tached to holiness, such as *majestic*, *glorious* and *awesome*, inform us that the essence of beauty lies in holiness.

1. Genesis
2. Exodus 1—24; 32—34
3. Exodus 25—Numbers 36
4. The Call to Be a Holy People (Leviticus 11—27)
5. Deuteronomy
6. Conclusion

1. Genesis.

There is little direct emphasis on holiness in Genesis. The Hebrew root *qds* (“holy”) occurs in a positive sense only in Genesis 2:3 in reference to God’s making the seventh day holy. The other occurrence of this root refers to “a holy woman,” that is, one belonging to a shrine (Gen 38:21-22). However, parallels between the garden of *Eden and the sanctuary in the wilderness (*see* Tabernacle) have been enumerated in some key studies. These parallels favor the assertion that the garden of Eden was holy. Eden was an ideal environment separated from the rest of the earth, presumably wild and uncultivated, as suggested by the narratives in Genesis 4. Although the term *holy* is never used to describe the garden in Genesis, it is in Ezekiel (Ezek 28:13-14). The ideals of the garden—spontaneous divine-human fellowship, harmony among all members of the divine and earthly realms, and fruitfulness of the garden to support all life for us—all reflect an environment infused with holiness.

2. Exodus 1—24; 32—34.

Unlike Genesis, holiness is a dominant concept in Exodus and the other books of the Pentateuch. Holiness is powerfully manifested in God’s revelations: God’s commission of Moses at the burning bush (Ex 3:1—4:17), God’s deliverance of Israel at the sea (Ex 15:2-18), the theophany at Sinai (Ex 19:1—24:18) and *Moses’ special vision of God (Ex 33:18—34:9).

2.1. At the Burning Bush. While Moses was shepherding in the Sinai wilderness, he came upon a bush that was on fire, but it was not being consumed. When he approached to investigate this marvel, God spoke to him out of the flame, instructing him to take off his shoes, for that ground was holy. Moses obeyed. Yahweh then spoke to him about leading Israel out of Egyptian bondage. In commissioning Moses to

deliver Israel, God displayed great compassion for the suffering of *Abraham’s seed.

2.1.1. God’s Name. Near the beginning of the conversation, Moses asked God to reveal his name. God answered, “I AM WHO I AM” (Ex 3:13-15). “I AM” is the name God uses for himself, while the Israelites use Yahweh (“He Is”). R. W. L. Moberley (24-25) has shown the nexus between Yahweh’s self-revelation at Sinai/Horeb and holiness; God’s giving the divine name on holy ground underscores the truth that the God of revelation, Yahweh, is indeed holy (*see* God, Names of).

2.1.2. God as Holy. In the account of Moses at the bush we discover several qualities of holiness. (1) The holy God often manifested his presence as a glowing brightness comparable to a fire (*see* Theophany). (2) The reference to holy ground was based on the premise that the space where God manifested his presence became holy, but only while God was present. When God’s presence departed, that space once again became common ground. For Israel sacred space was not something intrinsically holy from primordial times, as it was in many polytheistic religions. (3) In speaking to Moses, the holy God reached out to communicate the divine purpose to humans. This divine penchant is confirmed throughout the Pentateuch by the frequent connection between God’s appearing as holy and his communicating with Moses or the Israelites (Ex 19:18-19 with 20:1; Num 14:10-12; Deut 5:1-5, 24-27). (4) In this conversation the holy God expressed compassion for the hardships being borne by the descendants of Abraham in Egyptian bondage. God’s compassion is a characteristic expression of his holiness. (5) In giving Moses his personal name, the holy God made himself accessible to humans. God’s openness to humans contrasts the popular notion that holiness distances itself from ordinary human life.

2.2. At the Sea. While attempting to flee *Egypt, the Israelites became trapped at the sea and desperately cried out to God. God heard their cries and compassionately intervened to deliver the Israelites by driving back the waters of the sea with a strong wind. The Israelites then crossed safely through the sea. After they had crossed over, God drove back the waters, causing *Pharaoh’s chariots and warriors to drown. Before such a terrifying display of holy power, they sang: “Who is like you among the gods, O Yahweh? Who is like you—majestic in holiness,

awesome in praiseworthy deeds, performing marvels?" (Ex 15:11). Israel's glorious victory at the sea was a display of God's terrible power and of his love for his people, both mighty expressions of his holiness.

2.3. At Sinai. When Israel reached Mount Sinai, God descended on the mount in a majestic display. There was lightning and thunder and the blast of a horn as a thick dark cloud hung over the mountain (Ex 19:16). With the mountain shaking, fire descended and a plume of smoke was ascending. The people heard the blasts of a ram's horn growing louder and louder (Ex 19:18-19). The fire communicated the coming of the holy God, and the thick cloud guarded the people from the danger of looking directly at God's glory. The sound of the ram's horn most likely represented God speaking. In many ways this description brings to mind a volcanic eruption, but it differs in that the fire is descending, rather than ascending. Images from three powerful natural forces—a mighty thunderstorm, a volcanic eruption and an earthquake—indicate that Israel truly witnessed a manifestation of God, not merely some extraordinary disturbances in nature. The fear and trembling of the Israelites at the mighty manifestations on Mount Sinai (Ex 20:18-19), placed alongside God's anticipation that the people might rush up the mountain to see God (Ex 19:21), show that humans are filled with both terror and fascination before a spectacular revelation of God's holiness.

God's glory, which appeared on Mount Sinai (Ex 24:16-17), accompanied the Israelites in their journey through the *wilderness as a pillar of smoke by day and a fire by night (Ex 40:38; Num 9:15-23). Th. C. Vriezen defines glory as "the radiant power of [God's] Being, as it were the external manifestation of [God's] mysterious holiness" (Vriezen, 150). This glory-holiness juxtaposition is very similar to that found in Isaiah 6:3.

2.3.1. Appearances of the Cloud at Times of Deliverance. The first pentateuchal reference to the cloud occurs as Israel sets out from Egypt (Ex 13:21-22). For this band of poor slaves Yahweh's presence in the cloud and pillar of fire served as a guide through the trackless wilderness (cf. Ex 40:36-38). This manifestation of God at times also had a protective role. When the Israelites became trapped at the sea, the cloud positioned itself behind the people to shield them from the

advancing Egyptian army (Ex 14:19-20).

On their way to Mount Sinai, the Israelites grumbled for food (Ex 16). While *Aaron was telling the people that God had heard their complaints, the glory of Yahweh appeared in a cloud. Out of that cloud Yahweh spoke, promising the people plenty of meat and bread that very evening (Ex 16:10-12). This visible display of God's presence proved to the people that Yahweh was the provider of the food. In light of the commandment against making any representation of Yahweh (Ex 20:4; Deut 5:8; *see* Decalogue §6), these manifestations of God's glory gave the Israelites concrete evidence that they had truly experienced an encounter with God.

2.3.2. Appearances of the Cloud at Times of Punishment. The glory also manifested itself when God punished the people for their stubborn disobedience. When the Israelites refused to go up and take the Promised Land, the glory of God appeared at the tent of meeting. Then God pronounced judgment on the congregation (Num 14:10-25). In the punishment of Korah and his company for rebelling against Moses' leadership, God caused a plague to sweep through the camp (Num 16). The people's anger grew so hot that they were on the verge of rioting against Moses. At that tense moment the glory appeared to protect Moses and Aaron and punish the people (Num 16:41-45). These leading priests responded by interceding for the people, thereby staying God's wrath from consuming them.

2.3.3. The Intensity of the Glory. On a few occasions the glory was so powerfully present that the people were overwhelmed. After Moses anointed the *tabernacle, the glory descended in such power that not even Moses could enter the tent of meeting (Ex 40:34-35). This report is the denouement of the book of Exodus. The glory that had led Israel out of Egypt and had appeared on Mount Sinai now came and occupied the newly built tabernacle. The holy God had come to dwell among the *covenant people. This powerful manifestation of God's glory communicated to the Israelites the power, dignity and splendor of God's holiness.

2.4. Moses Beholding God's Glory. After having stayed God's wrath, which was kindled against the Israelites for worshiping the *golden calf, Moses asked God that he might behold the divine glory (Ex 33:18-23). God agreed. On that occasion God hid Moses in a rock crevice and covered him with his hand, letting him see only

the back of his being, since it was impossible for any human to look directly at God and live. While passing by, God made a self-proclamation: “Yahweh, Yahweh, a compassionate and gracious God, slow to anger and abundant in loyal love and truth, keeping loyal love for thousands, forgiving iniquity, transgression and sin, but never clearing the guilty, requiting the iniquity of the fathers on their children and grandchildren to the third and the fourth generation” (Ex 34:5-7; cf. Num 14:18). God’s self-proclamation asserted that he expresses holiness *to the covenant people* in gracious love and faithfulness and also occasionally in judgment.

Out of compassion God is inclined to forgive sins, but not casually or indulgently, for the holy God always upholds justice. As Isaiah says, “The holy God displays holiness in righteousness” (Is 5:16). Righteousness, then, is an integral expression of holiness for the God of revelation. If God’s people persist in sinning or refuse to seek forgiveness for wrongdoing, God out of justice will hold them accountable. That is, God is never so indulgent in showing love that justice is undermined. This connection between holiness and justice is clearly displayed in the laws given at Sinai, both in the *Decalogue (Ex 20:2-17) and in the *book of the covenant (Ex 20:22—23:33). These laws teach a high standard of justice in order that God’s people might truly live a holy life (Ex 19:5-6). Consequently, by providing insight into justice, these laws also provide insight into holiness.

3. Exodus 25—Numbers 36.

The legislation found throughout Exodus 25—Numbers 36 describes the organization of the worship of the holy God in ancient Israel. Among the variety of issues treated in this large section of the Pentateuch are the instructions for making the tabernacle (Ex 25—31; 35—40), the regulations for offering *sacrifices (Lev 1—7), the rules of ritual purity (Lev 11—15) and the laws for holy living (Lev 17—26). The book of *Numbers cannot be so easily segmented, for it blends two kinds of material: reports of incidents that happened during the wilderness and regulations for ordering the camp, particularly the role of the levitical families at the sanctuary and in transporting the tabernacle. Our understanding of holiness is enhanced by investigating both the operation of the sanctuary and the rules for the priesthood.

3.1. The Sanctuary. The sanctuary (*see* Tabernacle) was located at the center of the camp; it is called “a holy place” (Ex 29:31; Lev 6:16, 26, 27 [MT 6:9, 19, 20]; 10:13). There the covenant people had access to the divine presence. At the eastern end of the courtyard was the great bronze *altar. At the western end stood the tabernacle with the entrance facing east. It had two rooms: an outer room, called “the holy place,” with three pieces of furniture—the menorah, the table of shewbread and the altar of incense—and an inner sanctum, or adytum, called “the holy of holies,” with the ark of the covenant (Ex 26:33-34; 28:29; 29:30; Num 4:4, 19). Yahweh was enthroned over the ark, which was elegantly and artfully designed.

3.1.1. Gradations of Holiness at the Sanctuary. The sanctuary had three levels of increasing holiness: the court, the outer room of the tabernacle and the adytum. In correspondence to these gradations the construction materials became more costly and exhibited a higher quality of workmanship in moving from the court to the adytum. In the court stood the altar and the laver, both made out of copper (Ex 27:2; 30:18; 38:2, 8). Pure gold was used in both rooms of the tabernacle (Ex 25:11, 17-18, 24, 31; 30:3; 37:2, 6-7, 11, 17, 26). The “mercy seat” (NRSV) or “atone-ment cover” (NIV), which sat on top of the ark of the covenant, was made out of solid gold. The curtains of the tabernacle were finely woven out of the finest materials dyed blue and purple, conveying elegance and majesty. Farther from the adytum the materials were made out of a patterned weave, and even farther away a plain weave was used.

Parallel to the beauty and elegance of the adytum, the high priest’s garments (*see* Priestly Clothing) were regal: purple, woven out of fine linen, adorned with gold and having twelve precious stones set in the breastpiece (Ex 28:3-39; 39:1-31). They are described as possessing glory and beauty (Ex 28:2, 40). The emphasis on holiness at the sanctuary was reinforced by the word “holy” engraved in a gold plate fastened to the high priest’s turban with blue lace (Ex 28:36-39; 39:30-31). The majestic adornment of the high priest honored and praised God, before whom he ministered on behalf of the people. Corresponding to the first room of the tabernacle, the Aaronides had special clothes also conveying glory and beauty (Ex 28:40-43).

3.1.2. Gradations of Holiness in the Congrega-

tion. These gradations of holiness were echoed in the organization of the community. The people became holy by being in covenant with God (Ex 19:5-6). The priests, however, had to have a higher degree of holiness in order to serve at the sanctuary. The priestly families were organized into three levels or classes corresponding to the levels of holiness at the sanctuary: the *Levites, the priests and the high priest. The levels of holiness in the members of the community also paralleled those in the sanctuary. Being holy, the people were able to enter the court to offer up sacrifices. The Levites, having a higher measure of holiness, assisted the people and the priests at the main altar in the court. Some posit that part of the court area, namely, between the altar and the sanctuary, was an area with greater holiness and was, therefore, restricted to the priests (Haran, 184-85). The priests, being holier, had access to the entire court area and, when necessary, the outer chamber of the tabernacle. The high priest, being the holiest, could enter the tabernacle whenever necessary, and only he could enter the holy of holies, ordinarily limited to the Day of *Atonement (Lev 16:2).

3.1.3. Marriage and Mourning Standards for the Priests. The rules pertaining to the priests' marriage and mourning (see Burial and Mourning) for the deceased corresponded to their standing in the cult. A high priest could marry only a virgin of his own kin (Lev 21:13-14); a priest could probably marry an Israelite virgin or a widow of a priest (Lev 21:7; cf. Ezek 44:22). By contrast, a layman could marry a virgin, a widow or a divorced woman. In mourning the deceased, a high priest was permitted to mourn only for his wife, but he could not let his hair go unkempt or tear his clothes (Lev 21:5, 10). A priest could mourn the death of a wife or close relative, and he could let his hair be unkempt and tear his clothes, but like any Israelite he could not shave his head or beard or lacerate his body (Lev 19:27-28; 21:5).

These rules regarding mourning for the priests inform us that holiness relates to the fullness of life. Death, being antithetical to holiness, had to be avoided by those in the community who possessed a higher degree of holiness. In general, contact with a carcass made a person unclean until evening (Lev 11:24-28, 39-40), while contact with a corpse, a human bone or a grave made one unclean for seven days (Num 19:11-16). In the latter case a person who be-

came unclean in this way had to perform special lustration rites on the third and seventh days during a week of uncleanness in order to be restored to a state of cleanness (Num 19:17-21). Death was so defiling because, on the one hand, it was the opposite of *life/holiness and, on the other hand, it was the punishment on all humans for the brazen disobedience of the first humans against God (Gen 2:17). The antithesis between holiness/life and death reaches its highest expression in the restrictions placed on the priests in regard to mourning the deceased.

3.2. Sanctification of the Tabernacle and the Priests. After Bezalel and Oholiab had made the tabernacle and its furnishings, Moses set up the tabernacle (Ex 40:1-8, 20-33). In a special ceremony he anointed the tent of meeting and all its furnishings, sanctifying them for use in the worship of Yahweh (Ex 40:9-11). After the anointing, the divine glory descended on the tabernacle, confirming the anointing (Ex 40:34-35). Exodus 29:43-46 stresses that God's presence made the tent of meeting holy, empowering all parts of the sanctuary to function effectively, serving as the place where the covenant people could worship the holy God and find forgiveness for their *sins. Since the bronze altar was holy, all that touched it became holy (Ex 29:37).

On the day that the tabernacle was anointed, Moses also consecrated Aaron and his sons (Lev 8; cf. Ex 29), thereby endowing them with a higher level of holiness in order that they might carry out the offices of high priest and priest. Because of the importance attached to the sanctifying of both the tabernacle and the priests, each ceremony is reported separately (Ex 40; Lev 8).

3.3. Time as Holy. Certain segments of time were declared to be holy. During holy time the people were to forsake earthly commerce (i.e., what today is called secular). Work was particularly excluded from holy time, for work binds humans to the earth. Of course, certain essential tasks were permitted on holy days, but on days of the highest holiness (e.g., the Day of Atonement), no work at all was permitted (Lev 16:29, 31). Not having to work freed the people from their material burdens so that they could celebrate their relationship with God and their families. On a holy day numerous sacrifices were offered at the sanctuary to honor God and to provide an abundance of meat for feasting. Israel was commanded to make each *sabbath

holy by observing it as a day of rest (Ex 20:8; Deut 5:12; cf. Ex 31:15; 35:2).

The phrase for announcing a holy day, *miqrā' qōdeš*, is variously translated: "a sacred occasion" (NJPS), "a sacred assembly" (NIV, NAB) and "a holy convocation" (NRSV). Besides defining a certain day as holy, this phrase may also communicate that there was an official call for the Israelites to assemble for worship (Is 1:14-15). The seventh day of the week was defined as holy from the beginning (Gen 2:3), and in the Israelite calendar the *sabbath was defined as "a sacred occasion" (Lev 23:3). Other days so identified were the first and last days of the Feast of Unleavened Bread (Ex 12:16; Lev 23:6-7; Num 28:18, 25) and of the Feast of Tabernacles (Lev 23:35-36; Num 29:12) and the single day of the Feast of Weeks (Lev 23:21; Num 28:26). Two additional high days had this designation: the first day of the seventh month (Lev 23:24; Num 29:1) and the Day of Atonement (Lev 23:27; Num 29:7) (see Festivals and Feasts).

The Israelites were also to treat the fiftieth year as holy (Lev 25:10). During this year the fields were to lie fallow, and every family who had been forced to lease out their inheritance received it back. This was a year of liberation (see Sabbath, Sabbatical Year, Jubilee).

4. The Call to Be a Holy People (Leviticus 11–27).

In order that Israel might be in covenant with the holy God, she was exhorted to "be holy, for I, Yahweh your God, am holy" (Lev 19:2; 20:7, 26; also Lev 11:44-45). To heed this call the Israelites were to respond to God by becoming like God; that is, they were to develop in themselves characteristics such as those God possesses. Specifically, Israel's being holy meant: (1) they were in a covenant relationship with God; (2) God was present in their midst; (3) they were to promote justice throughout the community by keeping divine instructions; and (4) they were to observe the rules of ritual purity.

Observance of both the ceremonial regulations and the moral law was required for the fulfillment of this call to be holy. Keeping the law in itself did not make the people holy but prepared them to be made holy by Yahweh's presence, as the phrase "I am Yahweh who sanctifies you" attests (Lev 22:16, 32). God's sanctifying presence built the character of his people, but this does not mean that the people were to be

passive before God's presence. Rather, they were to sanctify themselves daily by faithfully observing the rules of ritual purity and adhering to the moral laws (Lev 11:44; 20:7).

The exhortation to be holy is the theme of God's speech in Leviticus 19. This speech, a collage of moral and ceremonial laws, serves as the setting for the great command to love one's neighbor as one's self (Lev 19:18). This setting for this command discloses that God's people were to display a holy character by showing love to others. The surrounding laws and exhortations provided specific guidelines for fulfilling the command to love one's neighbor. The context identifies a neighbor as one's fellow, a hired laborer, one who is physically challenged, a person of higher or lower social standing, even one who has caused offense. A landowner, for example, was not to keep a laborer's wages overnight, thereby preventing that worker from buying food for his family's daily needs (Lev 19:13). People were to show mercy to the physically challenged. Specifically, landowners were not to harvest a field so thoroughly that there would be nothing left for the poor and resident *aliens to glean (Lev 19:9-10). No one was to take advantage of a person's disability, such as by putting an obstacle in the path of the blind (Lev 19:14). These laws teach that being holy means being compassionate without either undue rigidity or indulgence in regard to standards. Later in this speech the circle of persons to be loved is extended to include resident aliens (Lev 19:33). This extension shows that there are neither ethnic nor class boundaries that limit expressions of love, which are acts that promote another person's well-being.

Placed among the moral laws in Leviticus 19 are a variety of rules dealing with specific ways of ordering life in the community. For example, a field was not to be sown with two different seeds (Lev 19:19), and the fruit of a newly planted tree was not to be eaten before its fifth year (Lev 19:23-25). The way one relates to the earth and to one's own land promotes a holy character. In addition, this speech also has several cultic laws, such as the one regarding the offering of peace offerings (Lev 19:5-8). Careful observance of the rules for worshiping God thus contributes significantly to the building of a holy character.

This variegated collection of laws in Leviticus 19 reveals that in striving to be holy and loving,

God's people must keep both cultic and moral regulations. They further promote inward holiness by following specific disciplines in daily living that orient their perspective to the purity and unity of God.

4.1. Rules of Clean and Unclean (Leviticus 11—15; Numbers 19). Most of the rules about ritual purity are clustered in Leviticus 11—15. The rules regarding corpse defilement are found in Numbers 19.

These rules on ritual purity were not designed either to separate the Israelites from dealing with foreigners or to set up classes within Israelite society, as was often the case in other cultures (Douglas 1993b, 25-26, 152-57). This claim is supported by the fact that most causes of uncleanness come from a person's body, the body of every person, both priest and laity, not from contact with certain classes or with foreigners. The purpose of these rules was to establish boundaries in the routine of daily life in order that the Israelites might live as a holy people serving Yahweh, who is holy. The primary boundary was to prevent any impure person or thing from entering sacred space; therefore, all had to be ritually clean before entering the sanctuary lest holiness consume them.

The priests had the duty of teaching the people to distinguish between the clean and the unclean, the common and the holy (Lev 10:10-11). Two sets of polarities are identified: clean/unclean and holy/common. These sets were complementary rather than overlapping. People, objects, space and time could be described as holy. In regard to space, the holy was an area dedicated to God's presence; all other space was common. Thus the sanctuary was "holy," and the camp was common. However, when the camp was compared to the area outside the camp, it could be considered holy (cf. Deut 23:14). The category clean/unclean, on the other hand, primarily defined the ritual standing of people, food and space. A person became unclean from contact with some contaminating substance. Space too could be classified within these poles. Certain areas outside the camp were also designated as clean or unclean; such defined spaces played an essential role in completing certain rituals performed at the sanctuary or fulfilling some of the regulations regarding purity (e.g., Lev 4:12, 21; 6:11 [MT 6:4]; 14:40-41, 45). Animals were classified as clean/unclean

primarily to establish which ones could be consumed as *food.

Cleanness was noncontagious. The potency of uncleanness, however, varied. A mild uncleanness, particularly one that lasted a day, was noncommunicable, but stronger cases of uncleanness, those lasting a week or indefinitely, were communicable. Anyone who was unclean with a minor impurity could remain in the camp, but a serious uncleanness required the person infected to live outside the camp.

In the routine of daily living, every Israelite became periodically unclean. No shame or harm attended becoming unclean for a brief period of time. The major danger in becoming unclean lay in coming into contact with the holy, for holiness is powerful, consuming all that is unclean. There was a latent moral danger: any person who failed to take the steps leading to ritual purity committed a deliberate sin against God and became subject to the penalties for such a wrong. As long as a person followed the ceremonial and the moral law and used the means available to rectify any failure in keeping these laws, that person continued to be numbered with the holy people of God.

4.2. Categories of Uncleanness. The rules in Leviticus 11—15 specifically address uncleanness in regard to animals (Lev 11), parturition (Lev 12), skin diseases and growths in houses and on garments (Lev 13—14), and genital discharges (Lev 15).

4.2.1. Clean/Unclean Animals. The rules regarding clean/unclean animals differ from the other rules on ritual purity in three major ways. (1) The classification of animals as clean/unclean was unchangeable. (2) The meat of unclean animals was an external source of impurity, while the other kinds of uncleanness addressed in Leviticus 12—15 come from within a person. (3) These rules assume that the Israelites would not eat meat from an unclean animal, whereas the other causes of uncleanness were unavoidable, being an essential part of human life. As a result, no cleansing rituals for ingesting meat from an unclean animal are included (*see* Foods, Clean and Unclean).

Animals were classified as clean/unclean in order to identify those whose flesh could or could not be eaten. The primary legislation put animals into four categories: land animals, fish, birds and creeping creatures (Lev 11:2-23). Land animals with cloven feet and that chew the cud

could be eaten (Lev 11:3-8). Cattle, sheep and goats (wild and tame), deer, gazelles, roebucks and antelope were the primary clean animals. Fish with fins and scales were edible (Lev 11:9-12; Deut 14:4-5). In regard to birds, in place of an identifying principle of classifying unclean birds, there is a list of twenty birds that could not be eaten (Lev 11:13-19). While winged insects were not to be eaten (Lev 11:20, 25), four kinds of locusts with legs for hopping were permissible (Lev 11:20-23). Animals that swam, such as reptiles, invertebrates, rodents and certain small animals, including possibly the weasel, were unclean (Lev 11:41-43).

Attached to the food laws are rules about uncleanness from contact with carcasses of various small swarming animals (Lev 11:24-28, 39-40). There is a list of eight animals, including several lizards, the weasel and the mouse, whose carcasses rendered household objects unclean (Lev 11:29-38). Specific reference to the carcasses of these animals may have been because these creatures infest storage places in dwellings.

4.2.2. *Uncleanness from Parturition.* Giving birth made a woman unclean, seven days for a male child and fourteen days for a female child (Lev 12). In addition, the woman could not come into contact with anything holy for an additional period of thirty-three days for a male child and sixty-six days for a female child. The reason for the longer period of separation for a female baby is not stated. A possible reason is that the baby girl is a future menstruant. A similar explanation is that at birth some girls have a vaginal discharge of blood. At the end of the days set apart for her purification, the mother would present a year-old lamb for a whole offering and a pigeon or a dove for a purification offering.

4.2.3. *Uncleanness from Certain Skin Diseases.* Certain skin diseases made a person unclean (Lev 13). Whoever developed an eruption or a bright spot on the skin, primarily on the facial area, had to go to the sanctuary and be examined by a priest. If the priest suspected that the eruption was grievous or infectious (*šāraʿat*), he had the person secluded for a week. After one or two periods of quarantine, if the priest determined that the disease was deep in the skin or spreading, he pronounced that person unclean. The unclean person had to live outside the camp.

The generic term used for polluting skin dis-

eases (*šāraʿat*) is difficult to render into contemporary English: NIV uses “an infectious disease,” and NRSV “a leprous disease” (Lev 13:3, 8, 11, etc.). While this term has often been translated “leprosy,” that is an inaccurate translation, since the symptoms of the diseases described here do not fit those of Hansen’s disease, the disease now referred to as “leprosy.” Nevertheless, the term *leprosy* captures both the horror that a person who had such a blemish felt and the repulsion that person experienced in the community. On recovery from such a disease, a person had to go through a complex ritual of aggregation that included two ablutions and the presentation of costly sacrifices (Lev 14:11-20).

A growth in a garment and a spreading mold in a house rendered the infected objects unclean. An infected garment or cloth had to be burned (Lev 13:47-52; 14:33-53). The bricks of a house infested by a persistent mildew had to be removed and destroyed.

4.2.4. *Uncleanness from Genital Discharges.* Discharges from the genitals were a common cause of uncleanness (Lev 15). A male or a female became unclean from contact with semen (Lev 15:16-18; cf. Deut 23:10-11). After laundering and bathing, they became clean at evening. Menses rendered a woman unclean for seven days (Lev 15:19). Anything she lay or sat on became unclean (Lev 15:20). Whoever touched her or anything made unclean by her became unclean until evening; waiting until evening along with laundering and washing made that person clean (Lev 15:21-23). A man who slept with a woman during menses became unclean for seven days (Lev 15:24). Since intercourse with a menstruating woman was forbidden (Lev 20:18), this law must have applied to intercourse that took place inadvertently at the inception of menses. Seven days after the start of menses, a woman became clean after laundering, bathing and offering a sacrifice.

If either a man or a woman had a continuous discharge from the genitals, that person was continuously unclean, making every bed and chair used by the person unclean (Lev 15:3-12, 25-27). Whoever touched either an unclean person or an object made unclean by such a person became clean at evening after laundering and bathing. Whenever an abnormal discharge ceased, the afflicted person waited seven days. On the eighth day that person offered two turtledoves or two pigeons at the entrance to the

tent of meeting, one for a purification (sin) offering and one for a whole offering (Lev 15:13-15, 28-30). In reference to a man, the law explicitly required that he wash his clothes and bathe in running water (Lev 15:13).

4.3. Defilement from a Corpse. The strongest defilement was conveyed by a corpse (Num 19; see Life, Disease and Death). Having contact with a corpse or even being in an enclosed structure containing a corpse made a person unclean for seven days. Any open vessel in an enclosed room with a corpse became unclean (Num 19:11-15; 31:19-20). Whoever came in contact with a human bone or stepped on a grave also became unclean for seven days (Num 19:16). Persons and objects unclean from contact with a corpse communicated this uncleanness to whom-ever touched them; that person became unclean until evening (Num 19:22).

A person made unclean by a corpse had to go through an involved process of cleansing that lasted a week. On the third and seventh days that person was sprinkled with a special solution called "water of impurity" ("water for cleansing," NRSV) made from the ashes of a red heifer and running water (Num 19:12, 18-19). On the third day the tent where the corpse had lain and all of its furnishings were also sprinkled with this special solution (Num 19:17-18). After the sprinkling on the seventh day, that person laundered and bathed in water and became clean at evening (Num 19:19; 31:19, 24). Anyone who did not go through this ritual of cleansing after becoming unclean by a corpse defiled the tabernacle and was expelled from the camp (Num 19:13, 20).

4.4. Reasons for These Rules on Clean/Unclean. Many proposals have attempted to account for the various laws of ritual purity. Three of the most prominent may be noted. (1) These rules promoted the health of the community. In particular, the laws about unclean animals guarded the Israelites from disease carried by certain animals (e.g., pork is a carrier of trichinosis). This view has been advocated by medieval rabbis such as Rashbam and recent scholars such as R. K. Harrison. (2) These rules prevented the assimilation of foreign cultic practices into Israel's worship of God. (3) The clean animals exhibited behaviors desirable in humans (e.g., the several references to an animal's chewing of the cud symbolize meditating on the law). This view goes back to Jewish rabbis of the intertestamen-

tal era. An adaptation of this position in sociological categories is set forth by M. Douglas in *Purity and Danger*.

These explanations and others provide insight into some of the laws on ritual purity, but none of them is sufficiently encompassing. If the laws of clean/unclean animals were given to promote the people's health, for example, Jesus did a great disservice in declaring all foods clean (Mk 7:14-20). Nevertheless, the numerous rules on washing certainly promoted the health of the ancient community, for cleanliness guards against the spread of disease. Some of these laws did set a barrier against pagan worship, but they did not do so categorically. For instance, the bull, the most valued sacrifice in Israel, was likewise highly revered by many of Israel's neighbors. However, these rules did establish guards against occult practices, for most ceremonies dealing with demons and magic had rites that would render an Israelite unclean. Thus finding a system that accounts for these rules as a whole is formidable.

J. Milgrom has argued that the nexus of life/death is the underlying principle. This nexus does offer a wide-ranging explanation for the rules of purity/impurity. The rules dealing with a corpse or with carcasses of various animals are rooted in the abhorrence of death and in the fact that death is the opposite of holiness, the life center. Skin diseases, besides being repulsive, give the appearance of sapping the life out of person. Certainly grievous growths in bricks and garments are destructive of those materials. The loss of blood and semen represent the loss of life-giving bodily fluids.

In light of this principle, Milgrom has posited that the laws regarding clean/unclean animals promoted reverence for life by limiting for Israel the flesh they might eat to a few animals, primarily domesticated small and large cattle, some wild game, fish, birds and locusts. His position has much to commend it. Certainly hunting as a sport did not gain the prominence in Israel that it had in Mesopotamia and Egypt. Israel's attitude toward hunting may be rooted in the food laws and the prohibitions against consuming blood. Furthermore, many of the prohibited wild animals were carnivorous or eaters of carrion. In this light it is valid to postulate that in general the food laws were based on the death/life nexus.

These rules of clean/unclean had a powerful

impact on the social and spiritual life of ancient Israel. They were a strong force for social cohesiveness. Later Jews of the Diaspora gave greater prominence to these rules in order to preserve their identity while living among Gentiles. They also provided numerous symbols of the character of holiness, especially of “unity, integrity, and perfection” (Douglas 1966, 54). The standard of wholeness explains why blemished animals could not be offered and priests with physical imperfections could not serve at the sanctuary (Lev 21:16-23; 22:17-25). The prohibition against various mixtures, such as sowing a field with two kinds of seed or wearing a garment of two different materials (Lev 19:19), symbolized the integrity of holiness. That “clean” symbolized moral purity is evidenced in the parallel of “a pure heart” with “clean hands” in Psalm 24:4.

The rules regarding corpse defilement kept the Israelites from highly valuing funerary monuments, as was the case in ancient Egypt. Since cemeteries in Israel were never considered holy ground, they could never function as places for Yahwistic worship (cf. Is 65:2-5). Burial grounds could never be located in proximity to a sanctuary, nor could a corpse be interred in a residence. These impossibilities struck a fatal blow against ancestral worship and also erected a huge barrier against occult practices, especially necromancy (cf. Deut 18:10-12). Thus they kept the concept of the demonic from enslaving the minds of God’s people.

By relegating all human *sexuality to the common area, the rules on ritual purity excluded any kind of sexual expression as a way of worshiping Yahweh. It is important to stress that these rules regarding genital discharges did not demean the proper expression of human sexuality in the marital context. They actually promoted male and female fertility, thereby enhancing the fulfillment in each family of God’s promises to Abraham that his seed would be numerous (e.g., Gen. 12:2-3). Their role was to separate this vital dimension of human living from sacred space.

The rules dealing with clean/unclean animals were a strong moral force, for they made the Israelites conscious at every meal that they were to order their lives to honor the holy God with whom they were in covenant. That this design is inherent to the food laws is confirmed by the presence of the command to be holy as God

is holy. This command appears in three listings of the rules regarding edible animals (Lev 11:44-45; 20:25-26; Deut 14:21; cf. Ex 22:31). Daily observance of these food laws established a pattern of obedience to God, thereby exalting the pursuit of spiritual values above following a pragmatic way of promoting the community’s welfare.

5. Deuteronomy.

The teaching of Deuteronomy moves between two poles: Yahweh’s gift of the *land and Israel’s obedience to God. Love is the motivating force on each side of these poles. God elected Israel, entered into covenant with her and gave her the land of promise as an inheritance solely because of his love for her (Deut 7:6-8; 10:15). The Israelites responded to God’s *election by loving God with all their heart, soul and strength (Deut 6:5; 10:12; 30:6). They expressed love for God by obeying what God commanded (Deut 11:1, 13, 22; 13:4; 19:9; 30:16, 20).

5.1. Holiness and Love. The bedrock for the Deuteronomic message of love and obedience is God’s holiness. That this is a premise in Deuteronomy is confirmed by the fact that Israel’s being a holy people frames the corpus of laws (Deut 7:6; 26:19). In enumerating the blessings of the covenant, Yahweh promises to make the people holy (Deut 28:9). Deuteronomy continues the characterization of Israel as a holy people (Deut 14:2, 21) and mentions that her camp is holy (Deut 23:14). Being a holy people, Israel gains praise, fame and honor (Deut 26:19); she enjoys a noble reputation as others honor her. Israel’s attachment to God is the basis of her honor.

The wedding of love and holiness as found in Deuteronomy is one of the most distinctive insights that Scripture offers into God’s being. This union is clearly taught in Hosea (esp. Hos 11), in Isaiah’s speaking of God as both the Holy One of Israel and the Redeemer (Is 41:14; 43:14; 47:4; 48:17; 49:7; 54:5) and in the teachings of Jesus (e.g., Mt 5:48).

5.2. The Jealous God. Deuteronomy also presents God’s holiness under the rubric of divine jealousy (Deut 7:4; 29:24-26; 31:16-17; cf. Eichrodt, 1.210 n. 1), as communicated powerfully in the confession, “Yahweh, your God, is a devouring fire, a jealous God” (Deut 4:24). “Jealousy” clearly identifies God as a person. It also captures the intensity of the divine love that ema-

nates from holiness. The metaphor *devouring fire* conveys that a marvelous display of power attends God's coming. That which is unclean or defiled is consumed, and that which is pure and honorable is purified or authenticated.

Moreover, jealousy guards God's actions from ever being influenced by an impure motive (Ex 20:5; 34:14). It guarantees that God will always be true to his holy character, will keep his promises and will nourish his established relationships. It moves God ever to seek the well-being of those in covenant with him. In addition, holiness purifies jealousy so that its expression is always appropriate and honorable. In God jealousy, therefore, never degenerates to envy, self-pity or undue concern for self-protection. Jealousy is the energy that keeps vital covenant love (*hesed*) and leads God to bless his people as promised in the covenant (Deut 28:1-14). Furthermore, God's holiness means that he never remains neutral to persistent disobedience. In covenant with God, Israel experiences the divine jealousy primarily as love that burns warm. It also tells us that God is partial to the relationship, earnestly desiring it to be an exclusive relationship.

Conversely, jealousy arouses God's anger against anything that defiles or is harmful either to his people or his sanctuary (Deut 6:14-15; 7:4; 11:16-17). Whenever Israel turns her affection from God, by doing wrong or by pursuing idols, she encounters God's holiness as blazing, jealous wrath (Deut 6:14-15; 29:18-21; 32:16, 21). Should Israel persistently disobey the terms of the covenant, God's jealousy would lead him to inflict on her the sequence of curses enumerated in the covenant (Deut 28:15-68). Even if Israel should come under the severest curse (i.e., exile), she has the hope that if she forsakes her wrongful behaviors and turns back to God, God will again reinstate her as his people (Deut 30:1-10), given the gracious character of divine holiness (Deut 4:30-31).

6. Conclusion.

Holiness is at the center of God's being, distinguishing him from everything on earth and in heaven. God mightily revealed his holy character to Israel at the sea and at Sinai. At the sea he demonstrated his love in delivering his people from Egyptian bondage. At Sinai God displayed his majestic power as he entered into covenant with his people in order that they might be a

holy nation, a kingdom of priests. By observing the covenantal law, his people would develop a community characterized by gracious righteousness. Their obedience would open them to God's sanctifying presence; thereby they would respond to God's call for them to be holy as he is holy. The pursuit of a holy life would yield an abundant life under God's blessings.

God also revealed his holiness in the instructions for building a sanctuary and in the regulations regarding its operation. To deal with the covenant people's sins, God gave them a place where they might find atonement and be empowered to live according to the divine will. By reason of the divine holiness, none might approach the sanctuary presumptuously; rather all had to prepare themselves to come before God with clean hands and a pure heart. The laws of ritual purity provided the people a guide, especially in matters of daily living, for preparing themselves so that they might approach the holy God with confidence. At the same time, these rules guarded the sanctuary from being accidentally defiled by that which was unclean. To assist the people in maintaining their relationship with the holy God, an order of ordained priests was instituted. The priests' having to live by stricter regulations in order to minister at the sanctuary bore further witness to God's holiness.

In becoming a holy nation, Israel was to function as a kingdom of priests. That is, they were God's agent of redemptive grace to all peoples. In time God fulfilled the goal of providing blessing for all peoples by sending his Son to secure forgiveness for any who accept the priestly work of Jesus. As a result, the call to be holy as God is holy continues to be the call to those who are under the new covenant (1 Pet 1:15-16).

HONOR AND SHAME

In the cultural world of the Pentateuch, honor and shame functioned as important social sanctions promoting behavior that contributed to strong families and an orderly society and dissuading behavior that weakened families, undermined hierarchy and disrupted social expectations. Knowing whom to honor and how to act in ways that would be regarded as honorable were essential to successful navigation of life in Israel. The ultimate foundation for a person’s life was to honor God—to give God his due weight—through careful observance of God’s *law and avoidance of all that God abhors.

1. The Vocabulary of Honor and Shame
2. Honor, Shame and the Physical Body
3. Honor, Shame and the Social Body
4. Women and Honor
5. God’s Honor and the Honor of Israel

1. The Vocabulary of Honor and Shame.

The strong presence of words connected with the values of shame and honor invites and launches the fuller investigation of these values in the Pentateuch. Honor is represented most

prominently by the word group formed from the verb *kābēd* (“to be heavy”), which yields readily to the metaphorical sense of “to be weighty or impressive; to possess honor and importance” (Oswalt, 426). The noun *kābōd* is also used to describe the visible manifestations of that worth and honor, as in the vestments of the priests or the appearance of the “glory” of Yahweh at the tabernacle (e.g., Ex 16:7, 10-12; 24:16-17; 29:43, 45; 33:22-23; 40:34-35). The antithesis is provided by the following word groups: the root *qll*, which denotes diminution or lessening, hence degrading or dishonoring; *qlh*, which denotes disgrace and dishonor (bringing low), *bōš*, which signifies shame; *bzh*, “despise”; and *hrp*, which expresses verbal degradation, among others (for more detail, see Olyan, 203 nn. 5, 6; Bechtel, 54-55). The vocabulary of honor and shame is increased as one comes to recognize those specific values or behaviors for which people are honored (or, in the absence or violation of which, people are put to shame) in early Israelite culture, as well as the means by which honor and dishonor are displayed in interpersonal interactions. For example, given the dishonor attached to incest and the importance of one’s genealogy for establishing one’s honor, Genesis 19:36-38 constitutes a clever assault on the honor of the Moabites and the Ammonites, peoples with whom Israel was historically at odds.

2. Honor, Shame and the Physical Body.

As early as the *creation story, the reader is taught to associate nakedness with “shame,” the feeling of vulnerability to inspection that makes urgent the need to hide oneself, as in fact *Adam and *Eve did from the sight of God (Gen 3:8-10), or to cover oneself, as God did for Adam and Eve with the skins of animals (Gen 3:21). Shame is born of disobedience in this story (cf. Gen 2:25 with 3:7); it is at once the consequence and penalty for transgressing the norms of the community. That the male genitals may be referred to as “shameful things” (*mēbūšim*, Deut 25:11) reinforces the connection between nakedness and shame; some things are proper only to oneself or to the marriage bed, and one is dishonored if they are seen by the wrong people or in the wrong places. Such a dynamic underlies the story of the drunken *Noah, whose nakedness Ham viewed unabashedly, but whom *Shem and Japheth covered up with eyes

averted. Noah understood Ham to dishonor him, so Noah diminished Ham as well through the power of the curse (Gen 9:20-27). *Priests had to take special care that their “shameful parts” were never visible in the tabernacle, for by revealing their shame they affronted the God of the *tabernacle, who would respond to the affront by diminishing them—permanently (Ex 28:42-43).

The body was also a means by which honor and dishonor could be displayed. Bowing down low, even stretching out upon the ground, was a prominent gesture by which one party showed honor to another, recognizing and acting out the proportionately greater honor of the one to whom one bowed (see Gen 18:1-2; 19:1; 23:7, 12; 37:7-8; 41:43). Physical assaults, such as the slap to the face, spitting in the face or beating or mutilating the body, were ways in which to enact dishonor and ascribe disgrace.

3. Honor, Shame and the Social Body.

Internal structures and hierarchies were created and sustained by codes of honor—giving honor where honor was due. The honor of parents, and thus their social authority over their children, was repeatedly reinforced (Ex 20:12; 21:15, 17). Affronts to the honor of the parent threatened to claim the very life of the child as reparation. Similarly, those who were appointed as leaders, priests and judges were to be honored rather than treated lightly (*qll*, Ex 22:28 [MT 22:27]; Lev 24:11-16) and their rulings followed to the letter (Deut 17:11-13). Challenging their rulings was regarded as an inappropriate challenge to their honor, an act of presumption improper for those who were “lighter” in terms of social honor and value (see, e.g., Num 16:1-4). Of course, at the head of all these codes stood the mandate to honor God (Ex 20:2-7; 22:28a; 34:13-14) by offering God proper worship, avoiding the ascription of divine honors to any rival and speaking the Name only in a manner befitting its “weightiness.” The honor of one’s fellow Israelites was also to be respected. Thus one was not to slander one’s fellow Israelites nor mock the handicapped (Lev 19:14, 16). Social cohesion was thus promoted by admonishing those who lightly trampled upon the honor, the weight, of other Israelites.

A peculiarity of Israelite honor and shame discourse was the degree to which it was permeated with, and expressed within, the language of

*holiness and the common, of purity and defilement (see Lev 22:31-33), a manifestation of the truism that each culture enfleshes the social sanctions of honor and disgrace in terms appropriate to its own worldview and ethos (Pitt-Rivers, 38). Lines of status within Israel were also inscribed using the language of purity and sanctification, of holiness versus the ordinary. Thus the *Levites were separated from the other Israelites to belong to God and to serve at the tabernacle, which was also the center of the community, through purification and cleansing (Num 8:6-7, 14-15), and provided an important component of the hierarchy of the theocratic state of early Israel. On the other hand, that which "defiled" was to be removed from the community. Anything threatening the status of the whole community was spoken of in terms of purity and pollution, although the social dynamics were those of honor and shame (see Num 5:2-3). The leper is not explicitly said to be a "disgrace," but the marginalization of the leper, the hiding of part of the face and the state of the hair and clothing, together with the label "unclean" (though a purity term), all revealed a person's place in the community, that one's honor was severely jeopardized by the feared diseases (Lev 13:44-46).

D. Daube (46) argues that the culture of Deuteronomy was one in which community members were deeply sensitive to one another's opinion and thus susceptible to the social control of shaming. Aversion toward humiliation or public scorn (Gen 38:23) and desire for honor (Num 22:16-17, 37) were expected to carry weight as people deliberated about their actions. Similarly, behaviors could be sanctioned against through the use of shame labels. Leviticus 18 uses the label "abomination" (*tô'ēbā*) to dissuade people from engaging in homosexual acts (Lev 18:22) and to guard against incest and bestiality (Lev 18:17, 23, 26-27, 29; see Sexuality, Sexual Ethics). Such terms serve to attach a social stigma to certain acts, functioning very much like "shameful" (*aischron*) in Greek ethical literature. The use of such terms in Proverbs to dissuade students from certain courses of actions merely by the value-laden power of these labels, bears out this observation. Thus, *tô'ēbā* became an important shaming label by means of which the conduct of Israelites was to be distinguished from the conduct of the native Canaanites, whom God displaced (Lev 18:24-30; Deut 18:9,

12). "Dishonorable" conduct was thus construed in such a way as would reinforce Israelite identity and group boundaries. That which was "abhorrent" was such specifically in the eyes of Yahweh (see the sanction against dishonesty in trade in Deut 25:16). God's opinion is ultimately the guiding force in pentateuchal *ethics; that which Yahweh disapproves (abhors) is heavily sanctioned against.

When the community's norms were transgressed, the transgressors were themselves subjected to shaming by the community. Deuteronomy 25:1-12 strings together three case laws in which the shaming of the offender is a prominent element of the punishment for specific infractions, making the treatment of the offender a deterrent to future infractions (Wilson). The beating of an Israelite male was a physical assault on his honor, made all the more disgraceful since it was deemed "deserved" by his community, those in whose eyes his honor was established or diminished. Deuteronomy 25:3, however, protected the offender by not allowing him to be stripped completely of his dignity in the eyes of the community, so that he had some means of recovery and continuing in community life.

The second piece of legislation prescribes a shaming ritual for an unwilling levir, a brother-in-law who refused to raise up a child for his dead brother with the widow (Deut 25:7-10). This law leveled a sanction against the person who put material gain (standing to inherit his dead brother's share of the paternal inheritance) ahead of the "name," the ongoing honor and remembrance of his brother (thus Daube, 35; Matthews, 100; Bechtel, 58). The man was made to endure the aggressive actions of the widow; the removal of his sandal may have represented the metaphorical exposure of his *pudenda* or the removal of privilege of having intercourse with her (Bechtel, 60); the spitting was an obvious display of contempt. Moreover, ongoing disgrace threatened to attach to the family, who might therefore pressure the man into fulfilling his obligations so as not to besmirch the family's reputation (Bechtel, 61).

The third piece of legislation in this series concerns the "no holds barred" intervention of the wife of one of the contenders in a fight between two Israelite males. If she dared to violate the "shameful parts" (*mēbūšim*, Deut 25:11) of an Israelite male, her hand, the instrument of the

offense, was to be cut off, thus marking her with a sign of disgrace for life (Wilson, 227).

The ultimate and final disgrace for an offender was the exposure of his or her corpse after execution. Criminals' corpses were hung out for viewing specifically to enhance the public nature of the shaming to which the offenders were subjected and thus to enhance the deterrent effect. Even here, however, Deuteronomy sets limits: shameful things degrade that which contains them, and for the sake of the land these corpses were not to be hung overnight (Deut 21:22-23).

4. Women and Honor.

One of the primary ways in which females achieved and protected their honor was through the proper use, direction and effectiveness of their sexual energies (see Family Relationships). Sexual exclusiveness was thus a primary location of honor. For the unmarried, this meant virginity (Gen 24:16). "The chastity of the girl becomes an indicator of the social worth of the family and the men in it. The honor of the family is at stake, for real men have the strength and cunning to protect and control their women" (Frymer-Kensky, 84). The legislation in the case of the slandered wife (Deut 22:13-21) reveals an awareness of this connection, since reparations were to be made to the wife's father. When the husband accused his wife of not having been a virgin at their wedding, his accusation implicated the family; either they were unable to uphold their responsibility to keep their daughters chaste, or they were guilty of fraud, passing off an experienced woman as a chaste maiden. If the charge was false, the honor of the family had to be restored through the public shaming of the husband through scourging and the offering of restitution through a fine (Matthews, 110).

Because the honor of the *woman was embedded in the honor of the family, attempting to gain improper access to the "virtue" of the woman was regarded as an assault on the family's honor (an "insult," as in Gen 39:17-18). Because honor and reputation were critical to a family's well being in terms of other families being willing to interact with them and fearing to trample or abuse them, families tended to defend their honor vigorously. *Abimelech was thus quick to give *Abraham a large sum of money as restitution, a sort of proof that he had

not actually dishonored Abraham by lying with Sarah and thus a pledge that no feud should arise between Abraham's people and Abimelech's people, since no honor had been lost. An even more dramatic expression of this principle is the episode of Dinah in Genesis 34. Shechem's violation of Dinah (which may not have been forced rape; see Frymer-Kensky, 86-91), enacted without regard for *Jacob's rights over Dinah and thus in flagrant abuse of his honor, dishonored the family. While Shechem, Hamor and Jacob sought to repair the situation through negotiation of a suitable bride-price and formal union, *Simeon and *Levi adopted deceit and aggressive behavior. In the latter's eyes, peaceful negotiation would not suffice to restore the family honor. In the biblical story, Jacob's opinion prevailed: upon his deathbed, Jacob "diminished" them (along with *Reuben, also for undermining the family's honor by encroaching on his father's concubine), with the result that *Judah, the fourth born, stood at the head of his brothers (Gen 49:3-8). In the inter-testamental period, however, Simeon and Levi were vindicated against Jacob's diminishing of them (see Jdt 9:2-4; *T. Levi* 2:1-4; 5:1-7) as those who had properly enacted zeal for Israel's honor in that situation.

Childbearing was also essential to the honor of the married woman. Sarah suffered disgrace on account of her infertility, and the ability to bear children gave her handmaiden Hagar cause to regard herself as better than her mistress and to violate the normal expectations of mistress-slave relationships (Gen 16:3-9). Leah expected that her bearing of multiple sons would lead to her being honored by Jacob at last, while Rachel celebrated the birth of her first child as the removal of her "reproach" (*herpāti*) by God (Gen 30:20-23).

5. God's Honor and the Honor of Israel.

The honor of God was intimately connected with the fate of Israel, the people God had called by his name. Their connection with the "name" was Israel's connection with *blessing and honor (see Num 6:23-27, in which the placement of the "name" upon Israel leads to blessing). God's plagues upon the *Egyptians, disgracing the Egyptians (Ex 10:2), were meant to establish God's honor as deity both in the eyes of the Egyptians (Ex 7:5) and in the eyes of the Israelites (Ex 10:2). God's *hardening of Phar-

aoth's heart was a means by which God showed greater and greater signs and thus gained "honor for myself at the expense of Pharaoh and his entire army" (Ex 14:4, 17-18), again with a view to God's revelation of his "weight" to Israel and Egypt alike (see also Ex 34:10). God's reputation was tied to the fate of his people, and thus even he could be induced to act out of concern for his reputation, avoiding shame in the eyes of the other nations (Ex 32:11-12; Deut 32:26-27).

God also willed to be honored by those whom he had benefited. One of the basic ideological underpinnings of the covenant was that those who honored God by keeping the covenant stipulations would be honored by God, while those who showed contempt for God and his honor by neglecting or violating those stipulations would themselves be subjected to contempt and disgrace (see Olyan, 204-8). This is a repeated emphasis of Deuteronomy: Israel's obedience to the Torah would give her an international reputation for wisdom (Deut 4:6-8). As a result of covenant loyalty, God would exalt Israel "in praise and in fame and in honor" above all other nations (Deut 26:18-19; see 28:1, 13). If Israel engaged in the sort of behavior that had characterized the Canaanites, however, it would be despised by its neighbors (as in Ex 32:25) and utterly humiliated by God (Deut 28:25-26, 37). It would incur a memory of lasting shame as a "byword," "proverb" and "reproach." Transgression of God's *law was thus presented as a grave threat to Israel's national honor.

Transgression was so serious because it enacted a low estimation of God's honor, power and "weight" (this correlation is especially clear in Num 14:11, 21-23; Deut 28:58; 31:20). Engaging in *idolatry and the worship of other gods was especially targeted as that which enacted contempt for God (see Deut 31:20; 32:15b-17). Assigning a low value to something or someone, then treating that thing or person according to the standards appropriate for that assigned value, stands behind the term *despise*. Despising someone or something of great value, as Esau "despised" his birthright (Gen 25:34), failing to give it sufficient "weight" in his deliberations, is a terrible mistake. Unintentional sins against God's honor could be remedied with sacrifices. Just as gifts could forestall the revenge of those who had been unintentionally dishonored (or satisfy the honor of the affronted one by pre-

senting a display of repentance in which one acknowledges the true worth and "weight" of the offended party, as in Gen 32:19-20; 33:8-11), so animal sacrifices provided atonement for unintended affronts against God's honor (Lev 4:2-3; 5:5-6). Intentional transgression, however, constituted an affront for which there was no reparation except the destruction of the transgressor (Num 15:30).

*Aaron's two sons *Nadab and Abihu disobeyed God's prescriptions concerning the fire to be used at the *altar: their "light" regard for those instructions resulted in God reestablishing his honor in the sight of all through their destruction (Lev 10:1-3). Numbers 14 preserves another episode in which Israel did not give God his due "weight," thinking more highly of the Canaanites. God Took their disobedience at the threshold of the Promised Land as a display of contempt, despite the signs he had provided to make known his honor and strength, his "weightiness," and thus to engender trust (Num 14:11-12, 21-23). The result was the death of the entire generation in the desert. Dishonoring God results in divine vengeance against the one who has treated God with less than proper respect. By bringing the offender low, God's own honor and reputation is restored.

Whatever honor Israel possessed, it possessed as God's gift. Deuteronomy 8:11—9:7 negated any attempts by the Israelites to interpret their success in Canaan as an achievement of their own and thus a claim to honor. They were not to "exalt" themselves, forgetting that God's beneficence and faithfulness (and not their own merit) were responsible for their enjoyment of the good things of the land (Deut 8:12-14). Topics of benefaction, and the consequent debt of gratitude (shown through covenant loyalty and obedience to the Torah), were thus to replace and undermine boasting. Deuteronomy 9:6-7 even goes so far as to shame the hearers, calling to remembrance their stubbornness and their failures in the desert, as a means of establishing the greater weight of God's patience and faithfulness. The Pentateuch, then, affirms that Israel's collective honor is bound up with, and wholly dependent upon, the one God and with their proper manifestations of reverence toward him (Deut 10:20-21).

IDOLS, IDOLATRY, TERAPHIM, HOUSEHOLD GODS

“You shall not make for yourself an idol, whether in the form of anything that is in heaven above, or that is on the earth beneath, or that is in the water under the earth” (Ex 20:4 NRSV). This familiar second commandment encapsulates the Pentateuch’s basic view of religious images. The pentateuchal legal materials communicate a pervasive aniconic viewpoint. The very title of this entry divulges the pentateuchal perspective that sacred icons are anathema. Icons are mere idols, not divine images. Despite the witness of the legal pronouncements, the astute reader of the Pentateuch will notice, however, that the materials do not present a uniform perspective on religious images. It appears that there may have been varying degrees of iconic acceptance and practice among the people of ancient Israel, this being the stimulus for the text’s critique. The *law banning the use of divine images suggests that this type of worship was practiced, but that it was considered heterodox by the pentateuchal authors.

1. Idols, Idolatry
2. Teraphim, Household Gods

1. Idols, Idolatry.

The anti-image viewpoint emerges most clearly from reading *Deuteronomy. In addition to promoting aniconism as part of its pervasive program of assuring religious purity, Deuteronomy prescribes a purge of unauthorized places of piety. From the standpoint of the historian of Israelite *religion who might wish to discover additional remains of the actual religious practices of the Israelites, both orthodox and heterodox, Deuteronomy 12:2-4 represents the nadir

of this view:

You must demolish completely all the places where the nations whom you are about to dispossess served their gods, on the mountain heights, on the hills, and under every leafy tree. Break down their altars, smash their pillars, burn their sacred poles with fire, and hew down the idols of their gods, and thus blot out their name from their places. You shall not worship the LORD your God in such ways. (NRSV)

The writer, painting false worshipers with a broad brush as “the nations,” “Canaanites” in the worst sense of the word, commands the faithful to eradicate all of the outdoor sacred sites. Notice that the writer marginalizes these worship practices by referring to the practitioners as non-Israelite, “the nations whom you are about to dispossess,” and by locating their worship in nature settings, not within the confines of the settlements. While *archaeological evidence does affirm the physical existence of high places during the Israelite period at the fringes of settlements, ideologically Deuteronomy places these “worship centers” at the fringe of acceptable practice, both spatially and nationally. According to Deuteronomy, true Israelites will worship at a central city shrine. The writer also designates the deities as “their gods” in contrast to “our God.” From the standpoint of iconographic worship, the Deuteronomic disciple is enjoined to break down, smash, burn and hack anything connected with the worship of these false gods. The delicate, indeed destructible, nature of “their gods” contrasts with the indestructibility of Yahweh, who cannot be represented by an idol, but whose Name alone resides in the central sanctuary as a witness to his presence.

The final line, “You shall not worship the LORD your God in such ways,” seals the distanc-

ing of the practices of “the nations” from the true worship of Yahweh. The Israelite faithful will not do such things. The commandment certainly concerns obliterating the divine images, but the focus extends to the razing of the site so that future generations would not be able to remember the name of the deity once worshiped at the site. This commandment, of course, assumes that the deity worshiped at such a site was not Yahweh. Significantly, Deuteronomy demands that the faithful destroy the sanctuaries to such an extent that they would be unusable even for the worship of Yahweh. The faithful follower of Yahweh, in contradistinction, should worship God without images and without any assortment of shrines. More importantly, Deuteronomy commands the faithful Israelites to leave the periphery, where the erstwhile Canaanites once worshiped, and to travel with their contributions to the center where Yahweh has established authorized worship. The Pentateuch never identifies this center, referring to it as “the place” (e.g., Deut 12:5), but modern scholars have tended to identify this place with Jerusalem, though before the monarchic time the place may have been Shiloh.

To appreciate the biblical aniconic tradition, one might consider some of the terms used in the Pentateuch to describe religious images. For example, the word *ṣelem* (“image”) occurs only six times in five verses in the Pentateuch. The first two (Gen 1:26, 27) describe the *creation of humankind. Humans represent deity in a significant sense, at least with regard to having authority over the remainder of creation. Genesis 5:3 describes this “image” as something almost genetic, since *Adam passed his image to his son Seth. Genesis 9:6 connects the “image” with divinity and provides a rationale for capital punishment: since humans are in God’s image, anyone who kills another person may be put to death. Finally, Numbers 33:52, a passage anticipating the conquest of the land, uses the word *ṣelem* to indicate the “molten images” the “inhabitants of the land” worship. The true Israelite will destroy both the images and their devotees.

The word used in the second commandment quoted above is *pesel*. This word, or the bi-form *pāsīl* when plural, occurs ten times (Ex 20:4; Lev 26:1; Deut 4:16, 23, 25; 5:8; 7:5, 25; 12:3; 27:15). Some translations, such as the NJPS, distinguish the *pesel* as a “sculptured or graven image” as opposed to a molten figure, and *pāsīl* as a generic term “images.”

The first pages of the Pentateuch confront the reader with the beginnings of opposition to images representing the deity. The order of creation and the concept of the *imago Dei* provide fodder for the polemic against the use of humanly fashioned objects to represent the presence of the deity. God fashioned humans in the *image of God. Humans, in contrast, may not fashion God in the image of humans or anything else. Potential potters of deity must realize that the fashioner was fashioned by the divine to evoke God. The equation, however, does not work in reverse; humans may not take it upon themselves to represent the deity by earthly fabrications. Ironically, since humans themselves imitate God, any human contrivance by hand would be derivative and redundant. But, as indicated by the case of Adam and Seth (Gen 5:3), humans may legitimately reproduce the divine image by means of procreation. By extending the human line, humans extend witness to God’s creative presence in the world. Producing children, then, is an authentic re-creation of the divine image and thus one of the key blessings from Yahweh in the OT. Human creativity gone awry, as in the production of unauthorized images, is denounced. Humans are forbidden from using their divinely given creativity to manipulate the created order to attempt to craft something that suggests God.

As noted above, the legal traditions of the Pentateuch, especially Deuteronomy, develop this resolute anti-icon viewpoint, introduced in the foundational narratives, with particular fervor. Some of the stories interposed between the primeval sagas and the legal texts, however, destabilize this negative view. In some passages images are accepted as part of a story without evaluative comment. Conversely, an original story that appears tolerant of iconic worship could be modified, though not in a thoroughgoing fashion, to bring it into line with the dominant aniconic paradigm. When read canonically, in the light of the added witness of the legal materials, the writer provides a corrective to the view that accepts worship with images.

The making of the *golden calf (Ex 32) presents a noteworthy example of such a partial adaptation of a story. At a rudimentary level, this text bears witness to the existence of the iconic worship of Yahweh in ancient Israel. Clearly in the story *Aaron and his followers view the calf as an appropriate Yahwistic symbol. They iden-

tify the calf image with the God who brought them out of Egypt (Ex 32:4). Aaron announces to all that the next day will be a *festival to Yahweh (Ex 32:5). As the story continues, *Moses descends from the mountain and enforces the aniconic worship of Yahweh (Ex 32:7-29). God, through Moses, asserts that the Israelites have misconstrued their past. According to this divergent layer of the story, some Israelites have forgotten Yahweh and inaccurately attributed their deliverance to the golden calf. The reader's attention is deftly redirected from acceptance of the worship of Yahweh by means of the calf (Ex 32:1-6) to rejection of such humanly misguided representational worship (Ex 32:7-29). The text presents the rebuked worshipers as foolishly worshipping a statuette and not the living God.

The location of the story of the golden calf within the canon is noteworthy; its impact is strengthened by its placement in the Sinai material. The people's offense appears as a violation of the expanded commandment of Exodus 20:23: "Do not make silver gods next to me; gold gods do not make for yourselves." The ultimate expansion of this aniconic law occurs in Deuteronomy 4:15-25, with the somewhat redundant "an image in the form of any figure" and the extension of the prohibition to all artistic representations with the potential to lead the people astray.

Of course, although the people in the narrative of Exodus would have heard and agreed to the commandments, they might not have grasped the gravity of them. The text says that Israel acted with Aaron after Moses had disappeared up the mountain for an indeterminate period of time (Ex 32:1). While Moses was receiving the directions for the *tabernacle and its utensils, which included the ark of the covenant, the people acted hastily by failing to wait for the detailed building instructions. They created the golden calf, an item that conceptually could supplant the place of the ark of the covenant within the holy of holies, to signify the immanence of Yahweh. The writer of the narrative firmly rejects their bovine symbol. Thus, the story of the golden calf both attests to the historical reality that some in ancient Israel worshiped Yahweh by means of plastic representations and condemns that practice by advocating a strict aniconic perspective. The God connected to the portable shrine, whose immanence was signified by the golden chest within the holiest place, was not to be worshiped by means of a brute

symbol. The worship of the calf-users has been marginalized. The text clearly asserts the aniconic viewpoint: the golden calf was burned, ground up, scattered and imbibed to signify its complete denunciation. Israel must place only the ark, the divinely authorized, manufactured token of God's presence, into the holiest place.

An interesting point is that the calf worshipers of Exodus 32 were not "the nations" or "Canaanites," but "Israelites." Significantly, Moses' own brother was the ringleader of this iconic worship style. Additionally, the calf was connected by those who used it with the worship of Yahweh and the recollection of Yahweh's saving activities. At its core this text reveals that at least some of the despised worshipers in ancient Israel were iconic Yahwists and not residual "Canaanites" or outsiders. This story signifies that Israel was like other nations of antiquity in struggling to envision the divine. The author's condemnation of idolatrous practice, the use of unauthorized images, was necessary precisely because some in ancient Israel sought to worship Yahweh, and perhaps other deities, in this manner.

In this regard, archaeology provides evidence for anthropomorphic cult statuary in Iron Age Palestine in obvious contrast to the strict prohibition of such figures in the pentateuchal legal traditions. This evidence is important for understanding the views of the Pentateuch, since the biblical materials received their final shape with these Iron Age realities in view, not during the Late Bronze Age settings of the stories. These Iron Age discoveries reveal how Israelites actually lived in the land in the light of aniconic injunctions. We uncover, in harmony with the witness of the historical and prophetic writings, that a portion of Israelites lived as though there were no rules against religious icons.

Of the many scholars who have written on the study of Israelite divine images over the past century, one must note especially the influential work of O. Keel and C. Uehlinger. While an exclusivist form of monotheism seems to have been a late station on the ancient Israelite religious landscape, there is nothing along the way to connect any particular image to Yahweh. From the twelfth to the late tenth centuries B.C., we find some metal and stone statues. There are also terra-cotta cult stands, terra-cotta shrine models and terra-cotta anthropomorphic vessels in the archaeological record. The cumulative evidence attests to or implies the fabrication and

utilization of anthropomorphic cult statuary throughout the early Iron Age in Israel. Uehlinger suggests that the iconography of the early Iron Age is not the place to look for the roots of aniconism, because the figurative representations of male and female deities did not abate (Uehlinger, 111-12). The Israelites seem to have ignored the injunctions against image-making—or at least reinterpreted them to avoid making images of Yahweh while producing other idols.

Uehlinger provocatively and convincingly concludes that there was no general recession of anthropomorphism in the visual art of Iron Age Palestine. Second, generally speaking the official cults in royally sponsored central state temples of Iron Age II Palestine focused upon the worship of major state and dynastic deities that were figuratively represented by anthropomorphic cult statues. Third, in the case of the kingdom of Israel, archaeological, inscriptional and iconographical evidence clearly points to the use of anthropomorphic cultic statuary by Israelites to a degree similar to their neighbors. In the case of the southern kingdom of Judah, growing and indisputable evidence contradicts the claim that its religion was essentially aniconic. We see repeatedly that biblical texts engage and critique the religious practices of some, especially any worship beyond the Temple Mount. While the main thrust of Yahweh worship seems to have remained aniconic throughout the history of Judah, the existence of some 854 Judean pillar figurines and the Khirbet el-Qôm and Kuntillet 'Ajrud inscriptions reveal that, at least in some quarters of the southern kingdom, Asherah was worshiped alongside Yahweh. It appears that the Judean pillar figurines were found and probably used at all levels of human activity, especially in the daily, domestic realm (Kletter, 62). These types of discoveries seem to indicate that the religious landscape of ancient Israel was more variegated than the pentateuchal legal traditions would have preferred. Ultimately, and unfortunately, we have to admit that in spite of growing material evidence and the reevaluation of long-known sources, our picture of the nuances of Israel's cultic life still remains awkwardly fragmentary. Scholars must proceed by means of analogies between Israel and her neighbors, since primary documentation is often lacking. Of necessity, this approach highlights commonalities throughout the Levant and is less suited

to measure the distinctive features of ancient Israelite religion (Uehlinger, 152-53).

In reading the varied witnesses of the Pentateuch regarding images, we note a progression along a continuum from silence regarding images to a total antirepresentational viewpoint. On one end of the spectrum, we see that the text does not condemn Rachel's theft of Laban's teraphim (see 2 below). The narrator does not judge her act of thievery and does not evaluate the pilfered items themselves. At the other pole, Deuteronomy demonstrates a strident and unsympathetic perspective against local and iconographic worship. Commenting on this continuum, M. B. Dick, building on the work of D. Knapp, suggests the following stages in the development in the *Bilderverbot* (prohibition of images): (1) no prohibition; (2) prohibitions rooted in intolerant monolatry; (3) Hosea's extension of the notion to every image, since each posed a threat of Israel's assimilation to other peoples and religions; (4) a complete prohibition of images as the final stage in process (e.g., Deut 5:8 [and later Ex 20:4]; see Dick, 11). This modern schema places the pentateuchal condemnations as the latest and most strident of an emerging perspective on images. This progression and the critical reconstruction of the Pentateuch it assumes may not be obvious to the casual reader of the Pentateuch, however. Rather, the average reader simply notices a stark contrast between the commandments of Exodus and Deuteronomy on the one hand and the *laissez-faire* attitude toward images in the Rachel story on the other.

2. Teraphim, Household Gods.

The teraphim offer a specific and troubling manifestation of divine images in the Pentateuch. The plural term *tērapīm*, which is used even when it denotes a singular item, occurs fifteen times in the Hebrew Bible. Only three uses are pentateuchal (Gen 31:19, 34, 35), and all of these are restricted to the tale of Rachel's robbery of these items from Laban. The other dozen are spread out over the Former Prophets (Judg 17:5; 18:14, 17, 18, 20; 1 Sam 15:23; 19:13, 16; 2 Kings 23:24) and the Latter Prophets (Ezek 21:21 [MT 21:26]; Hos 3:4; Zech 10:2). The meaning of this term is not clear. Scholars have proposed various etymologies, but none has won particular favor. Interpreters have associated the term with "healing" (from the root *rp*'), "sagging" (*rph*, *trp*), "vileness" (postbiblical *trp*),

“noninterpreters of dreams” (*trp* from *ptr* by metathesis) and “benevolent or malevolent spirit” (from Hittite). T. J. Lewis, in his survey of this material, prefers this last option, connecting ancestor figures with necromantic functions, though the interpretation is not without difficulties (Lewis, 844).

Unfortunately, ancient Near Eastern resources do not help in interpreting the term. The word does not occur outside the Bible. Since there is no direct verbal parallel, many scholars have sought to understand the teraphim by analogy with ancient Near Eastern materials that seem to parallel the teraphim in function, at least in the mind of the modern interpreter. On the basis of texts from second-millennium B.C. Nuzi, some have connected teraphim to the Akkadian word *ilānu* “gods.” The common translation of teraphim as “household gods” betrays this purported Nuzi connection. This association is strengthened by Laban’s question upon overtaking Jacob, “Why did you steal my gods?” (Gen 31:30). Laban, at least in the mind of the writer of Genesis, attached divine significance to the stolen teraphim. Other studies connect the gods more specifically with the *etemmu*, the spirits of the dead, and thus link the teraphim with ancestor worship.

While it is not clear what these teraphim were, they were certainly objects of sufficient value that when Rachel stole them she raised Laban’s ire. As stated above, Laban possibly considered these items as images of the divine realm. The teraphim were possibly believed to provide access into heaven by some *divinatory method. The story of the theft is never resolved in Genesis. As far as the reader is aware, *Jacob never learned of his wife’s action and Laban never traced the theft to his daughter. K. Spanier suggests that Rachel’s theft was connected to her continuing struggle for primacy in Jacob’s household over Leah. Since her husband was blissfully unaware of her activity, the theft could not be for his direct benefit. Perhaps Rachel saw this pilfering as a means of establishing the priority of her son as the chief heir. This supposition, though speculative, does offer a reasonable interpretation for Rachel’s act, Laban’s outrage and, possibly, the ascendancy of *Joseph in Jacob’s family.

If one assumes that the term *teraphim* throughout the Bible refers to the same or similar items, then these teraphim could vary in their dimensions. For example, according to

1 Samuel 19:13, 16, the teraphim was large enough to serve as a substitute for David in bed. By covering a teraphim with bedclothes and a wig, Michel was able to deceive Saul long enough for David to escape pending doom. But in the case of Genesis 31 considered above, the figures must have been small enough to allow Rachel to hide them in her camel cushion and thus avoid the scrutinizing eye of Laban.

ILLNESS. See LIFE, DISEASE AND DEATH.

IMAGE OF GOD

Known in classical Christian theology as the *imago Dei*, this term refers to the idea that humankind, by virtue of *creation and mandate, corresponds somehow to the Creator. Interpretations of this correspondence range all the way

from a sharing of characteristics and attributes—even in the physical realm—to a relationship in which the human race does not resemble God in any way but merely represents him. The fundamental question is whether *image* should be taken in an ontological sense or as simply a functional term. Is humankind like God, or does it only serve him as his agent?

1. Old Testament Texts and Terms
2. Humankind as Divine Image in the Ancient Near East
3. The Old Testament Concept of the Image of God
4. The Image of God and Postbiblical Jewish Tradition
5. The Image of God and the New Testament

1. Old Testament Texts and Terms.

The *locus classicus* for the biblical teaching of the image of God is Genesis 1:26-27. The relevant lines read, “Let us make humankind in our image, according to our likeness” (Gen 1:26), and, “So God created the human race in his image, in the divine image he created it; male and female he created them” (Gen 1:27). The word translated “image” in all three places is *šelem*, whereas its explanatory synonym “likeness” renders *dēmūt*. The Greek (LXX) translation offers *eikōn* for *šelem* and *homoïōsis* for *dēmūt*. The next occurrence of these lexemes is in Genesis 5:1: “In the day that God created humankind, in the divine likeness he made them.” Here *dēmūt* occurs alone, but it is rendered *eikōn* by the LXX, the usual translation of *šelem*. In Genesis 5:3, however, Adam is said to have sired a son “in his likeness” (*dēmūt*; LXX *idea*), “according to his image” (*šelem*; LXX *eikōn*). The final use of *šelem* in this technical sense is in Genesis 9:6, where God informs Noah that murder must be viewed as a capital offense, for “in the image [LXX *eikōn*] of God he made humankind.” In addition to these few occurrences of *šelem* and *dēmūt* in the context of *imago Dei*, they appear commonly throughout the OT to describe images and idols designed to represent the deities of pagan worship or even Yahweh himself on occasions of apostate Israelite cultic activity (Num 33:52; 2 Kings 11:18; Ps 73:20; Is 40:18; Ezek 7:20; Amos 5:26).

2. Humankind as Divine Image in the Ancient Near East.

2.1. Mesopotamia. The Akkadian term cognate to Hebrew *šelem* is *šalmu*, a word used commonly

to describe ordinary statues and, in religious settings, images of the deities. Kings are sometimes referred to as the image of certain gods, as are such persons as sorcerers. The Sumerian creation myth Enki and Ninmah states,

O my mother, the being whom you named is there:

associate the image [?] of the gods with him, mix the nucleus of clay above the primal-ocean.

The gods and princely figures [?] will thicken the clay,

but you must give life to the limbs. (Beyerlin, 77)

2.2. Egypt. Humankind as the earthly representative of the gods is a major tenet of Egyptian theology, especially as humankind is individualized in the monarchy. This is linked with the notion that humanity is the image of the gods, especially of the sun god, as is clear from the so-called Instruction of Merikare:

Well tended is mankind—god’s cattle,

He made sky and earth for their sake,

He subdued the water monster,

He made breath for their noses to live.

They are his images, who came from his body,

He shines in the sky for their sake;

He made for them plants and cattle,

Fowl and fish to feed them. (Lichtheim, 1.106)

2.3. Syria-Canaan. The paucity of creation texts may explain why few references to humankind as the image of God are yet attested in the region between Mesopotamia and Egypt. The terms *šlm* and *dmwt* (= Heb *dēmūt*) do occur together, however, in the bilingual Akkadian and Aramaic Tell Fekheriye inscription from the late ninth century B.C. In line 22 Akkadian *šalam* is rendered by Aramaic *šlm*, but in line 26 it is glossed by *dmwt*, thus suggesting (as in Hebrew) that the two words are synonymous. In any case, the reference in the inscription is to the statue of a king and not to an image of a deity.

3. The Old Testament Concept of the Image of God.

3.1. The Central Text (Gen 1:26-28). The concept of the image of God originates in the creation narrative of Genesis 1:1–2:3. That narrative is developed in a way that proceeds from the most general (“the heavens and the earth”) to the most specific (i.e., a single or soli-

tary being, Gen 1:26) and from the most inert to the most complex and dynamic. The purpose is to highlight humanity as the climax, the most significant, of all of God's creative work. As early as day five, sea creatures and birds are said to have been created "according to their kind" (Heb *min*, Gen 1:21), and the same is said of land animals of all types on day six (Gen 1:24-25). The word *min*, approximating perhaps the modern taxonomical idea of species, makes clear that all living creatures must be understood in terms of categories. That is, they find their identity by virtue of their resemblance to creatures of the same kind.

The creation of humankind is set off clearly from what precedes and not only because the human race does not belong to a category called *min*. First, God says, "Let us," a formula unique to the creation of humans. In all other cases, the phrase is merely "God said, 'Let there be . . .'" and the like (Gen 1:3, 6, 9, 11, 14, 20, 24). Second, humans are not compared to creatures of the same kind, for there are none with whom to compare humans. Rather, humanity is compared to God himself; that is, humanity is (in) the image and likeness of God. Third, the human race is charged with the responsibility of filling the earth and having dominion over it and everything on it, a responsibility frequently described as the creation mandate. Fourth, gender distinctions are clearly made, though obviously they are implicit in the creation of other living creatures (cf. Gen 2:18-20). It is as both male and female that humankind is to function as the image of God (Gen 1:28). Animals thus relate to one another within their own subhuman category, but in some grand and mysterious sense humankind resembles God.

The nature of this resemblance is determined largely by the meaning of the comparative particles in Genesis 1:26. God had determined to make humanity "*in* his image" and "*according to* his likeness." The preposition *bē* ("in") ordinarily signifies the idea of at, in, among, within, upon or according to (*HALOT*, 103-5). The traditional translation here is "in," a rendition that, in light of the following particle *kī*, is to be taken as "according to, after the manner of, as the same kind as" (*HALOT*, 453-54). The translation of prepositions, subordinate conjunctions and other such particles covers a wide semantic range, however, and is frequently governed by considerations of context, authorial

intention and theology. This is methodologically proper, but it opens one up to possibilities that transcend common points of view.

A basic issue here is whether humankind is being compared to God ontologically, that is, in terms of God's nature, character and attributes, or in some other way. Does being "in our image" (*bēšalmēnū*) and "according to our likeness" (*kidmūtēnū*) suggest that humankind is actually like God? If so, in what ways can this be true, inasmuch as humanity is, in fact, not God? The usual explanation is (1) that humans share with God such qualities as personality, will and sensibility, but (2) that they share these not in an essential manner but only in a derivative way. That is, humanity's resemblance to God is analogous but not ontologically identical. To be like God is to be patterned after him but, at the same time, to be qualitatively inferior to him.

Support for this understanding of the image exists in the creation narratives themselves. Both God and humans speak, are referred to by personal pronouns, exercise authority over lesser beings and have the capacity to make choices (Gen 2:17). On the other hand, God has always existed (Gen 1:1), whereas humanity was created (Gen 1:27); humankind is under the dominion of God and is therefore not equal to him (Gen 2:16); humankind is physical and corporeal (Gen 2:7), but God is spirit (Ex 33:17-23; cf. Jn 4:24); humans are mortal (Gen 2:17), but God is eternal. To be in the image of God cannot mean equivalence between deity and humanity, then, but only an analogous or corresponding relationship between the two.

An alternative understanding of the meaning of the *imago Dei* is that humankind is not *in* the image but *is*, in fact, the image. Humanity does not so much share with God his essential reality but, rather, is a representative of that reality. That is, humankind has a functional role to play, a role that requires no ontological commonness with God. Such a case rests grammatically on the well-attested use of the preposition *bē* as a so-called *beth-essentiae* (or *beth* of identity). This permits a translation such as "Let us make humanity *as* our image." The following comparison ("according to our likeness") does not have a *beth-essentiae*, it is true, but such a *beth* does occur with "likeness" (*dēmūt*) in Genesis 5:1 (*bidmūt*). Clearly, if a case can be made for a functional use of *beth* in Genesis 1:26 with *šelem*, then it can be made in Genesis 5:1 with *dēmūt*.

This opens the possibility that *kē* (usually translated “according to”) in Genesis 1:26 may also signify function rather than similitude (cf. Wis 14:17). Humankind, thus, *is* the image and *is* the likeness of God. The synonymous nature of *selem* and *dēmūt* also supports this option.

More persuasive than the grammatical evidence, perhaps, is the inner textual elaboration of what is meant by the image of God. Immediately after the resolution to make humanity “in the image” and “after the likeness” of God is the statement of purpose for human creation, namely, that humans have dominion over all God’s creation (Gen 1:26). Then again, following the statement of creation (Gen 1:27), God pronounced a blessing over the male and female, a powerful word of effective promise that humanity should fill the earth and dominate all its creatures (Gen 1:28). The connection between the notion of image and humanity as sovereign seems most apparent: to be the image of God is at the same time to be God’s vice-regent in the exercise of divine lordship.

Reflections of this role appear later in the narrative as well. When God created *Adam, he placed him in a garden for the express purpose of working (*ʿbd*) and overseeing (*šmr*) it (Gen 2:15). The garden—perhaps a microcosm of all creation—provided a testing ground for humanity’s role as image. That role is even more clearly in view in Adam’s naming of the animals (Gen 2:19), for in the naming he demonstrates his superiority to the things named.

The full significance of the *imago Dei* must, it seems, be drawn from both these notions. Humankind *is* in the image of God but also serves *as* the image. Humans have resemblance to God, even if limited, but stand in God’s place in the administration of God’s creation.

3.2. Derivative Texts (Gen 5:1, 3; 9:6). The terms *selem* and *dēmūt* occur next in Genesis 5:3 to describe Adam’s son *Seth, who, it is said, was in Adam’s likeness and image (in this order; not as in Gen 1:26). The word *dēmūt* appears also in Genesis 5:1 as a loose term to connect Adam to God. The point here is that Adam and all his descendants share in the privilege of imaging God, the *fall of the human race into sin notwithstanding. The image may be blurred, but it is not obliterated. This truth of continuing imaging is underscored in the instructions to the postflood world that murder must be avenged by capital punishment, since humankind is (in) the image

(*selem*) of God (Gen 9:6). The egregious nature of murder and the call for the death penalty mark the remainder of the OT law, thus testifying to the profound significance of the divine-human correspondence (cf. Ex 21:12; Lev 24:17; Deut 19:11-13).

4. The Image of God and Postbiblical Jewish Tradition.

Judaism in the Second Temple period and later shows surprisingly little interest in the concept of the image of God (cf. Wis 2:23; Sir 17:3). Philo understood the term *eikōn* in two ways: as visible and as an idea, including the concept of the logos. To Philo, man is the image of God in the sense that he is patterned after the logos, the archetype. *Genesis Rabbah* reports that when the Lord created Adam the angels thought he was divine and would have worshiped him had not the Lord caused him to fall asleep, thus revealing his mortality (*Gen. Rab.* 8:10). Moreover, humans are like the angels in that they stand upright, speak, understand and see peripherally. On the other hand, humans are like the animals since they eat and drink, procreate, excrete and die (*Gen. Rab.* 8:11). Clearly the notion here is that of humankind’s resemblance to the divine as well as its functional role.

Besides incidental references in the Mishnah (*m. ʿAbot* 3:14; *b. Meg.* 9a; 28a), only *b. Sanh.* 38b has any extensive comment on the *imago Dei*. For example, some rabbis suggested that only one man was created in order to “show forth the greatness of the Supreme King of kings.” At the same time, Rab Simon relates that a company of angels questioned the wisdom of God’s creating humans in his image, for God knew that humanity would become corrupt. The Lord’s response was to destroy those impudent celestial beings (*Gen. Rab.* 8:5). Yet the question of the meaning and purpose of humanity’s imaging remained unanswered.

5. The Image of God and the New Testament.

The NT translation of Hebrew *selem* (“image”), following the LXX, is invariably *eikōn*. The one occurrence of “likeness” with reference to the *imago Dei* is rendered *homoiōsis*, reflecting the LXX translation of Heb *dēmūt*. The four NT references to the image of God as a technical term are limited to Paul (see *DPL*, Image of God). He urges men not to cover their heads while at worship, for they are “the image [*eikōn*] and the

glory of God" (1 Cor 11:7). Paul also describes the "new person" in Christ as being "renewed in knowledge in the image [*eikōn*] of his Creator" (Col 3:10). But it is Jesus, in the apostle's theology, who is most preeminently the image of God. Paul speaks of "the light of the gospel of the glory of Christ, who is the image [*eikōn*] of God" (2 Cor 4:4), and most strikingly of Christ, "who is the image [*eikōn*] of the invisible God" (Col 1:15). Paul thus raises the idea of the *imago Dei* to a higher dimension by identifying Christ as such, an exaltation argued also by the author of Hebrews on the basis of Psalm 8, itself a commentary on Genesis 1:26-28 (Heb 2:6-8). Finally, James refers to human beings as being made "in the likeness of God" (Jas 3:9). "Likeness" translates *homoiōsis*, the term used by the LXX to render Hebrew *dēmūt* in Genesis 1:26. The sparing use of terms in the NT for the concept of the *imago Dei* ought not to suggest that it is unimportant to NT thought and to Christian theology, since NT authors would assume the foundational treatment of the idea in Genesis 1:26-27.

ISAAC

Isaac (*yishāq*), whose name means "laughter," is best known in his roles as the promised son of *Abraham and the father of *Jacob. Though viewed skeptically or marginalized by some OT scholarship, Isaac is presented in the biblical text as the longest lived of the patriarchs of Israel and, not insignificantly, his name is found in twenty-one biblical books, mostly in the Pentateuch. There are nineteen references to Isaac in the New Testament.

The presence of Isaac is between the promise of his birth (Gen 17) and the report of his death (Gen 35), with the major focus on his life from Genesis 21 to 28. Later uses in Genesis primarily refer to him as Jacob's father, to Abraham and Isaac as Jacob's forefathers or, climactically, to Abraham, Isaac and Jacob as recipients of the *covenant, which is the context of the majority of other uses in the Hebrew Bible. In the NT, roughly half the references to Isaac (besides genealogies) echo this historic OT linkage of patriarchal names.

1. Critical Assessment of Isaac

2. Isaac as Transitional Figure Between Abraham and Jacob
3. Isaac, Son of the Promise
4. Isaac, Husband and Father
5. Abraham, Isaac and Jacob
6. Isaac in the New Testament

1. Critical Assessment of Isaac.

Earlier generations of pentateuchal scholars were in general agreement concerning the main features of source analysis (i.e., J, E, D, P; *see* Source Criticism) of the Genesis narratives that include Isaac. However, that is no longer the case. With the exception of the tendency to date the final editing of the documents late (i.e., often postexilic), there is nothing approaching a current consensus in regard to composition (Martin-Achard).

The text of Genesis provides abundant information concerning the characters of Abraham and Jacob. By comparison, the details surrounding the character of Isaac are quite sketchy. Generally speaking, this phenomenon would appear to support the opinions of many scholars who view Isaac as a marginal, weak or inconspicuous character (Hicks). Isaac's early years are, for the most part, passed in obscurity. He was already a young man by the time of the Moriah account (Gen 22). Then, although the events regarding his arranged marriage to Rebekah are recorded in detail (Gen 24), Isaac recedes into the background of the Genesis narratives for another twenty years, until his twin sons Jacob and Esau are born (Gen 25). Only in Genesis 26–27 does Isaac receive sustained focus in the biblical text. After that, Isaac is mentioned infrequently until his death (Gen 35), underscoring his basically peripheral relationship to the movement of the narrative.

The biblical account conveys a portrait of the patriarch in a largely passive, even subordinate, light. For example, he shows no noteworthy reaction to his impending *sacrifice in Genesis 22. Also, it is his father Abraham who takes the initiative to acquire an appropriate wife for Isaac (Gen 24:1-9). Further, Isaac avoids direct confrontation with the shepherds at Gerar through compromise concerning water rights. In fact, it can be said that Isaac only plays a true leading role in Genesis 26.

Although Isaac may understandably be perceived as unremarkable, some commentators note elements setting Isaac apart from the other

patriarchs (Sarna). The circumstances of Isaac's birth are so clearly miraculous as to engender laughter (Gen 17:17; 18:12-13). He is the first newborn male child circumcised according to the stipulations of the covenant between Abraham and Yahweh (Gen 17:10-14; 21:4). As Abraham's heir (Gen 25:5) and only successor, Isaac provides the essential genealogical link between Abraham and Jacob, advancing the overall theme of "patriarchal promises." In addition, the prophet Amos later employed the phrases "shrines of Isaac" (Amos 7:9) and "house of Isaac" (Amos 7:16) as epithets for Israel, reaffirming the historical importance of Isaac as the fulfillment of the Lord's promised blessing of "seed," the recipient of the covenant, and acknowledging his key function as progenitor of Israel.

It can also be said that Isaac is morally distinctive in certain respects. He remains fully monogamous, this despite Rebekah's prolonged infertility (Gen 25:20-21, 26). Although Isaac originally set out for Egypt, he is the only one of the patriarchs who remains in the land of Canaan, even during famine (Gen 26:1-6). Consequently, Isaac enjoys the fruits of great agricultural prosperity, a cause for envy among the Philistines (Gen 26:12-14). Furthermore, he does not typically employ the manipulative behavior that often characterizes Jacob and Rebekah (Wenham), though Isaac is open for criticism regarding lapses of judgment. Out of timidity and fear for his life, he endangers the future promise of progeny by passing Rebekah off as his sister while sojourning in Gerar (Gen 26:7-10). Also, he apparently ignores the birth oracle to his wife (Gen 25:23) in attempting to give Esau the blessing of the firstborn (Gen 27:1-4).

Isaac's status of respect is revealed in his encounter with *Abimelech, who eventually recognizes that God is blessing Isaac (Gen 26:28-29). Following Abraham's death, the Philistines blocked up the wells in the area, a violation of the previous agreement between Abimelech and Abraham (Gen 26:15). When Abimelech approaches to petition Isaac, he is accompanied by a political advisor and a military officer (Gen 26:26), indicating Isaac has a status equal with a king. Isaac then initiates a pact, a function usually reserved for a king (Sarna). The two parties negotiate a mutually satisfying agreement confirmed by a common meal and sealed with an oath. In doing so, Isaac's peaceable nature and

desire to avoid conflict contrast markedly with the ongoing strife between his sons Jacob and Esau (Wenham).

Isaac is guilty of favoritism toward his first-born son, Esau. When Isaac, aging and blind, decides to transfer the blessing of birthright upon Esau, Jacob deceitfully substitutes himself in Esau's place, securing the blessing of the first-born for himself (Gen 27:1-29). Acknowledging the birthright as divinely sanctioned, and reminded by Rebekah of Esau's improper marriages (Gen 26:34-35), Isaac directs Jacob to travel to Rebekah's family in Paddan-Aram to procure an acceptable wife (Gen 28:1-2).

Thus, an overall assessment of Isaac reveals that he is actually a surprisingly complex figure. Possessing certain noteworthy strengths, he also manifests significant weaknesses. And even if he is not center stage in the biblical text nearly as much as Abraham or Jacob, Isaac is the most prominent "supporting actor" in the patriarchal narratives.

2. Isaac as Transitional Figure Between Abraham and Jacob.

The Isaac stories function as a hinge in the larger narrative structure of Genesis, looking retrospectively to Abraham and prospectively to Jacob. Isaac plays a significant role in advancing the theme of patriarchal *blessing, providing the necessary genealogical link between Abraham and Israel. The Lord's promise to Abraham is repeated in the latter stages of each patriarch's life (Gen 22:17-18; 26:24; 35:9-12), which is framed within the scope of divine promise (Fishbane). Isaac is frequently identified either as Abraham's son ("my son") or as Jacob's father ("my father"). Various forms of "bless" (*bārak*) predominate in the narratives, emphasizing the person of Isaac as the manifestation of promised blessing and the designated channel through which that blessing would flow (Gen 26:3-4, 12, 24, etc.). The Lord's distinctive promise of continual presence with Isaac is reiterated at several junctures in the text (Gen 26:3, 24, 28) and continues on through the Jacob narratives (Gen 28:15; 31:3, etc.).

Sophisticated structural analyses (e.g., Rendsburg; Fishbane) point out the parallel nature of the accounts of Abraham and Isaac, and Isaac and Jacob, creating a larger concentric unit. The general consensus is of a mirror image symmetry between the stories, which overlaps at vari-

ous points. Such an observation substantiates the deliberate arrangement of the patriarchal narratives (Rendsburg). Broadly speaking, the Isaac accounts continue a narrative cycle of crisis-tension-resolution in which the promised seed is jeopardized, resulting in a question regarding covenant fulfillment, then eventually brought to resolution through divine intervention (Gen 21:1-2; 22:15-18; 25:21). The stories are crafted using diametrically opposing concepts: barrenness/fertility, nonblessing/blessing and absence from land/homeland. These correspond to the three aspects of God's covenant promise: seed, blessing and *land.

Located just before the end of the Abraham narratives, the extended length of Genesis 24 indicates a distinctive function. The chapter develops the concept of covenantal loyalty through (1) Abraham's conscientiousness in seeking a proper marriage for Isaac, (2) the faithfulness of his entrusted servant and (3) God's divine providence in making the search a success (Ross).

Isaac's marriage and Abraham's death set the stage for the emergence of the next generation. Then the themes of strife, deception and fertility accompany the spotlighted birth of Isaac's sons in Genesis 25:19-26 (which later find their counterpart in Rachel's struggle in childbirth in Gen 35:16-20). The section creates the setting for the life of Jacob and foreshadows the development of later episodes.

Genesis 26 links the Jacob cycle with the Abraham cycle through several references to Abraham as well as the chapter's sequence of events, including famine, repetition of the blessing and promises, the disguising of Rebekah as his sister, and Isaac's renewal of the pact with Abimelech paralleling Abraham's experience in Genesis 20. In addition, Genesis 26 is mirrored by Genesis 34 (Mann; Fishbane), both passages containing events revolving around deception and making a covenant with a foreigner, as well as common vocabulary. These similarities, along with the fact that both Genesis 26 and Genesis 34 do not demonstrate an obvious relationship to their immediate literary contexts, negate any assumption of unorganized arrangement. If anything, the parallels argue for the arrangement of the narratives to display covenant transition between the generations.

3. Isaac, Son of the Promise.

The birth of Isaac furnishes the first tangible

manifestation of God's previous pledge to Abraham. The divine promise, initially made by the Lord with Abraham (Gen 12:1-3), consists of three elements: descendants, blessed relationship and land. This promise, which was reaffirmed and clarified several times to Abraham (Gen 12:7; 13:15-17; 15:7-21; 17:4-8; 22:16-18), is then repeated to both Isaac (Gen 26:3-5) and Jacob (28:13-15).

Since Genesis 12–50 concentrates on descendants or “seed,” Isaac is a key ingredient in the Abraham cycle, advancing the movement of the book as the fulfillment of the promise of an heir for Abraham. He also plays an indispensable role in the later Jacob cycle as Jacob's precursor. As the internal progress of the Genesis narratives narrows the scope of the blessings to a particular people through the use of genealogies functioning as literary linchpins between the patriarchal accounts, the birth of Isaac bridges the gap. He inherits the covenant promises as son and also becomes a father of the future nation of Israel.

The issue of progeny creates a series of tensions in the Genesis narratives in which the promised heir is jeopardized. Early on, Abraham passes off Sarah as his sister in Egypt (Gen 12:10-20). Similarly, Sarah is later allowed to become part of the harem of Abimelech (Gen 20).

Also, Abraham and Sarah are faced with the seemingly insurmountable problem of infertility, which leads Sarah to offer to Abraham her handmaiden Hagar, who bears a son, Ishmael (Gen 16). Ishmael is the potential heir as the only son of Abraham until the birth of Isaac, the son of promise (Gen 21:1-7). Sarah perceives Ishmael mocking Isaac as a threat to her son and his role, so Hagar and Ishmael are expelled (Gen 21:8-21).

Finally, the Lord's instruction to sacrifice Isaac on a mount of Moriah (Gen 22) seriously endangers the future of Abraham's seed. God tests Abraham's trust and obedience by instructing him to sacrifice his son of promise. Abraham's willingness to relinquish Isaac expresses his dependence on the Lord himself, not just on the divine promise alone. Abraham recognizes his son Isaac as a gift ultimately belonging to God, and the fulfillment of the Lord's covenant promises as a privilege, not a right. As a result, the Lord declares even expanded blessings on Abraham's descendants (Gen 22:16-18), who would be, of course, the “seed” of Isaac.

4. Isaac, Husband and Father.

The description of the death and burial of Sarah in the purchased family *burial cave at Hebron (Gen 23) does not even mention Isaac. However, even this silence begins the refocusing of the wider narrative toward Isaac. With the passing on of the mother of the son of promise, progress toward the next generation of the covenant is accelerated.

This overarching movement of the narrative is seen clearly in the proportion of the remaining two passages dealing with Abraham. The search for a wife for Isaac (Gen 24) is the longest narrative in the entire book (i.e., 67 verses). In stark contrast, the description of Abraham's marriage to Keturah, the ensuing large family and his death are summarized in only ten verses (Gen 25:1-10). With the end of the Abraham cycle, “the account of Abraham's son Isaac” (Gen 25:19 NIV), though most of it focused on Jacob, is set to begin.

After a twenty-year wait for children, Isaac's prayer is answered in the birth of twin sons to his beloved wife, Rebekah (Gen 25:19-26). The following verses (Gen 25:27-34) represent a compressed chronology and general preview of the lives of Jacob and Esau, especially Genesis 27.

In Genesis 26, as discussed above, the circumstances are clearly intentionally paralleled to Abraham's misportrayal of his wife in Genesis 12:10-20 and Genesis 20. Relatedly, in forbidding Isaac to go to Egypt, the Lord restates the covenant with Abraham to the second generation (i.e., Isaac; Gen 26:2-5). That Isaac is no “second-class citizen” in regard to the covenant in comparison to Abraham or Jacob is seen in the following extended chiasmic structuring, covering the three patriarchal generations (Luter):

- A (Gen 12:3) In you (Abraham) all the families of the earth shall be blessed.
- B (Gen 22:18) In your (Abraham's) seed all the nations shall be blessed.
- B' (Gen 26:4) In your (Isaac's) seed all the nations shall be blessed.
- A' (Gen 28:14) In you (Jacob) and in your seed all the families of the earth shall be blessed.

By Genesis 27, however, the focus is already beginning to shift away from Isaac to Jacob. Though an older and increasingly infirm Isaac (Gen 27:1-4) is the patriarchal bestower of blessing, the narrative basically pits a naive Esau ver-

sus the scheming team of Jacob and his mother Rebekah, with Isaac virtually a pawn in the unfolding stratagem. It is not immediately clear how much of Isaac's violent trembling, upon discerning the ruse (Gen 27:33), was anger and how much was brought on by the fearful realization of Isaac's shortsighted choice to ignore the birth oracle that "the older will serve the younger" (Gen 25:23 NIV).

The next set of verses brackets Jacob's time in Paddan-aram. After Isaac sent Jacob away to take a wife, but also to protect him from Esau (Gen 27:41—28:9), "the God of your father Abraham and the God of Isaac" (Gen 28:13 NIV) restated the covenant to Jacob (see above), who then bargained with God for safe return to "my father's house" (Gen 28:21). Then, twenty years later (Gen 31:38), when Laban overtook a fleeing Jacob, the phraseology "Fear of Isaac" is used twice (Gen 31:42, 53). This wording, which has been the subject of an unusual amount of scholarly speculation (Hillers; Puech; Malul), actually seems to be fairly easily understood in this context. In Genesis 31:42 "the God of my father" is simply further described as "the Fear of Isaac," which is reiterated in Genesis 31:53.

Isaac's name is then mentioned in Jacob's prayer about meeting Esau to the "God of my father Abraham" and "Isaac" (Gen 32:9; MT 32:10). It is not mentioned again until the Lord's restating of the covenant to Jacob (Gen 35:12) and then in Jacob's reunion with his father in Genesis 35:27, apparently shortly before Isaac's death (Gen 35:28-29).

5. Abraham, Isaac and Jacob.

After Isaac's death, his name appears five more times in Genesis. Jacob offered a sacrifice to "the God of his father Isaac" as he was leaving the land on the way to Egypt (Gen 46:1). Later, Jacob used Isaac's name twice in blessing Joseph's sons, Ephraim and Manasseh (Gen 48:15-16). Genesis 49:31 reports a charge to bury Israel (Jacob) in the family burial ground where Abraham, Sarah, Isaac, Rebekah and Leah were buried, back in the land. Finally, Joseph's request for his body to be likewise taken back to the Promised Land is the occasion for the first use of the phrase "Abraham, Isaac and Jacob" (Gen 50:24).

The eighteen additional references to Isaac in the Pentateuch all connect Abraham, Isaac and Jacob. Sometimes it is in the phrase "the

God of Abraham, the God of Isaac and the God of Jacob" (Ex 3:6, 15; 4:5; cf. 3.15), sometimes as recipients of the covenant (Ex 2:24; in reverse order in Lev 26:42) or of the "word" (Deut 9:5) or of some specific aspect of the promise, such as the land (Ex 6:8; 33:1; Num 32:11; Deut 1:8), that God "swore" to bestow (Deut 30:20; 34:4). The variant wording of "Abraham, Isaac and Israel" is found in Exodus 32:13.

Of the remaining fourteen uses in the Hebrew Bible, the wording "God of Abraham, Isaac and Jacob (or Israel)" is found in 1 Kings 18:36; 1 Chronicles 29:18; and 2 Chronicles 30:6; while the covenant with Abraham, Isaac and Jacob is in view in various ways in 2 Kings 13:23; 1 Chronicles 16:16; and Jeremiah 33:26 (variant spelling). Joshua 24:3-4 is a brief historical review at the beginning of Joshua's swan song. The uses in 1 Chronicles 1:28, 34 (2x) are genealogical. The only somewhat unusual uses are a variant spelling of Isaac in Psalm 105:9 (*yīshāq*) and references to the "house of Isaac" (Amos 7:16, variant spelling) and the "shrines [high places] of Isaac" (i.e., Israel; Amos 7:9, variant spelling).

6. Isaac in the New Testament.

The common OT phraseology linking the names of the three patriarchs of Israel is still highly visible in the NT. Of the nineteen references to Isaac in the NT, eleven (all in the four Gospels and Acts) are in genealogical contexts (Mt 1:2; Lk 3:34; Acts 7:8) or include the general wording "the God of Abraham, Isaac and Jacob" (Mt 22:32; Mk 12:26; Lk 20:37; Acts 3:13; 7:32) or place the three names in an eschatological context (Mt 8:11; Lk 13:28).

The remaining uses are more theologically oriented. Romans 9 uses Isaac as an example of God's election. Hebrews 11:17-18 shows how God's command for Abraham to sacrifice Isaac was not really in tension with the election of Isaac in the mind of Abraham the believer. James 2:21 considers Abraham's sacrifice of Isaac as a classic OT example of "working faith." In Galatians 4:28 Paul's elaborate allegory pictures Isaac symbolizing believers as "children of promise." Interestingly, only in Hebrews 11:20 is Isaac individually spotlighted for blessing Jacob and Esau by faith (see Gen 27).

ISHMAEL

Of the six persons in the OT bearing this name (cf. 2 Kings 25:23-25; 1 Chron 8:38; 2 Chron 19:11; 23:1; Ezra 10:22), the son of *Abraham by *Hagar is by far the most significant historically and theologically. Frustrated by the lack of a son to carry on God's covenant *promises to him, Abram bypassed his barren wife Sarai (see Sarah) at her suggestion and fathered a son by a surrogate mother, Hagar the Egyptian (Gen 16:1-4). While Hagar was yet pregnant she was forced out of the home by Sarai and alone in the desert received a revelation from the angel of Yahweh to name her expected son *Yismā'ē'l*, "God hears" (Gen 16:11). Hagar returned to Abram and Sarai but after some years was once again expelled, never to go back. This time Yahweh revealed to her and her son that they too would receive unusual blessing as a people.

1. Ishmael in the Old Testament
2. Ishmael in Post-Biblical Jewish Tradition
3. Ishmael in the Qur'an and Islamic Tradition
4. Ishmael and Historical Criticism

1. Ishmael in the Old Testament.

1.1. *The Setting and Circumstances of His Birth.*

Eleven long years after Abram had been given the promise of innumerable offspring (cf. Gen 12:4; 16:16), his barren wife Sarai was still unable to conceive. Abram had hoped that Yahweh might be content to allow Eliezer, his servant and adopted son, to fill the role of covenant heir (Gen 15:1-3), but Yahweh had foreclosed that option, promising again that Abram's own flesh and blood would do so (Gen 15:4). Abram's great faith notwithstanding (Gen 15:6), as time continued to elapse he and Sarai despaired once more of seeing the promise come to pass. They therefore resorted to a measure that, while conforming to the cultural mores of their time, proved to have disastrous consequences, namely, procreation by a substitute mother. Sarai's servant girl Hagar thus made her entry into the narrative as the unwitting cause of tension in the family. Eventually she would become the mother not only of a son but of a whole nation of people, a nation identified by Islamic tradition as the Arab people.

1.2. *His Rejection as a Son of Abraham.*

Abram's attempt to take matters into his own hands was clearly displeasing to Yahweh, and it was not long in bearing negative consequences. No sooner had Hagar conceived than she began to look upon her mistress with condescension (Gen 16:4). Sarai rebuked her husband for having given his blessing to the arrangement, and then made life so miserable for Hagar that she fled to the desert (Gen 16:6). The angel of Yahweh found her there and told her to return to Abram and Sarai. He then promised her that her offspring would be beyond counting. Moreover, her son, to be named Ishmael, would be a nomad living in the east. He would be a "wild donkey of a man," that is, one free of the restraints of sedentary life. His life would be marked by conflict with his neighbors as they all laid claim to rights and privileges in that hostile desert environment (Gen 16:7-12).

1.3. *His Blessing as a Son of Abraham.* Some fourteen years after Ishmael was born (Gen 16:16; 17:1; 21:1-5), Sarah at last was with child

and gave birth to *Isaac. Some time later after Isaac was weaned, Sarah observed Ishmael mocking (Heb *měṣahēq*, a play on the name Isaac, *yishāq*) Isaac. He may have been making fun of the toddler as he tried his first baby steps. Sarah saw no humor in it, however, and fearing for her own son's position as heir of the patriarchal promises, she expelled Hagar and Ishmael from the home (Gen 21:8-10). Abraham's consternation was assuaged by Yahweh, who told him that the *covenant descent would indeed be through Isaac but that he also had great blessing in store for Ishmael and his progeny as well (Gen 21:13). After being sent away by Abraham, Hagar and Ishmael made their way to the vicinity of Beer-sheba, where Ishmael, though in his mid-teens by then, was at the point of exhaustion and even death for the lack of water (Gen 21:15). With bitter lament Hagar implored the Lord to intervene. The Lord heard her and the boy and not only met the immediate need (Gen 21:19) but also promised that Ishmael, like Isaac, would be the founder of a great nation (Gen 21:18).

Abraham's relationship with Ishmael was distressingly difficult. Though he clearly understood that Ishmael was not destined to be the covenant heir after Genesis 17 (Gen 17:16), he nonetheless held on to the hope that God might relent in the absence of a son by Sarah. When Abraham was ninety-nine years old and Sarah eighty-nine and humanly speaking incapable of bearing children, Abraham pleaded with God that Ishmael might be an acceptable substitute (Gen 17:18). The appeal was denied, but Yahweh did affirm that Ishmael would be blessed by founding a great nation of twelve princes (Gen 17:20; cf. 25:16). In addition, Ishmael was forever bound to the Abrahamic covenant community by the rite of *circumcision, a sign that he and his offspring held special claim to the promises of God (Gen 17:9-14, 25-26).

Isaac and Ishmael were clearly not in a close relationship for the remaining years of Abraham's life (cf. Gen 21:21; 25:18), but they did come together for their father's burial (Gen 25:9). Thereafter Ishmael and his clan settled in various encampments in the Negev and Arabian deserts (Gen 25:12-18). Even then the families of Isaac and Ishmael intermingled to some extent, a case in point being Esau's marriage to Mahalath (or Basemath), a daughter of Ishmael (Gen 28:9; 36:3).

2. Ishmael in Post-Biblical Jewish Tradition.

On the whole the Mishnah and its talmudic elaborations do not speak well of Ishmael. The tractate *b. Šabbat* 146a says that impurity did not cease from the patriarchs until the third generation, Abraham's begetting of Ishmael being an example. As for the enumeration of Ishmael's years in the Torah, it served only to provide a chronology for Jacob (*b. Meg.* 17a). On the other hand, if one sees Ishmael in a dream, it is a sign that one's prayer is accepted as Ishmael's was (*b. Ber.* 56b). The tractate *b. Sanhedrin* 89b relates that Ishmael said to Isaac, "I am greater than you in the precepts, for you were circumcised at the age of eight days [when you could not protest], whereas I [was circumcised] at the age of thirteen years [when I could have protested]." The mocking of Genesis 21:9 is said in *Genesis Rabbah* 53:11 to allude to inheritance. When Isaac was born, everyone was happy. Ishmael said, "You are fools! I am the firstborn, and I will take a double portion." The *Zohar* explains the fact that God heard the cry of Ishmael in the desert on the grounds that though he was wicked, he was not yet twenty, and the Heavenly Court punishes only from the age of twenty (*Zohar* 1:118b). Finally, a *baraita*, eager to put Ishmael in a good light, explains that Ishmael repented during Abraham's lifetime (*b. B. Bat.* 16b).

3. Ishmael in the Qur'an and in Islamic Tradition.

The Qur'an identifies Ishmael as a prophet (Sura 19:54; 21:85; 38:49) but, more important, as one of the ancestors of the Arab people and a worshiper of Allah (Sura 2:127, 133; 4:163; 6:87; 14:39; 19:54). It was only after Muhammad moved to Medina that he discovered that Ishmael was a son of Abraham, and he thereafter linked the two as founders of the Kaaba in Mecca, the destination of the Hajj or sacred pilgrimage (Sura 2:127-129). Another important variation from the biblical presentation is the Qur'anic view that Abraham bound Ishmael, not Isaac, to the altar at Moriah (Sura 37:99-110). Later Islamic tradition relates that after Hagar and Ishmael were expelled by Abraham they wandered in the vicinity of Mecca until they happened upon the spring of Zemzem, which had burst forth from the ground. These refreshing waters from then on provided sustenance to Muslim pilgrims en route to Mecca. These same

sources relate that Ishmael settled in the area of Mecca, married a girl of the Djurhum tribe and learned Arabic from them. Subsequently the northern Arabs, or Musta'riba, were linked with Ishmael as their progenitor.

4. Ishmael and Historical Criticism.

Ishmael and Hagar appear in two narratives: Genesis 16 and Genesis 21:1-21. Source criticism generally describes Genesis 16 as part of the patriarchal history of the Yahwist, with Genesis 16:1b-2, 4-14 joined by a redactor with the Priestly genealogical framework of Genesis 16:1a, 3, and 15-16. Most of Genesis 21:1-21 is assigned to the Elohist, interrupted only by the P interpolation of verses 3-5. Such a reconstruction depends, of course, on the supposition of such sources in the first place, a supposition that lacks any independent and external evidence (Alexander; see Source Criticism).

Historically, the argument is made that the narratives in question have limited value in representing historical reality. Ishmael is viewed as the eponymous ancestor of people widely known not only in the OT but in cuneiform literature of the early first millennium. The stories about him are then considered to be etiologies whose purpose is to account for these peoples and their traditions and customs. Again, however, such conclusions have validity only if one rejects the historical credibility of the Genesis stories to begin with and only if one disregards the increasingly available extrabiblical literature attesting to the antiquity of Ishmaelite peoples and, hence, the figure who served as their ancestral source.

E. H. Merrill

ISRAELITES

Within the Pentateuch, the "children [sons] of Israel" (*bēnē-yisrā'el*, usually translated as the gentilic "Israelites") refers generally to the members of the twelve tribes of Israel—as an ethnic designation for the descendants of the eponymous ancestor Israel/*Jacob, or as a national designation anticipating the monarchic period (though during the period of the divided monarchy "Israel" was taken over as the national name of the northern ten tribes in distinction from the southern kingdom of Judah) or as a *covenantal/religious designation for the worshipers of the Israelite God Yahweh or followers of his *law. The designation of "Israelite" explicitly as a gentilic is found only in Leviticus 24:10-11 to designate an ethnically Israelite woman married to an Egyptian man, whose son was found guilty of blasphemy—serving to establish an equal law for those aliens and native-born among the congregation. However, the "children [sons] of Israel" as an ethnic or national identification occurs quite frequently (over five hundred times beyond references to the man, the God of, the land of and the like).

Within Genesis "the sons of Israel" refers, understandably, to the literal sons: the eponymous ancestors of the twelve tribes living as a family in Canaan and then finally in *Egypt (with the exception of Gen 32:32 [MT 32:33], which anticipates the later descendants), while "Israel" itself refers generally to the man himself. Genesis 46:8 and Exodus 1:1 use "sons of Israel" in reference to its genealogical list of seventy direct male descendants of Jacob (excluding wives) who had entered Egypt. After this point the reference is always to the collective descendants enslaved in Egypt (in distinction from the Egyptians) and then delivered from that *slavery to wander in the *wilderness as a congregation.

After the second name change of "Jacob" to "Israel" in Genesis 35, the two names of Jacob and Israel seem to be used interchangeably throughout the OT and are frequently paired in

poetic parallel (e.g., in Gen 34:7; 46:2, 5, 8; 49:2; Ex 1:1; 3:15; 19:3; Num 23:7, 10; 24:5; Deut 33:28; also in 2 Sam 23:1; 2 Kings 17:34; 1 Chron 16:13; plus numerous times in Psalms, Isaiah and elsewhere in the prophets). “Children [sons] of Israel” seems quickly to take over as the preferred name for the people (over 2,200 occurrences to Jacob’s 270, the majority of which refer to Jacob the man, though “house of Jacob” comes up regularly), referring collectively to “all Israel” in Joshua, Judges and Samuel in the earliest history of the nation, then subsequently only to the northern kingdom after the split and finally to Judah as the sole remaining remnant of Israel when the northern kingdom is out of the picture.

“Israelite” as the primary designation for the ethnic group, conceived as genealogically connected through the ancestry of Jacob/Israel, is joined in the text by the more generic designation of “[your] brothers” (*’āh*), “native” (*’ezrah*) or words related to “people” (*’am*) or “companion” (*rēa’*). The Israelites are also designated as the “people of [the children/sons of] Israel” or the “house of Israel” (compare “house of Jacob” in poetic parallel). The common usage of “brother” language in legal contexts to indicate Israelites reflects the kinship-based nature of society as well as a self-conception of common ancestry. Another parallel designation is the rather more ambiguous “Hebrew,” used as an ethnic designation, though probably originating as the socioeconomic status of a landless “client class” comparable to that of the *gēr* (see Alien, Foreign Resident) and only later taking on ethnic overtones (see Milgrom, 2252-53; Cross, 69; Wright, 253-59; Weippert; Loretz). Contrasting designations in the Pentateuch would be “alien,” “foreigner,” “stranger” (*gēr*, *nokrî*, *zār*—especially in legal contexts) or specific foreign people groups such as the Edomites, Moabites, Midianites and the like. It should be noted that within the laws placed at Mount Sinai, beyond the general designation of the collective congregation of the “children [sons] of Israel,” a distinction is regularly made between the ethnic Israelite (brother, native, Hebrew, etc.) and the ethnic “alien” living within the congregation or envisioned as later living within the land of Israel.

1. Israel as Eponymous Ancestor
2. Israel as National, Ethnic, Covenant Community
3. Archaeological Considerations

1. Israel as Eponymous Ancestor.

The Israelites (“children [sons] of Israel”) are so named in reference to the eponymous ancestor “Israel,” who is equated with Jacob the son of *Isaac and grandson of *Abraham, who became the father of the twelve tribes of Israel.

The two names, Jacob and Israel, seem to be used interchangeably in the biblical text of the Pentateuch within all of the traditionally identified sources, in both prose and poetry, and in reference both to the ancestor and to the anticipated nation. Most significantly, they are used as parallels in poetic texts identified by some scholars as the most ancient in the Bible (e.g., among the oracles of *Balaam in Num 23:7, 10, 21, 23; 24:5, 17).

1.1. Derivation of the Name “Israel”—Several Theories. Two accounts in Genesis of the renaming of “Jacob” as “Israel” survive. The first and most memorable comes in a mysterious *dream in Genesis 32, where Jacob wrestles with an angel and seemingly wins. The etymology given there (Gen 32:28 [MT 32:29]) is traditionally interpreted as deriving the new name from a root *śrh* (original *śry*, meaning “to fight, struggle”), with the explanation that he “struggled with God” (NIV) and overcame. This interpretation presents an apparent difficulty in that it suggests *opposition* between God and Jacob, his chosen servant, with the two struggling *against* each other. A somewhat more positive interpretation using the same derivation would be that “he struggled with [the help of] God,” but the wrestling scene unequivocally presents an image of opposition rather than support. From a theological perspective, conflict with God, and the necessity of ultimately submitting to him, is part of the human condition and integral to the gospel. Still, from a historical perspective, this is a rather puzzling image to be chosen to represent the relationship of the honored ancestor with his God, let alone to represent a nation.

The second, somewhat less colorful renaming account is found in Genesis 35:10. This account leaves out the negative connotations of the struggle and associated *śrh/śry* etymology. Instead, it is preceded by Jacob’s building of an *altar upon his return to Bethel and is directly followed by a statement of covenant renewal couched in the terms of divine *blessing from Genesis to “be fruitful and multiply.” The new name is not actually used in the text for the man until after this point, being found only in two in-

stances where it indicates the future nation (Gen 32:32; 34:7).

Much debate continues as to the proper translation of the name and its real meaning. G. V. Wigram translates the Genesis 32 etymology, “as a prince you have power with God,” presumably from the Hebrew root *śrh* II (“rule[?],” comparable to *śrr*, “to rule over or have power as a prince,” denominative of *śar* [“prince”]; cf. Hos 12:3 [MT 12:4]: “by his strength he had power [was a prince] with God”). BDB lists “Israel” under the root *śrh* I (975a), “persist, persevere,” citing an Arabic cognate and noting Hosea 12:4 (MT 12:5), where the construction is made as if from a nonexistent root *śûr*. The name then translates as “El persists” or, in the jussive, “Let El persist” (noting the usual translation as “Let El contend”), with the explanation translated as “he persevered with God.” The literature (as summarized by Danell) most often reconstructs an original root *śry*, interpreted by various scholars as meaning “to fight,” “to persevere,” “to shine” and “to rule, dominate.” Two more proposals suggest deriving the name from *y/wśr*, “to heal” (Albright), or “to cut or judge” (Coote). Yet another proposal derives the name from *ʾtr* (“happy, blessed”; Proto-Semitic *t* corresponds to Hebrew *š*), connecting it with the divine name “Asher” (consort of the goddess Asherah) to mean “Asher is God” (Naor, followed by Halдар). Another proposal is that of E. Sachsse (1914) for *yśr* (“be just, right”).

For these last two proposals, the chief difficulty is explaining the shift from *š* to *ś*, which, although graphically identical in Hebrew prior to Masoretic writing conventions, would certainly have been heard and understood differently. The spelling of “Israel” in the Merneptah Stela (Stager, 1985b) with *s* rather than *š* is compelling, though not absolutely conclusive since Egyptian inscriptions do not always represent semitic sibilants accurately in the transliteration of foreign names (e.g., the sibilant in Jerusalem is transliterated as *š* in the Execration Texts but as *s* in the Amarna Letters, as observed by B. Mazar, 2.698). The arguments of E. Sachsse and E. Naor for a dialectical variation as suggested by the *sibbōlet-sibbōlet* incident in Judges 12:6 are not convincing. Albright’s arguments for a *yod/waw-sibilant-resh* root, based on the Assyrian inscription of Shalmaneser III (Albright 1927, 166-67), make the *yśr* derivation more likely than an *ʾtr* (*ʾśr*) derivation.

F. K. Wong bolsters Sachsse’s proposal with the arguments of Albright and then uses a political-historical argument for a transition in interpretation of the name to explain the shift from an original *śin* to the *śin* preserved in the Masoretic tradition. In Wong’s theory the personal name granted to Jacob (and later the national name) originally derived from the root *yśr* (“be just, right”), recorded by the original author in the Piel stem as *yīśśir-ʾil* (“El has made right,” “El has made righteous” or “El has justified”; this is a hypothetical, reconstructed D-stem form in early Hebrew, based on the work of Huehnergard). In a purely consonantal script, the etymological explanation of Genesis 32:28 would have been written as

kyśrt mʾlhm Because you are right with God
wʿmʾnśmwtkl With men you will prevail.

This meaning fits well with the narrative of Jacob’s reconciliation with his brother, characterizing a fundamental change in the pattern of Jacob’s life and his relationship with God. Wong theorizes that following the division of the nation, and the subsequent use of this name by the northern kingdom with Jeroboam’s rival sanctuaries at Bethel and Dan, there was an historical transformation of the interpretation of this name from the positive connotations of “El has made right” to the negative connotations of one who “strives against God.” This suggestion highlights parallel designations of the people of Israel in early texts such as Deuteronomy 32:15; 33:5, 26 and Isaiah 44:2 as Jeshurun (*yěśurān*, “righteous ones”), Balaam’s oracle in Numbers 23:10 (with *yāsār* [righteous] parallel to “Israel”) and references to the “Book of Jashar” in Joshua 10:13 and 2 Samuel 1:18. Yahweh is also designated as *Yāsār* (Righteous One), and Isaiah 40:4 also uses the roots *yśr* and *ʿqb* as a contrasting pair. Finally, within the context of the renaming story (Gen 32), a *yśr* root makes a suitable contrast to the prior Jacob as “deceiver” or “usurper,” eliminating the puzzling derogatory connotation of the new name.

By explaining that this derogatory understanding of the name (surprising for the divinely assigned name of the revered ancestor or of God’s “chosen” people) was the result of a mistaken (or perhaps prophetically purposeful) Masoretic pointing of the name spurred by polemic against the northern kingdom that had

adopted it, Wong offers an intriguing solution to an old problem. The resultant theological implications of a name change from “He deceives/supplants” to “God has made right” are profound. The proposed *yśr* derivation does not fit the narrative context as it stands in Genesis 32:22-32, however, where the new name is given at the conclusion of a wrestling match in which Jacob was injured. Moreover the passage itself suggests a laudatory connotation for the name as received (Gen 32:28), praising Jacob’s perseverance during difficult, though at times self-imposed, circumstances.

1.2. Theological Significance of the Jacob-Israel Name Change. Within the narrative of Genesis, the renaming of Jacob seems clearly intended as an act of redemption, parallel to God’s forgiving treatment of *Adam, *Eve and *Cain, where the sinner is punished (conventionally by *exile) yet continues to be loved and protected. The identity of “Jacob” as a “deceiver” was earned in his interaction with his older twin brother, *Esau, first by tricking him out of his birthright and then by stealing his father’s blessing. The power struggle here, arising out of sibling rivalry, had potentially disastrous consequences, as witnessed by the Cain and Abel conflict. Esau was provoked to the point of murderousness, forcing Jacob to flee in fear for his life. The immediate result was Jacob’s forced exile from the Promised *Land (a traditional punishment in the Bible), and the long-term result was the establishment of a pattern of deception in Jacob’s life that was repaid to him sevenfold (as he was himself deceived by his father-in-law Laban in regard to his wedding and his wages, by his favorite wife Rachel’s stealing the household gods, by *Simeon and *Levi in the Shechem debacle, by *Reuben in unlawfully taking his father’s concubine Billhah [Gen 35:22], by his sons in regard to *Joseph’s faked death and enslavement, and by Joseph in his false accusation of *Benjamin). Ironically, the deceit seems to have worked to fulfill God’s purposes as revealed in the prophecy to Rebekah (possibly her motive for intervening to plan the deceit with him). Still, this derogatory understanding of Jacob’s name is unexpected for a “chosen” ancestral protagonist or, for that matter, as a name that a mother would assign to her newborn child. The name must surely represent a reflection on these later events of his life, from which the renaming was clearly *intended* to signal a change.

However the new name is interpreted, it must be understood as having a positive connotation.

The change of Jacob’s name coming at the point of reuniting with his wronged and potentially murderous “unchosen” twin brother Esau signals a reconciliation from a relationship of deceit to one that God has restored and “made right.” The text here intentionally builds up the tension with expectations of well-deserved retribution (e.g., Gen 32:6-11), climaxing with the wrestling episode in Genesis 32:24-32. Reconciliation with Esau was rendered possible only by God’s transformation of Jacob’s heart and character, as symbolized by the change in name. Instead of grasping after power not his own, he learned to grasp after God himself in humble determination to know God’s own name and character. Thus his own name and character were transformed.

Jacob’s subsequent humble approach to his brother, bowing down and declaring himself to be Esau’s servant, seems a reverse fulfillment of both the prophecy to Rebekah (Gen 25:23) and the blessing of Isaac (Gen 27:29), since we see that it was Jacob who, out of fear of his brother, was “exiled” from the land of promise and enslaved by his father-in-law, and Jacob who now bowed down as a servant (Gen 33:3-11). Yet by leaving his habits of self-interested grasping behind, he was able to realize God’s fulfillment, and the reconciliation was sealed by Esau’s unexpected generosity of forgiveness (Gen 33:4, 9; though still treated with some suspicion by Jacob in Gen 33:10-17, as similarly between Joseph and his brothers in Egypt in Gen 50:15-21). Thus Jacob’s change of name signaled a break in the pattern previously established in his life, ultimately allowing God’s plans to be fulfilled.

2. Israel as National, Ethnic, Covenant Community.

The “national” history of the Israelites cannot be said to have begun until the Iron Age, when they gained sovereignty over a territory substantial enough to act as a “nation.” However, in their own self-understanding the Israelites traced themselves back through a long period of enslavement to an individual family, with the later tribal groupings explained as descending from brothers, the sons of a single father (through four mothers). The catalyzing event for their emergence into nationhood in this self-conception was the *exodus from Egypt, when

Yahweh their God miraculously freed them from oppressive slavery in Egypt and brought them into the land of Canaan that had been promised to their forefathers.

Thus, at its base, the term *Israelite* must be acknowledged as conceiving an ethnic group, bonded by *genealogical ties of kinship, traditionally presented as twelve tribes descending from the twelve sons of Israel (but without a clear one-to-one correspondence, as Joseph's sons count for two of these tribes, while the descendants of *Levi are not allotted a separate territory of their own and thus are not counted among the "tribes," revealing a symbolic intentionality in the number). This basic kinship grouping, supplemented by those who joined themselves to it in the exodus, provided the basic structure of Israelite society.

Its use in the Pentateuch also anticipates the postconquest establishment of a nation, such that "Israelite" quickly became a national designation, clearly intended to indicate the people as a whole—a unity of the original twelve tribes—acting as a more-or-less-unified political entity (somewhat loosely allied for mutual defense) within the borders of its Promised Land. The careful arrangement of the tribes within the camp in the wilderness anticipated their distinct existence later within the land.

This national conception of what it meant to be "Israelite" is vastly overshadowed in the Pentateuch by the religious conception of Israel as a covenant people bound together by mutual loyalty to a single God—Yahweh—as his special, "chosen" inheritance, and by mutual obligations of upholding the covenant law. As can easily be seen from the stories of sibling rivalry in Genesis, incessant complaining in the wilderness (see *Murmuring*), and intertribal squabbling in Judges, kinship ties were not enough to hold them together as a nation. It was their mutual worship of the one God Yahweh, the "God of the fathers," that supplied their strongest unifying strand. "Israelites" are conceived ultimately as a religiously based covenant community, bound together chiefly by a voluntary oath of loyalty to Yahweh and his covenant as his chosen people. Anyone straying from this covenant was to be excised from the community.

Along with that religious conception, then, was founded a more concrete conception of the Israelites as a people bound by covenantal *law: defining themselves as "brothers" and "natives"

over against "foreigners," "strangers" and "aliens"; bound in community by the strictures of the law that governed all aspects of life (food, work, worship, sexuality); shown physically in their very bodies by rites of *circumcision; and demonstrated daily and weekly by the practice of *sabbath and by dietary restrictions as well as by distinctive traditions of worship and ideals of justice (such as political egalitarianism). More than anything else in the Pentateuch, it is probably obedience to the law that most properly defines *Israelite*.

3. Archaeological Considerations.

That "Israelites" existed as a people by about 1200 B.C. can hardly be disputed in view of their attestation as such in the Merneptah Stela just prior to that date, along with several Canaanite cities of the time (including Ashkelon, the corresponding pictorial representation of which clearly shows a Canaanite rather than a Philistine population), as noted by Stager (1985b).

The *archaeology of Syria-Palestine reveals a significantly new settlement pattern at the beginning of the Iron Age (c. 1200 B.C., to which most scholars would date the Israelite conquest or settlement). As argued by L. Stager (1985a), the significant numbers of new settlements appearing in the central hill country at the beginning of the Iron Age are greater than can be accounted for by natural population growth, strongly indicating the immigration of a new population group into the area at this point. Based on the later emergence of the Israelite nation with power centers in precisely these areas, combined with the biblical record, it seems reasonable to associate these new settlements with the arrival of the Israelites.

It is difficult, however, to distinguish Israelite ethnicity based on archaeological artifacts, as the cultural remains of these new Israelite settlements appear identical to (if somewhat cruder than) those of the Canaanites that preceded them. Pottery and architecture generally associated with Israelite settlements seem basically derivative of Canaanite forms, if perhaps more limited in their variety. This general indistinguishability of Israelite cultural remains from Canaanite has given rise to several alternative theories of Israel's establishment as a nation in the land. They provide alternatives to the biblical "conquest" model and are much debated. Some see Israel as having originated either

among nomadic elements in Syria-Palestine that for some reason adopted a more settled way of life at the beginning of the Iron Age, or else among a disenfranchised, landless peasant population of Canaan that revolted against the societal structure of the Canaanite city-state and broke off to establish their own poor settlements in the less fruitful central hill country (hence the radical egalitarianism of biblical law). While some elements of these theories may be useful in explaining some facets of the emerging Israelite culture, the Israelite self-understanding of who they were and where they came from explains much more and would be extremely difficult to relegate to a fictive creation.

The biblical conception of the Israelites is that they began as a small family band of immigrants from *Ur in Mesopotamia toward the beginning of the Middle Bronze Age (thus probably inheriting a number of Mesopotamian legal and literary traditions from the Ur III dynasty). They settled as “resident aliens” in Canaan and were subsequently enslaved in Egypt as refugees from famine. It was in Egypt that they grew to national proportions before their miraculous escape. They then had to endure a generation of harsh nomadism in the desert before successfully taking over a substantial territory among the Canaanites. The biblical text does give some indication that the Israelite community emerged as a “mixed multitude,” incorporating a number of diverse elements within it from the beginning (including Canaanite, Midianite and Egyptian). Even within this scenario of diversity, however, retention in the national literature and self-understanding of this unusually inspiring story of the core family as applied to the whole, along with the basic cultural assimilation of their subsistence economy, should not be surprising.

As argued by Stager, a few distinctive elements in Israel’s material culture may be found. Statistical survey studies of faunal remains indicate a mysterious lack of pig bones in Israelite settlements as compared to Philistine or Canaanite settlements, despite an ideal habitat and an abundance of acorns for fodder in the hill country. This surprising absence may arguably be attributable to the Israelite dietary taboo against pork (*see* Foods, Clean and Unclean). Similarly, a lack of male divine figurines in Israelite cultic settings as compared with non-Israelite shrines may reflect the Israelite aniconic

tradition as found in the Ten Commandments (*see* Decalogue), prohibiting images of the (male) deity. For the later monarchic period, the discovery of four-horned *altars at outlying locations, having been intentionally dismantled at a time corresponding to religious reforms seeking to centralize the cult in Jerusalem, may be clearly identified within the evolving ideological framework of Israelite society. The inscriptions of enemies offer occasional outside confirmation of various aspects of Israelite identity as well.

Historically and archaeologically the Israelites were part of a wider phenomenon at the beginning of the Iron Age, namely, the emergence of ethnically based national bodies encompassing blocks of territory that replaced a previous system of separate city-states. The Moabites, Edomites, Ammonites, Philistines, Phoenicians and Arameans, for example, also emerged as ethnically based nation-states following the same pattern, possibly afforded by the relative weakness of Mesopotamia and Egypt, both of which had lost their dominating power at this point in history.

The picture of Israel in Judges, following the conquest, is one of considerable disunity among several loosely related tribal groups with distinct dialects. It is likely that the encroachment of the Philistines as a constant military and territorial pressure did much to consolidate Israel as a nation by creating a necessity for mutual defense against this sustained threat. The intentional affirmation of genealogical ties as recorded in Genesis, along with their strategic reinforcement by intermarriage and adoption practices designed to consolidate unity and inheritance, then served this political necessity. Yet indications of strife even among these ancestors belie any solid unity—a reality foretold by the family stories of strife among brothers in the Pentateuch.

ISSACHAR

Issachar was the ninth son of *Jacob and the fifth son of Leah (Gen 30:18; 35:23). As is the case with the other sons of Jacob, Issachar died in Egypt and was buried there. Yet Issachar lived on in a significant way through the descendants who bore his name: one of the twelve tribes of Israel. The Pentateuch presents the tribe Issachar as a hard-working and loyal group of peo-

ple worthy of the honor accorded them by later Jewish tradition.

1. Issachar, Son of Jacob
2. Issachar, Tribe of Israel
3. Issachar in Jewish Scholarship

1. Issachar, Son of Jacob.

Little is known of Issachar, the son of Jacob and Leah, and not much more is known about the tribe of Issachar. Even the name Issachar is of uncertain meaning. S. Beyerle unsuccessfully attempts to link the name to an Egyptian deity Sokar, but some scholars think the name reflects a combination of the words *yīššā' šākār*, "he takes wages," or *'is šākār*, "man of wages" (Leah's link in Gen 30:16, 18 is by sound rather than etymology.) Brown, Driver and Briggs note that the name could be derived from *yēš sākār*, "there is recompense," though they regard *'is šākār* as more probable. The name is found at Mari with the meaning "May God be gracious," *yaskur-il* (Strus, 68 n. 32). That derivation suggests an allusion to a day-laborer, a worker, an allusion indicating the character of the tribe.

2. Issachar, Tribe of Israel.

The tribe numbered 54,400 in Numbers 1:29 and 64,300 in Numbers 26:25 (see Historical Criticism §4.2). Issachar took its place on the east side of the *tabernacle (Num 2:3-5). The tribe is mentioned briefly when Israel left Mount Sinai (Num 10:15), when the spies explored Canaan (Num 13:7) and when the boundaries for Canaan were assigned to the tribes (Num 34:26). In Numbers 7:18-23, Issachar is second only to the tribe of *Judah in bringing its offerings for the dedication of the tabernacle. In Deuteronomy 27:12, Issachar is one of the tribes that bless the people of Israel on Mount Gerizim.

2.1. Issachar in the Last Testament of Jacob.

Some controversy has surrounded the tribe of Issachar and the varying views of Issachar's relationship with the surrounding Canaanite tribes after the conquest of *Joshua. Most critical scholars think that Genesis 49:14-15 reflects a time when Issachar submitted to *slave labor rather than do the hard work of subjugating the land. The oracle in Genesis 49:14-15 is generally considered one of derision of the freemen who had let themselves be enticed by the fertile plain and had thereby become humiliated as beasts of burden. Noth suggests that in the early days *Zeb-

ulun, *Dan and *Asher (see Judg 5:17) paid for their settlement on territory controlled by Sidon by providing forced labor in the Sidonian ports, while Issachar did the same for Deborah to the south (Noth, 79). These points of view, however, rest largely upon critical presuppositions in the translation of Genesis 49:14-15 and in the reconstruction of the history of Israel.

A letter in the Amarna texts from approximately 1400 B.C., however, speaks of men working at forced labor at Shunem, a town within the territory of Issachar. This lends credence to the commonly accepted viewpoint. R. de Vaux writes, "The eastern part of the plain of Jezreel must therefore have been colonized by groups of people coming from Zebulun, who chose to live as serfs on good land rather than as shepherds or herdsmen in a poorer district" (de Vaux, 664).

There are several things about the customary interpretation, however, that are unsettling. First, the two blessings before Genesis 49:14-15 and the several blessings that follow are positive. The only two clear rebukes in the chapter are in verses 3-4 and 5-7, and they obviously refer to historical events of the past. We would expect another rebuke to do the same, but there is no record of any shameful deed done by Issachar.

Like other verses in the chapter, these verses contain an animal comparison. The positive nature of all the other animal comparisons in Genesis 49 suggests a positive thought here. Verse 15 pictures a strong donkey that has been working. The donkey has been carrying two saddlebags, but it has paused to "rest from exertion."

I. Mendelsohn reflects the common critical viewpoint, taking *lēmas* ^ʿ*ōbēd* to mean "a slave at forced labor." The phrase *lēmas* ^ʿ*ōbēd* appears in the OT for the first time in Genesis 49:15. In this archaic chapter, the phrase can be taken in an elementary sense to refer to "a body of workers that works the land," that is, a tribe that made the transition from the nomadic existence of the desert to the pastoral existence in Canaan. The meaning "a slave at forced labor" is a later development of the phrase, perhaps occasioned by the entrance into Canaan and the use of that phrase there. The LXX supports the elementary meaning of the phrase, translating, *kai egenēthē anēr geōrgos*, "and he became a farmer" (or "tiller").

This interpretation yields a consistent picture of Issachar, viewing Issachar in a positive sense,

thereby allowing verses 14-15 to mesh well with the context. The two verses say that Issachar is a sturdy, hard-working donkey who is resting from his labors. Such will the tribe continue to be in the future.

In verse 15, Issachar sees a beautiful, pleasant land. Part of Issachar's inheritance was to include the fertile plain of Jezreel. "Resting place" (*mēnūhā*) is a term for the settled life in contrast to the nomadic life (see Deut 12:9; Ps 95:11). When Issachar sees how good this inheritance is and how productive the land may become, he will continue his hard-working efforts. Genesis 49:14-15 should thus read, "Issachar is a sturdy donkey lying down between two saddlebags. When he sees how good is a resting-place and how pleasant the land, he will bend his shoulder to bear, and he will become a body of workers that work the land."

The fact that this tribe produced Tola, Deborah and Barak and was praised by Deborah in Judges 5:15 for its part in the battle against Sisera strongly suggests that Issachar did not trade its freedom for peace with the Canaanites.

2.2. Issachar in the Last Testament of Moses. The picture painted in Deuteronomy 33:18-19 includes Zebulun, paired with Issachar, not only because they were both sons of the union of Jacob and Leah, but also because they received their inheritance next to one another in Canaan. Zebulun and Issachar found the trade route that led through the Plain of Jezreel in their backyard and thus were in position to control the trade routes through Israel.

3. Issachar in Jewish Scholarship.

In Jewish scholarship, the proximity of Issachar to Zebulun in the last testament of Jacob (Gen 49:13-15) and the pairing of Issachar and Zebulun in the last testament of Moses (Deut 33:18-19) set up the two tribes as a paradigm for life. Zebulun was the merchant, while Issachar was the scholar who studied the Torah. Zebulun's livelihood made possible Issachar's important work of study, and, according to rabbinic exegesis, Issachar made a more worthy choice.

JACOB

Jacob was the third of the great Hebrew patriarchs and second born of the twins of *Isaac and Rebekah. He is presented as a man who sometimes manifested flashes of great faith and in his later years showed a deep spirituality. But in spite of these excellent qualities Jacob was, in some ways, an unusual hero, for especially in his early life he fluctuated between godliness and worldliness. He was sometimes conniving, as when he deceived his father. He was a crafty opportunist in his dealings with his brother *Esau. He was an embittered and angry father when *Joseph was lost to him. He was a man who was sometimes selfish to the extreme of unethical conduct in some of his dealings with his uncle, Laban. Concerning some of these faults, however, there may have been extenuating circumstances. His twin, Esau, was far more forceful and less interested in spiritual matters than he; Laban was himself a deceitful charlatan; and his mother, Rebekah, may have encouraged him to assert his promised dominance over his brother.

1. Literary Pattern
2. Early Life
3. Jacob in Haran
4. Jacob's Final Years
5. Evaluation of Jacob.

1. Literary Pattern.

The Jacob material consists of a number of biographical episodes that constitute almost all of the “generations [*tôlēdôt*] of Isaac” (Gen 25:19—35:22). This material is sandwiched between that of *Ishmael (Isaac's elder brother) and Esau (Isaac's elder son), neither of whom was a part

of the line of promise. Given the suggestive boundaries, and noting that certain occurrences seem to be closely parallel to one another, it has been proposed that individual events of Jacob's account are unified in the literary pattern of a chiasmic structure. The most complete and convincing presentation of this position is the analysis of M. A. Fishbane:

A oracle sought; Rebekah struggles in childbirth; *bēkōrā* (“birthright”); birth; themes of strife, deception, infertility (Gen 25:19-34)

B interlude; strife; deception; *bērākā* (“blessing”); covenant with a foreigner (Gen 26:1-35)

C deception; *bērākā* stolen; fear of Esau; flight from the land (Gen 27:1—28:9)

D encounter (verb: *pāga*⁶) with the divine at a sacred site near border; *bērākā* (Gen 28:10-22)

E internal cycle opens; arrival; Laban at border; deception; wages (Gen 29:1-35)

F (Gen 30:1-43)

Rachel barren; Leah fertile (Gen 30:1-24)

Rachel fertile; Jacob increases the herds (Gen 30:25-43)

E' internal cycle closes; departure; Laban at border; deception; wages (Gen 31:1-55)

D' encounters (verb: *pāga*⁶) with divine beings at sacred sites near border; *bērākā* (Gen 32:1-32)

C' deception planned; fear of Esau; *bērākā* gift returned; return to land (Gen 33:1-20)

B' interlude; strife, deception; covenant with a foreigner (Gen 34:1-31)

A' oracle fulfilled; Rachel struggles in childbirth; *bērākā*; death, resolutions (Gen 35:1-22)

This pattern demonstrates skillful literary foreshadowing that builds exquisite dramatic tension. Many of the themes recur, to the delight of the reader. Some of the wordplays give insight into the author's purpose.

2. Early Life.

The material on Jacob's early life is contained in the A and C sections of the chiasm (Gen 25:19-34; 27:1—28:9; see 1 above). Before narrating the episode with Esau, the author recounts three portentous matters: (1) Rebekah was the sister of Laban of Paddan-aram; (2) she was barren; and (3) after Isaac interceded, she conceived twins, whose prenatal struggles caused her considerable difficulty.

Jacob and Esau were born when their parents had been married for twenty years (Gen 25:20); Isaac was sixty years of age at the time (Gen 25:26). The twins were born, probably at Beer-lahai-roi at about 2006 B.C., as an answer to prayer (Gen 25:21). Prenatally they struggled within Rebekah, a harbinger of their struggle throughout their lives and the future history of their respective progenies. In the OT world, the naming of a child was an auspicious occasion. Esau ("hairy") was named because of his appearance, but Jacob's name ("one who takes by the heel" or, by derivation, "one who supplants," similar to the word for "heel") came from his unusual behavior at birth. Jacob and Esau were twins, but there was little resemblance between them. As they grew their differences became manifest, for Jacob chose a quiet, domestic life, staying close to home, probably working closely with the shepherding business. He was "a quiet man, living in tents" and totally unlike his brother, who pursued the perilous work of a hunter (Gen 25:27). Jacob was the favorite of his mother, whereas his father was partial toward Esau.

Under normal circumstances, the firstborn son received certain inheritance rights, including a double portion of the material inheritance, family headship with a special emphasis on spiritual leadership and the father's "deathbed" *blessing. Such customs reflected the practice of the ancient Near Eastern world. For example, the family estate was typically divided into a number of portions equaling the number of sons plus one, and the firstborn son would receive two portions. With regard to leadership of the family, C. F. Keil writes, "With

the patriarchs, this chieftainship included rule over the brethren and the entire family [Gen 27:29], and, of even greater significance, the title to the blessing of promise [Gen 27:4, 27-29], which included future possession of Canaan and the covenant fellowship with Jehovah [Gen 28:4]" (Keil, 1.268-69). By actual birth order, Esau was in line for these special privileges of primogeniture, but God gave Rebekah, while she was carrying the twins, a special message indicating, among other things, that "the elder shall serve the younger" (Gen 25:23). Although God's sovereign purpose gave Jacob these "firstborn" privileges, the manner in which Jacob appropriated those advantages is seen by some as devious and conniving, which was demonstrated in two separate events.

2.1. The Birthright. The first occasion of Jacob grasping Esau's firstborn position was in the acquisition of the birthright. The incident occurred one day when Jacob was cooking lentil stew as Esau was returning from a hunting expedition. It should be noted that in the culture of that time, food preparation was done by both men and women. Jacob took advantage of his brother's famished condition and purchased Esau's birthright for a portion of the stew. Although Jacob grasped this opportunity, the narrator comments that "Esau despised his birthright" (Gen 25:34). According to Hebrews 12:16, Esau was a "godless" person, and Malachi 1:2-3 reports that Yahweh loved (had a covenant relationship with) Jacob but hated (had no covenant relationship with) Esau.

2.2. The Blessing. The second occasion of Jacob's devious manner of acquiring his promised rights occurred when his father was 137 years old; this material is presented in chiastic section C (Gen 27:1—28:9; see 1 above). Either Isaac was unaware of the exchange of birthright or did not recognize the transaction as valid, for he offered one of the specific elements of the birthright—the deathbed blessing—to Esau. Isaac commissioned Esau to hunt and prepare venison in order to induce the best possible frame of mind for giving this blessing.

2.2.1. Deception of Isaac. Rebekah overheard her husband's words to Esau. Since such a blessing was considered as binding as a modern legal document would be, she and Jacob acted quickly to procure the blessing for Jacob himself. They deliberately deceived Isaac by Jacob's impersonation of his brother, by direct falsehood and by

subterfuge. The blessing included promises of fertility of the ground, supremacy over other nations, mastery over Esau and his progeny and a special promise that those who blessed Jacob would be blessed, and those who cursed Jacob would be cursed. Understandably, upon learning of the deceit that had been practiced by Jacob, Esau became regretful and vehement against him.

2.2.2. Esau's Response. Esau resolved to kill Jacob at the earliest possible opportunity, but he determined to postpone the murder until after the demise of their father. When Rebekah became aware of Esau's intentions, she advised Jacob to flee to *Haran in Paddan-aram to take refuge with her brother Laban, justifying her counsel by urging Jacob not to marry one of the local Canaanite women, as Esau had done, but to seek a wife among his own people. Endogamy (marrying within a select group) seems to have been the recommended procedure during patriarchal times. Jacob's flight occurred when he was about seventy-seven years of age.

3. Jacob in Haran.

3.1. Jacob's Journey. Jacob would have traveled over the central-ridge route from Beer-sheba through Hebron, through Bethlehem, past Jerusalem, and on through Gibeah, Mizpah and Bethel (also called Luz), where he had a dream of a ladder—more likely a staircase—reaching to heaven with angels ascending and descending (Gen 28:10-22). There God promised to Jacob his continuing presence with him. The next morning, Jacob anointed the stone he had used as a headrest to commemorate God's confirmation of the patriarchal *covenant promises to him, which assured Jacob of God's protective presence, and to remind him of certain vows of appreciation (e.g., the tithe of his wealth) that he had made. Jacob's commitment to God was essential at this juncture of his life, for he would soon enter a culture where false deities were worshiped. Following this significant, personal occasion, Jacob renamed the town of Luz, calling it Bethel ("House of God"). This divine encounter is presented in chiasmic section D (28:10-22; see 1 above); section D' (Gen 32:1-32) describes another divine encounter. Beyond Bethel, the north-south ridge is interrupted, but the general route continues to Shechem, Tirzah, and Beth-shean, where this local route joins the international highway to Mesopotamia. The en-

tire distance that Jacob would have traveled it is somewhat over four hundred miles, or about twenty days' journey.

3.2. Jacob's Arrival. Arriving at Haran, Jacob met Rachel, Laban's daughter, who was serving as a shepherdess. Since shepherding was the normal domain of men, this probably indicates that Laban had no sons at that point in time. Having given Rachel a kiss of greeting, Jacob assisted her by removing the heavy stone that covered the well. After Jacob introduced himself as a kinsman, Rachel told her father of Jacob's arrival, and Laban welcomed him into his home. Jacob was to spend the next twenty years as part of his uncle's household.

3.3. Jacob's Marriages. After Jacob spent a month in Laban's house, his uncle inquired what wages Jacob needed to be paid. Since Jacob wished to marry Rachel and under normal circumstances a marriage would have included a payment as a sort of "trust fund" to be given to the bride's family by the groom or his family, Jacob requested to marry Rachel in return for seven years' service to Laban. During the wedding ceremony at the close of that period, Laban surreptitiously substituted Leah for Rachel, excusing his behavior on the basis of the custom of the country. In light of Jacob's deceit of his brother and father, it is particularly ironic that his father-in-law cheated him, not just this once, but consistently during the twenty years they lived together.

Laban suggested that, as soon as the seven days of the wedding festivities accompanying his marriage to Leah were fulfilled, Jacob could marry Rachel, on the condition that he work for Laban for an additional seven years. In providing Zilpah as a handmaid for Leah and Bilhah for Rachel, Laban assured that each of his daughters would have a personal servant to assist in the performance of their duties.

3.4. Jacob's Children Born in Haran. During his service to Laban, Jacob fathered a number of children. Leah was the mother of the first four: *Reuben ("See, a Son!"), Simeon ("Heard"), *Levi ("Joined") and *Judah ("Praise"). Because she had not borne children, out of jealousy Rachel presented Bilhah to Jacob for the purpose of having children on her behalf. Bilhah then gave birth to a son whom Rachel named *Dan ("Judge"); Bilhah's second son was *Naphthali ("Wrestling"). Then, entering the spirit of competition, Leah gave her handmaid Zilpah to

Jacob; Zilpah proceeded to bear *Gad ("A Troop") and *Asher ("Blessed"). After the children of the two handmaids were born, Leah gave birth to *Issachar ("Wages") and *Zebulun ("Dwelling"); Leah was also the mother of Dinah ("Judgment"). Following the births of these ten sons and one daughter, God allowed Rachel to have a son, whom she named *Joseph ("Adding"). The end of Jacob's second term of seven years' service to Laban and the end of Rachel's barrenness established her status in Jacob's family, so Jacob felt free to ask Laban's permission to return to Canaan. (Later, during the family's journey back to Canaan, Rachel died as she gave birth to Jacob's twelfth son, *Benjamin ["Son of a Right Hand"].) Apparently Jacob's service to Laban had been a great benefit, for instead of granting his permission for Jacob and his family to leave, Laban persuaded him to remain longer. As it turned out, the arrangement was mutually beneficial, for Jacob was able to establish his own wealth during that time.

3.5. *Jacob's Further Service to Laban.* During further wage negotiations, Jacob suggested that in return for shepherding Laban's flocks and herds, Jacob's portion would be all of the animals that were not of a solid color. Because Laban knew that animals that were striped, spotted or speckled normally made up only a small proportion of the herd, he was quick to accept Jacob's suggestion. Contracts from that time period suggest that Jacob would have been receiving a far smaller share than was usual for shepherds, for ancient documents show that they sometimes received as much as twenty percent of the new births. The arrangement was already extremely favorable to Laban, but he took a further precaution of removing the variegated animals from the breeding herd and placed them under the care of his own sons. Responding to Laban's duplicity, Jacob, who as a shepherd was familiar with the breeding cycles of his animals, knew that the breeding of robust sheep would produce healthy lambs. N. Sarna suggests that the unusually marked sheep and goats were hybrids demonstrating certain recessive genes, and when Jacob removed these particular animals, the recessive genes had a greater possibility of appearing (Gen 30:40). But Jacob evidently also believed the superstition that using visual aids with the mother could affect the characteristics of the offspring. It would seem that uncle and nephew were each trying to cheat the other.

Still, God blessed Laban with great increase of his own flocks and herds (Gen 30:29-30), but God blessed Jacob even more abundantly, and the multicolored animals became particularly plentiful. Jacob's success displeased Laban and his sons greatly, and their attitude toward their kinsman deteriorated further.

At that juncture Jacob, having worked for Laban for an additional six years (making a total of twenty), received special instructions from God that it was time for him to return to Canaan. It is of interest to note that, according to Jacob, God identified himself as "the God of Bethel," reminding Jacob of the vow that he had made in Genesis 28:20-22. Clandestinely, he made plans with his wives, who, because of their father's financial dealings with him, were willing to leave with their husband. It may even have been the case that Laban had adopted Jacob and was planning to disinherit him in favor of his sons who had been born subsequently to the adoption. If this was the case, it was a severe measure indeed! Such an adoption might explain the fact that, unknown to Jacob, Rachel had stolen Laban's household "gods," which may have served to guarantee inheritance rights and may also have been recognized as tangible evidence of Jacob's right to all that he possessed (*see* Idols, Idolatry, Teraphim, Household Gods). Many scholars, however, question this function of the "household gods" (*tērāpim*).

3.6. *Jacob's Return to Canaan.* To avoid open conflict, Jacob waited until a time when Laban was preoccupied with sheepshearing. After those eventful twenty years, Jacob then gathered his family and his property and set out for Canaan in about 1909 B.C.

Hearing of Jacob's departure three days later, Laban was angry and pursued Jacob's company. Before he overtook Jacob, God appeared to Laban in a dream and warned him not to hinder Jacob's return. Able to move much faster than Jacob's party, Laban overtook him at Mizpah in the region of Gilead, about 275 miles from Haran, suggesting that for his return Jacob had chosen the Kings' Highway running along the western edge of the Transjordanian Plateau. Laban acidly complained to Jacob that he had covertly left Haran, accused him of stealing his household gods and remonstrated with Jacob that the secrecy of the departure had precluded an opportunity to have a farewell celebration, such as was common in that culture. Jacob re-

turned reproach with recrimination as he explained his stealthy departure in terms of lack of trust in his uncle. He vehemently denied the theft of the *tērāpim*, even recommending death if the thief were found in his group. Tricking her father, Rachel sat upon the idols, pleading her monthly cycle as an excuse for not arising in the presence of her father. This excuse may have been accepted partly because, in the ancient world, menstrual blood was often believed to be a haunt for demons.

Laban then almost threateningly declared that Jacob's wives were his daughters, that Jacob's family was his family and that Jacob's wealth was his wealth. This unpleasant meeting ended with both parties agreeing not to intrude on the domain of the other. To witness their agreement, they set up a pillar at Mizpah. On Jacob's part, this represented a pledge that he would take no other wives. The pillar may have also served as a kind of boundary marker between the areas of influence of the two men. They further sealed the agreement with a sacrificial meal (Gen 31:54), heightening the solemnity of the occasion. Then they parted amicably.

3.7. *Jacob at Mahanaim.*

3.7.1. *Jacob's Meeting with Angels.* Twenty years earlier, as he was journeying to Haran, Jacob had seen a company of angels in his *dream; now, as he made his return journey, he again saw a company of angels (Gen 32:1). From a literary perspective, this seems to form an inclusio, setting off the Haran experience as a literary unit. Just as the first of these angelic experiences had led Jacob to name the place Bethel, so this second angelic manifestation led him to name the place Mahanaim ("Two Camps").

3.7.2. *Jacob's Preparations to Meet Esau.* Jacob wished to contact his brother Esau with a report of his own status, so he sent messengers, who continued down the Kings' Highway toward Seir; these messengers returned with the alarming news that Esau and four hundred men were coming to meet him. Fearful, Jacob divided his people and animals into two camps as a precautionary measure, so that in the eventuality of attack one of the camps might escape. This also offers a second etiological explanation of the name Mahanaim. He then sent Esau a generous gift as a peace overture.

3.7.3. *Jacob's Encounter with the Angel.* Fearing the threat of hostility from Esau, Jacob sent his people and animals to the south side of the Jab-

bok River while he himself remained on the north side. There Jacob spent an agonizing night of prayer. During this time he experienced a confrontation during which he wrestled with the angel of Yahweh. As they fought, the socket of Jacob's thigh was dislocated, leaving him to limp. The angel asked for Jacob's name and then changed it to Israel ("Striver with God" or, less likely, "Prince of God"). Jacob then asked that this supernatural being give him his name, but his request was denied. However, he was assured of God's continuing presence with him. Following this remarkable encounter, Jacob named the place, near the fords of the Jabbok, Peniel ("Face of God"), for, he said, "I have seen God face to face, and yet my life is preserved."

3.7.4. *Jacob's Meeting with Esau.* When morning broke, in spite of the assurances provided the previous night, Jacob was still fearful when he saw Esau approaching with his retinue. He divided his own party into three groups, the least expendable accompanied by the handmaids and their children, the next group with Leah and her children, and the most protected with Rachel and Joseph. Jacob went ahead of the groups and upon approaching Esau bowed himself seven times. Bowing was an expression of respect for a superior; repeating it seven times magnified the respect exponentially. Esau received him kindly, embracing him tearfully with no sign of anger or bitterness. Esau offered to return Jacob's gifts, but upon Jacob's urging kept them. Esau implored Jacob to accompany him to Seir, his homeland, but Jacob declined, saying that the weak and young of his party could not keep pace. Esau then offered to leave some of his own men for assistance; Jacob declined this proposal as well. Actually, it seems that Jacob had no intention of going to Seir, for instead of traveling south he changed direction to the west, more or less following the course of the Jabbok to Succoth, near the Jordan River. After fording the Jordan, he took his group northwest up the Wadi Faria to Shechem (identified as Tell Balatah). At Shechem, he purchased property and there built an altar to El-Elohe-Israel (God, the God of Israel).

3.8. *The Continuation and Conclusion of Jacob's Journey.* In Shechem, Jacob's daughter Dinah was raped by the son of a city leader. Hearing of Dinah's violation, Jacob was strangely reticent. It seems that he was anxious to preserve good relations with his neighbors, perhaps out of fear. When Hamor asked Dinah's hand in marriage,

her brothers responded by insisting that all the men of the city first undergo *circumcision. While the Shechemite men were incapacitated, the brothers wreaked terrible revenge. Jacob was thus rendered *persona non grata* and was commanded by God to go to Bethel. Before leaving, Jacob wished to purify his camp and took all the “foreign gods” and buried them “under the oak that was near Shechem.”

At Bethel, God appeared to Jacob and renewed the covenant with him. As Jacob’s party traveled from Bethel to Ephrath, Rachel died during the birth of Benjamin. Jacob set up a monument there where he buried his beloved wife. Moving further south he reached Hebron, where his father Isaac still lived. It was during this time of sojourn in Hebron that ten of Jacob’s sons sold Joseph to a caravan of traveling merchants, telling their father that Joseph was dead. Jacob was thus devastated by the loss of his favorite son. Shortly after that loss, Isaac died. For the burial, Jacob was joined by his brother Esau.

4. Jacob’s Final Years.

4.1. Jacob’s Journey to Egypt. Twenty years after his loss of Joseph, the famine that ravaged the land made it necessary for Jacob to send his remaining sons, with the exception of Benjamin, to Egypt to buy grain. They were diligently questioned by the Egyptian in authority, not knowing that he was actually their brother Joseph. During their interview, Joseph asked them specifically about Jacob and Benjamin. Joseph then informed his brothers that they could receive no further sustenance from Egypt unless they were accompanied by Benjamin. Furthermore, Joseph had his servants restore to each of his brothers what had been paid for the grain. Later, when the provisions were exhausted, Jacob again asked his sons to go to Egypt to buy grain. Judah reminded Jacob that they could buy no grain unless Benjamin were with them; finally, yielding to Judah’s insistence, Jacob allowed Benjamin to go. Upon their return they discovered Joseph’s identity and were sent back to Canaan with an invitation from Joseph for the entire family to come to Egypt. Responding to the news that Joseph was alive and receiving the gifts he had sent, Jacob traveled to Egypt when he was 130 years of age to again see his beloved son Joseph. After being presented before *Pharaoh, Jacob lived in the area of Goshen for seventeen years; these were probably years of joy and fulfillment. He died at

the age of 147 (Gen 47:28).

4.2. Jacob’s Death. Shortly before his death, Jacob blessed Joseph’s two sons and then his own eleven other sons. His body was embalmed, then taken to Canaan for interment in the cave of Machpelah at Hebron. Because he was father of the progenitors of the twelve tribes, Jacob can be considered to be the father of the nation bearing his changed name, Israel.

5. Evaluation of Jacob.

What should the reader make of Jacob? It is clear that Jacob’s reputation as a deceiver is corroborated by the biblical account, which raises the issue of how God could use such a one as he. There are very few moral judgments offered in the narrative, so this conclusion must be a theological conclusion. Surely this was a matter of divine grace accepted by one particularly in need of it. Jacob did not deserve these blessings, but God bestowed them.

JETHRO

Jethro, the father-in-law of *Moses mentioned primarily in the book of *Exodus, serves an important literary function in the story of the Israelite *exodus from *Egypt, with respect both to the character development of Moses and also to the story’s plot. This article examines the narrative role of the character Jethro within the poetics of the exodus story and addresses some of the historical problems connected with his textual appearances.

1. Narrative Role
2. Historical Problems

1. Narrative Role.

As a character in the developing story of Moses, Jethro is mentioned first in Exodus 2:16-22, although, curiously, not by this name. Various historical problems have been perceived by interpreters over the past century due to this fact; however, it is clear that both naming as a characterization device and the literary principle of characterization in the service of the plot are

unmistakably at work. To summarize this section, Moses has recently fled from *Pharaoh’s presence in Egypt because his killing of an Egyptian man—seemingly indicative of a concern for justice—has become known by the Egyptian monarch, who now seeks to kill Moses. Moses flees north into Midian, where he encounters another act of injustice at a local well. A group of seven women, he observes, have come and drawn out water for their flocks, poured it into the troughs, but then are driven away by a group of shepherds who hope to quench the thirst of their own flocks with the water that the women have drawn. Moses rises to the occasion and “delivers” them—a microdeliverance that foreshadows the macrodeliverance of the exodus event itself. When the daughters return home early, their father inquires as to why, and they explain the events at the well. He rebukes them for abandoning “the Egyptian man” and sends them out to fetch Moses, who returns with them and is invited to dwell with them more permanently, an offer he accepts without hesitation. The father also gives one of his daughters, Zipporah, to Moses as a wife.

The fabric of Exodus 2:16-22 is woven by interspersing brisk action with dialogue to assist the characterization of its players and their development, and it is clear from a literary standpoint why the character naming occurs as it does. R. Alter and others have utilized the theoretical framework of the “type-scene” for interpreting this episode. This convention emphasizes the repetition of forms and patterns as a conscious device of literary composition. Exodus 2:16-22 is designated, then, a betrothal type-scene, similar to Genesis 24 (*Isaac and Rebekah) and Genesis 29 (*Jacob and Rachel).

Jethro is named initially in Exodus 2:16 as “the priest of Midian,” a character description that evokes status and a strongly religious role in the social hierarchy of Midian, which highlights him at the beginning as a person of central importance to the story. Not only is he the *priest, but one with *seven* daughters! His significance is further emphasized by the fact that he is properly named Reuel—meaning “friend of God”—in Exodus 2:18, which provides a sharp contrast to the oppressive, antireligious bent of the Pharaoh who has just been described as seeking to kill Moses (Ex 2:15). The hospitality of the priest toward Moses the outsider not only contrasts with Pharaoh and his banishment of Moses from Egypt but also serves to illustrate the im-

pending legal concern for upholding the cause of those on the margins of Israelite society, soon to be emphasized in the *book of the covenant.

These naming descriptives reinforce the symbolic geography of the exodus story thus far, reflecting how Moses has gone from a negative to a more positive topography in terms of the receptivity and support that is accorded him in Midian as compared to Egypt. Geographically speaking, this pericope also facilitates the relocation of Moses to Midian, the place where one of the foundational *theophanies of the OT occurs, along with his *prophetic call that sets the narrative fully in motion toward eventual resolution of the plot and its growing conflict.

Attempting to trace the history of the tradition, G. W. Coats, in a speculative reconstruction, considers the origin of the tradition that associates Moses with Midian to lie in the marriage story. Behind the present plot structure of Exodus 2:11-22, says Coats, is an older kernel of tradition about marriage, but its primary focus is between Moses and his Midianite father-in-law, which, along with Exodus 18:1-27, was “designed, at least in part, to justify a positive relationship between at least a portion of Israel and her traditional enemy” (Coats, 10). However the history of this tradition has contributed to its present shape, it is clear that the priest of Midian plays a significant role in the life of Moses within it.

Although he is not called Jethro in Exodus 2:16-22, several subsequent verses refer to him by this name, some identifying him clearly as the father-in-law of Moses (e.g., Ex 3:1; 4:18 [2x; the first occurrence in Ex 4:18 calls him Jeter, either an error or a variation on his name and certainly not an unknown name throughout the Hebrew Bible]).

It is somewhat difficult to itemize and pinpoint specific character types who are presented within such a stock literary form. The shepherds are easily recognizable as *agents* who provide conflict in the microplot of this episode, which Moses resolves as a heroic figure. Although the story focuses mainly upon the priest of Midian, supported by the fact that the female characters—his daughters—are named with reference to him, both his and his daughters’ interests remain with “the Egyptian man.” The daughters should be viewed as *agents* (along with the shepherds) who enable Moses to meet Reuel and find a wife as a development of the domestic aspect of Moses’ character. Reuel the priest is a

type, manifesting parental concern and social propriety. As with the previous section (Ex 2:11-15), the indeterminacy fostered in the narrative toward the character of Moses reveals him to be a *round* character. His unpredictability is evident alongside his ambiguity, and the reader must exert special effort once again to perceive his nature and course of action. For example, the past act of his murdering the Egyptian in Exodus 2:12 contributes suspense to the reader’s expectations of how Moses will deal with the shepherds of the present episode.

The second primary section in which Jethro occurs is the two episodes of Exodus 18:1-12 and 13-27, where the formerly called Reuel is introduced as “Jethro, the priest of Midian and father-in-law of Moses” (Ex 18:1). In the first episode, Jethro, having heard of Yahweh’s great deeds through the plagues and marvelous act of bringing the Israelites out of Egypt, comes with Zipporah and her two sons Gershom and Eliezer to meet Moses in the wilderness. This is the first we have heard of Moses’ sending her away subsequent to his earlier return to Egypt from Midian and also our first introduction to his son Eliezer (Gershom was introduced in Ex 2:22, with the etiology of his name summarizing Moses’ experience between Egypt and Midian). Moses and Jethro go into a tent, where Moses recounts Yahweh’s mighty acts over the journey from the plagues to the exodus, and Jethro offers up a confession and consequent sacrifice that sounds as though he has become a new convert to Yahwism (although some scholars speculate that this passage represents the initiation of *Aaron and the elders into the pre-Mosaic cult of Yahweh). His confession, “Now I know that the LORD is greater than all gods” (Ex 18:11), maintains the theme of knowledge that has been unfolding throughout the Exodus narrative, reinforced with the twofold intent of the plagues and exodus from Egypt that Israel would know Yahweh more intimately (e.g., Ex 6:7; 10:2; 16:6, 12) and that the Egyptians would know—as a form of *recognition*—that there is no other god like Yahweh in all the earth (cf. Ex 7:5, 17; 8:10, 22; 9:14, 29; 14:4, 18), in response to Pharaoh’s preliminary question, “Who is the LORD . . . ?” (Ex 5:2).

The second episode (Ex 18:13-27) shows Moses’ father-in-law contributing to his leadership success by initiating the principle of delegation into the Israelite administration of justice (*see* Leadership, Elders). Moses, potentially wear-

ing himself out by judging cases of civic dispute from morning until evening, is shown by Jethro how to choose respectable men of integrity and to teach them principles of jurisprudence in order for them to be able to deliver justice to the people. With this new system, Moses would need only to judge the most important cases, which would not only prevent him from getting burned out but would also reduce the grumbling of the people, who, prior to this were having to stand around for much of the day until their turns came up. Here the priest of Midian is named in relation to Moses, called his “father-in-law” (Ex 18:14, 15, 17, 24, 27).

2. Historical Problems.

Although these represent most of the OT appearances of Moses’ father-in-law, he is also mentioned elsewhere in the Hebrew Bible with references that are not without difficulty. For example, as we have seen, the “priest of Midian” of Exodus 2:16 is called Reuel in Exodus 2:18 but referred to as Jethro in Exodus 18:1, 2, 5, 6, 9, 10 and 12. In addition, in Judges 4:11 mention is made of Hobab the father-in-law of Moses. Cumulatively, not only is Moses’ father-in-law given the three names of Reuel, Jethro and Hobab, but the latter does not align with Numbers 10:29, which describes Hobab as the *son* of Reuel the Midianite, Moses’ father-in-law. Different proposals have been presented to solve this dilemma, from *source-critical solutions (Jethro = E; Reuel/Hobab = J), to the suggestion that a misreading of the Numbers passage may have influenced the identification of Jethro as Hobab in Judges, to the proposition that we may be missing fine distinctions between personal and clan names. This latter perspective was advanced by W. F. Albright, who concluded that Reuel was a clan name and Jethro his proper name, with the seeming reference to the same person in Numbers 10:29-32 attributed by him to a misvocalization in the Hebrew text (Albright read *hōtēn* as “son-in-law” of Moses instead of “father-in-law”; others read “brother-in-law”).

The introduction of Yahwism to the Hebrews has been connected with Jethro and Midian in the so-called Kenite hypothesis. This perspective suggests that Yahweh, the tribal god of the Midianites or Kenites (a group of metalworkers), was introduced to the Israelites by Jethro his priest (Moses’ father-in-law is given Kenite roots in Judg 1:16 and 4:11). This hypothesis, however,

has received little sustained support.

In summary, Jethro manifests a positive character in the unfolding biography of Moses and the narrative of the Israelite exodus out of Egypt. He brought stability to the individual Moses and facilitated a streamlined reorganization that affected the collective Israelite community on their journey to the Promised *Land.

JOSEPH

The consideration of the man Joseph is inextricably bound into the story of which he is the central character, and which occurs in the last patriarchal section of Genesis (Gen 37—50). The content and features of this story will be summarized before considering the man himself and the clans, Ephraim and Manasseh, that sprang from him.

1. The Joseph Story (Genesis 37; 39—48)
2. The Man Joseph
3. The Joseph Clans

1. The Joseph Story (Genesis 37; 39—48)

1.1. Introduction: The Evidence of Artistry in the Story.

1.1.1. *The Narrative as a Whole.* This story reflects a high degree of craftsmanship by the narrator. Whatever the origin of the story, it is well told and tooled, a far cry from some naive pre-conceptions of “primitive literature.”

Coming at the end of Genesis (Gen 37—50), the Joseph story and accompanying material is a bridge between the patriarchal narratives and the accounts of the *exodus and *wilderness wanderings. The stories of *Abraham, *Isaac and *Jacob form the family history background

of all that follows. The stories grow in complication and intrigue through three generations, with Jacob at once the inheritor of all that precedes, the hero and the antihero. Then, what could be called the crime of the century is perpetrated within the family itself. The old man Jacob, who had deceived his father in his youth and thus imperiled the family unity, is now himself cruelly deceived. Jacob has a precocious young son of seventeen, one of the two sons of his favorite wife Rachel. Physically handsome and intellectually gifted, Joseph is a *born leader* (Lowenthal's 1973 brilliant conjecture for *ben zēqūnīm* in Gen 37:3). Jacob makes for him a special coat (possibly a coat with sleeves or at least a coat of the sort worn only by supervisors), popularized by Luther as "a coat of many colors." To Jacob's open favoritism of his son, further fuel is added to the fires of sibling jealousy by Joseph's recounting to his brothers—and even in the presence of his father—his outrageous dreams of lordship and supremacy. Jealousy boils over into violence when the brothers catch Joseph alone in the open country. At first planning to murder him on the spot, the brothers are deterred by *Reuben. Finally, at *Judah's suggestion they sell him into slavery in Egypt. All that remains to be arranged is the coverup, and this is achieved by tearing Joseph's coat, staining it with goat's blood and showing it to Jacob with the query "Is this your son's cloak?" Jacob is devastated on seeing the torn and bloody remnant of the cloak, and the brothers are saddled with a long-term guilt complex.

Thus, in Genesis 37 occurs what can properly be called the inciting event (narrative template, Longacre 1996) of the story. In two different ways, Genesis 37 is treated as something special: (1) in regard to special internal marking; and (2) in regard to being contextually set apart by the intrusion of the material found in Genesis 38.

Genesis 37, itself a narrative, has its own template with Joseph's telling of his *dreams (Gen 37:5-11) as the inciting event of the embedded narrative. This inciting event is framed by references to the brothers' hatred and jealousy in Genesis 37:3-5, 11. In verses 3-4 the all-important prop, the special cloak, is introduced in a special Hebrew construction, the *waw*-consecutive with the perfect (*wqtl*) in the phrase *wē'āsā lō kētōnet passīm*: "And he made him a special cloak." The *wqtl* form (Longacre 1994, 71-84), when used as an isolated occurrence in narra-

tive, marks something pivotal or climactic; here the *wqtl* form, used to refer to the making of the cloak, tags this event as fateful in terms of what follows. The immediate result, recorded in verse 4, is: "When his brothers saw that their father loved him more than them, they hated him and could not speak a kind word to him."

Genesis 37:11, which follows the recitation of the dreams, tells us "His brothers were jealous of him, but his father kept the thing in mind." The passage then reports that Joseph's father, Jacob, sent him to Shechem to check up on his brothers and the flocks in their charge. Not finding them at Shechem, Joseph was directed by a stranger to Dothan. The next two incidents are told in a remarkably parallel fashion, which stylistically befits the climax of the account of the inciting event of the main story. In Genesis 37:18-24, the brothers sight Joseph coming in the distance, sit down and conspire to take his life, and then act out their intentions when he arrives on the spot. They seize him and strip from him the hated cloak. Deterred from killing him by Reuben, they throw him into an empty cistern. Here some fine details are added, namely, the conversation of the brothers and the explanation that "the pit was empty; there was no water in it." In quite parallel fashion the next episode records that the brothers sighted a caravan, sat down to discuss the possibility of selling Joseph as a slave and carried out this intention when the caravan arrived on the spot.

Besides this parallelism between episodes, several further special features mark this last episode of the embedded narrative: (1) the careful description of the caravan bound from Gilead to Egypt with a description of its merchandise; (2) the dual identification of the traders as first Ishmaelites (referring to lifestyle, as in Judg 8:24), and then Midianites (referring to ethnic group); and (3) actually pulling Joseph up from the pit and selling him. The latter is reported in three clauses in verse 28, employing the proper name Joseph three times:

And they pulled up and raised Joseph from the pit,
and they sold Joseph to the Ishmaelites for twenty pieces of silver,
and they brought Joseph into Egypt.

It is clearly beyond the needs of normal participant reference to use the proper name three times in these three clauses. The narrator is certainly employing special rhetorical marking

here. The heinousness and tragedy of the event is marked by the threefold repetition of the name, as if telling us “Now, mind you, this is happening to Joseph, Jacob’s favorite son.” Or to use a different figure, the threefold occurrence is like the tolling of a bell, and for whom does the bell toll but for Joseph!

The inciting event, embodied in Genesis 37, is set off from the rest of the story by the intervening story of Judah and *Tamar in Genesis 38. What person, reading the story for the first time, is not at least mildly outraged by the intrusion? As we shall see below, the matters relating to Joseph constitute but one strand of the “life and times of Jacob” (*tōlēdōt ya‘āqōb*), the other strand of which is the broader concerns of the family. The material relating to Judah and Tamar is certainly relevant to this second strand, but of greater import is the insertion of this further material precisely at this point. Why here and not elsewhere? Actually, the suspension of the story, awaiting its resumption in Genesis 39, is a further manifestation of the narrator’s art: the inciting event is recounted, then the story is broken off much as in a contemporary television series (cf. Longacre 1995).

1.1.2. Peak and Closure Phenomena. In the Joseph story the various episodes consist of embedded discourses, most of which have their own peaks and often have noteworthy closure phenomena as well. The inciting event (Gen 37), in addition to the peak phenomena described above, has a chiasmic paragraph as its closure (Gen 37:34-35), with verse 36 being mainly a link looking forward to the resumption of the story in Genesis 39. Literally translated, Genesis 37:34-35 reads:

A And Jacob *tore his clothes*.

And *he put sackcloth* on his loins.

B And *he mourned* for his son many days.

C And all his sons and daughters *rose up to comfort* him.

C' And *he refused* to be *comforted*.

B' And *he said*, “I will go down to my son *mourning* to Sheol.”

A' And his father *bewailed* him.

In episode 2 of the story, Joseph’s rise to prominence in Potiphar’s house, we find an episode structured as a single paragraph. It reaches a paragraph climax (similar to a discourse peak) in Genesis 39:5-6a. To begin, we note that the first part of verse 5 contains an unusually fulsome back reference to the preceding verses: “And it

happened that from when he appointed him [Joseph] over all his house and over all that was to him.” Such a long and explicit back reference to preceding material would more likely be paragraph- or even episode-initial; here it marks paragraph climax. The verse continues: “Yahweh blessed the house of the Egyptian on account of Joseph.” We now encounter the same lexical material paraphrased with the verb “bless” nominalized: “And the blessing of Yahweh was to him in all that he had in house and field.” Genesis 39:6a proceeds to reiterate Potiphar’s giving Joseph oversight over everything: “And he abandoned all that was to him in the hand of Joseph, and he didn’t keep account of anything except the bread that he ate.” Closure of this episode in Genesis 39:6b is unrelated to the preceding material and constitutes an ominous link to what follows in the next episode: “Now Joseph was shapely of form and fair of face.”

Episode 3 of the story, Joseph’s degradation (Gen 39:7-23), portrays a lively fracas between Potiphar’s wife and Joseph as she tries to persuade him to lie with her. Finally, on her grabbing on to his clothing, he leaves the clothing in her hand and runs outside (Gen 39:12). The next verse recapitulates this as “When she saw that he had abandoned his clothing in her hand and had run outside,” and then records her crying out and throwing a scene in which she accuses Joseph of attempted rape. She tells her story to the men of the house, including the crucial fact that Joseph abandoned his garment in her hand and ran outside. When Potiphar arrives home, she gives him the same story culminating with the same reference to the apparently incriminating fact that Joseph left his clothing and ran away. In this way, by multiple repetition, the high point of the story is marked. The closure of this episode is remarkably parallel to the recounting of Joseph’s rise to prominence in Potiphar’s house; just as Joseph had gone to the top in Potiphar’s estate, he now rises to the position of first trustee in the jail, and everything prospers under his management (Gen 39:20b-23).

While episode 4, Joseph’s interpretation of the dreams of the two courtiers (Gen 40), has no special features of peak marking or closure, episode 5, Joseph’s vaulting to power as grand vizier of Egypt (Gen 41), lacks nothing in the use of dramatic and rhetorical devices both in regard to peak and closure. The narrator begins by recounting Pharaoh’s dreams. The account starts

with: “And it happened at the end of two full years, that also *Pharaoh* had dreams.” The conjunction before the proper name *Pharaoh* implies that *Pharaoh* is now having dreams; it’s finally his turn after the dreams of Joseph himself and then the courtiers. The narrator recounts *Pharaoh*’s dreams and the fact that he could not find anyone to interpret them. The courtier then remembers that “a Hebrew lad, a slave of Potiphar’s” had interpreted correctly the dreams that he and the chief baker had experienced in prison. So then in six short successive clauses (Gen 41:14) we are told how Joseph was quickly readied to appear before *Pharaoh*. Then Joseph stands before the king of Egypt, and after the briefest of greetings *Pharaoh* recounts his dreams (Gen 41:17-24)—adding in a few details of his own that weren’t mentioned by the narrator.

Joseph’s reply (Gen 41:25-36) has three points: the meaning of the dream; a prophecy that seven years of plenty are coming soon to be followed by seven years of famine; and a suggestion to *Pharaoh* that he initiate a grain conservation and storage program under the hands of competent men. *Pharaoh* decides that Joseph is the man to head up such a program. It is noteworthy that Joseph in his speech before *Pharaoh* strongly emphasizes divine providence: God has been merciful to *Pharaoh* and to Egypt in giving them advance warning of the coming hard times. After discussion with his courtiers and the announcement of intent to Joseph (Gen 41:37-40), another succession of action clauses follows (Gen 41:41-43), as Joseph is installed in his new position with appropriate powers and is declared to be second only to *Pharaoh* himself. Joseph is given an Egyptian name and an Egyptian wife and goes out from *Pharaoh*’s presence as lord of Egypt, to embark immediately on his program.

It is significant that the two arcs of the action peak—preparation to see *Pharaoh*, and the installation ceremony—bracket a didactic peak (Joseph’s speech) that presents well the theme of divine providence. The combination of action peak and didactic peak makes the whole section the climax of the story. This passage is followed by three postpeak episodes of the embedded discourse that constitutes the section. The first postpeak episode (Gen 41:46-49) pictures Joseph traveling around Egypt, storing the grain of the countryside in its main cities, and “heaping up grain like the sand of the sea” (Gen 41:49). The second postpeak episode records

the birth of Joseph’s two sons.

The last postpeak episode (Gen 41:54b-57) of this embedded discourse sketches the onset of the famine in a chiasmic paragraph:

A And there was famine in *all the lands*, but
in all the land of Egypt there was bread.

B And all the *land of Egypt* hungered.

C And the *people* cried out to *Pharaoh*
for bread.

D And *Pharaoh* said to all Egypt,
“Go to *Joseph*; whatever he says
to you, do it.”

(A' And the famine was on all the face of the
land.)

D' And *Joseph* opened all [the stores]
that were in them.

C' And he sold [*grain*] to the *Egyptians*.

B' Nevertheless, the *famine* was strong in
the *land of Egypt*.

A' And *all the earth* came to buy [grain] to *Joseph*
for strong was the famine in *all the earth*.

We note this chiasm for two reasons: (1) this is still another instance of the use of chiasm to close an episode in the story; and (2) it serves to underscore the severity of the famine and prepares us to anticipate the appearance of the brothers in the next episode as they come down from Canaan to buy grain.

Episode 6 (Gen 42) is of very peculiar structure. Since episode 5 is climax and episode 7 is denouement, and both are surface-structure peaks in this story, episode 6, which comes in between the two, could be entitled the interpeak episode. This episode, which records the brothers’ first descent to Egypt for famine relief, has a sustained level of excitement, no discernible internal peak of its own and two chiasmic paragraphs (Gen 42:14-16, 18-20), both speeches of Joseph, which occur internally to the episode rather than marking closure.

Episode 7, the denouement, is long and action-packed (Gen 43—45). It opens with a seesaw argument between the brothers and their father Jacob about taking *Benjamin along on this their second trip. Jacob eventually has to capitulate and makes a speech in which he advises his sons to return the money that had been enclosed in their grain sacks and to take gifts to the demanding and mercurial lord of Egypt (Gen 43:1-14). When the brothers arrive in Egypt, everything apparently goes well—although when invited to a banquet in Joseph’s house they are

puzzled at being seated at the table in order of their birth, and Benjamin is outrageously favored (Gen 43:15-34). The morning after the night of wining and dining, everything goes wrong (Gen 44). The brothers depart with their grain sacks loaded and with Joseph's silver cup planted in Benjamin's sack. Joseph's steward overtakes them and accuses them of theft. On lowering and opening their grain sacks—suspensefully reported as “beginning with the eldest and ending with the youngest” (Gen 44:12)—Benjamin is found to be the (apparent) thief. So it's back to Joseph who, on their arrival before him, announces that he will keep Benjamin as a slave and let the others return to Canaan (Gen 44:17). The brothers, no longer disposed to save themselves by sacrificing the youngest, are utterly disconcerted. Finally Judah comes forward and makes an impassioned presentation of what the loss of Benjamin would do to Jacob (who had lost Benjamin's brother Joseph so many years ago). Then Judah volunteers to be kept as a slave in place of Benjamin (Gen 44:18-34). At this juncture, Joseph utterly loses his emotional control; the brothers now are men to whom he can be reconciled again. He proceeds to make himself known to them, as graphically described in Genesis 45:1-4. The man, whom they didn't believe understood or spoke Hebrew, now blurts out, *ʾānī yōsēp*: “I [am] Joseph.” Seven verses more (Gen 45:9-15) give Joseph's instructional discourse: they are to go up and tell Jacob and bring him and their families down to Egypt, where they can be nourished through the remaining years of the famine. Meanwhile, Pharaoh, having heard the news, adds his official invitation and sends royal carts up to help bring the clan down. When the brothers arrive back at Canaan, Jacob is informed of the startling news. This is reported in a chiasmic dialogue paragraph (Gen 45:25-28) that brings the episode (denouement) to a close.

Episode 8 (Gen 46:1—47:12), which is post-peak, contains the story of Jacob's going down to Egypt, including the list of all those in the embryonic nation who went down there. While such a “roll call” seems to Western readers to put the story on hold, it may have appeared as privileged and even exciting material to the Israelite reader for whom it was intended. The nation was now there in germ, and the promises to Abraham were being fulfilled!

In episode 9 (Gen 47:13-31), the last years of

Joseph's famine-relief program are pictured as a rising crescendo of desperation on the part of the Egyptian populace who, out of money and cattle, finally sell themselves as serfs to Pharaoh to obtain grain.

In episode 10 (Gen 48), probably the last episode that can properly be counted as part of the Joseph story, Manasseh and Ephraim are blessed by the dying Jacob. Nevertheless, although part of the Joseph story, it contains much material that is related to broader concerns, which are especially relevant to section 3 below: (1) Jacob's blessing of Joseph's two sons amounts to his giving to Joseph a double portion of the patrimony. (2) Jacob in blessing Joseph's sons crossed his hands and put his right hand on Ephraim, thus giving him pre-eminence over his brother. (3) A special blessing is given to Joseph's sons apart from the blessing on Joseph in the following chapter. (4) In Genesis 48:22, Jacob gives to Joseph “the ridge of land that I took from the Amorites with my sword and my bow,” certainly a reference to Shechem and the surrounding countryside. (5) If that were not enough, it is given to Joseph on the grounds that he was over his brothers. All of this, especially points 1 and 5 above, strongly indicate that Jacob, in effect, was treating Joseph as his firstborn—in spite of what is said concerning Judah in Genesis 49:10.

Broader concerns of Jacob and his family come to the fore in Genesis 49—50, which do not simply constitute an addendum to the Joseph story but are peak and conclusion to the whole *tōlēdōt yaʿākōb* section of Genesis—even though the Joseph story proper occupies most of that section.

1.2. Macrostructural Concerns. The term *macrostructure* may be given the following working definition: the gist or abstract of a text that exercises a controlling function over the text in respect to (1) what is included or excluded from mention; (2) what parts are developed in relatively more detail than others; and (3) departures in internal ordering of the parts of the text from the default ordering indicated in the template on which the text is built.

The macrostructure of the Joseph story surfaces within the story itself in two places: (1) When Joseph reveals himself to his brothers, he immediately adds: “And now don't be distressed and don't be angry with yourselves for selling me here, because it was to save lives that God sent me ahead of you. . . . But God sent me ahead of you

to preserve for you a remnant on earth and to save your lives by a great deliverance" (Gen 45:5, 7). (2) In an echo of the story in Genesis 50:20, Joseph remarks to the brothers after Jacob's death: "You intended to harm me, but God meant it for good to accomplish what is now being done, the saving of many lives." From these passages—in which Joseph himself is removed a few years from the more sordid aspects of the story and able to grasp better its meaning—and from the speech before Pharaoh we understand that the theme of the story is *divine providence*. But while a theme can thus be summarized in a noun phrase, the macrostructure needs a more detailed statement if we are to generate this particular story from it. Putting together the material in Genesis 45:5, 7 and 50:20, we formulate the macrostructure of the Joseph story as follows: Joseph's brothers, meaning to harm him, sold him as a slave into Egypt, but in reality God sent him there so that he could save Jacob's family and many others from death by starvation.

The elements that enter into this macrostructure can be made explicit as follows: (1) the intent of Joseph's brothers to harm him; (2) the selling into Egypt to carry out this intent; (3) God's overruling, making Joseph a savior from starvation—and this in turn entailing all the providential means employed to put Joseph in a position that empowered him to do what he did; (4) implementation of the measures that saved Jacob's family and others from death by starvation; and last but not least, (5) the severity of the famine itself.

The macrostructure may be considered to generate the whole story as the author progressively fleshes out its details. There is, however, a broader concern, the whole *tōlēdōt ya'āqōb*, of which the Joseph story is a part, albeit the larger part. The Joseph story proper has three main participants: Jacob, Joseph and Judah, who finally emerges as a hero of sorts. What about Genesis 38, which recounts how Judah's sons were born to his daughter-in-law? And what of the poetic material in Genesis 49? As for the deaths first of Jacob and of then of Joseph, the recounting of such events is a customary way of concluding a *tōlēdōt* section of Genesis. But to capture the broader and more inclusive concerns of the *tōlēdōt ya'āqōb*, that is, to posit a macrostructure for it, we need to see what is going on in Genesis 49 itself.

With Jacob (a main participant of the Joseph

story) passing away, we are left with Judah and with Joseph (and the latter's two sons). Judah had achieved a certain prominence in the story even as Reuben, the firstborn, proved to be an ineffectual leader. Also, Jacob never forgave Reuben's involvement with his concubine Bilhah (Gen 49:4). Simeon is more of a prop in the Joseph story than a participant; he is kept as a hostage between the brothers' two trips to Egypt. Levi is a nonentity. However, both Simeon and Levi come in for dishonorable mention in Genesis 49:5-7, which probably refers to the sacking of Shechem recorded in Genesis 34. With Reuben, Simeon and Levi thus disposed of in Genesis 49:3-7, Jacob comes to Judah, of whom he speaks in Genesis 49:8-12. Verse 10 is the crucial verse here: "The scepter will not depart from Judah, nor the ruler's staff from between his feet, until he comes to whom it belongs and the obedience of the nations is his" (NIV). Here, to Judah's descendants is promised a continuing line of rulers until the Rightful Ruler comes on the scene, and a promise is made of the gathering/obedience of the nations to him. Jacob mentions others of his sons rather briefly and summarily in Genesis 49:13-21, but then Genesis 49:22-26 deals with Joseph, followed by one verse devoted to Benjamin, Joseph's full brother. The blessings heaped on Joseph in verses 25-26 are indeed fulsome, ending with, "Let all these rest on the head of Joseph, on the brow of the prince among his brothers" (NIV). What, then? It is clear that Judah and Joseph get a good deal more "coverage" from the dying father than do the others, and a certain preeminence is granted to both. The scepter is to go to Judah with the accompanying promise (Gen 49:10), but to Joseph, as the continuing favorite of his father, rights and privileges are given such as would be given to a firstborn. I posit, then, that the macrostructure of the *tōlēdōt ya'āqōb* can be stated as follows: Among the descendants of Jacob, Judah and Joseph are to be pre-eminent both as individuals and as tribes—with ambiguous and somewhat conflicting claims.

We might say that the Joseph story has a macrostructure, which involves participants in a human-relations drama. But the whole *tōlēdōt ya'āqōb* is concerned with the ranking and fortunes of all the tribes of Israel.

1.3. Historicity. The nagging question of the historicity of the patriarchal stories, including that of Joseph, necessarily intrudes itself here

and elsewhere. Are these stories simply retrojective expressions of later Israelite faith—along with attempts at explaining the present in terms of the past, or are they valid representation of the past out of which the later developments unfolded?

Here the essays in A. R. Millard and D. J. Wiseman (1983) are a good starting point. Thus J. Goldingay (1-34), while admitting that bare history is necessarily reworked into story in these accounts, argues strongly for their factual base. In this he consciously takes a position contrary to such historical minimalists as T. J. Thompson (1974). Millard (35-51) argues that the patriarchal narratives are “family history,” comparable to those of other prominent personages of the ancient Near East (e.g., Gilgamesh, Sargon of Akkad, Naram-sin), which are partially and fragmentarily supported by material from other sources. He argues that “where there is no other evidence, where a literary text exists, we should be no less ready to treat it as a valuable and reliable record, unless it can conclusively be shown to be false in many matters” (Millard, 48). In the same volume M. J. Selman (91-139), after sifting through a number of alleged parallels between the patriarchal and other materials of roughly the same horizon (e.g., Nuzi), insists that there remain thirteen valid parallels between the two (Selman, 134-38).

Especially noteworthy in this regard is J. K. Hoffmeier’s (1997) examination of the evidence for the authenticity of the exodus tradition. He examines the story from the standpoint of an Egyptologist. In his discussion of “Joseph in Egypt” (Hoffmeier, chap. 4), he differs considerably from such treatments as D. B. Redford’s. In what is perhaps his most valuable contribution to the question of the historicity of this particular story, the “Egyptian Dimensions of the Joseph Story,” he points to several pieces of evidence, including: (1) the detail that the price for which Joseph was sold, twenty pieces of silver, was the price of a slave in the first half of the second millennium (2000-1500 B.C.), while at later periods the price was considerably higher; (2) the Egyptian counterparts/etymologies for the names Potiphar (Joseph’s master), Potiphara (Joseph’s father-in-law), Asenath (his wife) and Zaphenath-paneah (Joseph’s Egyptian name); (3) the role of magicians as dream interpreters in Egypt; (4) the significance of Pharaoh’s “birthday” (reinterpreted according to Egyptian

sources as the anniversary of accession/coronation); (5) the scenes of investiture of high officials whose details parallel the account of Joseph’s investiture; (6) Joseph’s status where the Genesis account suggests several Egyptian titles and parallels; and (6) even Joseph’s age at death (110 years), which has been recognized for two centuries as an ideal age according to Egyptian sources.

Hoffmeier aptly comments: “It seems to me, however, that if the narratives look like history, are structured historiographically, and the events described (especially in the Joseph story) are not incredible and compare favorably with the Egyptian backgrounds, . . . then the narratives ought to be considered historical until there is evidence to the contrary” (Hoffmeier, 91).

2. The Man Joseph.

What sort of man emerges in the story that we have summarized above? As a youth of seventeen, Joseph was precocious and showed leadership qualities that pleased his father and antagonized his brothers. Strutting around in a coat such as supervisors wore, not day laborers, and naively recounting his dreams of splendor and overlordship, he was totally insensitive to the ill feelings he was arousing.

For this spoiled and favored youth, his being sold into Egypt was the watershed of his life. Now the very qualities that had raised his brothers’ animosity served him in good stead. As a house slave in Potiphar’s household he proved to be a quick learner not only with respect to the Egyptian language and culture but the administrative arts as well. He quickly rose to the top in Potiphar’s estate and, when degraded, to chief trustee in prison.

He is pictured as a man of integrity and faith. When Potiphar’s wife attempted to seduce him, he refused to calculate the possible gains of placating her but pleaded that to do so would be a betrayal of Potiphar and, even more to the point, a “sin against God” (Gen 39:9). No doubt his belief in divine providence was severely tested in his years in prison. In interpreting the dreams of the two imprisoned courtiers he did not profess to be a great magician or seer but simply said, “To God belong the interpretations of dreams” (Gen 40:8). In much the same vein he assured Pharaoh some two years later, “God will give Pharaoh a satisfactory answer” (Gen

41:16). Furthermore, his speech before Pharaoh takes as its theme divine providence (Gen 41:25-36). The man and his message were one.

But why did such a man as this feel obliged to test his brothers so severely on the occasion of their two trips down to Egypt? Here we need to remember that Joseph's last experience of his brothers before they showed up again at the frontier to buy grain was that of cruel and implacable men deaf to his pleadings not to sell him as a slave (Gen 42:21). Had they changed since he saw them last? What if he were to put them into a position from which they could extricate themselves only by jettisoning Benjamin, his younger brother—treating Benjamin in effect as they had once treated himself? So Joseph proceeded to arrange circumstances to that end. On his tightening the screw the last turn, Judah stepped forward to offer to remain in Egypt as a slave so that Benjamin could go back to Canaan and Jacob would not suffer another great heartbreak of the sort that might finish the old man off. Now Joseph had his answer. But even during the process of the testing, Joseph had to turn aside a time or two to weep, and, on selling the grain to his brothers, he secretly restored their purchase money. His love for his family was never maudlin but all the more sincere for not being so.

One thing more about Joseph: in accepting office under Pharaoh he stood loyally by his overlord. In the next to the last episode of the Joseph story, he insists on payment for the relief supplies, and when the populace no longer have money, cattle or other possessions, he has them sell themselves to Pharaoh as serfs in exchange for survival.

3. The Joseph Clans.

One of Jacob's last acts was to take to himself Joseph's two sons, thus making their descendants tribes of Israel as if they were his own sons. This gives Joseph, as we have already observed, a double portion of the patrimony. In place of one tribe of Joseph there would be the two tribes, Ephraim and Manasseh.

The scene in which Jacob has his two grandsons in front of him lined up with Manasseh on Jacob's right hand and Ephraim on his left pictures the old patriarch as crossing his hands so that his right hand rests on Ephraim, to whom he gives preeminence. When Joseph thinks that his father is mistaken, Jacob insists that he in-

tends to make the younger son preeminent (Gen 48:12-20). The scene is graphically portrayed with the best resources of the narrator.

A further favor of Jacob to Joseph is expressed in the immediately ensuing passage (Gen 48:21-22). Jacob is referring here to Shechem, where he settled for a while and which his sons, led by Simeon and Levi, sacked and plundered (Gen 34). This last statement of Jacob's would presumably indicate that Jacob considered Shechem and the region around it his possession ever after. Now he gives this land specifically to Joseph. The book of John records that centuries later a wearied and thirsty Jesus sat at a well in a Samaritan village called Sychar "near the plot of ground Jacob had given to his son Joseph" (Jn 4:5-6). One may add to this the tradition referred to by Stephen (Acts 7:16) that the patriarchs, probably Joseph's brothers, were buried at Shechem.

Ephraim and Manasseh are shadowy characters about whom we are told almost nothing as individuals—except for one puzzling passage (1 Chron 7:20-24). Here we are told that two sons of Ephraim died as cattle rustlers down near Gath, and that "their father Ephraim mourned for them many days." Then it tells of Ephraim's having another son, and a daughter who proceeded to found three settlements in the region. All this seems to suggest a scenario in which Ephraim is living in Canaan rather than in Egypt. Now add to this the fact that at the time of Joshua's conquest, himself of the tribe of Ephraim, there is no record of a conquest in central Canaan in and around Shechem, but only of northern and southern campaigns. Nevertheless, it was to Shechem that Joshua mustered the tribes before his death to challenge them to be faithful to Yahweh and to renew the covenant. Shiloh, where the tabernacle worship was settled on, was somewhat to the south of Shechem.

All this tallies up to the possibility, suggested some years ago by Albright (279), that Shechem was an Israelite possession prior to the conquest. Funeral processions from Israelites in Egypt came up to this town and, for a while, at least, Ephraim and his immediate family may have settled there. When the main wave of Israelite conquest arrived under Joshua, they made contact afresh with this ancestral possession and the enclave living there.

In the apportionment of the land after the

conquest, half of Manasseh settled east of the Jordan up north in a region with no natural frontiers to commend it; they were easy prey to Aramean and Assyrian invasion and conquest. The other half of the tribe of Manasseh settled in the regions around Shechem and northward. Ephraim settled just to the south in a region that included Shiloh.

In celebrating the united monarchy the psalmist wrote: "Then he rejected the tents of Joseph, he did not choose the tribe of Ephraim, but he chose the tribe of Judah, Mount Zion which he loved" (Ps 78:67-68). Nevertheless, at a later time, when the united monarchy under the hegemony of Judah broke up, it was an Ephraimite, Jeroboam, who rebelled against Rehoboam and established the northern kingdom. Did something in the ambiguity of Jacob's words and behavior toward his sons Judah and Joseph give some credence to the actions of Jeroboam and those associated with him? At any rate, the Joseph clans were a force to be reckoned with in the days of monarchical Israel.

In still later and more tragic years, this central region, where the sons of Joseph settled, apparently survived as a core of the northern kingdom after much of that kingdom had been carried away, so that, for example, the prophet Hosea refers to his audience as "Ephraim." To end on a more positive note, the psalmist in Psalm 77:15 wrote: "With your mighty arm you redeemed your people, the descendants of Jacob and Joseph."

JOSEPH NARRATIVE. See JOSEPH.

JOSHUA

Joshua was an Ephraimite chieftain notable for standing with Caleb to exhort Israel to enter the Promised Land at Kadesh-barnea (Num 13:25-33; 14:5-12). Although the central figure in the book that bears his name, Joshua plays only a minor role in the Pentateuch. With but one exception he appears only in connection with *Moses. A series of brief appearances, as Moses' aide and military commander, work together to communicate a close association between the two men in preparation for Joshua's commissioning as Moses' legitimate successor. Joshua accompanied Moses as he ascended Sinai (Ex 24:13) and when he spoke to Yahweh at the tent of meeting (Ex 33:11). When Moses' authority was challenged, Joshua stood with him against the people (Ex 32:15-20; Num 14:1-10). As a consequence of his faithfulness, Yahweh allowed Joshua to enter the Promised Land, a privilege not granted to Moses (Num 14:30, 38; cf. Num 27:12-14). Because Moses would not cross the Jordan with Israel, Joshua was commissioned to do so (Num 27:12-23; Deut 31:1-29). A subtle stylistic device, however, signals that Joshua would remain subordinate to Moses

even after the latter's death. The first and last passages in which Joshua appears (Ex 17:8-16; Deut 31:1-29) each include a report that the words of Moses were written down in the presence of Joshua, intimating that Moses would continue to lead Israel through his designated successor (cf. Josh 1:7-9; 11:15, 23). By emphasizing Joshua's subordination to Moses, along with his success in battle, the Pentateuch anticipates the themes that shape his character in the book of Joshua.

The texts in which Joshua appears thus exhibit a continuity of theme and perspective that confirms his historical connection with Moses.

1. Military Leader
2. Moses' Aide
3. Moses' Successor

1. Military Leader.

Joshua first appears as a military commander who leads Israel to victory over the Amalekites (Ex 17:8-16), a role that echoes the sense of his name ("Yahweh saves," Heb *yěhōsua'*). "Saving" (*yš'*) is often associated with military contexts, where it denotes deliverance from a superior force (Judg 6:14; 1 Sam 4:3; 2 Sam 3:18). Joshua's name therefore not only reinforces his role in the conflict with Amalek but also situates him between Israel's deliverance from Egypt (cf. Ex 14:30) and its future victories over the superior might of the Canaanite kings. The text presents Joshua as Moses' surrogate on the battlefield; Joshua led Israel and achieved victory, but only as long as Moses' hands remained raised. The episode establishes a command-execution pattern that underscores Joshua's obedience to Moses. The narrator quotes a command of Moses and follows it with a report that "Joshua did as Moses had told him" (Ex 17:10). The pattern looks forward to the book of Joshua, where it serves a similar function (cf. Josh 5:2-3; 11:6-9).

A second episode demonstrates Joshua's faithfulness and courage (Num 14:1-12). In this case Joshua joined Caleb in exhorting Israel to follow Moses' command that they go up and take possession of the land, against the protests of their companions and the entire nation. The two men confirmed the goodness of the land and exhorted the people in both negative and positive terms, chiding their kinsfolk for their rebelliousness and declaring that the Canaanites were defenseless because Yahweh was with Is-

rael. The episode and its consequences (that generation's forfeiture of the promise) further sets Joshua above the people and reinforces his obedient character.

2. Moses' Aide.

Joshua is called Moses' aide in Exodus 24:13; 33:11 and Numbers 11:28. These and other texts set Joshua apart from the people and emphasize his close association with Moses. Joshua set out with Moses after the elders feasted with Yahweh on Mount Sinai, although it seems that Moses then continued up the mountain alone (Ex 24:13-14). Joshua was also present when Moses descended with the two tablets of the *covenant and mistook the sound of revelry for the sound of battle (Ex 32:15-18). Although both instances suggest that Moses alone met with Yahweh and received the tablets, they also highlight the unique status of Joshua, who left the elders and people to accompany Moses and who stood with Moses against the people's devotion to the golden calf. This unique status is reinforced by a short note that associates Joshua with Moses and the tent of meeting (Ex 33:11). A final episode accentuates Joshua's zealous loyalty to Moses while demonstrating that charismatic leadership derives from and is endorsed by Moses (Num 11:26-29). When informed that Eldad and Medad were prophesying in the camp, Joshua seemed to regard the act as a challenge to Moses' authority and entreated Moses to stop them. Moses responded with a question that indirectly affirms the passionate loyalty that Joshua displayed: "Are you jealous for my sake?"

3. Moses' Successor.

Two texts report the succession of leadership from Moses to Joshua (Num 27:12-23; Deut 31:1-29). Although the texts are often attributed to different pentateuchal traditions (P and D respectively; *see* Source Criticism), they have different literary roles and combine to offer a multifaceted account of this crucial change of leadership. The first (Num 27:12-23) focuses on the reason a successor needed to be designated (the imminent death of Moses) and the means by which Joshua was empowered and commissioned. It is primarily concerned with demonstrating that Joshua was the legitimate successor of Moses. At Yahweh's command, Moses presented Joshua to *Eleazar the priest and imparted some of his authority by laying his hands

on him.

The second passage (Deut 31:1-29) is more complex and consists of exhortations to Joshua, instructions regarding the book of the *law and predictions of future success and apostasy. In this case the text emphasizes Joshua's role in leading Israel to take possession of the Promised Land and continues the themes of obedience and disobedience prominent in the preceding materials (Deut 27:1—30:20). Following the *chronology of the Pentateuch, Joshua was therefore commissioned twice, once by Moses and Eleazar prior to the campaigns in the Transjordan, and then again by Yahweh himself as Israel prepared to enter the land.

The account of succession related in Numbers 27:12-23 implicitly links the succession of Joshua with that of Eleazar, which preceded the death of *Aaron (Num 20:22-29), and provides an occasion for defining the relationship between charismatic and institutional authority. In response to Yahweh's decree that he would not enter the land, Moses asked Yahweh to appoint someone over the congregation who would "go out and come in before them," a request that carries distinctively militaristic connotations (cf. 1 Sam 18:13). Yahweh identified Joshua as "a man in whom is the spirit" and instructed Moses to lay his hands on him (Num 27:18). The attribute seemingly qualified Joshua to be Moses' successor, but it is difficult to determine what the reference to the "spirit" means; endowments of wisdom, prophecy, skill and courage have all been advanced to explain it. The text focuses, however, on Yahweh's command that Moses impart some of this "authority" by laying his hands on Joshua (Num 27:20). The Hebrew term (*hōd*) occurs only here but appears to refer to a transmission of demonstrable power, sufficient to elicit obedience from the congregation. Yahweh stipulated that this was to be done in the presence of Eleazar the priest and the entire community and declared that "at his word they shall go forth and at his word they shall come in" (Num 27:21). The text thus presents Joshua as Yahweh's choice to lead Israel into the Promised Land and situates his military and political leadership, acquired through Moses, under the authority of the priesthood.

The Deuteronomistic account (Deut 31:1-29) is characterized by a complex interweaving of texts and themes. Here the succession of Joshua is not the central focus but one of many themes

that identify manifestations of Moses' continuing authority and presence within Israel. As in the previous account, the passage begins with the announcement of Moses' imminent death. But in this case the subject rapidly shifts to a preview of Israel's entry into the land, punctuated by divine promises and commands (Deut 31:1-6). With this scenario in mind, Moses summons Joshua and, in the presence of the community, decrees that he will put the people in possession of the land (Deut 31:7-8). However, at this point the narrative shifts abruptly and reports that Moses wrote down the law, gave it to the priests and instructed them to read it every seventh year during the Feast of Tabernacles (Deut 31:9-13). The matter of succession is then resumed with another announcement of the imminent death of Moses and a divine command that Moses and Joshua present themselves at the tent of meeting (Deut 31:14-15). Once again the story is interrupted, this time by Yahweh, who breaks in to predict Israel's future apostasy and to introduce a song that Moses is to teach the people as a witness against them (Deut 31:16-22). The narrative then returns a final time to Joshua. In a brief note that underscores the significance of the event, Yahweh commissions Joshua and confirms Moses' promises and assurances (Deut 31:23). The episode concludes with a return to the themes of the codification of Moses' words (Deut 31:24-26) and Israel's future apostasy (Deut 31:27-29). By interlacing these themes, the narrator emphasizes that Moses will remain present with Israel even after his death: through his successor Joshua, through the book of the law and through the song that will testify against the people.

Compositional analysis of the sections that deal with Joshua (Deut 31:1-8, 14-15, 23) has suggested that an earlier, pre-Deuteronomistic tradition that associated Joshua with the tent of meeting (Deut 31:14-15, 23; cf. Ex 33:11) has been supplemented by Deuteronomistic material that situates the succession within its literary context and forges links to the book of Joshua (Deut 31:1-8; cf. Josh 1:5b-9). The latter has been the focus of particular attention, due in large part to N. Lohfink's assertion that it reflects an "installation genre" that has been appropriated and modified by the Deuteronomist. Lohfink surmised that the genre derived from ceremonies in which someone was installed into a public office and identified a three-part scheme,

consisting of an exhortation to “be strong and resolute,” a declaration of the task and an assurance of divine presence. While his hypothesis has found support in a number of subsequent studies (e.g., Porter; McCarthy), recent discussion has inclined toward viewing the scheme more as a literary genre, with a focus on military leadership. From a literary perspective, the installation of Joshua may be viewed as a paradigm for succession that anticipates the monarchy by demonstrating the importance of an orderly transition of leadership. More broadly, the passage may present Joshua as an ideal figure who, as successor to Moses, demonstrated the necessity of following the Mosaic torah (see Schäfer-Lichtenberger).

Within its literary context, the commissioning of Joshua in Deuteronomy 31 opposes themes of faithfulness and obedience (Deut 31:2-6, 9-13) with those of future rebellion (Deut 31:16-22, 24-29), thereby demonstrating the necessity of continuing human leadership after the death of Moses. The three passages in which Joshua appears carefully trace the transmission of authority, echoing a broader thematic transition from life in the wilderness to future life in the *land. In the first scene (Deut 31:7-8) Moses summons Joshua, exhorts him to be courageous, declares that he is Yahweh’s choice to lead Israel into Canaan and assures Joshua of Yahweh’s continuing presence. In the middle scene (Deut 31:14-15) Yahweh summons Moses to present Joshua, and the three meet at the tent of meeting. However, only Joshua and Yahweh appear in the final scene (Deut 31:23). Here Yahweh commissions Joshua and succinctly reiterates Moses’ words of encouragement and assurance. The repetition of exhortations and promises looks ahead to the book of Joshua, where they will be repeated once again as Israel prepares to enter a new era as a settled people in the land promised by Yahweh (Josh 1:6-7, 9; cf. 10:25).

JUBILEE. See SABBATH, SABBATICAL YEAR, JUBILEE.

JUDAH

Judah is the name of several individuals in the OT, most noteworthy of whom was one of the twelve sons of Jacob/Israel. During his life Judah the son of Jacob experienced both periods of leadership and moments of sin, a trait shared with nearly every other character in the Hebrew Bible. After Judah’s death, the tribe that bore his name grew to prominence within Israel, eventually producing the line of David and, after the formation of the northern kingdom of Israel, even constituting an independent nation. Even today Judah’s name is recalled every time one speaks of God’s chosen people, the Jews.

1. Judah the Patriarch
2. Judah the Tribe
3. Judah the Kingdom.

1. Judah the Patriarch.

Judah was the fourth of the sons of *Jacob by Leah. At Judah’s birth Leah exclaimed, “This time I will praise the LORD,” and she named her fourth-born son Judah (“Praise”; Gen 29:35). In the ancient Near East, the naming of a child was a particularly significant event. As a general rule it represented some circumstance or predilection at the time of birth. The name itself was not

thought to determine a child's destiny but rather seems to have been related to the person's essential self. Often the name was significant in the experiences of one's life.

1.1 Judah and Joseph.

1.1.1. Judah's Suggestion. When Judah was about twenty-four years old, he and his brothers were in the field when Joseph came seeking them. Taking advantage of this opportunity to rid themselves of the brother they hated, they plotted to kill him. After *Reuben circumvented their plot, as an alternate plan Judah suggested that they sell *Joseph to the passing Ishmaelites; Judah's words convinced his brothers (Gen 37:26-27). This is the first time Judah's leading role among his brothers is asserted.

1.1.2. Judah and Tamar. Interrupting the flow the Joseph history is Genesis 38, the incident of Judah and *Tamar. The placement of this episode certainly increases interest in the events portrayed. In this chapter, Judah plays one of the key roles in one of the most sordid accounts in the OT, a story of base, immoral actions. Judah's first mistake was departing from his fellow Hebrews and settling near Hirah the Adullamite. His second mistake followed shortly: he married the daughter of Shua, a Canaanite, resulting in the birth of Er. This union was the first recorded marriage of an Israelite with a member of the Canaanites (*see* Nations of Canaan). Judah also became the father of Onan and later of Shelah, who was born at Chezib. Judah took Tamar (who was evidently a Canaanite) as a wife for Er, his firstborn, but Er was killed because of his wickedness. It was evidently a custom of the time for a brother or other near relative to marry a widow to raise up children for the deceased. (Later, this was incorporated into the Mosaic legislation as a part of the levirate responsibility.) In keeping with this custom, Judah then told his second-born son, Onan, to fulfill this responsibility. Evidently hesitant to lessen his own inheritance, Onan was unwilling to father a child by Tamar. At his refusal he too was stricken dead. Fearing that his youngest son Shelah would also die, Judah asked Tamar to wait until Shelah was older before making her second levirate marriage claim; this was simply a diversionary tactic, for Judah had no intention of giving Shelah to her. So Tamar returned to her father's house.

When Judah's wife, the daughter of Shua the Canaanite, died, Judah went to Timnah with his

friend Hirah the Adullamite. Hearing of his presence there, Tamar disguised herself as a harlot in order to make her claim upon Judah. He decided to patronize Tamar, whom he took to be a prostitute. As they negotiated a price, Judah offered to bring her a kid from the flock as collateral. Tamar asked Judah to leave his seal (probably a signet ring), cord (probably the string worn around his neck from which the signet ring hung) and staff. After these arrangements were completed, Judah had sexual relations with Tamar, and she conceived. When Judah tried to deliver the kid and redeem his pledges, there was no sign of the "harlot," for Tamar, of course, had departed. In about three months, it became obvious that Tamar was pregnant. Upon learning of her condition, Judah was enraged and demanded that she be burned as an adulteress. As Tamar was being brought out, she sent to Judah the signet ring, cord and staff, saying that they belonged to the father of her unborn child. Faced with the evidence, Judah guiltily acknowledged his own paternity, and her claim to have a child by one of her husband's kin was legitimate (Gen 38:1-11). Judah admitted his personal guilt absolutely; he not only exonerated but praised Tamar. As the subsequent history demonstrates, had it not been for her courageous actions, Judah's family line, the line of the Davidic family—and, ultimately, the messianic line—would have come to an end.

1.1.3. Judah and the Famine. Judah and his family suffered greatly during the widespread famine that had been revealed to Joseph. The second year of the famine, Judah and his brothers (except *Benjamin) were sent by their father Jacob to Egypt to acquire grain. During this visit the brothers were recognized by Joseph, who accused them of being spies and questioned them carefully about their father and younger brother. In the end, *Simeon was kept as a hostage until they should return. Joseph had instructed his servants to replace each brother's money in his sack, which caused great consternation among Judah and his brothers when they later discovered it. Some time later, when the famine continued to be severe, Jacob told his sons to return to Egypt. Judah reminded him that the Egyptian who had queried them, not yet known to be Joseph, had strictly instructed the brothers that they would receive no further aid from Egypt unless Benjamin accompanied them when they returned. When Jacob began to

blame his sons for revealing the existence of Benjamin, it was Judah who stated that the Egyptian (Joseph) had questioned them especially as to their family connections and specifically as to whether they had a younger brother. Judah then offered to guarantee Benjamin's safety, so Jacob finally agreed to let Benjamin go with them (Gen 43:3-10).

1.1.4. Judah as Spokesman. Following this visit, Joseph instructed his servants that along with the grain each brother should again have his money replaced in his sack and that his own divining cup (possibly associated with his interpretation of dreams) be placed in Benjamin's sack. This was intended as a test for his brothers, who thereupon departed. Joseph then had his house steward pursue the brothers and accuse them of abusing his goodwill by stealing his cup. Avowing their innocence, the brothers rashly said that they did not have it, but were the cup found among them, the one in whose sack it appeared should be killed and they would all become the Egyptian's slaves. Of course, the cup was found in Benjamin's sack.

When they returned to Joseph, he roundly scolded them, pointing out that they could not hide the truth from him. It was Judah who spoke the abject confession of the brothers, pointing out that all the brothers would forfeit their freedom. Joseph responded that only the person in whose sack the object had been found was to be his slave and the others could return to their father. Judah then approached the man whom he did not yet know was his brother Joseph, reminding him that he (Joseph) had closely interrogated the brothers concerning their father and brother. Judah continued pleading by pointing out that if the brothers returned without Benjamin it would surely precipitate the death of their aged father. He further explained that, because of his father Jacob's reluctance to allow Benjamin to accompany them, Judah had offered himself as surety for Benjamin's safe return. He then pleaded that he be allowed to be a slave for Joseph as a substitute for Benjamin (Gen 44:1-34). Following Judah's remonstrances, Joseph, with great emotion, revealed his identity to his brothers, urging them to bring the entire family to be his guests in Egypt, an invitation which Jacob accepted gratefully.

1.2. Judah in Egypt.

1.2.1. Judah's Leadership. As Jacob and his

clan approached Egypt, Jacob chose Judah to prepare the way for the family to occupy Goshen (Gen 46:28).

1.2.2. Jacob's Blessing on Judah. Jacob's blessing on Judah began with a marked paronomasia, "Judah [= "Praise], your brothers shall praise you." Judah was promised preeminence not only over his enemies but his family as well. He was likened to a lion going forth to conquer great prey then returning to his rest, from which no one dared rouse him. A great royal promise was given to him, "The [royal] scepter shall not depart from Judah, nor the ruler's staff from between his feet until Shiloh [NRSV: tribute] comes to him" (Gen 49:10). This "Shiloh" has been interpreted in several ways, such as "to be at rest," "to be content," "one who brings rest and contentment" or "ruler" (so Luther). However, from the clear, uncontracted phrase in Ezekiel 21:27 the word seems to be an abbreviation for the words "which to him," that is, "him to whom it belongs," a reference to the messianic king and ultimately to *Messiah himself. Finally, Jacob promised to his son Judah material prosperity (Gen 49:8-12).

Among the tribal blessings given by Jacob, the blessing on Judah is singled out by its length to be especially significant. Only the blessing on Joseph is of similar extent. Judah and Joseph each seem to be given certain "firstborn" privileges. Prior to the giving of the Mosaic law, it would seem that the privileges of primogeniture were not necessarily automatically set by the actual birth order. By birth order, Reuben was firstborn, but Jacob took away his right of primogeniture because of Reuben's incest. Simeon, the second born, was disqualified because of his misconduct following the rape of Dinah. One of the prerogatives of the firstborn was to be the priest of the entire family, but God accepted the tribe of Levi, the third born, to be priests to serve as a redemption for the firstborn of the tribes. Jacob had chosen Joseph to receive the firstborn's double territorial prerogative, giving him two tribes, one for each of his sons Ephraim and Manasseh. Thus God chose (and Jacob affirmed) Judah as firstborn to receive the prerogative of ruling.

2. Judah the Tribe.

2.1. In the Wilderness. When Judah entered Egypt he had three sons, but so greatly did his family increase that in the first military census of

males twenty years and older, it numbered 74,600, being first in population of all the tribes. His tribe camped on the east side of the tabernacle, along with Issachar and Zebulun, two other Leah tribes (Num 2:3-9).

During the march through the wilderness, Judah's place was in the vanguard of the host (Num 10:14). Arriving at the border of the Promised Land, Judah's representative among the spies sent to reconnoiter was Caleb, son of Jephunneh (Num 13:6).

At the second military census, taken at the close of the wanderings, the males twenty years and older in Judah's tribe numbered 76,500, still retaining its first rank among the tribes (Num 26:19-22). During the conquest, the defeat at Ai was occasioned by Achan, a member of the tribe of Judah "who caused Israel to sin" (Josh 7:1-26). It has been surmised that this may have been one of the reasons why Judah was required to mount an independent attack on the Canaanites (Judg 1:1-2). Joshua won several victories within Judah's tribal territory (Josh 11:21). Judah's leaders came before Joshua with Caleb to make his request for his family portion (Josh 14:6).

2.2. Judah's Tribal Territory. Judah was the first of the tribes west of the Jordan to receive its territorial allotment, which included over a third of the whole land. The boundaries and contents of the territory allotted to Judah are described at great length (Josh 15:20-63). Basically, Judah's portion was bordered on the north by the tribal lands of Dan and Benjamin, on the west by the Mediterranean, on the east by the Dead Sea, and on the south roughly as far as agriculture was possible. The portion of Judah's allotted territory that the tribe actually occupied consisted primarily of the central hill country of that region. Being an especially favored tribe, Judah, along with the tribe of Ephraim and the Transjordanian tribes of Reuben, Gad and Manasseh, did not participate in the division of the land by lot described in Joshua 18 and 19, for its territory had already been assigned. At the allocation of the tribal allotments, the tribe of Simeon received a portion of Judah's tribal territory (Josh 19:1-9). The levitical cities within Judah's tribal boundaries are listed in Joshua 21:4.

3. Judah the Kingdom.

In Jacob's blessing he prophesied that the kingdom would be centered in the progeny of Judah,

but the first choice of king by the people was Saul, who was a scion of the tribe of Benjamin. Following Saul's death, the tribe of Judah immediately chose David as king, crowning him at Hebron, but after Saul's son Ish-bosheth died, the people recognized Judah's tribal stability and leadership and enthusiastically made David king over all twelve of the tribes, thus beginning the fulfillment of Jacob's blessing in Genesis 49.

Further development of Judah's blessing came after the kingdom's division into two separate kingdoms. Judah emerged as the major component of the southern kingdom of Judah. After about two hundred years, the northern kingdom of Israel was conquered by the Assyrians, but Judah continued as a kingdom for a over a century. The kingdom of Judah was ended when Babylon conquered Jerusalem in 587/586.

Following its captivity, Judah was reestablished under Zerubbabel with the rebuilding of the temple. Later still, Judah found spiritual revival under Ezra, and the walls were restored during the time of Nehemiah.

JUDGE

The pentateuchal concept of "judge" bears both similarities to and differences from the modern notion of a legal official. On the one hand, a number of pentateuchal legal texts authorized the establishment and regulated the behavior of a select body of individuals who were to preside over a variety of civil and criminal proceedings in ancient Israel. On the other hand, the language and theology of judging was not limited to this narrow legal realm. For example, the Pentateuch reflects the common ancient Near Eastern practice of closely associating the roles of judge and ruler. Moreover, the biblical text clearly presents God as the judge par excellence from whom all other judges—whether the head of a household or the legal arbiter of the entire people—derived their authority.

1. Judging as an Action
2. Judges as Agents
3. Conclusion

1. Judging as an Action.

Judging as an action is expressed in the Pentateuch by means of two roots, *špt* and *dyn*. The root *špt* appears sixteen times, only in the Qal stem (Gen 16:5; 19:9 [twice]; 31:53; Ex 5:21; 18:13, 16, 22 [twice], 26 [twice]; Lev 19:15; Num 35:24; Deut 1:16; 16:18; 25:1; on the Qal participle of *špt*, see below). The subject of this root in the pentateuchal passages listed above is either divine (Yahweh [Gen 16:5; Ex 5:21]; "God or gods" [ʾēlōhīm, Gen 31:53]) or human (Lot [Gen 19:9]; trustworthy people [ʾanšē ʾemet] ap-

pointed by Moses [Ex 18:21-22, 26]; a court [*mišpāt*, Deut 25:1]; an assembly called to make decisions in civil cases [ʿēdā, Num 35:24; *šōpēfīm*, Deut 1:16]; officials or scribes [*šōtērīm*, Deut 16:18]). Judging typically takes place between individuals, such as "brothers" (ʾaḥīm, Deut 1:16), a "brother" and a "stranger" (*gēr*) or fellow citizens (ʿāmūt, Lev 19:15).

The root *dyn* occurs four times, also only in Qal. Genesis 15:14 states that Yahweh will "judge" the nation that will enslave his people, while Genesis 30:6 reports that God "made justice" to Rachel by listening to her prayer and providing her with a son named Dan. In Genesis 49:16, the root *dyn* appears with the meaning "to govern," as the writer makes a play on words: "Dan [*dān*] will govern [*yādin*] (his people)." Finally, Deuteronomy 32:36 states that Yahweh will "plead the cause" [*yādin* paralleled by *nḥm*, "to have compassion"] of his people. The noun *dayyān* ("judge") is not found in the Pentateuch. (It shows up only in two places in the entire OT: 1 Sam 24:15 [MT 24:16]; Ps 68:5 [MT 68:6].) In the case of the root *dyn*, the subject is Yahweh, God or an individual (e.g., Dan), while the object is either peoples (e.g., Israelites, Egyptians) or individuals. The roots *špt* and *dyn*, though used in parallel, are not necessarily synonymous in meaning (cf. Mafico, 3.1104).

As for the meaning of *špt*, the general view is that the two notions of *governing* and *judging* constitute the makeup of this root, whose origin is West Semitic (cf. the Ugaritic title *tpt*, "ruler, judge"; Phoenician *špt*, "to rule"; South Arabian [Qatabanic] *tpt*, "to decide, order"; in Akkadian and its dialects the term *šāpītum* ["district governor, judge"] is a loanword; see Liedke, 3.1393; cf. Niehr). The verb is used with the first meaning with respect to Lot in the phrase *yīšpōt šāpōt* ("to act as ruler"; Gen 19:9). In the Sodomites' view, Lot did not come to dwell (*gūr*) among them but rather to be a ruler. The transition from *governing* to *judging* is reflected by the formula *šāpat bēn . . . ūbēn* ("to decide between," Gen 16:5; 31:53; Ex 18:16; Num 35:24; Deut 1:16; cf. Niehr, 12.417-18). "Judging" means "to condemn" (Hiphil of *rš*) and then "to declare innocent" (Hiphil of *šdq*; Deut 25:1; cf. Liedke, 3.1394). The Septuagint renders the verb *špt* by *krinein* ("to judge") and the title *šōpēt* mostly with *kritēs* ("presiding judge"), though occasionally (e.g., Ex 2:14) with *dikastēs* ("a judge"). In Numbers 25:5, the Septuagint misreads *šōpēt* as *sēbet*,

which explains the rendition *phylē* (“tribe”).

2. Judges as Agents.

The agent “judge” is designated by the substantivized participle *šōpēt*; the other two terms discussed below are usually rendered “judge,” but there is still room for debate over their precise meaning.

2.1. *Šōpēt*. Genesis 18:25 portrays Yahweh as “the judge [*šōpēt*] of the whole world,” as the one who renders “justice” (*mišpāt*) by punishing the “wicked” (*rāšāʿ*) and sparing the “righteous” (*šaddiq*). According to Exodus 2:14, Moses acted as an “arbitrator/judge” during a private dispute between two Hebrew slaves living in Egypt. Significantly, the term *šōpēt*, followed by the preposition *ʿal* (“over”) rather than the more common *bēn* (“between”), shows up here in parallel with *šar* (“prince”), thus emphasizing the “governing” connotation of the root *špt*. Later Moses addressed “Israel’s judges” (*šōpētē yisrāʿel*, Num 25:5), whose main duty was of a military nature. The “judges” (contrasted with the “leaders [*roʾšē*] of the people”) were the executioners of Baal’s worshippers. In Deuteronomy 1:16, Yahweh charges the “judges” (*šōpētīm*) to listen to the parties and to render “justice” (*šedeq*) in cases concerning Israelites (“brothers,” *ʾaḥīm*) or those involving an Israelite versus an “alien” (*gēr*). According to Deuteronomy 16:18, “judges” (*šōpētīm*), in parallel with “officials” (*šōṭerīm*; scribes?), were to be appointed in all of Israel’s “gates” (i.e., cities) for all the tribes. The juxtaposition of tribes and cities echoes the transition from tribal life to urban life in Israel’s social structure. Finally, Deuteronomy 17:9, 12; 19:17 refer to a “judge” (*šōpēt*) who stood beside the *levitical *priests and whose main obligation was “to hold an inquiry” (*drš*) and deliver a “sentence” (*dēbar hammišpāt*).

2.2. *Pēlīm*. Exodus 21:22 refers to the price of restitution paid to the judges; according to E. S. Gerstenberger (10.613), the assumed meaning “to judge” for *pll* (cf. GesB 643-44; BDB, 813c; KBL, 881) is often questionable and perhaps influenced by our modern way of thinking. E. A. Speiser (303) argues for the idea of “estimation” (cf. Ex 21:22; MT: *bipēlīm*; LXX: *meta axiōmatos* “according to estimate”; versus *Targum Onqelos*: “judge”). In Hittite Laws §17 one finds a similar example to that in Exodus, with one difference: in the apodosis the Hittite document assesses the “estimate.” for the damaged

embryo, while the OT text focuses on the husband’s authority. The meaning “estimate,” implied in the Hittite document, is supported by the Septuagint’s rendition. In addition, the plural ending *-īm* on *pēlīm* may indicate, as elsewhere in Hebrew, an abstract noun. At Deuteronomy 32:31, the KJV, JPS and RSV offer the translation “our enemies [*ʾōyēbēnū*] themselves being judges,” but according to Speiser (303), the Hebrew may be rendered “Even in our enemies’ estimation.” Note also that the Septuagint reads *anoētoi*: “(our enemies are) without understanding.”

2.3. *ʾĒlōhīm*. Exodus 21:6, a text that belongs to the *book of the covenant, more precisely to the section dealing with slaves, stipulates that a slave who does not want to be freed is to be brought by his master “before the judge [literally, God]” (*ʿel ʾēlōhīm*) and then to the door. The Septuagint renders this phrase *pros to kritērion tou theou* (“to the judgment seat of God”), but according to Schmidt (1.118), here *ʾēlōhīm* designates rather the household gods as the protectors of the family (cf. Gen 31:30). Similarly, Exodus 22:8 states that an owner of a house accused of stealing items entrusted to him by a neighbor was to come into the presence of the “judge” (*ʾēlōhīm*, 22:7 MT) declaring his innocence. The Septuagint reads *enōpion tou theou* (“in the presence of God”), and Exodus 22:9 broadens the legislation to state that in cases of disputed ownership both parties were to present their cases before the “judge” (*ʾēlōhīm*, 22:8 MT). According to this verse the “judge” was to pronounce the verdict. In each case the Septuagint translates the Hebrew with *theos* (“God”), as do the Targum, Peshitta, Aquila and Symmachus (as they also do in Ex 18:19; 1 Sam 2:25; Ps 82:1). The evidence for reading *ʾēlōhīm* as “judge” is therefore not compelling.

3. Conclusion.

Summing up, one may notice that in the Pentateuch Yahweh is described as “the judge of the whole world” (Gen 18:25); in this capacity, God delegates to certain individuals the responsibility to administer justice.

Prior to the monarchic regime, the administration of justice was done by the head of the household (Gen 16:1-6; 31:25-53; 38:24-26) or elders as the representatives of the families in the clan (*zēqēnīm*, Deut 22:16; 25:7, 9). The elders used to sit in front of the city gate, where the

cases were judged (Gen 23:10, 18, noting that these are non-Israelites and are not identified as elders); expressions such as “the elders at the gate of the town” (Deut 21:19) and “the elders of the town” (Deut 21:3, 6) reflect this custom. The elders imposed the penalty (Deut 22:18-19), though in the case of capital punishment this was to be carried out by the witnesses against the accused or by all the men of the town (Deut 17:7; 21:18-21).

The appointment of officials as “judges” (*šōpētim*) can be traced in Exodus 18:13-27; an earlier echo of this tradition is found in Exodus 2:14. These officials appointed by Moses are the prototypes of the professional judges in Israel. Texts such as Deuteronomy 16:18; 17:8-13 refer to the centralization of jurisdiction to the capital and cities: judges are to be installed in every city. In Deuteronomy 17:9; 19:17, priests appear beside judges, and a priestly jurisdiction should be assumed.

The first responsibility of a judge was to render “justice” (*mišpāt*): to punish the wicked and save the righteous (Gen 18:25); “to give one a

fair hearing” (*šāpaṭ sēdeq*, Deut 1:16). But the most important duty of any judge was to restore the peaceful situation that existed prior to the conflict (Gen 16:5; 19:9; Ex 2:14); hence their basic function was that of arbitrators (cf. Mafico, 3.1105).

LAND, FERTILITY, FAMINE

Land is an important theme in the Pentateuch and has even been described as “*the central theme of biblical faith*” (Brueggemann, 3). The theme is prominent in all five books of the Pentateuch and impinges on other main themes such as *blessing and descendants. N. Habel suggests that land is such an important and comprehensive symbol in the OT that “it could be ranked next to God in importance” (Habel, 6).

1. Vocabulary Related to Land Issues
2. Divine Sovereignty over Land
3. Relationships Between People and Land
4. The Patriarchs and the Promised Land
5. The Significance of the Exodus and the Wilderness Wanderings
6. Israel’s Occupation of Canaan
7. Regulations Concerning Land
8. Conclusion

1. Vocabulary Related to Land Issues.

The main Hebrew words denoting “land” in Genesis are *’ereš*, *’ādāmā* and *śādeh*. Although the terms are often used synonymously, each has its own particular emphasis. The word *’ereš* occurs most frequently. It occasionally denotes “ground” (Gen 18:2; Ex 4:3; Deut 15:23) but usually refers to large stretches of territory such as a particular region or country (Gen 12:1, 5; 17:8; Ex 2:15; Lev 11:45; Num 13:2) or to the earth as a whole (Gen 1:1; 2:1; 6:4; 11:1; Deut 28:25); *’ādāmā* may denote the habitable earth (Gen 12:3; Deut 14:2) or a particular country (Gen

47:20), but most occurrences refer to the soil or the ground (Gen 2:5, 7, 19; 3:17, 19, 23; 4:2, 3, 10; Ex 3:5; Lev 20:25; Deut 4:18). Occasionally *śādeh* denotes a particular country (Gen 14:7), but usually it refers to cultivated land (Gen 37:7; Ex 9:22; 10:5; Num 16:14; Deut 11:15) or to the open countryside (Gen 2:19, 20; 3:1, 14; 25:27, 29; Ex 23:11; Deut 22:25). Thus *śādeh* is used, for example, in relation to the land that *Abraham bought from the Hittites (Gen 23:8-20).

2. Divine Sovereignty over Land.

God is cast in the roles of Creator and “supreme landlord” in the Pentateuch. The land owes its existence to him, and he creates its inhabitants, continually monitoring and supervising their behavior. He allocates land to people: *Adam is placed in *Eden (Gen 2:8), Canaan is promised to the *Israelites (Gen 15:16-21) and there are references to the allocation of land to the Edomites (Deut 2:5), Moabites (Deut 2:9) and Ammonites (Deut 2:19). Conversely, he removes people from land when they do not behave in a worthy manner: he expels Adam and *Eve from Eden (Gen 3:23-24), scatters the tower builders over all the earth (Gen 11:8) and earmarks the Canaanites for expulsion from their land when the level of their sinfulness warrants it (Gen 15:16).

The sovereignty of God over land is revealed in the *exodus of Israel from *Egypt. The plagues demonstrate that “the earth [*’eres*] is the LORD’s” (Ex 9:29; cf. 19:5) and that he is Lord in all the earth/land (Ex 9:14). In the account of each plague its effect on the land is prominent. For example, there is blood in all the *land* of Egypt (Ex 7:19, 21), the frogs cover the *land* (Ex 8:6) and flies destroy the *land* (Ex 8:20-24). Furthermore, as a result of the plagues the Lord’s name is proclaimed throughout the land/earth (Ex 9:16).

While Egypt is referred to as *Pharaoh's land, it is clear that his is a subservient role, and although Pharaoh does not recognize Yahweh's authority, he nevertheless has to yield to it and accede to his demands when Yahweh passes through his land and strikes it (Ex 12:12-13).

3. Relationships Between People and Land.

Land and people are portrayed in a close interdependent relationship. This is initiated when God, having already commanded the ground to bring forth vegetation, uses the soil (*'ādāmā*) as the material for the creation of humankind (*'ādām*). Although there is probably no etymological link between *'ādām* and *'ādāmā*, the close relationship between human beings and the ground is emphasized by this wordplay. This assertion, that the man is made from clay, elevates the ground while reminding human beings of their innate vulnerability; not only do they come from the ground, but when they die they return to it as mere dust (Gen 3:19). The close relationship that humans have with the ground means that they are obliged to care for it and enabled to reap its benefits (Gen 2:16), but it also means that anything adverse that affects the ground/land strikes deeply at the very basis of their existence.

Human beings are instructed to fill and subdue the earth (Gen 1:28). The word used for subduing (*kābas*) the earth means "to make subservient, to establish one's authority." It is used to describe what the Israelites must do when they enter Canaan (Num 32:29) and emphasizes that the creator has delegated control and authority over the created order into the hands of human beings.

The relationship between land and its inhabitants is contingent on good relations between humans and God. When humans are alienated from God there are significant repercussions, because God uses the land to punish his recalcitrant subjects. Misdemeanors as diverse as eating "forbidden" fruit (Gen 3:17-19), fratricide (Gen 4:10-16) and building a tower without divine approval (Gen 11:5-9) are all punished in relation to land. As a result, the ground is cursed (Gen 3:17-19), thorns and thistles make the ground more difficult to cultivate and less productive (cf. Gen 5:29), human beings must still work the soil but the benefits they receive are greatly reduced (Gen 3:19, 23), and the harmony established at *creation is replaced by alienation culminating in the expulsion of the hu-

man beings from the idyllic surroundings of the garden of Eden (Gen 3:24). The account of the fratricide perpetrated by *Cain shows that crimes such as murder could result in further alienation from the ground and in a total loss of fertility of the ground. The final crime in the primeval narratives is that of the tower builders whose insubordination results in them being scattered over all the earth.

In these early stories fertile land is a gift from God and a sign of his *blessing while infertility (famine) may be a consequence of divine displeasure. While later famines in the Pentateuch are not explicitly described as punishment from God, they clearly imply the absence of blessing and suggest that the lands so afflicted are not blessed with divine favor (Gen 12:10; 26:1). Fertile soil and secure boundaries, however, are evidence of divine favor and blessing (Gen 26:12-33).

4. The Patriarchs and the Promised Land.

Until the call of *Abraham there is a progressive deterioration in the relationship between God and human beings with the concomitant repercussions in relation to land. However, the call of Abraham represents a turning point. Beginning with the Abraham narratives the movement is toward a harmonious relationship with God in the Promised Land. Adam is expelled from Eden because of his disobedience; Abraham must be obedient in order to receive the land of *promise. At first the promise of land is fairly vague and is introduced to Abraham as "the land that I will show you" (Gen 12:1). However, the promises become more explicit as the narrative develops (Gen 12:7; 13:15-17), and eventually God makes a clear, unequivocal oath to give the land of Canaan to Abraham and to his descendants (Gen 15:12-21). These promises go hand in hand with a harmonious relationship between God and Abraham: God speaks to him and Abraham listens and obeys (Gen 12:1-6; 22:1-3); he builds *altars and calls on the name of the Lord (Gen 12:7-8); he fears God (Gen 22:12) and walks before the Lord (Gen 24:40).

Following Abraham's death, the promise of land passes to *Isaac (Gen 26:2-3) and then to *Jacob (Gen 28:13-15). Eventually Jacob and his family leave Canaan during a famine and live in Egypt, but they leave with the assurance that their descendants will return and take possession of it (Gen 46:1-4). Through the leadership of *Moses the return toward the Promised Land

begins (Ex 12:31-39). The movement toward land is accompanied by divine revelations and legislation that facilitates harmonious relations between Israel and God (Ex 20—31; 35—40; Lev 1—7; 11—26; Num 5—10; 15; 18—19; 28—30; Deut 4—30). Thus in the primeval narrative humankind had moved away from God and, consequently, from secure land. The reverse happens in the remainder of the Pentateuch as first the patriarchs and then their descendants move closer to the Promised Land.

5. The Significance of the Exodus and the Wilderness Wanderings.

The continuity between the promise of land to the patriarchs and the exodus from Egypt is often emphasized (Ex 3:8; 6:4, 8; 12:24-25; Deut 1:8, 21; 31:7, 21). The differences between the new land and the land of Egypt are described. Egypt is a land that is irrigated “by foot” (perhaps a reference to the way that water channels were regulated using small mud dams built up or breached by the feet of the farmer). However, the land of Canaan is a “land of hills and valleys, watered by rain from the sky, a land that the LORD your God looks after” (Deut 11:10-12). Israel’s need to rely on God, whether in the *wilderness or in the Promised Land is highlighted by this contrast.

One of the main crises that threatens possession of the land is the Israelites’ refusal to enter Canaan following the report of the spies. Returning to their camp with a huge cluster of grapes, the spies dramatically confirm that the depiction “flowing with milk and honey” aptly describes the land of Canaan (Num 13:27), but most also argue that it will be impossible for Israel to conquer the country (Num 13:28-33). They fail to give sufficient credence to the truth that this land is being given to them by God and instead they focus on their inability to conquer the country. Further ingratitude toward God is evidenced in the rebellion of Korah, Dathan and Abiram. Ironically, they accuse Moses of bringing them “up out of a land flowing with milk and honey” into a wilderness (Num 16:13). Their punishment is apt: the earth/land swallows them (Num 16:31-33).

Condemned to wander in the wilderness the Israelites are dependent on the providential supplies of water and *food. The wilderness cannot provide for them, and it serves as a foil for the fertile land. Just as the shortcomings of characters such as Cain and *Lot highlight the

roles played by *Abel and Abraham respectively, the inadequacy of the wilderness enhances the attractiveness and desirability of the Promised Land. The wilderness is a negative and hostile place (Num 20:4-5). It stands in sharp contrast to the fertile garden of Eden and to the Promised Land of Canaan. The Promised Land is characterized by its fertility. It is a good land (Deut 1:25) that is endowed with flourishing cities, houses, wells, vineyards and olive groves (Deut 6:10-11). It is a land “where you may eat bread without scarcity, where you will lack nothing, a land whose stones are iron and from whose hills you may mine copper” (Deut 8:9-10).

6. Israel’s Occupation of Canaan.

The occupation of Canaan is portrayed as a divine gift to an unworthy people. It is Israel’s *nahālā*. This word is usually translated “inheritance” in the English versions, but the idea of passing on property at death is not always prominent in the Pentateuch. Habel argues that the gift of a *nahālā* to Israel “seems to be equivalent to a legal grant of land or property” (Habel, 35). Thus terms such as “land-grant” or “entitlement” may convey the sense of the Hebrew better than “inheritance.”

On the other hand, paradoxically, the land that is given to Israel as a land-grant or entitlement must be occupied and retained through obedience and conquest. These apparently contradictory aspects of Israel’s occupation of Canaan are presented as two compatible aspects of Israel’s relationship with God. Through this relationship the gift of land is realized but obedience is required for the maintenance of the relationship without which the gift will be withheld or withdrawn.

The occupation of the land of Canaan is associated with **“rest”* (Ex 33:14; Deut 3:20; 12:9-10; 25:19; 28:65). From the time God curses the ground and expels human beings from Eden, they long for rest (Gen 5:29). Egypt and Israel’s sojourn there epitomized hard labor, and the wilderness is a place of restless wandering. The acquisition of the Promised Land, while not explicitly described as a return to Edenic bliss, gives Israel the rest and security that was endemic to paradise. This rest is not just understood in the negative sense of no longer needing to wander but also denotes security and safety from one’s enemies (Deut 25:19). In the NT this concept is developed and associated

with a *sabbath rest (Heb 4:9).

7. Regulations Concerning Land.

In preparation for taking possession of the Promised Land, the Israelites are warned that the behavior of its inhabitants will affect the land. The Israelites must treat the land with respect and not defile it with vile practices, as the previous inhabitants did (Lev 18:25). In their pursuit of good harvests the Canaanites practiced promiscuous fertility rites. This brought the inhabitants into confrontation with God and also alienated them from their land. The land is portrayed as having been nauseated by its inhabitants. Like a person who has eaten something disagreeable, it vomits them out (Lev 18:28).

The gift of the land to Israel is explained in terms calculated to engender a sense of respect and humility: it is not because Israel is righteous that they receive the good land but because the previous inhabitants were wicked and because of God's close relationship with the patriarchs (Deut 9:4-6). To remain in the land and to enjoy longevity, the Israelites must subject themselves to God's will as their forefathers had done (Deut 4:40; 5:33; 11:2; 32:47).

The tripartite relationship between God, humans and land in the garden of Eden portrays the ideal for which Israel must aim. In Eden God's presence was openly manifest, and there was communion with him. There were laws to be kept concerning the land, and people had certain responsibilities in relation to caring for it and exercising control over it (Gen 2:15-17). Failure to obey God led to expulsion from Eden. It is against this background of the rebellion and subsequent punishment of the first humans that the laws and regulations are given in the Pentateuch. It is recognized that humans will receive the best benefits from land when they live in harmony with God. Israel is not chosen simply in order to receive a special promise of land but to have a special relationship with God within the secure boundaries of Canaan. Relationships with land and God are, therefore, interdependent. The Promised Land reflects the ideal conditions in Eden and replicates significant aspects of the primeval paradise. Like Eden, the Promised Land is a place of fertility where God's laws are respected and his presence manifest. The erection of the *tabernacle and the giving of the ceremonial *laws that are so prominent in the Pentateuch are an essential

part of the preparation for living in the Promised Land, since harmony with God is the paramount requirement for those desiring fertility from the ground. However, although Israel's settlement in Canaan is presented as reminiscent of Eden, it is not presented as equal with Eden. Canaan does not fully replicate the uninhibited communion with God or the harmony and fertility that were endemic in the primeval garden.

The laws regarding the sabbatical year that are given in the wilderness (Lev 25:1-55) would seem harsh if they were given to people already reaping the benefits of *agricultural land. In the wilderness setting, however, the emphasis is not on how much God is taking from them, since they have no agricultural land, but on how much he is giving them. God is giving them fertile land for six years. In the seventh year they must leave it fallow. This recognizes that they have responsibility to treat the land well. Just as the sabbath laws for human beings recognize their right to rest, now Israel must recognize that the land has the right to a sabbath rest, though not every seventh day but every seventh year. Furthermore, the sabbatical year reminds them that the land ultimately belongs to Yahweh.

When the people are blessed with fertile land, they are to avoid greediness and dishonesty. Their generosity should be apparent in the way they harvest their crops. They are commanded to leave some of their crops in the fields so that food will be available to the poor and needy who have no land of their own (Lev 19:9-10; cf. Ruth 2). Furthermore, when buying or selling, their weights and measures should be fair and accurate (Lev 19:35-36). They should always remember that the Lord who makes these stipulations is the one who brought them out of their poverty and slavery in Egypt (Lev 19:36). They should acknowledge the Lord's sovereign right to the land by the symbolic act of a *priest presenting a sheaf of the first grain harvested (Lev 23:9-10).

The law also makes provision for the redemption of land so that if a person is forced to sell land, it can be bought back (redeemed) for the family by a relative (Lev 25:24). In cases where land is not redeemed, it is safeguarded by the prohibition of permanent land sales. The maximum lease was forty-nine years, since every fiftieth year the land returns to its original owner. The *Levites are not permitted an allocation of land (Deut 10:9). A consequence of this ruling is that they need suitable housing and pasture for

their animals (Num 35:1-5). This is not regarded as a land-grant but as the minimum provision for the flocks and herds. In the laws about the Jubilee year, there are special provisions to protect the rights of the Levites (Lev 25:32-34).

Since land and justice are clearly related, there are laws about bloodshed. In the event of accidental death, the perpetrator can escape the vengeance of the family of the deceased by taking refuge in certain cities nominated for this purpose (Num 35:6-29). However, unpunished murder defiles and pollutes the land and requires atonement, which can only be provided by the *blood of the murderer (Num 35:30-34). As T. Frymer-Kensky observes, "The most serious contaminant of the land is the blood of those who have been murdered. . . . Because of the seriousness of the crime of murder, and perhaps also because of the mystical conception of blood in Israelite thought, the blood of the slain physically pollutes the land" (Frymer-Kensky, 154). Failure to obey God's laws within the covenant obligations and failure to treat the land properly will be severely punished: their rain will turn to dust and powder; they will be scattered over the earth; their land will be burned out by sulfur and salt (Deut 28:24, 64; 29:19-23).

8. Conclusion.

The primeval narratives describe how humankind became alienated from God and brought a curse on the land. The restoration of harmonious relationships between God, people and land required the direct intervention of God (Gen 3:15). The role of Abraham was particularly significant. Through Abraham and his descendants God enabled the harmony between himself and the human population of the earth to be renewed. The Promised Land is to some extent a return to Eden. While the Israelites are obedient and live in harmony with God, they will enjoy Eden-like relationships with both God and the land: the Lord will send rain on their land, and it will yield abundant produce (Lev 26:4-5), and he will walk among them (Lev 26:12). If, on the other hand, they disobey, their land will be infertile and will be afflicted with pestilence (Lev 26:20). If they persist in their disobedience, they will be driven from the land and scattered among the nations (Lev 26:31-35).

LANGUAGE OF THE PENTATEUCH

The scope of this article includes three parts: a discussion of the history of languages in and around Palestine during the third and second millennia B.C., a consideration of the grammar and style of the Pentateuch's language in comparison with Classical Hebrew, and a study of those linguistic elements within the Pentateuch that might relate it to the period in which the narratives and events recorded in Genesis through Deuteronomy claim to have taken place.

1. The Language World of the Pentateuch
2. The Language of the Pentateuch
3. Connections Between the Language of the Pentateuch and Its Historical Context

1. The Language World of the Pentateuch.

By way of introduction, some sense of inner biblical *chronology is important. Although not the only crucial text, 1 Kings 6:1 is one of the most significant:

In the four hundred and eightieth year after the people of Israel came out of the land of Egypt, in the fourth year of Solomon's reign over Israel, in the month of Ziv, which is the second month, he began to build the house of the LORD. (RSV)

Although the exact interpretation of the 480 years is open to debate (either literally 480 or symbolically twelve generations and thus about three hundred years), the Bible understands Solomon to have been active in the middle of the tenth century B.C. and the exodus to have taken place at least three centuries prior to his reign. Since the events of Exodus through Deuteron-

omy purport to have taken place within a generation (forty years) of the time of the exodus, they should fall sometime between the fifteenth century B.C. and the end of the thirteenth century B.C. This period is identified with the Late Bronze Age (1550-1200 B.C., although the end of the Late Bronze Age is now dated by many a few decades later than 1200). Further, texts such as Genesis 15:13, 16 suggest that the period of the patriarchs in Genesis occurred a few centuries before the exodus, or during the first half of the second millennium B.C. This period (2000-1550 B.C.) is known as the Middle Bronze Age. It is likely that it includes the period from Abraham through *Joseph. The events of Genesis 1–11 confound attempts to relate them to historical events or periods outside the Bible, but they are obviously intended to occur before the time of Abraham.

Geographically, the earliest biblical connections we have place Abram and his larger family in northern Syria at the site of *Haran in the Balikh River Valley, one of the rivers that feeds into the Euphrates. Although *Ur is also mentioned, it does not appear associated with Abram's family, nor is it where his servant goes to find a wife for *Isaac nor where *Jacob flees to his uncle Laban. The places of Terah's death, of Rebekah's homeland and of Laban's household are all located in and around *Haran. In Genesis 12, the scene shifts to Palestine and remains there until the events of Joseph's life, when the family of Israel moves southwest to *Egypt. They leave Egypt at the time of the exodus and journey into the wilderness on their way to Canaan (Palestine).

Egyptian (the language written in hieroglyphic script) remained the dominant language in Egypt throughout these periods. In all other places mentioned, the dominant language was actually a family of languages or dialects known as West Semitic (or Northwest Semitic, as some would designate it). West Semitic is one of three major branches of the Semitic language family. The other two are East Semitic and South Semitic. South Semitic is not well attested before the Christian era, although it occurs earlier as Epigraphic South Arabic. Later it includes Classical Arabic and Ethiopic (initially, Ge'ez). East Semitic is attested throughout this period in the form of its two major dialects: Babylonian and Assyrian. Old Babylonian and Old Assyrian occur predominantly in texts from the Middle Bronze Age (2000-1550 B.C.), while Middle Baby-

lonian and Middle Assyrian are found in texts of the Late Bronze Age (1550-1000 B.C.). Since East Semitic, or Akkadian, as it is better known, was the lingua franca for the Middle East throughout much of the second millennium B.C., important archives of Akkadian cuneiform texts have been discovered in some major sites in or near the world of the patriarchs and the West Semitic world in general. These include Mari on the Euphrates (c. eighteenth century B.C.), Alalakh on the Hatay plain (two archives from about the eighteenth and fifteenth centuries), Ugarit on the Mediterranean coast (fifteenth to early twelfth centuries B.C.), Emar between Ugarit and Mari (thirteenth century B.C.) and Amarna in Egypt (fourteenth century B.C.), the latter being a collection of correspondence that includes letters from town leaders and Egyptian bureaucrats throughout Palestine and Syria (and further afield). Although many of the texts in these archives share in the Old Babylonian style of writing (even those that are Late Bronze Age), they also contain important West Semitic influences.

Attestations of the West Semitic language may predate the second millennium B.C. Excavations at another site in northwest Syria, Tell Mardikh, have yielded thousands of tablets from the ancient city of Ebla. These texts describe events at the city in the twenty-fourth century B.C. Many appear to be written in a language that has been identified as Eblaite and classified as West Semitic on the basis of some roots and morphological elements, as well as the site's location in the region of later West Semitic archives. More than two decades after its initial discovery, the style of the cuneiform and the absence of parallels continue to make translation of these texts a challenge. Therefore, little information is available about the Eblaite language or West Semitic in the third millennium B.C.

In the early second millennium B.C. (Middle Bronze), evidence of the West Semitic language is found in texts from Mari and Alalakh (Level VII). The language has been called Amorite, although it is more accurately described as a collection of dialects. It is not directly related to any of the OT Amorites, who come from a different region and tend to date to a later period. No text written in Amorite from this period has yet been found. Instead, all evidence of Amorite derives from the personal names of West Semitic peoples who are mentioned in these texts, otherwise written in Old Babylonian. The names in these

texts identify West Semitic name-bearers contemporary with the patriarchs and their families as found in Genesis 12–50. In addition, two contemporary sets of Execration texts from Egypt contain personal names of various leaders in Syria and Palestine. There are also names of Hyksos preserved on seals from the time these West Semitic peoples influenced and ruled Lower Egypt (i.e., c. 1750-1550 B.C.). Finally, there are names occurring in a variety of Old Babylonian cuneiform tablets found at tells scattered throughout Palestine and Syria, such as Hebron, Hazor and elsewhere.

The period of much of Israel's sojourn in Egypt and of the exodus and wilderness wanderings saw the development of the alphabet, a West Semitic invention. Although possibly originating in the previous era, this new invention flourished and became a vehicle for the communication of West Semitic dialects during the Late Bronze Age. At Ugarit it was translated into a cuneiform script, even though, with fewer than thirty different signs, it was far easier to learn than the syllabic Akkadian script, which used hundreds of different signs and values. In the Sinai peninsula and in Palestine itself alphabetic scripts developed on the basis of sign forms that would form the foundation for the Aramean and Canaanite alphabetic scripts of the first millennium B.C. In the western Sinai at the turquoise mines at Serabit el-Khadem, West Semitic workers left graffiti inscribed on the monuments in Proto-Sinaitic alphabetic script. In Canaan, including the areas of the modern lands of Israel, Palestine and Lebanon, arrowheads inscribed with West Semitic personal names use the Proto-Canaanite writing system. Abecedaries such as those at Bethshemesh (c. 1200 B.C.) and Izbet Sartah (twelfth to eleventh century B.C.) give evidence of an increased interest in and use of alphabetic writing systems. If one assumes a thirteenth-century date for Israel's exodus from Egypt, this form of writing would have been known to the generation of Moses.

One of the most important sources for the West Semitic language can be found in the Amarna correspondence. Although writing in Akkadian, the fourteenth-century B.C. scribes from places such as Byblos, Tyre, Shechem and Jerusalem were heavily influenced by local Canaanite dialects and betray this linguistic influence in the vocabulary, morphology, syntax and style of their correspondence. These glosses and "linguistic

(sub)strata" bring the reader closer than any other extant texts to the language of Israel at the time of the exodus. These were the precursors (albeit indirect) to the West Semitic languages of Hebrew, Aramaic, Phoenician, Moabite, Ammonite and Edomite that emerged in the first millennium B.C.

In addition to Egyptian, two other non-Semitic languages were used in the second millennium B.C. and had an impact on the Pentateuch. One is Hittite, an Indo-European language that was used by the Hittites who lived in modern-day central Turkey. A second is Hurrian. This unique language was spoken by inhabitants of northern Syria in the land of Mitanni. The country was annexed to the Hittite realm in the fourteenth century B.C. Special elements of Hurrian culture and family customs are preserved in the texts from archives at Nuzi and Alalakh. Hurrian personal names are also found there and in all the second-millennium B.C. archives. Hurrian cultural and onomastic influence waned in the final centuries of the second millennium and disappeared altogether after the tenth century B.C. (on the basis of present evidence).

2. The Language of the Pentateuch.

As a preface to this part of the study, it might be observed that grammars of biblical (or classical) Hebrew do not distinguish the Hebrew of the Pentateuch from that found elsewhere in the OT. Therefore, it is neither useful nor necessary to distinguish between the orthography, morphology, syntax and style common to both the Pentateuch and the remainder of the Hebrew Bible. The basis for this grammar has already been laid and can be found in the standard reference grammars of Gesenius, Joüon, Waltke and O'Connor, and van der Merwe.

However, it is legitimate to consider whether there are any distinctive elements found in the Pentateuch that might set it apart from the grammar of the remainder of biblical Hebrew. Unfortunately, no comprehensive studies of this question exist. However, recent research has isolated significant features of orthography, morphology and syntax that are distinctive to the Pentateuch. In part, this study has emerged from questions raised by the Documentary Hypothesis (*see* Source Criticism) and more recent theories that locate most or all of the pentateuchal literature in the later part of the first millennium B.C.

In this context distinctive grammatical items have been thought to demonstrate the appearance of archaic forms that can be argued as evidence for an earlier date to the Pentateuch. Again, the common appearance of these forms in a variety of literary genres in the Pentateuch has been thought to demonstrate the uniform nature and origin of various texts that have been ascribed to a variety of source documents or redactional layers. However, such evidence is supportive at best. Even the appearance of demonstrably archaic forms cannot prove the age of a text that could have been subject to archaizing tendencies. Nevertheless, the presence of these forms, if they can be shown to exist, does question the validity of either a Documentary Hypothesis or a Persian/Hellenistic origins theory insofar as these dispute clear and conscious links with great antiquity.

Radday and Shore's 1985 study of the authorship of Genesis used dozens of grammatical and syntactical features to tag each of the words studied from that book. They concluded, based upon a computer analysis of all the data, that the Documentary Hypothesis was invalid insofar as the analysis failed to indicate distinctive styles for each of the putative documents. However, Forbes (199-201) has severely criticized the method from numerous angles. For example, their assignment of texts of Genesis to various sources created source divisions that were unrecognizable, that is, at least thirty percent at variance with those found in Eissfeldt's divisions. Further, a random check of the data and the categories leads to evidence of some confusion and inaccuracy. Finally, Forbes is not persuaded that multiplying categories of syntactic tagging has increased the accuracy of the conclusion.

The work of Andersen and Forbes (1986) in analyzing the spelling patterns of the Hebrew Bible demonstrated an awareness of the weaknesses and strengths of the statistical method. Nevertheless, it examined plene and defective spellings of internal vowels in the Pentateuch. Among their conclusions they noted that all the texts from the Pentateuch clustered within one group that was distinct from the remainder of the Hebrew Bible. These spelling patterns were described by Andersen and Forbes as "old fashioned." The possible explanations of this phenomenon are summarized by Forbes (202):

Perhaps the manuscripts of this part of the Bible came from a different community, one with different spelling practices than the

source of the rest. Perhaps it enjoyed greater veneration and so resisted modernization.

Perhaps it is older than the rest.

Of these possibilities, the first seems least likely due to the historic and ancient authority accorded to the Pentateuch. The second and third may both be true. The random nature of the use of vowel letters throughout the Masoretic Text has been noted by James Barr, the most severe critic of this study (Barr 1988). Nevertheless, his arguments do not succeed in overturning the methodological soundness of the analysis (Forbes, 204).

3. Connections Between the Language of the Pentateuch and Its Historical Context.

As noted above, the language of the Pentateuch is similar to that of the remainder of the Hebrew Bible, with the exception of a tendency to spell words with fewer vowel letters. This seems to betray a greater antiquity. However, the *absence* of distinctive features within the grammar of the Pentateuch, features that can definitely be recognized as possessing greater antiquity than the remainder of the Hebrew Bible, implies one of three possibilities: (1) the entire Hebrew Bible was written at about the same time; (2) there is no history to the Hebrew language so that it did not change over a period of a thousand years of usage; or (3) the Pentateuch, though written earlier, was edited or updated at a later period so that its language would conform to that of the remainder of the Bible. The first option has been articulated by Whybray, who would date the Pentateuch's composition to the fifth century, and by Davies, who wishes to date it several centuries later in the Hellenistic period. This option must remain plausible unless one can identify other elements in the text to argue an earlier date to the pentateuchal traditions. In fact, there are a variety of pieces of evidence to suggest an early date for books in the Pentateuch. The concern here is with the linguistic evidence noted below.

The second option is the least likely one. Not only would it make Hebrew unique among the living languages of the world, it would also contradict the evidence already cited in the study of Andersen and Forbes.

The third option is both reasonable and likely. If true, it would suggest that evidence for an earlier dating of the Hebrew text may have been lost in the process of transmission. This should not be the case with some of the poetry

in the Pentateuch, where updating the text would necessarily destroy poetic forms and possibly rhythm and meter. Along these lines, Cross and Freedman have suggested that early verbal forms (*yaqtul* forms) are used in the poem of Exodus 15 to describe the past narrative tense. These forms do not occur either in the later poetry or in the narrative passages of the OT. They do occur in abundance, however, in the fourteenth-century Amarna letters from Palestine (Rainey, 222-27, *passim*). Thus, here one finds a morphological feature implying a second-millennium B.C. date for some of the poetry in the Pentateuch.

This raises a related question: Is there any linguistic evidence embedded in the *prose* narratives of the Pentateuch that might suggest an earlier date for this literature? The most useful material is to be found in the proper names. These alone would not be updated or altered but preserved in their original form, sometimes to the point that some of the understanding behind them was lost to posterity. Not every proper name is relevant, of course, for there are many personal names, place names and people names that occur in many or all periods in which scholars have supposed that the Pentateuch could have been written. Still, one can point to certain lines of evidence that suggest an earlier date for the Pentateuch.

Two examples from place names may be given. First, there is the reference to Shinar, first mentioned in Genesis 10:10; 11:2; 14:1, 9. Although previous scholars identified this place name with Sumer, Zadok has related Shinar to a name for Babylonia and its foreign rulers used by the Hittites and others in the Late Bronze Age (1550-1200 B.C.), namely, Shanhar. If this correlation is correct, then it argues for an origin to this name and its associated text in the second millennium B.C., since the name does not occur later in the cuneiform record. However, Shinar also occurs in Joshua 7:21; Isaiah 11:11; Daniel 1:2; and Zechariah 5:11. Except for the Joshua reference, these must all come from a later period.

A second place name comes from the opposite end of the Fertile Crescent, Rameses in Egypt. This is one of the store cities that the Israelites built, according to Exodus 1:11 (Heb *Raamses*). Exodus 4—14 describe events that place the *pharaoh's capital, the location of the Israelites and the best of pharaoh's army in the

vicinity of each other. From c. 1300 to c. 1100 B.C. Pi-Ramesse (or Piramesse) was an Egyptian capital in the eastern Delta where Apiru slaves worked on building it. After this period it was no longer an important city and ceased to be the capital (Hoffmeier, 116-18). Therefore, the use of the place name Rameses connects this site with the latter part of the second millennium B.C. but not later (*see* Exodus, Date of).

In addition to place names, personal names play an important role in identifying the linguistic and cultural influences behind the people and literature of the Pentateuch. While some names occur in various times, others are limited to particular ages and places. One name by itself may not prove much, but the cumulative evidence of many personal names may point to a common origin for the names and the texts in which they are found. Thus the personal names in Genesis 1—11 accord best with the earliest period of well-attested West Semitic, the Amorite language(s), and the personal names and place names (in the case of *Shem's genealogy) found in north Syria (Hess 1993). *Adam, Methuselah, Methushael and Jabal are names containing West Semitic roots that occur in personal names in the early second millennium B.C. and gradually disappear toward the end of that millennium. Names in Shem's genealogy, such as *Terah, *Nahor, Serug and *Haran, are best identified as place names located in and around Haran in northern Syria.

Genesis 14:1, 9 mention a king Tidal, who has been identified with Tudhaliyas, a royal name in the Hittite dynasty that flourished in the second millennium B.C. and disappeared shortly after 1200. The name was not used again.

Several of the patriarchs preserve a distinctive style of personal names, those that are formed by a verbal element beginning with a *yōd* prefix in Hebrew (Kitchen, 57, 90, 92). Examples include Isaac and Jacob (a form of which is reflected in the Hyksos name Ya'qub-'al). This style of personal name is most frequent in the Amorite names of Mari and other early second millennium B.C. sites. It becomes more rare as one moves into the Late Bronze Age and is highly unusual in the Iron Age.

Again, various names of the exodus era are Egyptian names or contain Egyptian elements found in names of the thirteenth century B.C. These include Moses, Phinehas, Hophni,

Shiphrah and Puah (Yurco, 46-47). They are found less frequently later in the second millennium and rarely in the following periods.

Mention should also be made of the possible presence of Hurrian names and name elements among the personal names of the Pentateuch. Genesis 1—11 contains two examples. The first occurs in the line of Cain: Tubal-cain, mentioned in Genesis 4:22 as a forger of instruments of bronze and iron. Although it is possible that the “Tubal” part of the name may relate to a Semitic root found in the names Jabal and Jubal, also in Cain’s line, it is now more likely that this is some sort of Hurrian gloss. This is because the Hurrian term *tubališ* means “metal smith” (Hess 1993, 52-53, 127).

A second example of a possible Hurrian name is found in the name of Noah. Although related by wordplay in Genesis 5:29 to the Hebrew verb *nāḥam* (“relief, comfort”), it also bears a close resemblance to the first part of the name of a figure who has been identified in the Hurrian flood story (Hess 1993, 29).

However, Hurrian names are not limited to the earliest accounts of Genesis. They also appear among personal names of the sons of Anak who are mentioned among the fearsome Canaanites residing in the region of Hebron (Num 13:22, 28, 33; Deut 9:2; Josh 15:13-14; 21:11; Judg 1:20; Hess 1996, 210-13). In Numbers 13:22 they are named Ahiman, Sheshai and Talmai. Ahiman is likely a West Semitic name related to names from Ugarit such as *a-ḥi-ma-na* and *a-ḥi-ma-nu*. The name is not particularly significant for dating, since it occurs in a variety of eras, including the Persian period (1 Chron 9:17). However, Sheshai and Talmai are unusual. They are not West Semitic and do not occur later than the tenth century B.C. in or outside of the Bible. Sheshai occurs as *še-ša-a-a* in the major source for Hurrian personal names, the second-millennium B.C. site of Nuzi. At Ugarit it is written in alphabetic texts as *ššy*. Talmai also may be a Hurrian name. It appears at Nuzi in the form, *tal-mu-ia* and *tá-al-mu*. At Ugarit it appears as *tlmyn*, and in Late Bronze Age Alalakh there are many occurrences of *tal-ma* and *tal-mi-ia*. The name also is found in the tenth century as the king of Geshur and father-in-law of David (2 Sam 3:3; 13:37; 1 Chron 3:2).

As has been argued elsewhere (Hess 1996), the appearance of Hurrian names is significant. Outside the Bible these names occur in second-

millennium B.C. texts but not in the first millennium. Within the Bible the same is true. The attestations of Hurrian names diminishes and disappears after the tenth century B.C.

Thus, despite the absence of clear grammatical features that would distinguish most of the language of the Pentateuch from the remainder of the Hebrew Bible, the personal names (and to a lesser extent the place names) provide indicators that correlate best with the second millennium B.C. It is not clear how these names can otherwise be explained. Further, their presence attests not only to an antiquity but also to a close correlation in place and time with what the surrounding narratives purport to describe. Thus the Egyptian context of the exodus produces Egyptian names from the Late Bronze Age. The generations immediately before and after Abraham yield names related to north Syria in the early second millennium B.C. Biblical traditions about the Anakim correlate with the influence of Hurrian onomastica in Late Bronze Age Canaan. This can hardly be coincidental or the product of a postexilic Jewish scribe grafting on an old list of names to a newly invented story. Further, these are not only personal names of major figures, such as Moses. In many cases the name-bearers are mentioned once or twice in the Bible and play a tertiary role in the narratives. Thus it is unlikely that these names would have been preserved outside the narratives in which they presently occur (Hess 1997). The agreement of the personal names with the periods that the narratives in which they are embedded purport to describe lends credence to the antiquity of the narratives themselves.

Finally, a note should be made regarding the theophoric elements in the construction of personal names in the Hebrew Bible and especially the Pentateuch. West Semitic names are often composed of elements that include a divine name. Sometimes these names are shortened by the omission of the divine name and its replacement by a hypocoristic suffix such as *-y*. In Hebrew personal names the *-yh* suffix could resemble a shortened form of the divine name, *yhwh*. If fact, this suffix and variants such as *-yhw* or *-yw*, became characteristic indicators of Israelite personal names in the first millennium B.C. They were compounded with the divine name of Israel’s deity. It has been observed that these forms occur frequently in Israelite onomastica of the first millennium B.C., both within and out-

side the Bible. However, in the second millennium B.C. they are nowhere found affixed to names outside the Bible, with the possible exception of the prefix on the name *ywhnn* found on an arrowhead and dated to the eleventh century B.C. (if correctly read by Cross; see Cross and citation there of original publications). This paucity of evidence is paralleled in personal names found in the Pentateuch. Andersen (50; see also de Moor) observes that in the Pentateuch there are no occurrences of personal names with the *-yhw* suffix and possibly one with the *-yh* suffix (Gen 36:24). Contrast this with 1 and 2 Kings, where there are 239 occurrences of personal names with the *-yhw* suffix and 82 with the *-yh* suffix (1 and 2 Chronicles have 269 and 219, respectively). The evidence suggests that the presence of Yahwistic suffixes on personal names distinguishes those narratives found throughout the Pentateuch from the later biblical narratives. Again, there is agreement with the onomastic evidence from the world outside the Bible.

LAVER, BRONZE. See TABERNACLE.

LAW

"Law" in the OT is the usual translation of Hebrew *tôrâ*, but as is often the case with important words, the equation is not exact. The English concept of law is narrower than that represented by *tôrâ*, and discussion of both terms is complicated by the fact that neither can be confined to a single meaning. It is therefore important to seek to define these key terms as a preliminary to understanding the pentateuchal concept of law. To that end, this article will explore the relationship between law and *tôrâ*, especially in its distinctive literary, historical and theological aspects.

1. What Is *Tôrâ*?
2. Law and Its Historical Development
3. Theological Issues
4. The Purpose of *Tôrâ*
5. Interpretation of *Tôrâ*

1. What Is *Tôrâ*?

1.1. *Tôrâ* and the Pentateuch.

1.1.1. *Tôrâ* as a Description of the Pentateuch. Although both Jewish and Christian literature describe the Pentateuch as "the Law," this usage occurs in parts of the Bible outside the Pentateuch rather than in the Pentateuch itself. In

the NT, the Pentateuch is called “the law” (e.g., Mt 5:17-18), “the law of Moses” (e.g., Lk 2:22) or simply “Moses” (e.g., Lk 16:31; Acts 15:21). NT writers also use “the law” for the OT as a whole (cf. Jn 10:34 concerning Ps 82:6; 1 Cor 14:21 concerning Is 28:11-12). The OT has a number of comparable expressions, including “book of the law of Moses,” “book of the law of God,” the “law of Moses” or even simply “the law,” though the latter phrase sometimes refers to the Pentateuch as a whole and sometimes to a particular section within the Pentateuch. In the light of this evidence, it seems that the designation “the Law” only emerged gradually as a title for the Pentateuch (see Source Criticism).

1.1.2. Uses of Tôrâ in the Pentateuch. Tôrâ occurs fifty-six times within the Pentateuch and is used in five different ways. It can refer to: (1) an individual pronouncement, (2) a group of laws on a single subject, (3) a particular collection of laws, (4) a general description for God’s laws and (5) a combination of narrative and law.

(1) The use of tôrâ for an individual pronouncement is rare; it is probably restricted to Numbers 19:14, though it may also be found in Exodus 12:49 and Numbers 31:21. The corollary of this is that the normal referent of tôrâ (or the plural tôrôt) is a group of laws or *law* in general, not an individual command or instruction. (2) The use of tôrâ for a group of laws on a single subject is actually the commonest in the Pentateuch. It is particularly frequent in titles or summaries in Leviticus and Numbers, as for example with “the law of the Nazirites” (Num 6:13, 21) or “the law of the burnt offering” (Lev 6:9 [MT 6:2]). (3) Tôrâ as a description of a law collection only occurs twice, concerning the Ten Commandments (Ex 24:12; see Decalogue) and the laws of Deuteronomy (e.g., Deut 31:9). Presumably it could also apply to other collections, though if it does, the usage in these two examples makes it likely that tôrâ refers to more than just God’s commands. The Ten Commandments are more like basic principles than laws, and the phrase “this law” in Deuteronomy seems to refer to more than the laws of Deuteronomy 12–26 (see further 2.1 below). (4) The usage to describe God’s laws in general always occurs in the plural (Heb tôrôt). It includes the sole mention of tôrâ in Genesis (Gen 26:5) as well as a few passages elsewhere in the Pentateuch (e.g., Ex 18:16; Deut 4:8). The main point in all these instances is that tôrâ comes from Yahweh. It describes what God

has spoken by his own authority and refers to his commands or requirements in general. (5) Finally, tôrâ is used occasionally in Deuteronomy to refer to a combination of narrative and law. This special usage seems to be an intermediate stage that led eventually to the ascription of tôrâ to the whole Pentateuch (see 1.3 below). These last three uses clearly demonstrate that tôrâ means more than law, though it certainly includes the latter. We will now proceed to investigate the meaning of tôrâ more closely.

1.2. The Meaning of the Word Tôrâ. The noun tôrâ is associated with the verb hôrâ, “to teach” (Hiphil form of yârâ). As a result of this connection, it is often assumed that the noun is derived from the verb and that tôrâ should accordingly be translated “teaching, instruction” (cf. HALOT). Some scholars find the original idea of teaching in hôrâ and tôrâ in the practice of extending a hand or finger to point in a particular direction (e.g., Östborn), but only on the basis that other alternatives are even less convincing. Since, however, it is impossible to be sure in which direction any borrowing between hôrâ and tôrâ took place or whether tôrâ is linked with this verb or with either of two other Hebrew verbs with the same spelling, it is extremely doubtful whether tôrâ can be defined on any etymological basis. Translations of tôrâ as “law” in the ancient versions and the NT (e.g., *nomos* in Greek) are also of only partial value in determining its meaning, since usage shows it has a wider reference than “law.” History and tradition are therefore of only limited help in understanding the meaning of tôrâ.

A survey of the 220 occurrences of tôrâ throughout the OT reveals three main aspects to this word. It involves (1) teaching or instruction to be learned, (2) commands to be obeyed and (3) guidance about how to live in specific situations. These meanings can be distinguished by the verbs associated with tôrâ, by the context of those addressed and by the responses expected. Commands, for example, are normally expressed in the imperative or jussive mood. Teaching and commands are normally applicable to a range of contexts, whereas guidance usually belongs to a specific setting. Commands expect the response of obedience, whereas the possible responses to teaching and guidance are more varied. Only two of these three emphases are reflected in the Pentateuch, namely, teaching and commands. The explicit sense of tôrâ as

guidance is lacking in the Pentateuch, though it is associated with *tôrâ* in some legal passages such as Exodus 18:15-16 and Deuteronomy 17:8-13.

The idea of *tôrâ* as teaching is particularly prominent in Deuteronomy and Exodus. Deuteronomy emphasizes that *tôrâ* should pervade Israel's life from beginning to end. Having previously been nurtured on what Moses had taught (Deut 4:5, 8), Israel's life in the future should continue to conform to God's ways as taught by the priests and the judges (Deut 17:8-13; 31:9-12). Meanwhile in the present, Moses expounded the *tôrâ* as the basis of Israel's anticipated occupation of the Promised Land (cf. Deut 1:5). The verb used in Deuteronomy 1:5 (*bē'ēr*, "to expound," "to make the meaning plain") indicates the need for Israel to understand Moses' words rather than just hear them read. Exodus concentrates more on the idea that *tôrâ* is designed to be taught. Exodus 24:12 even portrays God in the role as a teacher of *tôrâ*, as in the phrase, "the law and the commandment that I [i.e., God] have written to teach them" (Ex 24:12). Moses was also told to "teach them the decrees and laws [*tôrôt*]" and inform them of the way in which they should walk" (Ex 18:20). The notion of teaching is usually conveyed through the verb *hôrâ* ("to teach"), though occasionally it is implied by a corresponding emphasis on Israel's need to learn (Heb *limmad*) the *tôrâ*. Teaching and learning took place primarily when the *tôrâ* was read and explained, perhaps at a family Passover meal or a national assembly (Ex 13:8-9; Deut 17:18; 31:12), though difficult issues might also be clarified in a law-court setting.

Tôrâ also has the meaning of command or commandment and in this sense comes nearest to the modern idea of "law." When *tôrâ* has this meaning, it is often accompanied by other synonyms for law. The terms most commonly associated with *tôrâ* in the Pentateuch are "decrees" (Heb *huqqîm*) and "judgments" (Heb *mišpāṭîm*; e.g., Lev 26:46; Deut 4:8), though "commands" is also found fairly frequently (Heb *mišwôt*; e.g., Gen 26:5; Ex 24:12). In all such contexts, the idea of commandment is reinforced by the accompanying verbs. *Tôrâ* is often required to be "kept" (Heb *sāmar*; e.g., Gen. 26:5; Deut 32:46) and "obeyed" (Heb *sāma'*; Deut 31:12), and Yahweh is to be "feared" (Heb *yārē'*; Deut 17:19; 31:12). However, it is important to distinguish

between the biblical sense of *tôrâ* as Yahweh's law and the modern idea of law as a requirement of the state. It is the personal association between Yahweh and law that gives *tôrâ* its distinctive flavor in the OT (see 3.1 below).

The Pentateuch often combines the notions of teaching and command. This combination is particularly common in Deuteronomy, where, for example, the seven-yearly reading of the law at the Feast of Tabernacles was designed so that the Israelites would learn the *tôrâ* in its entirety (= the book of Deuteronomy?) and so keep "all the words of this *tôrâ*" (Deut 31:12). Almost identical expressions occur in relation to all Israel in Deuteronomy 5:1 (cf. Deut 4:44) and to the king in Deuteronomy 17:18-19. The same point is made in Exodus (Ex 18:20; 24:12) and in Leviticus and Numbers, though in different ways. In the two latter books, the use of the indicative rather than the imperative mood for the "decrees and judgments" indicates that the laws are communicated as instruction as well as orders to be obeyed (cf. the various *tôrôt* in Leviticus 11—15 and Numbers 5—6). Education and understanding were clearly vital to the biblical notion of *tôrâ*, though understanding was not to be regarded as an end in itself. Once the people had grasped what *tôrâ* was about, they were required to live by the *tôrâ* as the expression of their obedience to God. Israel was expected to live under the authority of *tôrâ* as well as benefit from its enlightenment.

1.3. *Tôrâ as Law and Narrative.* The fact that *tôrâ* cannot be confined to the idea of law in the sense of command raises an important question about the proper literary form(s) of *tôrâ*. If *tôrâ* cannot be restricted to the laws of the Pentateuch, it must be viewed in the context of the Pentateuch's entire narrative framework. This latter view of *tôrâ* has received increasing attention in recent years, though this is the result of various factors. For some it is a consequence of studying the Pentateuch holistically rather than as a collection of sources (Clines; Mann); for others it arises from the application of narrative studies to the Pentateuch (Sailhamer; Stahl); and for yet others it is simply a way of finding a rationale for the Pentateuch's combination of law and narrative (Carmichael; Watts). This approach has also been influenced by a recognition of the more positive aspects of the law in the NT, especially in relation to more recent understandings of Paul's view of law. In light of the

Pentateuch's own tendency to understand *tôrâ* in a wider sense, these approaches should be taken seriously.

Although most writers still reserve the term *law* for the laws rather than for the whole Pentateuch, the terminology of Deuteronomy suggests that this approach needs amending. Deuteronomy begins with a reference to "this *tôrâ*" (Deut 1:5), but which *tôrâ* is in view? Though it might refer to the laws in Deuteronomy 5–6 and 12–26, this is not evident from the context of chapter 1. It is much more likely that the term includes the speeches of chapters 1–11 along with the laws of chapters 12–26 and perhaps extends to Moses' speeches throughout chapters 1–31, if not the entire book. While it is probably impossible to decide the precise limits of "this *tôrâ*," it seems quite clear that *tôrâ* incorporates both narrative and law. This view also finds support from other uses of "this *tôrâ*" in Deuteronomy. The fact that the phrase occurs randomly in narrative and legal contexts throughout the book (e.g., Deut 4:8; 17:18; 27:3; 31:9) strongly supports the conclusion that it refers to the large majority of the book rather than to any specific literary form within it.

Deuteronomy's view of *tôrâ* is distinctive, but it is entirely consistent with the fact that all the Pentateuch's law collections are firmly embedded in their own narrative contexts (see 2.1 below). What Deuteronomy has done is to give this combination the explicit designation *tôrâ*. The use of *tôrâ* for the Pentateuch as a whole is a further extension of the same idea. Though most references to *tôrâ* outside the Pentateuch are to laws that had to be kept and obeyed, several passages also reflect the broader view. According to the Psalms, the Israelites used the *tôrâ* to teach their children about God's wonders and Israel's repeated rebellion (Ps 78:5), while the prophets show that rejecting Yahweh's *tôrâ* involved denying the purpose of the exodus as well as failing to keep God's requirements (Amos 2:4–12). References to a book of the *tôrâ*, apparently in direct dependence on Deuteronomy (Josh 8:31; 2 Kings 22:8; cf. Deut 30:10), and to *tôrâ* as a source of blessing rather than condemnation (cf. Josh 1:8; Neh 8:10–18) also support the idea of a document combining narrative and laws.

Though J. W. Watts interprets the Pentateuch as a single entity, he still regards "law" as the "primary, though not exclusive, meaning" of

tôrâ (Watts, 158). It is important to note, however, that his conclusion is based more on historical and theological concerns rather than literary ones. In his view, *tôrâ* is characterized by Yahweh's binding authority and is explained by drawing an analogy between Yahweh's giving of the law to Israel and the Persian emperors' recognition of postexilic Israel's temple law as imperial law. In order to pursue our comprehensive understanding of *tôrâ*, we must therefore include an examination of historical and theological issues.

2. Law and Its Historical Development.

Historical investigation of *tôrâ* has been primarily concerned with the development of the various topics dealt with in the laws. However, the main contents of the laws and the form in which they are expressed must be analyzed first before their historical relationships can be explored. The pentateuchal laws occur mainly in groups, though they can be scattered throughout a narrative, especially in Numbers. There are four main collections: (1) the Ten Commandments (see Decalogue) and the *book of the covenant (Ex 20–23), (2) the *tabernacle laws (Ex 25–40), (3) the laws of *Leviticus (Lev 1–27) and (4) the laws of *Deuteronomy (Deut 12–26).

Each of these collections has its own identity, which is partly determined by the narrative context in which it is set. The Ten Commandments, the book of the covenant and the tabernacle laws belong to the events at Sinai, while the laws of Deuteronomy are located in the plains of Moab, just before Israel entered the Promised Land. All of them therefore take their place in the larger narrative of Israel's life as the people of God and have their own specific historical and theological context.

2.1. The Law Collections. The law collections are sometimes called law "codes," but this is an unhelpful expression. They are not codes in the modern sense of being enforceable by a human authority, and they are not a complete set of requirements intended to cover every eventuality. It is therefore better to use the more neutral term "collection."

2.1.1. The Ten Commandments and the Book of the Covenant. The first collection is popularly known as the Ten Commandments, though this term is not used in the Bible. The OT calls them the "ten words," that is, the *Decalogue (Ex 34:28; Deut 4:13; 10:4). They were written by

“the finger of God” (Ex 31:18; Deut 9:10) on two stone tablets and were preserved in the ark of the covenant in the most holy place. The Ten Commandments occur in three versions. Two are almost identical with each other (Ex 20:1-17; Deut 5:1-21), but the third, which apparently replaced the tablets that were broken, is quite different and may include as many as twelve “words” (Ex 34:10-28). The relationship of this third version to the other two is problematical but cannot be discussed here (*see* Decalogue). The Ten Commandments have two sections preceded by a statement identifying Yahweh as the God who had already set Israel free from the bondage of slavery. The first section requires Israel to maintain an exclusive relationship with Yahweh and have nothing to do with other deities (commands 1-4). The second sets out the parameters of the Israelites’ interpersonal relationships, instructing them not to take from one another in any way, whether that involved a human life, someone else’s marriage partner, other people’s property or even merely desiring other persons or possessions (commands 5-10). Exclusive worship of God was to be complemented by total respect for one another.

It is often thought that a consistent original pattern of all the commandments can be reconstructed, based on the kind of short sentences found in Exodus 20:3, 13-16 and the simple negative forms in which all but two of the commands are framed. But though it is attractive to imagine what might realistically be inscribed on two stone tablets, such reconstructions are arbitrary and lack independent evidence. It is important not to impose an artificial consistency on the biblical material, since similar biblical laws can occur in various forms.

The Ten Commandments have been variously categorized. They have been called an “ethical decalogue” in contrast to the so-called “ritual decalogue” of Exodus 34 (Wellhausen), ancient Israel’s criminal law (Phillips), the only unalterable law in Israel (Lohfink), “the foundation scroll of the Israelite community” (Weinfeld, 262) or a summary of the pentateuchal laws. But none of these descriptions is convincing, though perhaps Weinfeld comes closest to an accurate categorization. For one thing, the Ten Commandments look more like basic principles than actual laws. They would be quite inappropriate in a law court, since they prescribe no penalties and cannot be eas-

ily enforced. They are also too broad to be limited to either ethical or legal matters and too narrow to be treated as a summary of the rest of the law, despite the traditions of Christian theology. On the other hand, they clearly enjoyed a special role within ancient Israel. That is, the fact that they are ten in number suggests a definitive list, they occupy key positions at the head of the laws in Exodus and Deuteronomy, their repetitive stylised language makes them particularly suitable for memorizing, and they are quoted directly elsewhere in the OT (Jer 7:9; Hos 4:2; Ps 50; 81).

What chiefly differentiates the Ten Commandments from other forms of *tôrâ* is that they were given directly by God rather than through any human agency. They were uniquely written on two stone tablets by “the finger of God” (Ex 31:18), and the lawgiving was accompanied by a dramatic theophany. The significance of this is explained in some detail in Deuteronomy 4:15-40. The fact that Yahweh gave the commandments to those he had freed from slavery in Egypt (Ex 20:1-2; Deut 5:6) emphasizes how closely they are bound up with the person and presence of a redeeming, liberating God. In Exodus 34, these attributes of God include his forgiveness and promise to restore Israel following the debacle of the *golden calf. “The ten commandments thus present the foundational layer of Yahweh’s expectation of those who, in response to his gift of himself, desire to give themselves to him” (Durham, 300).

The Ten Commandments are followed immediately in Exodus by the *book of the covenant. This title is taken from Exodus 24:7, and the book apparently includes all the material in Exodus 20:22—23:33. The book of the covenant is closely associated with the Ten Commandments, and together they seem to comprise all the laws ratified at Sinai (Ex 24:3, 7, 12), though certainty in this matter is impossible. The book of the covenant is normally divided into two parts, the “judgments” (Heb *mišpāṭim*, Ex 21:1) of Exodus 21:2—22:17 (or 22:20) and other laws in Exodus 22:18 (or 22:21)—23:33, though this distinction is based more on differences in form rather than content. The judgments are mainly in the form of casuistic, or case law, whereas the second group is more mixed, including laws in an apodictic format, that is, those framed as concise commands (*see* further 2.2.1 below).

The book of the covenant covers a variety of

subjects dealing with civil, ritual and moral issues, and it is not easy to see what unites them. However, certain connecting threads are present in the material. One important example is the motive clauses that are scattered throughout the second section. These provide moral and especially theological reasons for obeying the laws, such as the humanitarian ideal of caring for one's neighbor (Ex 22:26-27 [MT 22:25-26]), Israel's status as a holy people (Ex 22:31[MT 22:30]), Yahweh's concern for compassion and justice (Ex 22:27 [MT 22:26]; 23:6) and the freedom that God had given Israel (Ex 22:21 [MT 22:20]; 23:9). Another thread links the book of the covenant with the Ten Commandments. Both require Israel to make the worship of Yahweh their priority (Ex 20:22-26; 23:14-19; cf. 20:3-6), and both emphasize the worship of Yahweh alone, not Canaanite deities (Ex 23:20-33). The same kind of covenant language also occurs throughout the final narrative section (Ex 23:20-33) as in the Sinai narrative in Exodus 19—24 (Ex 19:3-8; 24:3-8). These links suggest that the book of the covenant may be intended to illustrate the principles of the Ten Commandments. Although scholarly debate on the book of the covenant has concentrated on historical issues such as the laws' historical origin and their precise connection with the Ten Commandments, consideration of the book's literary context and theological characteristics seems to offer more help in understanding its nature and purpose.

2.1.2. *The Tabernacle Laws.* In contrast to the variety of laws in the book of the covenant, the *tabernacle laws concentrate entirely on preparations for worship in the tabernacle. The central theme shows how the tabernacle, in its architecture and the activities that took place within it, was a sanctuary for Yahweh to live among his people (Ex 25:8; 29:44-46). The laws have two main sections, God's instructions (Ex 25—31) and how Israel obeyed those instructions (Ex 35—40), and they are concerned with three main topics: the ark and other symbols of God's presence, the layout of the tabernacle and its courtyard, and the functions of the priests.

The tabernacle laws have a close relationship with their surrounding narrative. First, the laws are part of a narrative relationship of divine command and promise on the one hand and fulfillment on the other. God's commands to build the tabernacle and his promise to live among the Israelites were fulfilled when the

cloud of God's glory filled the entire structure (Ex 40:34-38; cf. 25:8). Second, the inclusion of Israel's obedience to God's commands provides an ideal scenario for *tôrâ*. Here is an instance where Israel has fully obeyed God's law, a situation that God confirms by the appearance of his glory. Third, the account of the golden calf in Exodus 32—34 acts as a counterpoint to the main theme. The calf is a rival symbol of God's presence, strongly influenced by Canaanite ideology, but it is vigorously destroyed. Fourth, the laws are closely tied to the larger context of the Sinai covenant, with God's presence in the tabernacle directly continuing his presence at Sinai. Some scholars have also seen a parallel between the orderliness of the tabernacle laws and of creation (Gen 1:1—2:3) and have interpreted the tabernacle as a cosmos in miniature, preserving a means of access to God in a fallen world (*see* Creation).

2.1.3. *Laws of Leviticus.* The laws of Leviticus continue the account of the tabernacle. In fact, many scholars regard both collections as part of the same Priestly work in view of their similar outlook. The Levitical laws, however, are much more wide-ranging than the tabernacle laws. The first part of the book (Lev 1—16) is concerned with various rituals on matters such as sacrifice, purity and uncleanness, but the second part (Lev 17—27) is much broader, covering such diverse subjects as sexual behavior, blasphemy, the Jubilee and the sabbatical year. Since A. Klostermann (1877), Leviticus 17—26 has often been described as a Holiness Code (or H), on the grounds that this section is characterized by the demand for Israel to be a holy people ("Be holy because I, the LORD your God, am holy"; Lev 19:2; cf. 20:7, 26). But Gerstenberger (1996, 17-19), Blenkinsopp (223-25) and others are doubtful that these chapters can be separated off in this way. In their view, these chapters lack sufficient internal coherence to be a separate collection, and the requirement about holiness is not restricted to them (cf. Lev 11:44-45).

Apart from the theme of holiness, the Levitical laws reflect three further emphases. First, it is assumed that Israel is incapable of pleasing God, though God will preserve his *covenant even if Israel disobeys and is punished by exile (Lev 26:44-45). Consequently, Israel's worship involves atonement and purification, as illustrated especially by the Day of *Atonement (Lev

16). Second, Israel can experience God's blessings by choosing to obey the laws. The second part of Leviticus contains several exhortations that show God's intention to bless Israel as they cooperate with him (Lev 18:24-30; 20:22-26; 22:31-33; 25:18-24; 26:3-45). Third, the law makes Israel distinct from all its neighbors. It is God's special gift to Israel and is a means to purity, holiness and blessing.

2.1.4. Laws of Deuteronomy. The final law collection is the laws of *Deuteronomy (Deut 12—26). They are part of a series of addresses by Moses set in the plains of Moab as Israel stood on the brink of the Promised Land. They are preceded by a summary of God's actions for Israel (Deut 1—4) and a series of sermons on the general meaning of *tôrâ* (Deut 5—11); they are followed by blessings and curses and a final appeal to make a choice for the covenant (Deut 27—30). This context is essential for understanding the laws, though a particularly close link exists between the laws in chapters 12—26 and the sermons of chapters 5—11.

The laws cover the same sort of range as the book of the covenant and the laws of Leviticus, and as elsewhere, there is a special concern for worship (cf. e.g., Ex 23:14-19; 25—40; Lev 1—7). This is the main theme of the first part of the laws in Deuteronomy 12—18, and the concluding laws about *firstfruits and tithes reflect the same theme (Deut 26:1-15). The laws also have a strong humanitarian character, especially in their concern for justice and their desire to treat all members of the covenant community, including the king, as brothers.

Four features should be emphasized concerning the concept of law in Deuteronomy. First, Deuteronomy contains the most overtly theological approach to law within the Pentateuch. By building on what is implicit in the other law collections, Deuteronomy develops the concept of law and *tôrâ* to the extent of providing the most mature exposition of law found in the OT. In bringing to the fore ideas that are latent in other books of the Pentateuch, it seems to play a role analogous to that of John's Gospel in relation to the Synoptic Gospels.

Second, Deuteronomy is especially concerned with the motivation necessary to keep the laws. In fact, Deuteronomy is often described as preached law, and F. F. Bruce has spoken of its almost "evangelical fervour" (Bruce, 204). The laws and the sermons often take the

form of a personal address, which is reflected in such distinctive expressions as "to love him with all your heart and with all your soul" (Deut 13:3; cf. 6:5; 26:16) or "so that it may go well with you and you may have a long life" (Deut 22:7; cf. 6:2). Among the reasons given for obedience are that God's laws are distinct from all human laws, that they were uniquely given to God's chosen people and that they promise long life. But the chief motivation is that Israel should show wholehearted love to God as their response to God's far greater love for them (Deut 6:4-5; 7:7-8).

Third, law in Deuteronomy is closely linked with covenant renewal. The preaching is directed to the children of those who made the original covenant at Sinai, encouraging them to renew the covenant for themselves rather than rely on what God did for their parents. Israel is repeatedly requested to respond "today" (Deut 30:15-16) to the commands that God gave them "today" (Deut 13:18), rather than to look back to what happened at Sinai. The emphasis on the need for a new generation to make its own response to the preaching of the *tôrâ* and the reasons why they should do so goes beyond the general requirement for obedience found in all the other law collections. It underlines that *tôrâ* was a living concept that had to be appropriated and owned by succeeding generations.

Fourth, the written law of Deuteronomy has attained a fixed and authoritative form. Several references are made in Deuteronomy 28—31 to the "book of the *tôrâ*," which is probably synonymous with "this law" discussed above (see 1.3 above). The existence of a written form of *tôrâ* gave it a final form that was not to be added to nor subtracted from (Deut 4:2). The idea of written *tôrâ* was not, of course, new. It goes back to the Ten Commandments, which were written by God (Ex 24:12), and to the book of the covenant, which Moses wrote at Yahweh's command (Ex 24:4). However, the fact that Deuteronomy includes narrative and sermon alongside individual commands and teaching takes the notion of written *tôrâ* to a new dimension. The presence of extensive sections on the historical context of the new generation (Deut 1—4), interpretation of the detailed laws (Deut 5—11), the need for a fresh response (Deut 27—30) and a future perspective (Deut 31—34) also shows that this authoritative written *tôrâ* contained principles that were adaptable to new situations.

2.2. *Relationships Between the Law Collections.*

The various characteristics of the law collections raise important questions about why more than one law collection exists and why some laws are repeated in more than one collection. Most scholars have sought to explain this situation on the basis of historical and literary factors. For example, because most laws seem to reflect actual practice, interpreters have usually assumed that each collection arose in a specific historical and social context. Scholars have accordingly sought to determine what those contexts were and have attempted on this basis to reconstruct the development of law in the OT period. Two additional elements that must be brought into this discussion are the different forms of OT law and the parallels between OT laws and other laws from the ancient Near East. Although the similarities with other ancient Near Eastern laws confirms the essentially historical nature of the pentateuchal laws, it will be argued that any investigation of pentateuchal law that is primarily concerned with historical issues is likely to produce disappointing results.

2.2.1. Form-Critical Explanations: Apodictic and Casuistic Law. Since the work of A. Alt (1934 [1966]), form critics have regularly distinguished between apodictic and casuistic laws. The former are unconditional commands, as in the Ten Commandments, and the latter are case laws, usually including a protasis ("if . . .") followed by an apodosis ("then . . ."). This basic distinction is still observed, even though it is now widely recognized that Alt's categories are inadequate, especially in relation to the so-called apodictic laws. Even the term apodictic, meaning "of clear demonstration, established on incontrovertible evidence" (*OED* 1.387), is not really appropriate, since it is not a literary term but belongs to the logic of certainty and absolute truth. Apodictic law in fact covers several different forms, as Alt himself recognized, but he did not give sufficient attention to these differences. At least three different forms should be distinguished: (1) unconditional imperatives, such as the Ten Commandments; (2) curses (e.g., Deut 27:15-26); and (3) participial sentences concerning capital crimes (e.g., Ex 21:17). A key formal distinction should be made between expressions that are general principles, whether expressed positively or negatively, and those to which a particular penalty is attached.

Casuistic laws are more homogeneous in

form, despite the wide range of topics that they cover. Moreover, the case laws of the Pentateuch have the same basic form as most laws from the ancient Near East. Nevertheless, D. Patrick has made a helpful distinction between two kinds of casuistic law: "remedial law," where a legal remedy is proposed in the apodosis; and "primary law," which uses personal language to express the terms of a relationship (Patrick, 23-24). The former might be better called "judicial law," since it prescribes penalties to be imposed presumably by a law court (e.g., Ex 21:33-34), and it is quite different in content and style from the relational style of primary law (e.g., "If you lend money, . . . then charge no interest"; Ex 22:25 [MT 22:24]). E. Otto's attempt to distinguish casuistic civil law, casuistic criminal law and casuistic social law is less convincing because it depends on hypothetical historical reconstruction rather than the observable forms of case law in the biblical texts.

What seems clear from even this brief analysis is the flexibility of both unconditional and casuistic forms. Both can express general principles as well as laws that function within a legal system. Further, all the pentateuchal law collections, with the exception of the Ten Commandments, contain a mixture of unconditional expressions and case laws. It must therefore be concluded that a simple distinction between apodictic and casuistic law is an insufficient basis for drawing conclusions about different types of law.

The form of a law does, however, convey something about the context in which it was used. Most examples of case law were almost certainly framed in the light of a particular circumstance and belong in the context of a legal system, though the covenant context of the OT's case laws gives them a meaning significantly different from that of any ancient or modern equivalents. Unconditional law, which is a preferable term to apodictic law, also probably reflects actual use. Those that incorporate a particular penalty probably originated in a law court, while the general principles may well have come from contexts of instruction or authority. The latter could be of a religious, educational or legal character, or any combination of these. The fact that curses and unconditional imperatives often occur in series suggests they may have had a teaching function or that they were related to the formation or maintenance of

a covenant (e.g., Ex 20:2-17; Lev 18:6-23; Deut 27:15-26). Attention should also be given to the motive clauses. These are added most often to unconditional imperatives (Lev 18:6-23; 19:1-19; Deut 25:13-16), though they can also be attached to case laws. They supply theological or moral reasons for obeying particular laws, and their explanatory nature points to the teaching function of *tôrâ* in both its casuistic and unconditional forms.

2.2.2. Source-Critical Explanations. Another way of understanding the differences between the law collections is that they are the product of independent literary sources that arose in different periods of Israel's history. This approach is based on an assumption that each law collection represents the outlook and practice of a distinct social and legal context.

The classic historical reconstruction by scholars of the late nineteenth and early twentieth centuries, following Wellhausen, was that the Law basically followed the Prophets, in contrast to the traditional biblical order. This view was based on the comparative scarcity of references to the law in preexilic literature and on the presupposition that the law represented a tendency toward legalism and institutionalism that was considered typical of the decline in Judaism's religious vitality in the postexilic period. It became increasingly common during the latter part of the twentieth century, however, to acknowledge that law actually developed significantly before the exile. The validity and date of individual sources underlying the Pentateuch has also been subject to increasing question, though it must be said that the pentateuchal laws have received much less attention on this issue than the accompanying narratives (*see* Source Criticism).

Among those who adopt this approach, it is widely agreed that the book of the covenant was an independent collection of laws and was the earliest of the law collections. Since it does not mention any royal administration of law, it is usually placed in the premonarchy period, though it is sometimes associated with the pre-exilic prophetic movement. It is followed in many scholarly reconstructions by the Deuteronomistic laws from the eighth and seventh centuries B.C. and the tabernacle and levitical laws (part of the Priestly source) from the exile or soon afterwards, though some scholars place the Priestly laws before Deuteronomy. On the

other hand, considerable disagreement exists over the role of Moses as a lawgiver and whether or not any or all of the Ten Commandments originated with him. Scholars such as J. P. Hyatt conclude that "there is nothing in the Ten Commandments which could not have originated with Moses" (Hyatt, 208), while others such as F. Crüsemann regard Exodus 20 as the product of a postexilic priestly redaction that is dependent on Deuteronomy 5. The Exodus version has been variously attributed to the Elohist, the Priestly and the Deuteronomistic sources as well as regarded as independent of the standard sources.

It is worth noting that the various form-critical distinctions do not play any major role in source-critical discussions. First, the distinctions between unconditional laws and case laws, however they are categorized, cannot be correlated with the proposed sources. Both major forms are found in all the main law collections. Second, Alt's historical conclusions have proved unsatisfactory. His view that apodictic law was unique to Israel has been superseded by the existence of parallels to unconditional law in the ancient Near East (*see* 2.2.3 below), and his idea that Israel's case law was derived from the Canaanites has proved far too restrictive.

2.2.3. Israelite and Ancient Near Eastern Law. It is impossible to study biblical law without recognizing that a substantial number of pentateuchal laws, especially in the book of the covenant, have recognizable parallels in either form or content with other ancient Near Eastern laws, particularly from Mesopotamia. Laws outside the OT are found in two types of documents. One type comprises public documents and includes law collections, royal edicts and vassal treaties. The other consists of thousands of private contracts that contain legal agreements between private parties on topics such as land transfer, family issues and financial matters. The latter are records of real agreements and provide us with direct access to the ways in which law was understood and practiced in the ancient world.

The law collections range from the laws of Ur-Nammu, compiled in Sumerian toward the end of the third millennium B.C., to the Neo-Babylonian laws of the sixth century B.C., though only fragments have survived in each case. Better known and better preserved are the laws of Hammurabi from the eighteenth century

B.C., though several other collections are also known, including those from Assyrian and Hittite sources. The large majority of the laws are in casuistic form, beginning with either the phrase "if a man . . ." or "a man who . . .". Both patterns are familiar from the Pentateuch. Some laws, however, are in the form of statements, especially those concerned with determining prices. Unconditional commands are also found in ancient Near Eastern documents, though they tend to occur in treaties, moral instructions and ritual texts rather than in the law collections.

Many parallels exist between the laws of the OT and those from the rest of the ancient Near East, though no laws have been found so far that are identical in form in both Israel and Mesopotamia. Similar provisions are found, for example, concerning property rights (especially relating to boundary stones or protecting owners from the consequences of neglect), fair weights and measures, condemnation of bribery, and common attitudes against sorcery. Further parallels occur in the area of *family law, including inheritance, especially the rights of the eldest son, various practices such as adoption intended to counter childlessness, and practices relating to marriage and divorce (see further Selman). Many of the links concerning family law involve the patriarchal narratives of Genesis 12–50 as well as the laws in Exodus through Deuteronomy, indicating the importance of customary law alongside the formal collections.

Probably the closest parallel between the Pentateuch and ancient Near Eastern laws is the famous *lex talionis*, the principle of an eye for an eye or a tooth for a tooth (cf. Ex 21:23-25). However, although such laws occur in the laws of Hammurabi, the laws of Ur-Nammu (c. twenty-first century B.C.), the Babylonian laws of the state of Eshnunna (eighteenth century B.C.) and the Hittite laws (c. sixteenth century B.C.), the variations between them illustrate just how difficult it is to interpret their interrelationship. Whereas for the biblical laws, talion, or equivalent retribution, is a general principle applicable to all, the Hammurabi laws prescribe punishment by talion in the case of one freeman who attacks another, but a monetary fine if a freeman attacks someone of lower status. On the other hand, a monetary fine is the only penalty in the laws of Ur-Nammu, Eshnunna and the Hittites. It remains unclear why the earlier laws

prefer monetary compensation, why monetary compensation is restricted to those of lower status in Hammurabi's Babylon and whether talion was ever intended to be used in practice anyway. One explanation is that monetary fines represent a lower standard than the principle of absolute equality in the biblical laws, but it is also possible that the biblical laws are simply pronouncements of principle, whereas the monetary compensation reflects actual practice. Even within Israel, it is clear that the law of talion was not always understood literally (see Ex 21:26-27).

The case of talion raises afresh the question as to how differences between similar laws from different contexts should be explained, since even in this instance it is impossible to trace a convincing unilinear line of development from the earliest to the latest examples. According to R. Westbrook, ancient Near Eastern law remained basically static over many centuries, and major changes were only introduced under Greek influence from the seventh century B.C. onward (Westbrook; Levinson). While this is probably an overstatement, it is quite possible that differences between laws reflect special circumstances, such as local preferences and customs, rather than a developing progression. The notion that a common basis of law and custom existed with local variations for centuries throughout the ancient Near East, including Israel, remains the most satisfactory way of explaining both the similarities and the differences. This view gives full recognition to the evident continuity in ancient Near Eastern law as well as allowing for variations. The fact that most of the extant law collections come from the third or early second millennia B.C. also makes it clear that Israel's laws were part of a tradition that antedates the time of Moses by several centuries, even assuming the earliest possible date for Moses. The patriarchs' legal customs were part of this tradition, though their closest links are with practices belonging to the first half of the second millennium B.C.

One of the surprising facts about ancient Near Eastern law is the almost complete lack of correlation between the law collections and the private contracts. No private contract makes any reference to the law collections, though several documents do mention stelae that published rates of wages and prices (Roth, 5-7). This situation poses a real question as to the nature and purpose of the law collections. Two main alter-

natives have been proposed: a legislative function or an academic function. Traditionally, the law collections have been seen as authoritative sources of law underpinning the related legal system, but if that was the case, the failure to make a link in any extant document is surprising. The alternative view that the laws were part of a scientific tradition therefore looks increasingly attractive. According to this latter view, laws were compiled and circulated within scribal schools as part of a wider process of education (e.g., Kraus; Bottéro).

The extant prologues and epilogues in the law collections show that the king played a key role in propagating law and justice. Hammurabi, for example, says he was appointed by the gods as king to be a guardian and protector for the weak and powerless. He set up his laws on a stela in the Esagila temple in Babylon to encourage any person who felt they had been wronged. However, since the majority of the population was unable to read or to gain access to the temple, it is hardly likely that Hammurabi's laws were designed for wide dissemination. A more probable aim is that the laws were intended to promote Hammurabi's reputation before the gods. He asks for his name to be remembered in the Esagila temple and that anyone who benefits from reading the laws should pray for the king to Marduk, god of Babylon.

This extensive ancient Near Eastern background provides an important context for understanding the pentateuchal laws. First, the OT laws plainly participated in the legal traditions of ancient society, and the similarities include shared social norms and customs as well as common legal expressions. Second, attempts to set Israel's law collections in particular historical or legislative contexts are problematic. The ancient Near Eastern examples show that definitive explanations of the relationship between similar laws and law collections remain elusive and that continuity is equally as important as development. Third, if ancient Near Eastern law collections did have an educational purpose, this would tie in with the teaching element in OT *tôrâ*, though Israel's concern with teaching the people as a whole rather than simply educating scribes is a major difference. Fourth, the theological aspect of OT law finds an obvious echo in the religious character of other ancient Near Eastern laws, with the deity having ultimate authority for law in both cases. An analogy exists

between Moses and the Mesopotamian kings in that as a civil leader he was responsible for the propagation and administration of law, though his role as the mediator of *tôrâ* is to be sharply differentiated from the kings' aim of commanding themselves to subjects and deities alike.

2.3. The Development of Law in Israel. The Pentateuch is not unaware of differences between its law collections, as the case of Deuteronomy illustrates. First, the book not only contains two distinct law collections, the Ten Commandments (Deut 5) as well as its own collection (Deut 12–26), but its laws are clearly dependent on other pentateuchal law collections. Many scholars have noted similarities between the book of the covenant and Deuteronomy. The laws of Deuteronomy are often regarded as a “direct descendant” of the book of the covenant (Patrick, 97), and M. Weinfeld has even claimed that “Deuteronomy used laws identical in formulation with those of the book of the covenant and revised them according to its ideology” (Weinfeld, 19). It is therefore probable that Deuteronomy was intended to supplement the book of the covenant, based upon the continuing validity of the Sinai laws and their need to be adapted to changing circumstances. It is also more probable that Deuteronomy is dependent on the preexilic Priestly laws of Exodus and Leviticus than the other way round. The following factors lead to this conclusion: (1) the existence of extensive ritual laws in the rest of the ancient Near East from a much earlier period, (2) the significant differences in the language of ritual between Ezekiel and the Priestly laws, and (3) the repeated awareness of the Priestly laws in Deuteronomy, which is not reciprocated by any reference to Deuteronomy in the Priestly laws (cf. Milgrom, 3–13). All this points to the conclusion that Deuteronomy represents the climax of development among the pentateuchal law collections.

Second, though *tôrâ* came to Israel with divine authority, Deuteronomy makes it clear that the law was not set in stone! *Tôrâ* retained a remarkable ability to adapt itself constantly to new situations (cf. also Num 36:1–13; see Zelophehad, Daughters of). The fact that the *tôrâ* of Deuteronomy was addressed to a new generation after Sinai (cf. Deut 29:1 and W. Brueggemann's observation that Deuteronomy “is Sinai interpreted” [Brueggemann, 586]) and that it required the law to be taught to future genera-

tions shows that this adaptability was built into Deuteronomy's concept of *tôrâ* from the start. The rest of the OT provides further evidence of this adaptability. Prophets such as Samuel or Amos and kings such as David or Josiah interpreted *tôrâ* for their own generations, and priests and Levites did the same as they taught the law (cf. 2 Chron 19:8; Neh 8:7-8). Even the psalmists used the *tôrâ* as a basis for meditation (Ps 1; 19; 119). The reason for such flexibility was not simply *tôrâ*'s need to adapt to changing circumstances, important as that was. It goes back rather to the prophetic element in *tôrâ*, especially to Moses' role as the prophet par excellence (Mann; Sailhamer; Greengus). As a result, law was viewed as God's speaking to each generation as well as highlighting the future consequences of different responses to his word. Because a prophetic dimension was part of the pentateuchal *tôrâ*, the prophets did not see *tôrâ* as inconsistent with their prophetic messages. On the contrary, they recognized that a new covenant inevitably involved a new *tôrâ* (Is 2:3; Jer 31:33).

Though it is possible to draw some conclusions about the relationship of the different law collections to each other, trying to ascertain the social and legal circumstances lying behind each collection remains problematical. Differences in the laws on sacrifice and worship, for example, may be partly explained by changing social circumstances, such as the contrast between the unsophisticated village life represented in the book of the covenant and the more urban society underlying Deuteronomy. But the reality is that we still know very little about how the various law collections developed in Israel. Our evidence is effectively limited to the biblical texts themselves, and the lack of independent verification about the laws' social and legal contexts means that conclusions in this area must remain largely hypothetical. Certainly, neither form-critical nor source-critical explanations are sufficient on their own to account for the changes. The ancient Near Eastern evidence in fact suggests that continuity was as important as change, and that variations were due to local factors. The need reflected in Deuteronomy to educate each new generation in the law indicates that changes in Israel were as much due to the religious health of successive generations as to social, economic or political reasons.

As for the origins of the pentateuchal laws, there seems to be no good reason to deny that the basic core of Israel's laws goes back to the authority and mediation of Moses. It is equally likely that the various collections were regarded from the beginning as Yahweh's laws. The inclusion of unconditional laws having Yahweh's authority, blessings and curses, motive clauses, and the covenant context of all the law collections all provide evidence for this view. It is also reflected in G. von Rad's proposal that an original Hexateuch grew out of a creed in Deuteronomy 26:5-9 (von Rad, 1966, 1-78) and in W. Eichrodt's view that "not only the cultic law, but the secular law derives its validity from being a direct command of Yahweh" (Eichrodt, 1:75). Both scholars have argued for the basic principle that the Pentateuch (or Hexateuch) was a theological work from the start, even though von Rad's interpretation of Deuteronomy 26:5-9 is questionable. The various attempts to trace a development from secular to sacral law within the OT fail to address adequately the question of how something could have become divine law if no such claim had been made for it from the beginning. It is one thing for an original core of divine law to have been developed and adapted, but quite another to envisage it becoming something essentially different from what it was in the first place.

The point at which Yahweh's *tôrâ* became a national law supported by a judicial system remains uncertain. It may have taken place under the general influence of the monarchy, the centralizing tendencies of Hezekiah and Josiah, or the reformation of Ezra and Nehemiah. The process was probably not completed until the postexilic period, when a new understanding emerged under Persian influence about the relationship between the law of the state and the law of Yahweh. The main agent of this change was probably Ezra, who arrived in Jerusalem with the authority of the Persian emperor to establish the "law of your God" and to appoint magistrates and judges under the Persian system (Ezra 7:14). Despite Ezra's political and legal roles, however, he continued to teach the law in his role as a priest (Ezra 7:12, 21). Even in his case, therefore, it seems that the concept of the law as God's teaching was supplemented rather than replaced by the law viewed as an organ of the state.

3. Theological Issues.

Although the literary form of Israel's *tôrâ* is distinct in combining law and narrative, and historically it takes its place alongside other laws from the ancient Near East, its most outstanding feature is its theological character. *Tôrâ* in Israel is portrayed from the beginning in the context of Yahweh's *covenant with his people, and any approach to the study of *tôrâ* that minimizes this element can only prove to be inadequate.

3.1. *Tôrâ as the Will of Yahweh.* The central distinguishing feature of pentateuchal law is that it expresses the will of Yahweh; as F. Crüsemann puts it, "The basic notion that Israelite law is direct divine utterance is not at all common in the ancient world" (Crüsemann, 15). This is the main reason why "instruction" or "teaching" often conveys the sense of *tôrâ* better than "law." Whereas in English "law" primarily connotes human statutes and regulations, in the OT *tôrâ* is associated first and foremost with the person and character of Yahweh. *Tôrâ* is his word of instruction or command, which is inevitably bound up with his merciful nature as well as with his holiness (cf. Ex 20:5-6). It is also a distinctive form of the word of God in the OT and takes its place alongside prophecy, prayers and wise sayings as a major type of divine communication.

More than any other part of the OT, the Pentateuch stresses the special connection between *tôrâ* and the person of Yahweh. The linking together of the *theophany of Exodus 19 with the lawgiving of Exodus 20 shows that theophany was an essential aspect of the whole concept of law. The point is further developed in a meditation on the unmediated experience of hearing God's voice (Deut 4:32-40). After Sinai, the law preserved the sense of God's presence in two ways. The first was the concern of the Priestly laws that the tabernacle and its ceremonies should make possible God's desire to live among his people (Ex 25:8). The sacrificial laws were designed to make sure Israel benefited from God's holy presence rather than be threatened by it. The second was in the nature of the law itself. The principle that Israel learned in the wilderness that "human beings do not live on bread alone but on every word that comes from the mouth of Yahweh" (Deut 8:3), defines the nature of *tôrâ* and established the pattern for Israel's ongoing relationship with *tôrâ*. Even though *tôrâ* was received indirectly after Sinai,

through human mediators rather than directly, it was still regarded as Yahweh's gift (Deut 33:10).

The character of Yahweh pervades all the law collections. The Ten Commandments, for instance, are based around Yahweh's redemption, uniqueness, spiritual nature, jealousy or special concern for Israel, justice, overwhelming love, holiness, faithfulness, morality and omniscience. In the book of the covenant, the simple motive clause "I am Yahweh" is often enough to indicate the impact of his nature upon his demands. The Priestly laws concentrate on God's holiness and its implications both for Israel's worship and for their way of life. The laws of Deuteronomy are concerned above all that God's love for Israel should receive an appropriate response in Israel's loving obedience toward him. Yahweh's character was the bedrock of *tôrâ*. It determined the nature of all the laws, commands and instructions as well as the motivation for Israel's response to the laws.

This association with Yahweh gave the laws a special unity. Though the laws have traditionally been divided into moral, ritual and civil law (for a helpful criticism of these categories, see C. J. H. Wright 1983, 151-59), there is a danger of undermining the unity of law in order to examine its individual parts. Yahweh's law is essentially indivisible and claims the allegiance of the whole life of his covenant people, since the unity of the laws is bound up with the absolute commitment that Yahweh requires. It was precisely when Israelites started dividing up the law, deciding which laws were more or less important, that the prophets challenged them that they were separating what God had joined together. By retaining the idea of the *tôrâ* as a unity (notice the singular in, e.g., Amos 2:4; Hos 8:12), the OT preserved the idea that Israel owed comprehensive obedience to one God.

3.2. *Tôrâ and Covenant.* All the law collections are clearly set in the context of God's covenant with Israel. The immediate effect of this is to take the laws out of the sphere of law per se and put them within God's larger purposes for Israel. God gave the laws to Israel because he had redeemed them from *slavery (Ex 20:1-2; Deut 5:6; cf. Deut 1:1—4:43), circumstances that suggest that the laws were intended to preserve Israel's newly won freedom and to provide further opportunities for them to put their faith in him as they had done in the journey from Egypt. Non-

Israelites were not excluded by the laws, especially since many were present at Sinai. Rather, anyone who wished to live by the covenant laws had to acknowledge that it was first necessary to experience God's redeeming *grace as a foundation for living by that same grace under the law. The covenant was also associated with the idea of God's *promise. Just as the Sinai covenant partially fulfilled God's promises to the patriarchs, so the giving of the laws anticipated further fulfillment of God's promises as Israel lived by God's laws in the Promised Land. The whole covenantal context of grace and promise was intended to maintain Israel's continuing gratitude toward God and to encourage an obedience characterized by love and devotion (Deut 6:1-12; 30:19-20).

The relationship between law and covenant has been interpreted in two main ways. On the one hand, G. von Rad has argued that "in all circumstances the close connection between commandments and covenant must be kept in view" because "Israel understood the revelation of the commandments as a saving event of the first rank" (von Rad 1965, 1.193). In his view, the law was a form of the gospel, because the covenant was completed at a time when Israel had had no opportunity to demonstrate its obedience to the laws. He also thought that the idea of law as something that brought judgment was found first of all in the prophets. Alternatively, W. Zimmerli and H. D. Preuss have emphasized the presence of both curses and blessings in the covenant laws. For Zimmerli, "the election of Israel is unthinkable without the validity of its divine law and the concealed, threatening judgment within this law" (Zimmerli 271; cf. H. D. Preuss, 1:90-94). Preuss notes that since Israel's inability to obey the law is emphasized, the law by itself cannot have power to save.

Although the law focuses on the positive benefits it brings to those who observe it, a fine balance exists between *blessing and curse. The two main law collections in Leviticus and Deuteronomy both conclude with lists of blessings and curses (Lev 26:3-45; Deut 27:12-28:68), and Moses summarizes the choice between them in a most clear fashion: "See, I set before you today life and prosperity, death and destruction" (Deut 30:15). Israel's very participation in the covenant was dependent on their attitude to the law. Obedience would enable them to possess the land and to live permanently in it (Deut 8:1; 11:8-15).

Persistent disobedience would lead to the loss of all covenant privileges and would involve Israel's expulsion from the Promised Land, the loss of their status as Yahweh's special people and the laying waste of the land itself. The preponderance of curses in both Leviticus and Deuteronomy suggests that the element of threat and punishment must be taken seriously (see further 4.3 below).

4. The Purpose of *Tôrâ*.

4.1 *Tôrâ* as Principle. How did Israel understand the purpose for which *tôrâ* had been given? One possibility is that the laws were intended as rules and regulations to be followed; but if this was so, it is surprising that the rest of the preexilic literature in particular makes little reference to specific pentateuchal laws. For example, neither the theft of someone's cloak mentioned in a seventh-century B.C. letter from Yavneh Yam (Lindenberger, 96-98) nor the condemnation of lending of money at interest to a fellow Israelite (Neh 5:1-13) refer to the relevant pentateuchal laws, even though they were apparently in existence (Ex 22:25-27 [MT 22:24-26]; cf. Fitzpatrick-McKinley, 87, 93). Even the regulations about the Passover were apparently ignored for centuries (2 Kings 23:21-23). A greater interest is discernible after the exile about keeping specific laws (cf. the Chronicler's interest in the Levites as carriers of the ark [1 Chron 15:2-15] and the Passover of the second month [2 Chron 30:1-5], neither of which occur in the earlier parallel texts), but before that the only explicit reference to complying with an individual law is in 2 Kings 14:6 (concerning Deut 24:16). In the preexilic period, however, two distinct attitudes toward the law can be detected. First, the law was often mentioned as a whole, usually as a standard to which individuals and the nation of Israel were expected to conform (cf. 1 Kings 2:3; Jer 6:19; Hos 8:12). Second, where individual laws are referred to, they are adapted to current circumstances rather than followed exactly. Compare, for example, the account of Achan's sin, where the law about the ban includes precious metals and fabrics (Josh 6:18-19, 24; 7:10-25), in contrast with the mention of people and animals only in the Deuteronomic law (Deut 13:15 [MT 13:16]), or the acceptance of a treaty with the Gibeonites (Josh 9:15-27) in opposition to the Pentateuch's prohibition of treaties with any of the peoples of Canaan (Ex 34:12; Deut

7:2). Taken together, these examples indicate the presence of the idea of a fixed norm but imply that it was not understood in a rigid way.

Another possible function for the pentateuchal laws is that they provided a record of how law was practiced in Israel. This is often assumed to be the case by those who try to reconstruct the history of Israelite law from the Pentateuch. Support for this approach occurs in the kind of detailed formulation of the case laws and of some of the unconditional laws, which appear to have been drawn up with specific instances in mind. But the lack of confirmation of this kind of understanding in the rest of the OT is a severe obstacle. Even such important laws as the Day of *Atonement (Lev 16) or the Jubilee (Lev 25) are not mentioned anywhere else in the OT, and we actually have no idea whether or not they were observed in OT times or, if so, in what form.

If the pentateuchal laws were not primarily descriptive of legal practice, they were more likely to have had a prescriptive function. It seems that they promoted certain legal principles and ideals based on the use of actual examples. The pervasive influence of the first two commandments, condemning the worship of other deities and idolatry, throughout the Deuteronomistic History (or Joshua—2 Kings) may be cited in illustration. A different kind of example occurs in the two main biblical texts giving instructions for judges (Deut 16:18-20; 2 Chron 19:5-7), which are concerned entirely with the quality of justice and the judges' responsibility before God and show no interest in legislative procedures. The idea of the law as principle is also consistent with the preaching and teaching emphasis of the laws (cf. Ex 18:20; Deut 6:6-9; 11:18-20), especially the ability of *tôrâ* to adapt to new circumstances (see 2.3 above). It is also supported by the persuasive suggestion that the whole Pentateuch was designed for public reading (Watts; cf. Ex 24:3-7; Deut 31:9-11; Josh 8:30-35; 2 Kings 22—23), though it is important to note that each reading needed to be supplemented by exposition in order for the principles of the *tôrâ* to be understood in each new circumstance (cf. Deut 1:5; Neh 8:7-8).

The strong educational emphasis of the biblical laws (see 1.2 above) has an analogy with the Mesopotamian laws, though a distinction must be made between the limited aim of the education of scribes in Mesopotamia and the concern

in Israel to make *tôrâ* accessible to all levels of society. At one end of Israelite society, this included instruction for the king, who was to "read it all the days of his life so that he may learn to fear Yahweh his God and follow carefully all the words of this *tôrâ* and these decrees" (Deut 17:19). At the other, it included the whole population of Israel, as is evident particularly in the covenant renewal in Deuteronomy: "men, women and children, and the aliens living in your towns so that they can listen and learn to fear Yahweh your God and follow carefully all the words of this *tôrâ*" (Deut 31:12). The aim is quite explicit that king and people should learn about Yahweh and worship him, and this seems to be independent of particular social conditions or legal systems.

The responsibility for teaching *tôrâ* probably rested with various groups within Israel. According to Gerstenberger, it belonged originally with the patriarchal clan leaders and was taken over by tribal elders, though others have proposed the scribes from the royal court (Weinfeld; Fitzpatrick-McKinley). The levitical and the Deuteronomic laws place this responsibility primarily in the hands of the *priests (Lev 10:11; 14:57; Deut 24:8; 33:10), with some assistance from the *Levites (Deut 27:9, 14). In difficult legal cases, priest and *judge were to act together in teaching the *tôrâ* and giving legal decisions (Deut 17:8-13; cf. also Deut 19:17-18), but otherwise the judges were restricted entirely to legal activities. According to the Pentateuch, therefore, the *tôrâ* was to be taught primarily by the priests and only secondarily to be applied in courts of law. The fact that the priesthood was an ever-present feature of Israelite society, whereas courts of law in preexilic Israel were convened only as necessary and judges consisted largely of local elders, also points toward the priests as those most suited to the communication of Yahweh's *tôrâ* from one generation to another.

4.2 *Tôrâ and the Nature of Israel.* The immediate aim of the *tôrâ* was to enable Israel to live as Yahweh's covenant people or, as the Pentateuch puts it, as "a kingdom of priests and a holy nation" (Ex 19:6). All the pentateuchal law collections emphasize Israel's status as God's *holy people (e.g., Ex 22:31 [MT 22:30]; Lev 19:2; Deut 26:16-19). The essence of this holiness derived from Yahweh's presence, which was located in the *tabernacle (Ex 29:45-46). Yahweh's character and actions provided Israel with a model for

their own holiness, which was to be based on the imitation of God. Israel was to be holy because Yahweh was holy (Lev 19:2); they were to show compassion to others because of God's compassion (Ex 22:26-27 [MT 22:25-26]); and they were to be committed to justice because God was just (Deut 16:18-20; 32:4). They were also to treat *aliens with mercy because that was how God had treated them in Egypt (Lev 19:33-34), and to maintain the freedom for which God had redeemed them in the exodus (Deut 24:17). For this same reason, slaves were to be set free (Deut 15:12-15) and the whole population was to be relieved of their debts in the Jubilee year (Lev 25:8-55).

Israel's role as a kingdom of priests receives a much lower profile in the Pentateuch, but two aspects are particularly relevant here. First, the right of access to God that Israel enjoyed through the *Aaronic priesthood meant that they could represent the whole people of God, including non-Israelites, in the presence of God (*see* Priests, Priesthood). Second, the idea that the nation of Israel was a priesthood gave them an opportunity to mediate God's blessings to other nations. Though the laws repeatedly insist that the Israelites were to separate themselves completely from the *idolatrous and immoral ways of the Canaanites, Israel was also intended to be a paradigm and example by which people of other nations would be attracted to their God (Deut 4:5-8; 26:19). The *tôrâ* was therefore a theoretical means at least by which Israel could fulfill its own potential and bring the covenant blessings to other nations.

The law makes two particular emphases about Israel's holiness. First, it was to be comprehensive, combining worship with *ethics, the Godward and humanward dimensions of life. This all-inclusive combination is evident in the two sections of the Ten Commandments and is clearly present in all the law collections (*see* 2.1 above). It is also reflected in Jesus' quotations from the law in his answer to a question about the greatest commandment (Lev 19:18; Deut 6:4-5; Mt 22:34-40). This was a revolutionary concept of holiness that contrasts with the ritualistic understanding in ancient times and the modern tendency to limit it to moral concerns. Second, the people's holiness was to be lived out in the *land of Israel. This emphasis is particularly strong in Deuteronomy, where the Promised Land is a kind of stage on which *tôrâ* is to be

demonstrated in reality. So close was the relationship between *tôrâ* and the Promised Land that Israel's prosperity and their continued occupation of the land were dependent on their attitude to *tôrâ*. By keeping the laws, Israel would increase and be fruitful in the land, but disobedience would bring economic and political ruin and would ultimately end in *exile (Deut 11:8-17; 28:38-64).

4.3 Responses to Tôrâ. If *tôrâ* was intended to bring Israel's holiness into reality, this would not happen automatically. Yahweh's *tôrâ* demanded a response. This response is comprehensively summed up in Deuteronomy 10:12-13 and 11:22 as fearing God, behaving according to his ways, serving him wholeheartedly, keeping his commands, loving him and holding fast to him. In other passages, the required response is summed up either as loving God with all one's heart, soul and strength, or as obedience (Deut 6:3-5). Although the law thus presented each generation of Israelites with a choice (Ex 24:3-8; Deut 30:15-20), it was the normal expectation that they would accept its requirements. This they did when the covenant was ratified at Sinai (Ex 24:3, 7; 39:32, 42) and by implication when it was renewed in Moab (Deut 29:1—30:20).

Those who made the choice to obey the *tôrâ* were promised "blessing" and "life." Both ideas are found throughout the laws, but they are particularly prominent in Deuteronomy. Israel was promised, for example, that through the *tôrâ* "you will be blessed more than any other people" (Deut 7:14) and that "Yahweh will send a blessing . . . on everything you put your hand to" (Deut 28:8). This idea of God's blessing continues a key theme in Genesis and underlies the nature and purpose of the whole pentateuchal *tôrâ*. The purpose of the pentateuchal story has been helpfully summarized as "the partial fulfillment—which implies also the partial non-fulfillment—of the promise to or blessing of the patriarchs." (Clines, 30). The law collections that are part of this larger *tôrâ* are included in this blessing and continue God's purposes revealed in his promises to the patriarchs.

The idea of *tôrâ* as a source of life is clearly stated in the laws of Leviticus ("Keep my decrees and my judgments, for the one who obeys them will live by them"; Lev 18:5; cf. Rom 10:5), but it receives further development in Deuteronomy in two ways. First, keeping the laws was to be an expression of heartfelt love. The book holds to-

gether the ideas of obedience to God's demands and loving him from the heart within the single concept of a "covenant of love" (Deut 7:9, 12; lit. "covenant and steadfast love"). Living by the law was therefore expressed through a dynamic relationship rather than a duty. Second, the experience of living by God's laws and the result of keeping them are both described as life in Deuteronomy 32:47. Since the laws possessed their own internal dynamic and life-giving properties ("they are not just empty words for you—they are your life"), the natural consequence of obedience was also "life" ("By them you will live long in the land"). The latter was not so much a reward as a continuing enjoyment of God's promises, especially in the permanent occupation of the Promised Land.

This concept of a life-giving *tôrâ* suggests that a sharp distinction should be made between law-keeping and legalism. It is often alleged that legalism only became a real danger in the post-exilic period, perhaps as late as the time of the Septuagint when Hebrew *tôrâ* was translated by Greek *nomos*, but the problem is already plain in Deuteronomy. The instruction not to add to nor subtract from God's laws recognizes the temptation to treat them as a matter of mere human origin (Deut 4:2; 12:32), and the importance of the commandments being on people's hearts (Deut 6:6) shows that purely external observance was not sufficient. Genuine dangers also existed as Yahweh's laws were adopted by the Israelite state, since such a move carried the possibility of human authority taking responsibility for law instead of it being recognized as the words of God. The only sign of this development within the Pentateuch, however, is Deuteronomy's instruction to the king to submit himself to "all the words of this *tôrâ* and these statutes" (Deut 17:19).

Alongside this positive understanding of the purpose of *tôrâ*, the Pentateuch also draws attention to Israel's inevitable tendency to break the law. The golden calf incident and Moses' prediction of Israel's future disobedience (Ex 32—34; Deut 31:16—32:42) are only the most prominent instances of this, but the levitical atonement laws assume that Israel would need forgiveness on a regular basis. But though the *tôrâ* is pessimistic about God's covenant people, it remains optimistic about the law. Despite Israel's inability to keep the law, the law collections speak only of Israel breaking the covenant, never of

Yahweh annulling it (Lev 26:15; Deut 31:16). The laws of Leviticus and Deuteronomy point to Israel's future failure and exile, but Yahweh still promises to remember his covenant and restore Israel to their land (Lev 26:42-44; Deut 30:1-10). In anticipation of this hope, even the case of the *golden calf resulted in a fresh revelation of God's presence and a renewal of covenant law. The balance in the *tôrâ* between life and death, between blessing and curse, is therefore not evenly weighed. The laws were specifically geared in favor of life and blessing, and Deuteronomy in particular encourages Israel to make the only proper choice available, namely, life rather than death, blessing rather than curse (Lev 26:40-45; Deut 30:19-20). There was therefore a gospel in the law that could reverse judgment and curse. In order for this gospel to become reality, however, a human act of repentance and divine action to circumcise the human heart, that is, to bring about regeneration, were essential (Deut 30:1-6).

5. Interpretation of *Tôrâ*.

Pentateuchal law has been the subject of a particularly wide variety of interpretations, mainly as a result of the very different roles it plays in Christianity and Judaism. Whereas for the Jews, law is central to faith and is, at least in theory, regarded as God's living word, Christianity has been much more ambivalent and indeed has often been quite negative toward law. Though this more negative approach is partly due to the cultural and historical distance separating the ancient and modern worlds, the main underlying reason is theological, especially that interpretation of Paul which sees a fundamental separation between the law of the OT and the grace of the gospel in the NT. Luther, for example, understood the law merely in terms of its civil function as a hedge to restrain sin and in its spiritual role as a mirror to expose sin. Even those who interpret the law more positively have often been guilty of a partial approach, affirming essentially only the moral laws of the Ten Commandments for Christian use, though sometimes including also a typological understanding of the ceremonial laws as the Pentateuch's way of prefiguring Christ. A narrower version of this view is represented by dispensationalists, who accept only those parts of the pentateuchal law that the NT specifically affirms. As a result of this

approach, Christianity has often paid little attention to the civil and ceremonial laws, though some rehabilitation of ritual has taken place through the work of anthropologists such as M. Douglas.

Comparatively few Christian interpreters have attempted a more comprehensive approach, but those who have done so usually pursue one of two avenues of thought. On the one hand are those who take an essentially moralist view, based on the assumption that certain fundamental moral principles underlie the pentateuchal laws. D. Patrick, for example, sees the written law as the original formulation of the will of the living God and as a witness to an unwritten law about God's justice and righteousness (Patrick, 253). On the other hand are those who take a more theological approach, such as F. Crüsemann's view that *tôrâ* "identifies the unity of law and gospel and thus the unity of divine word and will" (Crüsemann, 2). A variant on this is C. J. H. Wright's view that the law as a whole has a missionary purpose based on Israel's calling to be a royal priesthood and their role as a paradigm for other nations (Wright 1992, 226-29). A further variant is the theonomic approach, which assumes that the entire pentateuchal law applies to Christians apart from what the NT repeals (e.g., Rushdoony; Bahnsen). Jewish commentators have also tended to take a much more comprehensive view of *tôrâ*, assuming that all 613 prescriptions of the law are God's word to his people, to be studied and practiced as a whole.

The key question for Christians, however, is Jesus' relationship to the law. Jesus' promise that he had come to fulfill the law (Mt 5:17) and Paul's view of Jesus as the end of the law (Rom 10:4) together indicate that all Christian interpretation of the OT must be christological (see *DJG*, Law; *DPL*, Law). Christ's interpretation of the law is determinative for Christians, not only as it speaks about the person and work of Christ, but also about motivation and direction for Christian living. However, this is insufficient without an equal emphasis on a pentecostal approach to the law. Jesus' new command that his disciples should love one another occurs in the same context as his promise of the Spirit (Jn 15:12, 26-27). Similarly, Paul's summary of the law, "Love your neighbor as yourself," is followed by his call to live by the Spirit (Gal 5:14, 16; cf. Lev 19:18). If pentateuchal law is not in-

terpreted christologically and pentecostally, it is always liable to decline into a set of rules and regulations that cannot change the lives of those who seek to live by them.

LEADERSHIP, ELDERS

Elders are relatively old members of a community who represent it in specific domains and matters as defined by the community and its ethos. The study of the elders in the Pentateuch is influenced by modern constructs of leadership and methods of textual interpretation. This study proposes that leadership is domain specific in its scope (temporal and spatial) and authority. There are various methodological challenges in reconstructing the development of the elders' function from the extant text. Consequently, references to sociocultural organizations are made in general rather than detail.

1. Terminology
2. Nature of the Elders' Leadership
3. Textual Examples

1. Terminology.

The semantic indicators of the “elders” are part of a larger manifestation of the role; therefore, the study of the indicators is a precursor to a substantive evaluation of the text's representation of the roles and functions of the elders.

1.1. Semantic Field. The term “elders” (*zēqēnīm*) is the masculine plural form of *zāqēn*, “old,” an adjective most often used substantively and derived from the Hebrew verb *zāqēn* (“be, become old”). The verb denotes the aged state following youth (Gen 18:12; 27:1, 2). When used as an adjective, *zāqēn* (and its derivatives *zōqēn*, *zīqnā* and *zeqūnīm*) denotes old age (Gen 18:11; 21:2, 7; 24:36; 35:29; 37:3; 48:10). The term *zāqēn* most often refers to males, but it is also used of females. In Genesis 18:11 it is used of both *Abraham and *Sarah, and the root is used of Sarah alone in Genesis 18:13 and 24:36. While it is possible that the elders were either male or female, it is less probable that they were female, given the sociocultural constraint of the patriarchal system. This argument is suggested on the basis that the qualifications to be an elder were more than age. If it were simply age, all the old persons of the community would have been considered elders regardless of gender.

The adjective *zāqēn* is also used substantively of an “old person/elder” (Gen 43:27; 44:20; Ex 10:9; Lev 19:32; Deut 28:50) in contrast to a young person (*na'ar*). The term *yāsān*, “old”—a synonym of *zāqēn*—denotes aged, namely, of

LAW, ANCIENT NEAR EASTERN. See LAW.

“old crop” as opposed to the fresh crop of the present harvest (Lev 25:22; 26:10). Other synonyms include *šib*, “be hoary” (1 Sam 12:2), and its derivative *šēb/ šēbâ*, “gray hair, aged” (Gen 15:15; 25:8; 42:38; 44:29, 31; Lev 19:32; Deut 32:25; cf. 1 Kings 14:4).

1.2. Occurrences. The elders may have existed in peer relationship to other leaders in the community—including chief or prince (*šar*, *ʾallûp*, *nāšîʾ*), *judge (*šōpēt*), head (of Israel) (*rōʾs*), official (*šōtēr*), *priest (*kōhēn*) and king (*melek*)—in so far as elders continued to function even after the centralization of the sociopolitical structure of the monarchy. The existence and nonexistence of the elders, their authority and their relationship to other leaders cannot be determined solely by the association of the various leaders on the literary level of the text. Notably, there are several texts in which the elders are mentioned without the judges (Deut 19:1-13; 21:18-21; 22:13-21; 25:5-10), and in others the judges are mentioned without the elders (Deut 16:18-20; 17:8-13; 19:15-21; 25:1-3 (Willis, 49). If the co-existence of the elders is verified by their association with other leaders in the text, in the case of the Pentateuch elders appear to have relatively limited contact with other leaders as compared to the rest of the Hebrew Bible. For example, the associations are as follows: elders and judges (Deut 21:2; cf. Josh 8:33; 23:2; 24:1); elders and priests (Lev 4; Deut 31:9; cf. Josh 8:33; 2 Sam 17:15); elders and heads (of tribes) (Deut 5:23); elders and officials (Deut 29:10; 31:28; cf. Josh 8:33; 23:2; 24:1; Judg 8:14); elders and kings (given the perspective of the Pentateuch, only with reference to the kings of other nations, Ex 3:18; in contrast to 2 Sam 3:17). The limited association does not necessarily indicate the mutually exclusive function of the groups or their domains of authority. Given the composite nature of the text, one must at least acknowledge the possibility that both the presence and absence of association between the leaders may be due to chronological development or their domain-specific authority.

2. Nature of the Elders' Leadership.

2.1. Domain of Leadership. As portrayed in the Pentateuch, Israel is often characterized as a lineage system wherein various contexts of varying sizes define the domains of its leaders' authority. Examples of these domains are familial, tribal, intertribal and national. In the lineage-based so-

ciety there is a hierarchy of power that corresponds to the vertical organization. Accordingly, the head of a *family/household had particular power over his household but not necessarily over the other households in his tribe. Likewise, there were elders with various domains of influence relative to their location in the societal structure. The head of a family may have been selected as part of a group who would represent the community. Along with others, he was charged with responsibility to the community and as such given authority that encompassed and transcended the scope of the family. As the domain of the leadership extended, the leaders' acquaintance with the totality of the community they represented may have diminished though their knowledge of their immediate community may have continued.

The domains of the elders' leadership (relative to the sociocultural hierarchy) are variously designated in the Pentateuch by genitive phrases in which groups are named (i.e., nations, cities, tribes). The elders are designated as follows: elders of Israel (*zīqnē yisrāʾēl*, Num 11:16), elders of the children of Israel (*zīqnē bēnē yisrāʾēl*, Ex 4:29), elders of the people (*zīqnē hāʿām*, Ex 19:7), elders of the congregation (*zīqnē hāʿedā*, Lev 4:15) and elders of the city (*zīqnē hāʿir*, Deut 21:4, 6). The “elders” were not unique to Israel but were found in other nations, including Egypt (*zīqnē ʾereš miṣrayim*, Gen 50:7), Midian (*zīqnē midyān*, Num 22:4, 7) and Moab (*zīqnē mōʾāb*, Num 22:7).

2.1.1. Elders of Israel. On the highest sociocultural level—the level expanding over the largest segment of the population—the elders are designated relative to the name of the nation or people-group. They are called the elders of Israel (*zīqnē yisrāʾēl*) or elders of the Israelites (*zīqnē bēnē yisrāʾēl*). Apparently, the composition (i.e., size) varied such that one cannot determine the normative size of the group. Furthermore, the variation in the size of the group also suggests that while elders may have continued to exist in the life of Israel, the size of the group that functioned in various capacities varied. What is readily apparent is that there were more than seventy elders in Israel, but on occasions a group of seventy was selected (cf. Ex 24:1, 9; Num 11:16, 24). On other occasions it appears that the entire group of the national elders were brought together; they were designated as “all the elders of Israel” (*kol zīqnē bēnē*

yisrā'el; Ex 4:29; 12:21; 18:12; Deut 31:9; cf. Gen 50:7 [of Egypt]). The entire group may also be represented by the designation “the elders of Israel” (*zīqnē yisrā'el*; Ex 3:16, 18; Lev 9:1; Deut 27:1) except where the restrictive use is continued from an earlier reference (e.g., Ex 17:6; Num 11:30).

On other occasions, an unspecified number was convened—namely, “some of the elders” (Ex 17:5). There is no decisive indicator that the task regulated the size of the group. Sometimes the scope of the occasion appears to be a determinant in selecting the national elders rather than the local ones. When the occasion concerned all of Israel, the national elders or a selection from that group were convened: namely, the negotiations with *Pharaoh to release the people from slavery (Ex 3:16, 18; 4:29), the preparation for Passover (Ex 12:21), instructions about the sin and burnt offering (Lev 9:1), the charge to observe the *law (Deut 27:1) and the commission to read the law (Deut 31:9; cf. 31:28). At other times, an unspecified number of the “elders of Israel” was convened even when the occasion concerned the entire Israelite population (e.g., Ex 17:5-6—the people’s murmuring concerning the lack of water). In Numbers 11 the selection of the seventy elders is occasioned by *Moses’ complaint and request for assistance in guiding the people. As in all the instances where the elders of Israel are identified, they functioned as a group assisting Moses with the task of leading the people. The elders are not portrayed as an independent entity that initiated its own course of action. Rather, the elders as a group derive their task from Moses’ leadership and the imperatives given to him by God. Their authority to act, the size of the groups and the task with which they are charged constitute the basis for the ad hoc rather than a permanent entity called the “elders.”

There are two other designations that appear to be analogous in scope to the “elders of Israel.” First, “the elders of the congregation” (*zīqnē hā'ēdā*, Lev 4:15) refers to the representatives of the people or nation of Israel. In this sense the elders in Leviticus 4:15 perform their cultic duties to address the unintentional sin of the whole population. Second, in Numbers 11:16, 24, the elders of the people (*zīqnē hā'ām*) constitute the pool from which the elders of Israel were selected. In Exodus 19:7 the reference seems to be to the whole group of Israel’s popu-

lation, to whom Moses brings “the words that Yahweh commanded him.”

2.1.2. Elders of the City. The national elders were convened from the general pool of elders, possibly including the “elders of the city” (*zīqnē hā'ir*, Deut 19:12; 21:3, 4, 6, 19, 20; 22:15, 17, 18; 25:8). In the latter reference, “city”—the place where a group of people lives or meets for various occasions—may refer to one of a few domains, including (1) the center of life for a family or (2) tribe, (3) a religious center that is the interclan center serving several cities, and (4) the administrative city that serves all other cities in a nation. The references to city elders in the Pentateuch most likely represent the first three of the four domains just mentioned (Willis, 15). While the designation “elders of the city” represents the group of leaders, their domain varied. As in the cases of the “elders of Israel,” this specification of the domain is qualified by, for example, a pronoun (“that city” [*hā'ir ha-hiw'*], Deut 21:4, 6; 22:18), a pronominal suffix (“his city” [*irō*], Deut 19:12; 21:19, 20; 25:8) or a noun (“all [*kol*] the elders of that city,” Deut 21:6). In these cases, the elders who adjudicated were the elders of the city in which the cases arose rather than elders gathered from a variety of cities. Their function was localized and specific to the cases brought to them.

The domains of influence even for the elders were affected by the structure of the society and the relationship of the elders to the governing body of the society. Thus it is possible that the city elders had more extensive power in their cities than they did on a national level, where they had little power (Matthews and Benjamin, 122).

2.2. Authority of the Elders. The elders’ domain also included particular adjudicative functions, such as issues of breach of contract (marital contract, Deut 22:13-21) and levirate marriage (Deut 25:5-10). The elders served as the jury in these cases, hearing the evidence and rendering a verdict. As to the execution of the verdict, it may be assumed that the verdict’s force came from the authority imbued to the elders by the people that they represented. The elders did not make the law but rather executed the law as that law applied to particular cases brought to them. Consequently, the elders were subject to the law that they administered, and their authority was constituted by the validity of their application of the law and the recognition of that validity by and within their community.

The elders' authority may have been specific to their domains, while the source of their authority was multifaceted. Elders existed before they were commissioned with particular responsibilities over the people. In many of the texts where the elders are called upon to assist, accompany or bear witness with Moses, the command to commission is given without any specification of who were to constitute the group (e.g., Ex 3:16, 18; 4:29; 12:21; 17:5; 19:7; 24:1; Num 11:16). Even in Numbers 11:16, where there is a specification of the eligible "men," the specification itself indicates the preexistence of the group of elders. The selection of the seventy men (*šib'im 'iš*) was made "from the elders of Israel" (*mizziqnē yiśrā'ēl*), and that group was made from the existing group of elders, namely, the elders of the people (*ziqnē hā'am*). This suggests that their first authority was derived from their community insofar as they represented the concerns of the community. The authority assumed in their role imposed by the commission was therefore indebted to their prior authority.

3. Textual Examples.

3.1. City Elders.

3.1.1. *Murder*. Deuteronomy 21:1-9 speaks of a case in which a dead body was discovered without evidence of the residence of the deceased or the suspect in the crime. In this case, the elders and priests functioned together. The designated role of the priest was to settle the case. The role of the elders was to ascertain the city of residence and then to perform the ritual to secure the cleansing of the city of blood guilt. In this ritual they acted as representatives of the city and declared that they had neither witnessed nor were guilty of the crime.

3.1.2. *Parent-Child Conflict*. The elders were also called upon to intervene in families when the parents were unable to manage a rebellious child (Deut 21:18-21). In this case, the parents took the child to the elders, and the men of the city executed the punishment of death on the child. No indication is given concerning the verification of the charge against the child, and the punishment itself seems to have been predetermined. The elders did not decide the nature or type of punishment nor execute it. Rather, they simply sanctioned the execution of the punishment.

3.1.3. *Marriage Contracts*. The elders administered the law in specific cases relating to marriage. According to Deuteronomy 22:13-21, they

were to hear the case, view the evidence brought to them and execute punishment on the culpable party, either the man who had slandered his wife (Deut 22:18-19) or the woman who had deceived the man (Deut 22:20-21).

In the case of a man who refused to adhere to the practice of levirate marriages—to marry the brother's widow (who did not have a son)—the elders also heard the case and facilitated the execution of the punishment (Deut 25:5-10). The elders adjudicated by carrying out a predetermined punishment rather than devising new ones.

3.2. *Elders of Israel*. The domain of the elders' authority also encompassed the transmission of and obedience to the law. In this manifestation of the leadership authority, they stood alongside Moses as the representative of law and *covenant. The elders were commissioned to take the law and recite it to the people (Ex 19:7; Deut 27:1; 31:9, 28 cf. 32:7). In this role, the elders became accountable to their commission and to the law that they were taught.

LEVI, LEVITES

According to Genesis 29:34, Levi was the third son whom the unhappy Leah bore to *Jacob. The text tells us that she gave him the name *lěwī* because she hoped that her husband would become more attached (*lāwā*) to her for having borne him another son. The man Levi would be completely lost in obscurity to us except for the one notorious episode of Genesis 34. This passage tells how Levi conspired with his older brother *Simeon to get revenge on Shechem son of Hamor, a prince of the city of Shechem, for having raped their sister Dinah. Although Simeon and Levi had a legitimate grievance against Shechem, their response was outrageously out of proportion to the crime—they killed not only Shechem but also his father and every man in the city. Thereafter, Jacob regarded both Simeon and Levi as vicious and as possibly unworthy of a place in Israel (Gen 34:30; 49:5-7).

The tribe of Simeon did in fact eventually descend into a kind of historical oblivion, but the tribe of Levi emerged from the *Egyptian sojourn and the *exodus as the priestly tribe of *Israel. Although they never had a separate territory allotted to them and were dispersed throughout the nation, this lack of real estate was more than compensated for by their religious status and the fact that Yahweh himself became their inheritance (Deut 10:9).

1. The Problem of the Levites
2. The Levites in Contemporary Scholarship
3. A Possible Solution

1. The Problem of the Levites.

The biblical account concerning the Levites leaves the modern scholar with two fundamental questions: (1) Why did the Levites receive sacerdotal duties? (2) What was the relationship between the Levites and the temple priesthood, particularly the Aaronite *priests, since at times their roles seem indistinguishable?

Concerning the first question, a traditional explanation is that the Levites distinguished themselves at the *golden calf episode and therefore received the honor of having the sa-

cred articles placed in their care (see Ex 32:28-29; Deut 33:8-11). This has a number of problems, however, and does not seem to be a sufficient explanation. For example, although *Aaron was a central figure in the creation of the golden calf (Ex 32:21-25), he does not forfeit his right to the priesthood. It is noteworthy that the people turned to Aaron to perform a priestly duty, the creation and consecration of an image, at the beginning of the golden calf episode and apparently *before* Moses announced that God had designated the Aaronites as the priests of Israel (Ex 32:1-3). Similarly, God described the priestly vestments and the consecration of Aaron and his sons with no explanation of why they were to have this office (Ex 28—29), almost as though it were assumed by one and all that Aaron had priestly status. Also surprising is Exodus 4:14, where God calls Aaron “the Levite” (*hallēwī*) the very first time Aaron is mentioned, hinting that the term “Levite” already had special significance among the Israelites. Had it simply been a matter of identifying Aaron’s tribe, we might have expected him to be called the “son of Levi” (*ben lēwī*).

This suggests that the Levites were already at the *exodus in some sense the sacerdotal tribe and that Aaron in particular was already widely regarded as a kind of national priest. Although the behavior of the Levites in the golden calf episode served to confirm their position as the clerical tribe, and perhaps won them the specific right to maintain the tent of meeting, it did not radically alter their status. All of this, however, depends on reading the narratives as historically trustworthy texts, something that many critical scholars today are unwilling to do.

Regarding the second question, the traditional answer is that the Levites served as special assistants who cared for the sacred articles of the tent of meeting whereas the Aaronites actually functioned as priests. Thus the Levites had sanctuary duties but were not actually priests (they are sometimes described as a *clerus minor*, or “lower clergy”). This interpretation is derived primarily from texts in Exodus, Leviticus and Numbers. For example, the priestly consecration of Aaron and his sons in Leviticus 8 starkly contrasts with the commands regarding the Levites in Numbers 3—4. The former sets the Aaronites apart for officiating in *sacrifice and worship, whereas the latter prescribes for the other clans of Levi (the Gershonites, the Kohathites and the

Merarites) specific duties in caring for and transporting the tent, the *altar and the other sacred vessels.

The principal problem with this approach is that other texts of the Bible, especially those associated with Deuteronomy and the Deuteronomistic History, seem to regard all Levites as priests. Deuteronomy 18:1 speaks of “the priests, the Levites, the whole tribe of Levi” as though it were a single group and implies that all Levites are (or could become) priests. Deuteronomy’s term “the priests, the Levites” (e.g., Deut 17:9, 18) at least indicates that a Levite was not a mere temple servant. Another significant text is Judges 17–18, where a certain Micah as well as members of the tribe of Dan regard it a matter of great importance that their priest be of levitical stock but are apparently unconcerned about whether he is of Aaron’s line (see especially Judg 17:13).

2. The Levites in Contemporary Scholarship.

Reflecting on the diversity of viewpoints in the Bible, many scholars follow J. Wellhausen’s lead and assert that although the OT presents a confused and unreliable account of the background of the Levites, the biblical texts are nevertheless not without value in reconstructing Israel’s religious history. In particular, most scholars see in the Bible the redacted fragments of texts that were used by rival claimants to Israel’s priesthood to bolster their cases. The story of Israel’s priesthood is thus a dialectical historical process in which rival groups (the Levites, the Aaronites, the Zadokites and the Mushites [priests claiming descent from Moses]) contended for the right to officiate at Israel’s altars. Each group, to support its claim to primacy, circulated stories that undermined the claims of other groups; these stories have been redacted into the current Pentateuch (and other OT books). The golden calf story (Ex 32), for example, is often thought to have been formulated by the Levites to weaken the Aaronites’ claim to the priesthood by presenting their eponymous head as idolatrous (e.g., Haran, 90-92; see also White). By contrast, some have argued, the Aaronites disseminated the story of the rebellion of Dathan, Abiram and the sons of Korah (Num 16–18) in order to show that God sanctioned the priesthood of Aaron over against the pretensions of the Levites.

Although most scholars agree that the history

of Israel’s priesthood was one of conflict between rival groups, there is wide diversity of opinion about specific details. In Wellhausen’s reconstruction, the Levites were originally a warrior tribe and the priesthood was at first mantic rather than cultic. The Levites were dispersed in Israel, perhaps because they were violently dispossessed of their lands during the judges period. With the rise of the monarchy, established priesthoods at cultic sites began to appear, and the few wandering Levites began to take on priestly roles at the high places. For Wellhausen there is no real connection between the warrior tribe of Levi, an early group that effectively disappeared by the end of the judges period, and the religious caste of Levi, a creation of D and especially P (see Source Criticism), which was artificially linked to the tribe. Eventually the (non-levitical) Zadokite priesthood of Jerusalem came into conflict with the more dispersed levitical priests, and under Josiah the Levites were forced into Jerusalem, subordinated to its priesthood and reduced to being temple servants. The process ended with the postexilic denunciation of the Levites in Ezekiel 44:6-16 and the writing of the P document, which gave the official viewpoint that the Levites had always been subordinates (Wellhausen, 121-51).

Some scholars reject the idea that the Levites had a long history as a secular or warrior tribe. A few, on the basis of Minaean inscriptions found at Al-Ula (biblical Dedan) in northern Arabia, have argued that the term *l̥wī* actually means “priest,” and thus that there never was a secular tribe of Levites. The priestly personnel who had the title *l̥wī* were artificially given a tribal heritage in the tradition. Many scholars, however, reject this interpretation of *l̥wī* and regard it as a personal name (see Cody, 29-35).

As an explanation for how the secular Levites came to be a priestly group in the first place, some scholars suggest that they were the losers in an intertribal conflict for land and took over the priestly function as a kind of consolation prize. Others contend that the original Levites were members of a cult association (like the Rechabites). Another suggestion is that the Levites for some reason had or adopted the status of “sojourners” (*gerim*) within Israel and, because of economic necessity, took up the trade of priestcraft (Cody, 55-61).

Many continue to believe that Ezekiel 44:10-15 and P describe a postexilic demotion of the

Levites to the status of *clerus minor*. M. Haran, however, points out that the situation in P, which presumes that there are far more Levites than priests, contrasts starkly with the reality of the postexilic community, where Levites were few in number (Haran, 94, 109). Some scholars present the conflict between priest and Levite as less a grab for power than a theological debate over Israel's identity; R. Albertz (480-93) reads P as the priestly side of a postexilic debate between "reforming priests" and "lay theologians."

For A. Cody, Exodus 32 was originally not directed against Aaronites but against the nonlevitical priests of Bethel; it was an apology for the legitimacy of the Levites over against the Bethel priesthood (Cody, 146-56). He suggests that the Zadokite priesthood was actually Jebusite and that the Aaronites were a subgroup of Levites in the preexilic south. The Zadokites came into conflict with the Aaronites over the control of the Jerusalem temple at the time of the Josianic reformation, but they ultimately worked out a compromise with the larger group of Levites whereby the Levites would take a subordinate role but the Zadokites would preserve the fiction of a levitical priesthood by declaring themselves to be descended from Levi through Aaron (Cody, 89-93, 155-74).

J. Blenkinsopp generally supports the Wellhausen hypothesis but considers it to have some significant problems, especially in the assumption that the preexilic Jerusalem priesthood was Zadokite. He argues that the postexilic community created the fiction of the priesthood of Aaron. This community subordinated the Levites to the status of a lower clergy but also gave them an expanded role within that status, including work as musicians, gatekeepers, liturgists and especially as teachers of the *law. He suggests that these broader functions allowed them to form, with the support of the laity, a counterweight to the power of the priestly aristocracy (Blenkinsopp, 83-98).

By contrast, Y. Kaufmann places the conflict among the rival groups in the preexilic period. He argues that the Levites were a warrior tribe who distinguished themselves in the golden calf episode and so won the right to serve in a priestly role. He rejects the view that they lived as landless sojourners (*gērîm*) prior to their taking on priestly duties in the shrines. In his view, the Aaronites were an ancient nonlevitical, pagan priesthood. He asserts that the principal

conflict was between the Aaronites and the Levites/Zadokites. In Kaufmann's view, the Levites had virtually died out by the end of the monarchy, although Ezra was able to find a few to help fill out the personnel requirements of the restored theocracy (Kaufmann, 197-99).

R. Nurmela argues that the fundamental division was between the Zadokites of Jerusalem and the Levites of the northern kingdom. With the destruction of the northern kingdom, priestly refugees (Levites) flooded the south; in the ensuing tension the Levites were demoted to the status of temple servants. T. Polk suggests that the Levites, especially the warlike Korahites, supported David against Saul and also supported the Aaronite Zadok against the Mushite Abiathar. In return for their loyal allegiance, they were given important functions in the royally sponsored Jerusalem cult (Polk, 3-22).

In summary, there is hardly anything like a consensus of opinion among scholars regarding the history of the Levites. The relationships among the various groups, the circumstances of their conflicts and the *tradition history behind the texts are all disputed. The only constant is the notion that behind the texts stands a conflict between rivals for the priesthood. We must ask ourselves if this, the starting point for research for the last century, is fundamentally misguided. Furthermore, all of the proposed solutions contain significant inconsistencies and improbable constructs. For example, how is it that the Josianic reformation was a major step in the demotion of the Levites and yet it is D, the supposed guidebook for that reformation, that most clearly gives Levites a priestly status? Scholars have offered no convincing explanation of how it is that the OT uniformly presents the house of Aaron as both priestly and levitical if in fact he was not both and may have been neither.

3. A Possible Solution.

If we regard the biblical text as fundamentally trustworthy, the following reconstruction is possible. First, the Levites seem to have come to the exodus and certainly entered Canaan already possessing some kind of clerical status (see also 1 Sam 2:27). The Levites never existed in the land of Israel as a "warrior tribe" or as a group of *gērîm*. The golden calf incident confirmed the status of Levi as the sacerdotal tribe.

Second, none of the often cited texts (Ex 32; Num 16—18; 1 Sam 2; Ezek 44) is a propaganda

piece in a war among rival priesthoods. In the only text in which there is conflict over control of the sanctuary (Num 16—18), both groups acknowledge that the sanctuary should be in the hands of Levites.

Third, the position of the Levites vis-à-vis the house of Aaron is not really confused in the Bible. During the exodus wandering, there is only one sanctuary and the Aaronites officiate there; the rest of the Levites serve as the sanctuary staff. Deuteronomy anticipates the dispersal of Israel throughout Canaan and a time when the tent will no longer be on the march. In those circumstances, the primary shrine will no longer require a large support staff. Instead, the Levites will scatter throughout the land and will be free to officiate at other legitimate altars to Yahweh. This is precisely the circumstance we see in the period of the judges and monarchy.

Fourth, Canaanite syncretism and the presence of nonlevitical shrines (1 Kings 12:31) prompted the closure of outlying sanctuaries during the reforms of Josiah. The hard lessons of the exile and the reduced size of the postexilic community encouraged the people to maintain the Jerusalem temple with its Aaronite priesthood as the only legitimate shrine, but the Levites were not “demoted” in the process. At the central shrine they had always been subordinate to the Aaronites.

LEVITES. See LEVI, LEVITES.

LEVITICUS, BOOK OF

Leviticus is not an easy book to understand. Despite Jewish recognition of the importance of the book, its study has been hampered primarily because the rationales for the rules and prescriptions that dominate the book are rarely spelled out. Although since the 1970s some significant proposals have been made regarding the meaning of offerings and prescriptions, the impression cannot be denied that on the whole any serious grappling with the book has just begun. There exists a wide variety of scholarly views of the meaning of some key Hebrew terms as well as the meaning of the rituals, and a reasonable consensus has not yet been reached. Hence it is hoped that the following article may contribute in a small way toward solving some crucial interpretive issues in Leviticus.

1. The Name and Location of the Book
2. Authorship and Date of Composition
3. Structure of the Book
4. Sacrifices and Offerings
5. The Cleanness and Uncleanness Regulations in Leviticus 11—15
6. Holiness as the Ideal of Living
7. New Testament Implications

1. The Name and Location of the Book.

Leviticus is the Latin name from Greek *Leyitikon* (“relating to the priests”). The Tannaitic name is *tōrat kōhānim* (“the law of priests”). These names suggest that the book deals with priestly matters. However, the name **Levites* itself occurs in this book only tangentially in Leviticus 25:32-33. It may well be that *leuitēs* referred to the priest among Hellenistic Jews. Taking the first word of the book, the ordinary Hebrew name of Leviticus is *wayyiqraʾ* (“and he called”). *Sipra*, an important halakic midrash on Leviticus, means “the book,” implying the importance of the book for early Jews.

Leviticus is located after the book of Exodus,

the end of which deals with the building of the *tabernacle. The content of Leviticus's opening chapters is a natural sequel to the theme of the last chapters of Exodus. Yet Leviticus 1:1 does not naturally follow the final verses of Exodus (Ex 40:36-38), which foreshadow the account resumed in Numbers 9 of the Israelites wandering in the desert. Another important literary link that indicates the unity of the two books is the fulfillment in Leviticus 8 of the priests' ordination, which is prescribed in Exodus 29. Since Leviticus 1—7, which deals with *sacrifices and offerings, comes in between, it has been argued that Leviticus 1—7 was "inserted" to break the natural sequence of the building of the tabernacle (Ex 40) and the priests' ordination followed by the inauguration of their ministry (Lev 8—9; cf. the discussion by Rendtorff 1997).

However, since the final verses of Exodus form a fitting conclusion to the themes of the book, it is logical that Leviticus should begin with the regulations on how one should make sacrifices and offerings following the completion of the tabernacle. Moreover, in view of the fact that the burnt offering and peace offering already appear in Exodus 29, the positioning of rules on sacrifices and offerings in Leviticus 1—7 suggests that the material from Exodus 25 onward is arranged thematically (see 3 below). Although the book of Leviticus is distinct from the book of Exodus, it continues thematically the story of Exodus.

2. Authorship and Date of Composition.

The issue of the authorship of Leviticus cannot be separated from that of the *authorship of the whole Pentateuch (see Source Criticism). Until the rise of modern critical scholarship, the author of Leviticus, as well as the rest of the Pentateuch, was believed to have been *Moses. Still today there are many who believe so. This is not merely an interpretive tradition of traditional Judaism and Christianity. NT writers as well as writers of later OT books appear to ascribe authorship of the Law (Pentateuch) to Moses, though the exact scope of "the Law" is not clear (e.g., Lk 24:27, 44; Jn 5:46; 7:19). However, this position has been heavily challenged by critical scholarship since the nineteenth century.

In OT critical studies from the nineteenth century onward, particularly in those represented by the Wellhausen hypothesis, scholars have viewed Leviticus as belonging to what is

considered to be the Priestly stratum (P). P was thought to have been produced after the exile and to have come last among the four major literary strata: J, E, D and P. Mosaic authorship is out of the question in this stream of research.

In later pentateuchal study, P itself was further divided into multiple sources. Leviticus 17—26 in particular was thought to constitute a document separate from P and was named *Heiligkeitgesetz* (Holiness Code, or H) by A. Klostermann. The scholarly consensus since has been that H was edited by P (cf. Hartley, 251-60).

However, since the nineteenth century, conservative Jewish and Christian scholars in particular (e.g., U. Cassuto, A. H. Finn, K. A. Kitchen) have demurred, criticizing critical scholarship's criteria for literary division in P's narrative over against other codes. Their contributions have not been sufficiently heeded. More recently, from the Jewish side, the antiquity of P has been demonstrated based on its language and institutions in an attempt to argue that P antedates D. Recently, G. Wenham has argued that wherever the materials are conventionally attributed to P in Genesis, P appears to antedate J. In this case, the relative chronology assumed by biblical critics for J and P is questionable. Moreover, A. J. Millard has recently pointed out that rituals in Leviticus can be compared best with those coming from the religious milieu of the Late Bronze Age.

More recently a remarkable argument with regard to the literary aspect of Leviticus has been made by Jewish scholars I. Knohl and J. Milgrom. Based on linguistic and ideological comparisons of P and H, they have advanced the view that P antedates H; H edited P material and not the reverse, as had been thought since the nineteenth century. According to Milgrom, the editor of H belongs to the end of the eighth century B.C. or later (Milgrom 1991, 27).

Space prohibits an extensive discussion of the above position as well as of P itself. However, for the present writer, the very existence of P as well as H is doubtful, though the possibility that the author of Leviticus utilized sources cannot be excluded (cf. Kiuchi 1999a). As regards the date of Leviticus, there seems to be no weighty evidence proving that the material in the book is later than the time of Moses. It is thus the conviction of the present writer that, if not by Moses, the book could well have been written by one of his contemporaries.

3. Structure of the Book.

Under the Documentary Hypothesis it was difficult to see the book as a single whole having a literary unity. However, recently M. Douglas has proposed a so-called ring structure for the book. According to her analysis, Leviticus is chiastically arranged in terms of its themes. Chapters 1—7 (things and persons consecrated to the Lord) correspond to chapter 25; chapter 10 (the holy place defiled) corresponds to chapter 24 (the name defiled); and so on. The center is Leviticus 19 (equity between the people), and it corresponds to Leviticus 26 (equity between the people). This attempt by Douglas should be appreciated as an endeavor to read the present shape of the book, yet the seemingly arbitrary characterization of the chapters is doubtful.

Setting aside the question of literary sources, we propose below another way of looking at the book holistically (see Kiuchi 1999a). This approach also challenges the presumption of H's existence. As stated above, Leviticus is closely bound up with Exodus thematically. It appears that the content of Exodus 25—Leviticus 26 can be seen as flowing from outer to inner aspects of worship, from the material side to the human heart expressed outwardly (Ex 25—Lev 16) and further on to the human heart expressed in obedience to the laws and decrees (Lev 18—26).

After the theme of sacrifice and offerings, Leviticus 8 recounts the ordination of the Aaronide priests. That the priests' ordination follows the theme of sacrifices and offerings matches the above-mentioned thematic flow, moving from material to human. It is logical then that Leviticus 8 is followed by Leviticus 9, in which the first tabernacle worship is conducted by the newly ordained priests. Unfortunately, the trespass of *Nadab and Abihu, Aaron's two sons, made the festive day sorrowful and painful for Aaron and the Israelites as a whole. Leviticus 10, therefore, contains the account of the incident in the first half, and in the latter half there is another contingent incident in which Aaron's two remaining sons burned the purification offering that was to be eaten. In the middle of the chapter comes the Lord's instruction for the priests' fundamental roles: they are to differentiate between clean and unclean, sacred and common, and to teach the words of the Lord to the Israelites (Lev 10:9-10; see Holy and Holiness, Clean and Unclean). These verses have a significant role in terms of the struc-

ture of Leviticus 10—26, for the distinction between the clean and the unclean is dealt with in chapters 11—16, while the distinction between sacred and common is dealt with in chapters 18—26 (note that *hillel* ["desecrate"] first appears in Lev 18). Thus Leviticus 10:9-10 chiastically anticipates the regulations in Leviticus 11—16 and 18—26. That Leviticus 18—26 deals with the distinction between the holy and the common is also suggested by the very positioning of Leviticus 27, which deals with the legitimate possibility and limitation of redeeming holy things; until Leviticus 26, converting the holy to the common is an illegitimate act of desecration.

Based on these observations it will be argued below that Leviticus 11—26 exhibits a thematic pattern, namely, Introduction-A-B-A'-B'. As the chart in figure 1 shows, A is developed in A', while B is developed in B'.

-
- I Introduction: cleanness and uncleanness reflected in the animal world (Lev 11)
 - A Uncleanness from sexual organs (Lev 12)
 - B Uncleanness of persons (Lev 13—14)
 - A' Uncleanness from sexual organs (Lev 15)
 - B' Atonement ceremony purifying the sanctuary from uncleanness caused by sins (Lev 16)
 - II Introduction: handling of blood securing the way to life (Lev 17)
 - A Sexual offenses and other customs in neighboring nations (Lev 18)
 - B Becoming holy (Lev 19)
 - A' Sexual offenses and other customs in neighboring nations (more emphasis on punishment) (Lev 20)
 - B' Conditions for *holy* priests and sacrifices (Lev 21—22)
 - III (No introduction)
 - A Festivals (Lev 23)
 - B Rules on lamps and bread and a case of blasphemy (Lev 24)
 - A' Sabbath year and the Jubilee year (Lev 25)
 - B' Blessings and curses (Lev 26)
-

Figure 1: The Thematic Pattern of Leviticus 11—26

This pattern does not mean that there are no literary or ideological connections between A and B, B and A', or A' and B'; there are indeed.

However, the pattern is a thematic one that enables us to see the overall arrangement of the material.

Leviticus 11 deals with edible and forbidden food in the first half of the chapter, with rules on defilement interspersed in the latter half. The chapter could be called a chapter on cleanliness and uncleanness reflected in the animal world. The theme of Leviticus 12 (defilement from sexual organs) is common to Leviticus 15. Leviticus 13–14 concerns various rules on the so-called skin disease, though the exact nature of *šaraʿat*, and therefore the appropriate translation, still eludes moderns. As will be argued below, this disease and its handling relates to human sinfulness in general. Thus, while Leviticus 13 concerns general sinfulness of the Israelites, Leviticus 16 focuses on particular sins of the Israelites committed during the year. Also, the two rituals in Leviticus 16 of the cleansing of the *sancta* and the devolving of the guilt upon the azazel goat (or “scapegoat”) have close parallels in Leviticus 14 (cf. Lev 14:4–7, 49–53).

A similar structure can be observed in Leviticus 17–22. First, the central theme of Leviticus 17 is the prohibition of *blood consumption when eating meat. Therefore, Leviticus 17 parallels Leviticus 11 in this theme of eating prohibitions. Leviticus 18 lists sexual and other spiritual offenses that are reiterated in Leviticus 20 with more emphasis on the punitive aspect. Leviticus 19 is a chapter on the holy living required of all the Israelites. Observance of all the commands in the chapter will lead the Israelites to holiness (see Lev 19:2). This requirement for communal holiness is specifically applied in Leviticus 21–22 to people and things called holy, namely, priests and sacrifices. Leviticus 22:31–33 concludes pattern II (note *niqdašti* in Lev 22:32). Looking back to pattern I, we can see a stark contrast between Leviticus 19 (emphasis on holiness) and Leviticus 13 (emphasis on sinfulness).

Pattern III has no introduction. It is clear that Leviticus 23 and 25 deal with “holy” occasions. Though the intervening chapter 24 has presented exegetes with the question of why these rules are located just here, it is understandable if we suppose that the rules regarding the lampstand (Lev 24:1–9) and the case of blasphemy (Lev 24:10–23) are developed in Leviticus 26; the former symbolizes God’s presence and thus adumbrates the blessings (Lev 26:3–13), whereas the latter concern of blasphemy adum-

brates the curses (Lev 26:14–39).

Though there are other issues to be addressed regarding the structure of the book, the evidence suggests that a structure like the one proposed above does exist. Moreover, if this is true, there seems to be no need to assume an independent source such as H for Leviticus 17–26. If chapters 17–26 are to be seen as a literary unit, they are a unit that must be studied within the larger literary unit of chapters 10–26.

4. Sacrifices and Offerings.

Leviticus 1:1–6:7 presents five major sacrifices and offerings to be made at the tabernacle: the burnt offering (Lev 1), the gift offering (or cereal offering, Lev 2), the peace offering (or well-being offering, Lev 3), the purification offering (or sin offering, Lev 4:1–5:13) and the reparation offering (or guilt offering, Lev 5:14–6:7). Since the names and functions of these offerings are discussed in recent articles on sacrifices and offerings, it needs no repetition (cf. Averbeck, *NIDOTTE*, 4.996–1022; Jenson; see Sacrifices and Offerings). Rather, we focus below on other aspects of the offerings and their ceremonies.

4.1. Aspects of Sacrificial Rituals. (1) Sacrifices and offerings are the means for the Israelites to approach God and thus have fellowship with him. The material of the offerings is the Israelites’ ordinary foodstuff, such as meat and grains. However, it is not conceived that God is fed by the human offering-bearers (cf. Ps 50:8–13). For example, the sacrifice of burnt offering is totally consumed. The question of whether God actually smells “the pleasing odor” still arises. To what extent should one understand this ritual element metaphorically? If it is not to be taken literally, then in what way is it metaphorical or symbolical, and to what degree? It appears that the cost and sacrifice on the part of the worshiper indicates that merely likening the Lord’s smelling the odor to the worshiper’s being accepted is not enough. One might suppose that the ritual components refer to spiritual realities and that they are not merely symbolic in a loose sense but are given reality by the fact that the Lord is portrayed anthropomorphically. The language of the ritual, then, approximates the language of the Lord’s Supper in John 6:53–54.

(2) While the purification offering (Lev 4:1–5:13) and the reparation offering (Lev 5:14–6:7) are to be offered for specific sins, it is not clear what the specific functions of the burnt of-

fering, the gift offering and the peace offering are. The meanings of the latter are not spelled out, presumably because they are well known to the Israelites. In fact, there are hints that the first five chapters of Leviticus are not just prescriptive texts; they intend to convey certain theological messages that assume general knowledge of the offerings. For instance, while the flesh of the peace offering is normally eaten by the offerer, that part of the ceremony is not mentioned in Leviticus 3 at all but rather is assumed. It seems that by leaving out the element and stressing instead the object of worship (i.e., the Lord), the chapter stresses that the peace offering should be offered to the Lord and not to the demon in the desert (cf. Lev 17:2-7). This indicates that the text emphasizes a certain aspect of the ceremony, assuming general knowledge of the offering (cf. Knierim's discussion on Lev 1).

(3) The five kinds of offering partly overlap in their rites. For instance, ritual elements such as slaughtering, handling of blood and burning of fat are common to the burnt offering, the peace offering, the purification offering and the reparation offering, while they differ in how they should be performed. It is clear that though each sacrifice has its own emphasis, they all overlap in many respects. If this is true when one kind of offering is compared with another, it is even more so when the combination of several kinds of offerings are made, such as on the occasions of the eighth-day service (Lev 9), the Day of *Atonement (Lev 16) and the completion of the Nazirite vow (Num 6). By accumulating similar kinds of rites, greater symbolic effect is achieved.

(4) The symbolism of blood is mentioned in Leviticus 17:11. Although J. Milgrom has contested that the blood here refers to the blood of the peace offering, this is inappropriate, as many scholars judge (see the reasons adduced by Averbeck, *NIDOTTE* 2.694-95). Thus it is reasonable to take the traditional view that the passage relates in general to what happens on the *altar. This is not incongruous with the role of the purifying blood. Further, the blood is not the blood circulating in the animal's body but rather the blood shed when slaughtered. In other words, *life here refers to life given over to death, that is, substitutionary death. Certainly the term "blood" is used symbolically, yet it is given atoning power before the Lord.

(5) The complexities of blood manipulation loom large in the ritual of the purification offering. There are basically two types of ceremony for the expiation of sin (Lev 4). In the case of the leader and the ordinary individual, the ritual blood is to be smeared on the outer altar and it is not brought into the sanctuary. However, in the case of the anointed priest and the whole congregation, the blood is brought into the inner sanctuary and sprinkled toward the *pārōket*-veil seven times while the rest of blood is daubed on the horns of the outer altar. It can be argued that the *sprinkling* of blood adumbrates the same act to be performed by the anointed priest on the Day of Atonement (Lev 4:6; 16:15-17; see the discussion of these verses in Rendtorff 1985-1992).

Corresponding to the two kinds of blood handling, Leviticus 6:24-30 prescribes that the first type of sacrifice should be eaten by the officiating priest while the second type of sacrifice should be burned outside the camp and not be eaten. Anomalies to these rules are found in the ceremonies in Leviticus 8 and 9. However, these can be explained on the assumptions that sinfulness, rather than specific sins, is expiated by the sacrifice and that Aaron and his sons have not yet entered the tent of meeting.

The nature of the two kinds of remaining meat has been debated. Milgrom argues that the ordinary purification offering can be eaten by the officiating priest because its contagiousness is low in degree, whereas offerings that are burned cannot be eaten because their contagiousness is high in degree and dangerous. Alternatively, it is argued that the first type is a priestly due, while in the second type there appears to be an assumption that the agent (the anointed priest) cannot bear his own guilt substitutionarily (see the discussion in Kiuchi 1987, 51-52, 67-85, 130-35).

(6) Because the ritual prescriptions rarely spell out what to say in offering sacrifices, the reader tends to infer that the rituals are to be performed in silence or with few words. However, the possibility should be borne in mind that the absence of any mention of the worshipers' words stresses their need to express inner motives outwardly and that this does not mean that the text has no interest in the inner feeling and words coming out of the worshipers' mouths. The reverse situation is found in the prophets' criticisms of offering sacrifices without

sincerity (e.g., Is 1:13-14; Amos 5:21-24).

(7) Later, in contrast to the prophets' denunciations against the people's hypocritical attitude toward the Lord, some of the psalmists confess a need to express their self-devotion in ways other than by sacrifices because they feel that offering sacrifice is simply inadequate to express their devotion to the Lord (cf. Ps 40:6-8; 51:16-17). These texts are to be taken as expressing the inner attitude of individuals and not the public theological attitude toward sacrifices, though they contain prophetic elements (cf. Ps 40:6-8; Heb 10:5-7).

4.2. *Kipper*. The term *kipper* frequently appears in connection with expiatory sacrifices such as the purification offering, the reparation offering and the burnt offering. Various etymologies of the term have been proposed: (1) Akkadian *kuppuru*, meaning "wipe off"; (2) Arabic *kafara*, meaning "cover"; and (3) Hebrew *kōper*, "ransom." In the case of the third option, *kipper* is construed as a denominative verb of *kōper*. An extensive discussion of these proposals has been made by Averbeck (*NIDOTTE* 2.689-710). Indeed, it seems necessary to attempt to gain the most exact meaning of *kipper* possible, as this term summarizes the whole significance of expiatory rituals, and particularly of blood (Lev 17:11).

Rather than pursue the discussion here, however, attention should be drawn to three exegetical observations. (1) *Kipper* is a comprehensive term, including the burning of fat and not just the effect of blood manipulation (cf. Lev 4:19 with 4:20; see Kiuchi 1987, 94-101). (2) While *kipper* appears to be synonymous with the ideas of "cleansing" (Lev 16:30) and "sanctifying" (Ex 29:36-37; Lev 8:15; 16:19-20), it also is synonymous with the idea of "bearing guilt" in some passages (cf. Lev 5:1 with 5:6; 5:17 with 5:18; 10:17; 16:22, cf. Schwartz). Uncleaness and guilt are two distinct ideas, and it seems possible to posit that the priest, by cleansing the uncleaness of *sancta* with blood from the purification offering, bears the guilt associated with uncleaness. This substitutionary act is compatible with the role of the blood in Leviticus 17:11 discussed above (see Kiuchi 1987, 87-109, and for a most recent study on this theme see Sklar). Furthermore, since one of the important roles of the priest is to make *kipper*, the priest is also considered to function in a vicarious manner (see Priests, Priesthood). (3) Although the evaluation

of the phrase "a pleasing odor/soothing aroma" varies among scholars, it is clear that assuaging the divine wrath constitutes at least part of the idea of *kipper* (Lev 4:31; cf. also [1] above). This factor ought to be taken into account in future discussions of *kipper*. The oft-made distinction between expiation and propitiation in regard to atonement may simply be fallacious (cf. Schenker).

5. The Cleanness and Uncleaness Regulations in Leviticus 11—15.

5.1. *Meaning and Rationale of Uncleaness.* The meaning and rationale of uncleaness in Leviticus 11—15 have long been among the more difficult questions in the study of Leviticus (see Hartley, 142-47; Averbeck, *NIDOTTE* 4.484; Wright, 739). Attempts to see a hygienic motive or cultic polemic against Canaanite customs appear to be unconvincing because both can explain only a portion of the regulations in Leviticus 11—15. What should be called symbolic approaches include the following explanations. (1) Cleanness symbolizes righteousness while uncleaness symbolizes wickedness. This explanation appears to be rather unpopular today, but it involves the fundamental question of whether cleanness and uncleaness have moral connotations. (2) As Douglas propounded, cleanness and uncleaness are concerned with the creational order. For instance, when an animal's locomotion fits in the original creational habitat, it is clean; when it does not, it is unclean. This theory has been criticized, for instance, on the basis that the criterion of locomotion cannot be applied to the creatures in Leviticus 11 with certainty (see Firmage, 177-82). (3) Uncleaness symbolizes an aura of death. The association of uncleaness with death has been noticed since the time of ancient Jewish exegetes, but recently the position has been elucidated by G. J. Wenham with firm scriptural basis (cf. Lev 11:24, 27-28, 39; Num 19). On the whole, a consensus is emerging that the third explanation best explains the text.

In general, uncleaness in Leviticus is not the matter of material "dirt," though the former may evoke the latter. Further, uncleaness in Leviticus has often been described as *cultic*, *ceremonial* or *ritual* in nature. However, since there is no ritual act without meaning, it is necessary to reappraise these modern terms (cf. Klawans).

In considering what uncleaness means, it

should be borne in mind that uncleanness in Leviticus 11–15 concerns only certain kinds of creatures (Lev 11), sexual abnormalities (Lev 12; 15) and a particular kind of “skin disease” (Lev 13–14). In other words, uncleanness does not result from all kinds of blood discharge, but only from discharge of reproductive organs; it does not result from all kinds of skin diseases, but only from *šāraʿat*. Given these data, if uncleanness symbolizes death, it must do so in a more qualified sense.

5.2. *Uncleanness and Genesis 3* It is proposed here that the rationale of cleanness-uncleanness regulations in Leviticus 11–15 is based on the event of Genesis 3, namely, what Christian theology refers to as the *Fall. While this view was vaguely entertained by older commentators without distinguishing between uncleanness and sins, it sees in the Fall an unwelcome spiritual metamorphosis that transforms the animal world and human world.

First, the list of unclean animals in Leviticus 11 includes various creatures that have abnormalities in Douglas’s sense, such as fish without fins or scales. However, it may well be that such features are not something wrong by themselves, but that they are viewed as reflecting the sin and its consequences of the first humans in a spiritual sense. Another important feature of unclean creatures is that they have contact with death, which came into the world with the sin of the first humans and which makes everything unclean. It is not coincidental that the unclean birds in Leviticus 11:13–16 happen to be those that have frequent contact with death. Thus, abnormalities and contact with death are the features of unclean creatures. Further, swarming creatures are emphatically said to be unclean. Strikingly, though serpents and swarming creatures share the same characteristics (Lev 11:29–31, 41–43), the serpent itself is not mentioned in Leviticus 11. However, there is an unmistakable coincidence of wording between Leviticus 11:42 and Genesis 3:14 in the phrase *ʿal gāḥôn* (“upon the belly”). The phrase occurs only in these verses in the OT, and it is not unreasonable to assume that the legislator of Leviticus 11 has Genesis 3 in mind.

Second, the case of the parturient (Lev 12) can be best explained by having recourse to Genesis 3:14, in which God increases the woman’s pangs in childbirth as a consequence of her sin. It is certainly possible that the blood

discharge symbolizes the loss of life, but since only discharges from reproductive organs are at issue, it is more likely that the discharge in Leviticus 12 symbolizes the parturient’s pangs and thus functions to remind man and woman of their original sin.

Third, the case of *šāraʿat* in Leviticus 13 has tended to be dealt with in terms of modern pathology, but it is argued elsewhere (see Kiuchi 2001) that *šāraʿat* serves an educational purpose: by remembering and observing this regulation one is reminded of the danger of hiding one’s sinfulness. In other words, the disease of *šāraʿat* is chosen because its symptoms, being hidden, persistent and, above all, almost indistinguishable from other skin diseases, are most apt for describing the nature of human sinfulness. This interpretation accords well with the fact that the first humans hid their nakedness just after they sinned against God. Thus *šāraʿat* indeed symbolizes death or the aura of death, but from this interpretation arises a more essential view of human nature, namely, the constant propensity of humans to hide their own sinfulness. Furthermore, it is the patchy condition that makes one unclean, whereas if the disease covers the whole body, one is pronounced clean (Lev 13:12–13). Uncleanness, thus, lies in hiding one’s whole situation. In fact, we find throughout the chapter the strong exhortation to make public one’s true uncleanness (Lev 13:13, 45–46). It can even be suggested, therefore, that uncleanness means hiding one’s sinfulness.

Leviticus 15 deals with uncleanness from male and female reproductive organs. Why is the discharge from sexual organs defiling? A highly possible explanation would be that semen and blood symbolize life, and therefore their discharge means loss of life (Wenham 1979). However, since the source of defilement is limited to the reproductive organs and does not come from other parts of the body (e.g., from bodily cuts), the rationale of uncleanness here should be sought elsewhere. It is proposed that it comes from the Fall of the first humans, although their sin was not sexual, nor does the tree of knowing good and evil have anything to do with sexual relations. However, they came to know the sense of shame in connection with their sexual organs (Gen 3:7), and the woman even incurred birth pains as a consequence of their sin. This suggests that uncleanness in Leviticus 15 has deep roots in the Fall.

5.3. Meaning of Uncleaness. The terms *clean* and *unclean* have been understood in a “cultic” sense. However, the search for the rationale of cleanness and uncleanness has been complicated by the use of the term *cultic*, since the latter has not been defined clearly. Certainly rituals cannot be mere formalities with no rationale behind them. Rather, these terms are to be taken as indicating states before the Lord, at least in the Israelite context. The clean state means that one is accepted into the divine presence, whereas one is not accepted if one is in an unclean state. If uncleanness in Leviticus 11–15 is based on the events of Genesis 3, not just as background but as its immediate rationale, the case could be made that uncleanness refers to the state of being under the influence of a curse as a consequence of sin. It is vital to realize at this point that the unclean state was caused by humans and not by other creatures. Thus, some creatures became unclean because of human sin. Therefore, if some creatures are said to be unclean, the Israelites had to be reminded of the root of that uncleanness, that is, the Israelites’ own present sinfulness.

Since uncleanness is a state of humans before God, it is proposed that it symbolizes sinfulness, or a sinful state, which means being out of the presence of the Lord (hence, the aura of death). Furthermore, it is certain that uncleanness lies in hiding one’s sinfulness (Lev 13; cf. Gen 3:7, 21). Here it is to be noted that the meaning of uncleanness cannot be separated from its rationale.

Thus it is inappropriate to make a distinction between cultic and moral/ethical aspects as has been done in OT and NT scholarship. Uncleanness is a result of the Fall, which was itself moral/ethical in nature. Although we moderns tend to envisage the cultic as amoral or at variance with the ethical, the rationale of uncleanness was moral from the start. The thrust of the above proposal is that certain creatures and conditions are called unclean not because they are unclean in themselves but with reference to human hearts being in a sinful state. In other words, by not eating the unclean animals, the Israelites were expected to see the condition of their own hearts (*see* Foods, Clean and Unclean). Certain creatures and blood and semen discharges from sexual organs are not inherently “unclean,” but they are unclean in so far as they function to remind the Israelites of their sinfulness

and, more specifically, to check whether or not they are hiding their own sinfulness. Thus, from this viewpoint, Leviticus 11:44–45 need not be seen either as an intrusion of ethics or as H’s editorial hand.

It is obvious that this proposal calls for a reconsideration of the corpus of “cultic” regulations, for both Jewish and Christian traditions have tended to understand the cleanness and uncleanness laws as amoral and as basically referring to something outside the human heart.

6. Holiness as the Ideal of Living.

The Hebrew root *qds* (“to be holy”) and its derivative words occur primarily in Leviticus 18–26, but they also appear in chapters 1–16. Formerly there has been a tendency to assume that *qds* (*holiness) is one of the divine attributes. However, the location of “be holy” at the beginning of Leviticus 19 indicates that what follows are all part of holiness. It is more reasonable, then, to assume that *qds* refers to all kinds of divine manifestations and not just to an attribute such as love, justice, and the like.

Since *qds* occurs in Leviticus 1–16 in connection with *sancta* and in 18–26 in connection with what appear to be so-called *ethical commandments, it is alleged that there are two kinds of holiness and that they derive from two different religious milieus (cf. Milgrom 1997). However, as has been mentioned above, there seems to be no need to assume a source H, nor is it appropriate to make a distinction between the cultic and the ethical. Thus it is possible to treat the term *qds* in Leviticus harmoniously. Though one may well tend to consider that the essence of *qds* first appears in Leviticus 18 onward, the fact is that one of the most important aspects of holiness is already enunciated in chapters 1–16: *holy* sacrifices and offerings, as well as the priest, take the place of the sinful. Thus, we see that becoming a sacrifice is an aspect (and in fact, one of the most important aspects) of holiness. As will be shown below, this aspect is also applicable to the human realm in general. Furthermore, it can also be posited that since sacrificial ceremonies, particularly the expiatory ones, are often characterized by atonement, one becomes holy through substitution, that is, substituting the clean for the sinful.

The Israelites are exhorted to be holy, but on the other hand, it is the Lord who consecrates them (Lev 21:8; 22:9, 32). This suggests that their

consecration is not automatic in any way and that it involves the will of the Israelites. What, then, is the content of “being holy”?

Leviticus 19 is a chapter on holy living. Some features of holiness can be learned from the arrangement of commandments and through exegesis of certain passages. First, the wide range of topics dealt with in the chapter attests to the fact that holiness should be exhibited in all aspects of one’s living: from God-human relationships to human relationships to one’s attitude toward plants, elderly people and commercial activities. In other words, the demand of being holy is present in whatever the Israelites are engaged.

Second, as Wenham elucidated, the first half of the commandments are so arranged that the love commandment in Leviticus 19:18 becomes the climax of all the preceding commandments (Wenham 1979, 266-67). Therefore, how one reads this so-called golden rule is vitally important.

Although Leviticus 19:18b (for various suggested translations, see Mathys) has been taken as a commandment for ordinary humans to observe, it is important to realize how difficult in practice it would be to keep it, considering the following points (cf. also Lev 19:17). (1) Since the command is given in the context of hate and injustice (Lev 19:16-17, cf. Els, 290), it actually demands the kind of love poured on persecutors, as seen in Jesus (e.g., Lk 23:34) and Stephen (Acts 7:60). (2) The command is not just to love one’s neighbor, but to love one’s neighbor the same as oneself. (3) The meaning of *’āhab* (“to love”) means that one gives top priority to the loved one. On the surface one may get the impression that the neighborly love should be equal to self-love, but this contradicts the essence of *’āhab*. The kind of self-love mentioned here actually refers to self-denial, denial of one’s selfish desires, because selfishness of all sorts, from crude to sophisticated forms, hinders one from loving one’s neighbor. Thus, one’s selfishness must be shattered in order to be able to love one’s neighbor (for the idea of “broken-heartedness,” cf. Ps 51:17). The experience of having one’s selfish ego broken is to love oneself and the beginning of the neighborly love (cf. Mt 10:39; Jn 21:15). In this sense, to love one’s neighbor cannot be separated from self-love in the above sense. It is inevitable, therefore, that the neighborly love spoken of here is self-sacrificial love, which is not naturally ob-

tainable by humans with selfishness of any kind.

If the Lord’s demand to be holy is summarized in the love commandment, which is impossible to implement, all humans would sin in this regard and thus be culpable. Moreover, though love for the Lord is not explicitly mentioned in this chapter, the incapacity for this kind of neighborly love implies that humans cannot sincerely love God either, certainly not if they place top priority on themselves (cf. Lev 19:3-4).

Third, priests are holy as a consequence of their appointment. This holiness is given by the Lord in order to carry out through the priests his salvific acts on behalf of the Israelites. Their holy status should be matched by their moral quality as much as possible. Their holiness is also associated with a perfect physique. However, it is unlikely that outer perfection fulfills the condition of holiness. The outer features are merely a reminder that a level of holy living higher than that of the lay Israelites is demanded of them. The priests’ infringement of the law is judged as more grave than that of the laity, as is shown by the rules regarding the priests’ sins (e.g., Lev 21:1-15; cf. also Lev 4:3; 10:3).

7. New Testament Implications.

One of the central questions of the relationship between the OT and the NT is the relationship between the law and the gospel. Leviticus, because of the nature of the material, is most suitable for discussing the question. Although this question is highly complex and difficult, it is worth delineating a possible picture based on what has been mentioned above, as this directly affects how one reads Leviticus. Among many Levitical themes, we focus here on the following three: sacrificial worship, cleanness and uncleanness, and the love commandment in Leviticus 19:18.

First, regarding sacrificial worship, what Christ did on the cross is seen in the NT as the once-for-all atoning sacrifice for all of humankind and that which far surpasses the sacrificial worship of the OT. Thus, OT sacrificial worship ceased. The term *abolish* has often been used for describing the cessation of the literal observance of sacrificial rituals. However, such an evaluation may not be appropriate, because NT writers frequently utilize sacrificial terms in portraying how NT believers should live (Rom 12:1; Heb 13:15; 1 Pet 2:5). One may understand the

situation brought about by the cross in such a way that the observance of the so-called sacrificial law is seen as no longer necessary, but the ideal (see below) of the sacrifice is still considered applicable in a spiritual way to the Christian life (incidentally, this is foreshadowed in Ps 40:6-8). However, "spiritual" does not preclude the physical element of sacrifice, considering, for example, the pain and troubles the apostle Paul experienced (cf. 2 Cor 4:7-11; 11:23-33). Indeed, for a believer to become a living sacrifice is the goal of the sacrificial ideal that began in the sacrificial worship of Leviticus. In other words, the literal performance of the sacrificial ritual ceased, yet the goal and essence of the sacrifice, the priests and the sanctuary find their fulfillment in Christ and his believers. Thus, there is more continuity between OT and NT understandings of sacrifice than one might think.

Second, in light of Acts 10:9-15, 28, the *ceremonial* distinction between cleanness and uncleanness is clearly seen to be abrogated, and thus the laws of Leviticus 11-15 need not be observed. Moreover, Jesus had already proclaimed that all foods are clean (Mk 7:19). This is in conformity with Jesus' attitude elsewhere, such as when he healed lepers or unclean persons by deliberately touching them (e.g., Mk 1:41; 5:27). It can be posited that by such actions Jesus clearly abrogated the *ceremonial* distinction between clean and unclean. However, it is too simplistic to suppose that the very ideas of cleanness and uncleanness are no longer relevant to Christians on the ground that the distinction is no longer valid or that those ideas became ethical or moral in the NT. For not only does Jesus himself use those terms, as proposed above, but the idea of uncleanness is not amoral; it had inherently moral connotations. Thus, when Jesus averred that cleanness and uncleanness are matters of the heart (Mk 7:20-23), contrary to the commonly held view, it was not a moralization of a "cultic" idea. Rather, Jesus merely pointed out the original meaning of cleanness and uncleanness.

Third, as mentioned above, it is practically impossible for ordinary men and women to observe the kind of neighborly love commanded in Leviticus 19:18. Moreover, if this commandment is the summary of the law, then it inevitably follows that all humans, and not just the Israelites, are likely to be judged as guilty of

breaking God's law. The situation becomes more serious when we see that while the infringement of one of the Lord's commandments can be atoned for by offering an expiatory sacrifice, the same offense is considered far more heinous than is generally thought, as the case of hating one's neighbor suggests (cf. Lev 19:17 with Mt 5:21-22). This suggests that the true nature of the offense is revealed in the NT, as well as further aspects of this commandment, such as the definition of "neighbor." In this sense, the commandment of neighborly love is more demanding in the NT than in the OT. If ordinary humans in OT times could not keep Leviticus 19:18 and therefore became culpable, what happens when the same commandment becomes even more demanding? The solution lies entirely in the cross and the power of the Holy Spirit.

Therefore, both in areas of sacrificial rituals and neighborly love, we may ascertain that Christ fulfilled their latent purposes and ideals and indeed far surpassed them and that concurrently the law is more demanding upon NT believers. Christians can now observe the law only by the power of the Holy Spirit, who renews them and challenges them by God's high standard, who shatters their selfish egos, and who empowers them to do what they have been incapacitated to do because of their incorrigible sinfulness.

Leviticus is an important book for NT believers in that it provides them with an indispensable foundation for realizing the depth and width of the love that their Lord has shown them. Leviticus points to the pervasiveness of sins, the abyss of human sinfulness, the daunting task of becoming holy and, therefore, the appalling gap between natural men and women and a holy God. The book's various means for bridging the gap, while showing the Lord's condescension, give the impression that they are insufficient, foreshadowing and demanding a fuller system of atonement.

LIBERATION INTERPRETATION. See HERMENEUTICS.

LIFE, DISEASE AND DEATH

“See, I set before you today life and prosperity, death and adversity. . . . Choose life so that you and your descendants may live, loving the LORD your God, obeying him and holding fast to him; for that means life to you” (Deut 30:15, 19-20).

Like all religious literature, the Pentateuch is profoundly concerned with issues of life, diminished life and death. It opens with the *creation of life and the threat of death. It continues with universal and local destruction as well as indi-

vidual and national survival. It deals with disease as a contamination of this life and a threat to communion with God. And it closes with the stark choice of life or death for the people of Israel. Above all, it presents a unique God as the essence of life itself and the true center of all human life.

Life and death are rich and complex themes suffused throughout the Pentateuch, in primeval, patriarchal and Mosaic material, and in both narrative and legal texts. The themes are seldom addressed directly, and where they are, as in Genesis 2—3, the interpretation is not straightforward. Thus their theology is often more implicit than explicit. By contrast, disease is treated mainly in the middle section of *Leviticus, but in an unexpected context for the modern reader. Its theology is more obvious if less expected.

1. Life
2. Disease
3. Death

1. Life.

1.1. Life from God. God himself is the source of all life, and his existence prior to creation is simply assumed (Gen 1:1). Life was an essential characteristic of deity throughout the ancient Near East (Ringgren, 4.329), but in Israel this aspect of Yahweh was inevitably enhanced by his uniqueness (Deut 32:39) and by the association of his name with being itself (Ex 3:14). He is “the living God” (Deut 5:26); his most solemn oath is “[as surely] as I live forever” (Deut 32:40), and the strongest Israelite oath is “as Yahweh lives” (e.g., Judg 8:19; 2 Sam 4:9).

God is the Creator of all life: physical, animal and human (Gen 1—2). Both the creation accounts distinguish humanity from the rest of creation as created in the *image of God (Gen 1:26-27) and as receiving the divine “breath of life” (Gen 2:7). Many scholars insist that the latter text does not present human nature as dichotomous (Knibb), and indeed most of the Hebrew Bible assumes a psychosomatic unity, without distinction between material and immaterial aspects. However, this should not be absolutized, since various prophetic and wisdom passages seem to envisage some form of continued if enfeebled existence beyond death (Cooper; Johnston).

God has absolute power over life: “I kill and I make alive” (Deut 32:39). This is repeatedly illus-

trated in the Pentateuch. God destroys *Noah’s generation, Sodom and Gomorrah, and various *wilderness rebels. Conversely, he gives children to several barren matriarchs, and preserves the enslaved Hebrews from genocide. He is the creator and progenitor of Israel (Deut 32:15, 18) and so has the right to their absolute allegiance.

1.2. Life Under God. Life under God is supremely one of *blessing. God blesses the first couple with luxuriant vegetation for food (Gen 1:28). He blesses Noah and further allows meat for food (Gen 9:1-5). He blesses *Abraham, promising him prosperity, descendants, land and international blessing (Gen 12:2-3, 7), and reiterates this to Jacob (Gen 28:13-15). He promises to bless his liberated people (Ex 20:24; 23:25), does so in their wanderings despite their unfaithfulness (Deut 2:7) and pledges to do so as they enter the Promised *Land (Deut 7:13-26). And he offers them abundant blessing in the future: human fertility, agricultural fecundity, prosperity, health, longevity, security and international influence (Deut 28:2-14). But there are also expectations at each stage: innocent obedience, respect for life-blood, circumcision, righteousness, and especially whole-hearted obedience to God and his laws.

The life of faith is not necessarily easy: Abraham must sacrifice his son (Gen 22), blessing in Egypt becomes oppression (Ex 1:6-10), *Moses’ mission is immediately threatened (Ex 4:24-26) and God’s presence frightens the Israelites (Ex 20:19). However, these are reminders that God surpasses human comprehension, even when this is enlightened by faith. Moreover, the purpose behind each bewildering development is to elicit greater obedience and holiness, which in turn should result in long, fruitful and contented life (Deut 28).

2. Disease.

Leviticus devotes significant attention to disease and health, in the context of uncleanness, cleanness and holiness (*see* Holy and Holiness, Clean and Unclean). In particular, it deals with diet (Lev 11), birth (Lev 12), “dermatitis” (Lev 13—14) and discharges (Lev 15; *so* Darling). Until recently these regulations were often seen as mainly hygienic and were admired as unique in ancient literature (*so* Rosner). But biblical scholars and medical practitioners now see them as primarily theological (*see* the commentaries). At the same time, they contain valid health bene-

fits, including isolation of contagious patients, disinfection by washing and quarantine for observation (Darling). The skin disease *ṣāraʿat* (Lev 13–14) was traditionally translated “leprosy,” but this is now widely accepted as inaccurate, since true leprosy is first attested in India in the sixth century B.C. and in the Middle East in the third century B.C. Rather, *ṣāraʿat* is probably a generic term for various surface ailments that affect and discolor skin, cloth, leather and plaster but that are generally noninfectious and nonpermanent (Browne).

Legislation also dealt with disfigurement, since this represented a lack of wholeness and necessitated exclusion from the sphere of holiness. Thus *priests with any physical imperfection were excluded from ministry, though maintaining their right to eat consecrated food (Lev 21:16–23), and men with genital mutilation were excluded from the assembly (Deut 23:1).

Most of the widespread “diseases” recorded in pentateuchal narrative are interpreted as divine judgment, notably the various plagues in *Egypt and in the *wilderness. Some may have viable physical explanations, such as severe weather, food poisoning and the like (see Marmal; Sussman), but the biblical text focuses on their divine origin and purpose, as shown in their reason, timing and selectivity. Similarly, *Miriam was afflicted with skin disease (the only record of individual illness in the Pentateuch) as divine judgment for her jealousy of Moses (Num 12:10).

Disease is a major element in the judgment threatened for future apathy and apostasy. It is described graphically as “consumption and fever that waste the eyes and cause life to pine away” (Lev 26:16); “pestilence [that will] cling to you until it has consumed you off the land that you are entering to possess” (Deut 28:21); and boils, ulcers, scurvy, incurable itchiness, madness, blindness and mental confusion (Deut 28:27–28, 35). The thrust of the passage lies not in the medical nature of each term (see Sussman) but in the urgency of the appeal. Sadly, such dire warnings proved ineffective.

3. Death.

3.1. Death as Punishment. Death is first mentioned in the Pentateuch as a punishment for eating forbidden fruit in *Eden (Gen 2:17). This does not mean that *Adam and *Eve were intrinsically immortal—to live forever they needed

continued access to the tree of life (Gen 3:22), and from this they were banished after their disobedience. Rather, their condition of mortality was sealed on the day of their sin (Gen 3:19).

Elsewhere death is occasionally associated with divine punishment. The curtailment of the lengthy antediluvian life span to 120 years immediately before the *flood was punishment for illicit marriage (whatever the interpretation of these marriages and the lengthy lives; see Sons of God, Daughters of Man; Gen 6:3). Then the flood itself wiped out nearly all humanity for its sinfulness (Gen 6:5–7). Later Sodom and Gomorrah were also destroyed for their wickedness (Gen 19).

In their wilderness wanderings Israelites were repeatedly killed for rebellion, either by fellow Israelites (Ex 32:28; Num 25:8) or directly by God (Ex 32:35; Lev 10:2; Num 11:1, 33–34; 16:31–35; 25:9). Further, almost the entire exodus generation was punished for their unbelief with death in transit, though their punishment was more the place than the fact of death (Num 14:23). In the same way, disobedience after settlement in the land would bring death and destruction (Lev 26:22, 25, 30; Deut 28:21, 26).

Death was the prescribed penalty for certain offenses, primarily the taking of human life (see Bodily Injuries, Murder, Manslaughter). This was affirmed after the flood (Gen 9:6) and repeatedly in the Mosaic legislation (Ex 21:12; Lev 24:17–21). It applied to premeditated or avoidable murder, when the community was responsible for punishment, and the sentence could not be commuted (Ex 21:14; Num 35:16–21, 30–31; Deut 19:11–13). It also applied to false witness in capital cases (Deut 19:16–21). It could apply to accidental manslaughter, when the nearest relative “avenged” the death, but here there was a crucial concession: the guilty party could flee to a *city of refuge and remain there until the incumbent high priest died (Ex 21:13; Num 35:22–28, 32; Deut 19:4–6). Implicitly, the high priest’s death atoned for the bloodshed, and the slayer was then free to return home.

The death penalty was also prescribed for other offenses in several areas: (1) religious offenses, including *blasphemy (enacted in Lev 24:14–23), *sabbath breaking (Ex 31:14–15; 35:2; enacted in Num 15:32–36), false *prophecy (Deut 13:1–5; 18:20), *idolatry (Deut 13:1–18; 17:2–7), sacrificing children to Molech (Lev 20:1–5) and witchcraft (Ex 22:18; Lev 20:27); (2) kid-

napping (Ex 21:16; Deut 24:7); (3) insubordination to parents (Ex 21:15, 17); (4) *sexual offenses, including adultery when married or engaged (Lev 20:10; Deut 22:22-24, cf. Gen 38:24), concealed premarital unchastity (Deut 22:20-21), rape of an engaged girl (Deut 22:25), prostitution of a priest's daughter (Lev 21:9), incestual relationships (Lev 20:11-12, 14), homosexuality (Lev 20:13) and bestiality (Ex 22:19; Lev 20:15-16).

Only the guilty was to be executed, not other family members (Deut 24:16). Death was never prescribed for property offenses in Israel, unlike many contemporary and subsequent cultures (see Theft and Deprivation of Property). For certain cultic offenses, God threatened offenders directly with death (Lev 8:35; 10:7; 16:2) and fulfilled the threat (Lev 10:2; Num 16:35).

Other offenders were to be "cut off from their peoples" (lit.). Sometimes this phrase was used for capital offenses (so designated in parallel or elsewhere), such as willful sin (described as blasphemy, Num 15:30-31), sabbath breaking (Ex 31:14), forbidden sexual relations (Lev 18:6-29; 20:17), sacrificing children to Molech (Lev 20:3) and witchcraft (Lev 20:6). Otherwise it applied mostly to ritual offences, such as neglect of *circumcision (Gen 17:14) or Passover (Num 9:13) or the Day of *Atonement (Lev 23:29), misuse of holy oil (Ex 30:33, 38) and other *festival and cultic offenses (Ex 12:15, 19; Lev 7:20-21, 25, 27; 17:3-4, 9, 14; 19:5-8; 20:18; 22:3-6; Num 19:13, 20). In the former group of texts the phrase clearly indicates death, and many scholars interpret "cutting off" as divinely enacted premature death (cf. Gen 9:11; see commentaries). However, Leviticus 20 may present a gradation of penalties (death, cutting off, childlessness). Here the phrase may mean not death but loss of inheritance and banishment, which was in any case severe punishment. Perhaps the sentence could be commuted in certain contexts, like the modern sentence of "life imprisonment."

3.2. Death as Life's Natural End. However, like most of the OT, the Pentateuch generally portrays death not as punishment but as the natural end of life, especially when life has been long and fulfilled. Thus Abraham divided his estate, settled his affairs and died peacefully "in a good old age, an old man and full of years" (Gen 25:8). *Sarah, *Isaac, *Jacob and *Joseph similarly died in contented old age. Natural death in old age was the "death of everyone" (lit., Num

16:29), while the addition of prosperity and posterity indicated "the death of the upright" (Num 23:10).

Only one pentateuchal character escaped death: "Enoch . . . was no more, because God took him" (Gen 5:24). Though striking in its genealogical context, this enigmatic reference remains undeveloped theologically here and elsewhere, and Enoch never became a paradigm for Israelite hope in OT times. (Some scholars see an echo in Ps 73:24, but the verb *lqh* is too common and its semantic field too wide to sustain this.)

3.3. Death and the Dead. As the negation of life, wholeness and communion with Yahweh, death brought uncleanness. All who touched a corpse, bone or grave, or even occupied the same tent as a dead body, were unclean for seven days. They had to wash twice, wash their clothes and be sprinkled with "the water of cleansing," and those who sprinkled them also had to wash their clothes (Num 19:11-22). Open containers in the tent also became unclean; clay pots were to be smashed, other vessels washed, and all food and liquid in them destroyed (implicitly from Lev 11). Priests might become unclean only for a death in the immediate family (Lev 21:1-3), and even this was forbidden to the high priest and to Nazirites (Lev 21:11; Num 6:6-12). If it happened unwittingly, the Nazirite had to completely renew his vow. Burial is simply recorded as an event, with no religious ceremony (see Burial and Mourning).

The destiny of the dead is not generally addressed in the Pentateuch. Moses pronounced the descent of Korah and his fellow rebels to Sheol, and the narrator then records this event (Num 16:30, 33). This is the only occurrence of Sheol in OT narrative—otherwise it is only used in direct speech. Jacob twice foresaw his "gray hairs" being brought down "with sorrow to Sheol" when he feared he would never see Joseph or Benjamin again (Gen 42:38; cf. 37:35; 44:29, 31). But this indicates his foreboding of divine judgment—when his troubles were over and his family was happily reunited, his death is recorded repeatedly without mention of Sheol (Gen 46:30; 47:29-30; 48:21; 49:29, 33; 50:5, 16). The only other pentateuchal reference to Sheol is in the Song of Moses (Deut 32:22), where it indicates the lowest depths of the earth. Here Sheol clearly means a region far lower than the grave (showing that the usual NIV translation of

Sheol as “grave” is inadequate).

The phrase “gathered to his peoples” (lit.) only occurs in the OT for the death of Abraham, Ishmael, Isaac, Jacob, Moses and Aaron (Gen 25:8, 17; 35:29; 49:29, 33; Num 20:24; 27:13). This “gathering” is distinct from death and burial (cf. Gen 25:7-8) and implies joining one’s ancestors in the afterlife, though the location is never defined and the concept not otherwise developed (though cf. Ps 49:19). (The plural “peoples” for one’s kinship group is confined mostly to the Pentateuch, indicating the section’s distinctiveness and perhaps antiquity.)

Consultation of the dead is repeatedly and strictly forbidden, and its practitioners were to be executed by stoning (Lev 19:31; 20:6, 27; Deut 18:11; *see* Divination, Magic). This is one practice for which Canaan’s inhabitants are condemned. Israel, by contrast, was to follow Yahweh’s *prophet (Deut 18:14-15). There is growing extrabiblical evidence that among Israel’s neighbors the dead were revered, consulted and appeased, and these practices were a constant temptation to Israel (cf. 1 Sam 28; 2 Kings 23:24; Is 8:19). But for Israel the world of the dead was cut off from Yahweh, and its exploration firmly forbidden (*see* Johnston). Yahweh is the author of life and the God of the living, and this life is the sphere of obedience and blessing.

LITERARY/NARRATIVE CRITICISM

Literary criticism, like *historical criticism, encompasses an array of analytical methods that focus on certain fundamental concerns and questions. Historical critics view the biblical text as a lens through which the skilled observer may gaze into Israel’s past and thereby discover those events, processes and contexts that shape its meaning. Put another way, historical critics approach the Pentateuch from a *diachronic* (literally “through time”) perspective that concentrates on the dynamic process by which the Pentateuch came into being. Literary critics, on the other hand, view the biblical text as a cut gemstone, a thing of beauty in its own right. Generally speaking, they adopt a *synchronic* (“same time”) perspective that focuses on the literary character of the Pentateuch as a subject worthy of study in and of itself. Literary approaches therefore tend to forego questions of history and external referents in favor of others that explore the ways in which the Pentateuch communicates as a written work of art.

1. Literary Study of the Pentateuch
2. Hebrew Narrative and the Pentateuch

1. Literary Study of the Pentateuch.

1.1. *The Transformation of Literary Criticism.*

As conceived within the context of the historical-critical enterprise, literary study of the Pentateuch involved the identification of sources and the description of the editorial process by which they were combined and modified. Literary criticism as utilized by historical critics thus consisted of delineating and describing the Yahwist, Elohist, Deuteronomist and Priestly sources (and debating the existence and extent of other materials), meticulously fitting pentateuchal texts within a scheme and speculating on the sequence and time periods in which the various

strands were redacted. Although this type of historical-critical study of texts had run its course in literary circles by the 1930s, it continued as the dominant paradigm for the study of pentateuchal texts for another forty years.

By the 1970s, however, many biblical critics had begun to explore alternative ways of studying the Pentateuch as a literary text. The shift derived in part from a dissatisfaction with the so-called assured results of biblical criticism. On the one hand, there was a growing sense that the achievements of historical criticism were anything but "assured." The relative paucity of historical data available to address questions of history and composition meant that answers to questions of composition remained largely speculative. On the other hand, the atomistic tendencies of literary-critical analysis created a measure of discontent with "results," especially within the church and synagogue. Dissection of the Pentateuch into component sources did not adequately address the needs of faith communities that incorporated the canonical form of the texts in preaching and liturgy and whose participants were largely unfamiliar with or disinterested in the complex methods utilized by scholars.

The new openness to literary methods gained momentum in the mid-1970s with the establishment of two new journals—*Semeia* (by the Society of Biblical Literature) and *Journal for the Study of the Old Testament* (by the University of Sheffield)—which published significant articles by scholars interested in pushing the discipline in new directions. Overall, the impact of the literary approaches was swift and decisive. In 1971, for example, the volume entitled *Literary Criticism of the Old Testament* in the popular series *Guides to Biblical Scholarship* introduced its readers to the topic with an analysis of the sources behind the *creation and *flood accounts in Genesis and descriptions of the Yahwist and Priestly perspectives (Habel). By 1977, however, the situation within biblical scholarship had changed so dramatically that the series revisited literary study with *The Old Testament and the Literary Critic*, a much different treatment that offered, among other readings, a structural comparison between Exodus 1–15 and *The Bacchae* of Euripides (Robertson). Subsequent decades witnessed an increased appreciation for the contribution of literary study, with the result that literary criticism, as distinct from historical criticism, assumed a prominent place in the study of

the Pentateuch. What was formerly called literary criticism has now been redefined by such terms as "source analysis" or *"source criticism" in all but a few instances (e.g., Steck, 59-63).

1.2. Structuralism. Structuralism was among the first literary methods to make inroads into the study of the Pentateuch. Deriving from the field of linguistics, structuralism holds that what is true of language at the most fundamental level (sounds, words and sentences) is also true of larger utterances such as narratives. That is, narratives function in a manner analogous to language. Speech appropriates the sounds and structures of a particular language system and can be understood by those familiar with that system. In a similar way, structuralists argue, narratives make use of a finite set of fixed structures and can be understood because those conventions are recognizable. Structuralists are interested in the manipulation of these structures and seek to identify the way they are appropriated in particular narrative units.

Structuralism promised a measure of objectivity and thus was able to present itself as a viable alternative to historical-critical study of the Pentateuch. One particularly influential study was that of French critic R. Barthes, who applied a structuralist paradigm to Genesis 32:23-32 (*Jacob's wrestling match at the Jabbok). Barthes showed that the episode appropriates the elements of a story common in folklore (the hero's quest) but combines the elements of the pattern in surprising ways. The originator of the quest (Yahweh) is also the opponent Jacob faces, reflecting (Barthes argued) Israel's determination to avoid a dualistic theology. Subsequent studies, notably D. Jobling's essays on Genesis 2:4b–3:24 and Numbers 32 (with Josh 22) and S. Kunin's on Genesis 22, demonstrated structuralism's usefulness for addressing the tensions and ambiguities of particularly thorny texts. Overall, however, structuralism has a limited impact on the study of the Pentateuch.

1.3. Narrative Criticism and Poetics. Narrative criticism's entry into pentateuchal studies coincided with structuralism's but quickly overshadowed it. Sharing structuralism's interest in the formative influence of conventions, narrative criticism draws from a variety of theoretical approaches, although rhetorical criticism, Anglo-American New Criticism and Russian formalism are often cited as formative influences. Central to the method is an interest in the ways that a

story is shaped into a narrative. Narrative criticism commonly distinguishes between “story” and “narrative,” story being an abstraction that becomes concrete when given utterance through the medium of narrative. Since a story may be told, or narrated, in any number of ways, narrative critics undertake a close reading of texts in order to discern the narrator’s strategies and message. Through analysis of the techniques and devices that configure a narrative, the critic attempts to discern the interests, perspectives and purposes of the narrator.

R. Alter’s *The Art of Biblical Narrative* (1981) stimulated interest in the approach with an engaging discussion of the distinctive features of Hebrew narrative. Works by A. Berlin (1983), S. Bar-Efrat (1989), M. Sternberg (1985), and D. M. Gunn and D. N. Fewell (1993) followed, some of which employed the term *poetics* to describe the new approach. (The term *poetics* extends narrative criticism’s interests to other genres and often functions as a de facto equivalent of “narrative criticism” within OT studies.) Genesis became a particular focal point for analysis, with comprehensive studies (Fokkelman; White) supplementing a burgeoning corpus of articles and essays (see House). As with structuralism, narrative criticism was especially persuasive when dealing with difficult texts and issues. For example, an early essay by R. Polzin on the three “endangered ancestor” stories (Gen 12; 20; 26) showed that the stories work together to effect significant transformations, an attribute of the stories lost on composition critics who saw them only as variations of a common tradition. Alter (3-12) presented the story of Tamar and Judah (Gen 38) as a showcase for his literary argument. Historical critics had viewed the text as a vexing interpolation, but Alter’s analysis revealed that it served an integral function within the larger narrative, namely, to confirm the reversal of the law of primogeniture that constitutes the theme of the surrounding story of *Joseph. Along similar lines, M. Sternberg (441-81) elaborated the persuasive and complex rhetorical strategy of the rape of Dinah, another text that had long frustrated interpreters.

Narrative-critical studies also extended to the Pentateuch as a whole. D. J. A. Clines (1978) argued that the entire Pentateuch is unified by a prominent theme: the partial fulfillment of the *promises to the patriarchs. T. Mann echoed

many of Clines’s points, while drawing a connection between the sense of incompleteness communicated by the Pentateuch and that experienced by its reader. Writing from an evangelical perspective, J. Sailhamer traced the narrative strategy of the Pentateuch, which he described as historical narrative. On a smaller scale, I. Kikawada and A. Quinn utilized literary analysis to argue that Genesis 1—11 is a unified work with parallels to the Babylonian Atrahasis Epic, and J. Rosenberg identified a number of structural symmetries in the garden story and *Abraham cycle.

1.4. New Literary Approaches. The 1980s and 1990s witnessed an increasing diversity of reading strategies as biblical scholars continued to draw on the panoply of methods and approaches characteristic of current literary theory (House). Though vastly different in goals and strategies, the newer strains of literary criticism as a whole presume the indeterminacy of the text and the subjectivity of interpretation, challenging more fundamentally the aims of the historical-critical method and the exegetical program that derives from it. They disavow the notion that any biblical text has one (right) meaning that can be determined by the correct application of “scientific” methods and deny that any interpreter can interpret a text with complete objectivity.

The new critical approaches do not establish clearly defined procedures so much as they reflect self-conscious reading postures. Reader-response criticism focuses on the role and participation of the reader in the production of meaning. Ideological criticism is concerned with the manner in which biblical texts and their interpreters articulate and reinforce systems of power and dominance. Feminist criticism (sometimes included under the rubric of ideological criticism) seeks to align the reader with the experience of women, challenging the patriarchal elements of the biblical texts and interpretations that contribute to the oppression of women. Psychoanalytic criticism applies the concerns of psychoanalysis (e.g., guilt and desire, remembering, generational conflict and inheritance, the fatherhood and otherness of God) to the interpretation of texts. Deconstruction argues that a text advances perspectives and values by negating their opposites, asserts that meaning is ultimately relational rather than absolute and seeks to dismantle the coherence of a text by identify-

ing its aporia, the points at which the text contradicts itself. The related program of intertextuality also denies the autonomy of the text and demonstrates the slipperiness of meaning by revealing how meaning changes when a given text is read alongside others.

Contemporary literary criticism of the Pentateuch can therefore best be characterized as eclectic, and the boundary between criticism and creative writing often blurs as new readings generate new texts. Eschewing the idea that there is one "correct" reading, literary criticism now offers a variety of ways into a biblical text. A few examples will suffice to illustrate the current situation. Clines, adopting a reader-response approach, revisits the "endangered ancestress" stories and, reading them within their literary context, concludes that the "danger" is more of the patriarch's own contrivance. Addressing the same stories, J. C. Exum applies a psychoanalytic approach that sees, in the repetition and variations of the stories, the working through of a neurosis deriving from male anxiety over the control of women's sexuality. Taking issue with M. Sternberg's assertion that the poetics of the text guide the reader to certain evaluative responses, D. N. Fewell and D. Gunn (1991, 193-211) press for a reading of the rape of Dinah that is more self-consciously ideological, overturning Sternberg's evaluation of the characters and the putative moral point made by the story. Like Alter, Gunn and Fewell lift up the story of *Judah and *Tamar as a paradigm for narrative criticism (1993, 34-45) but emphasize instead the ambiguities in the story. Tamar, who acts as a prostitute, is more righteous than Judah the ancestral patriarch, yet her story is ultimately subsumed by Judah's.

2. Hebrew Narrative and the Pentateuch.

2.1. *The Nature of Narrative.* Human beings tell stories to make sense of the world and their experience within it. By ascribing significance to events and establishing connections between them, individuals and groups construct narratives that ascribe order and coherence and confirm the conviction that life has meaning, that somehow all the disparate facets of existence fit together and make sense. Narratives thus present a view of "what life is like," infused with the perspectives, values, aspirations and self-identity of those who construct them. Critical reading of narratives, then, begins first of all

with the recognition that narratives are imaginative, written works of art that convey particular notions about the nature of reality. This starting point is a crucial corrective to readings that, under the influence of a prevailing historical consciousness, read pentateuchal narratives as a strict recounting of historical facts. Narrative criticism makes no judgments about whether the events recounted actually happened. (That is the purview of historical criticism.) Instead, it seeks insight into the way biblical stories are presented and from thence to the worldview, ideologies or theology that it communicates. Put simply, narrative critics assert that narratives have a point to make and thus should be read on two levels, with attention both to content and narration.

One of narrative criticism's most significant contributions has been the discovery and description of the distinctive character of Hebrew narrative. Diverse cultures do not tell stories in the same way. The fact would seem obvious, but in practice the chasm between the conventions encoded in biblical narrative and those that configure the Western literary tradition has not been readily apparent. For centuries the Pentateuch has been read as though it were a compendium of principles, a series of moral tractates or a scientific textbook that, when properly dissected, yields the concrete affirmations demanded by dogma. However, reading Hebrew narrative on its own terms suggests that it may not so much seek to answer questions as to raise them, not so much set out concrete norms as prompt contemplation. As E. Auerbach noted in his classic comparison of the stories of *Abraham and Odysseus, Hebrew narrative is characteristically laconic and mysterious. Possessing an "imaginative subtlety" (Alter, 88), it is typically short on detail and compact in language, heightening a sense of ambiguity by leaving significant gaps in the story. Where, for example, did *Cain's wife come from? Why did Yahweh seek to kill *Moses on his way back to Egypt? Why are the Midianites judged at Baal Peor but not the Moabites? (And why are the Midianites there in the first place?) The purpose of this "gapping" is much debated, and conclusions tend to coincide with assumptions regarding the determinacy or indeterminacy of the biblical text. Those strongly in the "poetics" camp, such as Sternberg, argue that the narrator provides clues about how the gaps are to be filled and speak of

"illegitimate gap-filling" and right hypotheses (Sternberg, 186-229). Those who accord the reader a greater role in the production of meaning see in these gaps the seedbed for a variety of valid readings (e.g., Gunn and Fewell 1993, 46-52, 155-58). Whatever the case, the playful openness of Hebrew narrative powerfully imitates the experience of life, where answers are not always apparent and meaning can be elusive.

Recently, more attention has been given to the way in which the narratives of the Pentateuch encode values and shape a sense of identity. A case in point are those stories that deal with the other peoples of Israel's world (the curse of Canaan, *Lot and his daughters, *Hagar and *Sarah, etc.). Conventional reading of these stories has yielded theological and moralistic interpretations. But when we acknowledge narrative's role in defining a community's sense of itself and its place in the world, the characters of Genesis acquire deep symbolic resonances. Jacob/Israel, for example, is at once an individual and the nation, and the stories associated with him and others express the community's convictions about its distinctiveness, as well as its perceptions of the neighboring peoples. Jacob is not physically powerful but is very clever. His story is united by the theme of trans-action. Virtually every episode involves negotiation and deal making, articulating Israel's sense of being a small mercantile nation between great powers, a nation that must live by its collective wits in order to survive and prosper. On the other hand, the stories portraying the Canaanites, Moabites and Ammonites (the peoples closest to the Israelites both in proximity and ethnicity) recognize a common lineage but associate them in repugnant terms with sexual deviance (Gen 9:20-27; 19:30-38; 34:1-3), expressing a common tendency to project reprehensible attributes to groups nearest one's own. *Esau/Edom is also depicted in unflattering terms, but his nomadic lifestyle diminishes his proximity to Israel, and his interactions with Jacob indicate a tenuous rapprochement between the two peoples. Stories associated with Philistia and Aram (the other key players in Israel's part of the world) convey a sense of parity. *Isaac negotiates on an equal footing with the Philistine king *Abimelech (Gen 26:12-31), and Laban, another close relative who lives in Paddan-aram, displays every bit as much savvy as Jacob (Gen 29:1-21; 30:25-43; 31:1-55). Finally, the stories

dealing with Hagar manifest Israel's attempt to define itself apart from Egypt, the land where it dwelt for centuries. In the case of Hagar, the tables are turned. *She* is the slave who is cast out into the desert, where she encounters the promising God (Gen 16:1-16; 21:1-21).

2.2. The Ordering of Events. Because human beings perceive events with a consciousness of their location in time, narratives utilize time as a means of organizing, explaining and evaluating experience. Telling a story thus requires decisions about how to situate it within time. Where and how will the story begin? How and when will it end? In what order will the events be presented? In addition, events must be connected so as to explain their significance and to impart a sense of the whole. The narrator therefore has other questions to address. What events and information will be included and what will be left out? Of those events that are included, which will be emphasized and expanded? How will the significance of particular events be conveyed? And how will the perceived relationship between events be communicated? What stylistic features will be employed? Taken together, these and other questions associated with the ordering and presentation of events shape a narrative's *plot*.

Hebrew narrative is marked by its distinctive appreciation for symmetry, expressed most often through myriad forms of *repetition*. Repetition of vocabulary, grammatical structures, events or images unites diverse events and signals their common import. The repetitive language and structure of Genesis 1, for example, unites the separate acts of *creation into one grand masterpiece that expresses both the orderliness of creation and the majesty of the Creator. In another context, the precise recounting of events at a well, through the mouth of Abraham's servant, establishes the trustworthiness of the servant and the efficacy of his mission (Gen 24:1-51). On a broader scale, repetitions of the promise to Abraham unite the entire Pentateuch and articulate its primary theme (see Clines 1997, 37-47).

The Pentateuch also includes a number of repetitive story lines. Besides the so-called "endangered ancestress" stories discussed above, the narratives devoted to Abraham and Isaac contain parallel accounts of the founding of Beer-sheba (Gen 21:22-34; 26:26-33), implicitly confirming Isaac as the legitimate heir of the

promise to Abraham. Three stories of complaining mark Israel's journey to Sinai (Ex 15:22-26; 16:1-36; 17:1-7) and are matched by three parallel stories of complaining as Israel journeys from Sinai (Num 11:1-3, 4-34; 20:1-13), raising questions about whether the Israelites have taken the *covenant to heart.

Repetition can also occur in figurative and subtle forms (see Alter, 88-113). A *Leitwort* is a recurring word root that occurs in diverse forms (including puns) throughout a narrative complex. The root *kbd*, for example, occurs at various points in the exodus story to refer to such things as *Pharaoh's hardened heart (Ex 7:14; 8:32 [MT 8:28]; 9:7, 34), Moses' halting speech (Ex 4:10), increased labor (Ex 5:9), severe pestilence (Ex 9:3), the dense swarm of locusts (Ex 10:14), Yahweh's glory (Ex 14:4) and the clogged chariot wheels of the Egyptians (Ex 14:25). A *Leitmotif* is a recurring image or object, such as the colors white and red in the Jacob story and the recurrence of *dreams in the Joseph story. *Theme* describes a recurring pattern of even broader dimensions, as in the reversals of primogeniture in Genesis, Jacob's transactions and Israel's persistent complaining in the wilderness. A *type-scene* is an episode that follows a fixed sequence, as in the betrothal stories of Jacob, Isaac and Moses (Gen 24:1-66; 29:1-30; Ex 2:16-21), all of which are associated with wells. An *allusion* occurs when a story evokes, in part or whole, connections to another story, as in the texts concerning Hagar (Gen 16:1-16; 21:1-21); these render lexical and thematic allusions both to the garden story and the exodus on one level and to the promise to Abraham on a broader scale.

Variation in repetition often carries significant import, a feature of narrative amply documented by Sternberg (365-440; cf. Gunn and Fewell 1993, 148-55). The variation may occur on the grammatical or syntactical level. When the *serpent confronts Eve, he quotes Yahweh God's command, but with slight modifications. The original command is framed in positive terms and conveys a sense of the Creator's generous provision: "You may freely eat from any tree in the garden, but of the tree of the knowledge of good and evil you may not eat, for on the day you eat of it, you will die" (Gen 2:16b-17). However, the serpent recasts the positive into a negative, implying a demanding Creator more concerned with keeping the rules, and

conveniently omits reference to consequences: "Did God really say, 'You may not eat from any tree in the garden?'" (Gen 3:1b). Variations in references to Pharaoh's hardened heart highlight the inscrutable tension between divine will and human freedom (Ex 4:21; 7:3; 9:12; 10:1, 27; 11:10; 14:8; cf. 8:15, 32 [MT 8:11, 28]; 9:34). Differences in episodic repetitions may achieve similar effects. The three stories of complaining on the journey away from Sinai include outbreaks of divine wrath (a feature absent from the corresponding stories prior to Sinai), intimating a change in God's dealings with the nation. On a similar note, Jacob's return to Bethel after wrestling with Yahweh at the Jabbok (Gen 35:9-15) omits the conditional, scheming character of Jacob's response to the divine promise on the first occasion (Gen 28:10-22), suggesting that Jacob has now submitted to Yahweh.

A number of structural devices organize repetitions into symmetries. Structural elements may occur in parallel repetitions, as in the pattern that renders the first creation story (Gen 1:3-31). A *chiasm* introduces a pattern and then reverses it, as in the tongue twister "she slit the sheet, the sheet she slit." While some prefer the term *palistrophe* for structures of more than four components and others distinguish a chiasm from a *concentric structure* (a structure with a single element at the center), the term is widely used to denote any form that fits the general pattern-reversal structure. While smaller, syntactical structures can be identified with relative certainty, large-scale or thematic chiasmic patterns have proven more difficult to determine. The chiasmic configuration of the Abraham cycle, for example, has been described by both Rosenberg (who prefers the term *palistrophe*) and Kikawada and Quinn, but the two patterns manifest significant differences, even disagreeing on the parameters of the Abraham cycle itself. On the other hand, there has been general agreement on the chiasmic pattern that configures the flood story (e.g., Anderson; Wenham; but see Emerton 1987, 1988).

An *inclusio* is a repetition that encloses a section of narrative. One such repetition encloses Yahweh's disclosure to Abraham concerning the imminent destruction of Sodom and Gomorrah. Framing the disclosure are references to the departure of the "men" who had visited Abraham (Gen 18:16, 22). In this case, the parallel references build suspense and forge a connection

between the two ostensibly disparate events (see Walsh, 57-75). A variation of this device, *Wiederaufnahme*, or resumptive repetition, consists of the repetition of previous material when the story resumes after a digression (e.g., Gen 37:36; 39:1; Ex 6:10-13, 26-30).

2.3. The Construction of Characters. A narrator constructs characters so as to influence the reader's perception of them. The characters we encounter in the Pentateuch have thus been shaped to serve the general aims of the narrative. Just as a picture of Moses is not "the real Moses" who existed at some point in time, so the Moses depicted in the Pentateuch is an imaginative representation. This is not to say, of course, that there is no connection between Moses the character and the historical Moses (again, a question for the historian). But narrative critics insist that, when addressing how the Pentateuch works as literature, we must recognize that the two are not equivalent. Within the context of the Pentateuch, even "God" is a character, a representation of the Creator who cannot be fully described or limited by the printed page.

The reader's perception of a character is shaped by a number of factors: descriptions and commentary provided by the narrator, the names or titles ascribed to the character, the character's actions and words, and comments made by other characters in the narrative. Hebrew narrative typically provides few descriptive details or evaluative comments. Because they are exceptions to the rule, description and commentary thus assume special significance when they occur. The narrator's comment that *Noah was a "righteousness man, blameless among his peers" (Gen 6:9) sets him apart from the rest of his generation, who are bad to the bone (Gen 6:5). Inasmuch as it follows a remark that Noah found favor with Yahweh (Gen 6:8), the note makes an important theological point: Yahweh's decision to spare Noah is not arbitrary but demonstrates the deity's concern for righteousness. On another note, the narrator introduces Esau as a skilled hunter who loves the outdoors and Jacob as a "quiet" man who prefers to stay at home (Gen 25:27-28), establishing a contrast of personality that will contribute to the conflict between the brothers.

In many instances the character's name defines his or her essential attribute or significance within the story. Sometimes the significance of a name is emphasized, as is the case

when Yahweh changes Abram's name to Abraham ("Exalted Father" to "Father of a Multitude"; Gen 17:5) and Jacob's to Israel ("Trickster" to "Struggles with God"). A new name can also signify a change in status; when Yahweh gives Sarai ("My Prince") the name Sarah ("Princess"), he establishes her identity independent of any man (the prince) to whom she is connected (Gen 17:15). Generally, though, the significance of names becomes apparent only as a story unfolds, sometimes to be disclosed dramatically (as is the case with Esau's agonized exclamation about his brother: "Isn't he rightly named Jacob? For he has taken advantage of me twice!" [Gen 27:36]).

For the most part characters in the Pentateuch are defined as much by their words as by their actions. Direct speech tends to be succinct. A brief declaration is enough to establish the vengeful character of Lamech (Gen 5:23-24), the piety of the Midianite chieftain *Jethro (Ex 18:10-11) or the faithfulness of *Caleb (Num 13:30). Within the context of dialogue, direct speech comprises a primary medium for the development of character. The narrator, for instance, establishes the conniving persona of Jacob through dialogues that illustrate his calculating character, first by contrasting his words with those of the impulsive Esau (Gen 25:29-34) and the unwitting Isaac (Gen 26:18-29) and then through a series of dialogues with the equally crafty Laban (Gen 29:15-27; 30:25-36). Monologues are infrequent, and interaction between more than two characters is rare. Longer speeches are mostly confined to major characters and convey attributes more indirectly.

2.4. The Narrator and Perspective. As noted above, a narrative tells a story from a particular point of view and encodes values, assumptions, ideologies and convictions within it. This point of view is conveyed via the narrator. The narrator can be thought of simply as the one through whom the story is told, as distinguished from the author(s) who produced the text. The "narrator" is thus an abstract entity who renders the story into a whole, suggests connections and invests events and characters with significance. There is general agreement that the biblical narrator is "omniscient" and possesses knowledge often not available to characters within the story. The narrator displays knowledge of God's disposition and decisions, although this knowledge is communicated infrequently (Gen 6:6; 29:31). In

some cases, however, the narrator seems to withhold insight into divine motives, precisely when such information might resolve difficulties in the story. At other points the narrator will build suspense by supplying the reader with information that is unavailable to one or more characters in the story. In still other cases, the narrator may delay reporting crucial information until a time late in the story. All these features are employed in the binding of Isaac (Gen 22:1-19), an episode that puts the play of perspective into the foreground. The narrator begins the story with the declaration that God tested Abraham, followed immediately by a divine command that alludes powerfully to Abraham's initial call (Gen 22:1-2; cf. Gen 12:1, 6). The reader thus knows that the story that follows constitutes a "test." But Abraham does not know why the command has been given. Likewise, Isaac knows that he and his father are journeying to Moriah to offer a sacrifice but does not know that he is the intended victim. The narrator exploits the various levels of perspective with a poignant interchange during which Isaac inquires about the intended victim (Gen 22:5-8). The questions heighten suspense by highlighting the gap between what the reader knows and what the characters know. Only when Abraham prepares to plunge the knife into his son do the characters learn the reason for the whole affair. The angel of Yahweh calls to him and now suggests a rationale for the test: "Now I know that you fear God, since you have not withheld your son, your only son from me" (Gen 22:12b). The implied explanation (that God requires obedience in order to confirm the promise, Gen 22:15-18) does not easily resolve the interplay of perspectives. What does God know, and when?

Irony, a gap between perceived intent and perceived meaning, can utilize points of view with powerful effect. Dramatic irony takes place when actions yield unintended results. The story of *Joseph, which skillfully appropriates different levels of perspective, contains many instances of dramatic irony, and these become the vehicle for expressing the mysterious involvement of God in human affairs. The sons of Jacob cast Joseph into a pit to rid themselves of him but eventually must confront him as a prince of Egypt. And Jacob, the trickster who has fooled others, becomes himself the object of numerous acts of deceit. Verbal irony works in a similar fashion, often giving a character's words

a meaning opposite of that intended. Again in the Joseph story, Judah does not realize the full implications of what he is saying when he reports Joseph's words: "You will not see my face unless your brother is with you" (Gen 43:3). By recourse to irony, the narrator can imbue both words and actions with mystery, thereby enhancing the sense of ambiguity that characterizes classical Hebrew narrative.

Study of the Pentateuch *as literature* thus encompasses an array of methods, approaches and strategies. The questions that literary criticism raises have prodded biblical scholarship to grapple with the fundamental issues of *how* the Pentateuch is to be interpreted (*see* Hermeneutics). Although there are those in both camps who insist that the methods of historical and literary analysis cannot be reconciled, interpretation now commonly utilizes both approaches. Because a text encodes experiences, beliefs and conventions that derive from particular settings in time, historical analysis remains a necessary component for understanding the Pentateuch's message and relevance. Literary analysis, for its part, constantly draws the interpreter back into an encounter with the text and with its distinctive character, tropes and conventions. A symbiosis of the two approaches thus seems desirable but remains very much a work in progress.

LITERARY STRUCTURE OF THE PENTATEUCH

Literary structure, or compositional shape, refers to the comprehensive plan in the textual fabric of a written work by means of which it exhibits meaningful cohesion and thoughtful direction reflective of an authored strategy. It encompasses both the organizing framework that defines the literary contours and the embedded patterns that fill out that framework, thereby displaying how the whole and the network of relations among its constituent parts are fashioned into a grand design for a desired effect. An analysis of the literary structure of the Pentateuch then attempts to describe the constructed shape of Genesis—Deuteronomy as a unitary composition by tracing the textured patterns in its larger (super- or macrostructural) and smaller (microstructural) units, by means of which it guides readers effectively to an authored goal.

The interests of literary structure intersect those of authorship and composition, conventional (*source, *form, *tradition) and newer (e.g., narrative) *literary criticism, and individual book analyses. While the exploration of literary structure engages each of these, however, it pursues the discussion along different lines. Specifically, the literary structure of the Pentateuch moves beyond genetic *strata* to purposeful *strategy* and beyond atomistic *structures* to comprehensive *structure*. It therefore shifts the interpretive focus from questions of origin and formation (i.e., the historical route by which the Pentateuch developed from primal sources to present shape) to the evidence for and effect of the resultant configuration, and from independent genres (e.g., narrative, poetry, genealogy, biography and legal materials) to their participa-

tion in and contribution to the larger compositional fabric into which they are meaningfully woven. Further, as the title implies, the literary structure of the *Pentateuch* not only encompasses the entirety of Genesis—Deuteronomy but also treats the material as a true *pentateuchos*, that is, as a five-part *book*. While each of its “books” may display discernible features of internal structure, the focus here falls on the overarching plan of “the *book* [singular] of Torah/Moses” (cf. Josh 1:8; 2 Chron 25:4; Mk 12:26; etc.).

1. Models for Understanding the Literary Structure of the Pentateuch
2. Considerations in Determining the Literary Structure of the Pentateuch
3. A Proposed Structure of the Pentateuch

1. Models for Understanding the Literary Structure of the Pentateuch.

There is no unanimity on the literary structure of the Pentateuch, which testifies not only to the complexity and magnitude of the material but also to the influencing presuppositions that drive the analytical enterprise. Approaches to the question fall broadly into three categories.

1.1. Popular Avoidance. One of the enduring effects of a tradition at least as old as Josephus (*Ag. Ap.* 1 §§37-43; cf. 2 Esdr 14:23-26, 38-48; *Jub.* 2:23-24) is the widespread assumption that the Pentateuch consists of five more or less discrete and self-contained books, each with its own title and each registering its presence in the canonical number. While this fivefold division almost certainly was not purely mechanical or driven solely by practical considerations relative to scroll production and storage (Blenkinsopp 1992, 45-47), its influence has discouraged serious reflection on a comprehensive strategy that governs and shapes the Pentateuch as a whole composition. Assuming literary boundaries coterminous with the traditional “books,” distributing commentary assignments accordingly and prejudging the nature of the material on the sheer impression of volume (in round numbers the Pentateuch comprises 80,000 of the 305,000 words in the Hebrew Bible, or over 25 percent)—all subtly obscure the meticulous crafting that binds Genesis—Deuteronomy into a single grand structure of meaning with ideological integrity and direction. One negative effect is that questions of the literary structure of the Pentateuch scarcely occur at the popular level, and relatively few proposals have appeared even in

the commentary literature.

1.2. Critical Agendas. If popular reading has by and large ignored the literary structure of the Pentateuch, critical scholarship has, in the main, followed agendas leading to structural elusiveness. Among the decisive results of *Literarkritik* (source, form and traditio-criticism), whether in its older classical formulation or in more recent dress, is the acknowledgment that the Pentateuch reflects an apparently complex historical development on its way to formation into the shape in which it now stands. Details of the various hypotheses and their endless revisions are adequately rehearsed elsewhere (*see* Pentateuchal Criticism, History of). For purposes here, the absorbing preoccupation with textual prehistory that dominated pentateuchal research during much of the past two centuries had only limited value for the study of the literary structure of the Pentateuch in its received form.

The reason for this is transparent. As long as textual questions were identified and pursued along strictly historical (diachronic) lines and their explanation subsumed under the hypothetical constructs of geneticism, attention was diverted from the resultant shape of the extant composition as a fixed (synchronic) phenomenon and the significance of that shape for meaning. Maximal *excavative* speculations on the residual effects of superimposed strata or conflated putative sources resulted in minimal *exegetical* attention to the meaningful features of an intentional strategy. In short, with its prior focus on *how* the Pentateuch may have arrived in its present formation, including the social, religious and political impulses that may have precipitated such a production, the history paradigm did not succeed in offering a comprehensive explanation for the Pentateuch as it now stands in the Hebrew Bible. Theoretically, at least, divergent theories on literary formation *could* arrive at reasonable proposals on literary structure, each standing on the strength of the reconstruction that supports it. But with a few notable exceptions, the former interests either stopped short of explaining how the Pentateuch *as composition* actually puts its literary features to work in a constructive appropriation of meaning (“behav[ing] as if the final composition was not worth discussing” [Knierim, 352]) or undercut that enterprise altogether by calling into question whether an intentional integrity of the Pentateuch existed at all. Further, the form-critical

analysis of discrete genres or even smaller units within those genres could serve up a miscellany of isolated narratives, poems, genealogies, speeches and legal codes, but it could hardly bring into view the significance of the present, final shape (so Muilenburg). Accordingly, “the book of Torah as a unified story remains largely unexamined. Scholars looking at trees have overlooked the forest” (Eskenazi, 28). Happily, correctives to that shortcoming are now appearing on the landscape of pentateuchal research.

1.3. Recent Advances. With the now widely rehearsed “collapse of history” (Perdue) as the primary paradigm in biblical interpretation generally and the demise of the dominance of historical questions in pentateuchal research specifically, the way has opened in recent decades for renewed interest in the Pentateuch as *product*, whatever the details of its *production* or provenance. While historical interests and formational hypotheses have not been completely abandoned, this shifting of interpretive focus to the present shape of biblical books has resulted in a growing consensus that the Pentateuch does after all exhibit an integrated structure reflective of purpose, even if some of the factors that exerted their influence in the formative stages remain uncertain. Creative and energetic inquiries into the various indications of that structure and its significance for meaning have appeared in recent years, fueled by considerations supporting the logic of an approach that gives prominence and due respect to the Pentateuch as an extant literary phenomenon. This is, after all, the only real Pentateuch that exists—a Pentateuch substantially like that which Jesus and the writers of the NT read and one that is, in any event, an object of study more suitable for confident inquiry than the hypothetical constructs of genetic and formal dissection (Alexander, xv-xviii; Knierim, 352).

Of course, it is theoretically possible that the Pentateuch has no comprehensive design that governs the whole, that the constituent parts, by whatever path they reached the hand(s) of the author(s)/redactor(s), were simply inserted at random. For a growing number of readers, however, textual and thematic indications point in other directions—features that warrant inquiry and demand explanation. Given the state of affairs sketched earlier, not surprisingly only a few examples have emerged to date for the entire Pentateuch, but these models may be regarded

as representative of this new impetus. Surveyed here are the most programmatic of these proposals, grouped in the sometimes overlapping categories of dominant focus or principal methodology.

1.3.1. Thematic. In a bold pioneering analysis, D. J. A. Clines eschewed the tendencies in critical research toward both “atomism” and “geneticism,” focused on the Pentateuch “in its final form” and asserted the legitimacy of treating the Pentateuch “as a single literary work” that is “not merely the sum of the first five books of the Bible . . . but an independent work in its own right” (Clines, 9-18). Pursuing a unifying theme of the Pentateuch that “arises from the subject [and] is a conceptualization of plot” (Clines, 23), Clines discerned “the shape of the Pentateuch as a movement towards goals yet to be realized” with “the impetus of that movement in the divine promise that initiates the patriarchal narratives” (Clines, 29). According to Clines (30), the pentateuchal theme of “the partial fulfilment—which implies also the partial non-fulfilment—of the promise to or blessing of the patriarchs” is anticipated in the “primaevial history” of Genesis 1–11 and consists in posterity (Gen 12–50), divine-human relationship (Exodus and Leviticus) and land (Numbers and Deuteronomy). Although his principal interest lay in discerning thematic unity rather than in literary analysis per se, Clines’s model is valuable in demonstrating how textual and thematic considerations together factor into the question of literary structure.

1.3.2. Generic/Biographical. R. P. Knierim’s analysis focuses on the question of the dominant genre of the Pentateuch. Proposing a bipartite Pentateuch consisting in Genesis and Exodus—Deuteronomy, with the former introductory to the latter, Knierim argues vigorously that the genre *biography* (specifically, the *Vita Mosi*; cf. Coats; Nigosian) better characterizes the Pentateuch than the widely accepted narrative history of Israel. J. H. Sailhamer (1992) has extended this proposal to the whole of the Pentateuch, demonstrating how the biographies of the patriarchs and Moses are part of the author’s conscious strategy in an effort to contrast the life of faith before the law (*ante legum*), represented especially in Abraham, with the lack of faith under the law (*sub lege*), represented especially in Moses.

1.3.3. Narratological. T. W. Mann and Sail-

hamer represent attempts to read the Pentateuch from a narratological perspective, that is, as an integrated story. Appreciating the Pentateuch as “both a composite document and a unified narrative,” Mann focuses on the latter in order to delineate both “the internal literary (i.e., redactional) cohesiveness of larger units (e.g., Gen. 1:1—11:9, or the ‘Jacob cycle,’ or Num. 1—10)” and “the narrative integrity of the Pentateuch as a whole, i.e., how the larger units constitute ‘books,’ and how the sequence of these books makes sense” (Mann, 6-7). Proceeding “book” by “book” through the Pentateuch, Mann applies insights from literary/narrative analysis to the respective texts, with minimal attention to any comprehensive configuration to the Pentateuch as a compositional whole.

1.3.4. Composition-Critical. Sailhamer’s composition-critical analysis (cf. Fohrer; Blum; Rendtorff; Schmitt) is the most ambitious attempt to date to trace the textual and thematic strategy of the whole Pentateuch. Approaching Genesis—Deuteronomy as a single, carefully constructed book exhibiting both unity and nonuniformity, and focusing on the manner in which this authored composition mediates or *represents* the world of historical events for the purpose of instruction, Sailhamer details how the three principal kinds of literary materials in the Pentateuch (i.e., narrative, poetry and legal corpora) are woven into a single literary fabric. He observes, for example, that the pervasive narrative-poetry-short epilogue technique highlights in each of its macrostructural occurrences a central narrative figure who calls together an audience and proclaims what will happen “in the end of days” (cf. Gen 49:1; Num 24:14; Deut 31:28-29; Sailhamer 1992, 36). In the Pentateuch’s rich use of “narrative typology,” by means of which “later events are written to remind the reader of past narratives” (e.g., Gen 41—Ex 12 foreshadowed in Gen 12:10-20; or Ex 25—40 in Gen 1-3), Sailhamer finds evidence in the strategy of the Pentateuch that the author worked “within a clearly defined hermeneutic,” namely, “an eschatological reading of his historical narratives” in which “the narrative texts of past events are presented as pointers to future events” (Sailhamer 1992, 37).

Again, the alternating placement of covenant, stipulations and failure accounts between the Sinai narrative sections (Ex 19:1-25; 20:18-21; 24:1-18; 32:1—34:35; Lev 17:1-9) and the col-

lections of laws (*Decalogue [Ex 20:1-17]; Covenant Code [Ex 20:22—23:33]; Priestly Code [Ex 25—31]; extended Priestly Code [Ex 35—Lev 16]; Holiness Code [Lev 17—26]) in the central section of the Pentateuch suggests that the Pentateuch is in considerable measure an extended treatise on the nature and shortcomings of the Sinai covenant. From these and other embedded designs in the pentateuchal texture, Sailhamer is able to discern a twofold theological strategy motivating its present shape: “The Pentateuch intends to look forward into the eschatological future to the coming of a savior-king who will defeat Israel’s enemies and restore the blessing God originally intended for all humankind ‘in the last days,’ ” and “the Pentateuch intends to demonstrate the failure of the Sinai covenant and to engender a hope in the coming of a New Covenant” (Sailhamer 1995, 99; cf. 1992, 44-59). In both of these respects the Pentateuch initiates a point of view shared by the rest of the OT books, especially the Prophets.

1.3.5. Integrative (Diachronic-Synchronic). While for J. Blenkinsopp the actual text of the Pentateuch “in its narrative integrity, and not this or that source,” is finally “the object of interpretation” (Blenkinsopp 1992, 33), his work represents recent attempts to harness the insights of methodological coexistence or synthesis. Pursuing both historical-critical and internal-structural agendas (cf. also Rendtorff; Blum; Knierim; Whybray; Carr), Blenkinsopp concludes that the Pentateuch is a “constitutional document” with a dominant priestly (P) perspective that was constructed in the matrix of imperial Persian and inner-Jewish interests for the purpose of preserving the uniqueness and consolidation of postexilic Judaism. It was configured, accordingly, to highlight Leviticus and its concerns with ritual laws at its structural center. Here mention should also be made of M. S. Smith’s recent exploration of the shape of Exodus and of the Pentateuch as a whole along the lines of a geographical-chronological priestly redaction (sacred space and time) that reflects postexilic liturgical customs associated with the three pilgrimage *festivals. One should also note S. E. Balentine’s sociological proposal in which the Persian imposition of social and political directives ultimately defined the shaping and final form of the Pentateuch and of “the Torah’s vision of worship.”

1.3.6. Rhetorical. Reacting to the favored em-

phasis on narrative material in most of the current discussions on the shaping of the Pentateuch, J. W. Watts has advanced a new analysis along rhetorical lines. Recognizing the intrinsically rhetorical nature of public law readings in ancient Israel, W. Watts addresses the relationship of law and narrative by probing how their combination in the Pentateuch was meant to be read and what rhetorical effects this combination would have had on the intended readers. For Watts, then, the question of the literary structure of the Pentateuch is bound up both in literary-redactional (the interaction of law and narrative) and in historical-sociological phenomena (the impulses of Persian period Judaism). T. E. Fretheim (1996) applies rhetorical interests more broadly to synchronic readings of the individual pentateuchal books.

1.3.7. Summary. To these could be added a burgeoning list of works on narrative (*see* *Literary/Narrative Criticism*), with their helpful contributions to analyzing narrative conventions and techniques and, of course, an almost endless inventory of commentaries and monographs on the individual pentateuchal “books” (*see* entries on individual books) or smaller pericopes, with their insightful observations on the respective structures within their defined parameters.

Perhaps the point to be drawn from this survey is that amidst the signs and growing conviction of a comprehensive shape to the Pentateuch, the actual identifying of that shape remains an ongoing challenge. Rather than undercutting the validity or value of such a pursuit, however, this observation serves rather to invite further exploration that is both cautious in its attitude toward the sovereign text (not to be treated, as M. Bockmuehl once warned, as vultures hovering over a suspected carcass!) and humble in its spirit toward fellow-explorers. It serves also to emphasize how important it is to clarify the methodological considerations that inform one’s proposal.

2. Considerations in Determining the Literary Structure of the Pentateuch.

This is not the place to mount arguments for the literary cohesion or thematic integrity of the Pentateuch but to pursue and display what one finds when research begins on the premise that such integrity and cohesion exist, that the Pentateuch is thoughtfully composed both in terms of *what* it

says and *how*. A final-form reading in this manner does not, of course, dismiss diachronic interests or their value to pentateuchal research generally, but it suspends those interests long enough to focus the question on what exists at the end: a composition worthy of study in its own right. Factors influencing the analysis of structure in such a composition fall broadly into three overlapping and converging strategic categories.

2.1. Canonical-Compositional Strategies. On the hermeneutical premise that the whole of a literary work is more than the sum of its parts, analyzing structure appropriately begins with questions about the impact and significance of the largest interpretive environment (canon) and the broadest internal contours (composition; for an ascending proposal that begins with textual units, *see* Dorsey). Included here are structural indications and implications of both *intertextuality* (relationship of the Pentateuch to the rest of Scripture) and *innertextuality* (relationship of the Pentateuch to itself). Examples include (1) the structural significance of the Pentateuch, with its own recognized integrity (*contra* Ewald’s Hexateuch, Noth’s Tetrateuch or Schmitt’s Enneateuch), obviously pointing beyond itself and introducing a consecutive narrative history that extends from the creation story to the account of the exile (Genesis—2 Kings); (2) the structural implications of the Pentateuch’s own parameters and the relationship, if any, between its beginning and its ending; (3) the structural influence of Deuteronomy and its function relative to the whole; and (4) the structural relevance of material selection, spacing and sequencing (e.g., the obviously selective *creation narrative in Gen 1:1—2:3 or *sacrificial instructions in Lev 1—7, with interpretive value both in what is included and what is excluded; the striking disproportion allotted to events narrated in Genesis [spanning some two thousand years], the stopover at Sinai [Ex 19:1—Num 10:11, covering almost one year], and Moses’ farewell address [Deut 1—33, delivered in just one day?]; and the sometimes nonchronological arrangement [e.g., Ex 40:36-38; Num 1:1; 7:1; 9:1, 15], apparent narrative intrusions [e.g., Ex 32—34] or central positioning [Sinai pericope]). The task of structural analysis is to make sense of such canonical and compositional strategies, explaining how the whole exerts shaping influence on the parts and how the parts give meaning to the whole.

2.2. Literary-Linguistic Strategies. Whether one adopts a descending model of literary analysis (working from macrostructure to microstructure) or its ascending opposite or a combination of the two, the primary locus of inquiry inevitably lies in the literary and linguistic details embedded in the texture of the text itself, that is, in the actual markers and movements woven into the written fabric. These patterns of evident structure take a considerable variety of forms, both in terms of how constituent units are marked and how they are related (cf. Dorsey, 21-35). Prominent in the Pentateuch, for example, are a masterful manipulating of genre (esp. the narrative techniques of narrator and narratee, plot, characterization, point of view, temporal and topographical setting, style and gapping) and genre mixing (esp. narratively inset poetry and legal material) and an impressive repertoire of repetition: of sounds (e.g., paronomasia, rhyme), words (e.g., *Leitwörter*, or theme-words, resumption, inclusio), stylized formulas (e.g., the creational pattern in Gen 1 or genealogical formula in Gen 5) and episodic analogy or narrative type (echoing). In varying degrees of subtlety and prominence, these and other strategies reflect patterns in the fabric and must be examined thoroughly for the light they shed on the author's structure of meaning. The recurring narrative-poetry-short epilogue pattern cited earlier (see 1.3.4 above) and the well-known *tôledôt* ("generations") pentads in Genesis 1–11 and 12–50 (see 3.3 below) are ready examples.

2.3. Thematic-Theological Strategies. The descending move from canonical-compositional to literary-linguistic investigation leads ultimately to an ascending inquiry into the thematic-theological strategies ("concept criticism," Knierim, 355) that inform and influence the overall structure. It is now widely recognized that the Pentateuch is an ideological composition, decisively shaped by the interests of faith, rather than a strict historiographical reconstruction. This conviction is confirmed by the function of Deuteronomy, a manifestly theological innerbiblical witness to the real meaning and message of the Pentateuch (Deut 1:5; cf. McConville 1984, 1993). This is in keeping with the fact that "the Hebrew Bible is itself a theological book," its texts authored by individuals "deemed to be in a certain sense theologians, who had theological ideas and purposes in mind when they spoke or wrote their texts, and even when they assembled the texts into larger units or books" (Rendtorff

1993, 40-41; cf. Birch et al.; Childs 1985; Seitz and Green-McCreight; Olson 1994; Schmitt; Seitz; and Fretheim 1996, 38, who observes that "theology plays a central role, not only with respect to the content of the Pentateuch but also regarding its very form and its rhetorical strategy"). Textual structure functions in the interest of reflecting an author's perspective on the events narrated. In other words, purpose determines shape, and readers are made privy to the intended depiction by deciphering the patterned texture so defined and determined. While the thematic-theological analysis of structure is not innately any more subjective than other kinds of inquiry (Clines, 9-18; Fretheim 1996, 36-38), its challenge lies in the delicate tension between *explaining* textual cohesion and *superimposing* explanations upon it. It is in the *convergence* of canonical-compositional, literary-linguistic and thematic-theological strategies, then, that readers discover both *how* the Pentateuch is structured and *why*.

3. A Proposed Structure of the Pentateuch.

The preceding discussion lays the groundwork for a concluding proposal, the broad contours of which are sketched in the following outline (see Figure 1: Proposed Structure of the Pentateuch), with selective clarifications appended on the most crucial points. Detailed analyses of the finer aspects of texture must be left to commentary, monograph and journal literature.

3.1. Overall Structure. The broad triadic scheme reflects (1) the transparently introductory function of Genesis 1:1–11:26 with respect to the whole; (2) the manifest concentration on God's purposes achieved through people and events leading to, occurring at and ensuing from Sinai in Genesis 11:27–Numbers 36:13; and (3) the distinctly recollective, interpretive and transitional function of Deuteronomy with respect to the whole.

3.2. Relation to the Rest of the Canon. The merit of the designation "Early Story" is confirmed by the canonical function of Genesis–Deuteronomy as the *first* chapters in the Bible and by the dominant *narrative* framework to the whole, with poetry, legal materials, genealogy, biography and speeches inset and subservient to a pervasive and traceable story line. The thematic-theological rubric "God's Universal Blessing Plan" is corroborated by (1) canonical-compositional and literary-linguistic indicators, includ-

-
- A. Introduction to the Early Story of God's Universal Blessing Plan: Initial Episodes (Gen 1:1—11:26)
1. Prologue. First Things: Creation (Gen 1:1—2:3)
 2. Story from Creation to Terah/Abram in Five *Tôlēdôt* Sections (Gen 2:4—11:26)
- B. Development in the Early Story of God's Universal Blessing Plan: Unfolding Drama (Gen 11:27—Num 36:13)
1. The Pre-Sinai Narratives: People of the Blessing Plan Elected and Preserved (Gen 11:27—Ex 18:27)
 - a. Story from Terah/Abra[ha]m to Jacob/Joseph in Five *Tôlēdôt* Sections (Gen 11:27—50:26)
 - b. Story of the Exodus (Ex 1:1—18:27)
 2. The Sinai Narratives: Provisions for the Blessing Plan Delineated (Ex 19:1—Lev 27:34)
 - a. The Covenant: Defining Israel's Vocation as the People of God (Ex 19:1—24:18)
 - b. The Tabernacle: Preparing Israel's Sanctuary as the People of God (Ex 25:1—40:38)
 - c. The Life of Worship: Maintaining Israel's Holiness as the People of God (Lev 1:1—27:34)
 3. The Post-Sinai Narratives: Prospect of the Blessing Plan Threatened and Awaited (Num 1:1—36:13)
 - a. Story of the First Generation: Disaster in the Desert (Num 1:1—25:18)
 - b. Story of the Second Generation: Destined for the Promised Land (Num 26:1—36:13)
- C. Conclusion to the Early Story of God's Universal Blessing Plan: Retrospect and Prospect (Deut 1:1—34:12)
1. Introduction (Deut 1:1-5)
 2. Interpretive Recapitulation of Earlier Narratives: What God Has Done (Deut 1:6—3:29)
 3. Interpretive Recapitulation of the Torah: What God Requires (Deut 4:1—28:68)
 4. Epilogue. Last Things: What God Promises—The "New Covenant" (Deut 29:1 [MT 28:69]—34:12)
-

Figure 1: Proposed Structure of the Pentateuch

ing the hermeneutical dialectic of the "cosmic" (Gen 1:1—11:26) and the "covenantal" (Gen 11:27—Deut 34:12), with Genesis 12:1-3 pivotal; (2) lexical data, such as the frequency, strategic location and verbal associations of 166 occurrences of the root *brk* ("bless/blessing"), including a conspicuous linking of "blessing" (and its semantic cohort *tôb*, "good") to creation and covenant, especially at the outer extremities of Genesis (88x) and Deuteronomy (51x); and (3) the hermeneutically foundational role of the Pentateuch relative to the rest of the canon, including a verbal and thematic closure (*inclusio*) in the NT Apocalypse (cf., esp. Gen 1—3 and Rev 21—22). One of the interpretive results of these reflections is that, read in the light of its beginning (Gen 1:1—11:26) and ending (Deut 1—34), the apparently particularistic heart of the Pentateuch (i.e., the story about God's dealings with Abraham and his descendants leading to and from Sinai [Gen 11:27—Num 36:13]) in fact participates in a larger strategy that advances a plot truly cosmic and ultimately eschatological in scope.

3.3. The *Tôlēdôt* Formula. The use of *tôlēdôt*

(lit. "what is brought forth," hence, "generations," "ongoing story/account," or simply "what became of") as a catchphrase framing device in Genesis is widely recognized, beyond the much-discussed question of its possible association with source "tablets" (see esp. Mathews, 26-41). Genesis 1:1—2:3 precedes the first *tôlēdôt* and so functions as a prologue to the ten *tôlēdôt* sections that follow (Gen 2:4; 5:1; 6:9; 10:1; 11:10, 27; 25:12, 19; 36:1; 37:2; the three remaining occurrences of *tôlēdôt* in Genesis [Gen 10:32; 25:13; 36:9] self-evidently continue or conclude movements) and in fact to the whole Pentateuch. These ten consist in two pentads, defining the structural contours of Genesis 2:4—11:26 and 11:27—50:26, respectively, which division is further supported by the transparent shift in focus and narrative flow beginning in Genesis 11:27. Each pentad pivots on its central panel—the *tôlēdôt* of Noah (Gen 6:9—9:29) and the *tôlēdôt* of Isaac/Jacob (Gen 25:19—35:29)—with numerous indications of artistry supporting the symmetry (e.g., respecting the former, the strategic placement and stylization of genealogies [ten generations

from Adam to Noah in Gen 5:3-32, and ten from Noah's son Shem to Abram in Gen 11:10-26], and the manifest links between the creation and flood accounts; respecting the latter, the alternating election-nonelection-election sequence [Terah/Abram—Ishmael—Isaac/Jacob—Esau—Jacob/Joseph] and the obvious centrality of Jacob's family in the continuing pentateuchal story).

Besides its role as a structural catchphrase, as a genuine *leitwort* the *tôlēdôt* formulary hinges the narrative sections, narrows the focus and intensifies the anticipation. Working in tandem with the genealogical lists and the *zera*^c ("seed/offspring") trail, the *tôlēdôt* superscriptions set the entire pentateuchal story in motion by focusing on "the ongoing account of" a narrowing elect line of promise with a providentially preserved "seed" that will play a vital role in mediating God's blessing to all the nations (Alexander, 6-18). This "seed" will be linked to a royal dynasty descended from Abraham through Judah, and this "seed" will rule the nations in majesty (cf. Gen 49:8-12). This "seed," of course, fulfills the hope of a wounded but winning warrior promised to the first woman (Gen 3:15). (It may be more than coincidental that the opening words in Mt 1:1, *Biblos geneōs*, precisely echo the LXX rendering of *tôlēdôt* [or *sēper* ("book of")] *tôlēdôt* in Gen 2:4 and 5:1.) *Tôlēdôt* serves then not to define Genesis as a discrete book (the term occurs sixteen additional times in the Pentateuch, twelve of these being in Num 1) but to render programmatic a focusing and forwardly directed orientation to the whole (see 1.3.4 above). This proleptic function, clearly established in the first pentad (Gen 2:4—11:26), continues into the second (Gen 11:27—50:26), which, as the opening movement in the actual pentateuchal body (Gen 11:27—Num 36:13), successfully fixes the reader's perspective for the whole.

3.4. The Centrality of Sinai. The unfolding drama of the Pentateuch consists in a triadic development of material focused unmistakably on its middle and major element—Sinai/Horeb, the mountain of God—which, accordingly, occupies not merely a central place but becomes "the Mount Everest" of pentateuchal theology (Smith 1999, 206). Supporting this conclusion are (1) the compositional location and proportion of the Sinai material; (2) the explicit focus-

ing of numerous passages (e.g., Ex 3:12; 15:13-18; 19:1; Lev 7:37-38; 25:1; 26:46; 27:34); (3) a tight narrative flow that binds Genesis 11:27—Ex 18:27 around temporal, geographical and familial markers, leading to a virtual freezing of time and space and community that slow to a standstill at Sinai (Ex 19—Lev 27); (4) the resumption of just these same calendric, locational and national notices in Numbers, now subordinated, however, to larger thematic concerns anchored to Sinai (i.e., Sinai as paradigm, not a mere point on Israel's itinerary, for which reason Num 1:1—10:10 is legitimately regarded as "post-Sinai" even if the actual departure report begins in Num 10:11); and (5) the manifest reinforcement of Sinai-centrism supplied by Deuteronomy and the Former Prophets. While *Moses indeed figures prominently in the Sinai pericope (Knierim; Van Seters 1994), his role remains subservient to Yahweh's larger purposes for the nation as medium of a universal plan of blessing—which plan involves a people, elected and preserved (Gen 11:27—Ex 18:27), who are made recipients of certain provisions delineating the path to blessing (Ex 19—Lev 27), which prospect is both threatened and, beyond the end of the pentateuchal center itself, awaited (Num 1—36).

3.5. The Role of the Legal Material. The dominance of legal material in the Sinai pericope (Ex 19—Lev 27) does not alter the fact that the pericope is narratively framed and driven. The legal corpora are compositionally inset as constituent parts of a larger story, with all the conventional features of narrative apparent (e.g., introductory formulas), and in any event are enveloped between pre-Sinai (Gen 11:27—Ex 18:27) and post-Sinai (Num 1—36) materials that are predominantly and self-evidently narrative. Hence the appropriateness of the title "Sinai Narratives," the warrant for understanding laws as subservient to narrative purposes and the legitimacy of differentiating the immediate addressees (e.g., *bēnē yiśrā'el*) and the implied "any reader," with all the attendant and far-reaching implications of that distinction (e.g., law qua law as covenantal stipulations addressed to the Sinai community versus Torah as revelatory instruction intended for readers in any age, which distinction almost certainly factors in the NT perspective on the "law").

3.6. The Structure of the Sinai Account. The Sinai narratives (Ex 19—Lev 27) in turn reflect a

manifest triadic structure in which three provisions for blessing are delineated: (1) Yahweh's covenant, which defines Israel's vocation (Ex 19–24; esp. 19:3–6); (2) Yahweh's *tabernacle, which locates Israel's sanctuary (Ex 25–40); and (3) Yahweh's worship, which provides the means for maintaining Israel's holiness (Lev 1–27). Central to this schema and therefore lying at the precise structural heart of the Pentateuch is the highlighting of Yahweh's dwelling among a covenant people set apart from the nations to be *holy. This analysis suggests, in other words, that Exodus 25–40 provides a more suitable and deeply embedded literary-thematic center to the Pentateuch than does Leviticus (a more popular proposal that leans suspiciously on the traditional fivefold division). Confirming this conclusion are (1) the transparent fulfillment of the covenant (Ex 19–24) in the establishment of the sanctuary (cf. Ex 24:15–18; 40:34–38) and the equally transparent subordinating of Leviticus to the interests of Exodus 25–40 (see 3.8 below); (2) the volume and conspicuous detail devoted to the tabernacle instruction and construction accounts; (3) the function of the apparently intrusive *golden calf story (see 3.7 below); (4) the conscious echoing of Genesis 1–2 in Exodus 25–40, long recognized in both Jewish and Christian interpretation (e.g., Ex 24:16 || Gen 1:1–2:3; Ex 31:3 and 35:31 || Gen 1:2; Ex 31:12–18 || Gen 2:1–3; Ex 39:43a || Gen 1:31a; Ex 39:32a || Gen 2:1; Ex 40:33b || Gen 2:2a; Ex 39:43b || Gen 2:3a; Ex 40:2, 17 || Gen 1:5; a heptadic pattern for both), depicting the tabernacle as a partial return to the garden of *Eden and Yahweh's indwelling presence as the location and essence of creation's blessing or, in other words, as both the means to and the meaning of God's blessing plan—a veritable new creation! (see esp. Balentine, 136–41; Blenkinsopp 1976; Fretheim 1991, 263–78; Levenson, 78–99); (5) the obvious highlighting of tabernacle concerns in the post-Sinai narratives (esp. Num 1–10); and (6) the explicating of the rescue from Egypt as having its goal in the tabernacle residence of Yahweh with a holy people (e.g., Ex 29:44–46). If these observations are correct, then the literary-thematic center of the Pentateuch fixes on Yahweh's sanctuary (*miqdās*) as the place of Yahweh's residence (*miškān*) and relationship (*'ōhel mō'ed*) with a called-out people of blessing (cf. Ex 25:8–9; 40:34–38). As R. P. Knierim observes:

The ultimate goal of Israel's encampment at Sinai during its migration from Egypt to the Promised Land is not the covenant—as important as it was as a precondition—but the permanent sanctuary as the place of Yahweh's presence or appearance in Israel's midst, along with the organization of Israel as a strictly theocratic community around this sanctuary. At the same time, this goal provides the prototype for the ultimate meaning of Israel's existence as a settled community in the Promised Land. (Knierim, 365)

The messianic and eschatological implications of such a reading are suggestive. With the tabernacle, Moses' many trips up and down the mountain come to a halt (Knierim, 360–72; Fretheim 1996, 112), and Yahweh's “coming down” to dwell marks a descent that will climax in a distant day (cf. Jn 1:14; Rev 21:1–3).

3.7. The Structure of the Tabernacle Section. The triadic pattern persists into the very heart of the Pentateuch, where another unmistakable threefold development emerges around tabernacle (Ex 25–31), antitabernacle (Ex 32–34) and tabernacle (Ex 35–40). Moreover, the central panel itself unfolds in three discernible parts: the rebellion and Moses' role as Yahweh's mediator (Ex 32:1–33:6), the “tent of meeting” and Moses' encounter with Yahweh's presence (Ex 33:7–23) and the renewal and Moses' radiance with Yahweh's glory (Ex 34:1–35). The merit of this observation lies in the microstructural reinforcement it brings to the macrostructural conclusion reached in 3.6 above. Specifically, at the triadic center of the Pentateuch (Ex 25–40) lies a triadic central panel (Ex 32–34) that itself pivots on a centerpiece (Ex 33:7–23) that features a “tent of meeting” (!) wherein Yahweh's glorious presence is displayed through a mediator in the midst of a called-out people whose very existence is defined by and depends upon that dwelling presence. And just as the pentateuchal introduction (Gen 1:1–11:26) consists in creation, fall and re-creation (or blessing, forfeiture and preservation), so the “Unfolding Drama” (Gen 11:27–Num 36:13) finds a hub in a microcosm (Ex 25–40) of tabernacle, antitabernacle and tabernacle (or instruction, destruction and construction). Read in this light, the story of the golden calf and its aftermath is only apparently intrusive. In the narrative strategy it highlights a crucial point: “The *real* crisis, for which the story of the golden calf is only the cause, consists of

the destruction of the tablets that were given by Yahweh *in conjunction with his instruction for the sanctuary*" (Knierim, 364; end italics added). Moreover, while Yahweh's plan will be accomplished through sinners, people who are by nature disobedient and rebellious need more than laws; they need Yahweh's faithful mediator, indwelling presence, forgiving grace and revelatory word—all *tabernacle* themes, all prominently displayed in Exodus 32–34 and all awaiting fulfillment beyond the border of the Pentateuch's final page.

3.8. The Sinaitic Role of the Leviticus Laws. The details of Leviticus 7:37–38; 26:46; and 27:34 (cf. Lev 25:1) have not received the attention due their importance for discerning structure in this third and final panel in the Sinai narratives. The common lexical elements are: (1) "This is/these are" (*zō't/ʿelleh*); (2) "the law/laws/commands" (*tôrâ/tôrôt/mišwôt*); (3) "that Yahweh commanded Moses" (*ʿāšer šiwwâ yhw̄h ʿet mōšeh*; Lev 26:46 has "that Yahweh gave . . . in the hand of Moses" [*ʿāšer nātan yhw̄h . . . bēyad mōšeh*]); (4) "at Mount Sinai" (*bēhar sinay*; Lev 7:38 adds "in the desert of Sinai" [*bēmīdbar sinay*]); (5) "when he commanded/between him and/for the children of Israel" (*šawwōtō ʿet/bēnô ūbēn/ʿel bēnē yisrāʿel*). These literary-linguistic details serve two purposes. First, they support the correlative canonical-compositional and thematic-theological strategies by maintaining an unmistakable narrative focus on Sinai (see 3.4 above), a point made all the more remarkable by the precise locating of Yahweh's speaking to Moses *mēʾohel mōʿed* ("from the tent of meeting") rather than from Sinai in Leviticus 1:1 (i.e., clearly the Sinai notices in Leviticus serve purposes beyond mere itinerary reportage). Even with the sanctuary in Israel's midst and the distance between Yahweh's and the people's locations thereby removed (cf. Ex 19–20), Leviticus is meant to be read as part of the Sinai pericope, subject to the limitations of that earth-bound paradigm.

Second, the clustering details of Leviticus 7:37–38; 26:46 and 27:34 function as compositional road signs marking off the material into three blocks of Yahweh's instructions through Moses to Israel at Sinai. These concern the formal system of worship (Lev 1:1–7:38), the life of worship (Lev 8:1–26:46) and the proper valuation of items consecrated to the Lord in worship (Lev 27:1–34). The exceptional and only addi-

tional mention of Sinai in Leviticus 25:1 simply signals the two-chapter conclusion to the large inner frame. The narrative of Leviticus, then, depicts a system and practice of worship appropriate to the Sinai paradigm whereby both priests and people are instructed on how they might conduct themselves in a manner befitting a community centered in the tabernacle and so ensure the blessing of Yahweh's indwelling presence. Organized in this way, Leviticus effectively brings to a close the Sinai narratives that began back at Exodus 19:1, in which three fundamental provisions for the blessing plan have been delineated: a vocation-defining covenant (Ex 19–24) fulfilled in a God-indwelling sanctuary (Ex 25–40) preserved by a holiness-maintaining worship (Lev 1–27). In this connection it is apparent that the tabernacle exists less in the service of worship than worship in the interest of the tabernacle, providing a means whereby God's people could abide in God's presence (cf. Ex 40:34–38). It is for this reason that tabernacle concerns remain central in the post-Sinai narratives (Num 1–36), where the essential pentateuchal vision of Yahweh's dwelling in the midst of a people encamped around the sanctuary continues.

3.9. Numbers. At least some of the issues that make Numbers notoriously defiant of structural analysis (see the introductions and commentaries) evaporate when the narrative in its entirety is read from the perspective of a post-Sinai prospect (see 3.4 above)—the aftermath of Sinai following on the heels of a deeply ingrained future orientation established in the pre-Sinai narrative promises. Functioning more at the level of subdivision than overarching structure, the much-discussed chronological and geographical markers are subordinated to the larger theological-thematic concerns of the blessing plan. Will Yahweh's elected and delivered people—vocation enacted, sanctuary erected, worship exacted—enter the fullness of their heritage in covenant and so discharge their *raison d'être* in creation? In this light, D. T. Olson's proposal (see Numbers, Book of) of a bipartite structure built on the framework of the two census reports (adapted in the outline above) enables the spotlight to fall upon the overarching issues—the effects of disobedient unbelief (first generation, Num 1–25) and the prospects of obedient faith (second generation, Num 26–36). This sets before the pentateuchal reader a twofold para-

digm that compels a decision between faith-obedience-blessing and unbelief-rebellion-forfeiture of blessing. Moreover, the dominant focus of Numbers on the nation's organization around the tabernacle and its concerns (esp. Num 1—10) continues the conviction of the earlier narratives on the heart of the matter: Israel's place and participation in God's blessing plan is to be fulfilled in a campaign mobilized around the sanctuary, with Yahweh in the lead—a "sanctuary camp campaign" (Knierim, 386).

3.10. Deuteronomy. The Pentateuch concludes with an interpretive retrospect and prospect, a commentary of sorts—selective in scope, theological in orientation, homiletic in style, hortatory in language, prophetic in presentation and eschatological in outlook. Following a short introduction (Deut 1:1-5), which details the time and place of Moses' farewell messages and clarifies their purpose (Deut 1:5, *hō'il mōšeh bē'er 'et hattôrâ hazzō't*: "Moses undertook to expound this Torah"), Deuteronomy consists of three major blocks of material: a retrospective survey of key narrative developments in Exodus—Numbers (Deut 1:6—3:29), an interpretive (innerbiblical) application of various *tôrôt* for the new generation (Deut 4:1—28:68) and a prospective orientation to things yet future—the vision of "new covenant" blessings following a period of apostasy and *exile (Deut 29:1 [MT 28:69]—34:12). These divisions bear more than a superficial correspondence to the principal concerns of the pre-Sinai, Sinai and post-Sinai narratives: a people of blessing elected and preserved (so Deut 1:6—3:29; cf. Gen 12—Ex 18, with new threats and glimmers of hope in Num 1—25), provisions for blessing (so Deut 4:1—28:68; cf. Ex 19—Lev 27) and the prospect of blessing following disaster (so Deut 29:1 [MT 28:69]—34:12; cf. Num 1—36). By engaging the pentateuchal reader to focus on *meaning as message*, meant to be *heard and lived and awaited*, the "applied theology" (or "*preached law*," Miller, 12) of Deuteronomy provides for the whole "the sense of an ending" (Fretheim 1996, 53-58) that is as hermeneutically indispensable to an understanding of the Pentateuch as it is foundational to the books that follow. These observations confirm earlier suspicions that the Pentateuch is structured along theological-thematic lines that point beyond its own borders to the fulfillment of a yet-unrealized blessing plan that will include, among other things, a new heart (Deut 30:1-20),

a new creation (Deut 33:26-29) and the distant anticipation of a new prophet like Moses (Deut 34:5-12). In this way, Deuteronomy brings an ending to the Pentateuch that is decidedly *opened*. Moreover, in Deuteronomy the ending meets the beginning (Fretheim 1996, 56-58), as multiplied verbal and thematic links forge an inclusio around the whole (e.g., Gen 1:2 || Deut 32:10-11; Gen 1:26-27 || Deut 4:32; Gen 2:15-17 || Deut 30:15-20; paradise lost || Promised Land anticipated; etc.), which becomes, then, the canonical segue to what follows. It will be for the Prophets to sharpen the pentateuchal vision of God's universal blessing plan by projecting it onto an eschatological screen that awaits apostolic interpretation.

LOT

According to the Genesis tradition, Lot was the son of *Terah's third son, *Haran, and the nephew of Abram (Gen 11:27). Following the *tōlēdōt* structure of Genesis (see Genesis, Book of, §1.1), Lot is known in the Pentateuch only within the framework of the *Abraham narrative (Gen 11:27—25:11). At the narrative's outset, Lot moves from *Ur to Haran with Terah because of the death of his father; at the narrative's conclusion, Lot fathers two sons by his two unnamed daughters. These two sons are identified as the progenitors of the Moabites and Ammonites. In Deuteronomy Yahweh instructs Israel not to harass the Moabites and Ammonites and not to make war with them since they were the "sons of Lot" (Deut 2:9, 19). The enigmatic triple reference to "righteous" Lot (2 Pet 2:7-8) provides an ironic reading of the Lot component of Genesis.

1. Survey of Lot Studies
2. Lot in the Abraham Narrative
3. Moabites and Ammonites
4. Conclusion

1. Survey of Lot Studies.

Analyses of the Lot material have generally taken the approach of *source criticism (von Rad), *tradition criticism (Noth) or, more recently, literary analysis of portions of the Lot tradition (Loader) and intertextual studies (Penchansky). Cultural (Matthews) and ethical (Smith) studies have also joined the ranks of the various approaches. Holistic, integrative treatments that address overall narrative rationale and composition are limited (Abela; Spina).

2. Lot in the Abraham Narrative.

2.1. Introduction. Typical for an analysis of the Abraham-Lot story's purpose is the contrast of Abraham as a man of faith and nobility with Lot as a man who gradually moves away from principled beginnings and whose life ends in ignominy. Such a treatment is the result of reading the accounts either in isolation or only at the Lot-Abraham level rather than addressing both the greater question of the Lot material's contribution to and assimilation into the larger Abraham narrative and the latter's integration into the more comprehensive Genesis narrative.

While views differ on this point, D. J. A. Clines, T. D. Alexander and others have shown that discussion of "seed"/"descendants" (i.e., heir) is generally a prominent narrative concern throughout Genesis. In the Abraham narrative, the identity of the one through whom Yahweh will actualize the covenant promise ("I will make you a great nation," Gen 12:2) to the childless patriarchal family is a particular narrative apprehension.

The location and content of the four Lot components of the Abraham narrative seem to provide clues to understanding how they function within the larger narrative setting. The presence of narrative pairs in this material is a point that has long been observed (e.g., two *Sarah-as-sister scenes: Gen 12:10-20; 20:1-18; two accounts involving Sarah, *Hagar and *Ishmael: Gen 16:1-16; 21:1-34). In the case of the Lot material, two "paired sets" have been integrated, one set in each half of the Abraham story. That the Lot accounts are framed by the two Sarah-as-sister stories indicates that the Lot material has purposefully and artfully been woven into a larger narrative context; that Lot is last seen narratively prior to Isaac's birth is significant for the overall Abraham/Genesis narrative agenda. In an engaging manner, the earlier Lot stories suggest and hold open the possibility of Lot as Abraham's heir. It is not until the second pair of Lot narratives (Gen 18—19) that Lot is narratively eliminated as the potential heir.

2.2. Prologue to the Lot Narrative. Lot's remarkable role in the Abraham narrative is signaled by the narrator's inclusion of his name in the *tōlēdōt* statement of Genesis 11:27, where he is introduced as the son of Haran and the grandson of Terah. The notice regarding Haran's death in Ur (Gen 11:28) sets up the further observation that Lot was part of Terah's clan that migrated from Ur to Haran (Gen 11:31). Lot's inclusion in the narrative description of Abram's entourage that journeyed from Haran to Canaan (Gen 12:5) anticipates his eventual reappearance in the narrative. Noteworthy, however, in these introductory inclusions (Gen 11:27, 31; 12:5) is the fact that Lot is always secondary to his uncle in the narrative presentation.

2.3. The Lot Tradition, Part 1 (Gen 13—14). Interclan conflict and separation initiate the Lot tradition's first pairing (Gen 13); international conflict, capture and rescue are the primary in-

redients in its conclusion (Gen 14). In both the account of the move from Egypt to the Negev (Gen 13:1) and the description of individual possessions (Gen 13:5; note the use of *ṛēkûš*, “property, goods,” in Gen 13:6; cf. 12:5; 14:11-12, 16, 21), Lot continues to occupy a secondary place.

The description of the choice Abram gives Lot (“left”/“right”) and Lot’s subsequent decision is striking. L. R. Helyer argues that the options given Lot by Abram were between “the north” and “the south”—both sections of Canaan’s hill country. Lot’s alternative selection represents a third region that was not necessarily included in the initial proposal and that, of course, prepares the stage for all that follows.

The description of “all the circle of the Jordan” (*kol kikkar hayyardēn*, Gen 13:10) as “like a garden of Yahweh, like the land of Egypt” (Gen 13:10) is noteworthy. Is such a description intended merely to draw attention to the region’s fertility, or is it also intended to strike ominous tones, in light of earlier narration involving each? Given the immediately preceding narrative aside (“before Yahweh had destroyed Sodom and Gomorrah,” Gen 13:10), it appears to function as a double entendre inasmuch as each (the garden of Yahweh; Egypt) has previously been associated with fertility and prosperity (Gen 2; 12) as well as inappropriate conduct (Gen 3; 12). Consequently, Lot’s narrated preference for the area carries with it a sense of foreboding. The closing statement of this first movement (Gen 13:13) as well as subsequent scenes (Gen 14; 19) lend credence to such a reading.

It has been suggested, on the one hand, that Genesis 13 is not so much about Abram’s nobility as about his concern for “living space and sustenance” (Westermann, 176) as well as his perception that separation is appropriate for survival. On the other, it is read as “Lot’s elimination as heir to the covenant promise” (Helyer, 85). It is more appropriate, however, to assert that this is the contribution of the *entire* Lot tradition, not merely Genesis 13, to the Abraham narrative.

The second Lot account is set in the context of an international incident involving four Mesopotamian kings who, in coalition, move west to confront a coalition of the five kings of the cities of the plain (Gen 14:1-10). The narrative’s final scene (Gen 14:17-24) has Abram dealing with the king of Sodom and the king-priest

*Melchizedek. Framed by these two episodes is the account of Lot’s capture by the Mesopotamian kings and his liberation by Abram.

Typically, an approach to Genesis 14 will focus on two different concerns: the historical context and questions related to the opening scene, such as the identity of the Mesopotamian kings (Gen 14:1-10), and the Melchizedek-Abram encounter at the end (Gen 14:17-24). While it is entirely appropriate to give attention to the historical and theological issues that Genesis 14 raises, their immediate significance directly and ultimately relates to the larger narrative issue of Abram and Lot. The opening scene narratively sets up the account of Abram rescuing Lot, and the closing scene is the result of the storied rescue. Together, they form a frame around the central, cryptic account of Lot’s capture and deliverance; this scene advances the preceding account of separation (Gen 13). Thus, while Abram—as opposed to Lot—is the dominant human character in Genesis 14, Abram is presented as intervening on Lot’s behalf. That intervention and the successful rescue obviously demonstrate that Abram has not disassociated himself from Lot, although the final scene (Gen 14:17-24) suggests that he does disassociate himself from Sodom’s king. Curiously, Genesis 14 does not specifically describe Lot’s return to Sodom subsequent to his rescue; that he does return is evident from his presence there in the Genesis 19 development. This narrative lacuna at the end of the first movement, however, seems intended to preserve the potential of Lot as Abram’s heir.

2.4. The Lot Tradition, Part 2 (Gen 18–19).

Genesis 15–17 temporarily puts the Lot story on hold and advances the Abraham narrative significantly. By the end of Genesis 17 “Abram” has become “Abraham,” and his heir has been identified specifically and proleptically as *Isaac. This anticipation of Isaac introduces a complication that must await resolution until the end of the Lot tradition. Genesis 18:1-15 moves one’s attention from these Isaac developments back to the second half of the Lot story. It is another example of a narrative text that is easily and often misread when isolated portions of it are focused on without regard for the larger narrative agenda. Readings of Genesis 18:1-15 tend to emphasize the visit and the identity of the individuals who announce the future birth of Isaac. This is, to be sure, in the narrative and is

to be treated appropriately. But the men who visit with Abraham and Sarah are on a journey with a specific destination: Sodom and Gomorrah. On their way to enacting judgment on those cities, they visit with Abraham and Sarah to announce the birth of Isaac. Once their visit with the patriarch is completed, they continue their journey to Sodom and Gomorrah, where Lot lives.

The two major components constituting the Lot tradition's second part antiphonally echo, in reverse order, dynamics that were prominent in the first half. While Lot again is not specifically part of the Genesis 18 narration, it is apparent that he is still the object of Abrahamic concern in Genesis 18:16-33. Just as Abram intervened for Lot by rescuing him in the second half of the first part of the Lot story (Gen 14), so Abraham's continuing concern for Lot is evidenced through his intercession on Lot's behalf. The impending doom of Sodom and Gomorrah is linked to "the outcry" (*zē'āqā*, Gen 18:20) of those cities and their "very great sin" (Gen 18:20). The former is reiterated in Genesis 19:13 (*šē'āqā*; see also Gen 18:21), while the latter is demonstrated through the narration of Genesis 19:4-11.

Genesis 19, the final component of the Lot tradition, consists of several scenes. Genesis 19:1-3 stands as a clear parallel to the "welcoming scene" of Genesis 18:1-5; another important narrative connection between the two components is thereby created. Narration of the confrontation between the city's men and Lot and his guests (Gen 19:4-11) both provides specificity to the evaluation of Genesis 18:20 and sets the stage for the anticipated cities' destruction (Gen 13:10). Obvious linkage, consequently, is established between the two movements of the Lot narrative: Genesis 13—14/18—19.

Separation, launched in Genesis 13, culminates in Genesis 19 with Lot's separation from Sodom, his escape to Zoar and his eventual move to the mountains (Gen 19:30) that he initially sought to avoid (Gen 19:19). Irony in Lot's desire to escape to Zoar rather than "the mountain" resounds in the final scene, where he is "dwelling in the mountains . . . because he was afraid to dwell in Zoar" (Gen 19:30). Furthermore, his explanation for preferring Zoar over the mountains ("lest the evil overtake me and I die," Gen 19:19) finds ironic resonance in his fathering sons by his two daughters (Gen 19:32-

38). Resolution of the tension between Lot's potential to be Abraham's heir and the announcement of Isaac as such (Gen 17) is finally reached with the portrayal of the ignominious origin of the Moabites and the *bēnē 'ammôn* ("sons of Ammon").

Just as a deft transition from the beginnings of the Abraham narrative was created to the Lot tradition's first half, so an equally adroit shift is made from the Lot tradition's second half to the continuation of the Abraham narrative. Abraham's narrated intercession on behalf of "the righteous" (*šaddiq*, Gen 18:23) of Sodom and Gomorrah certainly prepares the reader for his intercession for the "righteous" *Abimelech (*šaddiq*, Gen 20:4; cf. 20:7, 17-18). Furthermore, Lot's narrative disappearance (Gen 19) appropriately prepares for Isaac's appearance (Gen 21).

3. Moabites and Ammonites.

Except for the Lot tradition's final etiological explanation (Gen 19:36-38) and the Deuteronomic account of Israel's journey northward along the eastern plateau, as they move toward Canaan, the two sons of Lot, Moab and Ben-ammi, are not included in the pentateuchal narrative. However, numerous references to Moab as an existing people-group are found in the Pentateuch, particularly in Numbers and Deuteronomy. They are generally referred to simply as "Moabites" (Deut 2:11, 29; 23:3 [MT 23:4]), though *Moses' Song of the Sea celebrates the trembling of "the leaders of Moab" (Ex 15:15). Similarly, in the context of the *Balaam narrative reference is made to "the elders of Moab" (Num 22:7), and the Israelites are narrated as having sexual relations with "the daughters of Moab" (Num 25:1). Such allusions recognize a people living on the eastern plateau that bear the name of Lot's son by his eldest daughter. Likewise, the Pentateuch contains territorial references that link this people-group to the region that they occupied: "the border of Moab" (Num 21:13, 15); "the desert of Moab" (Deut 2:8); "the city of Moab" (NRSV Ir-moab; Num 22:36); "the territory of Moab" (Num 21:20) and "the plains of Moab" (Num 22:1). Most commonly identified as "the territory of Moab" is the plateau situated between the Arnon (Wadi el-Mojib) and Zered (Wadi el-Hesa) Rivers and the western escarpment, which drops off into the Rift Valley and the eastern desert. Texts such as Jeremiah 48

and others, however, indicate that the Arnon was not always the northern border.

Parallel references to “the Ammonites” (Deut 2:20; 23:3 [MT 23:4]) appear in context with the Moabites. The only other such appellation in the Pentateuch is “the sons of Ammon” (*bēnē ‘ammôn*, Num 21:24; Deut 2:19, 37; 3:11, 16). No other references using the title are attested in the Pentateuch. Ammonite territory, at its optimum, extended northwest of Rabbath-ammon to the Jabbok River and eastward to the desert. The southern limits seem to have correlated with Moab’s northern border, and the western confines were influenced by the Amorites.

Scholarly interest in these people-groups is generated, in part, by the accounts of their contacts with the Israelites, preserved particularly in the Former Prophets, as well as their inclusion in the oracles against nations of certain prophetic books (Isaiah, Jeremiah, Ezekiel, Amos). Various current survey and archaeological excavation projects in both ancient Moabite and Ammonite territories are extending the boundaries of our present understanding of these groups. A more precise delineation of Moab’s northernmost border and Ammon’s western and southern borders and the cultural history and heritage of each are among the areas that are gradually taking sharper focus as a result of these ongoing investigations.

4. Conclusion.

Without the skillfully integrated Lot material, the Abraham narrative would not only have a somewhat truncated shape but would also lack the color, mystery and suspense that the Lot story brings to it. More important, however, the carefully integrated and strategically located Lot accounts not only dynamically advance the Abraham narrative’s storyline but also develop one of its major theological issues: the identification of Abraham’s heir and *covenant recipient. Given the obvious concern in Genesis for “seed,” being fruitful and multiplying, and nations, the Lot material also explains the origin of people-groups whose stories will play a signifi-

cant role in the interpretive history of the Former Prophets.

MANNA

Manna (Heb: *mān*; LXX: *man* or *manna*), the breadlike food that God graciously provided the Israelites during their forty-year *wilderness wanderings, is discussed in two main narratives in the Pentateuch: Exodus 16 (Ex 16:15, 31-35) and Numbers 11 (Num 11:6-9). It is also mentioned in Deuteronomy 8:3, 16, as well as elsewhere in the OT (Josh 5:12; Neh 9:20; Ps 78:24). These latter references, however, as well as additional allusions (e.g., Ps 105:40; Wis 16:20-21), seem to be dependent on the Exodus and Numbers narratives. The attribution of the pentateuchal texts to the various *source-critical strata is highly debated (see Coppens; Malina; Maiberger 1983b; Ruprecht).

1. Etymology of the Word
2. Manna as Described in the Bible
3. Manna and the Natural Sciences
4. Manna as a Theological Substance
5. Manna in Later Literature

1. Etymology of the Word.

The etymology of *mān* is much disputed. An early tradition derives it from *mnh*, thereby meaning “gift,” but more recent linguistic work has opted for other Hebrew roots (e.g., *myn*, a verb meaning “to separate,” with the noun form thus indicating “separation, secretion”) or from cognates in other languages. Arabic *mann* might be especially important in this regard, since it is still used by indigenes to refer to the tamarisk “manna” of the Sinai Peninsula (see 3 below) and generally refers to something thin or fine (Maiberger, *TDOT* 8.392). (Hebrew *daq* has a similar connotation and is used of manna in Ex

16:14.) The question of Exodus 16:15 (*mān hūʾ*: “What is it?”; cf. *mah-hūʾ* later in the same verse) has been taken to be the folk etymology of *mān*, though some have treated it as a declaration (“It is manna!”; cf. Schult). A question makes better sense of the context, however, and *mn* is attested with interrogative sense elsewhere in Semitic (see *HALOT* 2.596-97; *DNWSI* 2.648; contra BDB, 577; Maiberger, *TDOT* 8.394).

2. Manna as Described in the Bible.

In the biblical texts, manna is variously described as a fine flaky substance left behind after dew (Ex 16:14), which fell with the dew at night (Num 11:9; cf. Ps 78:24) but melted in the sun (Ex 16:21); as bread (Ex 16:4, 8, 12, 15; cf. Deut 8:3) or grain (Ps 78:24); as something like coriander seed (Ex 16:31, Num 11:7); white (Ex 16:31) or the color of bdellium (Num 11:7; cf. Gen 2:12); and as tasting like wafers made with honey (Ex 16:31) or oil (Num 11:8).

According to the texts, the Israelites were allowed to gather only enough manna for one day, but this proved sufficient. Anything kept until morning “bred worms” and spoiled (Ex 16:20; cf. Ceccherelli’s derivation from Akkadian *mūnu*, “worm, caterpillar” [also in Old Aramaic, *DNWSI* 2.647]). The Israelites could gather twice as much manna on the sixth day, in preparation for the *sabbath, as the manna was not to be found on that day (Ex 16:22-30). The miraculous provision of the manna was celebrated by keeping an omer of the substance in the ark (Ex 16:32-34). The Israelites are said to have eaten this “food” for forty years—the entirety of the wilderness sojourn—until they entered Canaan (Ex 16:32), when it ceased (Josh 5:12). Manna was either ground or beaten before it was boiled or baked and made into cakes (Ex 16:23; Num 11:8). Some traditions ascribe to the manna a

wonderful taste (Wis 16:20-21), perhaps given its heavenly origin (Ps 78:24-25; cf. Ps 105:40; 2 Esdr 1:19), but others reflect the Israelites' great distaste for it (Num 11:6; cf. Num 21:5).

3. Manna and the Natural Sciences.

The biblical description of manna is tantalizing: detailed enough that it has inevitably led scholars to attempt to identify it with the help of the natural sciences, opaque enough that the results of such investigations are equivocal. There are at least three major options.

The older view is that manna was a species of lichen (*Lecanora esculenta*), no longer indigenous to Sinai, that grows on rocks and produces fructifications light enough to be carried by the wind. However, these "rains" (cf. Ex 16:4; Ps 78:24) are rare, typically happen in the daytime, and are small in quantity. A second perspective connects manna with the gum resin produced by flowering trees, either *Alhagi maurorum* (Sinai manna) or *Fraxinus ornus* (flowering ash). The third option is by far the most popular, namely, to connect manna with *Tamarix gallica mannifera* (the tamarisk tree; this identification is as early as Josephus and Pliny). Previously, scholars held that manna was an exudation from this tree, perhaps caused by punctures made in the bark by small insects. It is now known, however, that the substance is not a product of the trees, but is the excretion of two closely related species of scale insects: *Trabutina mannipara* Ehrenberg and *Najococcus serpentinus* Green. The excretions are excess carbohydrates extracted from the tree sap that the insect does not need. Rapid evaporation in the desert air causes the drops to solidify into solids (no larger than a pea) that turn a whitish, yellowish or brownish color (Bodenheimer; Maiberger 1983b, 8.392-93). This substance is produced for a relatively short period of time: anywhere from three to ten weeks, usually in May–June, the quantity dependent on the yearly rainfall.

Obviously, there are a number of correlations between the third option and the biblical account, but even it is not comprehensive. This has led B. Golden to conclude that biblical manna involved all of the above substances, because the biblical descriptions of its physical properties and means of preparation are not applicable to only one. Be that as it may, perhaps the most significant result of this research is the confirmation that the biblical numbers for the population of Israelites in the Exodus are hyper-

bolic (see Historical Criticism), as the naturally occurring "manna"—whether lichen, tree exudation or insect excretion—would hardly support a large group. Thus, one should conclude that either the numbers are hyperbolic or that the giving of the manna occurred but once or a limited number of times (see Coppens; Malina). Nevertheless, these scientific approaches have also functioned in a reductionistic fashion, making the miraculous deliverance (in timing if not in origin) of this food to Israel nothing more than a natural and commonly occurring biological process. Of course, it may very well be that, but the biblical text makes of manna much more; indeed, it uses manna to make several significant theological points.

4. Manna as a Theological Substance.

Paramount among these theological points is that manna *came from God* (note Neh 9:20: "your manna"). God gave Israel this food and did so for a reason: to humble and test them (Deut 8:3, 16); to teach them that they must rely on God for life (Deut 8:3); and to see if they would keep God's instruction (Ex 16:4), especially concerning the sabbath (Ex 16:22-30). In the Exodus and Numbers narratives manna is associated with the complaining of the people in the wilderness. Yet despite the complaints, the manna was graciously and miraculously provided—in the right amount, at the right time and for the duration of the wandering. So, while Israel learned it must depend on God in this experience, it also learned that their God was dependable. The memorial of this experience—the jar of manna in the ark and the narratives in Scripture—reminded Israel to continue to trust Yahweh in future times of trouble. It may also have provided an impetus to care for the needy (Brueggemann) as the omer of manna gathered was enough for each who gathered; there was no shortage (Ex 16:18; cf. 2 Cor 8:1-15). So clearly, no matter the testing involved, God gave Israel manna "in the end to do you good" (Deut 8:16).

5. Manna in Later Literature.

The theological points found in the OT texts are developed further in later materials, including the Apocrypha, the Dead Sea Scrolls, pseudepigraphal writings, Josephus, Philo, the midrashim, the targumim, rabbinic documents (e.g., *b. Yoma* 75b) and the NT (Jn 6:31, 49; Heb 9:4; Rev 2:17; cf. 1 Cor 10:2-4). Typically there are

both similarities (some quite marked) and differences in the ways these materials pick up on the OT manna traditions (see further Borgen; Dumoulin; Kugel; Malina; Meyer, 4.462-66; Vermes).

MELCHIZEDEK

Melchizedek, the king of Salem and a *priest of God Most High, appears briefly in Genesis 14:18-20 to bless *Abram after he returned from a victory over a coalition of kings led by Chedorlaomer, king of Elam. In addition to Genesis 14, Melchizedek is mentioned only once elsewhere in the OT. In Psalm 110:4, a royal psalm, the Davidic king is identified as "a priest forever after the manner of Melchizedek." The writer of the NT book of Hebrews pays considerable attention to the figure of Melchizedek in developing a distinctive argument for the superiority of the priesthood of Christ. The Dead Sea Scrolls and other texts in early Judaism also contain much discussion and speculation on the origin and character of Melchizedek.

1. Prosopography
2. Historical Account
3. Messianic Application

1. Prosopography.

Much of what is known about Melchizedek comes from the prosopographical data offered in the biblical text.

1.1. Name. Although the proper name *malki-*

šedeq is traditionally interpreted as “king of righteousness” (Heb 7:2), scholars disagree on whether it was originally a Northwest Semitic personal name (theophoric or descriptive) or a royal epithet. Complicating the matter is a grammatical issue regarding the *î* suffix on the first element *malkî*. The suffix may simply be the first singular possessive translated as “my king” or an archaic genitival element meaning “king of.”

Theophoric names contain a divine element as one part of the name. If Melchizedek is a theophoric name, which element is theophoric? Both *mlk* and *šdq* are said to be attested as divine names in ancient Near Eastern literature (Noth; Rosenberg). Thus, the name could mean either “(my) Malk/Melek is just” or “*Šedeq* is my king.” Similar theophoric names are found throughout the ancient Near East (Fitzmyer, 311 n. 27) and the OT (e.g., *malkîʿel*, “El is my king” [Gen 46:17]; *malkiyyāh* or *malkiyyāhû*, “Yahweh is my king” [Ezra 10:31; Jer 38:6]; compare also *yēhōšādāq* and *yōšādāq*, “Yahweh is just” [Hag 1:1; Ezra 3:2]).

Melchizedek can also be read as the simple descriptive name “my king is just” (i.e., taking the first element, *mlk*, as an epithet and the second, *šdq*, as an adjective). Adoni-zedek, the king of Jerusalem in the time of *Joshua, had a similar type of name (Josh 10:1, 3), and *ʾādōnî-šedeq* may also be read as a theophoric or descriptive name. It can either mean “*Šedeq* is my lord” or “my lord is just.”

On the other hand, Melchizedek and Adoni-zedek may have been Canaanite royal epithets. E. A. Speiser has argued that Melchizedek is the Canaanite equivalent of the Mesopotamian title *šar mēsarim*, “the just king” (Speiser, 318 n. 24). This would suggest that Melchizedek is a royal title rather than a personal name.

The use of *mlk šdq* as a descriptive title is attested a few times in the Northwest Semitic world. A fourteenth-century B.C. letter addressed to the king of Egypt discovered at Ras Ibn Hani (KTU 2.81) contains several royal epithets applied to the *Pharaoh. Included in this salutatory list are such titles as *mlk rb* (“great king”) and *mlk mšrm* (“king of Egypt”), as well as the phrase *mlk šdq* (“just king”). The tenth-century B.C. inscription of Yehimilk, king of Byblos, claims that he is *mlk šdq wmlk ysr*, “a just and upright king.” Later in the fifth century B.C., the inscription of Yehawmilk, also king of Byblos, contains the phrase *k mlk šdq hʾ*, “for he is a just king.”

1.2. King of Salem. Genesis 14:18 describes

Melchizedek as *mlk šālēm*, “king of Salem.” Psalm 76:2 (MT 76:3) places Salem in parallelism with Zion, suggesting that Salem is to be identified as Jerusalem. This identification is also affirmed in the Targums, the Dead Sea Scrolls (1QapGen 22:13), Josephus and early rabbinic and Christian literature (McNamara, 9). In the Amarna tablets Jerusalem is spelled *urusalim*, possibly reflecting a combination of the Sumerian word for city (*uru*) and the name Salem.

In A.D. 397 Jerome rejected the view that Jerusalem was Salem. He argued that Genesis 14:18 referred to Sālim, a town located in Samaria, northeast of modern Nablus.

However, the phrase may not be topographic at all. W. F. Albright proposed emending the text to read *mlk šēlōm<ōh>*, “a king allied to him” (Albright, 52). It is also noteworthy that Hebrews 7:2 appears to interpret *mlk šālēm* as a title or royal epithet meaning “the king of peace.”

1.3. A Priest of God Most High. Melchizedek is also identified as *cōhēn lēʾel ʿelyōn*, “a priest of God Most High.” The double divine epithet El Elyon (“God Most High”) is only attested in the OT at Genesis 14:18–22 and Psalm 78:35. Later it resurfaces in the Qumran literature. The single name Elyon (“the Most High”) occurs by itself a number of times in the OT, as well as frequently in the Psalms, where it is always synonymous with Yahweh.

Melchizedek declares El Elyon to be “possessor of heaven and earth.” Several scholars regard this affirmation as evidence that Elyon was the primary deity worshiped at Jerusalem during pre-Israelite times. In the MT Abram’s reply to the king of Sodom in Genesis 14:22 is almost identical to the affirmation of Melchizedek except that *yhwh* is placed before *ʾel ʿelyōn*: “Yahweh—El Elyon, possessor of heaven and earth.” Some consider Yahweh to be an editorial gloss because it is absent in the Septuagint, Syriac and *Genesis Apocryphon*.

2. Historical Account.

Understanding Melchizedek’s dealings with Abram is complicated by its presence within the larger account of Abram and the four kings in Genesis 14. The tendency among current critical scholars is to view the Melchizedek passage as a later interpolation (but see McConville for a helpful alternative).

2.1. Abram’s Victory. Abram became involved in the conflict between the four foreign kings

and the five kings of Palestine because the foreign kings had seized his nephew *Lot and carried him away. Along with his Amorite allies (Mamre, Eshcol and Aner), Abram pursued the retreating kings to Dan. In a night battle, Abram routed them and recovered Lot and all the goods taken in the initial battle.

2.2. The Blessing of Melchizedek. On Abram's return the king of Sodom came out to meet him in the Valley of Shaveh (Gen 14:17). It is at this point that Melchizedek, king of Salem, appeared to meet Abram with a gift of bread and wine. Then Melchizedek uttered a *blessing. First, he blessed Abram, and then he blessed El Elyon, ascribing to El Elyon the actual delivery of Abram's enemies into his hand.

2.3. Abram's Tithe. The end of Genesis 14:20 states simply "and he gave him a tithe from all." From the MT it is unclear who gave a tithe to whom. The subject of the preceding verb is Melchizedek (Gen 14:19a). Traditionally, it has been interpreted that Abram paid a tithe to Melchizedek (Heb 7:4, 9). However, after this last statement nothing else is said or mentioned about Melchizedek in the rest of the passage.

3. Messianic Application.

3.1. Messianic Interpretation. The combination of the enigmatic figure of Melchizedek in Genesis 14 and the reference to him in the royal Psalm 110 gave rise to a messianic interpretation in the NT. The greatness of Melchizedek is suggested by the two facts that he blessed Abram and Abram paid a tithe to him. The NT epistle of Hebrews points out that this shows the superiority of the Melchizedek priesthood over the *levitical priesthood (Heb 7:10). The Qumran text 11QMelch portrays Melchizedek as an archangelic figure like Michael. Melchizedek exacts the vengeance of God against Belial and then proclaims release for the sons of light. Later targumic literature identified Melchizedek with *Shem the son of Noah.

3.2. Meaning of the Text. Whether or not Genesis 14:17-20 is considered an interpolation or a precursor to messianic interpretation, the question of purpose must be asked. Why does the figure of Melchizedek appear at this point in the final form of the narrative? The actions and whereabouts of Melchizedek after his meeting with Abram are unimportant or irrelevant to the narrator. Instead, Melchizedek

functions as a foil for the king of Sodom. Melchizedek was the gracious king who demanded nothing and gave Abram refreshment and blessing. Abram responded in turn by giving a tithe.

The king of Sodom demanded the people freed from their captors. Abram responded by affirming an oath made to El Elyon, "possessor of heaven and earth," that he would not take anything belonging to the king of Sodom. The relationship between Abram and the king of Sodom is clearly not the same as that between Abram and Melchizedek. The narrative implies that Abram's behavior ultimately pleased the Lord (Gen 15:1).

MESSIAH

From the earliest traditions of Jewish and Christian exegesis onward, students of the Pentateuch have found references to the Messiah in the first five books of the OT. The passages that feature most prominently in this category are those concerning the conflict between the woman and the *serpent (Gen 3:15), the scepter that shall not depart from *Judah (Gen 49:8-12), the star and scepter coming from *Jacob/Israel (Num 24:17-19) and the *prophet like *Moses whom the Lord will raise up (Deut 18:18-19).

Since the middle of the eighteenth century scholars have become increasingly cautious about the messianic nature of these passages. This has led to a sometimes sharp divide. At one end of the spectrum one finds scholars who maintain that there are no messianic prophecies whatsoever to be found in the OT in general, let alone in the Pentateuch. At the other end of the spectrum are scholars who find numerous messianic prophecies throughout the OT, including the Pentateuch.

This article attempts to chart a way between these opposing views by looking first at the meaning of the word *messiah* and then at the use of the concept of “messianic expectations.”

1. Use of the Word *Messiah*
2. Messianic Expectations in the Pentateuch?

1. Use of the Word *Messiah*.

The word *messiah* is used in religious language today most often within the context of Jewish or Christian theology. It usually refers to an individual savior figure whose future coming was announced in the OT. While Jewish believers maintain that this person is still to come, Christians are convinced that a first-century person, Jesus, was in fact this Messiah. This usage of the word has its roots in the way the word was used in the Second Temple period, the period after the return from the exile in the sixth century B.C. through the destruction of the temple in A.D. 70, which overlaps with the NT period. It would be wrong, however, to assume that this is also the way the word was used in the OT.

The word *messiah* (and its modern language equivalents) is derived from a Hebrew form *māšiah*, which was used as either an adjective or a noun. The word meant “anointed” or “anointed one.” First the use of the word in the OT in general will be surveyed, and next the focus will be on its use in the Pentateuch.

1.1. The Old Testament. In almost all cases where it is used in the OT, the word *māšiah* is used in a compound phrase. When the word is used as an adjective, it is only found complementing the noun *priest* to create the phrase “the anointed priest.” As a noun the word is used only once on its own, and in that case without the article, “an anointed one” (Dan 9:25-26, where the referent of the word is identified by the next word as a “prince/leader”). In all other cases the noun is found in the compound phrase “the anointed of Yahweh” (once, “the anointed of the God of Jacob”) or in an abbreviated form, with a suffix replacing the divine name, for example, “his anointed.”

Usually found in the singular and referring to the king, this phrase is occasionally found in the plural to refer to the people of God portrayed as prophets (Ps 105:15; 1 Chron 16:22). It is perhaps worth pointing out that this usage is found in the representations of direct speech, and not in narrative. The related verb *māšah* (“to anoint”) is used with respect to both objects and persons. Persons who could be anointed were priests, prophets and kings. The act of anointing symbolized that God commissioned that individual for a specific task.

In earlier times the referent of the word “anointed (one)” was usually a contemporary figure (one well-known exception is 1 Sam 2:10). In times later than the OT the typical reference of the word became a future figure (so already once in the OT, in Dan 9:25-26, but there, unlike the later texts, without an article), usually a hoped-for king. Out of this latter use a special use developed in which the word could now also stand on its own, that is, without the complement of a divine name or a suffix and preceded by the article: “the Messiah.” This is how one finds the word in early Jewish writings, for example, the Dead Sea Scrolls, and its Greek equivalent is found in the NT (*ho messias* in Jn 1:41; cf. 4:25, the Hebrew word in Greek characters, explained by the Greek word *christos*, “Christ”).

1.2. The Pentateuch. In the Pentateuch the adjective/noun *māšiah* is used only four times, always complementing the noun *priest* and referring to an acting *priest in the present (Lev 4:3, 5, 16; 6:22 [MT 6:15]; this use corresponds with the use of the passive participle of the related verb in, e.g., Num 3:3). In Leviticus 4 one finds regulations for dealing with inadvertent sin with respect to people in general and then

also with respect to “the anointed priest,” in case he is the one who has sinned. In Leviticus 6:22 the phrase “the priest anointed in his place” is used with reference to the succession of one priest by another. The related verb (28 cases) is used for anointing persons (priests), food presented in an offering (unleavened wafers), the tabernacle and different parts of its furniture (the tent of meeting, the *tabernacle, the ark, *altar, the basin and its stand).

To sum up, the Hebrew word *māšīah* occurs only four times in the Pentateuch, never as a noun, but as an adjective describing a priest: “the anointed priest.” When the related verb *māšah* is used, the only category of persons with respect to whom anointing is mentioned is priests. Thus there is no obvious “linguistic” link with the postexilic use of the word *māšīah*.

2. Messianic Expectations in the Pentateuch?

In the earlier part of this article mention was made of the use of the word *messiah* in the Second Temple period. The origin of the expectations attached to the person to whom this word referred is a matter of debate. There are basically three positions. Some argue that the Second Temple period is the time in which one should look for the origins of what has been called “messianic expectations.” Others look to the period of the monarchy for the origins of these messianic expectations, either the time of the divided monarchy or the even earlier time of David and Solomon. Finally, some find messianic expectations starting from the very first part of the OT, that is, in Genesis, the first book of the Pentateuch. It is not an easy matter to resolve this issue. In particular it is extremely difficult to avoid circular reasoning. Within the scope of this article, the following observations may be made.

2.1. Definition. One of the most complex issues in the debate is the definition of phrases such as “the Messiah” and “messianic expectations.” As has been mentioned, the way in which the word *messiah* is often understood corresponds to the use of the word as it developed only after the books of the OT were written. The problem here is finding a definition of a word for a period (the OT period) in which the word has only started to develop its later sense.

In this article, the phrase “messianic expectations” will be used to refer to expectations focusing on a future royal figure sent by God who will bring salvation to God’s people and the world

and establish a kingdom characterized by features such as peace and justice. The phrase “the Messiah” is used to refer to the figure at the heart of these expectations. Perhaps it should be repeated here that this is a meaning of the word that developed only after the OT was written. As was shown above, in the OT the word was normally used not for a future figure but for a present one, sometimes a priest or a prophet, most often a king. It should also be noted that the way these phrases are used here takes its lead from the interpretation of the texts as they could be understood within the perspective of the first audience (as far as one can locate them in time and space) of the narrators, poets or prophets, not to the perspective of later audiences, including Jewish or Christian ones, who have found reasons to interpret a particular passage as pointing to the “Messiah.”

2.2. Word and Concept. One reason to trace the origin of messianic expectations to the Second Temple period is the fact that this was the time in which the word *messiah* received its technical meaning; in this usage the noun was preceded by the definite article: “the Messiah” (contrast “the anointed of Yahweh” or “his anointed,” the usual phrase in which the word is found in the OT). That this development happened in the Second Temple period is not an issue of much debate. It is a matter of confusing language and thought, however, to conclude on this basis that one can speak of messianic expectations properly only after a particular word was used to refer to the person at the center of these expectations. This would exclude the possibility that the concept of a messianic figure was already part of the mindset of the people of Israel even before the phrase “the Messiah” was used to express this concept.

2.3. Disappointment and Failure. Another reason to find the origin of messianic expectations in the Second Temple period is the conviction that the experience of the absence of a king in Jerusalem after the exile was the occasion for the emergence of messianic expectations. That is, the failure of the continuation of the Davidic monarchy after the exile led to the projection in the future of the idea of a coming king. What one can agree with in this view is the observation of the formative influence of notions such as disappointment and failure in the development of messianic expectations. However, it has been rightly pointed out by scholars that such notions were present already at an earlier stage.

2.4. The Eighth-Century Prophets. Already in the period of the monarchy one finds evidence of disappointment and failure. This is most striking in the prophets of the eighth century: Amos, Isaiah and Micah. In their prophecies of judgment they announced the coming of God's judgment over the kings reigning in their own time; at the same time in a number of their prophecies of salvation (though not in all) they saw a role for a new king, often modeled after David, in spite of the failure of the present occupant of David's throne and the resulting disappointment. This future king was in many ways an ideal figure who would meet the expectations of peace and justice, which many of the actual kings failed to meet. According to a number of scholars, it is most probably in this time in which judgment and salvation was announced to the house of David that one has to find the origins of messianic expectations.

2.5. The Dynastic Oracle. Going further back in time, one can observe that future kingship is evidently prominent in the so-called dynastic oracle in 2 Samuel 7. However, the prophet Nathan is talking about a succession of kings, not about one individual king, and the notion of an ideal king does not play a prominent role in the oracle. It has been rightly noted that this oracle is the seed bed from which later messianic expectations could grow, even though one cannot call the oracle itself properly messianic. The promise of God to secure the succession of kings in the Davidic dynasty was the bridge of hope that in a later period led people to the conviction that a time in which kings failed miserably or were even completely absent would not be the last phase in the experience of God's people.

2.6. Kings and Rulers. One of the striking features in the Pentateuch is a consistent future orientation. At several occasions the people to whom God relates in a special way are told to look forward to the future when God will realize what he has promised to them or their ancestors. For example, God promises *Abraham that he will give the land in which he is an alien to Abraham's descendants as their possession. In those cases where there is a recognizable figure at the center of this future orientation, this figure is often a royal figure, though occasionally the figure may be a prophet (Deut 18:18-19).

The expectation of a future royal figure is from the beginning focused on one particular family line. God promises Abraham (Gen 17:6,

16) that kings (plural) will come forth from him. Two generations later *Jacob gives a special position to his grandson Ephraim, the son of Joseph (who had assumed high office in Egypt): together with his older brother Mannaseh, Ephraim is adopted to the same level in the family hierarchy as the sons of Jacob (Gen 48:5-6, 13-20), but in the blessing that follows the younger brother is given precedence over the older. At about the same time, yet another son of Jacob, Judah, receives a promise of a position of authority over his brothers as part of the blessing given by his father (Gen 49:10; only in a later stage will the tribe of Judah leave that of Joseph/Ephraim behind and indeed assume leadership in the nation [Ps 78:59-72]). Toward the end of the time of Israel's wanderings through the desert, the pagan prophet *Balaam uses the imagery of a rising star to pledge to Jacob/Israel a ruler's position, which will result in the submission of neighboring enemy nations (Num 24:17).

In those cases in which one finds the word "descendant(s)" in modern translations, the Hebrew language uses a word that can mean both "seed" and "offspring." This word is singular in its grammatical form but may be used to refer to either an individual descendant (singular) or a group of descendants (plural). The same word is used for the "seed" of the serpent and of the woman in Genesis 3:15. In the case of the "seed" of the woman the word may refer to an individual descendant, since the verbal form, the pronoun and the suffix referring to the seed of the woman are all singular, whereas in cases where "seed" refers to a group the grammatical markers are usually plural. However, while there is no explicit connection made between the "seed" of the woman who will crush the head of the serpent and the kings who will come from the family line of David, according to some scholars the overall genealogical structure of Genesis may indicate a link.

These passages have traditionally been interpreted as messianic. Such a tradition goes as far back as early Jewish exegesis, which is first attested in ancient translations of the OT, such as the Greek Septuagint and the Aramaic Targums. It is interesting that such a clear messianic interpretation is not found in the NT. If one tries to establish the original reference of these passages, it seems more plausible to interpret them as pointing forward to the kingship and dynasty of David.

A decision not to call these passages messianic

expectations in the sense defined above only means that these parts of Scripture do not fit in one particular category of ways in which the OT points to Christ. At the same time, features such as the future orientation with a king often in the center show that later messianic expectations had several characteristics that were not completely foreign to the mind of God's people. In a sense these features prepared for these expectations.

2.7. The Old Testament Points to Christ in Many Ways. This approach should not be understood as an attempt to confine the meaning of these passages within the horizons of the original audience. It is aimed at enabling present-day readers of the OT to appreciate what one could call the historical relief that can be found in its many pages. With respect to the Messiah, this means that when one would want to say that there is a gradual revelation of his identity, one has to bear in mind that this is not a linear process, and it is not a process that is finished on the pages of the OT. The process is rather fragmentary and complementary.

As the New Testament makes clear, there is a variety of ways in which faith in Jesus Christ, who suffered, died and rose from the dead, opens up new ways of reading the OT. Thus, Christians can legitimately say that the OT points to Christ in many ways, but it is better to distinguish these varied ways from one another and to classify them accordingly (for a good example of what such an approach might look like, see Greidanus, who distinguishes seven ways: redemptive-historical progression, promise-fulfillment, typology, analogy, longitudinal themes, New Testament references and contrast) rather than to group all of them under one heading, "messianic expectations."

MIDRASHIC INTERPRETATION. See HERMENEUTICS.

MIRIAM

Miriam, whose name perhaps means "wish" or may come from the Egyptian word *mr* for love, is the daughter of Amran and Jochebed, Hebrew slaves in Egypt, and the elder sister of *Moses and *Aaron (Num 26:59; 1 Chron 6:3 [MT 5:29]). Although the Pentateuch accords her less space than her brothers, Miriam is set on a par with Moses and Aaron in Micah 6:4, where all three are mentioned as having been appointed by God to deliver the Israelites from Egypt.

Tradition assumes Miriam is the elder sister of the infant Moses mentioned in Exodus 2 who approached Pharaoh's daughter and engagingly argued for Moses' natural mother to be paid for nursing her own son (Ex 2:4-10).

1. Leadership Role
2. Challenge to Moses
3. Later Jewish Interpretation

1. Leadership Role.

Miriam appears to have been a leader in her own right, although texts supporting her leadership remain sketchy. She is called a prophetess in Exodus 15:20, although there is no record of her *prophecies.

Upon the miraculous deliverance of the Israelites at the Sea of Reeds (or Red Sea), when the water closed over the Egyptian army, Miriam took a tambourine and led the women in song. Echoing her brother Moses' song (Ex 15:1), she sang, "Sing to the LORD, for he is highly exalted. The horse and its rider he has hurled into the sea" (Ex 15:20-21 NIV). The song of Miriam and Moses climaxed four hundred years of oppression in Egypt (Gen 15:13-14). Miriam was the first of many Israelite women who sang and danced as they welcomed warriors home from battle (see Judg 5:1, 28; 11:34; 1 Sam 18:6-7; Ps 68:25 [MT 68:26]).

2. Challenge to Moses.

Numbers 12 reports that Miriam and Aaron challenged Moses' leadership. The chapter begins with Miriam and Aaron confronting and berating Moses because of his choice of a Cushite wife (Num 12:1). Because Miriam's name is mentioned first and the verb is in the feminine, scholars think that Miriam instigated the family rift. (No mention is made of Zipporah, Moses' first wife. Was she dead or divorced, or did Moses take a second wife?) According to one view, Miriam expressed the concern of the community over the marriage.

But the issues among the three run deeper. Miriam and Aaron questioned whether the Lord only spoke through Moses and not through them as well (Num 12:2). Their real motive in challenging Moses appears to have been jealousy.

The Lord called the three to stand before him at the tent of meeting, where he sided with Moses. The Lord spoke directly to them, outlining how he communicated with those whom he called to be prophets. He spoke to them in dreams and visions (Num 12:6). "But not so of my servant Moses," the Lord explained. "With him I speak face to face" (Num 12:7-8). The Lord even permitted Moses to see his form. Because of Moses' special place with the Lord, God asked Miriam and Aaron, "Why, then, were you not

afraid to speak against my servant Moses?" (Num 12:8). In the Lord's rebuke, he established Moses' special place with him but left open his calling of Miriam and Aaron. That he spoke to them at all suggests their preeminence among the Israelites.

When the two did not answer the Lord, his anger burned against them. As the Lord's presence departed, Miriam became leprous, "white as snow." Moses immediately interceded for her, calling out to the Lord to heal her (Num 12:13). The Lord, however, confirmed the justice of his punishment by comparing it to the uncleanness that would come from a father spitting in the face of his daughter.

In his action of intercession, Moses fulfilled the first job description of a prophet, that of intercession (Gen 20:7). The Lord replied that Miriam should be sent away from camp in disgrace for seven days and then be brought back to camp (Num 12:14-15). The text leaves open the question of whether she was healed before she went outside the camp or when she came back in.

Because of this incident, Miriam's name evidently became associated with punishment and leprosy (see Deut 24:9). Her name can also mean "bitterness," for it resembles the Hebrew word for bitterness (*Ex. Rab.* 26:1).

Miriam died at Kadesh and was buried there (Num 20:1). The text contains no record of an elaborate mourning time, as with Moses and Aaron. Moses was mourned for thirty days on the plain of Moab (Deut 34:8) and Aaron for the same number (Num 20:29). The deaths of all three leaders, however, coincided with three stops in the wilderness.

3. Later Jewish Interpretation.

Jewish tradition calls Miriam Azubah, the wife of *Caleb. Their son, Hur, was the grandfather of Bezalel, architect of Solomon's temple. He is said to have inherited the wisdom of Miriam, his great-grandmother. Some rabbis believed that David descended from Miriam (see *Sipre Num.* 78; *Ex. Rab.* 48:3-4). Jewish tradition also says that, like her brothers Aaron and Moses, Miriam died by the kiss of God because the angel of death had no power over her (*b. B. Bat.* 17a).

MOSES

Since the figure of Moses towers over pentateuchal history, it is not surprising that he plays a major role not only in later rabbinic, Christian and even Greco-Roman traditions, but also occupies a prominent place in the Qur'an and Islamic tradition. Besides Jesus, Moses plays the most important role in Western literature, art and music, and has been the subject of many modern biographies, including Freud's *Moses and Monotheism*, which viewed the prophet as an Egyptian champion of monotheism who was murdered by the Israelites. According to the OT, Moses had a unique status among humans, possessed superhuman traits (e.g., Deut 34:11), and was a prophet, priest, leader of Israel, poet, miracle worker, hero of the *exodus, mediator between God and humans, interpreter of God's words, and founder of Israel's *law, religious cult and political administration. Moreover, he was considered to be the author of the first five books of the OT and served as a prototype for the Davidic monarchy, as he was described as Yahweh's servant, in much the same way as David. He was even described like "god" in Exodus 4:16; 7:1. He is mentioned over seven hundred times in the OT (nearly three hundred times in Exodus alone), and about eighty times in the NT (either as the lawgiver or author of pentateuchal material). Elsewhere in the OT he is described with two primary epithets: "man of God" and "servant of the Lord" (e.g., Neh 10:29).

1. Overview of Moses' Life as Described in the Pentateuch
2. Historical Plausibility of the Moses Tradition
3. Late Traditions

1. Overview of Moses' Life as Described in the Pentateuch.

Any reconstruction of the life of Moses must be done with the understanding that the texts in the Pentateuch tend to concentrate on the deeds of Yahweh and thus must be seen in that light. The details of Moses' life as uncritically ex-

tracted from the Pentateuch are well known and can be briefly summarized. Born in *Egypt into the Hebrew tribe of *Levi (Ex 2:1-4), he was hidden as an infant in an ark that was placed in the Nile River to escape the wrath of an unnamed pharaoh (Ex 2:3). Ironically, an unnamed daughter of pharaoh found and raised him, paying his own mother to be his wet nurse (Ex 2:5-10). Moses subsequently was trained at the Egyptian court until he was an adult. His life took a dramatic change when he killed an Egyptian, fled from Egypt and took refuge in Midian (Ex 2:11-22). There he allied himself to *Jethro, a priest of Midian, married his daughter Zipporah and had two sons (Ex 2:15-22; cf. 4:20). At some point thereafter, Moses ventured upon a burning bush in the desert of Horeb, as he served as Jethro's herdsman, where he encountered the God of Israel, who proceeded to give him his divine commission to lead the children of Israel out of slavery in Egypt (Ex 3:1-10). With his wife, sons and his brother *Aaron (whom he met along the way), he returned to Egypt (Ex 4).

With Aaron at his side, Moses assembled the leaders of Israel and went to Pharaoh with God's demands. Pharaoh repeatedly rejected his pleas, instead increasing the hardships upon the Hebrews. They then murmured against Moses and Aaron (Ex 5—6). By a series of divinely appointed signs and wonders, culminating in the death of the firstborn of Egypt, Moses secured the release of his people (Ex 7—13). However, Pharaoh reconsidered and led his army against the defenseless host, who were saved by the mighty arm of Yahweh. God miraculously opened the Red Sea, bringing salvation to the Hebrews but destruction to the Egyptian army (Ex 14). Moses then led the children of Israel into the wilderness, where he instituted a system of government, received the divinely ordained law of God as part of the *covenant ratification process and set up the *tabernacle and *sacrificial system. However, because of the continued murmuring of the people, the building of the *golden calf (Ex 32), the jealousy of *Miriam and Aaron toward Moses (Num 12), the rejection of the Promised *Land (Num 13—14), and the rebellion of Korah (Num 16), Moses and the people were consigned to remain in the *wilderness for an entire generation. In fact, Moses himself was not allowed to enter the Promised *Land but was able only to view it from a mountain in the Abarim range (Num 27:12-14). After

appointing *Joshua as his successor, Moses died at the age of 120 years (Deut 34).

2. Historical Plausibility of the Moses Tradition.

Historical-critical scholarship of the past three centuries has centered much of its skepticism on the historicity of Moses. Some have even argued that searching for the historical Moses is an exercise in futility (Van Seters) or that the Moses of the OT is confined to folk tales (Thompson). However, there are still many who view the source material concerning Moses with incipient optimism (Campbell; Albright 1973, 48-76; Beegle; Hoffmeier).

This article will analyze the literary material and the historical plausibility of the Moses traditions as described in the Pentateuch, based upon analogues with other ancient Near Eastern traditions, namely, comparative Late Bronze Age textual and *archaeological material. By itself, historical analogy does not constitute historical proof, but it can assist the scholar in determining the plausibility of the historicity of the biblical record concerning Moses. Furthermore, the greater history of the ancient Near East provides a mine of historical information, not so much for single events, but for the geographical, political and cultural background of the OT.

Currently there are no existing nonbiblical contemporary sources that specifically mention Moses and the exodus. Furthermore, the Pentateuch lacks the type of information that contemporary historians demand: a clear witness to the use of sources close to the period described (i.e., annals, chronicles, inscriptions) and a backing of chronology that lines up with contemporary material.

Analogues from the ancient Near East afford the historian the opportunity to isolate the historical details of the textual material. Thus, we can understand that the Moses sources contain anecdotes, legal material, legends and tales about the prophet. In fact, except for the most skeptical scholars, most who concentrate on the various aspects of the literature and history argue for a modified form of the Moses story and maintain that the text as it stands presents serious difficulties for the historian (beginning with Gressmann). Many see notable differences in the view of Moses as derived by the hypothetical documentary sources, all of which may have been independent narratives (Coats; Thomp-

son; Noth). While one may argue that any reconstruction of the history of Moses must be preceded by literary analysis and a study of the character of the Moses tradition (Auerbach, 8), literary analysis has not achieved any type of consensus (e.g., Coats sees the Moses narratives as heroic saga [37]). Moreover, literary scholars have not always interacted adequately with the massive textual and archaeological material from the ancient Near East.

In light of this, we will attempt to view the pentateuchal narratives as a literary whole and concentrate on using comparative data from the ancient Near East. When attempting comparative analysis, one must use a proper method. Too often scholars have taken an “inventorial” approach to making comparisons, listing parallel phenomena without making clear their significance. They have also been subject to religious polemic. Searching for comparative data can be methodologically unsound, causing one to omit great amounts of relevant data while running the risk of “paralleomania.” There must be a “middle ground” that attempts a “contextual method, emphasizing both similarities and differences, while looking for diachronic and synchronic variations (Hallo). Since Israel and the Near East were part of a wider cultural continuum, one can study Moses in his greater cultural and literary environment. But there must be a systematic method through which to study the comparative data. One must address the similarities and differences in context, understand the literary genre and determine whether or not etymological kinship is useful in making comparisons.

2.1. The Date of Moses. There is extensive evidence for Semitic involvement in Egypt during the Old Kingdom (c. 2700-2190 B.C.), as Egypt’s Delta provided excellent grazing grounds for Asiatic bedouin. This evidence is even more marked during the Middle Kingdom and Second Intermediate Period (c. 2000-1550 B.C.) as many Asiatics were prisoners of war or merchants or were sent to Egypt as diplomatic gifts. Archaeological evidence reveals Semitic settlement in the northeast Delta at Tell el-Dab’a, Wadi Tumilat, Tell el-Maskhuta and elsewhere. Some scholars place the Genesis patriarchs in the period roughly between 1800 and 1550 B.C. in this area, somewhat contemporary with the Hyksos rule (Hoffmeier, 68).

There was also a significant Semitic popula-

tion in Egypt in the New Kingdom period (c. 1540-1100 B.C.), putting the exodus story and Moses into a plausible historical context. Laborers making bricks can be seen from the tomb of Rekhmire, vizier of Thutmose III (1479-1425 B.C.), some of whom were taken as prisoners of war from Canaan, a common use of Asiatics during the reign of this king. Thutmose III’s annals provide evidence of thousands of prisoners taken from Palestine during his reign. His successors during the Eighteenth Dynasty continued to bring Asiatics into Egypt. Furthermore, Nineteenth Dynasty monarchs also campaigned in West Asia until the reign of Ramesses II (c. 1279-1213 B.C.). By this period, there were thousands of Asiatics in the Delta region, if one accepts the historical veracity of the annals. Most likely they were assigned to building projects and to temples (Hoffmeier, 120).

The new Egyptian monarch mentioned in Exodus 1:8 as the “king who did not know Joseph” has been the subject of much discussion, although the statement most likely represents a dynastic shift in Egypt. In this context, it may have been the beginning of the Eighteenth Dynasty with the accession of Ahmose I, who had expelled the Hyksos. The new Theban rulers would not have “regarded” the people of Joseph. There is also evidence of building activity (military fortresses and storage facilities) in the area of Tell el-Dab’a (Avaris/Pi-Ramesse [or Pi-Ramesse]) dated to Ahmose I.

There appears to have been a renewed interest by the Egyptian monarchs in the northeast Delta region for a century during the reign of Horemhab until Ramesses II (c. 1325-1224 B.C.). This may explain the need for Hebrew “forced labor” in the making of bricks for extensive building projects (Ex 1). Thus, some archaeological data present a possible date for the forced labor and subsequent exodus (and the date of Moses in particular) as the period of the thirteenth century B.C. Of course, the Merneptah Stela (dated to c. 1207 B.C.) is the latest possible date for the exodus, as it implies that Israel was already in Palestine.

The biblical text, however, does not provide straightforward evidence for a thirteenth-century date for Moses and the exodus (*see* Exodus, Date of). Based upon 1 Kings 6:1, the exodus occurred 480 years before Solomon’s fourth year (c. 966 B.C.), which places it about 1450 B.C. The statement in Judges 11:26 that the Israelites had

been in the land for three hundred years hence (from 1100 B.C.) agrees in principle with the 1 Kings statement. Aside from the possibility that the number 480 might be intended as symbolic (i.e., for twelve generations; which is not done elsewhere in Scripture), there does not appear to be any easy answer to this problem. Most scholars still favor the Ramesside date (c. 1290-1225 B.C.), especially based upon recent archaeological data, with the caveat that the biblical text differs (Hoffmeier, 126). Thus, in this scenario Moses might have flourished during the reign of Ramesses II in the thirteenth century B.C.

2.2. The Birth of Moses. The birth of Moses, unlike the stories of the birth of *Jacob, Samuel or Samson, is not accompanied by any supernatural phenomena or announcement. Further, his parents are not named in the birth account in Exodus 2, although later he is described as descending from the tribe of Levi, the clan of Kohath and the family of Amram (Ex 6:16-25). The story of Moses' birth in Exodus 2 has long been compared to the Legend of Sargon of Akkad, a Mesopotamian monarch who ruled from approximately 2371 to 2316 B.C. (Childs). The extant texts concerning Sargon are, however, dated to the Late Assyrian and Babylonian periods (c. 700-550 B.C.), and it is not known whether they reflect any historical *realia* concerning Sargon's birth. The pseudo-autobiographical birth narrative states that Sargon was born of an *entu* priestess but an unknown father. For some reason, Sargon was cast adrift as a baby in a reed basket on the Euphrates River. Although a foundling (a common legal concept in Mesopotamia for children who were exposed in this way and reared by others), he later became the king of Sumer and Akkad. In a study of over thirty other texts with the "exposed child" motif from the ancient Near East, D. Redford argues that the circumstances of the two stories are superficially similar (Redford, 209-22). Some biblical scholars, however, have long argued for a dependence of the Moses account on the Mesopotamian exposed-child motif (Gressmann, 7-10; Childs; van Seters, 27-29). Some have even argued that the Sargon story is concerning Sargon II of Assyria (reigned 721-705 B.C.). However, there is no evidence of "exposure" in the Moses story. In fact, any similarities warrant the historian to posit that the Moses story belongs to the Late Bronze Age (argued by Gressmann

many years ago [7]). Recently, J. Hoffmeier (138-40) has argued that a number of words of Egyptian origin are found in Exodus 2:1-10, which he believes argues against a close Mesopotamian connection for the Moses birth story.

B. S. Childs compared the Moses story with an Akkadian text concerning adoption, where a child is given to a nurse who keeps him for three years and receives a salary. The child is later adopted and educated as a scribe, showing a parallel with the Exodus story.

2.3. The Name of Moses. Moses' name is explained in the biblical text by the fact that he was drawn (Heb *māšâ*) out of the water (Ex 2:10). Although some argue that the word comes from Egyptian *msi*, a common element in many theophoric names of Egyptian monarchs (Griffiths; Hoffmeier, 140-41), recent studies have argued against any Egyptian derivation of Moses' name (Muchiki). Papyri and inscriptions from the Ramesside era contain a number of references to Mose as a personal name, and some have in vain tried to identify one of these persons with the biblical Moses.

2.4. Moses as a Young Man in Egypt. There is evidence for Egyptian monarchs from the time of Thutmose III (c. 1450 B.C.) importing princes from subject peoples (especially from Syro-Palestine) to be trained in Egypt (much like the Romans did centuries later; Hoffmeier, 142-43). The Amarna letters provide ample evidence of this: Aziru of Amurru provided two sons to Egypt (EA 156.9-14), and possibly Abdu-Heba was a subject at the Egyptian court (EA 199.15-21). Moreover, there is substantial evidence of royal harems in Egypt during the New Kingdom period, including at the city of Pi-Ramesses. There was a long-established harem in the Fayum, where royal ladies supervised a domestic industry. A tutor often educated the children in the harem. One could speculate that Moses was raised in one of these harems. Although there is no evidence of Moses being a Semitic prince, it can be argued that the story is consistent with the idea of foreign children residing at the Egyptian court.

Semites rose to prominence under the kings of the Nineteenth Dynasty. For example, a trusted cupbearer of Merneptah was a Syrian, Ben-'Ozen of Sur-Bashan. Moreover, Semitic deities, loanwords and literary themes were assimilated into Egyptian culture. A number of Egyptian officials were educated in Canaanite

language and geography; still others were required to learn Babylonian cuneiform for diplomatic purposes. As a Semite residing in Egypt, Moses may have had access to the Proto-Sinaitic writing system, a script used for inscriptions by Semitic captives employed in the turquoise mines in the Egyptian Delta. These date at least two centuries before Ramesses II.

2.5. *Moses in Midian.* Although the text explicitly places neither judgment nor praise upon Moses for the act, the Bible claims that Moses fled Egypt as an adult after he killed an Egyptian for attacking an Israelite (Ex 2:12-15), possibly while the Egyptian was serving in an official capacity (Hoffmeier, 143). Flight from Egypt by runaway slaves in this period is attested (*ANET*, 259b).

At any rate, Moses found himself in Midian. The Pentateuch describes the Midianites as a confederation of five seminomadic tribes (Gen 25:2; Num 31:8). They appear to have ranged over a wide area from the Gulf of Aqabah to the Arabian Desert and the borders of Israel. The circumstances of Moses' life in Midian have been deemed authentic (Albright 1963), although some have argued that the Midian tradition is a retelling of the story of Hadad, the political refugee mentioned in 1 Kings 11:14-22 (van Seters, 29-33). However, there is an Egyptian correspondent to this story, the Story of Sinuhe (*ANET*, 18-22), written during the Middle Kingdom (c. 2000-1750 B.C.). Like Moses, Sinuhe fled from Egypt for political reasons, lived as a tent-dweller amongst the bedouin in Canaan, married the daughter of a local chieftain and returned to Egypt later in life. In fact, some have argued that the Sinuhe story is a model for later literary works and that the Sinuhe narrative structure is seen in Exodus 2—5. The flight of political refugees from Egypt was likely a common occurrence, and thus there is no compelling reason for the story of Moses' flight not reflecting a historical reality.

According to Exodus 2:21, Moses married Zipporah, a Midianite. However, Numbers 12:1 states that he married a Cushite or Cushan woman (cf. Hab 3:7, where Cushan is paralleled with Midian). Moreover, Exodus 3:1 states that Moses' father-in-law was *Jethro, while Exodus 2:18 claims his name was Reuel, and Numbers 10:29 gives his name as Hobab. W. F. Albright (1963) argues that Jethro was part of the Midianite clan of Reuel and that Hobab was Moses'

son-in-law. At any rate, the father-in-law is called the "priest of Midian" (Ex 2:16; 3:1; 18:1) and offers sacrifices (Ex 18:12). Jethro called upon the name of Yahweh (Ex 18:10), and Moses may have learned about Yahweh in Midian. Consequently, it has been argued that Yahwism developed in Midian. Some claim that Jethro was an official priestly title, since the name means "his excellency" (see Gen 49:3). Egypt developed copper mining in Midian near the end of the fourteenth century B.C. (Albright 1976, 124). The Israelite site of Timnah has an Egyptian temple founded by Seti I (c. 1294-1279 B.C.) and was occupied until about 1150 B.C. The pottery shows a strong Egyptian influence. The Midianites were no doubt interested in controlling the trade routes from the Transjordan to Sinai.

2.6. *Moses and Divine Revelation.* When he was confronted by God, Moses claimed to be "heavy of mouth and tongue" (Ex 4:10; 6:12, 30), which was apparently a bodily ailment or condition (Tigay). The Hebrew term for "heavy" (*kbd*) often refers to an ailment, as in Genesis 48:10, where *Jacob's eyes were heavy with age (i.e., he could not see). Ezekiel 3:5-6 speaks of the nations as "deep of lip" and "heavy of tongue" (i.e., unintelligible language). It is not surprising that foreign languages were considered somewhat like speech impediments. A cognate term (Akkadian *kabātu*) is likewise used in medical texts to indicate physical illnesses, usually affecting the ears, head, knees, shins, feet and eyes (Tigay, 58-59). Although not used in medical terminology, Sumerian has a metaphorical term "heavy" used of nonfluency of language. Thus, Moses either had a speech impediment or had forgotten Egyptian.

The God who spoke to Moses claimed to be Yahweh, the God of *Abraham, *Isaac and Jacob. The divine name Yahweh (Heb *yhw*) has been attested elsewhere, including the Moabite Stone, ostraca at Arad, Kuntillet 'Ajrud and in the Lachish letters. Although the verbal forms *iaum*, *iau* and *ia* are found in Akkadian, they are now not considered to be related to Hebrew *Yhwh* (Freedman-O'Connor, 510-11). *Ya-wi* is also found in personal names in the Middle Bronze Age documents from Mari in Syria. The name Yaum-ilum is found in Akkadian in the Old Babylonian period (c. 1800-1600 B.C.), and a similar usage possibly appears in the Ugaritic texts (*Yw-ilt*), although this has been contested (de Moor 1997, 113-18). *Yhw* is also the name of

a Shasu country in connection with Midian and Seir. These occur in an Egyptian eponym list from the time of Amenhotep III (c. 1400 B.C.) and in a text dated to Ramesses II a century later (Giveon, 26-28). Some have seen this as consistent with the poetic language in the Bible associating Yahweh with the region of Sinai, Seir, Edom, Paran, Teman and Midian (e.g., Deut 33:2; Judg 5:4-5; Ps 68:7-8). Some have argued that the biblical Kenites (a branch of the Midianites) were the mediators of the Yahwistic cult, possibly by way of traders along the caravan routes from the south to the east (Schloen).

The convention used in Exodus 3 for God speaking to Moses is similar to royal proclamation edicts from Syro-Palestine in the early first millennium B.C. (e.g., the Moabite Stone from Moab and Zakkur of Hamath). The description of God as "God of the fathers" is also not exclusive to Israel but found in the Assyrian texts from Cappadocia (c. 1900 B.C.), in the roughly contemporary Mari archives, later at Ugarit and in at least one of the Amarna letters.

2.7. *Moses and the Plagues of Egypt.* The plague narratives have long been thought of as a mixture of various sources (Childs, 130-42). However, some have seen them as a literary unity consisting of three cycles of three plagues each, with a final plague by itself (Sarna, 73-78). Hoffmeier (149) has argued that the plagues must be seen from an Egyptian viewpoint, since many of the plagues can be found in Egyptian folklore (Dumeruth). In fact, the *serpent changed into a staff, a hand covered with leprosy and water transformed into blood were all claimed to be accomplished by the Egyptian magicians. This indicates some knowledge by the Exodus source of the Egyptian context of these matters. There are a number of Egyptian parallels to the description of the plagues. From the Roman period, a story set during the Pharaonic period originally concerns a son of Ramesses II, who claimed to be able to turn water into blood (Sarna, 69). The Admonitions of Ipuwer, an Egyptian sage, describe the Nile as blood. The Prophecy of Neferti describes the sun-disk, which is covered over and will not shine, much as in the ninth plague.

On the other hand, various attempts have been made to explain the plagues as natural phenomena. G. Hort (1957, 1958) has argued that there is a chain of direct causal connections between the nature and sequence of many of

the plagues. She assumes that there was a high rainfall in the East African Plateau, the highlands of Ethiopia, and in the Nile Valley that caused the Nile River to rise higher than normal. An excess amount of red sediment was discharged from the river, causing a discoloration of the waters (and the death of fish), giving the appearance of red blood. Then frogs (the second plague) were unseasonably driven to dry land, along with mosquitoes (the third plague) and insects (fourth plague). The pestilence (fifth plague) and inflammation (sixth plague) that struck the livestock occurred when the floodwaters subsided, allowing for the cattle to pasture in open areas. The succeeding three plagues—hailstorms, locusts and darkness—periodically inundate Egypt. Though seemingly immune in the areas of geology and microbiology, Hort's thesis has been attacked on literary grounds, and the plagues are not depicted in the same order elsewhere in Scripture (e.g., Ps 78:42-51; 105:27-36). Furthermore, the biblical text says nothing of the causal connections between the plagues themselves.

2.8. *Moses and the Exodus.* Hoffmeier (164-75) has investigated a newly discovered canal along Egypt's border with the Sinai, labeled the Eastern Frontier Canal, which may be associated with one pictured on a relief of Seti I (c. 1300 B.C.) at the Karnak temple in Thebes. This canal may be alluded to in Exodus 14:2 and Numbers 33:7 as Pi-hahiroth, the point to which the frontier canal emptied into the Sea of Reeds, according to Hoffmeier (191). The Bible portrays the Israelites as having left Pi-Ramesses, moving in a southeastern direction toward the Tjeku region. In any event, the Exodus traditions present a coherent picture of the route the Israelites took through the Sinai.

2.9. *Moses, the Tabernacle and the Ark.* The techniques used by Moses and his subordinates to build the portable *tabernacle reflect Egyptian influence concerning portable structures. Exemplars of prefabricated oak shrines were found in the tomb of Tutankhamun (c. 1350 B.C.). In fact, the arrangement of the tribes by their standards in a "hollow rectangle" also betrays Egyptian training. The Egyptians also used silver trumpets for civil, religious and military purposes (Num 10:1-10). Ox wagons were often used on military campaigns in Syria by Ramesses II at Kadesh, similar to the span of two oxen that drew wagons for Moses (Num 7:3,

6-7). The ark also has ancient Near Eastern parallels. A treaty between the Hittites and Mitanni during the reign of Suppiluliuma of Hatti (c. 1370 B.C.) mentions that a duplicate of the treaty was deposited before the sun-goddess (Hittite) and Teshub (Hurrian). A treaty between Ramesses II of Egypt and Hatti was also deposited beneath the feet of the god of the two parties (i.e., at his footstool). The Israelites deposited the treaty in the chest, which was looked upon figuratively like a footstool (cf. 1 Chron 28:2).

2.10. *Moses and the Golden Calf.* The *golden calf, although forbidden as a representation, was intended to depict Yahweh. However, the calf was probably in fact a baby bull, a common item used to represent aspects of divinity throughout the ancient Near East. The animal was a symbol of lordship, strength and fertility. It has been suggested that Aaron did not intend for the calf (i.e., bull) to represent the deity but to function as a pedestal of the invisible God, Yahweh (Sarna, 151). There are numerous artistic examples where gods stand upon lions and bulls.

The “breaking of the tablets” after the incident of the golden calf is reminiscent of Akkadian legal terminology, where the term “to break the tablet” signifies the termination of an agreement. Furthermore, the goddess Anath pulverized and scattered Mot, the death-god in Ugaritic myth, destroying him in much the same way that Moses burned, pulverized and scattered the remains of the golden calf (Ex 32:20).

2.11. *Moses and Egyptian “Monotheism.”* According to J. Wellhausen, Israelite religion moved in an evolutionary progression from polytheism to henotheism (loyalty to one god without denying the existence of others). It only progressed to monotheism at the time of the Judean prophets in the eighth century B.C. Although this view has been all but abandoned, there is no consensus about when monotheism did take root. Of course, statements such as Exodus 15:11 (“Who is like you, O LORD, among the gods?”) have been considered proof of attributing a henotheistic belief system to Moses. Furthermore, the first commandment could imply the existence of other deities. The Hebrew term for God (Elohim), which is related most likely to Akkadian *ēlu*, denoted the function of a being, not its nature. Nowhere does the Pentateuch imply that the “gods” have fundamentally the same

nature as Yahweh. Thus Moses could have penned these statements and still have been a true monotheist. The prohibition of worship of other gods and of divine images in Israel appears to be unique in the ancient Near East.

In the past century, there has been a great deal of discussion comparing the religion of the Egyptian king Akhenaten (c. 1370 B.C.) and the religion of Moses. Even Freud succumbed to the idea that there were close parallels, and others have fancied Akhenaten as a teacher of Moses. However, the similarities are at best superficial. Akhenaten’s “religion” was not so much a religion but a royal statement concerning the king’s relationship with his divine father. In fact, the god of Akhenaten was a solar deity identified with light and the sun-disk. The name of the deity was not new and had few recognizable attributes, unlike Yahweh. In many respects, the sun-disk was a symbolic projection of Egyptian kingship, while Akhenaten mirrored his kingship on the earth. There were also many iconographic depictions of the sun-disk, unlike the prohibitions of portraying Yahweh. Further, Akhenaten was the only one who knew his father, the sun-disk, and the Egyptian people did not enjoy this relationship. Moreover, there was no covenant relationship between the god and the people, as there was in Israel. The similarities are only in the realm of hymnology, as the Hymn to the Aton has been compared to Psalm 104. This, however, is explained primarily by Egyptian literary, not religious, influence.

2.12. *Moses and the Law.* Many comparisons have been made between the Mosaic codes in the Pentateuch and cuneiform law codes from third-millennium B.C. Mesopotamia, especially the laws from Old Babylonian Eshnunna and the Hammurabi Code from Babylon (nineteenth to eighteenth centuries B.C.). Not only do both employ the conditional “if-then” clause, but many of the laws are nearly identical, exposing a common legal tradition among the Semitic peoples. In fact, many of the biblical laws that we find formulated (and modified) in the Pentateuch may be in fact pre-Mosaic and ultimately derived from a source common to both Israel and Babylonia. There is a unique difference between the Mesopotamian and biblical laws, however. None of the laws are directly attributed to Moses but to God. By way of contrast, the ancient Near Eastern treaties are of human origin and were presented to the deity. Even scholars

such as Gressmann (471-82) and Auerbach (172-81) have considered that many aspects of the Mosaic law, including the *Decalogue (Ten Commandments), date to the time of Moses.

The covenants from the Hittite state archives (c.1500-1200 B.C.) also show remarkable similarities to the Mosaic *covenant, especially that of Deuteronomy. Both use a suzerain-vassal treaty by which a great king (God) is formally related to a vassal (Israel). These stipulations are also found in Aramaic treaties from Syria in the ninth century B.C. and in the vassal treaties from the Late Assyrian Empire (c. 900-600 B.C.). The typical ancient Near Eastern vassal treaty employed a preamble, a historical prologue (events leading up to the treaty), general stipulations, specific stipulations, divine witnesses and blessings and curses. A great power imposed these conditions on a small state, normally one that had been conquered. The structure of the book of *Deuteronomy allows the possibility that the book was written in the Late Bronze Age (c. 1400-1200 B.C.; allowing Mosaic authorship) or in the Assyrian period, since it has affinities to the vassal treaties of Esarhaddon (c. 681-668 B.C.). However, many argue that the treaty structure in Deuteronomy reflects a closer parallel to the earlier (Late Bronze Age) treaties, not the later Assyrian ones. The Deuteronomistic treaty formula can be structured in the manner similar to the Late Bronze Age treaties: preamble (Deut 1:1-5), historical prologue (Deut 1:6—4:49), general stipulations (Deut 5—11), specific stipulations (Deut 12—26), blessings and curses (Deut 27—28) and witnesses (Deut 30:19; 31:19; 32:1-43).

P. C. Craigie (79-83) argues for an Egyptian background to the Deuteronomistic covenant. The Hebrew word for covenant (*bērit*) is found in Egypt as a Semitic loanword in decrees of Seti I and Ramesses III, signifying either a contract or a covenant. Although the form of the Egyptian treaty is not known, it has been assumed to be similar to the Hittite type. Moreover, Deuteronomy appears somewhat like Egyptian wisdom instructions, which were in the form of testaments to kings and viziers. Treaties also may have been used in relation to foreign labor groups within Egypt. It has been argued that the Israelites modified these forms for their own use, as they were labor vassals in Egypt for a long period. When they were liberated from the Egyptian monarch, they subsequently tied themselves to

Yahweh in the Sinai covenant.

In the past it was considered that Israel's covenant was unique in that it was an agreement between an entire people and God. This feature has now been attested, however, at Emar, a Hittite vassal town on the wide bend of the middle Euphrates River in Syria (c. 1200 B.C.; Fleming). In their *zukurru* treaty, the Emarites made covenant arrangements with a god rather than simply a foreign power. Furthermore, the city of Emar placed their *zukurru* outside of the city at a shrine of upright stones, reminiscent of the witness stones at Sinai (Ex 24:4) and elsewhere.

3. Late Traditions.

3.1. Postbiblical Jewish Sources. Hellenistic Jewish authors elaborated and expanded the Moses narratives in the OT, describing him as an inventor, lawgiver, architect of civilization, philosopher, prophet, king and even “divine man” (probably in response to attacks on Moses by non-Jewish authors such as Manetho and Apollonius). Philo of Alexandria wrote a life of Moses (*De vita Moysis*), primarily for a Hellenistic Greek audience that was somewhat familiar with him. He argued that Moses was the inspiration for Greek philosophy, describing him as the classic king, high priest, legislator, prophet and prototype for the Greek idea of the “divine man.” Josephus, also writing for a Greek audience, saw Moses as a “divine man” and even a general in the Egyptian army who married an Ethiopian princess (*Ant.* 2.10.2 §252-53). He also adds that he was taken up into heaven (*Ant.* 4.8.48 §§323-326). Josephus also argued for Moses' Israelite origin, rationalizing that the foundling baby refused an Egyptian wet nurse but was happy to take his Hebrew mother's breast.

Moses was also the main figure in a number of Palestinian Jewish texts, where his life and work were surrounded by legends. These include *Testament of Moses* (an interpretation of Deut 31—34, where Moses informs Joshua that God created the world for the sake of Israel), and *Assumption of Moses* (possibly a portion of the fragmentary *Testament of Moses*), both of which Moses reputedly authored. The book of *Jubilees* is an expanded commentary on Genesis to Exodus 12 with an additional revelation given to Moses by God. Moreover, both *Jubilees* and the *Temple Scroll* of Qumran are described as having come from a revelation that God gave to

Moses at Sinai. Thus, Moses was given not only the written law but an oral law as well. There are also frequent mentions and amusing stories in rabbinic Judaism, usually highlighting Moses' role as teacher. In Samaritan tradition Moses was the only prophet and God's primary means of revelation. Midrashic tradition was profoundly disturbed with the account of Moses' death in Deuteronomy, and thus it was addressed on many occasions (Goldin).

3.2. New Testament Sources. Moses is frequently mentioned in the NT, primarily in his role as lawgiver, and his name is often cited as representing the law itself. He is described as the author of pentateuchal material (e.g., Lk 24:27, 44). The NT often adds to the Mosaic tradition found in the OT (cf. Heb 11:23-28) and displays knowledge of later Jewish Moses legends (e.g., Acts 7:22; 1 Cor 10:4). Moses appears in the transfiguration scene along with Elijah (Mt 17:3-4; Mk 9:4-5; Lk 9:30, 33). Moses (or the law) is often portrayed as inferior to Jesus (e.g., Jn 1:17; Heb 3:3-6). Jude 9 adds information concerning the contention between the devil and Michael over the body of Moses, which came from the Jewish apocalyptic source *Assumption of Moses* (known only in fragments), and 2 Timothy 3:8 adds the names of the Egyptian magicians (Jannes and Jambres), known only from later Jewish tradition.

3.3. Greco-Roman Sources. Moses was clearly the best known of all Jewish figures in classical sources. The information in these sources appear to have been derived only indirectly from biblical sources, however. According to some (Pseudo-Manetho, Strabo and Apion; see Gager, 19), Moses was an Egyptian priest who was exiled from Egypt along with other inhabitants. Other writers claim for him Jewish descent (Apollonius Molon; Pompeius Trogus), but with a garbled genealogy. The common consensus was that he was the lawgiver to the Jews, although not all saw him in a positive light. Roman authors such as Quintilian (*Inst.* 3.7.21) and Tacitus (*Hist.* 5.4-5) saw him developing a destructive superstition and introducing "practices that were opposed to all other men." He was also known for leading the exodus from Egypt, not as the champion of an oppressed people but as one who fought against true religion (e.g., Manetho; cf. Josephus, *Ag. Ap.* 1 §§75-90, and in the *Egyptiaca* of Hecataeus of Abdera, as quoted by Diodorus Siculus, *Bib. Hist.* 40.3). Moses was

also known as a magician in more popular sources (e.g., Celsus, in Origen, *Cels.* 1.23; 5.41).

MURMURING

The stories of *Israel wandering in the *wilderness include several incidents in which the people murmured about water, food and leaders. While relatively few passages actually describe grumbling Israelites, they form part of a larger picture of the Israelites failing in their relationship with God. Consequently, the entire adult generation that left Egypt, apart from *Joshua and *Caleb, dies in the wilderness.

The writers use rare terms to describe these limited events. The most common word "murmur, complain, grumble" (*lyn /lwn*), occurs only fourteen times in the Hebrew Bible, with thirteen examples in the Pentateuch (Ex 15:24; 16:2, 7, 8; 17:3; Num 14:2, 27 (2x), 29, 36; 16:11, 41; 17:5; Josh 9:18). When Deuteronomy retells the spy story, it uses a different root (*rgn*) that is found only seven times (Deut 1:27; Is 29:24; Ps 106:25; Prov 16:28; 18:8; 26:20, 26:22). This term may move beyond the concept of grouching to slandering.

The murmuring memoirs present one biblical perspective on Israel before its emergence in the Promised *Land. In addition to the murmuring passages listed, other biblical writers record Israel's struggles to live faithfully before Yahweh in the pre-settlement period and their often flawed attempts to do so (Ezek 20; Ps 106). On the other hand, some biblical texts present the wilderness period in a positive light as a time when Israel enjoyed an uncommon intimacy with Yahweh (Hos 2; Jer 2; Ps 105).

Since the work of M. Noth (1948), scholars have inferred the composite nature of the pentateuchal wandering stories. Noth believed these narratives were added secondarily into earlier documents that covered an impressive array of themes (De Vries, 51). Regardless of how one might separate the extant stories into putative parts, or to what event one might anchor the origin of the murmuring traditions, the canonical shaping of these varied accounts has ordered them along an axis of increasing gravity. The events retold by these accounts deteriorate from complaint, followed by provision, to revolt resulting in decimation.

1. Exodus
2. Numbers

1. Exodus.

The stories of grouching in Exodus are interposed between the chapters describing Israel breaking ties with *Egypt (Ex 1—15) and those outlining Yahweh creating covenantal ties with his people at Sinai (Ex 19—40). These events occur in the period of transition from Egypt to Sinai. They demonstrate that Israel must forsake both Egyptian imprisonment and nourishment if they are to be the people of Yahweh.

1.1. Exodus 15. The first occurrence of murmuring comes immediately after *Moses and *Miriam led Israel in praise at the Reed Sea.

Quickly the people shift from faith to fear, from panegyric to panic. After being on the road one month, the people were facing the harsh realities of life in the wilderness as they trekked from one oasis to another. Public dissatisfaction surfaced and broke into a clamorous outcry against the leadership of Moses and *Aaron (Sarna 1986, 116).

The people traveled three days from the Sea of Reeds and found no water in the wilderness. They located water at Marah (bitter), but this bitter water was undrinkable. At this setback, the people grumbled against Moses and asked the well-founded question, "What shall we drink?" (Ex 15:24). In response God showed Moses a method of filtering the water by means of injecting a piece of wood. Moses ends this event with an exhortation to follow Yahweh faithfully, thus avoiding any of the sicknesses God sent upon Egypt. Immediately after this testing, the people arrived at Elim, where they encamped beside twelve springs of water.

Israel's reaction at finding unpalatable water at Marah is fully understandable. They turn their discontent at this deprivation against Moses, their human *leader. This is the first time the writer uses the term "murmur" to detail the people's reaction to a situation, and subsequently this becomes a stereotyped reaction throughout the wilderness wanderings (Childs, 268). Unfortunately, however, later interpreters of these stories have tended to caricature Israel's reaction to adversity. For example, one writer suggests that "such ungrateful and illogical behaviour in view of God's deliverance illustrates the fundamental biblical conception of sin as human rebellion against God and forgetfulness of his past gifts" (Clements, 94). While this point is well taken, it may be that this kind of comment is too harsh in assessing the spiritual maturity of a people migrating through the desert. From the standpoint of a later, sated situation it seems facile to criticize dry and dispirited people. Perhaps Israel "should" have trusted God more, but desert thirst demands to be slaked. This is a human need; a thirsty person is not ungrateful or illogical to request clean water. Additionally, no divine judgment comes in this account. God meets their need and promises *blessing for future trust.

1.2. Exodus 16. Israel came to the Wilderness of Sin after six weeks on the road. Here the entire community grumbled against Moses and

Aaron. They focused on their lack of abundant food, perhaps specifically craving flesh. Furthermore, as they complain they impugn their leaders' motives. "If only we had died by the hand of the LORD in the land of Egypt, when we sat by the fleshpots, when we ate our fill of bread! For you have brought us out into this wilderness to starve this whole congregation to death" (Ex 16:3 NJPS). The hardships of wilderness living aroused nostalgia for their Egyptian existence where water and food, if not plentiful, were at least available. Again, one might harshly measure Israel's wistfulness. The unsettledness of desert life was rife with basic uncertainty. And in this context the stability of *slavery, the known, might seem preferable to the instability of freedom, the unknown.

Also in these narratives God promises a daily portion of food from the sky. This provision provides another opportunity for Israel to comply with God's program. Moses instructs the people and cautions Israel that grumbling against him and Aaron was tantamount to murmuring against Yahweh (Ex 16:7-8). Despite this slight, however, Yahweh cares for his people by means of daily *manna and occasional quail. These gifts were to remind Israel of God's presence and power. Thus, in these first two instances, the people grumble about their need for water and food. In both cases God provides, though not without teaching about future faith.

1.3. Exodus 17. In Rephidim, thirsty Israel again murmurs, but the situation seems more severe than reported in Exodus 15. Here Israel quarreled (*rib*) with Moses, the word indicating a kind of juridical seriousness to the situation. The people go beyond grumbling to charge that they have been wronged. Additionally, the people frame their concern as a demand, not as a question as in the previous account (Ex 15:24). Again Moses asserts his inseparability from God, "Why do you quarrel with me? Why do you test Yahweh?" (Ex 17:2). But the people continued to grumble (the more common *hwn*) against Moses. They impugned his motives by accusing him of bringing Israel out of Egypt to desiccate them, their children and their livestock (Ex 17:3). This inflammatory rhetoric indicates that a riot, an ugly thing, was about to break out. God averted this rebellion by having Moses use his miraculous rod to make water seep from a rock. Israel's challenge to Yahweh—questioning God's providence—was commemorated by the derogatory

place names Massah (“trial”) and Meribah (“quarrel”) (Sarna 1991, 93). We note, however, that once again God does not punish Israel for complaining. It may be that their grumbling was not viewed as a serious offense since they were grumbling about basic human needs for water and food. It may also be that the grumbling goes unpunished because it occurs prior to the *covenant between God and Israel at Sinai (Sarna 1991, 94). As we shall see in the next accounts, punishment comes for murmuring after the Sinai pact.

2. Numbers.

2.1. Numbers 14. In this chapter Israel is concerned not with refection but with future foes. This pivotal chapter in the flow of the book of Numbers reverses the direction of the story of Israel’s move from Sinai to Canaan. Twelve spies returned with disparate reports, though all agreed on one thing: Canaan “flowed with milk and honey.” In response to the majority report, that the Israelites would be squashed like grasshoppers by the Canaanites, the people grumble (*lwn*) against Moses and Aaron, “If only we had died in Egypt, or in the wilderness!” (Num 14:2). Their complaint traces the order of their trek, asserting that it would have been better to die earlier in the process of their redemption than at their entrance into Canaan. First, it would have been preferable to have died in Egypt before the whole process got started. Second, death on the way would have been better than death a hairsbreadth from their destination. In their lament Israel maligns Yahweh’s motives, charging God with plotting to use Canaanite swords to kill them (Num 14:3). Their determination to return to Egypt grows stronger.

Joshua and Caleb produce the minority report to persuade Israel to move forward to the land. In response, the people propose pelting their leaders with stones (Num 14:10). Yahweh and Moses discuss Israel’s faithlessness and God’s response, including replacing all Israel with Moses’ progeny. It seems clear that Yahweh considers the people’s grumbling as direct complaints against him. In a macabre twist, God grants the people’s prayer and allows them to die in the wilderness since they had already asserted that this was preferable to following God (Num 14:26-35). Only Joshua and Caleb, the minority reporters, will live in Canaan. The importance of this is highlighted by the two censuses

that frame Numbers 1—26 (cf. Num 26:63-65).

2.2. Numbers 16—17. This complex narrative of Korah’s rebellion varies from the previous descriptions of protesting and prosecuting in the severity of both the insurrection and of the divine response. “Israel’s fortunes have reached a low ebb. Demoralized by the majority report of the scouts and condemned by their God to die in the wilderness, the people are psychologically receptive to demagogic appeals to overthrow their leadership and return to Egypt” (Milgrom, 129). It appears that several rebellious incidents are fused together in this chapter (Gordon), but the quintessential rebel is Korah. He, with three other instigators, convinced some two hundred and fifty Israelite leaders to rise up against Moses and Aaron. They asserted that the brothers had promoted themselves over Israel. Moses proposed a contest with Korah; Yahweh would indicate the leader by means of selecting an incense offering. Moses scolded Korah for failing to recognize his importance in the community as a *Levite, one who provides worship leadership for Israel. A struggle regarding the right to the priesthood underlies this text or has become a prominent feature of it. Thus a passage beginning with mutiny against Moses also authenticates Aaron’s authority. The other levitical groups should accept their position in the worship hierarchy and not grumble against the Aaronides. The ultimate resolution comes as the households of Korah, Dathan, Abiram and the two hundred and fifty leaders were swallowed by a rift in the earth and by fire.

The scorched censers of the rebels were hammered into plating for the altar. This visible memorial of Korah’s rebellion and rejection is a warning against future encroachers into the *holy area (Milgrom, 129). Aaron alone should burn incense to Yahweh (Num 16:39-40). The next day, rather than bowing to the divine decision, the people again grumbled (*lwn*) against Moses and Aaron. They accused Moses and Aaron of murdering their leaders. Responding to the people’s ire, Moses and Aaron retreated to the Tent of Meeting. Yahweh warned them to step aside so that the people could be incinerated. But Moses, a true *prophet interceding for his people, commands Aaron to use his censer once again and stand between the living and the dead (Num 16:48). The final toll for both phases of the rebellion was almost fifteen thousand souls.

When the plague ended, God instructed Moses to write the name of each of the twelve tribes on staffs that they would provide. Moses placed these in the tent of meeting. In a consummate act of "staff development," God promised to make one of these dead sticks blossom as a means of ending the grumbling toward leaders. Aaron, representing the Levites, provided his staff, and all of the sticks were placed together in the tent. By the very next day Aaron's staff had sprouted. In fact, it became a mature plant overnight, bearing buds, blossoms and almonds. This miraculous branch, testimony to Yahweh's choice of Aaron as priest, was filed away for a warning to future rebels "so that you may make an end of their complaints (*lwn*) against me, or else they will die" (Num 17:10).

MYTH. See FORM CRITICISM.

N

NADAB AND ABIHU

In the Pentateuch, Nadab and Abihu are two of *Aaron's four sons. They are particularly noted for their sin of presenting "alien fire" before Yahweh and their subsequent death by fire.

1. Genealogy and Consecration
2. Eyewitnesses of the Theophany on Mount Sinai
3. "Alien Fire" and "Fire from Before Yahweh"

1. Genealogy and Consecration.

According to Exodus 6:23, Aaron, brother of *Moses, married Elisheba, daughter of Amiinadab, and had four sons: Nadab and Abihu, Eleazar and Ithamar (cf. Num 26:60). Every list groups Aaron's sons in two pairs, Nadab and Abihu always in the first place. This literary feature suggests that Nadab was Aaron's firstborn, which is confirmed by Numbers 3:2 where Nadab is so labeled. The longer form of the first son's name, Nedabiah (*nēdabyā*), meaning "Yah(weh) is noble" (cf. Noth, 193), is found in 1 Chronicles 3:18. Abihu (*ʿābīhū*) means "He is father."

According to Numbers 3:3, Aaron's sons were "consecrated" (*millē' yādām*: lit. "he filled their hands") to serve as "anointed priests" (*hakkōhānīm hammēšūhīm*). It is not clear here who consecrated Aaron's sons; the Hebrew text reads "he," though the Septuagint has "they" as subject. Yet according to Exodus 28:1, Yahweh asked Moses to bring near Aaron and his sons from the midst of Israel in order "to serve as priests" (*lēkahānō*) to God. Furthermore, in Exodus 40:15 Moses is ordered by Yahweh to anoint Aaron's sons, as he had previously done with their father, so that they may fulfill priestly duties.

2. Eyewitnesses of the Theophany on Mount Sinai.

With respect to the witnesses of the *theophany on Mount Sinai, the author of Exodus 24 (i.e., the ratification of the *covenant) mentions three levels of holiness (accessibility). "The people" (*hā'ām*) were not allowed to climb the holy mountain but stood at the bottom of the mountain (cf. Ex 19:17). Moses, accompanied by Aaron and his sons Nadab and Abihu, and seventy "elders" of Israel ascended the mountain (Ex 24:1, 9). Only Moses was permitted to approach Yahweh (toward the center of the top of the mountain?); the remainder of the delegation prostrated "from afar" (Ex 24:1-2). The text adds that "they" (the entire group?) saw the God of Israel under whose feet was "something like a pavement of sapphire, as the very sky in purity" (Ex 24:10). In Exodus 24:11 the narrator notes that God did not stretch out his hand against Israel's "chosen people" so they could "gaze" upon God.

3. "Alien Fire" and "Fire from Before Yahweh."

Leviticus 10 presents Nadab and Abihu in a cultic setting. Each took his fire-holder and, placing fire in it, laid incense over it. Leviticus 10:1 notes that they offered before Yahweh "alien fire" (*ʿēs zārā*), which they were not ordered to offer. J. Milgrom (596-608, 628-35) lists several explanations for the phrase "alien fire." First, some suggest that in the accounts of Nadab and Abihu and Korah and his band, the phrase "each his fire-holder" (Lev 10:1; Num 16:17-18) refers to private pans. Yet the interpretation that Nadab and Abihu were punished because they used private pans rather than utensils of the sanctuary (Lev 16:12; Num 16:46 [MT 17:11]) should be ruled out since "alien" describes the fire rather than the fire-holder.

Another possibility is to take “fire” as designating coals. Instead of being taken from the outer *altar (Lev 16:12; Num 16:46 [MT 17:11]), the “alien [unauthorized] coals” come from a source that is “profane” (*Targum Onqelos* on Lev 16:1), “outside” (*Targum Yeruṣalmi I*) or from an oven (*Targum Pseudo-Jonathan*). One may also argue that Nadab and Abihu took unfit fire/coals from an idolatrous altar and presented it before Yahweh as an offering. Finally, the attribute “alien” may also refer to the act (offering). That is, God did not ask the two brothers to perform the respective acts of worship. Interpreting the episode to Aaron, Moses cites Yahweh’s couplet, found nowhere in the Bible except Leviticus 10:3: “Through those who are near me [i.e., priests] I will show myself holy, and before all the people I will be glorified” (NOAB). Perhaps Nadab and Abihu went beyond the limits of their function by disobeying God and thus ceased to show his glory before the people.

The sin committed by Nadab and Abihu was punished accordingly, with fire coming forth from before Yahweh and consuming both brothers (Lev 10:2). J. Milgrom (599-600) compares Leviticus 10:1 with Numbers 16:18, 35a, suggesting that Nadab and Abihu were struck “at the entry of the tent of meeting” in the *tabernacle court. This view is supported by the following facts: the fire “came forth” from the tent; Moses ordered Mishael and Elzaphan to “come forward,” not to “enter” (the tent); and the deaths occurred “before all of the people,” that is, in the tabernacle court, the place of the people. This interpretation agrees with the priestly *kābôd* (“glory”) theology that the divine fire cloud rests on the ark. On that day the fire came out twice, to consume the *sacrifices and to exterminate Nadab and Abihu.

Regarding the historical circumstances that lie behind this tragic episode, one may mention a few explanations previously proposed. R. Gradwohl sees in this incident a polemic against Jeroboam I, who set up two golden calves at Bethel and Dan (cf. 1 Kings 12:28, 32; 13:1-10). Like Jeroboam’s sons Nadab and Abijah, who died prematurely for their father’s sin (1 Kings 14:1-17; 15:27-28), Aaron’s sons Nadab and Abihu were punished for their father’s making of the *golden calf at Sinai. J. C. H. Laughlin suggests that the biblical account is a polemic against Zoroastrianism, which mentions the offering of the sacred fire on a censer by two priests in the

temple, although this reflects a period much later than that described in the Pentateuch. According to Milgrom (628-33), the background of this incident lies in the religious realm rather than in the political sphere. Thus the Nadab and Abihu narrative is a polemic against the pagan practices of offering incense in private idolatrous settings. Toward the end of the First Temple period, Assyrian astral cults with offerings of incense on the rooftops of private homes found a way into Judah (cf. Jer 19:13; 32:29; 2 Kings 23:5, 12). The biblical evidence is supported by archaeological finds. Small incense altars have been discovered in many Israelite cities (e.g., Gezer, Gerar, Samaria, Lachish), dating from the sixth to fourth centuries B.C. Most of these altars and cultic utensils were found in private homes. Although all biblical passages mentioning this practice refer to idolatry, one may assume that eventually offering incense in private settings infiltrated Yahwistic worship. By telling the story of Aaron’s sons, notes Milgrom, the priests meant to say that Nadab and Abihu, even though they offered incense inside the sanctuary, were struck because they offered incense on coals not from the altar but on “unauthorized coals.” In the way it is told, this old story invalidates all incense offerings outside the sanctuary, which, based on the archaeological evidence dating from the First and Second Temple periods, were quite prevalent and persistent in the religious life of Israel.

Numbers 3:4 adds three details concerning the tragic fate of Aaron’s sons: they were killed “while offering alien fire” (cf. Num 26:61); this mysterious episode occurred in the “wilderness of Sinai”; and since Nadab and Abihu had no sons, Eleazar and Ithamar, their brothers, continued their duty as priests under Aaron’s guidance.

NAHOR

Nahor is the name of two individuals in the Pentateuch, the father of *Terah (*Abraham's father) and a son of Terah. The name Nahor is also attested in the ancient Near Eastern world, both as a personal name and as the name of a city located near *Haran. Consequently, the OT data about these individuals can be seen to fit well within its ancient Near Eastern context.

1. Nahor, Father of Terah
2. Nahor, Son of Terah

1. Nahor, Father of Terah.

Nahor, descendant of *Seth and *Shem, was born to Serug when Serug was thirty years old. Nahor became the father of Terah when he was twenty-nine. After seventy years, when Nahor was ninety-nine, his son Terah became the father of Abram, Nahor and Haran (Gen 11:22-26). All in all, Nahor lived 148 years. The presumed habitation of Nahor at *Ur of the Chaldees, linked with the subsequent migration of his son Terah to Haran, may suggest a religious association with the moon deity Sin (Hess, 996). Both Haran and Ur were centers of moon worship unrivaled by any other Mesopotamian city (Speiser 1964, 81).

The name Nahor is known from the Ur 3 period (*naḥarum*) through to late Assyrian times (Wenham 1987, 252) and may be derived from the root *nḥr*, "to snort, blow out" (Wenham 1987, 252). The origin of Nahor's name may be related to Nahur, located near Haran (Harran in cuneiform texts) on the plain of the Upper Balikh River, a northern tributary of the Euphrates (Boraas, 731). The city of Nahor in Aram-naharaim, to which the servant of Abraham journeyed to find Rebekah as a wife for *Isaac (Gen 24:10), may be the city occupied by Nahor son of Terah rather than a city with the name of Nahor. There is no evidence to suggest that the biblical character Nahor lived in a location other than Ur of Chaldees.

2. Nahor, Son of Terah.

Nahor is the son of Terah and grandson of Nahor son of Serug (an example of the well-attested ancient practice of papponymy, naming a child after his grandfather [Wenham 1987, 253]). Nahor's brothers were Abram and Haran, the father of *Lot. Nahor was apparently born in Ur of the Chaldees sometime after Terah's seventieth year. His wife Milcah, the daughter of his uncle Haran,

bore him eight sons, and his concubine Reumah was the mother of four additional sons (Gen 22:20-24). *Source critics attribute the material about Terah and his sons (Gen 11:28-30) to J, and the common critical judgment is that the material is very ancient (Brueggemann, 107), in part because of the seemingly pointless reference to Iscah (Speiser 1964, 78-79).

Nahor's marriage to his niece (Milcah is the daughter of Nahor's deceased brother Haran) has led to speculation that cases of this kind involved adoption followed by marriage. Citing "marriage adoption" contracts from Nuzi involving the legal status of "daughter," "daughter-in-law" and "sister," E. A. Speiser asserts that the pertinent document would be called "document of daughter- and daughter-in-lawship," where the husband became also adoptive father and thereby father-in-law (Speiser 1963, 25). Both Speiser's interpretation of the Nuzi law and the aptness of the parallel have been questioned. Nuzi contracts provided the woman with additional family support (Grosz, 140) rather than providing for marriage between the contracted parties (Greengus, 22). Though some Nuzi adoption contracts discuss the transference of rights in terms of who may arrange a marriage, the biblical narrative provides no evidence that any such transfer was involved in the marriage of Milcah to Nahor (Thompson; Eichler, 48, 59).

Nahor's religion is also an issue of controversial speculation. First, the association of Nahor and his grandfather with Ur and Haran, the cult centers of the lunar deity Sin, has been used as evidence indicating that the worship of the moon god may have been the focus of their religion (Hess, 997). The controversy is directly related to the identity of "the God of Nahor" invoked by Laban in his covenant with Jacob (Gen 31:51-54). On the one hand, Laban may be viewing the God of Nahor as the equivalent of the God of Abraham whom he also invokes in Genesis 31:53 (Boraas, 731). If this is the case, service of the common God is further indication of the close relationship between the tribes of Abraham and the descendants of Nahor. On the other hand, if Laban and Nahor are devotees of the false god of their father Terah (Way, 809; cf. Josh 24:2), then identification of the god of Nahor with the lunar deity Sin is more likely. If that is the case, Laban's oath in the name of the god of Nahor may have involved concern to protect his property (Hess, 997). Since inheritance

clauses refer to the heirs invoking the gods of the fathers (Huehnergard, 429-31), Laban's action seems to be a right and an expectation of heirs. The Jacob and Laban narrative further indicates the distinction in property rights and family responsibilities between Nahor's representative, Laban, in Haran and Abraham's representative, Jacob, in the region to the south (Hess, 997).

Nahor was the father of twelve sons. Abraham received a report (Gen 22:20-24) that his brother Nahor had eight sons by his wife Milcah: Uz the firstborn, Buz, Kemuel the father of Aram, Chesed, Hazo, Pildash, Jidlaph and Bethuel the father of Rebekah. According to the same report, Nahor's concubine Reumah bore him four more sons: Tebah, Gaham, Tahash and Maacah. The twelve sons have been compared to the twelve sons of *Jacob, *Ishmael (Gen 25:13-16) and *Esau (Gen 36:9-14). The name Milcah means "queen" and has been associated with Malkatu, daughter of the moon god Sin (Wenham 1987, 273). Reumah ("beloved of God"; Coote, 207) is a second-class wife, likely acquired without bride money and having fewer legal rights (Wenham 1994, 121).

Additional information about the twelve is limited. Uz is the name of a country in north-west Arabia that was home for Job (though Uz is also the name of a descendant of Aram, according to Gen 10:23 and 1 Chron 1:17). Identifying the region with the first son of Nahor can be no more than speculative. Buz is associated with Dedan and Tema in Jeremiah 25:23, suggesting that it too may be linked to a region in Arabia. Kemuel is the father of Aram. The Table of Nations in Genesis 10:22 lists Aram as the son of Shem in the same generation as Elam and Asshur (eponymous ancestor of the Assyrians), while Genesis 22:20-24 may reflect another person named Aram, though some suggest a different, perhaps earlier, tradition about the ancestry of the Arameans (*BHS* suggests that Aram may have been added later to Gen 22:21). This tradition could mean to identify Kemuel and his brothers as eponymous ancestors of Aramean tribes (Pitard). Aram himself could be the ancestor of the state of Aram-Damascus and in the same generation as Jacob/Israel (Pitard). In any case, there is a close linkage between Israel and the Arameans evident in the whole of Genesis. Bethuel, the father of Rebekah and Laban, plays a secondary role in the engage-

ment of his daughter to Isaac. In his shared speech with Laban (Gen 24:50-51) he attributes the fortune of Abraham's servant to Yahweh. Whether or not this speech indicates devotion to Yahweh on the part of Nahor's descendants cannot be determined. Yet it does demonstrate their discovery that God is managing the events of their families' lives (Sternberg, 151-52). Reumah may have been the name of a league or alliance to which her sons belonged. Tebah, Tahash and Maacah were the names of kingdoms or towns in what is now Lebanon or Syria (Wenham 1994, 121).

NAPHTALI

Naphtali was the sixth son born to *Jacob and the ancestor of the Israelite tribe of the same name. He was Jacob's second son by Bilhah, the maid Rachel had given to Jacob as a concubine (Gen 30:1-4, 7-8).

1. Birth and Name
2. Naphtali's Role in the Pentateuch
3. Subsequent History

1. Birth and Name.

The name Naphtali is related to the Niphal of the Hebrew verbal root *ptl*, "to twist or plait," hence "to wrestle," and is derived from a wordplay uttered by Rachel upon Naphtali's birth: "With mighty wrestlings [*naptûlē*] I have wrestled [*nip-taltî*] with my sister, and I have indeed prevailed" (Gen 30:8 NASB). This naming speech shows Rachel to have been an aptly suited mate for her husband (cf. Gen 25:22-26; 32:24-32 [MT 32:25-33]). Naphtali's only full brother was *Dan, whose own name means "[God] has judged" (Gen 30:5-6). Thus Rachel's joy in finally bearing two sons—albeit through her maid—was a bit vindictive, though perhaps justifiably so.

Bilhah's two sons were born "on [Rachel's] knees" (Gen 30:3), a phrase signifying Jacob's formal recognition of their sonship through Rachel. Significantly, this phrase does not appear in connection with the birth of Zilpah's sons (Gen 30:9-11).

2. Naphtali's Role in the Pentateuch.

Naphtali plays little more than a background role in the Pentateuch either as a son of Jacob or as a tribe.

2.1. Standard Formulas. Typically Naphtali appears only in standard genealogical or census-related formulas common to each of the sons of Jacob or the tribes (Gen 35:25; 46:24; Ex 1:4; Num 1:15, 42-43; 2:29; 7:78-83; 10:27; 13:14; 26:48-50; 34:28; Deut 27:13). Naphtali appears last, or nearly last, in each of these lists and typically is named in them in connection with Dan, *Asher and *Gad. From a genealogical point of view, this is expected inasmuch as these four tribes were the sons of Bilhah and Zilpah. Three of these tribes, Naphtali, Asher and Dan, were stationed together on the north side of the camp of meeting at Mount Sinai (Num 2:25-31); eventually all three also settled the northernmost reaches of Galilee. In Moses' two censuses Naphtali was a nondescript sixth and then

eighth largest of the Israelite tribes (Num 1:42-43; 26:48-50), dropping slightly in total numbers between the two.

2.2. The Blessings of Jacob and Moses. The blessings that Jacob (Gen 49:21) and *Moses (Deut 33:23) conferred on Naphtali reflect the favored position the tribe would receive once it settled in Canaan. Jacob compared Naphtali to a "doe set free that bears beautiful fawns" (Gen 49:21 NIV, following a majority opinion that emends MT). Moses perceived that that the tribe of Naphtali "is abounding with the favor of the LORD, and is full of his blessing," and further noted that "he will inherit southward to the lake" (Deut 33:23 NIV), that is, the Sea of Galilee. Both of these blessings reflect the wild beauty and goodness of Naphtali's inheritance in Galilee.

Naphtali's tribal allotment lay to the east of Asher, to the north of Zebulun and Issachar, and to the west of the Jordan River (Josh 19:32-39). Naphtali's northern *border was not delineated in the territorial description of Joshua 19 and probably extended as far as Israel was able to settle, perhaps to the Litani River in southern Lebanon. This region includes the high hills of upper Galilee, the broad and lush Huleh Basin and a number of smaller valleys approaching the Sea of Galilee. Naphtali also received abundant water resources (ample rainfall, control of the headwaters of the Jordan River, numerous smaller springs and half the shore of the Sea of Galilee), excellent building materials (basalt, hard limestones and wood) and rich soils. In addition the international highway linking Egypt with Mesopotamia and Europe funneled through the valleys lying along the southern and eastern extremities of Naphtali.

Most of the towns lying within the tribal territory of Naphtali (Josh 19:32-39) are known. Of these, Chinnereth (Khirbet el-'Oreimeh) on the northwestern shore of the Sea of Galilee, Hazor (Tell el-Qedah) on the southwestern end of the Huleh Basin, and Kedesh (Tell Qades) on the heights above the Huleh Basin to the west were strategically significant. All told, Naphtali's natural resources offered a greater promise of abundance and fertility than did those of any other tribe, amply fulfilling the words of Jacob and Moses.

3. Subsequent History.

When one considers the larger scene, however, Naphtali's position astride the northern ap-

proaches of Israel was rather insecure. Isaiah rightly termed the region “Galilee of the Gentiles” (Is 9:1 [MT 8:23]), reflecting the difficulty Israel faced in settling its northern regions in the face of incessant military and cultural pressure by its Gentile neighbors. From the beginning Naphtali was not able to drive out the Canaanites who lived in Beth-anath and Beth-shemesh, cities that guarded the two favored natural routes that penetrated upper Galilee from the coast (Judg 1:33). For the most part Naphtali was able to settle only in the hilly regions of upper Galilee that lay away from strong centers of Canaanite settlement, as is generally supported by archaeological evidence from the thirteenth through eleventh centuries B.C.

Naphtali played a prominent role in the battles of Barak (Judg 4:6, 10; 5:18) and Gideon (Judg 6:35; 7:23), securing its territory for Israelite political expansion under the monarchy (cf. Ps 68:27 [MT 68:28]). Yet Naphtali lay first in the line of Syrian (e.g., 1 Kings 15:20; 2 Chron 16:4) and Assyrian (2 Kings 15:29) advances against Israel. The Assyrian king Tiglath-pileser III incorporated Galilee into his empire in 733 B.C., bringing “contempt” upon the lands of Zebulun and Naphtali (Is 9:1 [MT 8:23]). Isaiah used this dark event to speak of “a great light” that one day would shine in Galilee (Is 9:2-7 [MT 9:1-6]). In fulfillment of this prophecy, most of Jesus’ public ministry around the Sea of Galilee took place in the old tribal territory of Naphtali (Mt 4:12-17).

NATIONS, TABLE OF

“Table of nations” is the term commonly used to describe the list in Genesis 10:1-32 that details the location of peoples and their relationship to each other. It begins with the expression “These are the *tôlêdôt* [family history, *genealogy] of Noah’s sons, Shem, Ham and Japheth, when children were born to them after the flood.” Ten of these *tôlêdôt* formulae introduce major sections in the book of *Genesis. Until modern times Jews and Christians regarded the table as a comprehensive description of the spread of humans over the whole earth. When, therefore, new peoples were discovered, as, for example, in the Americas, they had somehow to be brought into relation with the groups described in Genesis 10. The *Book of Jubilees* (second century B.C.) attempts to relate the world as it was in its day to Genesis 10 (see *DNTB*, Geographical Perspectives in Late Antiquity). For *Jubilees*, Zion is the center of the world, and the table is used as a basis to prove that the Canaanites rightly belong in Africa and had illegally seized “the land of Lebanon as far as the river of Egypt.” Israel’s original expulsion of the Canaanites was thereby justified, as was the territorial expansion of the Hasmonaeans (see Alexander, 982). Modern understanding of the world and its peoples compels us to read the table more carefully and to appreciate its context more sensitively.

6. Lands

1. Context.

1.1. Textual. The table is clearly linked to the preceding story of the history of *Noah’s descendants as they emerge from the ark. Beginning with Noah’s three sons, *Shem, Ham and

Japheth, human beings will repopulate the earth after their almost total destruction by the *flood. The spread of Noah's family in the post-flood world is anticipated in Genesis 9:19 with the use of the verb *nāpaš*: "From them the [population of] the whole earth spread out [*nāpēšā*]." But a related verb, *pūs*, appears at the end of the *Babel story in Genesis 11:8: "Yahweh scattered [*yāpes*, Hiph.] them over the surface of the whole earth." These two occurrences of a reference to human beings spreading across the earth form something of an *inclusio* for the section of Genesis that includes the table of nations in chapter 10 and the Babel account. They also indicate how the spread of humans following the flood must be seen as a result of both divine *blessing and human disobedience that leads to divine judgment. This balance between divine blessing and punishment is ultimately reflected in the next *tôlêdôt* that begins with Genesis 11:10. Here the account of Shem's descendants is taken up anew, only this time it is traced until it reaches Abram. God's choice of *Abram indicates an important new strategy in his dealing with the human race, and it is developed in the light of God's punishment of humans but also because of his determination ultimately to act in *grace to restore them.

Chronologically the Babel story must precede the table of nations, but the two are arranged as part of a structure intended to highlight an important theological development. The theme of divine grace is explicit in the story of Noah and his family, and the table of nations further develops this theme: God not only preserves the human race but he renews the divine blessing of fruitfulness originally given in Genesis 1. At the same time, however, the content of the table indicates an awareness of the problems that have arisen in Noah's family and the effect of the blessings and curses pronounced on Noah's offspring (Gen 9:18-28). Thus Noah's family not only spreads over the earth but it is now a divided family. The table also anticipates the theme of judgment and its consequences for all human beings that is made explicit in the Babel narrative. The formulae that help to structure the table point to the fact that the one people (*'am*) of Genesis 11:6 are actually the nations (*gôyim*) of the earth (Gen 10:5, 20, 31, 32). The one language that the city builders spoke (Gen 11:1) has been replaced by a bewildering variety of languages used by distinct groups located in their own lands and all pursuing their own exclusive

interests (Gen 10:5, 20, 31, 32).

The human "family" has become the competing nations of the world. In the present context, the main rhetorical function of the table is to demonstrate why, given the dissolution of human unity, God will move to choose a particular individual and his offspring through whom he will restore humans to a new relationship with himself. Abram emerges as that individual. He comes into increasingly sharper focus in the next two *tôlêdôt* (Gen 11:10-26, 27-31), and finally he receives the divine call and *promises by which he will become a great nation (*gôy*) through whom all the clans of the earth will be blessed (Gen 12:1-3).

1.2. Historical. Most scholarly studies accept that the names and disposition of nations in the table are a reflection of the geography, political associations and ethnic groupings known to the author in his own era. Some suggest that it draws on earlier tradition and so represents ethnological relationships in place much earlier than the time of its final compilation. D. J. Wiseman (265), for example, argues that "the geographical information in Genesis 10 could have been available to the Egyptian court when Moses received his education there in the fifteenth or fourteenth century B.C." If, as this quotation indicates, *Moses is seen as responsible for the material in the table, then his lifetime must represent the latest date for the table. This is commonly taken to be either the fifteenth or thirteenth century B.C. G. J. Wenham (214) thinks that the cosmopolitan tenor of the writing points to an author who is well informed about foreign peoples and probably connected with a royal court. He is prepared to allow for a setting in the fourteenth-century Egyptian court or in the Jerusalem court of either the tenth or seventh century B.C. Those who argue for a date no earlier than the seventh century B.C. generally do so on the assumption that the list is made up of more than one source (cf. Westermann, 503; Alexander, 980). They also point to the presence of some nations in the table that would not, judging by the time of their first appearance in written records, have been known to Israel before the seventh century B.C. T. C. Mitchell (1058) contests this claim: he argues that many of these peoples are likely to have existed as tribes before their appearance in the written records, and knowledge of their existence could have been transmitted through invading groups such as the Kassites. Proposals for dating the ta-

ble in the postexilic period face the problem of the seemingly inexplicable absence of Persia from the table.

2. Genre.

In many ways the table resembles a segmented genealogy (cf. Wilson, *ABD* 2.930-31; Ross 1980, 349-50), but it does not conform totally to this genre (see *Genealogies*). C. Westermann (498) notes that "the traditional form of the genealogy is obviously inadequate. It can present growth and expansion in the family context, but not the division and spread of the nations over the earth as then known. The history of the nations cannot be presented as family history." The table seems, rather, to have used a number of different forms and drawn on a variety of traditions to produce what is widely recognized as a distinct form with a unique contribution to our understanding of the development of human societies.

3. Sources.

Traditional *source criticism identifies Priestly (P) and Yahwistic (J) sources as the major written materials out of which redactors have composed the present table. The P source (Gen 10:1a, 2-7, 20, 22-23, 31-32) is thought to be largely intact and to provide the formal stylized framework of a genealogical pattern. This is intended both to indicate the political realities of the writer's time (probably the sixth or fifth century B.C.) and to trace the peoples of his era to a common family ancestry in Shem, Ham and Japheth. In this way he is also able to locate them within the context of the narrative of sacred history.

The J source (Gen 10:1b, 8-19, 21, 24-30) is said to be present only in a broken form. Westermann thinks that while J is primarily narrative, mostly verbal in its style ("A begot B, sons were born to A"), P displays a formalized and predominantly nominal approach ("sons of").

The confidence that exponents of source criticism have traditionally shown in isolating sources has been increasingly called into question. In the present environment it is easier to point out different styles and emphases within a single pericope than to persuade scholars that these distinctives are a sufficient proof of the presence of the traditional pentateuchal sources J, E, D and P. Thus A. P. Ross (1980, 344-70), for example, recognizes the differences in the verbal "begot" and the nominal "sons of" and offers a reasonable explanation of these without

restricting himself to the value-laden descriptors of traditional source criticism. We shall take up the import of the distinction between the "begot" and the "sons of" formulae later.

4. Structure.

Genesis 10:1 is echoed in verse 32, and together they function as an inclusio for the table. These opening and closing verses are very similar in content; both link the story of the spread of humanity with the flood ("after the flood") and with Noah's three sons who have survived it. Yet there is a subtle but significant variation in the terms that are used. Summarizing the new situation, Genesis 10:32 twice mentions the fact that we now have to deal with the emergence of "nations." As we have already indicated, this development is important for appreciating the context and theology of the chapter, for the "family" of humans has developed into the competing nations of the whole earth.

The table's basic three divisions relate to Noah's three sons. In this case, however, the sons appear in reverse order. Japheth and his descendants are mentioned first, then Ham's descendants and finally, in third place, those of Shem. Having Shem and his offspring appear last creates a climax in the table: it intimates that Shem and his descendants will be the central focus of the narrative from this point on. Ham's offspring will have continuous and highly significant contact with the Shemites, hence they are given second place in the list. The sons of Japheth are presented as somewhat remote from the other two, almost on the periphery of the crucial action of the drama, at least for the present. This same pattern of focusing on the elect son by dealing with him last of all is seen elsewhere in Genesis (e.g., Cain, Gen 4; Seth, Gen 5; Esau, Gen 36; Jacob, Gen 37). Also, the number three is an important structural element in the early chapters of Genesis: Cain's genealogy in Genesis 4 ends with Lamech's three sons, and the last person in the continuation of Shem's genealogy in chapter 11, *Terah, has three sons, one of whom is Abram. The table of nations is set out in figure 1.

The whole table has an introductory and concluding formula, but each of the three divisions also has a separate introduction and summary statement (colophon), and each shares formulaic elements with the others. The colophons attached to the lists for Japheth (v. 5), Ham (v. 20) and Shem (v. 31), and the summary

of the whole table (v. 32), are almost identical. They mention that the descendants of (*bēnē*, “sons of”) each of these men are settled as clans in their own land, nations (*gōyīm*) identified by their own language.

The two terms *bēnē*, “sons of,” and *yālad*, “to beget” (and its derivatives), help to structure the table. Japheth’s list begins with *bēnē* and does not use the term *yālad*. Ham’s genealogy begins with *bēnē* but also uses *yālad*, while Shem’s list begins with *yālad* and also uses *bēnē*. Ross (1980, 347) summarizes the way in which the terms are used in the table: “The term *b’nēy* points to the ancestor; the term *yālad* (and related forms) points to the descendants. The former emphasizes the beginning; the latter the continuing results. By using these terms correctly the writer, in one table, bridged the past with the present, thus forming a major transition in the book.” Source critics have often used these two modes of representing sequences of descendants as one means of distinguishing between P and J source material. The entire table is, of course, described in both its introduction (Gen 10:1) and its concluding colophon (Gen 10:32), as a *tôledōt*, a noun derived from *yālad*.

The table demonstrates a process of selection at work by which only some of the lines of descent of individuals who appear in the list are traced any further. Thus, for example, only two of Japheth’s sons have their genealogy extended, and then only to the next generation. Only three of Ham’s four sons have their immediate descendants recorded, and only two of these are selected for limited mention of elements of the third generation—most strikingly, the Philistines. Arpachshad and Aram receive extended treatment among the five names in the second generation in the Shem list. Arpachshad’s line is traced in the form of a “linear genealogy” for two generations in order to hasten the movement toward Eber and his offspring, Joktan and Peleg. Joktam’s offspring receive detailed treatment, but Peleg’s line is not developed any further. This seems to indicate that the present form of the table anticipates the even more selective development of Shem’s line through Peleg to Terah and then on to Abram in Genesis 11:10-32, and by concentrating here on Joktam it effectively dismisses him from any further role in the developing drama.

Seventy names of the descendants of Noah’s three sons appear in the table. Later Jewish tradi-

tion links these seventy with Deuteronomy 32:8, where Yahweh allocates land holdings to the nations according to “the number of the children of Israel.” The tradition associates the “number” of the Israelites with the seventy who accompanied *Jacob into Egypt and sees this as the basis for God’s appointing seventy nations, each in its own land. Israel, however, which is not listed in the table, is said to occupy a special position as Yahweh’s chosen portion, and to Israel he allocates its own appointed land (cf. *Tg. Ps.-J.*).

5. Name Categories.

Genesis 10 sets out to show how the offspring of Noah’s three sons spread and repopulated the earth. But texts within the OT and from the ancient Near East clearly indicate that the names of some of the descendants in the table are those of ethnic groups and geographical locations such as cities and countries.

The names of Noah’s sons are intended to represent individuals who survived the flood, and Nimrod is also presented as an individual whose fame is related to a distinctly historical context. Similarly, in Peleg’s case a significant historical event is said to have taken place during his lifetime.

Place names like Babel, Accad and Erech occur in a straightforward way in the table to refer to cities in Mesopotamia. However, a quite different category of place names is created when, e.g., Sidon, the name of a major city in Phoenicia, appears as the name of Canaan’s firstborn son (Gen 10:15).

The names of people groups appear as the Dodim, Ludim, Caphtorim and so forth, a form occurring in the table most frequently to describe the descendants of Egypt, or as gentiles such as Jebusites, Amorites, Hivites and Hamathites, a form that appears overwhelmingly in connection with the names of Canaan’s descendants.

Names of places and people groups may point to individuals who are considered to be the eponymous ancestors of the group or the inhabitants of the location. Ross (1980, 344) points out that the idea of eponyms is used in significantly different ways. For some it means “fabled ancestors to the different nations.” Ross thinks that such a definition would rule out the concept here, since the text clearly envisages real individuals as the progenitors of those who spread out to fill the earth after the flood. If, however, “eponymous” may be used to describe a “founder

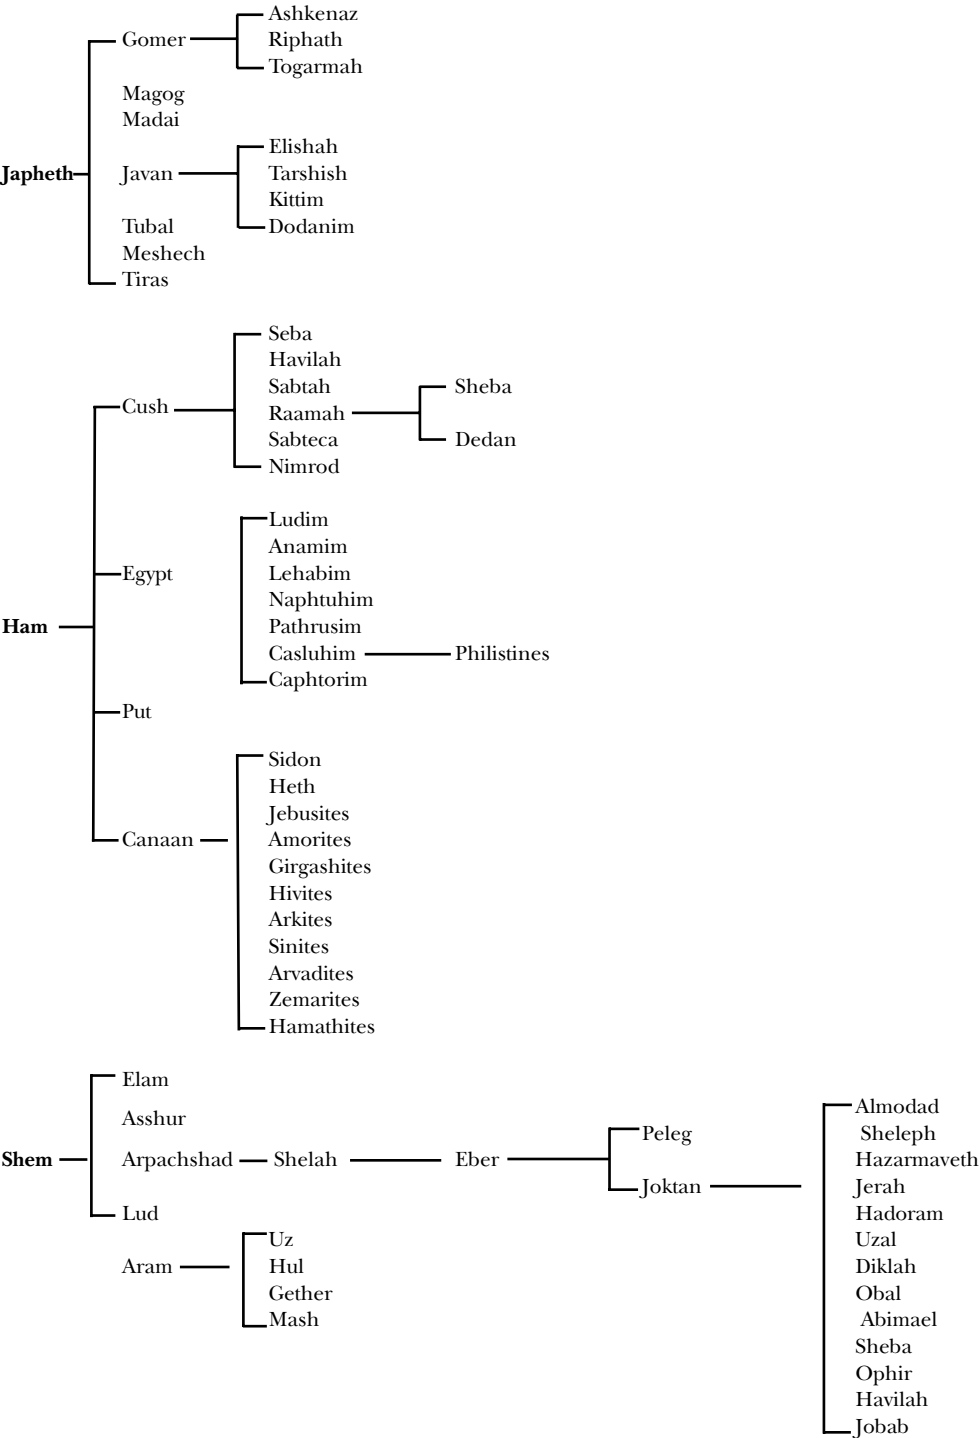

Figure 1: The Table of Nations

or ancestor who gave his name to the people or place,” then it is compatible with biblical writer’s intent.

The Hebrew terms used to express the relationship between the various elements in the table are the nouns: “son(s),” *ben*, and passive and active forms of the verb *yālad*, “to beget.” These terms are used to indicate that all those mentioned here are descended from the “family” that emerged from the ark. Nevertheless, *son* and *beget* are sometimes used in the OT and its world to indicate wider social and political arrangements beyond those of actual family relationships. In the context of covenant making, for example, the junior partner, or vassal, in the arrangement may refer to himself as “son” or be so designated by the senior partner, or suzerain (cf. 1 Sam 7:14; 2 Kings 16:7). The “sons of the prophets” are groups of disciples who gather around major prophetic figures (cf. 2 Kings 2:3). The phrase “sons of Belial” indicates the moral or ethical character of the referents. In general, this wider range of meaning for *son* allows for political or even geographic associations that relate to some sort of links with a putative individual. Similarly, the verb *beget* may be used in a figurative sense. It would be difficult for readers of the table not to recognize the Sidon that Canaan begets as the famous city in Phoenicia.

The image of a father-son relationship between Canaan, the land and a city (and the people groups) within it may be a way of expressing political, social and geographic realities in the author’s day. This does not, of course, rule out the fact that the author is claiming to be able to trace a blood lineage back to a much earlier, eponymous but historical individual. Given the passage of time and complex nature of developments in the area, the reality of relations between the various elements in the author’s own day may be much more involved than a simple genealogy can fully explain. Wilson (*ABD* 2.931) comments that “in a given society, segmented genealogies being used for differing purposes may exhibit a great deal of variation, for the society’s political, economic and religious configurations may be quite different. In such cases the apparently conflicting genealogies are in fact accurately reflecting the way in which the society sees itself in a particular social sphere.”

5.1. A Variety of Principles. It seems, therefore, that a number of different principles are used in describing the spread of humanity and the de-

velopment of nations and their subgroups. The colophons indicate some of these principles when they speak of the earth being replenished with people segregated into clans, languages, lands and nations. This is an indication of family relations, language groupings, geography, political relationships and ethnicity. The reference to language grouping is a clear echo of the Babel story, but otherwise this principle plays no obvious part in grouping names within the table. Principles of geographical, political, family and ethnic relationships do, however, seem to operate in important ways in expounding the interconnections that make up the table’s lists.

In a few cases the same names appear in the lists of both Shem and Ham’s descendants. This applies to the Lydians (Ludim, Gen 10:13; Lud, Gen 10:22) and Havilah (Gen 10:7, 29). Source critics see this feature as an example of the combination of J and P sources, each of which represents a different tradition about the connections between these people and the redactor’s failure to appreciate the contradiction. The final form of the table, whatever the sources that lie behind it, is a remarkable, carefully constructed piece of tabulation with a deliberate theological point to make. It is therefore more than a little strange that a redactor with such obvious skill should twice fail in a simple exercise in tabulation. A more likely explanation may be found in recognizing the way the table uses the range of different principles we have already mentioned. This would allow for the possibility of duplicate, or even multiple, relationships between the various groups.

5.2. Explanatory Notes. A number of names have explanatory notes attached to them. The note attached to the Hamitic Casluhites explains that the Philistines came from there (Gen 10:14). The verb *yāšā*’, “go out,” is used in the table only here and in the note relating to Nimrod to explain the derivation of any person or group.

Nimrod is another Hamite who is descended from Cush. The table provides him with the most extensive and intriguing historical background in a style quite different from the normal tabular form (Gen 10:8-12). Source critics argue that this insert belongs to J, but the original source of the material and history of its transmission cannot really be determined.

Nimrod “began to be a mighty man [*gibbōr*] in the earth [or land]” (Gen 10:8). Here the term *gibbōr* “expresses the idea of violent, tyrannical

power" (Westermann, 516). Westermann also believes that the Hebrew of 10:8 means that Nimrod is the first man of might on earth: "Nimrod's dominion is seen as something new, as an epoch making beginning" (Westermann, 516). However, Gen 6:1-4 also opens with the same Hebrew verbal construction translated in 10:8 as "began to be", and in the chapter six passage *gibbor* (pl.) appears as a descriptor for the descendants of the "sons of God" (6:1). The new beginning of despotic power in the earth may, in fact, simply be a reversion to some older practices of the pre-flood generation.

The most appealing explanation of the expression "a mighty hunter" (*gibbôr ṣayid*) in Genesis 10:8 relates to the fact that Nimrod established a kingdom (Gen 10:10). Scholars point to frequent representations of ancient Near Eastern kings as hunters. But Westermann points out that the later images of kings in scenes depicting the hunt as sport actually mask the original importance of the king's role in providing security for his people from predatory animals. Perhaps it is this royal role that lies behind the phrase applied to Nimrod. He fits the paradigm of a powerful king able to provide for his subjects, but his rule may involve a climate of despotism.

Mesopotamia is certainly the location for Nimrod's kingdom. The kingdom begins with his control of major cities in the land of Shinar (southern Mesopotamia; the prominence given to Babylon is a foreshadowing of the Babel incident in chapter 11) and expands with the establishment of important cities in Assyria. Nimrod's identity is much less clear. Two basic questions arise in any attempt to identify the Nimrod of the table with any known figure in Mesopotamian history. First, he is described as a descendant of Cush, who rules in a geographical region that the table itself recognizes as essentially Shemitic. Second, there is no unequivocal reference to the name Nimrod as a ruler of Sumer and Assyria. Source-critical approaches to these problems simply propose that the Nimrod material is from J. But this does not help us, for it does not explain where and how the tradition linking Nimrod and Cush emerged.

Various suggestions have been made in addressing these problems, and Y. Levin mentions the most important of these. Some of the figures from the ancient Near East who are proposed by various authors as a possible prototype for Nimrod are human rulers: Sargon of Akkad, Tukulti-

Ninurta of Assyria and the Egyptian Pharaoh Amenhotep III; gods: Nergal, Marduk and Ninurta; or demigods: Gilgamesh. Levin (357) agrees with E. A. Speiser (1994, 272) that there is no textual evidence to support the idea that Nimrod is anything other than a human. Wiseman (1994, 260-61) argues on the basis of archaeological evidence from the sites of the cities mentioned in the verses concerned (Babylon, Uruk, Ashur, Calah and Nineveh) and from literary evidence relating to Akkad that the Nimrod tradition goes back at least to the twenty-third century.

Levin agrees with this and makes a strong case for connecting the earliest tradition with Sargon of Akkad, his son Naram-Sin and also with the Sumerian city of Kish. This city established a primacy among the rival Sumerian city-states of the third millennium, and its rulers came to epitomize the very essence of kingship. He sees the tradition developing over a considerable period of time, during which time it became known and modified in Western tradition in the region. The biblical Nimrod is thus a "composite Hebrew equivalent of the Sargon dynasty" (Levin, 366). Unfortunately, Levin has no better proposal for explaining the biblical connection of Nimrod with Cush than to suggest that it is a mistaken identification of the Mesopotamian Kish with the Hamitic Cush. It is highly unlikely that Kish was a sufficiently prominent element in the titulary of Mesopotamian rulers as known in the West for biblical tradition to use that as the basis for assigning a Cushite origin to a prominent Mesopotamian king. Wiseman's proposal that Nimrod's Hamitic links may reflect the non-Semitic origins of the earliest city builders in Mesopotamia, such as the Sumerians and others, seems to have rather more to commend it.

Canaan's list of offspring has an appended note (Gen 10:19) that describes the extent of Canaanite territory. This rounds out the explanations attached to the Philistines, Mesopotamians and Canaanites, people who were to play a vital role in Israel's history.

6. Lands.

While not all the names of descendants of any one of Noah's three sons can be identified with certainty, a general picture emerges of the geographical areas most closely associated with each of the three blocks of people. There are surprises, but these may be best explained by the application of the various principles indicated above.

6.1. Japheth. The inhabitants of the region represented here extends from the Mediterranean islands through modern Turkey and into Iran. The various elements in the Japheth list are normally identified as follows: Gomer = Cimmerians; Magog (cf. Ezek 38:2; 39:6) = Lydia, but this is far from certain; Madai = Media or the Medes; Javan = Greece; Tubal and Meshech (cf. Ezek 27:13) = groups in central and eastern Anatolia. Tiras is not positively identified, but possibly = one of the groups of “sea people.”

Gomer’s descendants are: Ashkenaz, (cf. Jer 51:7) = the Scythian Ashkuz of Assyrian texts; Riphath is not certain; Togarmah probably = Tegarama, north of the road from Haran to Carchemesh.

Javan’s descendants are: Elisha = S. E. Cyprus; Tarshish is westward across the Mediterranean, but its location is not certain; Kittim = Cyprus; Dodanim (1 Chron 1:7 reads Rodanim) probably = Rhodes.

The impression given by this list is of widely dispersed people groups that are geographically somewhat on the margins of the author’s focus of interest.

6.2. Ham. The main geographical area represented here is from Egypt and Libya (Put) southward to Nubia/Ethiopia (Cush), touching areas on both sides of the Red Sea, and northward to Phoenicia-Palestine (Canaan).

The descendants of Cush are represented in Upper Egypt and the lower part of the Arabian Peninsula. Some scholars explain the appearance of Havila in both Ham and Shem’s lists as an indication of the mixing of Shemites and Hamites in this region. Cush’s offspring Raamah produces two well-known tribal groups of Arabia, Sheba and Dedan. This Hamite-Shemite fusion may explain why the note on Nimrod is included at this point in the table.

From *Egypt emerges a series of groups who inhabit regions west and east of the Delta and in Libya and the Caphtorim (Cretans). Crete comes under the political-economic sway of Egypt. The Philistines are here linked to the Casluhim, whereas elsewhere in the OT they are linked to the Caphtorim (Amos 9:7; Deut 2:23; Jer 47:4). Ross (1981, 27) explains the references in all these cases as indicating migration and not origination. They migrate via Crete to Egypt and then later to Palestine.

The list of Canaan’s descendants is rather similar to the stylized lists of the inhabitants of the

“Promised Land” that are repeated elsewhere in the OT (cf. Deut 7:1; see Nations of Canaan). It does, however, also contain reference to Sidon, Arkites, Sinites, Arvadites and the Zemarites, cities and groups in Phoenicia, as well as Hamathites, inhabitants of Hamath on the Orontes.

6.3. Shem. It is strange to find a list of Shemites beginning with Elam. Elamite is not a Semitic language, but Semites lived in Elam from the end of the third millennium

Elam was at times subject to Semitic Mesopotamian rule and there was also powerful Semitic cultural influence on it, reason enough to list Elam here. Arpachshad’s name is not readily recognized as Semitic, and his location is not known. Lud is probably Ludbu of the Assyrians rather than Lydia in Asia Minor. Aram’s descendants are not recognized as corresponding to known groups, but they appear to be located north of Mesopotamia, near Armenia. The thirteen descendants of Joktan are all to be located in the Arabian Peninsula.

B. Oded has argued that the table goes back to very old traditions that were concerned to divide humans into three groups: nomads (Shem), city dwellers (Ham) and seafarers (Japheth). E. Van Wolde develops this understanding of the table. She argues that the Shemites, as the people of God, are essentially a nomadic people, distinct from the settled population, and theirs is a God who travels with them. The table then portrays Yahweh as the god of the outsiders, “not so much the God of a people as the God of a particular social class: the have-nots” (Van Wolde, 162).

This reading of the table seems to impose on it ideas which, at best, may be purely subsidiary to its main thrust. The important thing for the final editor of the text is not that the Semites are not urban sophisticates and must never become such. The emphasis is rather on the God who, though his punishment of the race is real enough and leads to the loss of human “family” unity and the development of self-seeking “nations,” will nevertheless pursue in grace his determination to bless humanity—as it was in the beginning.

NATIONS OF CANAAN

Deuteronomy 7:1, addressed to the *Israelites as they are about to enter Canaan, the *land promised them by God, lists seven separate peoples who inhabit the land, whom the Israelites are to destroy and whose land they are to occupy: Hittites, Girgashites, Amorites, Canaanites, Perizzites, Hivites and Jebusites. This article surveys what is known about these seven peoples from the Bible and elsewhere.

3. Biblical Material Relating to the Seven Peoples
4. Synthesis

1. Definitions.

These seven peoples are said to have occupied a territory described in several biblical texts (e.g., Gen 15:18; Num 34:1-12; Josh 1:4; 11:3; 12:7-8; 13:5): a territory bounded on the west by the

Mediterranean and on the east by the Sea of Galilee and the Jordan River, the southern border running from the southern end of the Dead Sea to the Mediterranean and the northern border running from Sidon to Mount Hermon (cf. Josh 11:1-8). Some of these biblical texts seem to include within the territory that God permits the Israelites to occupy additional land lying toward the north and the northeast (Gen 15:18; Num 34:7-11), but none of the seven peoples is said to have occupied any of this land, nor, indeed, did Israel ever take possession of it. Transjordan, similarly, is always treated as a separate territory in the biblical texts.

Biblical texts (e.g., Num 33:51; 34:2) refer to the territory occupied by the seven peoples as “Canaan.” This usage is also found in some extrabiblical texts. For the Canaanites, Amorites and Hittites, considerable extrabiblical evidence goes back many centuries before Israel’s occupation of Canaan. For the Girgashites, Perizzites, Hivites and Jebusites, however, the Bible is the only source.

Scholars also use the term *Canaanite* in a more extended sense to denote a larger territory linked by cultural similarities reflected, for example, in city design, building styles, styles of pottery and other artifacts. “Canaanite” territory in this sense includes Palestine but extends north to take in much of Lebanon and the Syrian coastal territories as far north as Ugarit. But this larger territory was never seen as a single political entity in antiquity. For much of the second millennium the land of Canaan had substantial economic ties with *Egypt, and it was under Egyptian control for much of the Late Bronze Age (1550-1200 B.C.). The “Canaanite” territories north of Canaan, by contrast, tended to fall under the influence of powers yet further to the north, such as the Hittites and the kingdom of Mitanni. This use of *Canaanite* to denote cultural similarities should be distinguished, again, from “the Canaanites” as used in biblical texts (and by modern scholars following the biblical usage) in reference to the nations of Canaan. According to this slightly confusing usage, for example, Phoenicia was culturally Canaanite but was never part of Canaan and was never identified by the biblical writers as belonging to “the Canaanites.”

In addition to these geographical/cultural uses of the term *Canaanite*, it is also used linguistically to indicate the Northwest Semitic languages,

which, in addition to Ugaritic and Amorite, are divided into two main groups, Canaanite and Aramaic (Moscati et al., 7-13). The former includes Hebrew, Phoenician and Punic, Ammonite, Edomite, and Moabite. The latter includes Old Aramaic (including the Imperial Aramaic of the seventh to fourth centuries B.C.), Biblical Aramaic of the period of the Persian Empire, and Middle Aramaic of the third century B.C. through the second century A.D. and the much later West and East Aramaic. There is thus some correspondence with the wider geographical and cultural use of the term and the linguistic use.

2. Canaan: Historical Overview.

In the period known as Early Bronze III (2700-2300 B.C.) Canaan had boasted a flourishing city-state culture, with a number of significant fortified *cities. Around 2300 B.C., for reasons that are not clear, this culture collapsed: the cities were abandoned, many of them destroyed. For the next three hundred years (Early Bronze IV) few sites in Canaan show any signs of permanent occupation. This collapse was part of a wider phenomenon: during these centuries Egypt entered into a time of weakness and confusion known as the First Intermediate Period (2160-2010 B.C.), and in Mesopotamia the empire of Akkad came to an end in 2193 B.C., followed by nearly a century during which no large power emerged.

The beginning of the Middle Bronze Age (2000-1550 B.C.) saw a general revival of the former urban culture in Canaan: old city sites were reoccupied and new sites founded, many of them fortified. This revival may be connected with the rise of the Twelfth Dynasty in Egypt (early twentieth century), which brought a recovery of political and economic unity lost during the First Intermediate Period (*see* Egypt, Egyptians). One of the results was increased trade with Canaan, attested in finds at various sites in Palestine. The reestablished cities of Canaan seem to have formed the basis of a number of small city-states, many of whose rulers are named in the Egyptian Execration texts. These give some idea of the political state of Canaan. The Execration texts were bowls or figurines inscribed with the names of actual or potential enemies of Egypt, which are then shattered by a priest in order to cause the same fate to befall those named on them (*ANET*, 328-29; *COS* 1.32:50-52). They include the names of the rul-

ers of many Canaanite city-states.

Influences between Canaan and Egypt were by no means in one direction. From the nineteenth century on, Canaanites appear to have been settling in the Nile Delta, as evidenced by various newly founded cities similar to those of Canaan: Avaris (Tell ed-Dab'a) was one such. By the seventeenth century these immigrants controlled much of the Nile Delta, with Avaris as their center of power, and during the next one hundred years they extended their control down the Nile to take in much of Middle and Lower Egypt. This was the period of Hyksos rule in Egypt ("Hyksos" derives from the Egyptian for "foreign rulers"). This period came to an end when rule by native Egyptians was reestablished in the second half of the sixteenth century.

The Late Bronze Age (1550-1200 B.C.), whose beginning coincided with the expulsion of the Hyksos rulers from Egypt, saw a great expansion of Egyptian power. Experience of Hyksos rule appears to have fostered a much more aggressive foreign policy. The pharaohs Thutmose I (c. 1504-1492 B.C.), Thutmose III (c. 1479-1425 B.C.) and Amenhotep II (c. 1427-1400 B.C.) led a series of expeditions into Canaan and Syria that brought all of Canaan and also much of Syria under Egyptian control. For much of the Late Bronze Age, Egypt would dispute possession of the territories north of Damascus with the Hittites (based in Anatolia) and the kingdom of Mitanni (based in northern Syria). Relations between these powers and Egypt took the form of a series of wars and temporary truces, only brought to an end when Pharaoh Ramesses II (c. 1279-1213 B.C.) concluded a peace treaty with the Hittite king Hattusilis III in 1258 B.C. (the Hittites having destroyed Mitanni in the previous century). Canaan, however, remained under Egyptian control until the end of the thirteenth century. The Amarna letters, dating mostly from the reign of Pharaoh Amenhotep IV (Akhenaten; c. 1352-1336 B.C.), give insight into the state of Canaan in this period. It was a period of some chaos in the area, with rulers of the various city-states accusing each other of disloyalty to their Egyptian overlords (Halpern 1983, 67-79).

The end of the thirteenth century saw the end of Late Bronze civilization throughout the ancient Near East. For reasons as yet unclear, the Nineteenth Egyptian Dynasty ended in confusion at the turn of the twelfth century. The Hit-

tite Empire in Anatolia fell extremely quickly to people from the Aegean, including the Sea Peoples, who were moving into their territory. Assyria, which had gained strength under Tukultinurta I (c. 1234-1197), was weakened after his assassination. The destruction of Ugarit also occurred during this period, either due to the incursion of the Sea Peoples or, more likely, due to earthquake activity (Drower, 147). The Sea Peoples, among whom were the Philistines, were also very active during this period (Howard).

Egyptian power outside its borders dwindled, and after the mid-twelfth century Egypt had little direct influence in Canaan. Israel was by now in the land, as implied both by the accounts in Joshua and by the reference to them in the Merneptah Stela (*COS* 2.6:40-41).

This is the historical context against which we must read biblical and extrabiblical references to the seven peoples of Canaan.

3. Biblical Material Relating to the Seven Peoples.

Many of the biblical texts relating to the seven peoples take the form of simple lists of names (discussed in detail by Hostetter; Ishida; and O'Connell). These lists fall into three categories: (1) lists from Genesis—Kings that relate to Israel's entry into Canaan and that form the bulk of the biblical lists; (2) Genesis 10:15-19, reproduced in large part in 1 Chronicles 1:13-16, the list of Canaan's sons, a category by itself; (3) later lists, along with which it is convenient to include two drawn from intertestamental texts. Since the third category is beyond the purview of this dictionary, these lists will not be discussed here. It is, of course, necessary to take into account the context in which these lists occur. There are also other biblical texts relating to the seven peoples; for example, boundary descriptions of the Promised Land.

3.1. Lists from Genesis—Kings. There are eighteen relevant lists of names in Genesis—Kings from contexts speaking of Israel's occupation of Canaan. They are presented in table 1, "Lists of Peoples" (adapted from Ishida, 461-62). The second column gives the number of peoples in the list; the third column gives the peoples in the order in which they are listed. The table is based on the Masoretic (Hebrew) Text of these passages. There are variants in the Qumran texts and also in Samaritan Pentateuch and LXX (Hostetter, 7-50; O'Connell).

Text	Number of Peoples	Order Listed
Genesis 15:19-21	10	Kenites, Kenizzites, Kadmonites, H, P, Rephaites, A, C, G, J
Exodus 3:8	6	C, H, A, P, V, J
Exodus 3:17	6	C, H, A, P, V, J
Exodus 13:5	5	C, H, A, V, J
Exodus 23:23	6	A, H, P, C, V, J
Exodus 23:28	3	V, C, H
Exodus 33:2	6	C, A, H, P, V, J
Exodus 34:11	6	A, C, H, P, V, J
Numbers 13:29	5	Amalekites, H, J, A, C
Deuteronomy 7:1	7	H, G, A, C, P, V, J
Deuteronomy 20:17	6	H, A, C, P, V, J
Joshua 3:10	7	C, H, V, P, G, A, J
Joshua 9:1	6	H, A, C, P, V, J
Joshua 11:3	6	C, A, H, P, J, V
Joshua 12:8	6	H, A, C, P, V, J
Joshua 24:11	7	A, P, C, H, G, V, J
Judges 3:5	6	C, H, A, P, V, J
1 Kings 9:20	5	A, H, P, V, J

Table 1: Lists of Peoples (Genesis—Kings)

(Abbreviations for the seven peoples are Hittites (H), Girgashites (G), Amorites (A), Canaanites (C), Perizzites (P), Hivites (V), Jebusites (J). Other names are given in full.)

As is clear from table 1, the lists vary considerably among themselves. Apart from Deuteronomy 7:1, only two other passages list seven peoples (Josh 3:10; 24:11). Ten of the passages list six out of the seven peoples (the Girgashites being consistently omitted), and other passages list three, five, or even ten peoples. Furthermore, the order in which the peoples are listed varies.

Nevertheless, some patterns are discernible. For example, nine of the lists begin with Canaanites, Amorites, Hittites, in varying orders, and continue with Perizzites, Hivites, Jebusites, also in varying orders. E. C. Hostetter (125-26) explains the first halves of these lists as follows: the Canaanites and the Amorites were two of the larger population groups among the inhabitants of Canaan, as reflected in the fact that "Canaanites" and "Amorites" were sometimes used by the biblical writers as shorthand for all the peoples of the land (see 3.3 below); hence, there would be a natural tendency to place them at the beginning. As for the Hittites, while they do not seem to have been a large group, they were known to be linked to the Neo-Hittites,

themselves the remnants of a once-large empire in Anatolia (see 4.3 below), and might on this account also have tended to gravitate toward the beginning of the biblical lists. This general suggestion may well be correct. But attempts to account in more detail for the varying forms of the lists run into difficulties.

T. Ishida, for example, has proposed a three-stage development in the lists with five, six and seven items, based on the changing positions of the Canaanites and the Hittites in the list. He suggests that the different forms of the lists reflect different underlying historical circumstances (Ishida, 470-73). Thus the earliest form of the list was the six-name list in the order Canaanites, Amorites, Hittites, Perizzites, Hivites, Jebusites (Ex 33:2); the form beginning Canaanites, Hittites, Amorites (e.g., Ex. 3:8) reflects contact with Neo-Hittite kingdoms in the period of David and Solomon; the form beginning Hittites, Amorites, Canaanites (e.g., Deut 20:17) reflects the usage of Assyrian inscriptions from the seventh century, according to which “Hatti-land” (“Land of the Hittites”) referred to the whole of Syria and Palestine (hence it begins this form of the list because it is now used as a comprehensive term that includes the territories of the other peoples in the list). This is highly speculative, however, and the theory of Assyrian influence on some forms of the biblical lists is also questionable. Why should the biblical writers have followed Assyrian usage?

The same objection may be raised against Van Seters’s view that some biblical texts use *Amorite* as a general term for the inhabitants of Palestine in imitation of a different Neo-Assyrian usage—attested, for example, in the Sennacherib Inscription (ANET, 287; COS 2.119B:303; c. 700 B.C.)—according to which the term *Amurru* denoted Palestine and Syria. This view is subject to the further objection that Sennacherib included Edom and Moab in *Amurru*, but these are never described as Amorite in the OT, in spite of the fact that both Moab and Edom were occupied by Israel at different times (see, e.g., Judg 3:28-30; 1 Sam 14:47; 2 Sam 8:12; 2 Chron 20; the Moabite Stone [COS 2.23:137]).

It seems safer to eschew such attempts at dating different forms of the lists and conclude more loosely that the biblical writers were somewhat flexible in the way they listed the inhabitants of Canaan. The very fact that the lists are given in varying forms, but with considerable

underlying similarities (only seven peoples are mentioned with any regularity and there are some patterns in their order), “reassures us that we have some reliable data” (Hostetter, 127). We also ought to bear in mind the textual uncertainty noted above that makes any compelling theory difficult.

3.2. Genesis 10:15-19. Genesis 10:15-19 lists the descendants of Canaan, Noah’s grandson. These include the Hittites, Jebusites, Amorites, Gergashites and Hivites, already familiar to us. The remaining descendants are Sidon and a group of peoples who can be identified from Egyptian, Ugaritic and Assyrian texts as lying along the coast north of Sidon: the Arkites, Sinites, Arvadites, Zemarites and Hamathites. The exception to this is Hamath, which lies inland and which is somewhat surprisingly described as belonging to Canaan (Millard, 29-30). Is this meant as a description of the bounds of Canaan at some early period? If so, it seems to extend the northern border somewhat further north than even texts such as Numbers 34. The territory included goes beyond that ever held by Israel or any other people in the vicinity, so it is unclear what political realities it describes.

3.3. Other Biblical Texts. Other biblical texts refer to one or more of the seven, mainly in geographic lists giving the bounds of land of Canaan (Aharoni, 67-77; see Borders). Most of these will be referred to in what follows.

In some other biblical texts *Amorites* and *Canaanites* are used as shorthand for all or most of the seven peoples. At Joshua 7:7 “Amorites” seems to refer to all the inhabitants of Cisjordan (compare 2 Sam 21:2, where the Gibeonites, elsewhere identified as Hivites [Josh 9:7] are described as “survivors of the Amorites”). As noted above, this usage is distinct from the Neo-Assyria use of *Amurru* as a general term for Syria, Palestine, Edom and Moab; the inclusive use of *Amorite* in the biblical texts only has Cisjordan in view. The inclusive use of *Amorites* also occurs in some passages referring to the wickedness and idolatry of the inhabitants of Canaan (Gen 15:16; Josh 24:15; Judg 6:10; 1 Kings 21:26; 2 Kings 21:11). For the inclusive use of *Canaanite*, note the reference to “the land of the Canaanites” at Exodus 13:11 and Joshua 13:4, and the frequent use of *Canaanites* in Judges 1 to denote the original inhabitants of the territories of most of the Israelite tribes (cf. Num 35:10).

3.4. Summary of the Biblical Picture. A consis-

tent picture of these peoples is difficult to determine. Certainly they are more than a list of names (e.g., approximate geographical areas are given for some of the peoples). It is equally clear, however, that we have a very selective and polemical presentation of them. The exact geographical location of the nations is also less than clear (though see tentatively Hostetter, 151). What can be stated with certainty is that the seven peoples of Canaan are regarded in a uniformly negative light by the biblical texts.

It is interesting to briefly compare the way in which the seven peoples are treated with the biblical treatment of three other groups: (1) Amalekites; (2) Kenites, Kenizzites, Kadmonites; and (3) Rephaites and associated groups. These are all groups also said to have been dispossessed of lands, though under different circumstances and at different times. Some of them are mentioned in two lists in which some or all of the seven peoples are also mentioned (Gen 15:19-21; Num 13:29), while others are mentioned in Deuteronomy 2 (Hostetter, 85-113, discusses the biblical data in detail).

(1) Amalekites were descended from Esau (Gen 36:12, 16). They were earlier mentioned in the period of Abraham (Gen 14:17) as being in the area of the Negev (cf. Num 13:29), between Judah and Egypt (Aharoni et al., 45). This reference has been seen as indicating a late date for the composition of the chapter or as indicating two groups called Amalekites, since it is anachronistic if taken in light of the Esau passages. It could rather be a later editorial update. Amalekites are also mentioned during the *wilderness wandering (Ex 17:8-16; Num 24:20; Deut 25:17-8), where their opposition to Israel led to their permanent ban (Deut 25:19; 1 Sam 15:2-3), though this was not carried out, since they still existed in later periods (e.g., Judg 2:15; 3:13; 6:3-5, 33; 1 Sam 30; see Mattingly, 1.169-71).

(2) Three groups are at times included with the seven Canaanite nations among whom Yahweh promised land to his own people (Gen 15:19). In later texts some of them had positive links with Israel. The *Kenites* are known mainly in later, Iron Age texts (e.g., Judg 4:11, 17; 5:24-27; 1 Sam 15:6). It is suggested that they descended from Cain and that they were smiths or metal craftsmen, suggestions that are not mutually exclusive (Gen 4:17-22; see Halpern, 4.17-22). The *Kenizzites* are linked to Edom through descent from Esau (Gen 36:11) and also associ-

ated with Caleb's family (Josh 15:17; 1 Chron 4:15). The *Kenizzites* later became associated with Judah (Kuntz). The *Kadmonites* are obscure, linked with the former two in the one passage referring to them (Gen 15:19). Apparently the name is related to the adjective meaning "easterner" (Ezek 47:18), and other texts refer to a group called *bēnē qedem*, "people of the east" (e.g., Gen 29:1; Judg 6:3, 33; Is 11:14). Association with Moab and Edom could indicate a Transjordanian link for these people (see Reed, 4.4).

(3) *Rephaites* are only in one list of peoples to be dispossessed (Gen 15:19-20; cf. 14:5). It appears to be a general term of uncertain meaning that could be used to include the Emim (former occupants of Moab; Deut 2:10), Anakites (Deut 2:11) and Zamzummites (associated with Ammon; Deut 2:20). All these, with the exception of the Anakites, were regarded as more or less having passed from the scene by the time Israelites arrived in Canaan. The Anakites, known for their great height (Deut 2:10, 21; 9:2), were associated with Hebron (Josh 21:11; possibly at an earlier stage than Gen 23, where Hebron is linked to Hittites), and still around when Israelites arrived (Num 13:22; Josh 11:21-22). They are possibly mentioned in the Egyptian Execration texts (COS 1.32:51; Mattingly, 1.222).

4. Synthesis.

4.1. Canaanites. The Canaanites are most frequently the first among the listed foreign nations whose land will be annexed by Israel. They are said to hold territory "near the [Mediterranean] sea and along the Jordan" (Num 13:29). This is apparently the stretch of the Jordan River between the Sea of Galilee and at least halfway down to the Dead Sea, since according to Deuteronomy 11:30 the Canaanites lived in the Arabah (Jordan River valley) near Gilgal, some five miles north of the Dead Sea. There could have been two enclaves of Canaanites, since Joshua 11:3 has Canaanites in the east (the Arabah) and west (the sea; cf. Josh 5:1). They are also said to reside in the Jezreel Valley, especially Beth-shean (the area of Manasseh; Josh 17:11-16; Judg 1:27-28), other tribal holdings in the north (Judg 1:30-33), as well as the vicinity of Gezer (in Ephraimite territory; Josh 16:10; Judg 1:29; 1 Kings 9:16). The picture thus presented is more likely somewhat like a crescent, with territory on the west, north and east of

Israel being Canaanite territory (cf. Hostetter, 151).

Egyptian control of lowlands, valleys and thus the major trade routes, which the Canaanites were said to occupy (cf. Num 14:25), could be reflected in Canaan's incorporation into Ham's family (Gen 10:6; 1 Chron 1:8). In this capacity, the term *Canaan* had much wider use, incorporating all of what would become Israel and even beyond. This is reflected in the Pentateuch by references to the Canaanites much further in the south (e.g., Num 13; 21:1; 33:40; 34; Josh 13:1-4). One of the reasons for the broader use must have been the fact that the entire land was designated Canaan in various texts: the Bible (Gen 10:19; Num 34:29; Ezek 16:3), cuneiform sources at least as early as the fifteenth century (Millard, 32) and hieroglyphs from the thirteenth century (*ANET*, 246). Extrabiblical texts also use *Canaan* as an inclusive term.

The Phoenicians preserved Canaanite culture after the Israelites were established in Cisjordan. They therefore were sometimes later referred to as *Canaan* (Is 23:11; possibly Obad 20).

The etymology of the name "Canaan/Canaanite" is debated. A derivation from *kn^c* ("bow down"; hence "land where the sun bows down; western land"; cf. Amurru below) has been in vogue for some time (Astour), though a derivation from a term for purple dye, a product of the coastal area of Canaan, has also been suggested (Speiser). No suggestion has been found compelling (Millard, 34).

As regards the Canaanites' language, the evidence is rather patchy. The earliest clear evidence consists of the Canaanite glosses on the fourteenth-century Amarna letters, which are themselves written in Akkadian, the diplomatic language of the period. Canaanite has a number of similarities to Ugaritic, from the Syrian coastal area north of Israel, but there are also significant differences. The two languages should not simply be equated (Millard, 34).

Evidence for Canaanite religion comes in various forms, archaeological as well as written. Since Canaanite religion had more direct relevance to Israel after it settled in the Promised Land, when it became important for the *religion and theology of Israel, it will not be discussed here.

4.2. Amorites. The term *Amorite* is imprecise, used to signify different things at different times.

It apparently derives from the Akkadian *amurru*, meaning "west," and Sumerian *mar-tu*, used ethnically of foreign cultures to the west of Mesopotamia (Liverani, 102-3). First mentioned during the time of the kings of Akkad (2334-2154 B.C.), the term was used frequently during the time of the Ur III dynasty (2111-2003 B.C.), where it sometimes referred to part of Mesopotamian society and sometimes to hostile forces on northwestern borders. The Amorites seem to have been partly responsible for the collapse of the Sumerian Empire (Mendenhall, 199-201).

An earlier romantic view saw the Amorites as nomads from the Syro-Arabian steppe who invaded the Fertile Crescent in successive waves. More likely, the Amorites had a sedentary existence in northeast Syria from before recorded history, and many of the states that emerged from collapse in the early second millennium were of Amorite descent: Isin, Larsa, Uruk, Babylon. In Syria most of the small city-states were controlled by Amorite dynasties from the eighteenth century on (Mendenhall, 200). The Amorite language was never written down (Amorites wrote in Akkadian), so it is known only from personal names and loanwords in Akkadian. Their history is hard to trace after the sixteenth century, since, although the terms *mar-tu* and *amurru* continue to be used and there was a kingdom of Amurru in western Syria, connections with the Amorites of previous centuries is uncertain. A kingdom of Amurru in the upper Orontes Valley (Syria) in the Late Bronze Age is referred to in fifteenth-century texts from Alalakh, and there are also references in Hittite and El Amarna texts. This kingdom was destroyed at the beginning of the Iron Age (Liverani, 119; Mendenhall, 201).

According to the biblical accounts, Amorites were found in the Transjordan (cf. Deut 1:44). The Amorite states of Og and Sihon opposed Israel in their move from Egypt toward the Promised Land (Josh 12:1-6; Judg 1:36). These states apparently arose after the collapse of the kingdom of Amurru. The boundaries of this kingdom had varied from time to time but generally included parts of Lebanon, the Anti-Lebanon mountains and the Orontes River Valley. Portions of the population of Amurru had apparently moved south into north and central Transjordan. Amorites also settled in the hill country west of the Jordan (cf. Gen 48:22), though not spreading all the way to the Mediter-

anean, since they are contrasted with the Canaanites “by the sea” (Num 13:29; Josh 5:1; cf. 9:1). The term *Amorite* shows mixed ethnic/geographical use, since in Joshua 10:5-6 five “Amorite” kings of Jerusalem, Hebron, Jarmuth, Lachish and Eglon are mentioned. The description cannot be strictly ethnic here, since Jerusalem was Jebusite and Hebron, Hittite (cf. also Ezek 16:3, 45).

4.3. Hittites. Discussion of the Hittites is fraught with difficulty since at least four different ethnic groups of antiquity have this designation (Hoffner 1973, 197; 1994, 152-53). The most important historically were the Hittites (Heth) who, during second millennium B.C., controlled much of modern-day Turkey. At their peak, they were a powerful empire based at Hattusas and reaching from the Aegean to the Euphrates and along the northern Levant (Aharoni et al., 4). The empire collapsed about 1200 B.C., though a number of smaller Neo-Hittite states continued for some time in the borderland between Anatolia and Syria. The relationship between these Indo-European peoples and the Hittites mentioned in the Pentateuch is a matter of debate.

In the Pentateuch, Hittites are mentioned on several occasions. Descended from Canaan (Gen 10:15; 36:2; Ezek 16:3, 45), they all have Semitic names (Hoffner 1973, 214). They were resident around Hebron, and from them *Abraham purchased the land to bury his wife, *Sarah (Gen 23:1-20). There is debate as to whether the legal aspects of the transaction can be used to date the incident, although there are some indications that it reflects early, preexilic practices (Wenham 1994, 125). Esau married Hittite women, to the chagrin of his parents, apparently while resident in the vicinity of Beer-sheba (Gen 26:34-35; 27:46). They were also noted to live in the central hill country (Num 13:29; Josh 11:3). Later, *Hittite* was used to designate two people in David's service: Ahimelech (1 Sam 26:6) and Uriah (2 Sam 11).

Apart from these Hittites in Palestine, further references to Hittites in the north of Israel should be identified with the Neo-Hittites, city-states that had belonged to the Anatolian Hittite Empire before its fall and continued to be identified by that name (Judg 1:26; 1 Kings 10:29; 11:1; 2 Kings 7:6; possibly Josh 1:4). They could be indicated as distinct from the Hittites of the Pentateuch, since the OT uses Hebrew plural

forms of *Hittite* only for those groups in Syria and Anatolia.

Were the two groups ethnically distinct? The Hittite Empire never extended as far south as Hebron (Damascus [Apa] probably being the furthest south they came; *ANET*, 319), suggesting that the two groups were not identical. The use of a common term for both groups could have derived from the Neo-Assyrians (Van Setters, 66) or Neo-Babylonians (Wiseman 1956, 25), both of whom used *Hatti* for the combined area of Syria and Palestine, though the OT never uses *Hittite* to denote the whole region, as it does with *Canaanite* and *Amorite*. We cannot rule out the alternative possibility that the OT Hittites in southern Cisjordan could have been remnants of Anatolian or Syrian Hittites who made their way further south, but this would imply that the references in Genesis are anachronistic, and one would also have to assume that these Hittites quickly adapted Semitic names. It seems best to assume at this stage that the pentateuchal Hittites were a completely separate group from those further north (cf. Hoffner 1973, 213-14).

4.4. Gergashites. The Gergashites are the most shadowy of the Canaanite nations (Gen 10:15-16; 1 Chron 1:13-14). The name could be related to the *grgšû* and *bn grgšû* found in Ugaritic texts (*UT* 3.381, entry 619), placing them in a Canaanite context and in the presettlement period. Since their name is attested in the Bible only in the lists, and not in all of them, no description of their territories is available. This is only deduced when the territories of the other six peoples are mapped out according to their main locations. This results in a gap between the Galilee region north of the Jezreel Valley and south of the Lebanon Mountains. They must also have been in Cisjordan (Josh 24:11). Some have associated them with the NT Gergesenes (Mt 8:28; Mk 5:1; Lk 8:26, 37), but the existence of textual variants reading “Gadarenes” and “Gerasenes” rules against this identification (North, 44). Northern ties with the Hittite *Qaraqasi*, followers of a Sumerian god *Gēs* (Schnell, 2.399), have also been suggested. This is too far north, and also the deity *gēs/dīs* is better understood as the Akkadian numeral 1, which symbolized Anu/Ea (Labat, 213, sign 480).

4.5. Perizzites. Unlike many others among the Canaanites, the Perizzites are not listed in the Table of *Nations (Gen 10). They are first encountered in the biblical text in association

with the Canaanites, in the territory between Bethel and Ai, just north of Jerusalem (Gen 13:7; cf. 34:30; Judg 1:4-5). In later texts they are found further north, in the highlands of Samaria (Josh 11:3), the forested territory of Ephraim and Manasseh (Josh 17:15). Here they are associated with the Rephaites (see 3.4 above). The latter were located on both sides of the Jordan (see Deut 2:9-11, 20; 3:11, 13 [Transjordan]; Josh 15:8; 2 Sam 23:13 [near Jerusalem]), so their mention in Joshua is not problematic. In Joshua 9:2 the Jebusites and the Perizzites are also related.

Etymological links for the Perizzites are tenuous. Some link the term to the personal name Pirizzi, which is found in a number of cuneiform texts. In several of these texts a person by this name acts as a messenger from Tushratta, king of Mitanni (a Hurrian kingdom), to pharaoh Amenophis IV. This could indicate that the Perizzites were Hurrian in origin (Boling, 166). Hurrians are known to have lived in Canaan in the fourteenth century (Hess 1989, 1997), but the name Pirizzi provides at best slender evidence for such a view. Another suggestion is to link it rather to Hebrew *pērāzî* ("rural person, resident outside a walled city"; Esther 9:19; Ezek 38:11; Zech 2:4 [MT 2:8]; cf. *HALOT*; Boling, 166; Strathmann, 523). If so, then a term originally denoting a social category came to be used for an ethnic group, in a way similar to the proposed relationship between *Apiru* and *Hebrew*. Some have proposed that the combination Canaanite-Perizzite might indicate either a distinction between town (fortified city) and country (or town, hamlet; Gen 13:7; 34:30; Schnell 1962, 3.735) or between Semitic and non-Semitic (Speiser 1962, 3.241; Ishida, 480).

4.6. Hivites. The location and identity of the Hivites is obscure. Descendants of Canaan (Gen 10:17), they are associated with Gibeon, just north of Jerusalem (Josh 9:7; 11:19), Shechem further north (Gen 34:2; in Hebrew "Shechem" is also associated with the Amorites, Gen 48:22) and even further north in the area of Lebanon and the Anti-Lebanon Mountains (Josh 11:3; Judg. 3:3; 2 Sam 24:1-9). There is also a possible Transjordanian connection through Esau/Edom (Gen 36:2-3).

Identifying the Hivites is difficult. Textual confusion of Hivites with Horites/Hurrians (e.g., Josh 9:7; Is 17:9; *BHS* note; *NRSV*; cf. Gen 36:2, 20) could indicate the identity of the two

(Baker). Other suggestions include a link with the Sea Peoples who migrated into the area from the Aegean (Boling, 338; cf. a possible link with the Ahhiyawa mentioned in the Hittite letters [an alternate name for Homer's Achaeans who were fighting against Troy; cf. Güterbock; Carroll, 719]); an identification with the Hittites, also from the north (Crossan, 152, on Judg 3:3); a link with residents of Kue (on the eastern Cilician plain in Turkey), if they are identified with the Hurrians (Avalos, 4.102); or a possible original meaning of "tent-dwellers" (i.e., bedouins who then settled down; cf. Wiseman 1982).

4.7. Jebusites. The Jebusites occupied the hill country (Num 13:29; Josh 11:3) between Judah (cf. Judg 1:8) and Benjamin (Josh 15:63). According to the biblical text, Jebus was the pre-Israelite name of Jerusalem (Josh 15:8; 18:28; Judg 19:10), though an exact identity between the two is debated (North, 46; contra J. M. Miller; cf. Reed, 3.653). A powerful city, it was only conquered by the military genius of David (2 Sam 5:6-10). The archaeological evidence is not able to confirm or deny his actions, since it does not show a distinct shift between the remains of the Jebusites and those of the subsequent Israelites (A. Mazar, 353). The term *Jebus* does not occur outside the Bible. The earliest extrabiblical references to the city uses *Jerusalem* (e.g., the Egyptian Execration texts from the nineteenth to eighteenth centuries B.C. [*COS* 1.32:51]; the Amarna letters from the fourteenth century [*COS* 3.92A+B:237-38]; the later Assyrian records, e.g., the account of Sennacherib's siege in 701 B.C. ["Ursalimmu"; *COS* 2.119B:303]). This would suggest that the name Jebus must be derived from the name of the people rather than from the place (cf. Reed, 3.652). Though a captured people, they continued to reside among the Israelites during David's reign (2 Sam 24:18).

The ethnic background of the Jebusites is unclear. Apart from Genesis 10:16, which lists them as descendants of Canaan, Joshua 10:5 lists a king of Jerusalem/Jebus as being an Amorite, but this is clearly a general designation ("highlander"), which is shared with Israel itself (e.g., Ezek 16:3), and need not indicate ethnic affiliation. Araunah the Jebusite (2 Sam 24:18; alternatively read "Ornan," 1 Chron 21:15; 2 Chron 3:1) seems to be non-Semitic in form, possibly being Hurrian (Hoffner 1973, 225; Wenham 1987, 225).

NOAH

The celebrated story of Noah, the account of a man who survived a cataclysmic flood and thus preserved humanity, forms part of the early literature of the Israelites. Similar stories of surviving such a catastrophe occur elsewhere in ancient Near Eastern literature. This article traces the biblical account of Noah's journey, looks at comparable stories among Israel's neighbors and, finally, considers a recent attempt to locate the ark in history and geography.

1. Noah and the Flood in the Hebrew Bible
2. Deluge Heroes Outside the Hebrew Bible
3. The Modern Quests for Noah's Ark

1. Noah and the Flood in the Hebrew Bible.

1.1. Overview of the Story in Genesis 6-9.

Noah and his massive ark form a significant part of Israel's primordial accounts in Genesis 1-11. These texts recount how God created the world and everything within it (see Creation). Significantly, these origin texts chronicle the initiation of struggles between the divine and human wills. Thus, these introductory sections to Genesis, to the Pentateuch and to the entire canon establish certain important parameters for understanding the drama that unfolds through the pages of Scripture.

The divine-human conflict is described in one way through the contrasting notions of *rest and agitation. The divine intention for rest and a settled existence, established by the divine cessation from creation and the institution of the *sabbath at the end of the creation stories (Gen 2:1-3), opposes human agitation and anarchy in the surrounding chapters. Thus Genesis 1-11 sets the stage for the working out of the divine and human wills that will begin in earnest at Genesis 12 with the ancestral stories.

Noah's story, one-third of the primeval history, resonates with these themes of calm and commotion. Noah's story begins with the announcement of his birth to Lamech (Gen 5:28). It is common to associate Noah's name with the verb *nwh*, "to rest." This root is related to the Akkadian word *nāhu*, which is one of the verbs used to describe the abating of the deluge according to the Mesopotamian version of the flood story (Gilg. 11.131). But, as is sometimes the case in ancient explanations of personal names, the etiological statement announcing Noah's birth (Gen 5:29) connects the child's name to the verb *nḥm* ("to be sorry, comfort oneself, console another") and not to *nwh*. The verse declares, "He named him Noah [*nwh*], saying, 'This one will comfort [*nḥm*] us from our work and from the pain of our hands, from the ground that the LORD cursed.' " Ironically, this purported *blessing portends the negative use of *nḥm* as part of the justification for the flood. Yahweh regrets (*nḥm*) that he created humankind and determines to wash all humans from the earth (Gen 6:6). Noah's name foreshadows both the judgment to come and the possibility for consolation in the midst of desolation. Noah, whose name sounds like a blessing (rest from labor), stands as a curse on the people inhabiting the accursed land. He and his family discover

that only the time in the ark provides rest from the frenzy of human life. Noah rests on the floating ark. The remainder of humanity rests on the ocean bed.

As an example of the confusion of human life, Genesis 6:1-4 describes God's displeasure with the breaking down of divinely ordained boundaries between the human and divine worlds. According to one interpretation of this episode, divine males had impregnated human females to produce a race of superhumans (*see* Sons of God, Daughters of Man). In an effort to minimize the amount of time for this sort of mischief, God reduced the normal human life span to 120 years, a reduction of up to 88 percent from the long lives recorded in Genesis 5. According to this interpretation, humans were culpable in the intermingling of the divine and human realms; they had not been forced by the deities. The condemned activities reflect humankind's wicked imagination. As in the garden story in Genesis 3 and the Babel story in Genesis 11, humans *sinned by aspiring to divinity. In Eden, people sought to know everything. In Babel, people overreached by building a stairway to heaven.

The flood story begins in Genesis 6:5 with Yahweh's second evaluation of the deviousness of humanity. God regretted that he had created humans and decided to do more than limit the span of human life. With great remorse, God decided to wash humankind and land-dwelling beasts from the earth. In stark contrast to the rest of humanity, Noah found favor with God (Gen 6:8).

Genesis 6:9 introduces the flood story proper with the introductory line that recurs throughout Genesis: "These are the generations of . . ." (cf. Gen 2:4; 5:1; 10:1, 32; 11:10, 27; 25:12, 19; 36:1; 36:9; 37:2). This formula is used to introduce a *genealogy or another episode in the story. According to the episode begun here, God revealed his intentions to destroy all flesh and instructed Noah to build a massive barge with three decks. This vessel would preserve Noah, his wife, his sons and their wives and representative samples of the earth's creatures. Noah was also to take enough food to supply the evacuees. To demonstrate that righteous Noah stood out against his wicked contemporaries, the text notes that Noah did all that God had instructed him to do (Gen 6:22).

After Noah finished the ark, Yahweh instructed his upright follower to enter the ark and

to take the animals with him. At this juncture the instruction more specifically distinguished between seven pairs of clean animals and one pair of unclean animals (Gen 7:2-3). God gave Noah the timetable for the judgment: rain would commence in one week and continue for forty days and forty nights. Once again Noah did all that Yahweh had commanded (Gen 7:5).

When Noah was six hundred years old, all of creation exploded and primeval watery chaos inundated the earth. Chaos did not take over the world, however, for God limited the duration of the rain. Chaos could not harm Noah and his passengers because Yahweh had shut them into the ark (Gen 7:16). The flood continued forty days and carried the ark above the ground. The waters covered even the mountains. All dry-land inhabitants, creeping things and humans, perished in fulfillment of Yahweh's judgment (Gen 7:21).

After one hundred and fifty days, God recalled his promise to Noah and, as in the first act of creation (Gen 1:2), a wind from God blew across the waters, and they began to abate. The ark grounded in the mountains of Ararat (Gen 8:4). After the water receded further, Noah finally opened the ark window. He sent out a raven (Gen 8:7), then a dove (Gen 8:8), to determine if the waters had decreased enough for him to disembark. He sent the dove a second time (Gen 8:10-11), and it returned with an olive leaf. After another week, Noah sent out the dove, and it did not return (Gen 8:12). Finally, after more than a year, the earth was dry and God told Noah and his passengers to disembark (Gen 8:15-16).

Noah's first impulse after landing was to worship Yahweh. Noah built an altar and slaughtered a portion of the clean animals he had taken on the ark. Yahweh responded to the pleasant smell by promising that he would never inundate the earth again. The normal cycles of seasons and of days would continue unabated.

God blessed his new creation and, as at the first creation (Gen 1:28), commanded the people to fulfill the only charge they had obeyed: multiply and fill the earth (Gen 9:1, 7). Once again humans were given authority over the animals. Apparently God extended human authority beyond naming of animals, adding to their apparently primeval vegan diet (Gen 1:29; 2:9). Animals, though not expressly forbidden in the past, were now explicitly allowed as fare, "just as

I gave the herbs to you,” so long as people did not consume the blood (Gen 9:3-4).

God proclaimed his previously private decision to spare creation future destruction by flood (Gen 9:9-17). The bow in the sky (*see* Rainbow) would always signify God’s promise to Noah and his descendants. In this atmosphere of promise, Noah’s sons did their part in repopulating the earth, with all the people of the earth branching out from them (Gen 9:18-19; 10:1-32).

The ark adventure concludes with a disturbing story of Noah’s colonized family (Gen 9:20-29). Noah planted a vineyard and ended up drunk and naked in his tent. When Ham told his brothers about their father’s state, Shem and Japheth averted their eyes and covered Noah. Whatever the precise meaning of the phrase Ham “saw his father’s nakedness,” Ham’s action against Noah resulted in a curse on Ham’s son Canaan that made him the lowest of Noah’s progeny.

Thus the themes of violence, distress and a lack of divine rest return in the wake of the reestablishment of human civilization in the post-flood period. Humanity, as at the first beginning of the world, multiplied and spread over the earth. The tower of *Babel episode concludes these elemental stories. Humans still strive to be divine, and judgment comes and spreads wicked humanity across the globe.

1.2. *Writing of the Flood Story.* Many OT scholars believe that the Pentateuch is the product of the amalgamation of several sources (*see* Source Criticism; Pentateuchal Criticism, History of). The flood story is presented as a parade example of multiple authorship, resulting from the combination of the postulated sources J and P. Some of the pieces of evidence adduced for this theory focus on the divergence of divine names, duplications of events and disparities within the preserved narrative. For example, throughout the story the divine names Yahweh (e.g., Gen 6:3, 5, 6, 7, 8; 7:1, 5) and Elohim (e.g., Gen 6:9, 11, 12, 13, 22; 7:9) alternate. In addition, duplications such as the description of the water rising in Genesis 7:17, 18 (2x), 19, 20, 24 abound. These disparities present the greatest problems to a view of unified authorship. Moreover, the chronology of the flood varies. The proposed J source relates a flood of forty days and nights (Gen 7:4, 12), and the P source a deluge lasting 150 days (Gen 7:24; 8:3). In P Noah is commanded to take a pair of every kind of animal

into the ark (Gen 6:19-20; 7:14-15), but J distinguishes between seven pairs of clean animals and one pair each of unclean animals (Gen 7:2-3).

Despite a broad critical consensus on the existence of multiple sources in Genesis 6—9, some scholars attempt to read the Noah narrative as a whole, maintaining that the narrative makes sense as it stands. Though the divine names alternate throughout Genesis 6—9, the divine-name criterion is not a consistent indicator of authorship throughout the Pentateuch. For instance, J uses Elohim in Genesis 3:1-5, and E uses Yahweh after Exodus 3 (*see* God, Names of). This general observation may weaken the argument for the Noah story in particular.

Likewise, duplications may indicate an ancient writing style rather than the existence of discrete sources, a style that appears unnecessarily repetitive to an untrained modern reader. Are all duplicates simple restatements of material, or do they vary from one another in significant ways? Repetition may delay the next scene of the story to build suspense or, perhaps, underline particular elements of the story. Seemingly meaningless repetitions may serve an important narrative function rather than signal the presence of multiple sources.

Suggested internal contradictions within the narrative depend a great deal on establishing that the chronology of the present text of Genesis 6—9 is inconsistent. In contrast to the critical stance of the varying time frames of J and P, there may be no discrepancy regarding the length of the rain. According to the final redaction of the story, the flood may have lasted a total of 150 days. Forty days account for the intense rain and flooding that brought destruction, while 110 days measure the leisurely abatement of the water, perhaps signifying the rest denoted by Noah’s name.

In the end we are not left with only two options: a hodgepodge of multiple sources or a unified composition. A third approach recognizes the composite nature of Noah’s story and looks for meaningful or sensible editing. This approach allows for tensions within the story without negating the fact that ancient authors respected their traditions and carefully adapted earlier materials to write their stories. Most important, this strategy recognizes that these ancient writers were not hacks who did not have the literary talents of later source critics. Thus

B. Halpern suggests that the editor of the flood story inherited two sources on the subject that had to be treated as a single account, not as stories of separate floods. Genesis 6—9 represents a conflated text that does not suppress its earlier witnesses but shows evidence of purposeful transmission of these inherited materials. The editing is not whimsical or arbitrary, but these conservative editors paid attention to the narrative created by the combined sources in a way that preserved each tradition as much as possible (Halpern, 33).

Halpern is a more recent example of one who wishes to recognize the meaningful adaptation of ancient sources in the flood story. Almost three decades ago, G. Wenham suggested, on the basis of syntax, literary pattern, internal chronology and Mesopotamian parallels, that the Genesis account of Noah's flood was unified and coherent (Wenham 1978, 347). Although Wenham's description of the flood narrative as an extended, elegant palistrophic structure centered around the affirmation of Genesis 8:1 ("God remembered Noah") and his suggestion that Genesis recollects an underlying epic source seem especially specious, he is correct to suggest that the careful reader of Genesis 6—9 must grapple with the joint notions of unity and diversity within this simple story. This is necessarily the case whether one thinks that the text represents the ingenious blending of two accounts or the creative reworking of an earlier epic. According to both interpretive models, the reader appeals to hypothetical materials that stand behind the text in hand.

2. Deluge Heroes Outside the Hebrew Bible.

The Noah story in Genesis, and not in some putative pentateuchal prototype, closely mirrors other ancient Near Eastern deluge descriptions (*see* Flood). The written tradition of a massive flood goes back at least to the first half of the second millennium B.C. In addition, several ancient sites reveal flood layers separating strata of occupation. Apparently at various sites and on several occasions floods did wipe out the existing culture. In light of this, it is possible that the flood tradition reflects either a particularly destructive inundation or the telescoping of several local floods (Lambert and Millard, 17).

Though there are other stories of cataclysmic floods from around the world and later allusions to ancient flood traditions, such as that of Beros-

sus, we will focus on three ancient Near Eastern flood heroes: Ziusudra, Utnapishtim and Atrahasis.

2.1. Ziusudra. The Sumerian story of Ziusudra, first published in 1914, was discovered at the ancient city of Nippur, site of an ancient and prestigious scribal school. This was the most important religious center of the Sumerians and was dedicated to Enlil, the chief god of the pantheon. This fragmentary text (about one-third of the original tablet seems to have survived) dates to about 1600 B.C.

This hero of the Sumerian flood story bears a name meaning "Life of lasting days." As with the thematic connection between Noah's name and his story, Ziusudra connects thematically with his version of the story, since the gods granted him immortality after the deluge's destruction. Ziusudra was the last antediluvian king of Shuruppak. The gods may have attempted to destroy humankind before the flood, but the fragmentary nature of the tablets precludes a full reconstruction. The tablets describe the zealous Ziusudra praying daily. Thus Ziusudra's righteousness links him with the perfect Noah. During one of these prayer sessions, Ziusudra overheard the divine plan to destroy humankind and kingship by means of a flood. Thus forewarned, King Ziusudra was saved in a huge boat when a seven-day and seven-night flood swept over the country. At the conclusion of the ordeal, he is once again pictured in prayer, this time also offering a sacrifice of a large number of bulls and sheep. The gods elevated Ziusudra to eternal life, like a god, because he had preserved the seed of humankind. This reward seems peculiar, since the aim of the flood was to wash away humankind. In the end, the gods settled him in the distant and apparently idyllic country of Dilmun (Bahrain).

2.2. Utnapishtim. The recitation of Utnapishtim's flood adventure forms part of a larger narrative complex known as the Gilgamesh Epic. The most complete copy of this epic comes from the library of Ashurbanipal, king of Assyria (669-627 B.C.) in Nineveh. The flood story occurs on tablet 11 of the twelve-tablet epic. Sin-liqi-uninni, an ancient editor, perhaps added it around 1200 B.C. The text of Gilgamesh survives from several different periods in several different languages, including Akkadian, Hittite and Hurrian.

As part of his quest for eternal life, Gilgamesh went to a distant island to discuss im-

mortality with the flood hero. In this Akkadian version of the story, the hero bears the name Utnapishtim, "I have found life." Once again, this personal name suits the outcome of the story, since the hero found long life. In fact, as Utnapishtim explains to Gilgamesh, the antediluvian hero is the only one who may have the life of the gods. The Gilgamesh Epic intertwines multiple themes as Gilgamesh struggles with the meaning of life, life's brevity, connections with the gods, friendship and adventure. Utnapishtim declares that it is not impossible for one to gain eternal life, but it is highly improbable. Utnapishtim and his wife were the only ones granted this gift, and one gets the impression from the text that eternal life is not real living. This faraway couple, removed from the relationships and challenges of normal human existence, have ceased to live truly human lives. They also do not dwell with deities. Utnapishtim and his wife are suspended between two realms.

In this version of the story, Utnapishtim is the supreme sage, although he is removed from normal life by being somewhat connected to the divine realm. He has gained this insight by being neither human nor divine. Gilgamesh believes that Utnapishtim is no different from him, except that he has been granted an exceptional gift by the gods. Gilgamesh says, "I look at you, Uta-napishti: your form is no different, you are just like me, you are not any different, you are just like me" (Gilg. 11.2-3; George, 88). But he is not just like Gilgamesh. Utnapishtim has ceased to be human. Utnapishtim has discovered the meaning of life and, as he shares a portion of his wisdom with Gilgamesh, chides Gilgamesh for his quest that can never be fulfilled.

Utnapishtim used skilled laborers to build his boat after being warned of a coming flood by the cunning Ea. Little did the workers realize that, as they enjoyed Utnapishtim's provisions—the beer, ale, oil and wine that flowed like water (a poignant image in light of the outpouring to come)—they were partaking of their own funerary feast. At the loading of the boat, Utnapishtim took all of his goods and that which was necessary for the reestablishment of culture. He explains, "I sent on board all my kith and kin, the beasts of the field, the creatures of the wild, and members of every skill and craft" (Gilg. 11.84-85; George, 91).

The storm raged for "six days and seven nights," and then the deluge ended. Enlil, the

god who sent the flood, blessed the hero and his wife: "In the past Uta-napishti was a mortal man, but now he and his wife shall become like us gods! Uta-napishti shall dwell far away, where the rivers flow forth!" (11.201-203; George, 95). Utnapishtim had gained life, but he was not re-integrated into human society. He may have looked just like Gilgamesh and other humans, but he was different. He and his wife were like gods, at once connected to humankind yet distant and disconnected from it.

This note regarding the difference between the divine and human realms parallels the message of the pentateuchal primeval history: people are to live life as humans, not strive to become like God or to overstep the divinely ordained boundaries in the universe. The strivers who brought about the wrath of God in Genesis are unknown. The memory of the perfect Noah, who apparently was not striving for renown, endured. Gilgamesh gained the eternal life he sought in the retelling of his story.

2.3. *Atrahasis*. The earliest copies of this Akkadian text date from the seventeenth century B.C. (Lambert and Millard, 23). This story was the source for the flood story in the Gilgamesh Epic. The larger narrative framework is similar to that of the pentateuchal primeval history, including creation and multiplication of humankind, various threats to the viability of human life and the flood as the divider of two epochs. About two-thirds of the original text has survived. It was found in two different editions in the famous library of Ashurbanipal in Nineveh.

Atrahasis follows a common Sumero-Babylonian idea that humans were created to relieve the labor of deities by making food and drink offerings. That is, the gods created humans because after forty years of labor the worker gods rebelled against the heavy tasks imposed on them, burning their tools and surrounding Enlil's house. After hearing their grievances, Enlil decided to create humans to dig rivers and canals to ensure agricultural prosperity.

Once created, the human race multiplied and became noisy. In response, Enlil tried to reduce the population to relieve the increasing disturbance. First he tried a plague, then a famine-producing drought. In both cases, Atrahasis appealed to Enki and salvation came. The noise resumed, as did the drought. As a macabre joke on parched people desiring water, En-

lil ultimately sent a flood!

In each case Enlil's punishment failed to produce the desired result. Even the flood failed to exterminate all humanity, for the god Enki warned Atrahasis to build a boat to escape the deluge. This man escaped with his family and a variety of animals on a simple reed boat.

Enki and the other deities grieved at the loss of their creation. The gods began to find the disadvantages of a world without humans. The toil that humans had taken over, digging the rivers and canals, for example, was part of the agricultural process, and with this interrupted supplies of food and drink were cut off. On disembarking, Atrahasis offered food to the gods. This opportune act reminded the gods of the advantages of living mortals. In this satiated state they were less apt to treat this survivor of the planned genocide severely (Lambert and Millard, 12).

3. The Modern Quests for Noah's Ark.

Given the claims of these texts describing global floods, people have regularly sought to locate the ark in wreckage and writing. Some are driven to find remains of the massive boat on the mountains of Ararat as part of a broader concern to establish the "truth" (i.e., historicity) of the early Genesis stories. Others have been concerned to establish the links between the extrabiblical stories and the biblical narrative. Additionally, some have sought to find out how this story, especially if it is not based on a literal universal inundation, was launched in the first place.

R. M. Best provides an interesting recent attempt to establish the origins of the story. Best strips away the distinctive elements—in his words, separating myth from legend—of each story to lay bare the elements common to all of them. In demythologizing the ark stories Best disregards names, mental states and agendas of the gods to focus on the constant parts of the story: (1) the hero builds a boat; (2) a storm occurs, accompanied by a flood; (3) the hero and his family are on the boat during the flood; (4) the boat grounds on a mountain; and (5) the hero offers a sacrifice to a god (Best, 20).

Best traces all of the stories back to a lost legend about Ziusudra, king of the Sumerian city-state Shuruppak at the end of the Jemdet Nasr period (c. 2900 B.C.). A six-day thunderstorm caused the Euphrates River to rise and flood Shuruppak and a few other cities in southern

Sumer. The ark was a commercial barge ready to haul grain, beer and other cargo, including a few hundred common animals, when the storm began. There was no parade of exotic animals with great pomp and circumstance. The runaway barge floated down the river into the Persian Gulf, where it grounded in an estuary at the mouth of the river. Ziusudra then offered a sacrifice at the top of a hill, which storytellers later misunderstood as a mountain. This led them to assume that the nearby barge had grounded on the top of a mountain (Best, 2). The mountain tradition, the one constant story element that could not have happened, provides the key to interpreting the flood myth. Although many commentators focus on identifying and locating the mountain, Best argues that this is futile because a worldwide ocean flood rising above any mountain for a year would be physically impossible (Best, 20; *see* Flood §3.4.2.1).

Best's suggestions are thought-provoking, but somehow his reconstructed lost legend lacks the punch that comes from the distinctive elements each culture contributed to the flood story. Best extracts the essentials that breathed life into the stories and inspired their hearers. For instance, on a basic level, all of the flood stories suggest perspectives on the meaning of life. In a turbulent world, one that experienced devastating inundations, the question would arise, how do people survive such natural disasters? Life exists in an atmosphere of preciousness and fragility. These stories recognize that humans are always dependent on the good graces of the gods.

Noah, however, provides a case study that goes beyond these issues of human precariousness. The biblical text notes that humans live before a powerful Creator. For the biblical narrator this fact points toward human responsibility and the serious ideas of sin and punishment and grace. These are among the unique themes developed throughout the remainder of the Bible. They are introduced in this story of an ancient flood before Israel's birth, just as many other themes are introduced in the primeval history of Genesis 1—11. We may never accurately locate the primordial events and their towers, boats and gardens, but their truth for the people of God, in the land, in the Exile, in the Diaspora and beyond, is watertight.

NUMBERS, BOOK OF

Numbers is the title of the fourth book of the

OT. The book of Numbers recounts a crucial phase of the wilderness journey of Israel as it traveled from a life of slavery in the land of Egypt to the land of promise in Canaan. The book narrates the death of a whole generation of rebellious Israelites in the wilderness and the birth of a new generation of Israelites who look forward in hope and obedience to entering the Promised Land.

1. Title and Literary Structure
2. The Critical Study of Numbers
3. Content and Themes

1. Title and Literary Structure.

1.1. Title. The English title of the book, "Numbers," derives from the Greek (*Arithmoi*) and Latin (*Numeri*) translations of the OT. This title is based primarily on the two detailed numberings, or census lists, of the twelve tribes of Israel in Numbers 1 and 26. The first census of the *exodus generation of Israelites is taken approximately two years after Israel's exodus from *Egypt (Num 1:1). The second census of the new generation of Israelites born in the *wilderness occurs approximately forty years after Israel's exodus from Egypt (Num 14:20-35; 26:64-65).

In the Hebrew tradition, the book's name is not Numbers but "In the Wilderness." As with the other pentateuchal books, a significant word or phrase from the first line of the book is used as the title. This title underscores the wilderness setting for the book as Israel travels from a great civilized empire in Egypt to its *promised home in Canaan. The forty years of wilderness wandering functions as a transitional interim between these two geographical centers as Israel is formed into a mobile community under a *covenant with God. The threatening wilderness motivates Israel positively to learn from God how to be organized into a *holy community with the *tabernacle as the seat of God's presence in its midst (Num 1—10). On the other hand, the stresses of wilderness life with little *food and much hardship also form the crucible for Israel's eventual series of rebellions against God, which end finally in the death of a whole generation of Israelites (Num 11—25). The trials of the wilderness once again become a positive seedbed for learning as another new generation of Israelites emerges who learn to negotiate a middle way between rigid adherence to patterns of the past and the new challenges of an uncharted future (Num 26—36). Within the larger

biblical tradition, the wilderness is never an ideal place for humans to dwell. It is a place of chaos, threat, danger and death, and thus is a place to be avoided. But when one is forced to endure the wilderness for a time, as Israel is in the book of Numbers, it may be experienced either as a place of maturing and learning or as a place of disintegration and death.

1.2. Literary Structure. One long-standing obstacle in interpreting Numbers has been the wide disagreement among scholars over the question of whether or not the book has a meaningful structure as a whole. Many interpreters complain that the book has no coherent organizational scheme or outline. The alternation of *laws and stories and lists seems so haphazard to many that one commentator calls Numbers “the junk room of the Bible,” a book in which editors simply tossed together miscellaneous bits of tradition without intending any meaningful flow of thought or meaning. However, one might begin understanding the overall structure of Numbers by noting the larger context of the Pentateuch in which it is set. As one reads through the Pentateuch, a careful reader notes that the old generation of Israelites who occupy center stage in the books of Exodus and Leviticus are suddenly gone and replaced by a new generation of Israelites whom *Moses addresses in the Mosaic speeches of Deuteronomy. Where and how is the transition made from the old generation of the book of Exodus to the new generation of God’s people on the edge of the Promised *Land in Deuteronomy?

This important generational transition in the Pentateuch is made in the book of Numbers. In fact, the transfer from the old generation to a new generation of hope on the edge of the Promised Land forms the primary structure and theme for the entire book. The primary pillars for this generational structure are the two census lists of the twelve tribes in Numbers 1 and 26, which serve to divide the book into two major halves, chapters 1–25 and 26–36. The first census (Num 1) introduces the first half of the book, which recounts the eventual death of nearly all the members of the old generation of God’s people who came out of Egypt in the exodus. Numbers 1–25 begins with the census and organization of the people of God on the march in the wilderness in chapters 1–10. When the preparations are complete and the march begins, however, the people immediately fall into

rebellion (Num 11–12), which climaxes in the spy story (Num 13–14). The members of that first generation in Numbers are then condemned to die. Much of the rest of this first half of Numbers recounts further rebellions and plagues and deaths (Num 16; 17; 20; 21; 25). Some glimmers of hope shine through along the way. God proclaims laws that will apply to a future time when a new generation will properly enter the Promised Land (Num 15). God gives military victories to Israel over the king of Arad and over Sihon and Og (Num 21). A final crescendo of future hope is sounded in the oracles spoken by a prophet named *Balaam, which promise a glorious distant future for Israel (Num 22–24). The first generation’s story ends with the final rebellion of the people and the death of the remainder of its members in Numbers 25.

The second census list in Numbers 26 introduces the second half of the book (Num 26–36). This second census list shares many formal features with the census list in Numbers 1: the same wording of God’s command (Num 1:2-3; 26:2), the similar order of the twelve tribes and the census of the priestly *Levite tribe that follows the census of the twelve tribes in each case (Num 3–4; 26:57-62). Although this second census list shares many formal similarities, it also has one major difference with the first census list: no member of the Israelite community counted in the first census remains alive to be counted in the second census except for the two faithful spies, *Joshua and *Caleb (Num 26:63-65; cf. 14:26-35). This second census list begins the second half of Numbers, which narrates the emergence of a new generation of Israelites as they prepare to enter the Promised Land of Canaan. The theme and tone of this part of Numbers is quite different from the earlier chapters. *Life and hope, rather than rebellion and death, characterize the story of this new generation. The story of the new generation begins at the entry point to the Promised Land in the plains of Moab by the Jordan River (Num 26:3), not in the midst of “the wilderness of Sinai,” as with the first census of the old generation (Num 1:1).

After the second census in Numbers 26, the second half of Numbers is bracketed by an *inclusio* in chapters 27 and 36. Both of these chapters deal with a legal dispute involving claims to inherit land in Canaan brought by the daughters of *Zelophehad. The legal issue is resolved

through the mediation of competing legal principles and values, setting a positive and hopeful tone for the entire second half of the book. In contrast to the deaths of a whole generation in a series of rebellions and punishments in the first half of Numbers, the second half does not record the death of any Israelite. Moreover, the Israelites are victorious in their first military engagement against the Midianites (Num 31). Potential crises do not turn into rebellions but are successfully negotiated and resolved (Num 27:1-11; 31:14-15; 32:1-42). Numerous laws in this section assume and look forward to future residence in the Promised Land of Canaan (Num 27; 34—36). In short, this second half of Numbers is uniformly hopeful and positive in tone.

2. The Critical Study of Numbers.

Jewish, Christian and other scholarly communities have studied and interpreted the book of Numbers in important ways over many centuries. The apostle Paul, for example, recalls the story of the wilderness generation in Numbers as an example for his contemporary readers: “These things happened to them to serve as an example, and they were written down to instruct us” (1 Cor 10:11). The early third-century church father Origen wrote a long series of sermons based on the book of Numbers. Origen noted the neglect of the book among Christians, but he argued vigorously for the value of Numbers as a resource for faith. The Jewish tradition likewise continued to develop a long tradition of interpreting Numbers with the *Midrash Sipre*, the Talmud and many other rabbinic commentaries that focused their interpretive energies on the many legal sections as well as the narratives contained in Numbers.

2.1. Modern Studies: The Literary Formation of the Book. Since the eighteenth century, modern scholarship on Numbers has focused much attention on the history of the literary development of the book in relationship to the other literature of the Pentateuch. The Numbers commentary by G. B. Gray (1903) illustrates this overriding concern with discerning earlier and later layers of material within the book. Gray, like many scholars of his time, relied on the Documentary Hypothesis (see Source Criticism). This scholarly hypothesis assumes that the Pentateuch is composed of four major literary sources or traditions that appeared in Israel in the following chronological order over the

course of the tenth to six centuries B.C.: J (Yahwist), E (Elohist), D (Deuteronomist) and P (Priestly). Gray argued that the bulk of Numbers was composed of P material, especially Numbers 1—10 and 26—36. This P material originated after the exile of Judah to Babylon in 587 B.C. Gray detected an intermingling of earlier J and E material with the P source in Numbers 10—25. According to Gray, the present shape of Numbers is dominated by a Priestly perspective and addresses a postexilic setting in which the yearning of a new generation of Israelites in Babylon to return to the Promised Land matches the situation of the new generation in the book of Numbers seeking to establish a community of worship and service on the eve of entering the Promised Land of Canaan.

Some of Gray’s assumptions and positions have continued to generate debate about the dating of the material within Numbers. Some more conservative scholars, both Jewish and Christian, argue for the historicity of much of Numbers, dating it to the Mosaic period, before the rise of Israelite kingship, or sometime before the Babylonian exile. Other scholars follow Gray in dating much of Numbers to an exilic or postexilic time. Most scholars would at least agree that the perspective of the Priestly tradition dominates Numbers, whether dated to the preexilic or postexilic periods. There is less consensus among pentateuchal scholars about the nature and date of the pre-Priestly traditions within Numbers (what Gray called the J and E traditions). Some scholars doubt the existence of an independent E source altogether in Numbers and speak only of a J (Yahwist) or simply “pre-Priestly” material. The dating of this earlier pre-Priestly material is also disputed; some argue that it is much later than originally supposed, dating to the time of the exile, which then pushes the Priestly material later in the postexilic period. Other scholars also see some Deuteronomistic editing at certain points in Numbers. Still others see some if not most of the material in Numbers as quite ancient, dating from the time of Israelite kingship or before. What remains clear in these debates is that the book of Numbers is the product of a fairly lengthy history of literary development and editing from its earliest pieces to the final shape of the book.

2.2. The Varied Forms of Literature Within Numbers. The book of Numbers stands out as containing the greatest variety of literary forms of

any book of the Bible. J. Milgrom lists fourteen different genres within the book: narrative (Num 4:1-3), poetry (Num 21:17-18), *prophecy (Num 24:3-9), victory song (Num 21:27-30), prayer (Num 12:13), *blessing (Num 6:24-26), lampoon (Num 22:22-35), diplomatic letter (Num 20:14-19), civil law (Num 27:1-11), cultic law (Num 15:17-21), oracular decision (Num 15:32-36), census list (Num 26:1-51), temple archive (Num 7:10-88) and itinerary (Num 33:1-49). These individual traditions and forms have been woven into a complex but meaningful pattern in the present form of the book of Numbers.

According to some scholars, the material in these varied genres likely originated throughout the history of ancient Israel, ranging from the early period before the rise of kings in Israel to the much later postexilic period. Many scholars suggest that the earliest portions of Numbers may be found among the poetic sections, especially the following: the priestly blessing of *Aaron (Num 6:24-26), the Song of the Ark (Num 10:35-36), a section from the Book of the Wars of Yahweh (Num 21:14-15), the Song of the Well (Num 21:17-18), the ballad over Heshbon (Num 21:27-30) and the oracles of the prophet *Balaam (Num 23:7-10, 18-24; 24:3-9, 15-24). Other scholars maintain an early date not only for these poetic pieces but also for larger narrative sections of Numbers.

3. Content and Themes.

We have noted both the great variety of forms as well as the meaningful structure that make up the book of Numbers. The structure of the book in its present form may be outlined as follows:

1. The Death of the Old Wilderness Generation (Num 1—25)
 - A. Obedient Beginnings: Preparation for Israel's March in the Wilderness (Num 1—10)
 - B. An Abrupt Slide into Rebellion: The Death of the First Wilderness Generation Begins (Num 11—20)
 - C. The Final End of the First Generation: Signs of Hope in the Midst of Death (Num 21—25)
2. The Rise of a New Generation on the Edge of the Promised Land (Num 26—36)
 - A. The Second Census, the Daughters of Zelophehad, the Succession of Leadership and Laws for the New Generation's Life in

the Promised Land (Num 26—30)

- B. A Military Victory and Words of Warning and Encouragement from a Generation Past (Num 31—33)
- C. Law as Promise: Divine Commands in Anticipation of Residence in the Promised Land (Num 34—36)

3.1. The Death of the Old Wilderness Generation (Num 1—25). The first half of Numbers recounts the fate of the old generation of Israelites who were eyewitnesses to the exodus out of Egypt and the covenant with God at Mount Sinai. The beginnings of this first generation was marked by a census list already back in Exodus 1 (see also Gen 46:8-27). There seventy people were counted among the twelve tribes of Israel who came down to Egypt (Ex 1:5). The next census list of the twelve tribes of Israel (Num 1) marks a major transition in the people's wandering. They have been liberated from bondage in Egypt. They have received God's commandments and entered into a covenant with God at Sinai (Ex 19—24). They rebelled against God by worshiping the *golden calf, which required Moses to intercede for God's forgiveness of the people and the making of a new covenant (Ex 32—34). Now with Numbers 1 and after a new series of regulations in Leviticus, this first wilderness generation is ready to organize and begin the new phase of its march toward the Promised Land of Canaan. While the first organizational phase begins with obedience and hope (Num 1—10), the people quickly relapse into rebellion and disobedience (Num 11—20). The story of this wilderness generation concludes in this first half of Numbers with further rebellions and death punctuated at the same time by signs of hope and blessing for a future generation (Num 21—25).

3.1.1. Obedient Beginnings: Preparation for Israel's March in the Wilderness (Num 1—10). This first section of Numbers is dominated by a positive tone. The people of Israel obediently follow all of God's instructions mediated through Moses as they prepare for the march from Sinai to the Promised Land. The twelve tribes of Israel undergo a census in which all warriors are counted and then organized into a military camp with three tribes on each of the four sides. The priestly tribe of Levites are also counted and organized (Num 1—4). Laws are given to preserve the holiness of the camp. The laws deal with issues of purity, suspected adul-

tery and vows of Nazirites who dedicate themselves to special service to God for a specified time (Num 5—6). Included in this section is an instruction for the priestly blessing of the community, which continues to function as words of benediction to conclude worship services in both Jewish and Christian communities even today:

The LORD bless you and keep you;
The LORD make his face to shine upon
you, and be gracious to you;
The LORD lift up his countenance upon
you, and give you peace.

Numbers 7 recounts a twelve-day ceremony in which each of the twelve tribes brings offerings to be used for the dedication of the *altar. What is remarkable is that each tribe brings exactly the same offerings. Anthropologist M. Douglas maintains that this equality among all the twelve tribes of Israel here and elsewhere in Numbers reflects a deliberate critique of the exclusivity of the Ezra-Nehemiah separatist program in the postexilic period. The priestly writers of Numbers, she argues, resisted the favoritism shown toward returned exiles from the tribe of Judah over other groups who had roots in the northern tribes of Israel, including the Samaritans (see Neh 4). Douglas's views assume a later postexilic setting for Numbers, an assumption some other scholars would not share. Nevertheless, the equality among the various tribes remains noteworthy.

Numbers 8 continues with the consecration of the priestly Levites to service in connection with the tabernacle, the seat of God's presence in the midst of the camp of Israel. Numbers 9 describes the celebration of the second Passover since leaving Egypt, the marker of a new phase in Israel's life as God's people as they are about to begin the march to the Promised Land of Canaan. The sons of Aaron are instructed in Numbers 10:1-10 to blow the silver trumpets in order to call the entire community into assembly and to signal the inauguration of the march through the wilderness from Sinai to Canaan. Finally, Numbers 10:11-36 recounts the actual beginning of the march of the holy camp of Israel through the wilderness. The reader has been assured throughout these first ten chapters that the Israelites have obediently followed all the commands of God mediated to them through Moses. As we come to the end of Numbers 10, the general mood of the narrative is

positive, hopeful and encouraging.

3.1.2. *An Abrupt Slide into Rebellion: The Death of the First Wilderness Generation Begins* (Num 11—20). The portrait of Israel's total obedience in Numbers 1—10 is abruptly shattered by the unexpected complaint and rebellion in Numbers 11, which interestingly builds on Exodus 16. Throughout Numbers 11—20, God's people continually rebel, and God punishes Israel with plagues and military defeats. God offers signs of forgiveness and compassion, but the people in each case resume their rebellious ways. First there is a general rebellion of the people (Num 11). Then there is a rebellion for the first time in the wilderness by two leaders of the people, Aaron and *Miriam (Num 12). This is followed in Numbers 13—14 by the most serious revolt against God: in the spy mission into the Promised Land of Canaan. The spy narrative defines the central theme and structure of the entire book of Numbers as the tale of the death of the old wilderness generation and the birth of a new generation of hope on the edge of the Promised Land.

Despite Israel's definitive rebellion in Numbers 13—14, a series of laws offers assurance that a future generation will indeed continue the wilderness journey and enter the land of Canaan (Num 15). However, the cycle of rebellions by the old generation resumes as some Levites, lay leaders and the people join in successive uprisings against God, Moses and Aaron (Num 16). The attack by Korah and others against Aaron and his sons concerning their priestly duties prompts the reaffirmation of Aaron's role as high priest and the laws for supporting the *priests (Num 17—18). The many Israelite rebellions had repeatedly prompted God's judgment of death and plagues so that the community was constantly threatened with the impurity and pollution of contact with dead bodies, which rendered a person unclean (Num 5:2). Thus, Numbers 19 specifies a process involving the ashes of a *red heifer by which people made unclean through contact with a corpse are returned to a state of ritual purity.

The narrative in Numbers 20 returns the reader to a forward movement of Israel's camp. Numbers 20:1 reports that the whole congregation of Israelites "came into the wilderness of Zin in the first month, and the people stayed in Kadesh." The people are again on the move toward the Promised Land. Many in the old wil-

derness generation have already died, but the new generation of Israelites is growing toward adulthood. However, just as chapter 20 gets the march of Israel's camp underway, it recounts a series of dramatic events that rock Israel to the core: the death of the leader Miriam (Num 20:1); Aaron and Moses' rebellion against God, along with God's command that Moses and Aaron will not lead Israel to the Promised Land (Num 20:2-13); and the death of the high priest Aaron (Num 20:22-29). This series of tragic blows again interrupts the reader's sense of a moving narrative and a moving Israelite camp. Every time Israel recovers from one of its rebellions, it is interrupted again by enumerations of laws, revolts and death. Progress for the old wilderness generation is slow, painful and ultimately futile, for they will all end by dying outside the Promised Land as predicted by God himself (Num 14:29-30).

3.1.3. The Final End of the First Generation: Signs of Hope in the Midst of Death (Num 21—25). A major break in the narrative of Numbers occurs with Numbers 21. For the first time in this predominantly negative portion of the book, a positive tone is struck with the account of Israel's first military victory over the Canaanite king of Arad (Num 21:1-3). This hopeful story is followed quickly by another rebellion involving a plague of poisonous snakes and the healing power of a bronze serpent (Num 21:4-9) and another positive conquest account of military triumphs over two kings, Sihon and Og (Num 21:10-35). An extended cycle involving King Balak of Moab and a foreign prophet named Balaam follows in Numbers 22—24. The Moabite king hires the prophet Balaam to curse Israel as it is encamped at the boundary of the land of Canaan. However, an episode with Balaam and his talking donkey ensures that Balaam will speak only what God wills him to speak: words of blessing over Israel rather than words of curse and destruction. The centerpieces of the Balaam cycle are a series of four climactic promise oracles directed to Israel's distant future (Num 23:7-10, 18-24; 24:3-9, 24:15-24). A final rebellion narrative (Num 25:1-18) recounts the death of the remaining members of the old wilderness generation, who continue to rebel despite God's faithfulness and promises. This section concludes the first half of Numbers (Num 1—25) by weaving together stories of failure and death for the present generation and

anticipation of profound promise for the next generation.

3.2. The Rise of a New Generation on the Edge of the Promised Land (Num 26—36). The second half of Numbers and the emergence of a whole new generation of Israelites is inaugurated by the second census list (Num 26). The overriding question in the second half of Numbers is whether this second generation will find a way to be faithful and enter the Promised Land or will rebel and fail as the first generation had done. The spotlight is on the new Israelite generation as they ready themselves to enter the land of Canaan, resolving disputes and making necessary compromises that allow the journey toward Canaan to continue.

3.2.1. The Second Census, the Daughters of Zelophehad, the Succession of Leadership and Laws for the New Generation's Life in the Promised Land (Num 26—30). Two significant texts guide our interpretation of the second census list. First of all, Numbers 26:52-56 suggests that the purpose of this second census list is primarily to determine the relative size of the territories that will be assigned to the twelve tribes when they enter Canaan. The second important text is Numbers 26:63-65. These verses explicitly pick up the theme of the entire book: the death of the old generation and the birth of the new generation of God's people. Except for the two faithful spies (Joshua and Caleb), "not one of those enrolled by Moses and Aaron" in the census list in Numbers 1 is present in the second census list, "for the LORD had said of them, 'They shall die in the wilderness'" (Num 26:64-65). Thus, this second census list is a sign that God's judgment upon the first generation has been completed and that God's promise of a new generation of hope is being fulfilled.

Numbers 27:1-11 narrates the successful resolution of a legal dispute regarding the inheritance of land by the five daughters of a man named Zelophehad (see Zelophehad, Daughters of), who had died without leaving a son as a male heir. The decision affirms the important value of maintaining land with each family so that the economic base for each family is secured for the future. Numbers 27:12-23 relates the transfer of leadership from Moses, who will die outside the land of Canaan because of his sin (Num 20:1-13). The office of Israel's leader is given to Joshua, Moses' assistant (Num 11:28; cf. Ex 17:8-13) and one of two faithful spies whom

God promised would enter the land of Canaan (Num 14:30). Numbers 28–30 includes a systematized program of *sacrifices that Israel is to offer once in the land of Canaan and other laws that remove any ambiguities about *women and the legitimacy of their vows. Some commentators argue that this section of laws is among the latest additions to Numbers and the entire Pentateuch, dating perhaps to the postexilic period in Israel's history. Others would date this material much earlier.

3.2.2. A Military Victory and Words of Warning and Encouragement from a Generation Past (Num 31–33). Numbers 31 recounts a successful war of revenge on the Midianites (cf. Num 25:16-19) led by Moses in his last act of military leadership. The battle and its victory functions as the new generation's dress rehearsal for the imminent conquest of Canaan. Numbers 32 tells of a potential crisis involving two Israelite tribes who wish to settle not in Canaan but in the Transjordan area, which lay east of the Jordan River. Moses is upset by the request, but he and the two tribes work out a compromise that resolves the conflict. Numbers 33 is a summary of the itinerary traveled by the old generation of Israelites from Egypt through the wilderness to the edge of the Promised Land with notes of both encouragement and warning to the new generation.

3.2.3. Law as Promise: Divine Commands in Anticipation of Residence in the Promised Land (Num 34–36). The book of Numbers concludes with a series of laws and instructions that assume with assurance and hope that the conquest of Canaan is near at hand. Numbers 34 outlines the procedures for the future division of the land of Canaan. Numbers 35 makes provisions for special cities in which the Levites will live, since the Levites have no tribal lands of their own (Num 18:24). Six of the Levitical cities will also be designated as cities of refuge to which a person who had killed another person unintentionally could flee (Num 34:6). Numbers 36 resumes the case of the daughters of Zelophehad and the inheritance of their father's land in the absence of any male heirs, which first appeared in Numbers 27. The case answers the question whether the daughters can marry outside their tribe. Since the daughters will now own land, marriage outside the tribe would entail the transfer of one tribe's land to another tribe. This would upset the equitable balance of tribal land

ownership, so Moses consults with God and another compromise is reached. The daughters may marry whomever they wish within their own tribe, thus ensuring that the tribal lands will not be transferred to family groups outside the tribe.

The varied and rich contents of the book of Numbers combine to paint a realistic and somber portrait of a rebellious community of God's people as they struggle through the wilderness period of Israel's history. However, God's faithfulness to the promises made to Israel ensure the birth of a new generation of hope who stand expectantly on the threshold of entering the Promised Land of Canaan. This new generation seeks to integrate the traditions and lessons of the past with the new challenges and demands of the future that face them. As such, the book of Numbers has remained an essential paradigm for each succeeding generation of God's people that has in some way passed through a wilderness period of struggle and judgment. In the face of such struggles, Numbers continues to offer hope, guidance and a model for faithful dialogue with the past in the face of future challenges and hopes.

ORPHAN

In the ancient world, the term *orphan* often referred more specifically to the fatherless, not more generally to one who had lost both parents. This nuance is also evident in the OT (cf. Lam 5:3). The head of the family was the father, so his early or unexpected death could result in the loss of legal and physical protection and diminished daily provision for both his widow and orphaned children. In most cultures the god of justice and the king became the patrons of the vulnerable, and legislation was designed to guarantee long-term security by specifying the means of the transfer of the family inheritance.

1. The Ancient Near Eastern Context
2. Children in Israel
3. Legislation for Orphans in the Pentateuch
4. Concern for the Orphan in the Rest of the Old Testament

1. The Ancient Near Eastern Context.

The protection of the widow and orphan is a virtue of the ideal sovereign or leader that is heralded in various literary genres (Fensham;

Havice; Weinfeld). It is a moral duty of the chief steward to which the downtrodden can appeal in Egypt ("The Peasant's Lament," *ANET*, 408) and is listed among the duties of a good king in the Keret Epic of Ugarit (*ANET*, 153). In the epilogue to his law code, Hammurabi declares that one of his achievements was to provide justice for the widow and the orphan (*ANET*, 178).

The key socioeconomic problem for orphans dealt with in Mesopotamian law codes spanning a millennium is the disposition of the inheritance. This legislation is, of course, to be coordinated with the guidelines regarding the rights of the widow upon the demise of her spouse. Since these societies were patrilineal (signifying that the estate was passed down through the male heirs), when the father died prematurely the legal system had to stipulate how and to whom the family's property and goods were to be transmitted once the surviving children came of age (e.g., Lipit-Ishtar §31; Code of Hammurabi §§167, 177; Middle Assyrian Laws A §26). In the case of the death of the mother, what was at issue was the dowry with which she had entered into the marriage arrangement. Would this return to her father's home, be kept by the husband or be bequeathed to her children (e.g., Code of Hammurabi §162, 167; Neo-Babylonian Laws §13)?

Many of these concerns also surface in the OT. This does not result, however, in a mere repetition of the same ethical values and laws. Israel's concern for the orphan (Heb *yātôm*) is grounded ultimately in the very nature of Yahweh and his gracious acts on Israel's behalf.

2. Children in Israel.

The multiplication of the human race is part of God's design for humanity (Gen 1:28; 9:7). Within this broader intention appears Yahweh's

commitment to *Abraham to make him into a great nation (Gen 12:2; 15:5; 17:2, 16; 22:17). One of the prominent themes that drives the patriarchal narratives is the divine (and sometimes miraculous) provision of a seed. Barrenness is lamented and even considered a judgment of God (Gen 16:2; 20:18; 30:2-3, 9). It was hoped that a woman would bear many children, who were considered to be a blessing and a gift from God (e.g., Gen 24:60; 29:31—30:24; cf. Ps 127; 128).

Their birth was the cause of great celebration (Gen 21:6-7). This response makes sense, too, in light of the concrete realities of an agrarian social world in antiquity (Perdue; *see* Agriculture). In the primarily subsistence setting of Israel's rural farming communities, children represented important economic potential. They meant more hands for work in that labor-intensive environment and would assure, as well, the future preservation of paternal lands within the family.

Parents, along with the extended family, took it upon themselves to nurture and educate the children. As they grew, these children would be socialized into the appropriate social and gender roles, be trained in skills required for tilling the soil and handling all kinds of chores, and be introduced to a trade (and probably, in the case of the males, to the rudiments of combat). Education within the family also had a religious component. Children were to participate in the *sabbath (Ex 20:8-11; Deut 5:12-15) and, on occasion, apparently accompanied their parents to the *sacrifices and *feasts (Deut 29:11; 31:12; cf. 1 Sam 1—2). Several texts describe the father's responsibility to recount the history and significance of Israel's faith to his offspring (Ex 12:24-27; 13:8, 14-16; Deut 4:9; 6:4-9, 20-25; 32:46-47). In addition, archaeological evidence points to the practice of household religious rituals, whether Yahwistic or of a more syncretistic kind with the veneration of ancestors and local deities.

This background helps explain the extent of the losses suffered by a child at the death of a parent, especially that of the father. Absent now would be the instructor and model in the many details of life and worship; missing would be the legal head of the home and arbitrator of conflicts. The extended kinship structure (*see* Family Relationships), however, also provided the context for the care of these orphans, along with the other less fortunate, such as widows and resi-

dent aliens. These three groups are often mentioned together in passages dealing with the care of the powerless in ancient Israel.

3. Legislation for Orphans in the Pentateuch.

Fundamental to the ethical call to the nation to defend and provide for the orphan is the very character of Yahweh himself, who, though he is the incomparable and omnipotent God, had demonstrated unmerited grace in his *election and redemption of Israel (Deut 10:14-22). Attitudes and actions toward the orphan, then, were to be rooted in an appreciation of the divine mercy manifested toward Israel throughout its history (cf. Janzen, 26-86; Millar).

The memory of the exodus is underscored in the demand to treat the orphan (as well as the *widow and resident *alien) with justice in any legal proceeding. Yahweh would "hear their cry," even as he had done when Israel had groaned under the Egyptian yoke (Ex 22:22-24 [MT 22:21-23]; cf. 2:23-25); the people were never to forget their own misfortune and deliverance in the past and, therefore, were to act with equity and compassion toward those experiencing hardship (Deut 24:17-18). This moral demand was emphasized yet again on Mount Ebal by the self-pronouncement of a solemn curse for withholding that justice (Deut 27:19).

The Pentateuch does not delineate the transfer of the family patrimony in the case of orphans with the detail found in other ancient Near Eastern law codes. The account of the complaint of the daughters of the deceased Zelophehad, however, leads into the specification of the proper order for determining the rightful heirs of the inheritance upon the death of the father; male orphans were to have precedence over the females (Num 27:1-11; *see* Zelophehad, Daughters of). The Pentateuch also contains laws that seek to ensure the welfare of children (cf. Wright, 222-38), and its legislation calls for various forms of periodic charity toward the orphan. Such benevolence would be rewarded with divine blessing. Harvesters were to leave some of the gleanings in the fields for the orphan (Deut 24:19-22), and a special tithe was to be collected every third year for their benefit (Deut 14:28-29; 26:12-15).

This communal ethic extended to supplying them with the means for participating in the cultic life of Israel. Families and towns were to facilitate and welcome the involvement of the

orphans in their midst at the Feasts of Weeks and Booths (Deut 16:9-15). These celebrations were annual reminders of Israel's unique corporate identity in the world, and the orphan was not to be cut off from this special privilege. In other words, personal adversity was not to be compounded by marginalization and exclusion.

4. Concern for the Orphan in the Rest of the Old Testament.

Instead of providing concrete measures for enforcement or punishment according to the degree of compliance, the Pentateuch strikes at a deeper ethical level through its moral imperatives. The call to do justice and compassion, which echoes throughout Israel's history, ultimately is a demand to reflect the character of Yahweh himself. Accordingly, it is not surprising that the prophets decried the poor condition of orphans and their abuse by the powerful in their day (e.g., Is 1:17, 23; 10:1-2; Jer 5:26-29; 7:5-7; Ezek 22:6-7; Zech 7:8-10). Later narratives picture widows with children who fell into debt and struggled to survive (1 Kings 17:8-24; 2 Kings 4:1-7).

Beneficence toward the orphan was never lost as a moral virtue. Job defended his innocence in part on the basis of his care of these children, when earlier he had enjoyed a position of prestige in the community (Job 29:12; 31:16-23). The protection of the fatherless served as a measure of a king's righteous standing (Jer 22:3). Most important of all, Yahweh himself remained as their divine defender and father (Ps 10:12-18; 68:4-6 [MT 68:5-7]; 146:9). Under his sovereign hand Esther, who had lost both her father and mother and was under her cousin Mordecai's care (Esther 2:7, 15), became queen in Persia and saved the Jews from de-

struction (Esther 4:14). The courage of this orphan, the ironic fate of the evil Haman and the deliverance of God's people continue to be celebrated in the Feast of Purim (Esther 9:18-28).

PENTATEUCHAL CRITICISM, HISTORY OF

The Pentateuch refers clearly to the role of *Moses in the composition of portions of its legal materials (e.g., Ex 24:4; 34:27; Deut 31:9, 24) and other sections (e.g., Ex 17:14; Num 33:2; Deut 31:19, 22). Such references led to a nearly uncontested tradition of Mosaic authorship for the whole Pentateuch in early Jewish and Christian sources. The Talmud (*b. Sanh.* 21b-22a; *b. B. Bat.* 14b), the Mishnah (*m. 'Abot* 1:1) and possibly the NT (Luke 24:27, 44, *passim*), along with the Jewish historian Josephus (*Ant.* 4.8.48 §326) assume Mosaic authorship. However, it has long been noted that the Pentateuch itself looks back on the time of Moses as the distant past (e.g., Gen 12:6; Deut 34:6, 10), and from earliest times

certain anachronisms and inconsistencies led to doubts regarding Mosaic authorship of the whole Pentateuch (Harrison, 1-9, 497-98; Childs, 31-34). Several medieval commentators raised questions about Mosaic authorship, and in the seventeenth century philosophers Benedict Spinoza and Thomas Hobbes concluded that Ezra was responsible for the Pentateuch, though he used certain Mosaic materials (Childs, 112-13). From the time of the Enlightenment to the present, scholars have considered many possibilities for the Pentateuch's origins. Beginning especially in the eighteenth century, scholars sought to construct literary theories of pentateuchal authorship that would account for the internal features of the text.

1. Eighteenth Century
2. Nineteenth Century
3. Early and Mid-Twentieth Century
4. Late Twentieth Century
5. Conclusion

1. Eighteenth Century.

The *Zeitgeist* of the Enlightenment made possible a reevaluation of traditional understandings of how the Bible was composed, including especially the composition of the Pentateuch. Emphasis on human rationality and the conviction that humankind was coming of age resulted in a rejection of supernaturalism and the concept of divine revelation.

1.1. Jean Astruc. The beginnings of a source-critical approach to the Pentateuch are usually traced to Jean Astruc, though he had less illustrious predecessors. Astruc was a French student of medicine who in 1753 published anonymously an inductive investigation of Genesis. His work is usually acclaimed as the beginning of pentateuchal *source criticism proper. Astruc established the divine names Elohim and Yah-

weh as the basic criterion for identifying and distinguishing the sources used by Moses in the compilation of Genesis. He concluded that Moses used one source referring to God primarily as Elohim (Astruc's source A) and one referring to him as Yahweh (source B). Astruc developed other criteria, including parallel accounts, which he used to further divide the sources for the rest of the Pentateuch.

Astruc never questioned Mosaic authorship or the authority of the Pentateuch. His approach was naive in that he assumed he could approach ancient Near Eastern literature with the same assumptions one might use for modern Western European literature. Yet his primary emphasis on the divine names as a criterion for source analysis paved the way for future source critics of the Pentateuch.

1.2. Johann G. Eichhorn. Eichhorn produced a three-volume introduction to the OT (1781-1783) in which the term *introduction* designated a thorough scholarly treatment of the higher-critical issues for the entire OT. He is sometimes called the "Father of Old Testament Criticism."

In his treatment of Genesis, Eichhorn followed Astruc's lead by accepting the divine names Elohim and Yahweh as the basic criterion for separating the main sources. He designated the sigla E for the Elohim document (Astruc's A source) and J for the Yahweh document (Astruc's B). But Eichhorn also admitted that there must have been other sources for Genesis, since it was evident that some materials did not harmonize with the J and E documentary approach. He speculated about other criteria, such as style and content, as means to understand the original sources better. Eichhorn also applied this approach to the rest of the Pentateuch, and he eventually rejected Mosaic authorship altogether.

Eichhorn's early documentary hypothesis quickly became popular because it seemed to supply the most satisfying explanation of how the Pentateuch was composed. But there were unanswered questions about his conclusions, and the next one hundred years of European scholarship on the OT were devoted to answering two questions. How does one explain the unity of the Pentateuch in light of the diverse documents used in its composition? And, what were the basic characterizing features of each of the documents themselves?

At the end of the eighteenth century, schol-

ars continued Eichhorn's investigations. The period was one of unrestrained confidence and optimism, one might even say arrogance. Some scholars claimed to have isolated as many as seventeen different sources in Genesis alone. K. D. Ilgen was the first to divide E into two separate documents, E¹ and E², and grouped the numerous different sources of Genesis into three basic documents: J, E¹ and E².

2. Nineteenth Century.

In the early part of the nineteenth century, the two- or three-document hypothesis began to lose favor. Several scholars began to advocate a "fragmentary" hypothesis of pentateuchal composition. In this approach the Pentateuch had been produced by combining a mass of fragments rather than documents. Some scholars believed these original fragments were woven together by a redactor (or editor) in the period of Solomon. Others claimed to have discovered as many as thirty-eight or more fragments for the Pentateuch and felt they were edited together during the exile.

2.1. Wilhelm M. L. de Wette. De Wette was among the early fragmentary proponents, suggesting that a group of J fragments and E fragments were behind the present Pentateuch. His views were criticized by Heinrich Ewald, and by 1840 de Wette had changed his position to a supplementary hypothesis (see 2.2 below).

However, the most important proposals made by de Wette had to do with the book of Deuteronomy, the books of Chronicles and the role of law in Israelite religion. Indeed, he was the first to use the critical method to present a view of the history of Israelite religion that is radically at variance with the view implied in the OT itself (Rogerson 1985, 29). The legal traditions of the Pentateuch were not delivered by Moses at Sinai but were from different stages of Israelite history. This led de Wette further to question the historical reliability of Chronicles, which he took as an anachronism that provided no dependable evidence for the religion of Israel in the preexilic period. Concerning Deuteronomy, de Wette argued that it was the last of the pentateuchal books to be written and that it could not have been written before the seventh century B.C. In this he followed the lead of Jerome that a portion of Deuteronomy had been the "book of the law" found in the temple in Josiah's day, which had become the source of the

good king's religious reforms (see 2 Kings 22—23). In many ways, de Wette inaugurated a new era in critical OT scholarship. He raised all of the main questions that were to be of central concern in the rest of nineteenth-century OT scholarship, and he even proposed many of the answers that would eventually be adopted by mainstream scholarship of the century (Rogerson 1985, 28-34; Nicholson, 5-6).

2.2. Heinrich Ewald. Early in his career, Ewald emphasized the unity of Genesis in an attack on the fragmentary theories. In 1823 he suggested a "supplementary" hypothesis, in which a single core E document was supplemented by J and strands from the book of Deuteronomy.

However, Ewald's supplementary theory did not account for all the material in the Pentateuch. The legal sections especially did not belong to any of the three documents, J, E or D. So twenty years later he proposed his complicated "crystallization" hypothesis, in which numerous narrators and editors participated in the composition of the Pentateuch plus Joshua. Ewald joined those scholars who preferred to speak of a Hexateuch (the first six books of the Bible) rather than a Pentateuch. His approach suggested that each of the first six books contained cores, or centers, around which other parts clustered. The earliest of Ewald's "narrators" wrote during the judges period, the fifth and last put the first four books of the Pentateuch and Joshua in something like their present form during the seventh century. During the second half of the seventh century, another writer produced Deuteronomy, which was deeply influenced by the prophets of the eighth century and became the basis of Josiah's reforms. Sometime before the fall of Jerusalem in 586 B.C., a final editor combined the previously self-contained Deuteronomy with the work of the fifth narrator to produce the Pentateuch and Joshua. Ewald's theory was overly complex and detailed, and so theoretical that few of his students wished to take his method further. Yet much of the scholarship that followed him in the nineteenth century was indebted to his detailed observations (Rogerson 1985, 93-97).

2.3. Wilhelm Vatke. Most scholars of the nineteenth century described the religious history of ancient Israel in developmental or evolutionary models. Frequently it is argued that Hegel's idealism, particularly the famous dialectic (or logical) philosophy, was the most important philosophical influence on Vatke, which subse-

quently influenced Wellhausen. Indeed, Wellhausen admits the influence especially of Vatke's developmental understanding of Israel's religious history and states clearly that his approach is near to Vatke's, "from whom indeed I gratefully acknowledge myself to have learnt best and most" (Wellhausen 1983, 13; see Kraus, 179-82; Perlitt). Conservative scholars have often claimed that since the nineteenth-century documentary theories were based on a now defunct and disproved philosophy (Hegel's idealism), those theories can no longer be sustained (Harrison, 21-22, 505-9). However, dependence on Hegel has often been overstated, and in any case such dependence in itself does not predetermine Wellhausen's methods or the validity of his conclusions (Blenkinsopp, 8-11).

There is, however, a certain degree of truth in this critique of nineteenth-century scholarship, since Vatke himself made no secret of his own Hegelian positions (Kraus, 194-99; Thompson, 22-24). The Hegelian principles that had the greatest impact on Vatke by his own admission were the idea of development, an emphasis on comparative religions, and the dialectic between the "religion of nature" and "religion of spiritual individuality," in which Hegel perceived a gradual movement toward ideas of divine transcendence and away from cruder ideas of divine immanence in nature (Rogerson 1985, 70-71). Thus Vatke argued that Israel's religion was primitive and naturalistic during the judges period and the early monarchy (thesis). During the later monarchy and the age of the prophets, Israel's religion emphasized a more personal and spiritual God (antithesis). The postexilic period institutionalized and legislated Israelite faith (synthesis). This evolutionary (or dialectical) approach to Israel's religion became a powerful influence on later OT scholars.

Vatke's developmental approach led him to an innovative suggestion concerning Israelite law and the legal sections of the Pentateuch. He concluded that the law of the OT appeared at the *end* of Israel's religious heritage rather than at the beginning, as the Bible claims (Vatke; Rogerson 1985, 69-78). Vatke's argument that the legal regulations of the Pentateuch were actually composed during the exilic and postexilic periods did not meet with instant approval. But this feature of his work would eventually become the linchpin for the source-critical approach to the Pentateuch.

2.4. Hermann W. Hupfeld and Eduard Riehm. In the mid-nineteenth century these two scholars made adjustments in the documentary approach that would eventually win wide acceptance. In 1853 Hupfeld argued for the presence of three self-contained documents behind the Pentateuch: E¹, E² and J. The framework of the whole was provided by E¹, which was the foundational document for the others. J was a continuous document that had been woven together with E² (Rogerson 1985, 131-34). In 1853, Riehm identified Deuteronomy as a self-contained, independent source. Thus the four main sources for the Pentateuch were established, though the sequence would change: E¹, E², J and D.

2.5. Karl H. Graf and Abraham Kuenen. Initially Karl H. Graf agreed with the Hupfeld sequence of the documentary sources (E¹-E²-J-D), but he eventually became convinced by the arguments that the law came late in Israel's history. In 1865 he used the fixed date of D (622 B.C., following de Wette) and effectively convinced the scholarly world that E¹ was exilic, establishing the sequence E²-J-D-E¹. He suggested a significant role for Ezra in the exile, who supposedly compiled the priestly and legal materials in E¹ and later combined them with E², J and D to form the Pentateuch (Rogerson 1985, 258-59). Because of the effective way in which Graf argued for the lateness of the priestly legal materials of the Pentateuch, the Documentary Hypothesis that won the day is often known as the Graf-Wellhausen hypothesis.

Subsequently, Abraham Kuenen reversed the sequence of the first two sources, arguing that the Yahwist (or J author) was the earliest of the four authors, thus establishing the sequence J-E²-D-E¹. By proposing dates for the composition of the individual sources, Graf and Kuenen elevated source criticism beyond its earlier attempts and began to move in the direction of historical criticism (De Vries, 56-76). This would further set the stage for Julius Wellhausen, whose synthesis of previous work and whose articulation of the Documentary Hypothesis would make him the most significant pentateuchal theorist of the century.

2.6. Julius Wellhausen. Since Eichhorn's day, European OT scholars had been concerned with two main questions: How does one explain the unity of the Pentateuch in light of the sources it used? And, what were the basic characterizing features of each of the documents themselves? After a century of scholarship, most

believed the latter question had been answered. The J-E²-D-E¹ analysis of Graf and Kuenen was widely accepted as self-evident for most scholars near the end of the nineteenth century. But the problem of a unified composition remained. Given the differences in style, vocabulary, theological conceptions and the like, how does one explain the unity of the present arrangement of the Pentateuch?

It was in this atmosphere that Julius Wellhausen gave culminating expression to the documentary approach. With exceptional acumen and clarity, he was able to combine the prevalent source theory of Graf and Kuenen with skillful historical criticism in a way that appeared to explain the unity question. Within a few decades of his work, the Graf-Wellhausen hypothesis (also known as the Documentary Hypothesis) had swept the scholarly world. It remains today as one of the leading theories of pentateuchal composition.

Most surveys of Wellhausen's work focus on his monumental history of Israel (two German editions under different titles in 1878 and 1883, but available in English translation since 1885; see Wellhausen 1983). This is the work in which Wellhausen drew together influential ideas from other scholars of the nineteenth century, combining them with his own understanding of pentateuchal composition with such rhetorical and persuasive force that the book became a watershed contribution in OT research generally. But his critical positions on pentateuchal composition were already put forth in a series of articles in 1876-1877, which established the foundation for his subsequent history of Israel. These articles were reprinted in 1889 as *Die Composition des Hexateuchs und der historischen Bücher des Alten Testaments*, which is arguably more important to this review of his work (Rogerson 1985, 260).

It is somewhat simplistic to view Wellhausen as the great "documentarian," for he also espoused *supplementary* approaches in his understanding of the history of J and E. Wellhausen sought to redefine the process of composition as not simply an editorial "scissors and paste" process. He pictured redactors who were not merely compilers but who freely shaped, reshaped and in some cases authored materials. By the time J and E had been combined into JE, these sources had gone through their own complex supplementation and transmission history. Subsequently, a redactor (R^{JE}) combined these sources,

which could just as easily be designated J³ and E³ because of their own extensive supplementation history. Wellhausen called this redactor the Jehovist, reserving the term Yahwist for the earlier narrative source J (Elohists for E). In sum, Wellhausen saw the Jehovist (R^{JE}) as the creator of the Hexateuch. He had so thoroughly reworked and combined the earlier J and E materials that Wellhausen seldom attempted to reach behind the Jehovist, believing that it was nearly impossible to separate the two (especially in the *Jacob narrative of Genesis and later sections of Numbers).

Wellhausen assumed, with his predecessors, that the core of the book of Deuteronomy had been composed in the seventh century. Now it remained to argue that a later redaction of the book was combined with R^{JE}, resulting in the JE+D work. Further, Wellhausen argued for the existence of an additional self-contained narrative from the early postexilic period, which took the form of a history similar to that of J and E. This document broadly traced four *covenants (those of *Adam, *Noah, *Abraham and the Sinai covenant), which served as the framework for extensive priestly legal additions and ultimately as the framework for the Pentateuch as we have it today. Wellhausen designated the original document Q (*quattuor*, “four,” for the four covenants), which was then expanded by a mass of priestly legislation, and perhaps several other editions, resulting in a “Priestly Code,” or P (materials that had been designated E¹ by previous scholars). Finally, the last major redaction of the Pentateuch combined JED with P, the so-called Priestly redaction (R^P), resulting in the Pentateuch substantially as we know it today. Wellhausen thus bequeathed to scholarship the now familiar designation JEDP, in that particular order of composition (Nicholson, 3-28; Rogerson 1985, 260-68).

The contributions of Wellhausen are undeniable. First, more successfully than any of his predecessors, he argued for the lateness of Israelite law and its various redactions, which resulted in P. Wellhausen’s fundamental assumption was that pentateuchal law appeared at the beginning of the *Jewish* state (that is, in the postexilic period) rather than at the beginning of *Israelite* history (Wellhausen 1983, 1-4). Second, after a period of time in which the “Older Documentary Hypothesis” of Astruc, Eichhorn and Ilgen had been replaced by various supplementary and fragmentary theories, Wellhausen inaugurated an era of general consensus on the docu-

ments of the Pentateuch and their transmission history (the so-called “New Documentary Hypothesis”). Third, he brilliantly correlated his three main sources (JE, D and P) with the religious and political history of ancient Israel, appearing to explain the unity of the Pentateuch as we have it today. Thus, JE came to be seen as a product of the divided monarchy, D a product of the seventh century and the Josianic reforms, and P a product of the postexilic restoration (Rogerson 1985, 266).

Wellhausen had convincingly united the results of source criticism with the nineteenth century’s understanding of the historical and religious institutions in ancient Israel. It seemed that all the questions had been answered. His presentation was so compelling and persuasive that, by the turn of the century, Wellhausen’s reconstruction had convinced most of the scholarly world, including scholars in England and America.

3. Early and Mid-Twentieth Century.

OT scholarship during the first half of the twentieth century was characterized by modifications of Wellhausen’s hypothesis and by scholarly refinement of the so-called assured results of the researches of the nineteenth century. Additionally, there were new explorations of the traditions *behind* the established sources and new approaches based on archaeology and the maturing of ancient Near Eastern studies. The following is a brief survey of the most significant developments of the early twentieth century.

3.1. William F. Albright. Just as Graf, Kuenen and Wellhausen were giving shape to the Documentary Hypothesis, an entirely new field of research was developing. Egyptian hieroglyphics and Mesopotamian cuneiform had been deciphered in the mid-nineteenth century, and thousands of written documents from the ancient Near East began yielding their secrets. Though ancient Near Eastern research has long since developed into a scientific field of study in its own right, it has had a long relationship with OT studies. Since the world of the OT is the ancient Near East and the books of the OT are products of that ancient culture, these discoveries were immediately brought to bear on the Bible. The first half of the twentieth century was a remarkable period of archaeological discovery, and the fields of Assyriology, Egyptology and Syro-Palestinian archaeology came of age.

The application of these new disciplines to OT studies was most evident in the prodigious works of William F. Albright and his many students in the United States. Albright was an individual of immense gifts and talents who made significant and lasting contributions to the study of ancient languages, archaeology and ancient Near Eastern history in general. His continuing influence on OT studies in particular makes him perhaps the most significant scholar in this field in the twentieth century (Bright 1979, 13; Machinist).

It is not accurate to say that this great mass of new information from the ancient world somehow proved the Bible right or directly related to the problem of the composition of the Pentateuch. In fact, rare is the ancient Near Eastern discovery that has any *direct* connection with an OT event or person. But the burgeoning new field of ancient Near Eastern studies provided an external source of information, which many felt could serve as a check on the speculations of earlier OT scholars. The American Albright "school" contended that archaeology and ancient Near Eastern studies provided hard facts, objective evidence of an ancient world very much like the one described in the Pentateuch, and that properly defined comparative methods were more fruitful than the subjective and unverifiable constructions of nineteenth-century European scholars. Such a perspective was largely a North American phenomenon, partly because it was American excavators and their institutional sponsors who introduced modern scientific techniques into archaeological exploration (along with Kathleen Kenyon in Great Britain).

Albright and his students did not reject the Wellhausen documentary approach, though they challenged the developmental process and the provenances of the sources. They used archaeological parallels to argue for the plausibility of the ancestral traditions of Genesis and the general trustworthiness of other events of pentateuchal history. They reconstructed the history of Israel in ways that called into question the evolutionary and developmental assumptions of the Wellhausen school (pride of place goes here to the classic history of John Bright). In general, Albright objected to the standard nineteenth-century history-of-religion trajectory, especially the conviction that religion moves from polytheism to henotheism to monotheism. He argued that monotheism existed early in Israel's history,

a conviction that is best articulated in his classic volume, *From the Stone Age to Christianity*. In general, the American Albright school and its emphasis on archaeology and comparative methodologies can be said to have restrained the excesses of the "assured results" of critical scholarship (at least in the United States).

3.2. Hermann Gunkel. One of the most important developments of the post-Wellhausen decades was the rise of form criticism, which attempted to trace the fundamental ideas of the ancient Israelites back to their preliterate stage. Form criticism has sometimes been viewed as an alternative to source criticism with its speculation about documents and their redaction history. But more often, form criticism has served a complementary role to the results of source criticism, especially with the pioneering scholar who gave definition to the discipline, Hermann Gunkel. Gunkel wrote important works on Genesis, most notably his 1895 volume on creation and chaos, which covered the opening chapters of Genesis (followed subsequently by a more detailed treatment in 1901).

Though Gunkel accepted the basic Documentary Hypothesis as defined by Wellhausen, his approach implied a fundamental criticism of Wellhausen as well. He believed that behind the J and E sources of Genesis were collections of sagas preserved orally for centuries, instead of relatively late writings of a few great individual authors. Gunkel was in many ways closer to the fragmentary hypothesis of the early nineteenth century. Since many of these sagas were preserved accurately, they may in some cases preserve historical kernels of truth. In some ways, the new form criticism was affirming in a different way what the growing body of evidence from the ancient Near East was showing. Ultimately, however, the final text and its meaning became less important to some form critics than the oral stages or the situation behind the text. More recently, the whole question of an extended period of oral transmission has been challenged, so that the possibility of an extensive preliterate stage of pentateuchal materials is now in doubt (Van Seters 1975, 131-48).

3.3. Albrecht Alt and Martin Noth. Gunkel's form-critical approaches were continued in the first half of the twentieth century in the influential works of Albrecht Alt and Martin Noth. They applied form-critical techniques to the text in an attempt to discern the nature of OT law, the so-

cial organization and religious beliefs of the early Israelite tribes and biblical history in general (Noth). Much of their reconstruction of patriarchal and premonarchic Israel has not withstood the test of time, but their form-critical investigations did succeed in raising the possibility of historical reality behind the early traditions, which to a large extent had been precluded by adherents of the Graf-Wellhausen hypothesis. For Noth an important common base-text (or "G" for *Grundlage*) of many pentateuchal sources came into existence in the pre-monarchic period and established the decisive stages of the formation of the Pentateuch. Each of the subsequent non-Deuteronomistic sources (J, E and P) was, in Noth's opinion, the work of individual authors relying on G for the nucleus of the content.

3.4. Gerhard von Rad. Gerhard von Rad, utilizing form-critical and redaction-critical approaches, wrote several important works, all assuming the basic validity of the Graf-Wellhausen hypothesis. Von Rad believed that Israel had preserved its basic history in the form of "ancient credos," short historical creeds still apparent in certain passages of the text (particularly Deut 6:20-24; 26:5b-9; Josh 24:2b-13). These creeds were preserved because they had been used for centuries in liturgical affirmations of faith in public acts of worship.

Von Rad believed he could trace the redactional history of these creeds. He concluded that the author of the J document (the Yahwist) had inherited the basic historical outline of God's actions on Israel's behalf and had filled it out with materials from local and tribal sources. The Yahwist was thus the one who gave the Pentateuch its rudimentary form. Since the creeds themselves omitted any reference to the Sinai covenant, von Rad assumed that this element of the Pentateuch had been edited into the whole by J at a later date. Despite the fact that von Rad's reconstruction of the history of these creeds is extremely subjective (as is the role of the Yahwist in editing these materials), his works have had a tremendous impact on OT studies.

4. Late Twentieth Century.

The works of Noth and von Rad had emphasized certain historical dimensions of the early Israelite traditions. Although they did not often agree with the Bible's self-claims, their form-critical investigations allowed some degree of basic historicity behind the oral and written traditions

of ancient Israel. Developments during the second half of the twentieth century would challenge even these conclusions.

4.1. Thomas L. Thompson and John Van Seters. Critical investigation of the early Israelite traditions preserved in the Pentateuch reached a turning point in the mid-1970s when two important books were published just a year apart. Thomas L. Thompson's work (1974) refuted the archaeological evidence for a patriarchal age in Israel's history. His was an attack on the widely accepted argument formulated by the Albright school that archaeology and ancient Near Eastern evidence supports a second millennium B.C. setting for the Abraham narratives. Thompson emphasized the patriarchal narratives as literary creations. Instead of traditions that preserved even the smallest trace of reliable history, they were theological stories from later times reflecting an unrealistic worldview. The patriarchal stories were the invention of the J document toward the end of the tenth century or in the ninth century B.C. They contained nothing of historical value whatsoever from Israel's earlier periods.

Likewise, John Van Seters also denied the second-millennium setting for the Abraham narratives (Van Seters 1975). In Van Seters's view, the Abrahamic cycle is an elaborate response to the exilic situation. Abraham himself was a fictional figure, created for theological reasons. Instead of a preexilic editor of oral and written traditions from early in Israel's history, the Yahwist becomes an author who used materials intentionally to compose a unified introduction to the Deuteronomistic History from an exilic perspective. The P material is a postexilic supplement to the Yahwist, resulting in the book of Genesis in its present form about 300 B.C. (Van Seters 1975, 304-8). Van Seters employed form-critical methods to arrive at his conclusions and then supported them with archaeological evidence from the first millennium B.C. He denied the validity of any second-millennium archaeological connections. In a sense, Van Seters revived the supplementary hypothesis, since the exilic J document was then supplemented by a postexilic P document. He questioned completely, however, the existence of an E source.

4.2. Rolf Rendtorff. A major criticism of the Documentary Hypothesis appeared in the 1970s when Rolf Rendtorff offered a new approach to the production of the Pentateuch. Rendtorff ar-

gued that the tradition-critical approaches of his predecessors in Germany, especially those of Noth and von Rad, were incompatible with the classical expression of the Graf-Wellhausen hypothesis. He averred that their method of moving from the smallest units of the text through the larger complexes of tradition and ultimately to the final form of the text left no room for independent literary sources such as J, E and P. Therefore, the classical formulation of the Documentary Hypothesis had to be abandoned.

Instead, Rendtorff argued that the Pentateuch was composed of large strands of material that have been joined end to end. The primeval history (Gen 2—11), the exodus history (Ex 1—15), the Sinai materials (Ex 19—24) and the various cycles of patriarchal narratives were brought together during the time of Solomon. Unlike Thompson and Van Seters, Rendtorff assumed that the various blocks of materials in the Pentateuch reflected a level of actual historical events, and he valued the ancient Near Eastern control data more seriously. Rendtorff in general rejected the classical source analysis of JEDP and its tendency to atomize the text. Specifically, he denied the existence of self-contained J and E documents and suggested a P and eventual D redaction of the whole.

Rendtorff's student Erhard Blum has carried his approach further. Starting with a study of the patriarchal narratives, Blum rejected completely the parallel sources of the Graf-Wellhausen hypothesis, proposing instead a supplementary approach (*Vätergeschichte*). First the Jacob narrative (*Jakoberzählung*) was composed in the northern kingdom, which was subsequently expanded to include the Joseph story after the fall of Israel to the Assyrians (together making up the *Jakobgeschichte*). After further minor supplementations this narrative was eventually expanded again to include the Abraham and Lot narratives. This resulting document formed the first patriarchal history (*Vätergeschichte*, or *Vg*¹). This document was further expanded during the Babylonian exile (*Vg*²). During the postexilic period, a Deuteronomistic redaction incorporated the patriarchal history with the rest of the Pentateuch. Finally, a Priestly author undertook yet another revision.

4.3. Canonical and Literary Criticism. In the closing decades of the twentieth century, broad new methodologies developed among North American OT scholars. These new approaches

were often (though not always) less likely to accept the classical expression of the Graf-Wellhausen hypothesis. Many trace the beginning of these developments to James Muilenburg's presidential address to the Society of Biblical Literature in 1968 (though this is overly simplistic; Muilenburg). Muilenburg complained that form-critical studies were too atomistic, too narrowly focused on discrete units of Scripture, and he called for a new rhetorical analysis in which scholars would regain an appreciation for larger movements of the text and would retain the historical context. He is most often associated with the rise of "rhetorical criticism."

The rise of so-called canonical criticism is often associated with Brevard S. Childs and James A. Sanders. Sanders, who first coined the term, sought to find evidence of a consistent "canonical hermeneutic" running through the tradition history of Scripture (Sanders). In contrast, Childs rejected the designation "canonical criticism" in order to emphasize that his own approach was not some new exegetical technique but rather a hermeneutical project focusing on canonical context (Childs, 82). He defined his approach as an attempt to go beyond traditional source and form criticism by focusing on the final form or the received, canonical shape of the biblical witness. Childs assumed that the shape itself is integral to a process whereby the continuing significance of the biblical text can be analyzed, which by definition means the modern exegete must go beyond a reconstruction of some theoretical "original" behind the received text. However it is defined by its practitioners, canonical criticism employs all the various critical approaches but tries to use them in a balanced way, avoiding the extremes of each one. While most scholars who have adopted this approach would not necessarily reject the JEDP analysis, they seek to explore the theological message of the received form of the canon, not only the individual sources or literary traditions behind the text.

Literary critics during the closing decades of the twentieth century were less amenable to the older source-critical approaches. *Literary criticism by definition is less concerned with investigating the historical evolution of the text (that is, its diachronic development) and more interested in the literary artistry of the text as it now stands (that is, its synchronic structure; for overview of the many scholars involved and critique, see Longman).

5. Conclusion.

The second half of the twentieth century witnessed the collapse of the older consensus on the Documentary Hypothesis and its various applications in form and tradition criticism. Recent decades have brought new challenges to the criteria used by scholars for source identification. The nature of the sources themselves and their respective dates of composition are much in doubt, and alleged archaeological parallels are often in dispute (on the development since 1970, see Wenham). There has not been a total collapse of the Documentary Hypothesis, however, since many scholars continue to work with this theory or from one of its many modifications.

The various critical methodologies are not inherently antisupernaturalistic. Indeed, they are necessary for serious biblical studies and productive in the hands of scholars who respect the unique nature of the Bible. Christian scholars most naturally embrace the concept of divine intervention, which must also be brought together with the intellectual achievements of modern Western civilization. A Christian approach to the biblical text will be a holistic view, which means it will never appropriate only that portion which can be squeezed into a predetermined naturalistic system. Christian scholars should apply the best of their critical skills to the text while always remaining open to divine intervention in the world and in history (Abraham, 187-89). Finally, scholars working on these issues need constant reminders that every hypothesis growing from the critical methodologies is inherently speculative, and indeed must be so. For this reason hypotheses are always in flux and conclusions tentative.

PHARAOH

The Hebrew word *pharaoh* (*par'ōh*; LXX: *Pharaō*; cf. Akkadian *pi-ir'-u-u*), occurring 216 times in the Pentateuch, is a loanword from Egyptian *Pr-ꜥ*, which literally means “(the) Great House,” originally referring to the royal palace. It was only later, especially in the Eighteenth Dynasty, perhaps sometime during or prior to the reign of Thutmose III (1479-1425 B.C.; names and dates follow Kitchen), that *pharaoh* began to be applied to the ruler's person. From the time of Shoshenq I (945-924 B.C.), the term was sometimes included in the titularies of royal inscriptions, and later in the Twenty-Second Dynasty (945-715 B.C.) it was included in the cartouche. By the seventh century it was little more than a synonym for “king” and was conjoined with the proper name (see Redford; Osing; Gardiner; Cazelles, 6.761-62; *HALOT* 3.971).

Four pharaohs are mentioned by name in the Old Testament: “Shishak” = Shoshenq I (1 Kings 14:25), “Tirhakah” = Taharqa (690-664 B.C.; 2 Kings 19:9), “Neco” = Necho II (610-595 B.C.; 2 Kings 23:29) and “Hophra” = Apries (589-570 B.C.; Jer 44:30). Only the last two are explicitly called “pharaoh,” while the former are designated kings (*melek*). A fifth pharaoh might be referred to in 2 Kings 17:4, which names a king (*melek*) “So.” Since no such pharaoh is known from Egyptian records, the passage is controversial. “So” may be a hypocoristic for Osorkon (IV [?] 730-715 B.C.) or an epithet, “the Saite” (= Tefnakht [?], 727-720 B.C.; see Meltzer). Whatever the case, none of these references to the pharaoh by name are to be found in the

Pentateuch, which uses the word in its generic sense as a royal title, even though this is anachronistic prior to the Eighteenth Dynasty (1550-1295 B.C.).

2. The Pharaoh in Pentateuchal History
3. The Pharaoh in Pentateuchal Literature

1. The Pharaoh in Egyptian History and Literature.

The third-century B.C. Egyptian priest Manetho is credited with first organizing the history of Egyptian kingship into thirty consecutive dynasties (later, a thirty-first dynasty was added; see Waddell), and his schema, despite its many problems, has remained standard. Subsequent refinement of the Manethonian dynasties by scholars on the basis of further research and other sources (e.g., the Turin Canon) has produced the following periodization of Egyptian history:

Predynastic (c. 4000-3000 B.C.)

Archaic/Early Dynastic (Dynasties 1-2; c. 3000-2700 B.C.)

Old Kingdom (Dynasties 3-8; c. 2700-2160 B.C.)

First Intermediate Period (Dynasties 9-10; c. 2160-2100 B.C.)

Middle Kingdom (Dynasties 11-12; c. 2100-1786 B.C.)

Second Intermediate Period (Dynasties 13-17; c. 1786-1550 B.C.)

New Kingdom (Dynasties 18-20; c. 1550-1069 B.C.)

Third Intermediate Period (Dynasties 21-25; c. 1069-656 B.C.)

Saite-Persian Period (Dynasties 26-“31”; c. 664-332 B.C.)

Pharaonic kingship remained remarkably stable throughout this great sweep of history, despite many political and historical crises and developments. Pharaonic imagery is evident as early as the Naqada I period (c. 3700-3500 B.C.; see Williams). This early imagery often proved formative for subsequent periods (e.g., the smiting pose on the Palette of Narmer; Smith, figs. 13-14). Indeed, the preference for the typical and ideal in presentations of the pharaoh—both iconographical and literary—complicates any attempt to press behind them for information on the individuality of the rulers themselves. The iconography, for example, typically depicts the pharaoh in ideal fashion, at his or her (female

pharaohs were rare, but note Hatshepsut [1479-1457 B.C.]) prime, youthful and strong. Notable exceptions to this statement—for example, the distinctive style of Akhenaten (1352-1336 B.C.) and the Amarna age (see Smith, 314-38) or the pensive face of Sesostri III (1862-1843 B.C.; see Aldred, fig. 84), stand out due to their unusual nature. Such idealization of the king is equally evident in Egyptian literature. There the pharaohs often portrayed their own accomplishments by using the very words of their predecessors—indeed, even by reusing lists of their deeds. As B. J. Kemp has put it, this “impressive facade of uniformity and continuity presented by inscriptions and monuments” hinders the historical task as it indubitably “hides a complex and changing political scene” (Kemp, 73).

Nevertheless, several important things about the pharaoh’s position as king of Egypt are known. Most prominent of these is the centrality of the pharaoh in Egyptian society. Pharaoh was lawgiver, judge and, in theory at least, the only true priest to the gods, despite the fact that he delegated the actual duties of the various temples to others (Morenz; Hornung 1999; Baines). Yet this centrality was not only political or religious—if indeed these can be separated in antiquity—it was also cosmological. Kingship was introduced at the time of creation: the creator-god was the first king (see *ANET*, 3-4), and according to the Memphite theology Horus was the first king of Egypt (*ANET*, 4-6; *AEL* 1.51-57). Subsequent kings—those of hoary antiquity prior to the First Dynasty—were thought to be demigods (see Waddell).

With such royal ancestors, the office that the king held clearly had divine origins and connections. But was the pharaoh himself divine? This has been the subject of much recent debate, though most scholars would agree that the pharaohs claimed divine status from the very beginning. Later texts from Luxor and Deir el-Bahari indicate that the pharaoh was actually the offspring of Amun-Re and the queen mother (see Frankfort 1948b, 40-47). The king’s status may perhaps best be captured in the royal titulary, which, in its fully developed form, included five names: (1) the Horus name, indicating that the pharaoh was the earthly incarnation of that deity; (2) the *nebty*, or “Two Ladies,” name, so called after the vulture goddess Nekhbet of Upper Egypt and the cobra goddess Edjo (or Wadjet) of Lower Egypt, signifying the monarch’s

role in uniting the two lands; (3) the golden Horus name; (4) the *prenomen*, usually assumed upon accession to the throne and containing the name of the sun god Re, which followed the title “King of Upper and Lower Egypt” (lit., “he of the Sedge and the Bee [*n-sw-bit*]”); and (5) the *nomen* proper preceded (beginning with the Fifth Dynasty) by the title “Son of Re” (Frankfort 1948b, 46-47; Gardiner 1973, 71-76). Hence, the monarch was the earthly embodiment of Horus and the true offspring of Re. The monarch was often called the “good god” (*ntr nfr*) while alive and was identified with Osiris upon death. It would thus seem that B. J. Kemp is correct in his assessment that “divine kingship is the most striking feature of Egypt” in the Old and Middle Kingdoms (Kemp, 71). Such a perspective, which received its fullest scholarly expression in the important monograph of H. Frankfort (1948b), finds support in many texts, not the least in the Autobiography of Rekhmire, lines 17b-18a: “What (?) is the king of Upper Egypt? What (?) is the king of Lower Egypt? He is a god by whose dealings one lives. [He is] the father and the mother [of all men]; alone by himself, without an equal” (Gardiner 1925, 69; cf. also *ANET*, 431).

Nevertheless, more recent Egyptological work has challenged the pharaoh-as-divine consensus (see O'Connor and Silverman). Two works published in 1960 (Goedicke; Posener) cast serious doubt on the pharaoh's fully divine status. H. Goedicke pointed out that even in the Old Kingdom varying terminology distinguished the individual personage of the king from the holder of the divine office proper. This led to the doctrine of the king's “two bodies” (*hm* and *nswt*; see Morenz, 37). G. Posener's work went further, stressing the many and significant ways in which the king differed from the gods, showing that he was, therefore, their inferior. This research has led most Egyptologists to speak now of a human being in a divine office who, upon ascending the throne and fulfilling the roles and duties of the kingship, became “suffused with the same divinity manifest in his office and the gods themselves” (O'Connor and Silverman, xxv; cf. Baines, 6). Pharaoh was thus “divine but not a god” (Hornung 1999, 4) and might best be termed an intermediary between the gods and humankind (Baines).

Various items support this non- or semidivine interpretation: (1) there was very little worship

of the monarch while living, at least on Egyptian soil (Erman, 58; Baines, 3); (2) some of the clearest references to the king as a god—for instance, as Re or Osiris, in the Pyramid Texts—refer to the deceased king (see Morenz, 37-39); (3) even if the king was divinized, this probably only occurred on the occasion of coronation (Hornung 1982, 142; Morenz 38, Hoffmeier 1997b; Erman, 56). Indeed, the development seems to move from an original identification (god-king) that was later reduced to incarnation (king *as* god), thereby making the king an intermediary but not a god “in the full sense of the word” (Morenz, 37). Such a weakening or diminution can be traced in the iconography as well, where earlier presentations portray the king as one with Horus (e.g., the Fourth Dynasty statue of Khafre and Horus; Smith, fig. 107). Later second-millennium pieces begin to portray the king differently, though he is still identified with the divine office (e.g., the Eleventh Dynasty statue of Mentuhotep II [2033-1982 B.C.]; Smith, fig. 151). The realistic presentation of Dynasty Twelve statuary (e.g., Sesostri III; see above) emphasizes the king's humanity in a way that is unmistakable. The New Kingdom continues this humanizing trend, despite a brief break during the Amarna age, and culminates in the presentations of Ramesses II's battle at Kadesh (c. 1274 B.C.). Although Ramesses presented the battle in both art and text as a stunning victory, other sources reveal it was more like a narrow escape—a successful retreat perhaps, but one that served to underscore the humanity and finitude of the pharaoh (see Groenewegen-Frankfort, 129-38).

Still, this weakening process was slow, and the power and importance of the pharaoh—attested above all in the endurance of the institution of kingship—should not be doubted, whatever the details of his divine or semidivine status. Indeed, the debate continues: the king's titles and epithets equate him with the gods, even if it is equally true that he is not their equal in capacity or quality (Hornung 1982, 141-42). So at the very least, “the king *reveals* the deity by being a visible incarnation of it” (Morenz, 41; cf. O'Connor and Silverman, xxv).

2. The Pharaoh in Pentateuchal History.

The debate on the king's status is of particular importance for an assessment of the pharaoh in pentateuchal literature (see 3 below). Before ad-

dressing that subject, it must first be noted that the problems inherent in historical treatments of the king in Egyptian history also obtain for the biblical materials. Indeed, these problems are compounded by the fact that in the large majority of cases—indeed, all instances in the Pentateuch proper—Pharaoh goes *unnamed*. This unfortunate situation precludes certain identification of these pharaohs with those of Egyptian history, barring further epigraphic discovery. Indeed, even deciding which general period or dynasty of Egyptian history to focus on proves a formidable task, as different scholars propose different (sometimes radically so) dates for the ancestral period(s) and for the exodus. Hence, very little can be said of the historical personage of the pharaoh in the Genesis accounts of *Abraham (Gen 12) and *Joseph (Gen 37—50) other than what was said above about the role of the pharaoh in Egyptian society generally (but see further below on Pharaoh's literary character). Even so, two important questions must be addressed, especially in regard to the pharaohs mentioned in the book of Exodus.

2.1. *Who Is the Pharaoh of the Exodus?* Given the situation described above, an answer to this question is not forthcoming, as both the pharaoh of the oppression/slavery and the pharaoh of the exodus go unnamed. Inferences can be drawn, of course, and candidates identified, but these are dependent on the hotly contested question of the date and historicity of the exodus (see Frerichs and Lesko; Hoffmeier 1997a). It must suffice here to say that, despite some who continue to argue for an early date in the fifteenth century, the majority of scholars agree on a thirteenth-century date for the exodus (see Exodus, Date of). This would make Ramesses II (1279-1213 B.C.) the pharaoh of the exodus (or, less probably, Merenptah [1213-1203 B.C.]); the preceding pharaoh (see Ex 2:23) would thus be Seti I (1294-1279 B.C.). To be sure, problems remain with such identifications, but the indirect evidence—especially the rise of the highland villages in the central hill country of Palestine and the Merenptah Stela—clearly points toward the thirteenth-century horizon (see Hoffmeier 1997a).

2.2. *Why Is the Pharaoh Unnamed?* The preceding paragraph assumes, of course, that there is something historical to the exodus traditions. Yet this is a point that has not gone unchallenged in recent scholarship, some of which has

questioned the historical veracity of the accounts on the very basis that the important kings of this event are not identified by name (e.g., Dever, 68). But this situation need not necessarily indicate ahistoricity, as several reasons have been proffered for the lack of a pharaonic personal name—at least in the case of the exodus narratives. F. J. Yurco, for instance, has pointed out that Pharaoh's name is often omitted in administrative documents (Yurco, 50). J. K. Hoffmeier has raised other possibilities, including the fact that the term "Pharaoh" was often self-standing until the tenth century (Hoffmeier 1997a, 87-88; see above), a pattern that is repeated in the biblical literature (no proper names attached until "Shishak"). Hoffmeier also points to the Egyptian practice of not naming Egypt's enemies, at least in official inscriptions. If it could be demonstrated that Israel adopted the same practice in its own literature—but, ironically, *against* the very culture from which it derived the convention—then the lack of a name might actually be an argument (from silence, of course) *in favor* of the historicity or early nature of the tradition rather than an example of its lateness or ignorance, especially since first-millennium biblical and Egyptian sources, perhaps under Neo-Assyrian influence, typically detailed enemy personal names (see Hoffmeier 1997a, 109-12). Alternatively, the lack of enemy names, and perhaps the lack of a name for Pharaoh in the Pentateuch, could be a case of deliberate elimination akin to defacement, the *damnatio memoriae* (Hoffmeier 1997a, 111; cf. the Execration Texts, see *ANET*, 328-29). Whatever the precise case, the name of one of the pharaohs may be preserved in Exodus 1:11, which indicates that the Israelite slaves built Pithom and Rameses (Heb Raamses; see Yurco; Hoffmeier 1997a).

3. The Pharaoh in Pentateuchal Literature.

Yet another reason that Pharaoh goes unnamed may be *theological* in nature: perhaps it is already a hint that the pharaoh has become a larger-than-life figure, one that functions on a literary, narrational and theological level quite irrespective of his function in history. J. K. Hoffmeier, for instance, notes that the exodus narrative primarily witnesses to Yahweh, not Pharaoh; it is thus not surprising that we know so much about the former from these texts and so little of the latter (Hoffmeier 1997a, 109-12; cf. Ex 5:2). Even

in the Joseph cycle, Pharaoh is powerful and yet powerless, despotic and yet determined by a will not his own, self-sufficient and yet massively reliant on Yahweh's chosen servant, Joseph, and therefore also on Yahweh (see Green; Burns). Pharaoh is subordinate, dominated by Joseph (Gen 45:8) and twice-blessed by *Jacob (Gen 47:7, 10). J. B. Burns has pressed these points to their fullest extent, suggesting that the writers of the OT "wage relentless war on pharaoh" (Burns, 17). The fact that few pharaohs are named in Scripture actually proves the point: "Pharaoh plays, for the most part, a theological rather than a historical role," and that role is that of "the enemy *par excellence*" (Burns, 17; cf. Brueggemann 1997, 504-6; 1995).

Hence, subtle theological reasoning may be at work in the presentation of the pharaoh—even in his nonidentification—in the Pentateuch. Indeed, the work of W. Brueggemann, J. B. Burns and B. Green not only serves to de-emphasize the historical problems but may also help in addressing long-debated and highly vexed questions such as the hardening of Pharaoh's heart (for the terms utilized and the sources, see Childs 1974, 170-75; Wilson). The *sklerokardia* ("hard heart") passages (Ex 4:21; 7:3, 13, 14, 22; 8:11, 15, 28 [MT 8:15, 19, 32]; 9:7, 12, 34, 35; 10:1, 20, 27; 11:10; 14:4, 8; cf. 1 Sam 6:6) are exceedingly complex and deserve extended treatment (see Wilson; see Hardness of Heart; Exodus, Book of, §7.3); only a few comments can be made here. The hardening of Pharaoh's heart is obviously connected to the plague narratives (cf. Ex 11:9) and has been variously explained, though attempts to relate the motif to psychological states or theories of divine causality are best avoided (Childs 1974, 174). The plagues themselves have been interpreted as naturalistic phenomena, "decreation" or polemic against various Egyptian deities (see Currid, 108-17; Hoffmeier 1997a, 146-51; Zevit). Each of these interpretations has strengths and weaknesses. It might be noted in the case of the last, for instance, that no Egyptian deities are named apart from the general reference in Exodus 12:12. However, to return to an earlier point, Pharaoh is mentioned numerous times. If he is understood as a divine figure, or at least as a representation and incarnation of the Egyptian high god Amun-Re, the hardening of his heart serves to highlight several critical issues: (1) the pharaoh's lack of divine powers vis-à-vis Yah-

weh, indicating that he is no god or at least no god like Yahweh; (2) the pharaoh's inability to maintain Ma'at ($m_3^c t$), or order, a crucial concept in Egyptian society and a major task of the king (see Currid, 118-20; Frankfort 1948a, 53-56; Hoffmeier 1997a, 151-55); (3) Yahweh's ability to "get glory over pharaoh" (Ex 14:4, 17-18 [2x]); and (4) Yahweh's ability to bring judgment on Egypt—even on its gods (Ex 12:12; Num 33:4).

The hardening serves, in this scenario, to exalt Yahweh while at the same time severely challenging Pharaoh's authority, power and status—not to mention Pharaoh's (and Egypt's) religious system. It may even cast doubt on Pharaoh's *character*, as Egyptian scenes of final judgment often depicted the weighing of the heart. If a person's heart was too heavy (cf. *kābēd* in Ex 7:14; 8:11, 28 [MT 8:15, 32]; 9:7, 34; 10:1), he or she was doomed (Currid, 102-3). Pharaoh, the quasi-cosmic, semidivine if not fully divine, archenemy of Yahweh and Yahweh's people (see, e.g., Ex 1:8-11, 22; 2:15; 5:6-9) is thus, in the final analysis, little more than a puppet on Yahweh's strings—judged, controlled, defeated.

Whether or not Pharaoh's role as archantagonist to Yahweh in the exodus narratives can be stereotyped and applied elsewhere in the Pentateuch or the Bible (so Burns) must be decided by the individual texts themselves. It may be that the texts will refine such an analysis. Even so, in another context, S. R. A. Starbuck has recently argued on the basis of (Egyptian) comparative evidence that the royal psalms *intentionally* suppressed the regnal name of the king so as to democratize and theologize (perhaps, to an extent, even dehistoricize, if not demythologize) them for later audiences. Might the same be happening in the pentateuchal references to Pharaoh? Could it be that earlier versions of at least some of these stories once contained regnal names but that these were later omitted by canonical editors (cf. the dynamics discussed in Childs 1979)? Of course one cannot say for certain, but if so, such a situation would highlight two insights: (1) the (relative) unimportance of the actual, "historic" pharaoh of the narratives; and (2) the importance of Pharaoh as a theological figure—especially as an adversary humbled by God and God's servants—serving, thereby, as a useful pedagogical tool (see Deut 6:20-25, 29:2-3 [MT 29:1-2]). Indeed, the defeat of Pharaoh—named or not—is nothing short of paradigmatic (see Deut 7:17-19).

PREACHING FROM THE PENTATEUCH

S. Greidanus laments the fact that the vast majority of Christian preachers seldom if ever base their sermons on any of the material found in the OT. He writes: "Statistics are hard to come by, but from reports of several denominations it is safe to conclude that fewer than 20 percent of the sermons the average church member hears are based on an Old Testament text. This figure is all the more telling when we remember that the Old Testament constitutes about three-fourths of the Christian canon" (Greidanus, 15). A similar point is made by M. Duiduit, editor of *Preaching* magazine, who observes, "I annually receive hundreds of sermon manuscripts from ministers in a variety of Protestant denominations. Less than one-tenth of the sermons submitted to *Preaching* are based on Old Testament texts" (Duiduit, 9).

Is this absence of OT preaching based on the belief that the OT is not authoritative for Christians? Is the OT the story of the people of Israel with no relevance or importance to the followers of Jesus Christ? Perhaps Christian preachers avoid the OT, or at least the vast majority of it, because they do not know what to do with the customs and culture of that ancient society. What is a Christian to do with animal *sacrifice, male *circumcision and dietary codes that exclude shrimp and pork? What use can a Christian preacher make of religious *festivals based on an agricultural cycle that has no relevance for modern industrial society? Most troubling for many is belief in a God who is known as a holy warrior and who orders the wholesale slaughter of thousands of people who are guilty of nothing more than not being members of the Hebrew nation. For many Christian preachers, the wisest course of action seems to be to avoid the OT altogether.

E. Achtemeier suggests that the OT fell out of favor among Christian preachers as early as the eighteenth century and the age of rationalism. The basis for dismissing it was the widely held view that the content of the OT was the descrip-

tion of what was viewed as a "primitive religion" (Achtemeier 1973, 28). She also states: "The Old Testament was considered to be simply the history of the first stages in man's spiritual evolution, whose lower ideas of God and faith had subsequently been superseded by the higher spiritual truths of Christianity. The Old Testament had no revelatory value in itself. It was simply the historical preparation for the New Testament" (Achtemeier 1973, 30).

1. The Necessity of Preaching from the Old Testament
2. Preaching from the Pentateuch
3. Principles for Christian Preaching from the Old Testament

1. The Necessity of Preaching from the Old Testament.

What must be understood, however, is that it is essential that Christian preachers make regular use of the OT if they are to fulfill the challenge of Paul, who said, "I did not shrink from declaring to you the whole purpose of God" (Acts 20:27). There are several compelling reasons why preaching from the OT is essential for Christians. First and most important, it is impossible to understand the ministry of Jesus and Paul or the theology of the NT without having a deep and reverent understanding of the OT in general and the Pentateuch in particular. The OT is a part of the Christian canon. Its thirty-nine books are an inseparable and invaluable portion of the church's authoritative text. The second reason the OT must be read, preached from and learned from is that it is the material that served as Holy Scripture for Jesus, the apostles and the NT church. Before the Epistles and Gospels had been written, the writings that we call the OT provided the theological concepts and vocabulary, the historical framework and the religious rituals and practices without which the ministry and teachings of Jesus cannot be understood.

1.1. The Old Testament as the Theological Foundation of Christianity. If someone were somehow determined never to preach from the OT, this person would be unable to make much sense of preferred NT texts, because so much of the NT is dependent on the OT for its language, theology and historical perspective. How does one understand the incarnation of Jesus or the mission of the church in the world without first understanding the central concept of a God who

works in and through history to create a people who will live in obedience to his revealed will? How does one understand the concept of the church described in 1 Peter 2:9 as “a chosen race, a royal priesthood, a holy nation, God’s own people” without referring back to the OT concept of Israel as the chosen people of God first mentioned in Exodus 19:6?

1.2. The Old Testament as the Bible for Jesus and the Early Church. How many times does Jesus quote from the OT? This fact alone forces anyone who seeks to preach from one of those texts to go back to that passage to grasp more fully what Jesus is now saying about himself, some doctrinal issue or some controversial question put to him by his critics. For example, in Luke 4:16-21 Jesus returns to his boyhood home of Nazareth, enters the synagogue and reads from the Isaiah scroll. He then says that the passages in Isaiah 61 pertaining to the *Messiah have been fulfilled. Not only must preachers go back and study the Isaiah passage, but they must also come to some informed understanding of the meaning of Messiah, the Spirit of the Lord and the year of Jubilee.

Later in that same passage, Jesus speaks of the love of God extending to Naaman the Syrian in the days of Elisha and to a woman of Sidon in the days of Elijah. Strangely, those comments draw a more hostile response from those gathered in the synagogue in Nazareth than does the idea that comments about the Messiah are being fulfilled in the life and ministry of the man before them. This inevitably forces the preacher back to the relevant passages in 2 Kings. More important, it begs the question of Jewish nationalism tied to the concept of the chosen people that made it difficult for them to imagine the love of God extending beyond themselves, least of all to the hated and despised Syrians and Phoenicians. Thus, this critical passage about the identity of Jesus as the fulfillment of messianic promises cannot be grasped without going back to its OT roots.

Jesus repeatedly refers to such OT characters as *Abraham, *Isaac, *Jacob, *Moses, Jonah, David, Daniel, *Noah, Isaiah, Solomon, Elijah and many more. He refers to such OT events as the *flood, the destruction of Sodom and Gomorrah, and the persecution of the prophets. He also draws heavily from OT images and language during the week prior to his death. The Palm Sunday procession is best understood over

against Zechariah 9. When he cleanses the temple, casting out those who exchanged money and sold birds and animals that were to be used as acts of atonement, he references Isaiah 56:7. The Lord’s Supper is developed out of the context of the observance of a Passover meal. And during his crucifixion Jesus utters a groan in the words of Psalm 22. In short, it is impossible to understand much, if anything at all, about the life and ministry of Jesus without conceding the importance he placed on the OT. If it was important to his self-understanding, we must turn regularly to that material when we plan our preaching.

Jesus made great use of materials from the Pentateuch when he engaged in a conversation with a scribe in Mark 12. When asked which was the greatest of the commandments, Jesus quoted from Deuteronomy 6:5 and Leviticus 19:18. When Jesus was tempted by the devil after spending forty days in the wilderness (Mt 4), he rebuked Satan three times by referring to passages found in Deuteronomy 6; 8. He referred to levitical laws dealing with *holiness (Lev 9:2), retribution (Lev 24:19-20) and swearing oaths in the name of God (Lev 19:12). Jesus made reference to the cities of Sodom and Gomorrah, which are discussed in the book of Genesis. In Luke 10:25, when an expert in Jewish law asked him what one needs to do to inherit eternal life, the first thing Jesus did was refer him to what is written in the *law of Moses. These are but a few instances of the crucial and irreplaceable legacy that flows from the OT to the NT. There is no way to preach about Jesus Christ without a full and complete understanding of OT terms, times, topography and theology.

2. Preaching from the Pentateuch.

So far as the Pentateuch is concerned, there is much that can profitably be examined in sermons. This is where the heart and soul of the debate surrounding creationism versus evolution is located. In fact, one theory need not exist to the exclusion of the other, so far as the Pentateuch is concerned. From a creationist’s perspective, Genesis clearly suggests that creation was willed into existence by the spoken words of God: “Let there be . . .” From the perspective of those who argue for evolution, the biblical text is equally helpful because it places God at the center of that creative process. No matter how many millions of years old the earth may be, evolution

only describes how life emerged upward out of some primordial mystery. What evolution does not do, but what the Pentateuch clearly does, is account for the first essential spark of life from which human life evolved. The answer is plainly stated: "In the beginning, God . . ." No matter which side of the argument one lines up with, the Pentateuch places God at the center of the transaction. A nineteenth-century African American spiritual comes to mind when one considers God as the agent of creation: "He's Got the Whole World in His Hands."

Several other preaching possibilities emerge from a review of the creation stories in Genesis 1; 2. The first of them concerns the role and status of *women in the community of faith. What shall we make of the phrase "Male and female he created them"? There is no sense of female subordination in this passage. There is no implication that women should not aspire for leadership within the community of faith solely because of their gender. Israel was a patriarchal society, yet the creation of humanity as *male and female* opens the door to some helpful and long overdue consideration of what the Bible teaches and reflects concerning the role of women in ancient Israel. One can also consider the implications of these for the contemporary church as we seek to resolve the still controversial issue of women in ministry and other leadership positions in the church.

No issue is more debated these days than the institution of marriage, and the understanding of marriage that is most commonly held by contemporary Christians is largely rooted in the Pentateuch. Consider the challenge to "be fruitful and multiply, and fill the earth" (Gen 1:28). Then consider the observation that for this reason "a man leaves his father and his mother and clings to his wife, and they become one flesh" (Gen 2:24). When one begins with this image of marriage in mind, it is easier to respond to those who advocate for everything from polygamy to same-sex marriage to premarital sex and teen pregnancy. Issues that perplex us in the twenty-first century may have their solutions in the plain wisdom of Israel. The preacher must address these contemporary concerns, and the material found in the Pentateuch can be of immense help in providing a theological framework within which to speak.

Much of the environmentalist movement is rooted in the Pentateuch's claim that human-

kind was designated the task of being stewards of the earth. How should we approach the controversial issues of air and water pollution, solid waste disposal, the handling and encasing of toxic nuclear materials, urban sprawl and the loss of green space, urban redevelopment and the reclamation of brown fields? Taking a careful look at the commandment to "subdue [the earth] and have dominion" (Gen 1:28) is a good place to start. Does having dominion over the earth extend to expanding our usable spaces at the expense of other species? These questions, rooted in the Pentateuch, are timely subjects for contemporary preaching.

3. Principles for Christian Preaching from the Old Testament.

From the third to the sixteenth centuries, much Christian preaching from the OT employed one of two standard methods of interpretation or hermeneutics. They were known as allegory and typology. In allegory, every word, character or image in the OT is read as if it actually represents something else of NT relevance. Nothing in the OT means what was written in literal terms. The classic use of allegory involves the story of Rahab the harlot (Josh 2:17-20). Rahab is told to hang a scarlet cord in her window so the advancing Israelite army will know not to destroy that house as they begin their conquest of the city of Jericho. That story was interpreted to suggest that the red cord was a symbol for the blood of Christ and that salvation was possible only for those who sought refuge in him.

Typology was a method that suggested that things mentioned in the OT were types or models of things that would later appear in the NT. Abraham's willingness to sacrifice his only son, Isaac, is viewed as an early expression of the sacrifice that God was willing to make when he allowed his only Son to be sacrificed on Calvary. Typology as a way of interpreting an OT text occurs when an OT event is viewed as a prelude to or an earlier example of something that reaches a fuller expression in the NT. Unlike allegory, where the OT text's literal meaning has no value, with typology the historical relevance of the OT text is preserved. However, in many instances the events of the OT are seen as a foreshadowing of things that would appear in the NT. H. W. Wolff writes: "Typology is intended not to suspend historical-critical work, but to support it in a relevant manner.

The question of exposition remains firmly directed toward the meaning of the text that the authors had in mind in their time. The concern is that the meaning may be missed through the neglect of the New Testament context" (Wolff, 182). In addition to typology, several more recent hermeneutical principles can assist Christian preachers in their attempts to preach from the OT.

3.1. Continuity and Discontinuity. The first hermeneutical principle concerns continuity and discontinuity. That is to say, as a result of the Christ-event, some aspects of OT theology are no longer instructive or authoritative for Christians, while some things taught and believed by OT Israel remain relevant and binding on the contemporary Christian church. Christian preachers must learn to navigate this issue if they are to make use of the OT.

3.1.1. Discontinuity. The principle of discontinuity must be our point of departure when discussing how to preach from the OT because it makes us sensitive to the way that Jesus has altered the meaning of certain things, such as when he transformed the Passover meal into the Lord's Supper or when he repeatedly stated, "You have heard that it has been said, . . . but now I say to you . . ." (Mt 5). It involves such subtle shifts as moving the day of worship from the Jewish *sabbath (sundown Friday to sundown Saturday), in honor of creation, to the "Lord's Day" (Sunday), in honor of the resurrection. It involves more radical and self-defining practices such as shifting from circumcision and obedience to Mosaic law to *grace as the assurance of membership in the family of God. This is the meaning of discontinuity. Terms, practices and beliefs that were valid for the believing community of the OT no longer have that same claim on the followers of Jesus Christ. This would include such things as the temple rituals revolving around a sacrificial system or nationalist claims revolving around a king of the seed of David sitting on a throne in Jerusalem. In fact, the very centrality of Jerusalem itself becomes a matter of discontinuity.

The words of Paul in 2 Corinthians 5:17 fit in this discussion: "So if anyone is in Christ, there is a new creation: everything old has passed away; see, everything has become new!" From the point of view of preaching from the OT, the preacher needs to recognize what aspects of OT faith and doctrine "have passed away" so far as

the NT church and the subsequent followers of Christ are concerned. Discontinuity is like a line in the sand of time across which some things do not pass at all and across which other things pass but only after having been drastically redefined. It is discontinuity that is being signaled in John 1:17, which says, "The law indeed was given through Moses; grace and truth came through Jesus Christ."

It is discontinuity that is being signaled when Paul, speaking of giving up his Jewish faith for the sake of Christ, says, "For his sake I have suffered the loss of all things, and I regard them as rubbish, in order that I may gain Christ" (Phil 3:3-9). It is discontinuity that is being signaled when the Jerusalem Council determines that obligations that some viewed as still binding on Jews who converted to Christianity would not be imposed on Gentile converts (Acts 15). And it is discontinuity that is being signaled when Paul casts aside the social and cultural prejudices of ancient Israel and declares, "There is no longer Jew or Greek, there is no longer slave or free, there is no longer male and female; for all of you are one in Christ Jesus" (Gal 3:28).

3.1.2. Continuity. When preaching from the OT, one must be careful to inquire whether an aspect of doctrine or religious ritual has authority that passes over into NT faith and practice, or has been dramatically eclipsed or substantially reinterpreted in light of the Christ-event. Continuity and discontinuity converge in some interesting ways around certain concepts. For instance, animal sacrifice on an annual basis as a way of atoning for sin is no longer binding on Christians, a clear instance of discontinuity. We are no longer obligated to honor that part of OT faith and teaching. On the other hand, continuity also appears at this point. The concept of needing atonement for sin continues in the NT, but now that atonement is accomplished through faith in the death of Jesus Christ who is for us "the Lamb of God" (Jn 1:36).

Continuity and discontinuity do not always mean the complete elimination of certain terms and concepts from Christian theology. In many instances those concepts have been significantly altered and redefined from their original OT intent to the new ways in which they are applied and interpreted in the NT. Nearly the entire book of Hebrews is a demonstration of this very principle at work. Its repeated references to the high priest, the tabernacle, the sacrificial system

and more are clear reminders of the weight and authority once given to practices and beliefs contained in the OT. Those practices and beliefs are not abandoned as a result of the Christ-event. Rather, they are reinterpreted in such a way as to point out how the ministry of Christ is best viewed as an outgrowth, if not a continuation, of that OT legacy.

3.2. Liberation Theology. In many contemporary communities of faith, liberation theology has become another lens through which the OT can be used in preaching. What God did at the Red Sea, while the Israelites crossed the Sinai Desert, in the lions' den or in the fiery furnace in Babylon was on behalf of those who were victims of oppression. The God of Israel is not only a jealous God who says, "You shall have no other gods before me." The God of the OT is also a God of justice who says to Pharaoh through Moses, "Let my people go."

Does that mean that God's power as liberator is limited only to those who were members of the community of biblical Israel? Certainly the African slaves of the American South in the nineteenth century did not think so. They regularly appropriated the liberation stories of the OT and reinterpreted them, without benefit of any formal theological training, to serve their spiritual needs. As a result, their songs and sermons were replete with references to "Go Down Moses, Way Down in Egypt's Land" or "Didn't My Lord Deliver Daniel, and Why Not Every Man"? They took the words of Jeremiah 8:22—"Is there no balm in Gilead? Is there no physician there?"—and turned that question mark into an exclamation point and sang instead, "There is a balm in Gilead that makes the wounded whole. There is a balm in Gilead that heals the sin-sick soul."

The religion of those slaves is a reminder that another key to preaching from the OT is the use of the motifs of liberation. God takes the side of the oppressed. God comes to the aid of those who are victims of injustice. Moreover, as part of God's *covenant community, Israel and the church are challenged to extend justice to the neediest in society, especially the stranger who dwells in the land, "for you were aliens in the land of Egypt" (Ex 23:9).

Of course, the careful preacher will present the entire story. There has been a historic weakness attached to most liberation-theology arguments of the last thirty years. That weakness has

been the disconnect between the exodus story and the deliverance of Israel from Egypt, on the one hand, and the clear command to Moses to bring the people to Mount Sinai, on the other hand, where they were transformed from slaves into a covenant community guided by the Ten Commandments (*see* Decalogue). God did not simply release Israel from bondage under Pharaoh. God did not merely identify with the oppressed. God also called those newly liberated people into a new relationship of accountability to God and to one another.

Christian preachers using the OT can provide a needed corrective to this glaring absence of theological accountability. God did not simply lead Israel out of Egypt, bearing them "on eagles' wings" (Ex 19:4). God also said, "Therefore, if you obey my voice and keep my covenant, you shall be my treasured possession out of all the peoples" (Ex 19:5). Indeed, it was because Israel did not keep that covenant that they were returned to captivity in 586 B.C. when Babylon conquered their nation, sacked Jerusalem, knocked down their temple and sent many of the people into exile. Not only does God demand justice from those in power who oppress us, but God demands justice from us as well.

3.3. Promise and Fulfillment. A third motif that can serve as a guide to preaching from the OT is the notion of *promise and fulfillment. Preaching from the Pentateuch allows for an encouraging description of a God who keeps promises no matter how hopeless circumstances may appear and no matter how sinful people may be. God made promises to Abraham, Isaac and Jacob concerning offspring as numerous as the sands of the sea and the stars in the sky, yet the wives of these men—Sarah, Rebekah and Rachel—were all barren. How could God keep that promise in the face of that hopeless situation? By the same token, Abraham, Isaac and Jacob were regularly disobedient, and unfaithful Sarah, Rebecca and Rachel all tried to help God accomplish what they were sure God could not do alone. Despite the impossibility of their circumstances and the sinfulness of their lives, God still kept faith with them and fulfilled the promises made to them.

This depiction of the faithfulness of God despite the unfaithfulness of Israel runs throughout the rest of the Pentateuch as well, especially as the exodus story is recounted. Despite the murmuring in the *wilderness, the rebellion in-

volving the *golden calf and the faithlessness of those spies who doubted that the Promised *Land could be conquered, God kept faith with the people. Along with God's faithfulness despite human sinfulness is God's ability to accomplish the divine purpose despite seemingly insurmountable obstacles. This can also be seen throughout the exodus story. Whether it involved working through the hard heart of Pharaoh, allowing Israel to pass through the Red Sea as on dry ground or feeding the people with *manna and quail during the trip across the desert, God made a way out of no way. It should be possible for creative preachers to make great use of these two themes. A song by Thomas A. Dorsey captures the spirit of OT promise-and-fulfillment texts: "The Lord Will Make a Way Somehow!"

The question of promise and fulfillment becomes trickier when assumptions about the Promised Land are concerned. Preaching from the Pentateuch forces the preacher to consider Israel's claims to nationhood as well as the Mosaic versus the royal covenants that undergird that claim. Is Israel's claim to the Promised Land valid and binding on God no matter how Israel behaves? That is the view of those who believe that God gave the land of Canaan to the people of Israel as an inheritance forever. That is the essence of the royal covenant and the basic claim of contemporary Zionists who use that idea to justify the existence of the modern state of Israel. Meanwhile, the Mosaic covenant links Israel's continued ability to remain in the Promised Land to their obedience to the commandments of God. Occupancy of the land of Israel was not an automatic birthright; it was a gift of grace by God to a faithful people.

Having a clear view on this question is useful for contemporary preachers, especially in light of the current dispute about which group has the most authentic claim to the land of Palestine. What are the rights of the Palestinians who were displaced from that land in 1948? Is the present-day Jewish state of Israel, comprised largely of secular Jews who do not practice Judaism, the actual continuation of OT Israel? Should Jerusalem be the capital city for a Jewish or a Palestinian state? These explosive issues, and others, can better be discussed by those preachers who acquaint themselves with the material found in the Pentateuch and throughout the OT.

There is another side to this issue of Israel's claim to nationhood. That is the fact that in the Pentateuch Israel has not yet conquered the Promised Land. In fact, as the Pentateuch ends Israel has still not crossed over into Canaan. The central document of ancient Israel—the Torah, the Pentateuch—did not record Israel living a secure life in the Promised Land. It is this issue that has caused some to argue for a Hexateuch (six books), which would include Joshua and the conquest of the Promised Land as part of its core canon. The question that the debate over the Hexateuch seeks to resolve is whether one has to live in the land of Israel in order to belong to the people of God. Making use of the promise-and-fulfillment motif allows the preacher to conclude that being the people of God is a spiritual, and not a geographical, issue. One can serve God from any location, as Israel had to do after 586 B.C. There is immense value for Christians in the notion that communion with God can be sustained no matter where we are physically located.

3.4. Salvation History. Beginning in the Pentateuch and running throughout the OT is another hermeneutical approach to preaching, namely, salvation history. It begins when God calls Abraham to walk by faith, and it culminates in the faith that believers place in the death, burial and resurrection of Jesus. The notion of God working through individuals and events (even evil deeds and wicked schemes) to bring about the redemption of his people is a centerpiece of the OT that leads directly to Christ and the cross. Along the way one encounters such themes as the suffering servant, vicarious suffering and substitutionary atonement.

One way to read the OT is to focus on Genesis 1:31. The created order has come into existence with humankind challenged to be good stewards of creation. God looks upon the whole of creation and declares it to be *very good*! One could argue that what God is seeking to accomplish in salvation history is to return the whole of creation to the place where God can look at it, both in terms of the environment and in terms of human relationships with God and with each other, and once again say, "It is very good."

As Christians, we believe that the salvation-history work of God took a decisive turn in the incarnation of God in Jesus Christ. The work God began with OT Israel was finally accomplished through the life, death and resurrection

of Christ. Moreover, that salvation history is continued today through the preaching of the church and the message that God was in Christ reconciling the world to himself (2 Cor 5:19). However, as was stated at the outset, the Christ-event cannot be viewed as an isolated event. It is an integral part of the story that begins in the OT.

PRIESTLY CLOTHING

The requirements for the high-priestly and priestly garments are set out in Exodus 28:4-43; their manufacture is recorded in Exodus 39:1-31; and the order in which the high-priestly garments are put on is noted in Exodus 29:5-6 and Leviticus 8:7-9 (see also Sir 45:6-13; 50:5-11; Josephus *Ant.* 3.7.1-7 §§151-187). These garments were indicative of the dignity and honor of the respective offices (Ex 28:2, 40; cf. Num 20:26, 28). The priestly garments were for ministering in the holy place and around the *tabernacle (Ex 35:19; 39:1, 41; Lev 6:10 [MT 6:3]; Haran, 172-73) and were holy (e.g., Ex 28:4; 29:29; 39:1). Not to wear them when functioning officially would incur guilt and death (Ex 28:35, 43).

The biblical description of these garments fits culturally with what is known of ancient Near Eastern garments of the second millennium B.C. In view of the critical consensus of a final redaction of Exodus and Leviticus toward the fifth century B.C., a tentative attempt has also been made to relate the garments to much later Phoenician dress as depicted on funerary stelae from Hellenistic times (Maes, 224-30).

1. High-Priestly Clothing
2. Priestly Clothing
3. The Holiness of the Clothing

1. High-Priestly Clothing.

The regular official attire included the ephod, the breastpiece, the Urim and Thummim, the robe of the ephod, and the diadem on the turban. Other clothing is also mentioned as part of the high-priestly attire during regular ministry and on the Day of *Atonement.

1.1. The Ephod, Breastpiece, and Urim and Thummim. The high-priestly ephod (^ʿēpôd) was a sleeveless garment made from gold; blue, purple and scarlet yarn; and finely twisted linen. It had a waistband of the same material and two shoulder pieces, each with an onyx stone mounted in a gold filigree setting and engraved with the names of six of the tribes of Israel (Ex 28:6-14; 39:2-7). The gold thread, cut from hammered gold sheets, must have given the whole a dazzling appearance (cf. Sir 50:5-11) and a somewhat rigid construction, possibly allowing it to be stored in an upright position (see 1 Sam 21:9 [MT 21:10]; Van Dam, 141-42). Blue and purple were the most expensive colors available and were associated with royalty and power, while scarlet was associated with blood and ritual cleansing. The dyed yarn would have been wool (Brenner, 143-48; Milgrom, 501-2, 548-49).

Opinion is divided about where the ephod was worn. One view holds that it was like an apron and worn below the waist (Haran, 166). The rendering of the LXX (*epōmis*) and the testimony of Josephus (*Ant.* 3.7.5 §162), however, favor the interpretation that it was worn on the upper part of the body. Such ephodlike garments have been attested in New Kingdom Egypt, indicating some cultural affinity with the OT ephod. The term ^ʿēpôd has cognates in Ugaritic and Old Assyrian, where it signifies garments (Van Dam, 56, 66-67, 76-79).

The breastpiece (*hōšen*) was about nine inches square, made of the same material as the

ephod, and had mounted on it twelve gems in four rows, with each gem engraved like a seal with the name of an Israelite tribe. In this way the memory of the Israelites was brought before the Lord continually (Ex 28:29). The precise identity of each gem is sometimes uncertain (see Harris; Garber and Funk; cf. Lucas, 386-405; Moorey, 79-103.) Four braided golden chains and rings secured the breastpiece to the ephod (Ex 28:15-28; 39:8-21).

The breastpiece's construction from material folded double is best interpreted as forming a pouch that held the Urim and Thummim, a means of revelation utilized by the high priest. The presence of this oracular means made the *hōsen* a "breastpiece of judgment" (Ex 28:15, 30).

It is striking that in a chapter of instructions for making clothes, the manufacture of the Urim and Thummim is not commanded (cf. Ex 28:30). Also, this oracular means is referred to with the definite article (Ex 28:30) and never explicitly described. These factors suggest that the oracle was a known entity. The Urim and Thummim belonged to God (Deut 33:8), and this revelatory means was to be used for matters of national importance (such as waging war) about which Yahweh had not yet made his will clearly known (cf. Num 27:21; *Tg. Ps.-J.* on Num 27:21; 31:6). Although the current scholarly consensus appears to identify the Urim and Thummim with a lot oracle, significant arguments can be raised against this identity (Van Dam, 194-221; for a survey of how this oracular instrument has been understood, see Van Dam, 9-38). The available evidence suggests the hypothesis that the Urim and Thummim were used by God to give a miraculous light as a sign authenticating the message given by prophetic inspiration to the high priest (Van Dam, 221-26). As mediator between God and Israel, the high priest could inquire of God by the Urim and Thummim and so maintain Israel's rights and privileges with God (Van Dam, 161-63, 269-71).

Because the ephod basically functioned to provide a place for the breastpiece of judgment with the Urim and Thummim, reference to the ephod can include reference to the Urim and Thummim (as in 1 Sam 23:9; 30:7). This *divinatory use associated with the ephod could be the reason that in the days of the judges illegitimate copies of the high-priestly ephod were made with which to inquire of God (Judg 8:24-27; 17:5; 18:5; Van Dam, 143-49).

Royal and priestly breastpieces that show features similar to the *hōsen* have been attested in Egypt (New Kingdom), Phoenicia (eighteenth century B.C.) and Assyria (from the eleventh century B.C.; see Van Dam, 56-62, 71-76; cf. Aldred). The art of engraving seals from stone and crafting gold chains was also known in antiquity (Aldred, 14 and no. 45; Moorey, 103-6, 229).

1.2. The Robe of the Ephod. The *mē'il* was a type of robe that persons of rank such as Jonathan and Tamar, daughter of David, wore (1 Sam 18:4; 2 Sam 13:18), although the high-priestly robe of the ephod (*mē'il hā'ēpōd*) was of course unique. This blue, sleeveless robe, with a hole to put the head through, was worn under the ephod and probably extended below it (Lev 8:7-8; Josephus *Ant.* 3.7.4 §159), but some think it may have been worn over the ephod (Noth, 224-25; cf. Gabriel, 35-36). The opening for the head was reinforced (cf. Riefstahl, 23) so that it might not tear when being put on (cf. Lev 10:6; 21:10; cf. 13:45). The robe was fringed on the bottom, with cloth pomegranates and golden bells alternating. The bells were to be heard lest the high priest die (Ex 28:31-35; 39:22-26).

1.3. The Diadem on the Turban. A rosette-like gold plate (*šiš zāhāb*, Ex 28:36), more precisely identified by way of apposition as a diadem (*šiš nēzer*, Ex 39:30; Lev 8:9; cf. Ex 29:6), on which were engraved the words "Holy to Yahweh," was mounted with a blue cord on the front of the high-priestly turban (*mišnepet*) made of fine linen (Ex 28:36-37; 39:30-31). The usual meaning of *šiš* is "flower," but the LXX rendered it "plate" (*petalon*), and the rendering "rosette, medallion" seems justified (*HALOT* 3.1023; cf. Milgrom, 511-12).

This prominent inscription identified the priest as consecrated to God and as God's representative among his people for the atonement of sins (Ex 28:38; cf. Ps 106:16; for views on the content of the inscription, see Gordon, 122-23 n. 13). Egyptian analogies to the rosette-like gold plate have been postulated (de Buck; Noth, 226).

1.4. Other Garments and the Day of Atonement Attire. Underneath these official clothes of the high priest for the daily entry into the holy place were a tunic (*kuttōnet*) of fine linen (apparently checkered), a linen sash (*'abnēt*), embroidered, presumably, with dyed wool, and fine-twisted linen breeches (*miknēsayim*) (Ex 28:42; 39:27-29; Lev 8:7; Josephus *Ant.* 3.7.1-2 §§151-56). It is not clear how long the tunic was, whether short and

shirtlike (*HALOT* 2.505) or long, reaching to the ankles (Josephus *Ant.* 3.7.2 §§153-54). Clothes that would be in direct contact with the body, the tunic and the breeches, were of linen and would have made the wearer less prone to sweating, which had to be prevented (cf. Ezek 44:18). No mention is made of sandals, and we may assume that the high priest officiated barefooted in the presence of God (cf. Ex 3:5; Josh 5:15).

On the Day of Atonement, when the high priest entered once a year into the holy of holies, he wore only a tunic, sash, breeches and turban, made simply of linen, instead of "fine linen" (Lev 16:3-4, 23-24, 32). In spite of their simplicity, these were holy garments (Lev 16:4, 32).

2. Priestly Clothing.

The dress of the regular priests (Ex 28:40-42; 39:27-29) included clothes similar to the simple linen garments of the high priest, but there were distinctions. The tunic (*kuttōnet*) of the regular priest was not checkered (Ex 28:40), the sash was probably the same as the high priest's (Milgrom, 519, 548; but cf. Haran, 170) and the turban (*migbā'ā*) was distinguished from that of the high priest (*mišnepet*; Haran, 170). Also the breeches were made of linen (Ex 28:42) rather than the fine-twisted linen of the high priest (Ex 39:28).

The tunic, mainly ankle-length, was well-known from approximately 1500 B.C. on in the ancient Near East (Sarna, 184). Except for the priestly clothes, breeches were unknown in the Bible and Near East in preexilic times (Sarna, 117). They were required to cover one's nakedness (Ex 28:42), especially when stepping up to the altar (cf. Ex 20:26; Lev 6:10 [MT 6:3]; 9:22). Such a requirement contrasts with ritual nudity found in Mesopotamia (e.g., *ANEP*, nos. 597, 600, 603, 605).

3. The Holiness of the Clothing.

It is indicative of the high priest's holiness that his garments were made of the same basic material as the curtains of the tabernacle (Ex 26—27; 28:5; 39:1; cf. Lev 19:19), and the blue of his robe matched the blue covering of the ark used when traveling (Num 4:6). Also, the glory of the tabernacle was reflected in the splendor of the high-priestly dress. The high priest was thus equipped to be in God's presence and mediate

between God and his people in the Most Holy Place (Houtman, 3.467). In this context it is noteworthy that gems of the breastpiece are mentioned in discussions of paradise (Ezek 28:13; Rev 21:18-21; cf. Garber and Funk, 902-5) (*see* Eden, Garden of).

Next to the high priest's holiness was that of the priests, whose sash contained material of the tabernacle (Milgrom, 519, 548). Next was the sanctity of the Israelites, whose dress only included a blue cord in each tassel (Num 15:38; Milgrom, 548-49; on the graded holiness of high priest and priest, *see* Jenson, 124-28).

The simple holy linen garments worn on the Day of Atonement indicated that the splendor of the regular high-priestly attire was not fitting for the atoning of sins that included those of the high priest and his household (Lev 16:6, 11-14). In humble simplicity, the high priest would come into the very presence of God (cf. Milgrom, 1016, for other views). The secondary connotation of linen as white underlines the primary emphasis that the garments are holy and pure (Brenner, 93, 148-49).

PRIESTLY SOURCE. See AUTHORSHIP OF THE PENTATEUCH; PENTATEUCHAL CRITICISM, HISTORY OF; SOURCE CRITICISM.

PRIESTS, PRIESTHOOD

The Israelite priesthood was a religious institution within which certain people were given particular and often exclusive rights, roles and responsibilities as mediators between the divine and human realms. The purpose of this article is to describe the Israelite priesthood as portrayed in the Pentateuch. The article will focus on the origin and development of the priesthood, on the symbol system within which it operated and on its roles within Israelite life and faith.

1. The History of the Priesthood: The Pentateuchal Portrait
2. Reconstructing the Historical Priesthood
3. The Message of the Pentateuchal Portrait
4. The Symbolism of the Priesthood
5. The Functions of the Priesthood

1. The History of the Priesthood: The Pentateuchal Portrait.

The origin and history of the Israelite priesthood within the history of the Israelite cult (that is, its system of religious expression) presents one of the most vexing problems for biblical historians. The difficulty has two causes. First, the Pentateuch is composed of a variety of texts that have been composed, collected and edited at different times under differing circumstances. Second, the communicative intention of some of these sources and of the final canonical shaping was not to provide a complete history of the Isra-

elite cult (see 2 below). Although a general portrait, virtually in the form of a montage, of the origins of the priesthood and the official Yahwistic cult of Israel may be gleaned from the Pentateuch as a whole, this portrait is rather incomplete and hazy in places. Moreover, individual traditions in the Pentateuch, as well as in the historical books and the prophetic books, present differing sketches related to the origin and development of the Israelite cult. Attempts of historians to separate out, reorder and bring together all of the sketches like pieces of a jigsaw puzzle in order to provide one clear and complete image have not achieved a consensus.

1.1. Priesthood Prior to Moses and the Giving of the Law. As the pentateuchal narrative unfolds, the first direct association of the priestly institution with Israelites designates them all as a "kingdom of priests and a holy nation" among all of the peoples of the earth (Ex 19:6). However, prior to that reference and prior to the formal creation of the Israelite priesthood (Ex 28—29), which occurs after the exodus and the giving of the *Decalogue at Mount Sinai, the biblical characters demonstrate knowledge of cultic practices. For example, one finds sacrificial acts by *Abel (Gen 4:4), *Noah (Gen 8:20), *Abraham (Gen 22:13) and *Jacob (Gen 31:54; 46:1; see also Ex 24:5). Often scholars have used such evidence to draw the conclusion that in the patriarchal period the patriarchs served as their own priests. However, it is possible that the biblical presentation actually meant to avoid such a picture. M. Haran has argued that in the ancient Near East individuals could offer *sacrifices at *altars without encroaching on the prerogative of the priests, who served the gods within the enclosed sacred space of temples (Haran, 13-42).

The biblical portrait also presupposes a cultural background that from the beginning is familiar with priestly institutions. Examples of priests appear in the Bible prior to the mention of any Israelite priestly system (e.g., Canaanite, Gen 14:18; Egyptian, Gen 41:45; Midianite, Ex 2:16). Indeed, Abraham honors a Canaanite priest, *Melchizedek, who is apparently a worshiper of the same God (Gen 14:18-20; note that "God Most High" is identified here with Yahweh), and Moses' father-in-law was a Midianite priest (Ex 2:16-21; 18:1; see Jethro). Moreover, Exodus 19:20-24 gives the impression that some sort of priestly system of Yahweh worship ex-

isted among the Israelites, who had recently exited Egypt, both prior to the giving of the Decalogue at Mount Sinai and prior to the formal instructions recorded later for establishing the priesthood (Ex 28–29). The form and content of this early cultic worship is not clarified.

1.2. The Aaronide Priesthood. Following the giving of the Decalogue and the establishment of the *covenant with the people whom Yahweh had delivered from Egypt, Yahweh took the initiative to establish official forms and means of worship (Ex 25–30). The establishment of the *tabernacle, a portable sanctuary, created an area of “sacred space” in which God would symbolically dwell in order to be present with his people and at which place they could officially worship (Ex 25–26). As in other ancient Near Eastern cultic systems, the creation of sacred space called for the consecration of sacred functionaries, priests, to attend to the matters of that place. The first formal mention of persons being designated as priests to the God of Israel occurs in Exodus 28:1–4, where *Aaron, the brother of Moses, and Aaron’s sons (*Nadab, Abihu, *Eleazar, Ithamar, Ex 28:1) are named. (Their actual consecration as priests, which lasted for a week, and their first official actions as consecrated priests are recorded in Lev 8–9.) However, an earlier reference to Aaron and his sons being given the role of keeping the lamps burning in the tent of meeting (Ex 27:20–21), which is later a priestly role, along with the inclusion of Aaron with Nadab and Abihu in the events of Exodus 24:1, 9, gives the impression that their “selection” took place earlier, perhaps when “Aaron the Levite” (see 1.3 below on Levites) was chosen as a cospokesperson with Moses (Ex 4:14). The distinctive garments, role and manner of consecration described for Aaron (Ex 28–29 and Lev 8) presuppose that he will serve as the “high priest,” an office that is not specifically mentioned until much later in the Pentateuch (Num 35:25). By divine decree the priesthood became a dynastic role of the Aaronide family (Ex 29:9). The role of high priest was also apparently hereditary, being passed on to Aaron’s third son, Eleazar (Ex 6:23; Num 3:2), after Eleazar’s two older brothers, Nadab and Abihu, were consumed by fire for offering unauthorized fire before Yahweh (Lev 10:1–3; see Num 20:25–28, where Eleazar becomes Aaron’s successor). However, another traditional reason for the perpetuation of the

priesthood through a son of Aaron is given in Numbers 25:10–13 (also 1 Macc 2:26, 54). Here the descendants of Phinehas, son of Eleazar, are granted a lasting priesthood because of an act of loyalty to Yahweh by Phinehas.

1.3. The Levites. In addition to the priests proper, there was a lesser order of cultic functionaries known as the Levites. This distinction between the two orders is clearly delineated in Exodus and Numbers. However, Deuteronomy fails to make such a clear distinction and appears to speak of the priestly nature of the whole tribe of *Levi. According to Exodus and Numbers, the Levites primarily assisted the priests in their duties. On a scale of “holiness,” the Levites stood between the people, who were “common,” and the priests, who had been sanctified for closer contact with the divine realm (see 4.2 below on holiness; see Num 8:5–22 for the purification of the Levites). As a result, the Levites could perform functions that the layperson was not permitted to do, but they were not permitted to fill some of the roles of the priests. According to the traditions in Numbers, the Levites initially had two main duties (Num 3:5–10; 4:1–49; 18:1–32). First, Levites were expected to aid the priests by guarding against encroachment. Encroachment occurred when those who were common or less holy illegally came into contact with the more holy objects of the cult. Second, they were to help with the labor of loading and transporting the cultic paraphernalia of the tabernacle from place to place. (Milgrom [1970] has demonstrated that in priestly texts *mišmeret* means “guarding” rather than the more general “service,” and ‘*ābōdā* refers to portage-related duties rather than to “work” in general.) Over time the role of the Levites changed somewhat. Once the Yahwistic temple cult became permanently fixed at a site, the latter duty of portage would have become obsolete. According to the traditions in Chronicles, when David and Solomon centralized the temple cult in Jerusalem, the Levites were also given the role of temple musicians, a function not found in the Pentateuch (1 Chron 15:16–22).

Pentateuchal traditions give us two accounts for the origin of the secondary role of the Levites, although the accounts are not necessarily mutually exclusive. In Exodus 32, when the people followed Aaron in the worship of the golden calf, it was the “Levites” who zealously executed those who had committed apostasy. For this act

of loyalty the Levites were appointed for their special role. Deuteronomy also attributes priestly roles to the tribe of Levi in association with an act of zeal (Deut 33:8-10), although it is not clear whether or not the text is referring to the *golden calf incident. On the other hand, Numbers 1 does not count Levi among the twelve tribes to be numbered but reckons them as simply appointed to the charge of the tabernacle (Num 1:47-53). The reason for their not being counted among the other tribes is found in Numbers 3, where they are taken by God as belonging to him in exchange for the firstborn male children of Israel, who had been spared when God struck down the firstborn males of Egypt.

Because of their special professional role of serving the Israelites as cultic personnel, the whole tribe of Levi, which included the priestly lineage, were not given a tribal allotment of land. Instead they were to be given certain towns with accompanying pastoral land scattered among the other tribal territories (Lev 25:32-34; Num 35:1-8). Also, they were to be maintained by tithes given by the people (Num 18:20-32). Another tradition explaining the landlessness of the Levites is found in Genesis 49:5-7. Here Levi and his brother *Simeon are cursed for their acts of violence (traditionally associated with their actions found in Gen 34), so that they (that is, their tribal families) would be scattered about the land of Israel.

2. Reconstructing the Historical Priesthood.

Although a general portrait of the priesthood may be gleaned from the Pentateuch, individual traditions appear to present differing sketches about the origin and historical development of the Israelite cult. As a result, biblical scholars have raised questions about the historical accuracy of the pentateuchal portrait and have sought to reconstruct a more consistent picture. For instance, because of the various traditions regarding the Levites, biblical historians have debated whether the term Levi originally designated a person from the tribe of Levi, and by extension became used for these cultic functionaries, or if the term originally had a cultic connotation and somehow became associated with a tribe called Levi. (A. Cody, however, has convincingly shown that Levi is a proper name and not an appellation [Cody, 29-38].)

2.1. Critical Reconstructions. One classical and

popular thesis among biblical historians for sorting out the differences in the individual biblical traditions was tied to the identification of and dating of sources in the Pentateuch. This thesis is known as the Documentary Hypothesis (see Source Criticism). Toward the end of the eighteenth century, after over a century of scholarly efforts to identify and date literary strands in the Pentateuch, J. Wellhausen promoted this thesis. In his work, Wellhausen accounted for some of the differing "sketches" in the traditions about the priesthood by arguing a logical progression from more primitive and less organized forms of cultic expression to later and complex forms. The linchpin of his argument was the thesis that the literary source containing the complex cultic forms, the Priestly source, or P (represented for the most part by Exodus 25—40, Leviticus and Numbers), belonged not to the Mosaic age but to the postexilic time and was fabricated as a defense for later cultic practices. Less formal and complex cultic activity was then to be found in the earlier pentateuchal sources of J, E and D. For instance, he posited the following development. In the patriarchal period, primarily recorded in J and E, the patriarchs themselves could function as priests. In the period of the judges, Levites, a name for cultic functionaries, came to refer to the preferred priestly personnel. They later became associated by literary invention with the tribe of Levi. However, there were other competing priestly houses. The D source, mainly Deuteronomy, came from the late monarchy when Josiah centralized the cult at the temple in Jerusalem around 621 B.C. At this time all Levites could serve as priests in Jerusalem. Later, after the return from the Babylonian exile, the Priestly source (P) told about stricter cultic reforms that had occurred. By this time Levites had been demoted to the role of second-class cultic functionaries.

This very influential reconstruction promulgated by Wellhausen did not, however, resolve all difficulties left by the gaps and the differing sketches of the individual traditions found in the OT. Moreover, the linchpin of his thesis was found to be problematic. New evidence of complex cultic institutions with, for example, differing orders of priestly personnel, were found to exist in the ancient Near East even prior to the time of Moses (see Sabourin, 98-157). Scholars also began to date some of the terminology and

practices in P as preexilic in origin. As a result of these factors, during the last hundred years there have been several other attempts to reconstruct the history of the Israelite priesthood. For example, F. M. Cross argued that the discrepancies could be explained better by positing two ancient priesthoods that vied with one another: an Aaronic priestly house with sanctuaries in Bethel and Jerusalem, and a Mosaic (Mushite) priesthood at Dan, Shiloh and other places in the Negev (Cross, 195-215). M. Haran, on the other hand, sees one priestly line going back to the ancient Levites, the kinsmen of Moses, who were distinguished later in terms of their location in the northern kingdom ("Levites") or in the southern kingdom ("Aaronides").

2.2. A Critique of Historical Reconstructions.

Many of the assumptions of historical-critical reconstructions are sound. For instance, throughout their history the people of Israel lived in different sociological, economic and political settings: family, village, city, tribal alliance, royal statehood, vassal nation and a province within a foreign empire. One would expect that the precise nature of the priestly office changed within those different settings in terms of its roles, the size and specialization of its members, its status, the ways and means of priestly sustenance and the complexity of its ritual expression. Indeed, the current generation of biblical scholars will need to incorporate our increasing knowledge about the sociological nature of ancient Israel into our understanding of priestly institutions (e.g., Anderson).

The basic pentateuchal portrait also appears to contain different sketches of the priesthood, possibly coming from different traditional sources. If possible, it would be important to identify and date any sources and layers of editing that have been employed in the composition of the Pentateuch. One might expect the cultural and sociological setting of the times of writing and editing to influence the perspectives, emphases and even the agenda of the authors and editors, although the total process of the composition of each text and its inclusion in the Pentateuch was inspired to achieve God's total communicative intent. Understanding those perspectives would then guide the modern interpreter as he or she seeks to reconstruct both the historical developments of the Israelite priesthood and the role the priestly cult played at different times in Israelite life.

However, the presence, the diversity and the historical setting of the individual traditions regarding the priesthood are not the focus of the canonical form of the Bible (see Childs, 84-91, 145-74). In some traditions the priestly institutional features are said to have originated by divine, Mosaic or royal decree. In other instances, cultic features are linked to historical events. But in all cases, the emphasis is on the divine design of the Israelite cult. The biblical cultic texts, the bulk of which are not historical narrative but are instructional and expository discourse, preserve the essence of the Israelite Yahwistic cult. Therefore, although reconstructing the history of the Israelite priesthood is a valid scholarly enterprise, the message about the priesthood in the canonical form of the Bible is not to be found in such reconstructions.

3. The Message of the Pentateuchal Portrait.

What the biblical writers and editors preserved and presented was the message about the priesthood's divine origin, its lofty calling to holiness and the dangers of its role being perverted. In the Pentateuch, priestly perspectives have been integrated with the overarching biblical theme of a covenant made with God. Whereas texts that focus on the concept of covenant present Israel's relationship to Yahweh in terms of a legally binding contract, the texts that focus on the priestly cult present that relationship in terms of a symbol system that emphasizes Yahweh's holy presence. The Pentateuch asserts that proper worship was established by God and was an integral part of the covenant. Both **law* and *praxis* came from Yahweh. The modern tendency to separate cultic law from ethical law was unknown.

Because Israel was called to be a holy nation and a kingdom of priests to the nations (Ex 19:6), the Israelite priests had an analogous function of being a holy priesthood to Israel. The priesthood held the people accountable to Yahweh by teaching (Lev 10:10-11; Deut 33:10), a role that was expanded from cultic precepts to the totality of the Torah. This was done within a ritual complex that at every turn reminded the people of the awesome holiness of Yahweh and their covenant to be holy (see 4 and 5 below).

However, not to be overlooked in the pentateuchal material is the brutal reminder of the dangers of forsaking God's decrees even in the face of God's graciousness: Aaron created a

*golden calf (Ex 32), priests offered unholy fire (Lev 10:1-3) and Levites tried to usurp the priests (Num 16). Even the sacrificial system that the priests oversaw, which was given by God to atone for sin, was primarily for inadvertent sins rather than for deliberate sins (Num 15:22-31). The priestly system could seek to engender obedience to the holy God and speak of the blessings of obedience and of atonement for some sin (Lev 26:1-13; Deut 28:1-14); however, the cultic system could never atone for consistent, outright rejection of the covenant (Lev 26:14-46; Deut 27:9-26; 28:15-68).

4. The Symbolism of the Priesthood.

4.1. The Symbolic Nature of the Cult. Cultic practices are symbolic by nature. They reflect, enact and shape one's beliefs about reality. They draw on the symbol systems by which one's culture comes to comprehend and create its view of reality. Moreover, it is often the "priests" of a culture who teach, interpret and mediate the important elements of these systems. Therefore, it is important to examine some of the symbol systems that lie behind, and help to explain, the roles of the Israelite priests. As a caution, however, one should note that this section presents the cultic system not in terms of its historical growth but as a whole. Again, it is likely that some of the symbol systems, or at least their forms of expression, developed over time.

The Israelite, priestly ritual complex made use of the imagery of the surrounding cultures but transformed it within a symbol system that expressed a different worldview. The worldview of autonomous primordial beings who were susceptible to various influences by one another and from human magic was disavowed within Israelite priestly theology. Instead, in their worldview Yahweh was sovereign, not contending with primordial beings for supremacy and not susceptible to magical words or gesticulations (*see* Divination, Magic). The Israelite system had no means to coerce God or to heal diseases that others believed were caused by evil primordial forces (*see* the works of Kaufmann and Milgrom).

The heart of the ritual complex employed classification schemes. In these classification schemes people, animals, places, things and times were recognized as clean or unclean, holy or common (*see* Holy and Holiness, Clean and Unclean). Biblical scholars have yet to sort out

fully the intricacies of these schemes and how they related to one another; however, their importance is quite clear. The role of clarifying these distinctions and preserving them fell to the priests. As they preserved and restored these distinctions, they helped to maintain the divinely created order (*see* Gorman; Jenson).

4.2. Clean and Unclean, Holy and Common. Cultures often tend to classify people, animals and objects, even places and seasons, as either "clean" or "unclean" (*see* some of the categories in Lev 11—15). Such categories have nothing to do with modern concepts of hygienic cleanness and are sometimes only indirectly connected with notions of sin. However, by extension these categories also become applied to the realm of behavior and ethics (Lev 18). For Israel, the standard by which something was clean or unclean appears to have rested on a theology of creation that is represented in Genesis 1:1—2:3. In this account of *creation, one sees how God rules over the elements that are contra life and order (the symbols of chaos: darkness, a watery deep and a formless "earth"). God created an orderly separation of these elements into life-ready realms and then filled those realms. God created an orderly, life-filled world and called it good. For Israel, then, that which was associated with the divinely created order or life was clean, and that which somehow was symbolic of chaos or death was unclean.

The normal state of a person was clean. Uncleaness was a state of being that sometimes was contagious or transferable and could make the clean person or object become unclean. Unlike the belief of some of their neighboring cultures, in which uncleaness could be the result of demonic gods, the Israelites represented uncleaness as an abstract dynamic "power" representing human susceptibility to the realm of chaos and death as well as to wrongdoing. Uncleaness had no place in the presence of the God of life and order. It polluted God's dwelling in Israel's midst. Such uncleaness was of two types: tolerated and prohibited. On the one hand, a person could become unclean through normal and necessary actions, such as sexual intercourse, childbirth and preparing a dead family member for burial. (On the symbolism connecting such acts with the concept of uncleaness, *see* Milgrom; Wright.) Such uncleaness was tolerated and not a sin, although the person was required to go through a ritual act of

cleansing to remove the impurity. On the other hand, flagrant sin resulted from the mismanagement of tolerated uncleanness or from breaches of prohibited uncleanness, such as incest, adultery (see Sexuality, Sexual Ethics) and spiritualism (see Lev 18; 20).

Things were also classified as “holy” or “common.” In the ancient Near East, that which belonged to the realm of the gods was holy. So too, for Israel, that which specifically belonged to Yahweh was holy (Lev 27:9; Num 3:13; 8:17). The normal state of people and things outside of the divine realm was common. Holiness, like uncleanness, was a “power” that in some cases was contagious and could sanctify that which had been common, making it holy. However, God’s holiness, God’s life-producing essence, had to be approached with utmost respect. Coming into contact with that which was holy could be quite risky. The Israelites believed that improper close contact with God could result in death (Ex 19:21-24; Num 4:19-20; for an example, see 2 Sam 6:6-7). Holiness was found in gradations; there was a scale of holiness whereby some things were more holy than others (e.g., the difference between the holy place and the holy of holies within the tabernacle/temple, Ex 26:33-34). In general, contact between nonadjacent elements on the scale of holiness was prohibited (e.g., that which was less holy could come into contact with the holy, but that which was common could not come into contact with the more holy).

The two classification systems of clean/unclean and holy/common shared a complex interrelationship. For example, a layperson could be common and in a state of being clean or unclean. Also, an object could be holy (a sacrifice) and clean prior to use but unclean after being used to remove impurity.

4.3. Sin and Pollution. Dealing with the distinctions of clean/unclean and holy/common was a serious matter. Mismanagement and violations of these distinctions were sins that resulted in harmful consequences for individuals and for the community. In the pentateuchal portrait, when Israel entered into covenant with Yahweh, they entered into a relationship involving God’s presence with them. God’s presence in Israel’s midst was represented by the portable tabernacle and later by the temple. By extension of this spatial concept of God’s presence, Israel viewed the Promised *Land as God’s land, in which

they were received as sojourners (Lev 25:23). Improper care of the distinction between holy and common when approaching to worship God was an egregious affront to God’s gracious presence and could result in death (Lev 10:1-2). Also, the failure to preserve the distinctions of clean/unclean resulted in spiritual “pollution.” Such acts of defilement polluted God’s land and, more specifically, God’s dwelling place as represented by the tabernacle or temple. Such pollution impeded Israel’s relationship with God and could result in the people being vomited out of the land (Lev 18:24-29). As a result, the sin of one person had consequences on the total community’s relationship with God.

The sacrificial system, for which the priests were the main overseers, provided a major means of dealing with the polluting influence of sin, particularly for unintentional sins as opposed to defiant sins (Num 15:22-31). In some cases, the purging influences of sacrifices were required to cleanse God’s dwelling place. However, in other cases purification was not possible. The party guilty of causing such pollution often was to be executed (Lev 20). Continued pollution would result in Israel being “vomited out” of the land (Lev 18:28).

5. The Functions of the Priesthood.

The priests worked to create, maintain and reestablish the divine order symbolized by the classification systems of the clean/unclean and the holy/common. The charge given to the priests in Leviticus 10:10 to “distinguish” (*habdil*) between the holy and the common and between the clean and unclean uses the same Hebrew root for the divine action of making distinctions in the process of creation (Gen 1:4, 6, 7, 14, 18). Therefore, one might say that, just as God established the original creational distinctions between order and chaos, life and death, the priests in particular, and to some extent all people who were created “in the image of God,” became “cocreators,” or at least “comaintainers,” with God. By maintaining those distinctions, they upheld the creational order from the constant threat of encroachment of chaos and death (see Gorman). (See too the use of *habdil* in Leviticus 20:24, 25, 26: as God has made a “distinction” between Israel and other nations, Israel is to make “distinctions.”)

The priestly role corresponded with their unique “position.” They occupied the boundary

zone or “no man’s land” between the holy (the presence of Yahweh) and the common. To be a priest was to operate in the danger zone of encroaching upon the divine realm for the purposes of representing the divine will to the community and representing the community before God. To be in the presence of the holy God was to risk death (Ex 20:18-19; 28:35, 43; 30:20-21; Lev 10:1-3). Those set aside to be priests were placed in a special state of holiness that allowed them access to the “dwelling” of God (on their consecration, see Ex 29; Lev 8—9). The priests had to wear special garments (see Priestly Clothing). These garments not only symbolized the priests’ representative status (e.g., the breastplate of the high priest had twelve stones representing the twelve tribes of Israel) but also “protected” them from dying when entering before Yahweh (e.g., their undergarments, the high priest’s bells and possibly the seal on his turban; Ex 28). The priests also had to live by stricter rules of cleanness than the layperson, particularly when on duty (Ex 30:17-21; Lev 10:8-9; 21:1—22:16). The priests’ position of having a greater status of holiness than that of the layperson not only put them at greater risk of dying but also placed them in a position of being able to serve the community of faith effectively.

The following is an attempt to order the various roles of the priests; however, it should be recognized that these categories, which are not prescribed in the Pentateuch, are imperfect. Certain roles may fit under more than one category or perhaps be better listed separately.

5.1. Custodians of the Cult. The priests were the general custodians of the instructions that were designed to set the community apart as holy to Yahweh (Lev 19:2). As custodians of these instructions, they had several subroles.

5.1.1. Teachers. The priests were teachers. They held the responsibility for teaching the people the instructions regarding clean/unclean and holy/common (Lev 10:10-11; Deut 33:10; see also 2 Chron 35:3; Ezek 22:26; Hag 2:11-13). The various instructions, which expressed these classifications, constantly reminded the people as they went about their daily lives that their God, Yahweh, was a God of life and order and that they should reject “death” and choose life. Yahweh was unfathomably holy and could not dwell with impurity. Moreover, in Jewish tradition the priests’ role as teachers expanded from teaching cultic precepts

to teaching the totality of the Torah. The movement toward this fuller responsibility is found already in Deuteronomy 31:9-13, where it is prescribed that every seven years, at the Feast of Booths, the priests were to read the laws of the covenant to the assembled people. Perhaps the reason that the levitical cities were spread throughout the land was to make them accessible to the people for instruction. As the people of this holy God, they needed to be aligned with the divine design of life and order to be in right relationship with Yahweh. The priests taught them how to live in that right relationship.

It has also been suggested that priests might have had the role of perpetuating the traditions regarding the origin of their sanctuary and cultic practices, as do the priestly functionaries at some relatively modern Palestinian cultic sites (Gray, 222-23). One might suppose that the Israelite priests knew the stories of the origins of their cultic practices as found in the Pentateuch and that they might have carried the teaching responsibility of passing on these traditions.

5.1.2. Boundary Interpreters. The priests were interpreters of the cultic boundaries in time, space and status. They had to clarify and set the boundaries in the ritual complex according to the guidelines that had been established under divine guidance. It was their role to distinguish between the holy and unholy, the clean and unclean (Lev 10:10; 11:47; see Foods, Clean and Unclean). That task involved making an abstract principle clear in concrete situations. For instance, guidelines for distinguishing clean and unclean animals are given in Leviticus 11. These guidelines seem to come from the *zoological classification system of their culture and aided in identifying animals that might have symbolically seemed to have blurred the bounds of the creational order. However, not all animals are listed in such texts. The priest would have to make decisions about other animals based on these guidelines. Another example is found in the case of skin diseases, in which the priests virtually played a diagnostic role. The person who was afflicted with a condition that might be unclean was brought to the priests. They examined the condition and pronounced the person as clean or unclean (Lev 13—15). One would also suppose, however, that new situations and new questions would always be arising. In such cases, it was probably up to the priests to clarify the boundaries of acceptable and unacceptable be-

havior on the basis of what had been revealed about the character of Yahweh and how Israel was to be set apart to be a different people. For example, the community was to avoid the polluting practices of the nations that God was expelling from the Promised Land (Lev 18:3, 24-28; 20:22-25). Although some pagan practices are specified in such lists as Leviticus 18—20, not all such practices are mentioned. Apparently the priests were given the responsibility to make these decisions. Practicing cultic rituals at the right time was also important (Lev 23:1-44). However, keeping a lunar calendar was not always an easy task. Although not stated in the Pentateuch, the priests probably also had to track astronomical signs and determine when the holy times and seasons began and ended.

5.2. Agents of Divine Blessing, Holiness and Purification. The priests, as occupants of the medial zone between the divine and the common, enabled communication and transference between the holy and the common or unclean. It was their job to establish, maintain and restore the proper creational order of persons and things.

5.2.1. Purifiers. Most important, priests had the responsibility of purifying the holy place and the *altars, which symbolized Yahweh's dwelling with Israel. First, they "made atonement" for accrued pollution from sins. That is, by the manipulation of the blood of the sacrifices, they cleansed away the pollution and made God's dwelling holy again, bringing the situation back to its proper state and order (e.g., Lev 4:1—6:7; 16:1-19). Second, they purified the person whose impurity had lasted more than seven days, such as in the cases of childbirth and abnormal genital discharges (Lev 12; 15:13-15). The primary function of the sacrificial system, which the priests oversaw, was to restore God's dwelling and people to their orderly status and to enable a right relationship with God.

5.2.2. Spokespeople for God. The priests spoke for God in at least two ways. First, there were times when they pronounced divine *blessing upon the people (Num 6:22-27; Deut 10:8). Such words were apparently seen as efficacious: the pronouncement resulted in wholeness and prosperity. Blessings might be pronounced over the people on public occasions (Lev 9:22) and possibly in response to cultic petitions. Although this latter function is not clarified in the Pentateuch, there is some evidence from passages

such as 1 Samuel 1:9-20 (perhaps Judg 17—18) and the Psalms (see Ps 12:5 [MT 12:6]; 85:8 [MT 85:9]; 118:26) that, in response to petitions, a priest might have spoken a prophetic word of blessing on God's behalf. (See also words of blessings that might have been spoken by priests in Ps 20:1-5 [MT 20:2-6]; 115:14-15; 121:7-8; 128:5; 134:3.)

Second, perhaps closely related to the last function, the priests also pronounced oracles announcing the will of God for certain decisions, sometimes having employed the Urim and Thummim, a divining device (Num 27:21; Deut 33:8; see Ezra 2:59-63). The exact nature and function of the Urim and Thummim is uncertain. However, it does appear that they were devices used by the priests to determine the divine response to a petition by a leader, such as *Joshua or a king (Num 27:21; 1 Sam 14:41; 28:6), or to determine someone's status in cultic matters (Ezra 2:59-63; Neh 7:63-65). These cases of priests speaking for God appear to be primarily in response to petitions that were made in cultic settings.

5.2.3. Judges. In Israelite history, the realm of judicial authority probably progressed from the heads of households to recognized elders of status to appointed officials. (In Genesis the patriarchs ruled their households, and in Ex 18:5-27 and Deut 1:9-18 Moses instituted a system of judges.) It is expected in Deuteronomy 16:18-20 that each town would have appointed *judges. However, one also finds provision for the priests to assist as judges in difficult cases (Deut 17:8-13; 19:16-17; 21:1-5). It appears that in these difficult cases, which involved a lack of witnesses or conflicting witnesses, the priests stood as divine representatives and perhaps were expected to divine the truth as they did in the case of the wife suspected of adultery (Num 5:11-31).

5.2.4. Participants in Warfare. The priests participated in *warfare, which was basically viewed as a religious activity. In their role as diviners (see 5.2.2 above) the priests were called on to give oracles from God about whether or not the people should go out to war (Num 27:18-21; Judg 20:26-28). Deuteronomy 20:2-4 has the priests addressing the troops before they go out to battle. The priests probably also went out to battle on many occasions. First, one notes that Phinehas went out to battle taking articles from the sanctuary and the trumpets for signaling (Num 31:6). Second, if it was customary to take

the ark of the covenant and the trumpets into battle, as appears to be the case in nonpen-tateuchal material (Josh 6; 1 Sam 4; 2 Sam 11:11; the imagery of Ps 24; see also Num 10:33-36; 14:41-45), then the priests would have had to be present, because they were in charge of the portage of the ark (note that Levites may carry the ark, but the priests are in charge [Num 3:31-32; Deut 31:9, 25] and of blowing the trumpets (Num 10:1-9). Finally, it is possible that the priests made decisions about the purification and division of the booty that was taken in war, at least when it was perceived as sacred war (Num 31:21-31; see *Hērem*).

5.3. Supervisors of Cult Objects. Priests would have had some administrative roles. At the least, they would have had charge of caring for the sacred paraphernalia. (See Num 3:5—4:33, where they supervise the Levites.) For instance, although the Levites were to help serve the priests by transporting the cultic objects (Num 3:27-32), the Levites themselves could not come into direct contact with these objects. The priests first covered and prepared the objects (Num 4:1-20). Furthermore, as the temple became part of the hub of the centralized state government, the administrative roles of the priests probably grew in complexity. (At least by the time of the second temple period, the temple had some banking functions [2 Macc 3:10-12].) Any precise historical development based on the biblical sources is difficult to reconstruct.

5.3.1. Guards. The priests literally served as guards. People and objects that were common or less holy were not to come into contact with those that were more holy (Num 3:10). The priests were to “bear the guilt” of the sanctuary (Num 18:1); that is, they were held responsible to keep others from profaning it. Priests had, along with the Levites, the role of protecting the holy things from encroachment by persons and things less holy or unclean. They had to do so upon the penalty of their own lives (Num 18:1-7; for clarification of technical language, see Milgrom 1970 and 1990).

5.3.2. Tithe Assessors and Collectors. As early as the book of the covenant (Ex 20:22—23:33), in connection with the feasts, tithes of *firstfruits were to be brought to the house of Yahweh (Ex 23:14-19). In Exodus 30:11-16 a payment of atonement money for each Israelite was to be given to Yahweh, presumably through the priests, and to be used for the service of the tent

of meeting. Other systems of tithes and offerings are also prescribed (e.g., Lev 27:1-33; Num 18:8-32; Deut 14:22-29; 18:1-8; 26:1-15), which generally fell under the supervision of the priests and Levites, who were to receive part of this income as compensation for their service to the people. Indeed, in some cases priests were to determine the value, often in monetary terms, of what was to be given (Lev 27:8, 11-12, 14, 18, 23). Such monetary transactions were based on the standard weight of the “sanctuary shekel” (Lev 27:3, 25).

The priestly activities, symbolized in rituals involving sight, smell and sound, time, space, and status, taught Israel the healthy fear of being confronted with the presence of the holy God, the Creator of life and order. Israel was reminded of the great gap between their God and humanity. Only the priests, who were specially sanctified, could step carefully into that gap and mediate between the divine and human realms. Through their instructions and rituals, the priests warned Israel how its waywardness, intentional and unintentional, polluted God’s dwelling and hindered God’s presence in their covenant relationship. Individuals and community alike were called to be “clean” and pure before God. Moreover, through the priestly role, Israel saw that Yahweh’s graciousness was not limited to mighty historical acts and the anointed leadership of key individuals. God had provided the means of removing the pollution, of purifying the unclean person and of restoring the divinely intended order. It was through the priesthood that this message of grace was mediated.

PROMISES, DIVINE

Divine promises play an important role within the Pentateuch. They occur frequently, take a variety of forms and are important factors in the development of the plot that unites the books of *Genesis through *Deuteronomy. Moreover, because certain major promises remain unfulfilled by the end of Deuteronomy, this orientates the Pentateuch toward the future.

The diversity of divine promises found within the Pentateuch makes it impossible to examine all of them. Almost inevitably whenever God speaks his words, they contain elements that may be labeled promises; those that convey a negative expectation are more commonly called threats. By their very nature, covenants initiated by God contain divine promises. Immediately after the *flood, for example, God promised that he would never again strike down every living creature as he had done on this occasion (Gen 8:21-22). Yet while divine promises permeate the whole of the Pentateuch, the promises associated with the patriarchs are especially important (e.g., Gen 12:1-3; 22:16-18; 26:2-5; 28:13-15; 35:11-12; 46:3-4). Focusing chiefly on the concepts of land, descendants and blessing, God's promises to Abraham, Isaac and Jacob play a special role in the plot of not only the Pentateuch but also the books of Joshua to Kings.

1. Divine Promises and the Patriarchs
2. Obstacles to Fulfillment
3. Beyond the Pentateuch
4. Conclusion

1. Divine Promises and the Patriarchs.

Within the Pentateuch the divine promises associated with the patriarchs have attracted the most attention from scholars. In part this reflects their frequency, for as J. Blythin observes, almost all of the divine speeches in Genesis 12–50 include promises. Biblical scholars, however, diverge in two main ways regarding their assessment of these promises. First, opinions vary concerning the number and content of

these promises. Second, scholars differ as regards which promises were originally part of the earliest patriarchal traditions and which were added at a later stage.

In 1928 K. Galling first suggested that the divine promises were absent from the patriarchal traditions when they were initially transmitted orally; only when the stories were committed to writing were the promises incorporated. While A. Alt rejected this approach, he in turn distinguished two promises: (1) the increase of the patriarchs' posterity and (2) their possession of the Promised *Land. Alt considered the former promise to be the earliest. In 1943 G. von Rad recognized four types of promises within the patriarchal narratives: land, progeny, *blessing and a new relationship with God. Of these, the promise of land belonged to the oldest layer of tradition. The process of distinguishing between original and secondary promises was investigated further by J. Hoftijzer, who concluded that the promises ought to be dated to the time of the exile.

Developing the work of Hoftijzer, C. Westermann (28) concluded that

only a very small portion of the narratives in Genesis 12–50 were conceived originally as promise narratives. Most of the narratives in which we find promises were transformed secondarily into promise narratives, or else the promises stand outside the ancient narratives as expansions, interpolations, additions, interludes or special scenes representing the giving of a promise. The promise motif belongs in the vast majority of cases to the stage when the early narratives were being put together to form larger units.

Among the small proportion of narratives that initially contained promises, Westermann retained the accounts of the promise of a son in Genesis 16; 18. He also accepted that there must have been an original promise narrative concerning land. While the original version of this narrative no longer exists, Genesis 15:7-21; 28:13-15 resemble it closely. All other promises in the patriarchal narratives are the work of later editors.

To arrive at these conclusions, Westermann made a number of important assumptions. First, only those promises that contain a single element are original. Any promise involving a combination of promises (e.g., land and descendants) should be viewed as a later development

in the narrative. Second, promises that are incidental to the story should be dismissed as secondary. Third, original promises relate directly to the nomadic lifestyle of the patriarchs; promises concerning permanent settlement in the land or the establishment of a monarchy were added later. However, all of these assumptions are open to question. As we shall observe below, certain promises may be viewed as part of a larger promise (e.g., nationhood, as found in Gen 12:2, automatically consists of elements concerning descendants and land). It is also exceptionally difficult to establish criteria by which it is possible to determine if a promise is intrinsic to a tradition. Finally, the lifestyle of the patriarchs is not simply nomadic; although they lived in tents (*see* Historical Criticism §4.5), they also settled in various locations for considerable periods of time (e.g., according to Gen 26:12, Isaac planted crops; *see* Agriculture).

Support for Westermann's approach comes from R. Rendtorff, who accepts that few of the patriarchal stories originally contained references to divine promises. According to Rendtorff, the promises were superimposed on originally independent traditions in order to form, first, various narrative cycles (concerning *Abraham, *Isaac and *Jacob), and then, at a later stage, one single narrative unit (the patriarchal story).

Another prominent scholar to argue that the divine promises in the patriarchal stories were introduced at different stages is J. A. Emerton. He suggests that whereas the promises of a son in Genesis 16:11; 18:10, 14, and of land in Genesis 12:7, are original, "the others were added to JE in the seventh or sixth century" (Emerton, 32).

Since most of these scholars approach this issue from within the framework of the Documentary Hypothesis—Rendtorff being a notable exception—their conclusions are heavily dependent on the validity of this theory. However, R. N. Whybray exposes clearly the inadequacy of the criteria by which different sources are isolated, and T. D. Alexander (1997) shows that the Abraham narrative in Genesis 12–25 is a more carefully composed narrative than is commonly assumed. In the light of these studies, doubts must be raised about the ability of scholars to assign the divine promises in Genesis to different stages of composition.

While considerable scholarly attention has

been focused on the significance of the promises in relation to the process by which the patriarchal narratives were composed, less attention has been given to the issue of how these promises function within the final form of the Pentateuch. In 1978 D. J. A. Clines (29) suggested that the “*theme of the Pentateuch is the partial fulfillment—which implies also the partial non-fulfillment—of the promise to or blessing of the patriarch*” (italics his). According to Clines, there were three elements to this promise: posterity, divine-human relationship and land. From his analysis of the Pentateuch, he concluded that the “posterity-element of the promise is dominant in Genesis 12–50, the relationship-element in Exodus and Leviticus, and the land-element in Numbers and Deuteronomy” (Clines, 29).

Although Clines’s study establishes the importance of these promises within the Pentateuch and points to the fact that their ultimate fulfillment must be sought beyond the book of Deuteronomy, Clines’s proposal of a main promise of blessing, having three distinctive elements, does not reflect as accurately as possible the precise nature of the divine promises given to the patriarchs. Unfortunately, scholars differ somewhat in their assessment of the number and content of the divine promises (for a brief survey, see Hamilton, 4.666-67). Granted that some differences are of a relatively minor nature (e.g., where Westermann distinguishes between the promise of a son and the promise of increase, Clines speaks of “posterity”), it is still important to establish as clearly as possible the precise nature of the divine promises given to the patriarchs.

1.1. Nationhood and International Blessing. To address the issues of nationhood and international blessing, attention must be focused on the divine comments made to Abram (later renamed Abraham) in Genesis 12:1-3. The importance of these verses cannot be overstated. Although H. W. Wolff highlights their significance as regards the supposed work of the Yahwist, G. J. Wenham (271) underlines their importance for the final form of the book of Genesis: “By placing the promises to Abram right at the beginning of the patriarchal narratives the redactor is asserting their fundamental importance for the history of Israel and the world and indicating how the stories that follow ought to be understood.” As we shall observe, God’s remarks set the agenda for both Abra-

ham’s own lifetime and far beyond it.

God’s words to Abraham may be translated as follows:

Leave your country, your people and your father’s household and go to the land I will show you, so that I may make you into a great nation and bless you and make your name great. Be a blessing, so that I may bless those who bless you, and curse the one who disdains you, and so that all the families of the ground may be blessed through you. (Gen 12:1-3)

Two aspects of this translation require further comment. First, the imperative “Be a blessing” is preferred here in place of a consequence clause, “so that you will effect blessing.” While the latter represents a possible rendering of the MT, there is no strong reason to avoid the normal imperative force of the Hebrew text. If one adopts this reading, Abraham receives two sets of instructions, which are distinctive but complementary. Second, the translation of the final clause adopted above is preferred over the alternative, “and by you shall all the families of the ground bless themselves.” The arguments for and against these two readings, which have recently been set out by P. R. Williamson (223-28), involve subtle distinctions between the Niphal (“passive”) and Hithpael (“reflexive”) forms of the Hebrew root *brk*, “to bless.”

At it stands, Genesis 12:1-3 falls naturally into two parts. The first focuses mainly on the concept of Abraham’s becoming a “great nation,” whereas the second comes to a climax in the idea that through Abraham all the families of the ground will be blessed. The two parts are closely connected, and it would be a mistake to consider one element as being more original than the other. As we shall see, the themes of nationhood and international blessing are placed side by side in the Abraham narrative, although the emphasis is not always shared equally between them. Moreover, it needs to be observed that in Genesis 12:1-3 the statement “so that all the families of the ground may be blessed through you” stands at the climax of the divine speech (Hamilton, 4.667). For this reason, and as we shall observe more fully below, the promise of international blessing ought to be viewed as more important than the promise of nationhood; the former builds on the latter, with both promises being linked through their close association with

Abraham's future descendants.

The divine promises of nationhood and international blessing that come in Genesis 12:1-3 not only set the agenda for the rest of Genesis and beyond but also are intimately connected to the opening chapters of Genesis. Whereas Genesis 3—11 is dominated by episodes that highlight the theme of divine cursing, resulting in humanity's alienation from the ground/earth, the call of Abraham holds out the prospect of blessing (note the repeated use of "bless" in Gen 12:1-3) associated with the provision of land. Although we must look beyond the patriarchal narratives to see the full significance of this, when God comes to dwell among the Israelites in the land of Canaan, we witness a partial return to the conditions that existed prior to *Adam and *Eve's expulsion from the Garden of *Eden. The call of Abraham marks, therefore, an important stage in the pentateuchal narrative, being a major turning point in the story.

The divine promises of nationhood and international blessing are closely linked, the fulfillment of the former being a necessary step toward the fulfillment of the latter. Significantly, the promise that Abraham will become a great nation is initially contradicted by Abraham's immediate circumstances. As Genesis 11:30 states, "Now Sarai [later renamed *Sarah] was barren; she had no child." Throughout Genesis 11—22, the question is constantly posed, Will Abraham have an heir through Sarah? Even when Sarah in old age conceives and gives birth to a son, Isaac (Gen 21:1-3), a further twist in the story threatens to bring Isaac's life to an untimely end. What thoughts must have gone through Abraham's mind when God instructed him to sacrifice Isaac (Gen 22:1-2)? While the immediate focus of the Abraham story is the birth of an heir (see Alexander 1997, 102-25), this must be viewed as an essential step toward the fulfillment of the divine promises of nationhood and international blessing.

Abraham, however, is not merely childless when God calls him. God demands that he leave the security of family and homeland in order to journey to a new land. Remarkably, it will be here that God creates of Abraham a "great nation." The initial challenge facing Abraham is enormous, yet clearly he is persuaded on account of the divine promises to venture forth.

When Abraham arrives in the land of

Canaan, God affirms to him on several occasions that this will be the region where his descendants will be established as a nation (Gen 12:7; 13:14-17). Eventually these promises are confirmed to Abraham by a divine *covenant (Gen 15:18-21). Significantly, this covenant, which sets out in detail the *borders of the Promised Land, comes in a chapter that focuses on God's provision of both numerous descendants and land. These two elements, which are sometimes mentioned separately within the Abraham narrative, provide the essential components of a nation. Furthermore, Genesis 15 indicates that nationhood will not be established immediately. Abraham's descendants will be enslaved for four hundred years in a foreign country before returning to the Promised Land (Gen 15:13-16).

While the covenant in Genesis 15 guarantees for Abraham that the divine promise of nationhood will be fulfilled, a second covenant is introduced in Genesis 17. As Williamson (145-216) demonstrates, this covenant differs markedly from the covenant in Genesis 15, having as its focus the theme of divine blessing being mediated to the nations of the earth. This is highlighted in the statement, "Behold, my covenant is with you, and you shall be the father of a multitude of nations. No longer shall your name be called Abram, but your name shall be Abraham, for I have made you the father of a multitude of nations" (Gen 17:4-5 ESV). The emphasis here is not on those nations that are descended biologically from Abraham (which in reality number only a few) but on the figurative use of the term *father*, as one who is a source of well-being for others. Such an understanding of *father* is not uncommon. Later, in Genesis 45:8, Joseph states, "He [God] has made me a father to Pharaoh, and lord of all his house and ruler over all the land of Egypt." As father of the nations, Abraham will be a source of blessing to them.

The promise of international blessing associated with the covenant in Genesis 17 is linked, however, with a unique line of Abraham's descendants. This is highlighted in Genesis 17:19, when Isaac is chosen in place of *Ishmael. Through Isaac, God establishes a lineage that will eventually lead to a monarchy. This monarchy will rule over the nation descended from Abraham and mediate God's blessing to all the nations of the earth (Alexander 2002, 101-28).

In the light of this, the patriarchal stories in

Genesis give special attention to the firstborn lineage. Yet the blessing of the firstborn is not always given to the one who is born first. Isaac takes precedence over his older brother, Ishmael. More remarkable, perhaps, is the way in which Jacob gains preeminence over his older twin brother, *Esau. In a situation of complex *family relationships, Esau, who foolishly sells his birthright for a bowl of lentil stew (Gen 25:31-34), fails to obtain his father's blessing when Jacob is persuaded by his mother to inter-vene. With words that echo Genesis 12:3, Isaac gives Jacob the blessing of the firstborn: "May God give you of the dew of heaven, and of the fatness of the earth, and plenty of grain and wine. Let peoples serve you, and nations bow down to you. Be lord over your brothers, and may your mother's sons bow down to you. Cursed be everyone who curses you, and blessed be everyone who blesses you!" (Gen 27:28-29 NRSV). While Jacob's actions initially alienate him from Esau and he is forced to flee to Pad-dan-aram, the brothers are reconciled years later when Jacob returns, having been richly blessed by God.

After focusing briefly on Esau's descendants (Gen 36), the Genesis narrative concentrates attention on *Joseph, Jacob's son born to Rachel. Although Joseph is chronologically the eleventh son of Jacob, his father treats him as the first-born. For this reason, his older brothers are exceptionally jealous and eventually sell him into *slavery in *Egypt. Significantly, Joseph adds to his brothers' hatred of him by recounting to them *dreams in which they bow down before him. Not only does this echo one of the main themes in the blessing given by Isaac to Jacob, but it reinforces the idea that the firstborn lineage is associated with royalty.

Although Joseph is first a slave and then a prisoner in Egypt, through divine providence he is later placed by *Pharaoh in charge of the whole land (Gen 41:41-43). In this exalted position God uses Joseph to be a source of blessing not only for his own family, with whom he is eventually reconciled, but also for many nations. However, while Joseph partially fulfills the divine promise of blessing, the book of Genesis looks beyond him to the coming of another king.

Joseph's firstborn status is confirmed in Genesis when the elderly Jacob blesses Joseph's two sons, Manasseh and Ephraim (Gen 48). Remark-

ably, once again the blessing of the firstborn is bestowed on the younger of the two boys. In spite of Joseph's protest, Jacob blesses Ephraim, stating that he will be the greater of the two (Gen 48:19). By doing this, the tradition is established that through Ephraim will come a royal lineage. Later, this is reflected in the prominence of the tribe of Ephraim, especially when the nation of Israel is under the leadership of *Joshua, an Ephraimite.

Although priority is given to the role played by Joseph, we should not overlook the way in which Genesis also anticipates the future rise to prominence of the line of *Judah. Several features point to this. First, the story of Joseph's journey into slavery is unexpectedly interrupted by the account of Judah's unusual dealings with his daughter-in-law, *Tamar (Gen 38). The location of this story, especially with its focus upon the continuation of the "seed" of Judah, suggests that the lineage descended from Judah will be important. Moreover, the description of the birth of twin boys to Hagar introduces another instance in which the birthright of the firstborn is challenged by a younger brother. Although the hand of Zerah emerges first, and the mid-wife carefully notes this by attaching a scarlet thread to it, Perez breaks through to be born before his brother (Gen 38:27-30). In a book that places so much importance on observing the unique lineage associated with those considered to be the "firstborn," this incident involving Perez should not be overlooked; it is through Perez that the later royal line of David traces its descent (Ruth 4:18-22). Significantly, according to Psalm 78:59-72, in the time of Samuel the line of Ephraim was rejected by God in favor of David. This also coincided with the rejection of Shiloh as the central sanctuary in favor of Jerusalem.

1.2. A Holy Nation. While Genesis concludes by observing the future importance of the lineages descended from Judah (cf. Gen 49:8-12) and Joseph (cf. Gen 49:22-26), the book of Exodus returns to the theme of nationhood. Although the Israelites now find themselves enslaved in Egypt, their remarkable growth causes Pharaoh to view them with hostility. In spite of his oppressive regime, the Israelites are rescued by God from Egypt following a series of *signs and wonders that climax in the death of the Egyptian firstborn. An integral part of this process is the renewing of the divine promise of

land. Thus, when God appears to *Moses, he says:

Go and gather the elders of Israel together and say to them, "The LORD, the God of your fathers, the God of Abraham, of Isaac and of Jacob, has appeared to me, saying, 'I have observed you and what has been done to you in Egypt, and I promise that I will bring you up out of the affliction of Egypt to the land of the Canaanites, the Hittites, the Amorites, the Perizzites, the Hivites and the Jebusites, a land flowing with milk and honey.'" (Ex 3:16-17)

The process of creating a nation out of fleeing slaves took an important step forward when, under Moses' leadership, the Israelites came to Mount Sinai. Here they were invited by God to enter into a special covenant relationship with him, a covenant based on another divine promise: "If you will indeed obey my voice and keep my covenant, you will be my treasured possession among all peoples, for all the earth is mine; and you will be to me a kingdom of priests and a holy nation" (Ex 19:5-6).

The events associated with Mount Sinai introduced an important new development that set the Israelites apart from other nations. With the sealing of the covenant, which almost ended before it began because of the *golden calf incident, the Israelites eventually proceeded to construct the *tabernacle. Here God would dwell among the people and, by so doing, confer on them the status of "holy nation." By coming to live in their midst, God set the Israelites apart from every other nation; his presence made them unique among the nations. However, this privilege came at a cost, for the Israelites now had to ensure that their lifestyle was compatible with that of the Holy One. The importance of this is stressed through the instructions and regulations set out in the book of *Leviticus.

2. Obstacles to Fulfillment.

While the events at Mount Sinai are something of a climax within the Pentateuch itself, the divine promise of nationhood to Abraham, Isaac and Jacob could be fulfilled only when the Israelites took possession of the land of Canaan. As recounted in the book of *Numbers, the next stage began as the Israelites left Mount Sinai and moved toward the Promised Land. However, things did not proceed smoothly. When the spies returned from surveying the land, their

reports fueled an open rebellion against God's plans for the people. Of the twelve spies, only *Caleb and *Joshua spoke positively about taking possession of the land.

The reaction of the people is presented as a rejection of God's ability to bring them safely into the land he had promised. Consequently, all the adult Israelites, apart from Caleb and Joshua, were condemned to die in the *wilderness. On account of this a hiatus of forty years occurred, marked by various other incidents that highlighted the inability of the Israelites to trust God fully.

When the census in Numbers 26 confirmed the death of the adult generation, the scene was set for the Israelites to move into the Promised Land. However, before the crossing of the River Jordan took place, Moses addressed the people at length, reminding them of their covenant obligations. His words were clearly directed to the future, anticipating their occupation of the land (cf., e.g., Deut 9:3; 11:25). In this context, a series of divine blessings and curses offered conditional promises to the people. In response to their obedience, God would prosper them in the land (Deut 28:1-14). Disobedience, however, would bring divine judgment, with the terrible prospect of being expelled from the land (Deut 28:15-68, esp. 28:63-68). The ominous nature of these curses is underlined in various ways at the end of Deuteronomy. The list of curses far exceeds the blessings in length. Moses instructed the *Levites to place the book of the law beside the ark of the covenant as a witness against the people, for they were "rebellious and stubborn" (Deut 31:26-27). The so-called Song of Moses was also given by the Lord to remind the Israelites of their sinfulness (Deut 32:1-40; cf. 31:19-21).

3. Beyond the Pentateuch.

As it stands, the Pentateuch ends by anticipating a variety of future developments. In spite of the emphasis placed on it, the land was yet to be possessed. Until this happened, Israel could not be viewed as a nation having its own land with borders. Although things advanced swiftly under the leadership of Joshua, the period of the judges was marked by stagnation and retreat regarding the Israelite occupation of the land. Only during the reigns of David and Solomon was the process brought successfully to completion (1 Kings 4:20-21; cf. 2 Sam 17:11; McComiskey, 42-55).

While the Israelites eventually possessed the land promised to the patriarchs, the promise of international blessing, which was specifically tied to the royal line descended from Abraham, remained unfulfilled. Although Solomon's great wisdom was praised by the rulers of other nations, his failure to remain faithful to the law of Moses resulted in his kingdom being divided between his own son Rehoboam and an Ephraimite, Jeroboam. As the book of Kings reveals, the moral and spiritual apostasy of both Israel and Judah led to two separate exiles, events previously anticipated in the concluding chapters of Deuteronomy.

The fall of Jerusalem to the Babylonians, the destruction of the temple, the exile of the people and the removal of the Davidic dynasty from its position of authority together stand in sharp contrast to the main divine promises of the Pentateuch. The expectations and hopes contained in the Pentateuch were shattered by the actions of the conquering Babylonians. Yet even in these grim circumstances, the divine promises remained a source of hope. While the exile was anticipated, restoration was also a possibility. For this reason the books of Genesis to Kings recount not merely past events, but by their emphasis on the divine promises, offer hope for the future.

4. Conclusion.

A promise by definition involves a commitment by one party to another. Through making a promise God not only commits himself to do something, but he creates an expectation or hope for the one who receives the promise. For this reason, divine promises are special because they come from One who has both the power to accomplish what he has said and the faithfulness to ensure that it will happen. Promises made by God stand apart from those made by fickle, finite human beings. Moreover, as we have observed, while divine promises throughout the Pentateuch cover a wide variety of issues, there are a small number that recur often and so dominate these books. At the heart of these major promises lies God's commitment to Abraham, Isaac and Jacob concerning nationhood and international blessing. While the former of these came to fulfillment in the time of David and Solomon, the latter, although later associated with the lineage of David, remained unfulfilled by the time of the

Babylonian exile. Nevertheless, the expectation still remained that one day God would bring it to fulfillment. For the writers of the NT, the promise of international blessing came to fulfillment in Jesus Christ (e.g., Mt 5:17; Lk 24:27, 44; Jn 1:45; Acts 3:25-26; 26:22-23; 28:23; Rom 1:2; Gal 3:16).

To many twenty-first-century readers, the Pentateuch stands apart as a most unusual literary work. At one level it presents a remarkable account of human history, focusing particularly on the growth and development of one branch of humanity associated with the figures of Abraham, Isaac and Jacob. At another level—and this is where it differs from most contemporary literature—it is a theological narrative describing the interplay between the divine Creator and his creation. At the heart of this story lies the strained and difficult relationship that develops when the first human couple, Adam and Eve, rebel against their Maker. Expelled from God's presence and under his curse, human beings struggle to survive alienated from God, their environment and one another. Within this context the divine promises take on special significance because they are a witness to the unique relationship that exists between God and humanity. Through a series of promises, God initiates a process that will eventually lead to the reestablishment of a harmonious creation (Kaiser). In the outworking of this process the pentateuchal narrative lays the foundation on which the rest of Scripture builds.

PROPHECY. See PROPHETS, PROPHECY.

PROPHETS, PROPHECY

Biblical readers generally associate the phenomenon of prophecy with the second division of the Hebrew Bible, appropriately named the Prophets (Heb *Nevi'im*; also referred to as the Former Prophets [Joshua—2 Kings] and the Latter Prophets [Isaiah, Jeremiah, Ezekiel, Hosea—Malachi]), rather than the Pentateuch, and with a period of history later than that described in the Pentateuch (the monarchical through the early postexilic periods). Valid though this association may be in general terms, it should not blind us to the key pentateuchal material that both describes several individuals performing a prophetic role and establishes a number of laws to regulate prophetic activity. Neither should we ignore the fact that prophecy per se was not unique to Israel but was part of a broader ancient Near Eastern reality. In order fully to understand the pentateuchal presentation of prophecy, we must begin with a clear definition of prophecy and an appreciation for prophecy within the ancient Near East, then read the pentateuchal narratives and laws to discover how Israel perceived God to be uniquely at work in its

midst through the shared phenomenon of prophecy.

1. Prophecy as Intermediation
2. The Ancient Near Eastern Context
3. Individuals Functioning as Prophets
4. Laws Regulating Prophetic Activity

1. Prophecy as Intermediation.

1.1. Lexical Data. The relatively small number of terms associated with prophecy might suggest that prophecy is unimportant to and nearly nonexistent within the Pentateuch. For example, the common Hebrew word for "prophet, prophetess" (*nābī', nēbī'ā*) appears just fifteen times in the entire Pentateuch, only five times outside of Deuteronomy 13 and 18. The verb form of this root is even more conspicuous by its absence, being used only three times (Num 11:25, 26, 27). Other terms used elsewhere in the Hebrew Bible for the prophetic role or prophetic activity—the roots *hzh* and *r'h*—are similarly rare, being used only occasionally within a prophetic context. However, these meager results demonstrate only the shortcomings of taking a simplistic lexical approach, not the absence of prophecy within the Pentateuch.

1.2. *Social-Scientific Considerations. Much more fruitful is the tack taken by scholars such as R. Wilson, T. Overholt and D. Petersen, namely, defining prophecy in terms of the typical social role or function performed by individuals identified by their societies as "prophets," "seers" and the like. Working from this broader cross-cultural perspective, one can define prophecy as communication-based intermediation between the divine world and human society (see Wilson, 27-28; Petersen 2000, 37-38). Prophecy is distinguished from priestly activity by virtue of the former's focus on the conveyance of information rather than on cultic acts. Prophecy can also be differentiated from revelation per se or prayer, since prophecy assumes three parties (deity, intermediary and audience), while revelation and prayer require only two (deity, recipient of revelation/individual praying). Information can be conveyed from the divine to the human (most common) as well as from the human to the divine (consultation, intercession), while the form of communication between the deity and the intermediary varies (e.g., audible speech, vision, *divination in one form or another), as does the conveyance of information between intermediary and audience (e.g., oracular pro-

nouncement, symbolic act). Finally, intermediaries can authenticate their messages by performing divinely empowered acts, but the exercise of such power is not an essential element of intermediation.

With prophecy thus defined as intermediation (and prophets as intermediaries), one can easily explain why ancient Israel identified some persons (e.g., *Moses, *Balaam) as prophets but did not place all recipients of divine revelation (e.g., *Jacob) or religious functionaries (e.g., *Eleazar) in the same category. Such a definition also comports well with Yahweh's declaration to Moses, "I have made you like God to Pharaoh, and your brother Aaron shall be your prophet" (Ex 7:1). Moses (deity) is to reveal information to *Aaron (intermediary), who is then responsible to convey it to *Pharaoh (human audience). This definition also accounts for the presence of prophecy/intermediation within the other cultures of the day, a presence attested in ancient Near Eastern texts and in the biblical prohibitions of certain types of prophetic behavior (see 4 below).

2. The Ancient Near Eastern Context.

Space prevents a thorough discussion of prophecy within the ancient Near East (see Nissinen; Huffmon), but several points deserve mention. First, intermediation was a social reality throughout most of the ancient Near East during the entire biblical period and beyond. The most noteworthy examples are Mesopotamian in origin, including the various intermediaries of Mari (Middle Euphrates, c. 1750 B.C.) and the Neo-Assyrian Empire (seventh century B.C.), but textual remains make it clear that diviners, ecstasies and divinely authorized messengers also operated in the region of Syria-Palestine (e.g., Phoenicia, Hamath, Ugarit, Tell Deir 'Alla in Jordan). The picture with regard to Egypt is less clear, though it seems that intermediation there was restricted to, or at least dominated by, divination.

Second, ancient Near Eastern prophecy was, as in Israel, a multifaceted phenomenon. For example, intermediaries received information through various means, including visions, dreams, direct revelation and divinatory-type activities (e.g., observing the flight of birds, the shape of a sacrificial animal's liver, the alignment and movement of the stars and planets, or the slant of the statue of a deity). Likewise, inter-

mediaries could convey their messages orally or in writing (or both) and could do so in response to an inquiry or without any such request. Finally, intermediation in general was not a gender-specific role (though certain role labels seem to be associated more often with one gender than with another), as the evidence clearly attests the existence of both female and male prophets.

Third, the extant evidence generally associates ancient Near Eastern prophecy with the royal court or the ruling class (much as in Israel's later history), though not too much should be made of this. The evidence itself generally originates from the royal archives and thus tells us only what was taking place there, not what might have been happening throughout the rest of society. In addition, cross-cultural studies imply rather strongly that intermediaries operate at all levels of society (sometimes at the center of the power structures, sometimes on the periphery) and address matters as mundane as lost donkeys or as vital as a military campaign.

3. Individuals Functioning as Prophets.

Considering the widespread existence of prophecy/intermediation within the ancient Near East, it is no surprise to discover that the ancient Israelites identified certain persons as prophets. Sadly, little is known of the prophetic activity of some of these individuals. For example, *Miriam is labeled a prophetess (Ex 15:20), but the nature of her prophetic function remains entirely uncertain. Likewise, seventy of the elders of Israel are reported to have "prophesied" (or acted like prophets, meaning ecstatic or trance-like behavior? [see Parker, 275-77, 279-80]) when Yahweh took some of his spirit that was on Moses and put it on them. However, their prophetic activity was a one-time occurrence, never to take place again (Num 11:16-17, 24-30). Within the context, the author seems to be more interested in their divine enablement for service alongside Moses than in any particular prophetic behavior. In the midst of this uncertainty, the biblical description of three individuals—*Abraham, Balaam and Moses—helps us flesh out a bit the pentateuchal perspective on prophets and prophecy.

3.1. Abraham the Intercessor. If not for Genesis 20:7, few would consider labeling Abraham a prophet or intermediary. Still, the statement of

this one verse is clear. In it God tells Abimelech, “Return [Abraham’s] wife; for he is a prophet [*nābi*’], and he will pray for you and you shall live.” Nothing else in the Abraham cycle betrays specifically prophetic activity, so what should one make of this single enigmatic reference? Clearly Abraham is not to speak on behalf of God, since God is already speaking directly to Abimelech without an intermediary. Only two other interpretations seem possible.

The first connects the designation of Abraham as a prophet with the preceding clause: “Return the man’s wife *because* he is a prophet.” In this view Abraham is a holy man, one so imbued with divine power that he poses a risk to any who offend or assault him (cf. 2 Kings 2:23-25). However, Abraham is never labeled a “man of God” or “holy man” (Heb *’is hā’ēlōhīm*), which lessens the likelihood of this explanation (contra Skinner, 317; Ps 105:15 is often cited in support of this view, but it presents the patriarchs as anointed ones/prophets whom God preserved, not as holy individuals whose inherent power protected them from assault).

The second interpretation links the designation of Abraham as prophet more closely with the following clause: “Indeed, he is a prophet, and he will pray for you and you will live.” In this view Abraham’s prophetic role is to serve as intercessor (see Gen 18:17-33; Balentine, 170). If Abimelech returns Sarah, Abraham will pray to God and have God commute the death sentence currently standing over the heads of Abimelech and his household. Needless to say, this is not prophetic activity in its “classic” or defining sense, merely one possible manifestation of intermediation broadly defined.

3.2. Balaam the Seer. The picture is fuller but more complex with *Balaam, whom Balak, king of Moab, hires to pronounce curses on Israel (Num 22–24). Scholars often describe Balaam as a seer/diviner and exorcist (Moore), but it may be more helpful to eschew sometimes-unclear role labels and to describe the various aspects of Balaam’s intermediary activity.

First, Balak clearly regards Balaam as an individual in contact with and control over spiritual powers (i.e., an exorcist or, to use anthropological terminology, a witch or sorcerer; see Wilson, 23-25). Consequently, Balak repeatedly asks Balaam to curse Israel (Num 22:6, 17; 23:11, 13, 27; 24:10), assuming that whomever this holy man blesses will be blessed and whomever he

curses will be cursed (Num 22:6). In the end, Balak’s assumption is proven wrong as other aspects of Balaam’s intermediation come to the fore. (One might even argue that this type of activity is not, strictly speaking, prophetic intermediation, since the focus is on the use of spiritual power rather than on the communication of information. Still, most acknowledge a degree of overlap between the two activities.)

Second, both Balak and Balaam recognize that the latter engages in divination: the attempt to gain knowledge of the spiritual realm (e.g., the will of a god) through the observation of various phenomena or the performance of certain acts. For example, Balak sends envoys with “fees for divination” (Num 22:7) in order to enlist Balaam’s services. In addition, both Balaam and the biblical author allude to Balaam’s divinatory actions (Num 23:23; 24:1) during Balaam’s first two oracles. As before, however, the assumed intermediary behavior proves useless, as God restricts Balaam to two biblically authorized activities.

The third and fourth elements of Balaam’s intermediation are closely related. On the one hand, Balaam operates as a seer, one who is given revelation during the course of a visionary experience (Heb *hẓh* and *r’h*; Num 23:3, 24:3-4, 15-17; for Balaam as a *hōzeh* in the Tell Deir ‘Alla texts, see Balaam §1.2). On the other hand, Balaam communicates the contents of his vision in a manner similar to Israel’s “classic” prophets by proclaiming to his audience oracles (*nē’um*; Num 24:3-4, 15-16) or messages (*dābār*; Num 23:38; 23:5, 16) revealed to him or put in his mouth by God. In all likelihood, Balaam’s visionary experience entails some sort of trance (note the reference to falling down with eyes uncovered), but the emphasis falls more on the content of Balaam’s message than on the means by which it is gained. Thus, within the biblical context the fourth element of Balaam’s intermediation receives the greatest interest: Balaam’s announcement of God’s immutable will to bless his people Israel.

3.3. Moses the Prophet Par Excellence. There can be little doubt that Moses is the prophet of most interest to those responsible for the Pentateuch. Like Abraham, Moses is explicitly labeled a prophet (*nābi*’; Deut 34:10). Fortunately, the biblical evidence provides a good deal more information about Moses’ intermediation between Yahweh and the people of Israel. First,

Moses receives his prophetic messages directly from God and is instructed to deliver them to various audiences (e.g., Pharaoh in Ex 6:20-22; the Israelites in Ex 19:3; Lev 19:1-2; the Aaronide priests in Lev 21:1). Indeed, the manner in which Moses receives revelation (“face to face,” Num 12:6-8; Deut 34:10) distinguishes him from all other intermediaries. Second, Moses’ delivery of prophetic messages sets him apart from other intermediaries in the Pentateuch. Through Moses, God conveys both specific instructions (e.g., Ex 14:1-4; Num 9:1-5; 16:23-24) and enduring legislation (e.g., Ex 20:22—23:33; Lev 1:1—7:37) in both oral and written (e.g., Ex 24:4; 31:18; 32:15-16; 34:28) form.

In addition to performing the primary or defining intermediary roles, Moses also engages in several activities secondarily associated with intermediation. Thus Moses intercedes with Yahweh on behalf of the Israelite people on several occasions (e.g., Ex 32:7-14; Num 14:10b-25). In addition, Moses performs divinely empowered miracles and mighty deeds (e.g., Ex 7:8-24; Deut 34:11-12).

When viewed in its entirety, the biblical presentation of Moses as a prophet addresses every aspect of intermediation. Thus it is no surprise that Moses serves as the standard against which other intermediaries are measured. Unlike other prophets, who receive revelation through visions (*mar’ā*, from the root *r’h*) and dreams, Moses receives his divine messages directly from the mouth of God (Num 12:6-8). In this respect Moses clearly overshadows the other major prophetic figure in the Pentateuch, Balaam, who attempts to discern the divine will through divination and eventually relies on visionary experiences. As the prophet par excellence, Moses also serves as the model for prophets to come. According to Deuteronomy 18:18, God promises to raise a series of prophets (taking the verb as a customary or progressive imperfect implying a series of prophets, not merely one; see *IBHS* 31.3b§) to convey his will to his people but adds that these prophets will be “like” Moses. Little wonder, then, that one sees similarities between the OT depiction of Moses and the NT portrayal of Jesus in his prophetic role (see, e.g., Miller, 154-56; Merrill, 272).

4. Laws Regulating Prophetic Activity.

Within a context of such diverse prophetic behavior, the need to regulate intermediary ac-

tivity becomes acute. It is surprising, then, to note how little the Pentateuch says about legitimate and illegitimate behavior. Granted, certain types of intermediation are prohibited (see Divination, Magic; note, however, that use of the Urim and Thummin, a specific form of divination, is authorized [Num 27:21; Deut 33:8; 1 Sam 28:6]), and specific means of receiving revelation are valued more highly than others. However, apart from several fundamental restrictions, prophetic behavior is left to the leading of the spirit and the expectations of the audience.

4.1. Deuteronomy 13:1-5. The first legislation concerning prophets forms a part of a larger series of commandments prohibiting any Israelite from advocating the worship of a god other than Yahweh (Deut 12:32—13:18). The listing of prophets (*nābi*) or dream-diviners (lit. “a dreamer of dreams”) is surely not comprehensive but is intended to offer both ends of the prophetic spectrum and thus include any type of intermediary. No matter what type of authenticating sign an intermediary might offer, the Israelites are not to listen to such a one if he or she “prophesies” that the people should follow other gods. Instead, such a one is to suffer the same fate as anyone promoting apostasy—death. In short, the defining characteristic of a genuine prophet of God is not the ability to perform awe-inspiring acts but rather faithful communication of God’s word to his people, a function that is spelled out in greater detail in Deuteronomy 18.

4.2. Deuteronomy 18:15-22. This passage offers a more complete listing of illegitimate and legitimate prophetic activity and even provides a way for Israel to identify unauthorized prophets who are engaged in legitimate prophetic behavior. Verses 9-14 begin the section by prohibiting certain types of intermediation practiced by the Canaanites (and other ancient Near Eastern peoples). The list of proscribed activities is difficult to sort out, especially since some of the terms are obscure and others appear to overlap, but the text seems to have two general categories of prohibited activities in view. First, the biblical text outlaws divination in general as well as specific types of divinatory activity: child sacrifice, perhaps performed in conjunction with a specific divinatory rite (see Merrill, 270-71; 2 Kings 17:17; 21:6); soothsaying (meaning of the Hebrew uncertain); and augury (divination from omens or portents). Second, the text prohibits

activity that seeks to exercise power or control over the spirit world. Such behavior includes sorcery (perhaps the exercise of malevolent power through the manipulation of objects), the casting of spells (i.e., witchcraft), and consultation of spirits, ghosts or the dead. That this categorization fairly represents the thrust of the passage is supported by the closing statement in verse 14, that the people the Israelites "are about to dispossess do give heed to soothsayers [the second category] and diviners [the first category]."

After outlining prohibited forms of intermediation, the biblical text turns its attention to an authorized form, namely, prophets after the pattern of Moses (see 3.3 above). Specifically, Yahweh will raise up a series of prophets "like" Moses (Deut 18:15, 18) and will place his words in each prophet's mouth. Of course, this presents Israel with a problem: How can one determine if a prophet speaking in Yahweh's name is lying, deluded or telling the truth? Verses 21-22 offer a solution: if a prophet's declaration of Yahweh's intent does not take place, the prophet has spoken on his or her own and should not be feared but rather killed. One should note that the prophetic message in view here is no mere prediction of the future but is, in fact, a statement of Yahweh's future plans. In addition, as simple as the "test" sounds, it is difficult to implement during moments of crisis. That is, it works only when people can wait to make a decision about the authenticity of a prophet's message. When, however, a prophet calls people to follow a certain course of behavior in order to avoid some future catastrophe, the audience must decide beforehand and then live with the consequences of their choice (see Jer 28). Fortunately, the larger biblical context consoles its readers with the assurance that those who doggedly seek the face of Yahweh and struggle to hear his voice will, in the end, not be disappointed.

RAINBOW

A colorful rainbow in the sky is regarded by many as a symbol of beauty. Informed by modern science, we know a rainbow is the reflection and refraction of sunlight through a mist or curtain of falling rain, which produces an arc displaying a prism of colors. In the Bible the rainbow is mentioned in association with rain, clouds, storms and visions, but the most memorable instance is associated with the conclusion of the great flood narrative of Genesis 6—9.

In many ancient cultures (as in traditional cultures of today), a rainbow was regarded along with other natural phenomena—such as eclipses, earthquakes and comets—as a sign or portent of something good or bad. A rainbow was a symbol in the language of the gods, and its meaning might well be disclosed in an etiological tale imbued with myth. The ancient Roman writer Pliny, though offering an explanation of the phenomenon from nature, was still captive to this worldview, maintaining that the rainbow portended a cold winter or even war (Pliny *Nat. Hist.* 2.60). From within the context of these ancient worldviews we should seek to understand the rainbow of Genesis 9:13-16.

1. A Covenant Sign
2. Ancient Near Eastern Parallels
3. Later Interpretations

1. A Covenant Sign.

The rainbow first appears in the biblical text at the conclusion of the story of the *flood (Gen 9:1-17). It is the sign of the *covenant that God makes between himself and *Noah, the living

creatures and the earth for generations to come (Gen 9:12-13). God declares his intention never again to allow the waters to become a flood in which all life is destroyed. God specifically claims the rainbow as his and emphasizes that it is he who sets it in the sky (Gen 9:13).

It is noteworthy that the rainbow serves in the first instance as a reminder to *God* of his *promise, an everlasting promise between himself and all creatures of the earth (Gen 9:16). The rainbow represents God's initiative, for it speaks from God to man. As D. J. A. Clines has noted (1978), the flood represents an "un-creation" of the original *creation, a rending of the firmament that held back the heavenly waters and an eruption of the fountains of the deep that were retained beneath the earth. The work of separation and distinction that so characterizes the Genesis 1 creation account is undone in an act of cosmic judgment. The conclusion of the flood evokes a theme of re-creation, accented in God's covenant and blessing of Noah, which echoes God's earlier blessing on the man and woman (cf. Gen 1:28; 9:1). It is significant that the sign of the covenant associated with this re-creation, the rainbow, is a unique and auspicious feature of the creation—and open for all to see. Intimately associated with the storm, rain and cloud of destruction, the "rainbow in the cloud" is now newly interpreted as a sign of God's commitment to his creation, a covenant that God is solely responsible to uphold.

As the first of God's covenant signs in the Bible, the rainbow provides a key to understanding many subsequent signs. A sign points to something larger and beyond itself. The rainbow, a divine covenant sign, joins other covenant signs like circumcision, sabbath, baptism and Lord's Supper, which are God-initiated. God both speaks to his covenant people in signs and

confirms his words with additional signs throughout the biblical corpus.

2. Ancient Near Eastern Parallels.

The extant flood myths of the ancient Near East do not have a direct parallel with the rainbow, but there is one correspondence that merits notice nonetheless. In the Epic of Gilgamesh, at the conclusion of the flood, the hero makes a sacrifice to the gods. When the great goddess arrives, she lifts up the magnificent lapis lazuli necklace from around her neck and announces, "You gods here, as surely as this lapis upon my neck, I will not forget, I will be mindful of these days, forgetting them never" (Gilgamesh 11.160). In this case a sign is given of the goddess's enduring remembrance of the event, and the lapis necklace provides a colorful counterpart to the rainbow.

The Hebrew *qešet* can mean either "rainbow" or "bow," a weapon for warfare or hunting, and we can readily see the resemblance (preserved in our English *rainbow*) between the two. In literature throughout the ancient Near East, the bow speaks of male strength (cf. Gen 49:22-25). The quiver full of arrows and the taut bow symbolize the virility of warriors in Mesopotamian literature. A Hittite curse on armies involved removing the warriors' bows and arrows—thereby emasculating them—and making them dress as women. Breaking the bow of a warrior came to symbolize the signing of a treaty between parties.

3. Later Interpretations.

Rabbinic commentators speculated regarding the rainbow. Nahmanides believed the rainbow existed before the flood but was not assigned as a symbol to serve as a promise to man and as a reminder to God until after the great deluge. But Ibn Ezra differed, saying the account in Genesis 9 chronicles the appearance of the first rainbow (*Encyclopedia Judaica* 13.1524-25).

By one rabbinic account, the rainbow was created on the eve of the sabbath at twilight (Pes. 54a). Elsewhere people are warned not to gaze directly at a rainbow since it reflects the glory of God (Ezek 1:28; Hag 16a). Some rabbis advocated falling down on one's face as Ezekiel did when he saw a rainbow (Ezek 1:28), but others discouraged this practice since it would appear as if one were worshiping a rainbow (*Encyclopedia Judaica* 13.1524-25).

The rabbis approve a blessing upon seeing a rainbow, however. People are encouraged to stop and say, "Blessed are Thou, O Lord our God, King of the Universe, who remembers the covenant, is faithful to His Covenant, and keeps His promise" (Ber. 59a). They add that this blessing is to be recited even if a rainbow is seen twice within thirty days.

M. Luther linked God's promise that no future flood will cover the earth with "God's extraordinary affection for mankind." Luther writes that God is trying to persuade mankind via the rainbow not to fear a punishment like a flood but to hope for a blessing and for the utmost forbearance from the Lord (Luther, 2:145). J. Calvin agreed with Luther that the rainbow is a sign of "the wonderful kindness of God, who for the purpose of confirming our faith in his word does not disdain to use such helps" (Calvin, 1.298). T. E. Fretheim expands on these views when he states that the rainbow had existed before the flood "but was now filled with new significance for the future" (Fretheim, 400).

The rainbow itself lends itself to much figurative interpretation. It bridges heaven and earth and symbolizes peace. Writing on Genesis 9:12, Nahmanides says that the bow pointing downward, like a warrior lowering his bow, declares peace.

RED HEIFER

The corpse-decontamination ritual performed by *Eleazer, *Aaron's son, involving the ashes of a red heifer (or cow) mixed with spring ("living") water and sprinkled upon persons or objects to be purified is described in Numbers 19:1-22 and applied in Numbers 31:19-24 in the case of soldiers and captives returning from war. This ritual allowed a corpse-contaminated layperson to be restored to a state of purity, enabling full participation in the religious life of the community. Nazirites and priests required separate purification offerings for corpse contamination (cf. Num 6:9-12; Ezek 44:26-27).

1. Description of Ritual
2. Significance
3. Critical Views

1. Description of Ritual.

1.1. Animal Requirements. The cow had to be without blemish and, being dedicated to God, never previously yoked for profane use (Num 19:2), evidently a young animal. "Red" presumably refers to the hair rather than the skin, although the latter has been suggested (cf. Brenner, 63). The exact shade of red and its significance is debated. A common interpretation is that red (Heb *'ādumma'*) is the color of blood (Heb *dām* ["blood"]), possibly cognate) and anticipates the ritual use of blood (Num 19:4) essential for purification. Or red could anticipate its being burned in the reddish fire (Num 19:5-6). The Mishnah, which dedicates tractates *Parah* and *'Ohalot* to the red heifer and corpse contamination, emphasizes the rareness of a totally red cow: "If it had two black or white hairs [growing] from within a single hole, it is invalid" (*m. Parah* 2:5). Accordingly, certain modern Jews interested in restoration of sacrificial worship are attempting to breed pure red cows (Schemann). A. Brenner (64-65), on the other hand, argues that the color here is bay or reddish brown, a more common color. She discounts the rabbinic sophistry on black and white hairs and, due to the text's silence, any symbolic connection with either blood or fire. Why then specify the color? Connecting the color with blood, symbolically adding more "blood" to the ashes (Milgrom 1990, 158), appears the more acceptable interpretation. The crimson yarn and the (red) cedar (Num 19:6) serve the same symbolic function (Milgrom 1981, 65), as well as adding bulk to the ashes. The blood in the ashes contains the cleansing power.

1.2. Nature of the Sacrifice. Is this a sacrifice or a profane slaughter, and if a sacrifice, what kind (Wright 1992, 3:115)? Milgrom argues that Numbers 19:9 should be rendered, "It is a *ḥaṭṭā't* [i.e., a purification offering]" (cf. NRSV, REB). Many English versions regularly render "for removal of sin" or the like (e.g., RSV, NIV, NASB). The translation "sin" is problematic, since contamination by removing a corpse from a tent (Num 19:14) involves no "sin." Therefore the *ḥaṭṭā't* offering is better rendered "purification offering" rather than "sin offering." Profane slaughter is problematic, since the ritual is supervised by Eleazer the priest. Part of the confusion lies in this *ḥaṭṭā't* offering being completely burned to ashes—skin, flesh, blood, dung—whereas elsewhere it is the *'ōlā* ("burnt offering") that is so burned. Moreover, unlike other sacrifices, it is slaughtered outside the camp (Num 19:3) rather than at the altar.

1.3. Why a Female? Why does this ritual specify a female cow? Milgrom (1981, 65) plausibly suggests that a bull could not be used because that was the purification offering for the high priests (Lev 4:1-12; 16:11) or the community (Lev 4:13-21) rather than individual Israelites.

1.4. How the Ashes Cleansed and Defiled. Like the Day of *Atonement *ḥaṭṭā't* offering, any priest who handled it became unclean (Num 19:7-10a, 21; cf. Lev 16:28), even as it purified its recipients, as if impurity being absorbed into the cow contaminated its handler (Milgrom 1990, 441). Touching or even being in the same room as a corpse (Num 19:11, 14), handling human bones (rearranging bones in a tomb was common practice) or touching a grave transmitted uncleanness. Being contaminated by war killings, the whole army (not just ones who actually touched corpses) and its war captives also required purification after battle (Num 31:19-24). The purification ritual took seven days in which the purifying waters mixed with ashes were sprinkled onto the contaminated person, using hyssop branches on the third and seventh days (Num 19:12, 19; 31:19). Hyssop, associated with other purification rituals, was also considered a purifying agent, burnt and mixed with ashes of other purifying agents: the cow, the cedar and the scarlet thread (Num 19:6). Ritual cleansing applied also to objects contaminated by a corpse: unsealed vessels in the same room, the tent, its furnishings (Num 19:15, 18), clothing, hides, goat's hair, wooden objects (Num 31:20).

All that would not be destroyed was cleansed with fire (Num 31:22-23), but the rest with the waters of purification. The ritual ended with washing clothes and bathing with water on the seventh day (Num 19:19; 31:24). Those who refused to undergo the rite were “cut off,” or excommunicated, from the community and Yahweh’s sanctuary, which their uncleanness defiled (Num 19:13, 20).

2. Significance.

2.1. Relationship with the Purity Laws. This regulation fits into the larger matrix of laws of purity and impurity that required anyone contracting uncleanness to avoid that which was holy and to take steps to return to a state of purity lest the sanctuary be defiled (Num 19:13; cf. Num 5:2-4; 31:19). This system symbolically conveyed the extreme holiness of God and the unavoidable contamination of human beings, probably symbolic of human sinfulness (“uncleanness” can be used metaphorically for sin), so those who approached God would be ritually and morally cleansed. It also showed Yahweh’s association with life and separation from anything associated with death. Minor lessons included showing that war, even under Yahweh’s command, nonetheless brought uncleanness and that necromancy and ancestor worship were incompatible with Yahweh worship (Sprinkle, 100-101).

2.2. Typology and New Testament. The NT often observes analogies or correspondences between OT persons, institutions or events and similar NT persons, institutions or events, as if the former (the “type”) foreshadowed the latter (the “antitype”). Hebrews 9:13-14 in this manner connects the outward purification through the red-heifer ritual of those defiled by dead bodies that allowed renewed contact with the sanctuary with the blood of Christ that inwardly cleanses the Christian’s conscience from “dead works,” that is, from practices belonging to the way of death, and allows the Christian to serve the living God. Thus the writer of Hebrews uses the red-heifer ritual to illustrate the work of Christ. Similarly, though the NT makes no explicit connection, Dozeman (152) finds in the red-heifer ritual’s purging of death-contamination from the camp a foreshadowing of the purging of death itself in the coming messianic kingdom (cf. Rev 20:14; 21:4).

3. Critical Views.

The Wellhausen school assigns this material to

P and questions whether Numbers 19 is an original unity or has come about by a process of supplementation (see Budd, 209-12, for a summary of views; Dozeman, 150, for the view that Num 19:10b-13 are secondary; Wright for the view that Num 31 is a supplement to fill omissions in Num 19). Scholars speculate whether the pericope originated in pre-Israelite exorcism and magic (Milgrom 1990, 443) or pagan burnt offerings (Wefing, cited by Wright 1992, 116) or in opposition to pagan cults of the dead (Levine, 472), though direct evidence for any of these speculations is lacking.

RELIGION

In the Pentateuch, as throughout the OT, religion is attention to God, who is the one governing force outside the natural world with which humanity must deal. More precisely, it is every facet of the relationship between God and his human creation. For our purposes here, the particular focus will be the whole range of activity and ideas that shape the maintenance of the bond between God and his people. To study the religion of the Pentateuch as such, we must accept the biblical bounds of our object, which is by nature literary. This is not “the early religion of Israel” but the religious aspect of the first five

books of the Bible, which are framed by their final goal, the instruction given through *Moses for the life of God's people Israel in their Promised *Land. In recognition of this priority, we will begin with Moses and only then work backward in time to Genesis.

1. Writing a Religion of the Pentateuch
2. The Religion of Israel Under Moses
3. Before Moses: The Book of Genesis

1. Writing a Religion of the Pentateuch.

1.1. *The Pentateuch.* A review of "the early religion of Israel" would incorporate the Bible into a larger evaluation of independent evidence from *archaeological excavation and other writing. For these to be identified securely with Israel, however, we would require some confirmation, necessarily written, that any given site and time are Israelite. No such direct evidence exists for the world of the Pentateuch, before Israel settled in the land. Indeed, we do know quite a lot about the region in this period, so that the setting offered by the biblical books can be considered in light of an increasingly intelligible context. Nevertheless, the Bible's portrait of how Israel began, and how its religion first took form, must for the present stand on its own.

Because the Pentateuch's account of Israelite beginnings, with occasional echoes elsewhere in the Bible, still lacks any direct external check on them, it should not be surprising that their picture of earliest Israel is controversial. The biblical rendition is easily attributed to much later people, whose legends and legal traditions say much more about their own times than about the older setting they describe. Rather than attempt here a dogged and distracting defense of our solitary source, I have chosen to offer an alternative without proof. This exploration proceeds with constant reference to the ancient setting as we know it from other evidence, while asking at every point how this religion might be understood as part of earliest Israel if we try out the historical framework offered to us. The reader should recognize both the conscious choice to take seriously the ancient setting and the severe criticism of this approach in the larger scholarly community.

1.2. *Religion.* In general, the religion of the Pentateuch is the affair of an entire community, whether the extended households of the patriarchs or the entire people of Israel under Moses. Certainly it touches familiar categories such as

worship or prayer and praise, but the spoken elements of religion are fairly peripheral to these books, and the remaining category of worship is terribly inadequate to the perspective of these books. Religion is not simply what the people bring to God but incorporates everything that relates to the bond itself. Religion here is a fabric of what is said and what is done, what is believed and how it is followed up concretely for maintaining an unbroken life with God. In its pentateuchal frame, Israel's religion involves both patterns for ongoing use, such as forms for offering or feasts, and a succession of changing circumstances, life with God unfolding through time.

One important development in study of ancient religion has been recognition of the fact that it never represented a uniform whole, the same for everyone. What was thought or practiced was rarely the same in a capital city and in a distant village, even under a single ruler. The first cut in discerning such variety has often been separation of "official" from "popular" religion, where the first sets certain norms according to the interest of the elite, and the second serves its own idiosyncratic needs, which often leads to a messier combination. The educated elite and those who hire them provide most texts, including the Bible, and so they present a rather one-sided view of the religious landscape. Popular religion may be carried into texts by vehicles such as personal names (e.g., Jonathan, "Yahweh has given"), or it may be discerned independently in excavation of private homes, by the religious artifacts found inside (e.g., figurines of deities, protective amulets).

While this sensitivity to variety advances greatly our understanding of Israel and the Bible, we need to avoid another oversimplification that may come with it. Actual experience would not have divided official from popular religion in absolute terms, as if they were mutually exclusive. Ancient people participated in religion in different spheres, as we do today. National *festivals united people into a larger community, with heightened influence for political leaders or professional clergy. Birth, *death and marriage revolved around the household, as it touched a more limited circle, and would involve only local *leadership, if that. Individual need would provoke prayer that might or might not be pursued in the institutions of the people at large.

Within this web of living religious practice, all authority will hope to influence the widest

possible range of social settings, including even the private affairs of individuals and households. The Torah or “instruction” of Moses is preoccupied with the collective business of the people with their God, but it makes many personal demands, epitomized in the Ten Commandments (*see* Decalogue), which are concerned with what takes place in each family. Even so, we must recognize that the Torah of the Pentateuch is still highly selective and leaves large swaths of Israelite life untouched. The ritual aspect of family transitions is almost ignored: birth, passage to adulthood, marriage and death, not to mention prayer for medical or other physical needs.

On the other side, we find no ritual to celebrate the state as such, no royal enthronement or the like. The Torah is satisfied to penetrate every level of Israelite society with certain nonnegotiable norms: especially the worship of Yahweh alone, without help of images. As the rest of the Bible shows, even this core was not at all easy to maintain, and the history of Israel is not one happy celebration of Mosaic instruction.

2. The Religion of Israel Under Moses.

At the center of the Pentateuch stands the bond between Israel and its God, established and nurtured under the *covenant and instruction communicated through Moses. The Pentateuch tells the story of how God brought Israel into being, but it also presents the instruction itself as a point of reference for the generations of Israelites who would live by it. This Torah defines Israel above all in religious terms, as a people under God, with little interest in what government may rule them. This is the best starting point for discussion of religion in these books.

2.1. *The Religion of the Pentateuch as the Religion of Moses.* The Pentateuch is constructed from its end point, as the books of Moses, with Genesis already anticipating Israel in the Promised *Land. The goal is to bring us there, to explain to us how this accomplished fact came to be. One reflection of this is the scheme of “lasting covenants” that proceed from *Noah after the *flood (Gen 9:16), to *Abraham as he waits for his *promised son (Gen 17:7) and at last to Israel’s observance of the *sabbath (Ex 31:16). In Genesis, God promises the patriarchs a land of their own and children to fill it, with a steady gaze toward fulfillment in the books to follow.

The religion of the Pentateuch is the religion

of Moses, both by authority and by setting in history. The Torah of Moses is not offered as an undisciplined collection but is built into the story of how God prepared Israel to be “a kingdom of priests and a holy nation” (Ex 19:6). By blending instruction and story, the Pentateuch insists that Israel has always been accountable to the commands of God contained in it, not merely that these instructions came through the authoritative lips of Moses. Given to Moses at the beginning, they are not presented as what Israel actually observed through its life in the land but as the measure of all that follows.

2.2. *The Written Form.* While the whole Pentateuch has come to be associated with Moses, the books of Moses more literally are Exodus through Deuteronomy, which open with his birth and conclude with his death. Genesis is almost completely devoted to the storyline, excepting various lists, but the books of Moses are dominated by the instruction that occupies a large fraction of all four. At the same time, none of the books escapes the narrative thread that traces the life of Moses.

Even Leviticus picks up the directions for ordination of the first *priests from Exodus 28—29 and describes the actual event in Leviticus 8. With each reminder of Israel in the *wilderness, the Torah is shown not to be timeless but to have been provided at a particular historical moment to prepare the people for life in the land. Of course, this priority of covenant instruction before Israelite history is widely discounted.

2.2.1. *Sinai and Pisgah.* The instruction of Moses is famously associated with Mount Sinai (or Horeb), where Israel first encounters Yahweh in the southern wilderness after their escape from *Egypt. Almost all of God’s instruction to Israel in the books of Exodus, Leviticus and Numbers is placed at Sinai (Ex 19:1—Num 10:11). At the foot of the mountain, God and Israel enter a formal bond called a covenant (Ex 24:1-8). On Israel’s side, this covenant requires obedience to all the commands given to govern their life together as the people of God. Interestingly, there are a few stragglers, clearly related to the Sinai *law (compare the festivals in Lev 23 and Num 28—29), but left as generic command. Also, the core instructions for the celebration of Passover are presented with the protection from death before the *exodus (Ex 12:1—13:16), not at Sinai.

The Torah of Moses includes a second body of instruction that is associated with the very end

of Moses' life, when Israel is camped in Moab, across from Jericho. The style of this instruction in Deuteronomy is fresh and different, gathered as a long farewell address from Moses to the people, presented in a form calculated to persuade future generations to keep faith with God. As at Sinai, the people are enjoined to enter a covenant with God, this time to be renewed as soon as they are established in the Promised Land (especially Deut 27—31).

The association of both Torah-giving episodes with the covenant is underlined by the blessings and curses set before the people with each, in Leviticus 26 and Deuteronomy 28. Unlike the Sinai Torah, the instruction of Deuteronomy is given entirely in Moses' own voice, and this contrast parallels the role of a second and much less famous mountain in Moses' farewell, called Pisgah. God's only direct words to Moses in Deuteronomy are also spoken to him on the mountain, this time Pisgah, where God shows Moses the whole land and renews his promise that it will be given to Israel (Deut 34:1-4; cf. 3:26-28). At Pisgah, God's business is with Moses alone, and this mountain facing Israel epitomizes the oddity of a national tradition with a founding leader who never set foot in Israel and who lacked even a burial site in the land he is said to have established.

Although the stay at Sinai overlaps the books of Exodus, Leviticus and Numbers, the definition of each book as such remains important, and each highlights a different feature. The Ten Commandments and the social code attached to the covenant ceremony take pride of place in Exodus (Ex 19—24), which then celebrates the manufacture of God's mobile sanctuary, the *tabernacle (Ex 25—31; 35—40). Leviticus is centered instead on the holiness of the people themselves, to be maintained by offerings to God and by the purity of each household at every level. This book shows a particular interest in the sons of *Aaron, the priests who oversee safe contact between the people and a *holy God. The long lists that begin the book of Numbers serve to order the people for travel to the Promised Land with God in their midst, in the tabernacle.

Deuteronomy stands apart, at the other end of the journey to the Promised Land, as Moses' last word to his charges. It consciously builds onto the Sinai law, but just as its mode of speech is different, so also is its entire interest. All the law anticipates life in the new land, but in Deu-

teronomy the land becomes the whole focus. The land was the intended goal from the first (Deut 1:8), when they turned back in fear; it is now to be *Joshua's immediate objective (Deut 3:28), and obedience in the land is the point of this last instruction (Deut 6:1-3). Moses' last act is to view the land from Pisgah, where God promises once again, "This is the land I pledged to Abraham, to Isaac and to Jacob, saying, 'To your seed I will deliver it' " (Deut 34:4).

2.2.2. Moses and Authority. The teaching of the Pentateuch is dominated by the authority of one human voice, that of Moses. Moses represents something new in the progress of Israel. Through the time of the patriarchs, God approached those with whom he had business directly. Now that Israel has become a large people, they are no longer led by a father, as an extended *family, but by a leader selected from their midst. God chooses the first leader himself, and that intimate interchange with God becomes the identifying characteristic of Israel's first human ruler.

Moses is no mere king who governs by inherited authority or military prowess. He does not even govern because God assigned him the office but rather because God gave him a task: to lead Israel out of Egypt. In this role, he requires constant guidance, and with Moses God enters a relationship of unprecedented intimacy, based on regular communication that goes far beyond the occasional contact allowed the patriarchs. Moses needs no angel but speaks to God "face to face" (Num 12:8; Deut 34:10) and is given the privilege of a direct glimpse of God (Ex 33:18—34:7).

Based on his leadership in the exodus, Moses becomes the *de facto* ruler of Israel, as seen in his exercise of judgeship in Exodus 18. He supervises the covenant ritual of Exodus 24:1-8, but God has him appoint his brother Aaron as future priest in charge of such offerings. Because Moses brings to Israel the words of God, he is compared to a *prophet (Num 12:6-8; Deut 18:15, 18; 34:10), but this title does not account for his leadership. Also, the "instruction" (Torah, law) that Moses bears is more than God's response to one situation; it offers lasting guidance for life as his sacred people.

All this is unique to Moses, not a permanent role created in the Torah. Joshua inherits the responsibility to lead the people into the land, but without the intimate contact with God and the authority that accompanies it. Moses' special au-

thority suffuses the Torah, and with it the Pentateuch that takes its Hebrew name from this “instruction.” No body of written divine ordinances is included in the Bible except under the aegis of Moses, and the lasting effect of pentateuchal instruction is founded on his relationship with God.

On their own terms, the books of Moses do not derive their authority from full attribution of the writing itself to Moses, but they seem to be built around his collected records. The written covenant itself is said to have been stored inside the ark (*‘ēdut* [“witness”], Ex 25:22; 40:20). Two shorter documents are incorporated with citation of Moses’ role in recording them: the report of Israel’s victory over Amalek at Rephidim (Ex 17:14-15), and the itinerary for Israel’s full journey to the Promised Land (Num 33:1-2). Finally, the essential document for Deuteronomy, called “this instruction,” is said to have been written by Moses and given to “the Levite priests” and the elders of Israel, to be read at the autumn feast of Sukkoth (Booths) every seventh year (Deut 31:9-10; cf. Deut 17:18, the king’s copy). This last practice, while commonly dismissed as a postexilic invention, now matches exactly the calendar of the primary festival celebrated at the inland Syrian town of Emar around 1200 B.C. According to Deuteronomy 31:24-26, this final Torah is to be deposited not inside the ark but beside it.

Although early Jewish tradition already regarded the books of Genesis through Deuteronomy as a unit, linked especially by the centrality of Moses in the formation of Israel as a nation, this Pentateuch is built into a larger history of Israel that continues into the book of Joshua and on through Judges, Samuel and Kings. As a story of Israel’s establishment in the land, the Pentateuch is incomplete without the invasion recounted in Joshua. Joshua then begins a long compilation of tales and records that trace God’s dealings with Israel through its whole existence as a sovereign people, culminating in Babylon’s final dismantling of the kingdom of Judah in 586 B.C. Inclusion of the Pentateuch in a literary work that brings us to the dissolution of Israel means that, in the end, the instruction of Moses is to be read by Israel’s descendants, people who must find their identity in a heritage that transcends political independence and occupation of the once-Promised Land. The religion of Israel under Moses, when the people encountered God outside that land, is to be a model for

a new generation that must likewise find God beyond the borders of Israel.

2.3. *The Tabernacle and Its Staff.* At the center of Israel’s practice of religion, as defined in the books of Moses, stands the tabernacle and its sacred personnel. This therefore represents the logical starting point for a closer look at religion in the Mosaic Torah.

2.3.1. *A Mobile Shrine.* The religion of Israel from Sinai to its entry into the Promised Land revolves around a single formal sanctuary and its affiliated institutions, which display one remarkable feature when compared to known ancient evidence. They are not attached to any sacred place, such as Sinai or Jerusalem. This sanctuary exists for life on the move. What is surprising is not simply the moveable tent but the establishment of a formal staff for its service and rites, otherwise known only for fixed temples and shrines.

The tabernacle was created specially for worship by a people on the move, and the use of a mobile tent shrine should not be considered a novelty to Israel as described in the Pentateuch, as if the mobile way of life was new to the people of the exodus, only occupying forty years in the desert. Before they settled in the Promised Land, Israel was a shepherd people, and we should not imagine their use of Egypt as a base to have changed this. Although Israel finds itself forced into sedentary slavery in the generation of its departure (Ex 1—2), the last thing we were told about *Jacob’s family is that they continued to live as wide-ranging shepherds (Gen 46:31—47:6). The land of Goshen in Egypt should not be understood as the fixed pasture for Israelite flocks but as a new home base for shepherds who still travel seasonally in the eastern interior.

Moses’ flight to Midian assumes this old pattern. Palace upbringing aside, Moses retreats to the shepherd life his people already know. In the Egyptian Tale of Sinuhe, the hero likewise flees toward the land of Canaan (Retenu), but to circles that compare to his high position in the *pharaoh’s court. Sinuhe becomes the powerful military commander for “the ruler of Upper Retenu,” with a wealthy estate of his own. Moses, however, settles into life as a far-ranging shepherd, like his ancestors, and meets God at Sinai while grazing the flock in distant regions. For this style of pastoralism, we should remember the account of *Joseph traveling to find his distant brothers in Genesis 37:12-17. Responsibility for the flocks falls to the older brothers, as this is

the principal family wealth. In the story of David's anointing, by contrast, the older brothers are ready at hand near home, while the youngest is left with the inferior task of herding the sheep, relatively near the house (1 Sam 16:1-13). The family inheritance depends above all on the fields, where the primary heirs are found.

The exodus and the time in the wilderness appear to return Israel toward the east along their old routes, to shift their base once more. In having them build a tabernacle, God allows the people to maintain their old identity, defined by relationship to one another rather than by place. The tent itself belongs to mobile people who are accustomed to spending part of the year on the move. Its structure of hides, cloth and wooden poles reflects nomadic habits. The arrangements for carrying the ark, the table and the *altar with poles (Ex 25:12-14, 26-27; 27:6-7), as well as the teams of porters for the tabernacle frame and coverings (Num 1:50-53; etc.), show more than a vague idea of putting God in a desert tent. Transfer of the shrine from one camp to the next is part of its essential form.

All the key artifacts of the tabernacle shrine are portable as well, in practical terms. The ark, the table, the lamps and all other paraphernalia are constructed for genuine mobility. When the ark is in motion, the process of changing camps becomes a sacred procession, a common feature of ancient religion but known mainly by association with fixed towns and their temples. In these settings, processions represent the most accessible public element of religious celebrations, the one time when the gods emerge from their guarded space and invade the domains of everyday living. With Israel, God does not visit their neighborhoods, but he joins them in search of a whole new home.

2.3.2. Priests but No Kings. After he superintends the ritual for the covenant at Sinai in Exodus 24:1-8, Moses passes his priestly function on to his brother Aaron, in conjunction with the building of the tabernacle. The ruler of Israel has no role in leading its worship, even when Moses himself enjoys an unparalleled access to God. Israel's religious life with the tabernacle excludes the political ruler to a remarkable degree. Even though the later kings at Jerusalem are still kept at some distance from the center of worship, their influence is visible in David alone. David takes the initiative to move the ark of God to Jerusalem, his new capital city, where

its religious authority can undergird his fledgling reign, and he leads the procession to and sacrifice at its new site (2 Sam 6). Such a ritual role is common to most kings of the ancient Near East.

According to the instruction of Moses, this centrality was not part of earliest Israel. It is commonly supposed that the prominence of Aaron in the tabernacle ordinances reflects the new political power of the high priest after the return from exile, under Persian rule. In fact, Aaron's role is purely ritual, and Moses' instruction will not explain any later period of wider influence.

2.3.3. The Sons of Aaron and the Levites. The core of the Pentateuch is the Sinai Torah, genuine "religious" writing, so why is it such difficult reading? It is not devotional but professional, and its primary audience was the group responsible to oversee the ritual maintenance of the bond between Israel and its God. In this aspect of the Pentateuch, we see the religion of priests, known by writing for priests, who are together established as a lasting institution. A community of sacred workers for permanent employment at a mobile shrine is otherwise unknown to us in the ancient Near East, though very little from such institutions would tend to survive for our perusal.

Two main groups are defined in the tabernacle ordinances. The Levites claim inheritance in Israel as a full tribe going back to Jacob himself. Moses and his brother were descended from *Levi, and the separation of Aaron's descendants for special service as priests produces a much smaller class.

The Levites are first of all given the physical care of the tabernacle, especially for its repeated dismantling and setting up, with portage in between (Num 3—4). Once in the land, however, it seems that this charge will no longer be necessary, and the Levites are to disperse to towns donated by the remaining tribes (Num 35:1-5; cf. Josh 21). After this, they become hard to track. Deuteronomy regards them as vulnerable, surely because they hold no tribal land of their own and are collectively in a weaker economic position (e.g., Deut 16:14, at festivals; 26:13, charity from tithes). At the same time, however, Deuteronomy doggedly reminds the reader that the higher-status priests who oversee the place of *sacrifice are still Levites themselves and must share the resulting wealth with indigent brethren.

ren who come willing to work (Deut 18:1-8; cf. Deut 17:9, 18; 21:5; 27:9; 31:9).

It is difficult to know what became of the Levites after arrival in the land. With Joshua, the ark is carried by priests, only once identified as Levites (Josh 3:3). When the ark finally reappears at Shiloh with Eli the priest, Levites come on the scene only to move it after capture and return by the Philistines (1 Sam 6:15). They retain a religious authority, but not linked to service with the ark shrine, as evident in the renegade Levite who becomes the priest for Micah's images in Judges 17. The books of Chronicles show particular interest in their Jerusalem service (e.g., 2 Chron 23, with Jehoiada).

The sons of Aaron are an entirely different matter, commissioned specifically to live with the ark and its tabernacle and to receive their income from the offerings made there (e.g., Lev 7:28-38). The law of Deuteronomy is not concerned with their lineage from Aaron but rather to remind them of their solidarity with their larger Levite kin, and the history that follows, from Joshua through Kings, continues to respect priests mainly for their current office, without interest in blood lines from Levi or Aaron. In the tabernacle law, the sons of Aaron function with small numbers. They oversee all sacrifice and offering (Lev 1—7) and make judgments about the purity of the people, their possessions and their dwellings, based on the condition of the surface in question (Lev 13—15). Once in the Promised Land, the second task would be much more difficult to carry out, because of distance, unless actual need was rare. There is no mention of it in Joshua through Kings.

2.3.4. The Fate of the Tabernacle. The existence of a real tabernacle is widely doubted. In the Pentateuch, it is mainly mentioned in the collection of ordinance associated with its building, in Exodus through Numbers. Deuteronomy speaks of the ark but never the tabernacle. One reason for doubt about the tabernacle's existence is the contrasting pictures encountered in the Bible's two histories of Israel. These are the works that run from the Pentateuch through Kings, and the account of David's dynasty in Chronicles, which was written during the Persian period and depends in part on the larger, earlier work. The problem is that only the later work explicitly carries the tabernacle of Moses forward to the transition of Solomon's temple. When David brings the ark to Jerusalem and sets up a tent for it (1

Chron 13:1-14; 15:1-2, 25-29; 16:1-6), following the story in 2 Samuel 6, the tabernacle is somehow left out of the entire picture, as if the ark had long been detached from it. Before the temple was built, the tabernacle itself is said to have been left by David and Solomon at Gibeon (1 Chron 16:39; 21:29; 2 Chron 1:3, 13), a place that is never associated with the ark in the Bible.

Chronicles treats the tabernacle as a regular part of Israelite worship during the time before kings (1 Chron 6:32 [MT 6:17]; 23:25-26), though the work does not cover this premonarchic period and has nothing specific to say about the tabernacle's whereabouts or use. In the history from Joshua through Kings, the ark plays an active role only in the stories of its movement into God's new home, first in its approach to the land as a whole (Josh 3—4; 6) and then through the events that dislodge it from Shiloh and lead it to Jerusalem (1 Sam 4:1—7:1; 2 Sam 6). The tabernacle is never mentioned in connection with any of these texts, and it receives only one passing mention in this entire presentation of Israel's history, without reference to location except as west of the Jordan River (Josh 22:19). Shiloh's shrine for the ark is rather called a "house" (*bayit*) or "temple" (*hêkāl*), not a tent or tabernacle (1 Sam 1:7, 9; 3:3). Solomon's temple in Jerusalem takes over only the ark, adding huge copies of its cherubim for the inner sanctum (1 Kings 6:19-28). None of the remaining furnishings of the tent shrine is mentioned, and the new temple is equipped on a much grander scale (1 Kings 7:13-51). For the tale told in Exodus through Kings, at least, Moses' tabernacle is important for its service in accompanying Israel on its journey to the Promised Land, not for its use once arrived.

The Torah itself does not emphasize what purpose the tabernacle has after Israel enters the land. In the associated texts other ordinances include specific commands for lasting observance, such as the lamps before the ark (Ex 27:21; Lev 24:3), the vestments of the priests (Ex 28:43), the priestly office itself (Ex 29:9), the system of offerings and feasts (e.g., Ex 29:42; 30:10; Lev 16:34; 23:14; Num 15:14-15) and other details of their work and compensation (see Ex 30:21; Lev 3:17; 7:36; 17:7; 21:17). In general, the governance for the conduct of the community is permanent because it is the basis for successful life in the Promised Land: "You shall keep all my statutes and all my ordinances, and

observe them, so that the land to which I bring you to settle in may not vomit you out" (Lev 20:22 NRSV). While some version of the ark shrine is assumed to continue in the land, the specific tabernacle (*miskān*) is never called a "lasting ordinance." God tells Moses that the daily burnt offering is to be made for generations to come at the entry to the more generic "tent of meeting" (*'ōhel mō'ēd*, Ex 29:42).

In sum, the fate of the tabernacle is unclear. According to Chronicles, it was separated from the ark at an unknown time and ended up at Gibeon, in the territory of Benjamin, and went out of use with the construction of Solomon's temple in Jerusalem. It is worth noting, in any case, that for the history of Israel from Genesis to Kings, the tabernacle performs its primary service in the journey from Sinai to the Promised Land. Throughout this journey, the tabernacle is the physical center of Israelite religion, and God's people are gathered as one just as they would be for celebration of the major festivals in the land. The journey thus becomes a sacred procession, with God's people gathered in his presence for a pilgrimage of forty years. God himself moves with Israel from Mount Sinai to a new home in the Promised Land, where he will take up residence with his people.

2.4. The Ark of a Solitary God. Of course, the Ten Commandments ban the use of images for worship of God, and many specific representations of divine presence are rejected throughout the Pentateuch and the rest of the Bible. It may be surprising, then, to realize that Israel was given one acceptable vehicle for the presence of God, the ark of the covenant. A closer look at the ark and its role provides a useful way to think about how Israel understood its God.

2.4.1. One Tabernacle, One People, One God. As they moved from Sinai to the Promised Land, Israel was instructed to build one shrine with one altar, for use as a gathered people. It may be that this initial unity of worship site was understood to have served the festival-like procession to the new home of God and his people.

The book of Judges shows no such convention, as can be seen in Gideon's freedom to make three different offering sites without reference to the ark. He brings an offering (*minhā*) when he first meets God's angel, who burns it up on a rock right at hand (Judg 6:18-21). In response to this encounter, Gideon builds a proper altar on the spot (Judg 6:24), and finally God

orders him to construct a third one as a rival to his father's Baal altar (Judg 6:25-28). Gideon's worship follows the pattern indicated by the ordinance for building altars in Exodus 20:24-26, but this ordinance does not make clear whether such altars were envisioned for public assembly only, whether local or more inclusive.

Moses' instruction never overtly provides for sacrifice by Israel as a gathered whole at any location without the ark, but Israel accepted multiple sacred sites in actual practice. Faced with a war against Benjamin, the other tribes gather to "Yahweh" at Mizpah (Judg 20:1), a place for sacred oaths (Judg 21:1, 5). To decide whom to send into combat first, they proceed to Bethel to ask "God" (Judg 20:18), and after two setbacks they return to make offerings and try again (Judg 20:26). We are told that the ark is to be found here in Bethel (Judg 20:27), though later the people build a fresh altar for further sacrifices (Judg 21:4). At the same time, there is an annual "festival of Yahweh" at Shiloh (Judg 21:19), the town where we will find the ark at the beginning of 1 Samuel. This seems to be a local event only.

At least for the time of pilgrimage to the Promised Land itself, the tabernacle law insists that all sacrifice must be made at the tent of meeting (Lev 17:1-6). Deuteronomy 12 seems to require a single place for all sacrifice (Deut 12:13-14), the place God will set his name (Deut 12:5). This may anticipate the resting place for the ark in the Promised Land, though we know that in the end it wandered quite a bit. The exclusive location is underlined by careful provision for profane slaughter of animals at home, if the distance to God's chosen place is too great (Deut 12:20-21). This is a peculiar practice, proposed only for those who cannot manage to kill their animals as proper sacrifices.

The situation of the ark in the tabernacle ordinances reflects the setting described in all the books of Moses, where Israel is gathered as one people at one place to worship their one God. This congruence of worship belongs only to the Pentateuch and contrasts with actual life in the land in every period. Israel and the Jews never otherwise live as a gathered encampment around their God, except when they come together to celebrate him during festivals. This fact makes the whole religion of the tabernacle anticipate all the more strongly the later tradition of national festivals.

Even if the journey to the Promised Land represents a unique moment in the life of Israel, it underscores the centered coherence of pentateuchal Israelite religion in one God. Normal ancient Near Eastern religion, especially among settled peoples, recognized a diversity of gods for a diversity of needs, locations and assemblies. This does not mean that one god could not be the focus. Ancient peoples could gather under homage to a single god when one group joined to address one need under one divine power. Above all, this would occur with celebrations sponsored for a whole state, so that unified devotion to one deity follows unified political power.

When divine power came to be concentrated in one god on a more permanent basis, it tended likewise to follow political power, as with Ashur and Marduk of Assyria and Babylonia. Another logic was also possible, which concentrated divine power without excluding subordinate beings. At Ugarit, El's preeminence reflects simple paternity, in being father of all the other gods. During the first millennium B.C., the larger Near East shows some tendency to center power in a single god, especially to accompany the trend toward centralized political power in great empires, beginning with Assyria and continuing with Babylonia and especially Persia. The question is whether the family-based logic could also produce a tendency to favor one god. Evidence for the Transjordanian states of Edom, Moab and Ammon is scant but suggests some preference for a dominant national god, such as Chemosh of Moab. These peoples had tribal origins, like Israel, and the pattern would come from unity as kin rather than political dominance.

As a tribal people gathered as a single family from one father Jacob, Israel's worship of one God alone would represent the logical extreme of this principle of one god for one power to act for one clan. This would not otherwise be known for this early period, but neither would it be intrinsically foreign to ancient Near Eastern patterns of thought. Israel's uniqueness, I would argue, is never a matter of religion dropped from the sky without reference to existing patterns of life, as revelation disengaged from culture. Rather, it results from critical choices among existing possibilities, with dramatic effect.

2.4.2. *The Ark and the Cherubim.* The ark

serves two essential functions at once. Literally, it is a "box" (*'ārôn*), so its role as container of the covenant text should not be dismissed as a secondary tradition. At the same time, however, God is "seated" there between its two cherubim, which mark his very presence with Israel (1 Sam 4:4; 2 Sam 6:2). The ark is the throne of an invisible God.

Although the ark is not a direct part of the Ten Commandments, it offers a concrete expression of the ban on images of God found there, and by this it gives us some idea of what that ban really involved. On one hand, the ark maintains the standard ancient Near Eastern framework for intimate encounter with deity, where the god makes himself or herself present in a single point, in order to enter active communion with those who serve the deity. The normal form for that physical vehicle of revelation and exchange is an image, whether human or of some other symbol. In the west, from Anatolia south through Syria and Palestine, a simple stone might be set up without any particular image. Texts for the renovation of small sanctuaries in the Hittite countryside, in Anatolia roughly contemporary with the early judges, often replace the stones with new statues, evidently understood by the empire to offer a more powerful expression of the deity's nature and force. The ark commanded through Moses is also new to Israel, likewise replacing among other things the simple stones of the type used by Jacob at Bethel (Gen 28:18-22).

On the other hand, instead of illuminating God by an image, the ark does so by a frame without a picture. The cherubim are heavenly beings, protective spirits often portrayed with mixed forms, such as the "living things" of Ezekiel 1:5. In the ancient Near East, these beings would have been classed as divine, and the cherubim offer one hint that God still keeps company in heaven, though company that is not to be worshiped—from the sons of God in Job 1:6 to the plural "we" of creation in Genesis 1:26 (cf. Gen 3:22-24, again with cherubim).

The ban against images in the Ten Commandments includes a precise list: "any form that is in the sky above, or that is on the earth below or that is in the waters below the earth" (Ex 20:4). This would target all the new-fangled images of created beings, from living things to heavenly objects. A simple stone such as Jacob's is not obviously excluded, though other law at-

tacks this very thing, not as an image but as a dangerous vehicle for worship of other gods (Deut 7:5; cf. Lev 26:1).

Dissociating God from images, then, does not change the way he is present at one point, nor does it change intrinsically how he receives offerings, which in the wider world could also have been made before a stone or other form that does not need food to eat.

2.5. A Holy People. Although the camp of each patriarchal father could be impressively large, with Abraham capable of assembling 318 warriors (Gen 14:14), in Genesis the focus religiously and otherwise remains the individual family and household. With the books of Moses, Israel is no longer one household, and with the move from Egypt to Canaan, the religious focus has changed from that of the household to that of the nation. With this journey, a new theme is introduced, the “holiness” of all the people. God is accompanying Israel to the Promised Land, and the retinue of God must be prepared physically and socially to be in his presence. Of course, the priests are consecrated to his special service, a standard ancient Near Eastern notion. Likewise, it is not strange for the common people to be purified for celebration of special events when they draw near to their gods. The Pentateuch’s idea, however, of a nation continually in the presence of God, so continually holy, is striking. This “kingdom of priests” and “holy nation” is an odd thing (Ex 19:6).

2.5.1. How to Be Holy. To be “holy” (*qādōš*) is to belong wholly to God (or elsewhere, the gods), whose very being is different, intrinsically dangerous to created life. God is like fire or radioactivity, but more so; his being is power unbridled, though for every communication with his creation he must veil it to an unimaginable extent. The Bible’s idea of holiness does not originate in accountability to a divine judge or even the need to keep a pure household but in the problem of coming into contact with the explosive being of God. Holiness is not just “set apart,” which could be for any special purpose, but rather the unique preparation for this contact with God. All the Hebrew words derived from this root (*qds*) have this narrow application.

Israel’s holiness has two main aspects. First, a physical and ritual purity must characterize both the people’s bodies and their homes. In this aspect, the operative word is *clean*, and that which

is “unclean” is understood to be incapable of tolerating the burning presence of God. Physical purity is not just a matter of bathing but involves the food they consume (Lev 11) and the houses they inhabit (Lev 14:33-53). All excretions are experienced as sullyng a clean body, from the bodily expressions of sexuality (Lev 15:16-24) to all the rashes and boils that might or might not prove to be permanent skin diseases (Lev 13:1-46).

At the same time, holiness to God requires consistent observance of larger standards of behavior, especially between people, that we would call moral. For Israel, limitation of sex to marriage between a man and a woman who are not too closely related by blood (Lev 18) is not a matter of individual ethics but of keeping the whole community healthy before God.

In sex, the crucial domains of physical and social holiness are inescapably joined. Likewise, justice and honesty are the essence of healthy life together in the presence of God (Lev 19:9-18). The holy people of God have to care for each other as if together they are one body that can be injured or defiled by the failure of one part, and God’s call to justice concludes with the famous command to “love your neighbor as yourself” (Lev 19:18). Naturally, holy life together requires also the proper remembrance of God, rooted in a novel Israelite division of time into seven-day intervals and marked by the sabbath.

2.5.2. The Presence of God Among a Holy People. The ark and the tabernacle result from an act of generosity and concern by a holy God, vehicles by which he not only meets his people but also reveals himself to them. All divine revelation by nature accommodates the Creator to a form less than himself, whether in human language or more concrete expressions. In the ark, God channels his raw power to one point, veiled by layers of protective space. Even with God’s generous movement toward his people to make a direct meeting possible, it is impossible to tolerate or survive his presence without a matching movement on the human side toward the holy God. Together, the consecration of special priests and the consecration of the people to holy life are calculated to make it possible for Israel to remain in the presence of its God and by doing so to receive his unmixed blessing.

2.6. Pilgrimage. The entire religious life of Israel in the time of Moses is framed as a pilgrim-

age to the Promised Land with God in their midst. Gods are usually to be found at particular sacred locations, and pilgrimages go to places that are already recognized to be holy, where the gods may be encountered to greatest effect. When God is already at hand, why go on pilgrimage to a new sacred place? The answer is that God is taking up residence in the land he has chosen for his own people. Israel's hymn for Yahweh's victory at the Red Sea celebrates the Promised Land not as their happy home but as the very dwelling of God. "By your power you have guided [them] to your sacred estate" (*něwēh*, Ex 15:13). "You [God] will bring them and plant them on the mountain of your ancestral land [*nahālā*]; you have made a place for you to live; your hands have established a sanctuary [*miqdās*], O LORD" (Ex 15:17). Together Israel and its God are going home.

Once Israel is settled in the land, their assembly under Moses will be re-created in only one religious institution, the national festival. Under normal circumstances, Israel will be gathered before Yahweh only three times a year, for festivals that mark God's care for his people and their commitment to him. These festivals are so important to Israel's holy life together that a description of them is preserved in every main body of Mosaic Torah, with varying names and focus (Ex 23:14-17; 34:18-24; Lev 23; Num 28-29; Deut 16). Israel's year is marked by two axes, during the spring and the fall, and the two most important feasts occur then: Passover night and the seven-day Feast of Unleavened Bread in the spring, and the week-long Feast of Booths (Leviticus, Numbers and Deuteronomy) or Ingathering (Exodus) in autumn.

Whether or not the people succeeded in carrying out this ambitious program of full assemblies, imaginable only in a small country, the Torah envisions meetings at a single sacred place in a settled land, reflected especially in the strong agricultural element to the festivals. The various passages never propose a specific geographic location for the grand reunions, though the tabernacle instruction assumes the centrality of the ark, and Deuteronomy the place where God will set his name.

The festivals offer a direct complement to the tabernacle. Whereas the tabernacle is created for the pilgrimage to the Promised Land and is not directly commanded as a lasting ordinance for life there, the festivals serve only life in the

land and are not to begin until Israel's settlement. The first Passover after the escape from Egypt is observed at Gilgal, with the end of *manna and the first bread made from the yield of the land (Josh 5:10-12). These three annual pilgrimages to meet God are to take the place of the first grand pilgrimage of the tabernacle and perhaps also to recall it.

3. Before Moses: The Book of Genesis.

Any discussion of religion in the Pentateuch must divide Genesis from the remaining books. This is true even if the patriarchs are considered legendary and the contents of Genesis relevant only to later Israelite religion. The setting in time before Israel existed as a people supposes a noticeably different religious world, with different rules of engagement. Space here allows only a basic orientation to the contrasting landscape.

3.1. Working Backward. As with the Pentateuch as a whole, we must keep in mind that strict study of Israel's ancestors is entirely a Bible affair. Both the period and the region are fairly well-documented by other texts and archaeological finds but without any mention of the patriarchs and their God. Behind Abraham, we disappear into a world before "history," in the sense of context to which we can attach any names at all, outside the Bible's. On the Bible's own terms, however, Genesis 1-11 is crucial to set the stage for all that follows, especially relating God to the world he has made.

For the purposes of this general essay, I have found it better not to talk about Genesis first, as if its religion could be disentangled from the whole package of the Pentateuch. Yahweh is already the name of a God identified uniquely with Israel, the nation that comes into being with entry into the land. To speak of "Yahweh" in biblical times is to call to mind this people. The sabbath introduced with creation is the sign of Israel's covenant as an established people (Ex 31:12-17). Genesis 1:1-2:4 does embed the sabbath in the created order, as for all humanity, but even more it places Israel itself back in the foundational plan of God. By its unique observance of sabbaths, the "holy nation" Israel keeps time for the whole world.

As we work backward to the beginning, Genesis finally gives us religion without history. That is, Genesis 1 describes events that only God himself could know, not even imagined to be reported by human witness. By going back to the

beginning, Genesis explains not only human *creation but also the first human awareness of God, in a world without religion. *Adam and *Eve live in the very garden of God (Gen 2:8) and chat with their Maker without concern for holy danger. Only after their expulsion do *Cain and *Abel make the first offerings (Gen 4:3-4), and only after Adam and Eve produce a new line through *Seth and Enosh do people first call on Yahweh's name (Gen 4:26).

3.2. *Israel's Ancestors.*

3.2.1. *Religion Before Law.* The Pentateuch puts a conscious distance between the patriarchs and the covenant and Torah of Moses. God tells Moses that his ancestors did not meet God as Yahweh but as El Shaddai (Ex 6:2-3). In coastal Syria-Palestine of the second millennium, especially as known at Ugarit, "El" is the god whose name is "The God," the father of all, the chief of the divine pantheon. In the Bible, "Elohim" is the normal name for Israel's "God," and Genesis presents us a series of distinct "El" titles by which the patriarchs worship their God (see Gen 14:18-22; 21:33; 31:13; 33:20; 35:7). Knowing that the Canaanites already made use of the same basic terminology to name their preeminent god, we must account for this strong continuity with Israelite religion, especially as associated with the early experiences of Abraham, *Isaac and Jacob.

According to the Bible, it was entirely appropriate to address Israel's deity by a title that would identify him with the ancient father of all, "The God" El. It was impossible, however, to call him "The Lord" or Baal, the standard title of the storm god, the other leading male deity of the Canaanites. Why not? It is clear that by the time of Elijah and Jehu in the ninth century (1 Kings 18; 2 Kings 9—10), Baal was linked to the influence of the great Phoenician cities of Tyre and Sidon, with a fear that Israel would be swamped by a foreign power and culture. Because the Baal title had become so strongly associated with a god separate from El, perhaps it was simply not possible to align Yahweh's primary titular with two separate deities, when the name "God" already had priority. There was nothing in the character of the storm god as such that excluded identification with Yahweh's powers (see Ps 29).

The book of Genesis identifies El with Yahweh, the name of God proclaimed at Sinai. It is not clear which name had historical priority,

and it seems that we are meant in much of Genesis to accept this as an ancient equation that needs no explanation. If the name El had been foreign to earliest Israel, the association would have attributed to Yahweh the stature of the chief regional god. The question turns on whether the 'el in the name Israel (of uncertain meaning) refers to the proper name El or just means "(the) god," whether Yahweh or any other. Both are possible.

At Beer-sheba, Abraham plants a sacred tamarisk tree and calls "on the name of Yahweh, El Olam [Ancient El?]," using both names together (Gen 21:33). Though God introduces the name Yahweh to Moses as something new, Genesis unselfconsciously lets the true God go by his Israelite name. Exodus 6:2-3 would then offer a historical clarification that in the old days Yahweh made his appearances under another name. This passage seems to refer directly to Genesis 17:1, where Abraham is about to receive the covenant with *circumcision. There, using the same language as Exodus 6:2-3, we are told: "Yahweh appeared to Abram and said to him, 'I am El Shaddai.'"

Besides the different names by which the patriarchs knew God, they were noticeably free in their worship, using means common to people of their time that were later banned because they were too closely associated with other gods or with offensive forms of worship. Jacob pours oil on an upright stone at Bethel (Gen 28:18), but such *maššēbôt* were outlawed for Israel (Lev 26:1; Deut 7:5). The tree planted by Abraham at Beer-sheba (Gen 21:33; cf. Gen 12:6; 13:18; 35:4) would later have been attacked as dangerous (Deut 12:2; Hos 4:13). Though God does not allow Abraham to go through with it, the command to sacrifice Isaac may make sense as a test only in this time before the giving of a Torah to govern Israel. It is less clear how sacrifice was limited in the earliest period of Israel's settlement, but the patriarchs' free use of many sacred sites, making sacrifice without priests, is certainly at home in a world without Moses' instruction.

These practices do not appear in Genesis as a kind of accident. They are based on the idea that God provided something new with Moses' Torah. The Torah thus gives Israel not an eternal blueprint for the only way to worship God truly but a plan for the particular people Israel to live as a people consecrated to himself.

3.2.2. Religion Without Nation. The religion of Genesis 12–50 is before Moses and before Israel as a nation. It is on a smaller scale, then, with a different purpose. Oddly, it is already a religion of the Promised Land, though with many shrines and no professional priesthood. No offering is ever made by the patriarchs outside the land that will belong to Israel. This is most visible with Jacob, who does so at Bethel with his departure (Gen 28:18-22) and at Mizpah in the Transjordan with his return (Gen 31:54, making peace with Laban), but never in Syria.

This pattern should not be surprising, because the theme that links the patriarchal stories to each other and to the books of Moses is the Promised Land. The land is God's chosen home, and it is no wonder that Israel's ancestors keep encountering him there.

The patriarchs are not yet governed by the religious system established for life as a nation, but they already worship one God, identified as Israel's by the name Yahweh. In fact, it is assumed that one family will have one god. Laban and Jacob call their two gods (not one) to witness their treaty at Mizpah: "May the God of Abraham and the god of Nahor, the gods of our fathers, judge between us" (Gen 31:53; the verb is plural). There is no ban on images, but none is used. The images found in Jacob's household in Genesis 35:2-4 are called "foreign gods," using an old term for those outside the family circle. Rachel steals her father's household gods (teraphim), but they are never identified with Jacob himself (e.g., Gen 31:19). Laban and Jacob share the same mode of living, as far-ranging shepherds working from a town base. If we allow Laban to model the religious norm for such people, he also worships one primary family god but keeps household gods as well, which may be related to veneration of ancestors. Images were freely used. In the terms of Genesis itself, the patriarchs do not merely imitate standard custom, though in worshipping one family God they are completely in step with their peers.

Finally, Israel's ancestors display a religion of the extended family rather than that of a nation or state. Only *Melchizedek appears as a priest, in a rare encounter (Gen 14:18), and there are no temples, no calendar of regular ritual and prayer only to have children, a need most relevant to the family. God provides his own intermediaries from the divine court in the form of "messengers" (later, "angels") who come with

his words, or he addresses the patriarchs in *dreams (e.g., Jacob at Bethel, Gen 28:12).

3.2.3. Life Before Torah: Right and Wrong. The stories about the patriarchs often draw no judgment, and one should not jump to conclusions from their silence. Jacob's deceit is no model. The few explicit expressions of what is right or evil are therefore the more important.

Above all, Sodom and Gomorrah are declared to have sinned abominably (Gen 18:20), illustrated by their treatment of strangers who turn out to be God's messengers, with the sexual aspect offered as the ugliest expression (Gen 19:4-9). It can be no accident that Israel's pastoralist ancestors find the epitome of evil in the rich cities of the Jordan plain. A less direct expression of wrongdoing is found in the repeated threat that a married woman will be defiled by adultery, when the patriarchs keep offering up their wives in self-protection (Gen 12; 20; 26). As at Sodom, the worst crimes seem to be sexual. Such breaches subvert the family in a culture that defines itself entirely by bonds of kinship. A similar importance is assumed in Joseph's refusal of Potiphar's wife in urban Egypt (Gen 39:9).

The one direct approbation of what is "right" in Genesis is God's famous praise of Abraham: "He trusted Yahweh, (who) by it counted him in the right" (Gen 15:6). God shows off Abraham's trust again in asking for Isaac, saying afterward, "Now I know you are a God-fearing man" (Gen 22:12). As seen in Abraham, *faith is trust in a promise not yet received, which suits well the main theme of Genesis.

3.3. The Beginning: Genesis 1–11. Genesis 1–11 defines a religious framework for humanity as a whole while presenting a creation with echo, before and again after the flood. Out of the rich raw material, I have chosen to present the beginning in two main layers of thought: the *image of God in humanity, and *Eden with its aftermath.

3.3.1. The Image of God as Frame for Genesis 1–11. The frame for Genesis 1–11 is constructed by genealogies leading from Adam to Abraham, starting in Genesis 5. Genesis 1:1–2:4 is then shown to be part of that frame by Genesis 5:1-2, which picks up the "image of God" from the first creation of humanity (Gen 1:26), not from the story of Eden. God's image is invoked again as the basis for the death penalty in the guidelines for life after the flood (Gen 9:5-6). Other evidence for a second try at creation is found in the

new authorization of meat and the repetition of the old command to be fruitful and to multiply (Gen 9:1-3; cf. Gen 1:28-30).

Read in light of the Bible's abhorrence of images, Genesis 1:26 proposes that humanity itself, male and female, represent the only acceptable statues of God. The only legitimate representation of the Creator has been made by himself. Like ancient Near Eastern statues of gods more generally, this image does not exhaust the character of God but is a revelatory gift. If we want to know about God, we are to look at ourselves. No attempt to limit the search to "mind," "spirit" or the like has ever proved convincing.

At the start of the first genealogy, the "image" is repeated to define the family bond from parent to child. If the metaphor is to be applied consistently, this suggests that as God's *image*, the trite truism aside, all humanity are indeed God's children. Likewise, the idea of God as father is built into the first chapter of the Bible. Human responsibility for the world is also based in this image. We imitate God in caring for it as our own inheritance.

3.3.2. Eden and Its Aftermath. Before the first genealogy, we find one long story about the family of Adam. The tale begins in Eden, which should be in Turkey if the Tigris and Euphrates run out of it (Gen 2:14), and it moves eastward toward Babylon (see Gen 3:24; 4:16; cf. 11:2). Throughout, humanity is a rival to its Maker. In Eden, we take the fruit of the knowledge tree in order to be like God (Gen 3:5, 22). Lamech wants his vengeance to outdo that of God himself (Gen 4:24). Later, the marriage of human daughters to "sons of God" invades this terrain by marrying into heaven, so to speak (Gen 6:1-4). The tower of *Babel has as its goal to reach heaven itself (Gen 11:4). This ambition seems to be the flip side of creation with God's own breath in us (Gen 2:7). Possession of this one link to God's being is the basis for the temptation to seize more.

At the same time, we see in these connected stories a silhouette of what is meant to be the sole right of God. God alone has the capacity not only to know what is good and evil but also to survive this knowledge without terror and shame. Life that lasts forever is only God's to give. Justice that is not simply self-serving belongs only to God. In spite of God's breath in us, humanity comes from the soil, and we are bound to it. Heaven and its glories are God's alone.

Finally, as we move back in the Bible's time from Moses to the patriarchs to the beginning, we see God in the fresh intimacy he first intended to have with the human beings he created. Eden is God's garden home on earth, where he walks at his leisure and converses freely with Adam and Eve. In such a place, even a snake cannot be quite dumb. No angel is found through Genesis 1—11; God speaks directly with Cain (Gen 4:6-15) and appears simply at Babel (Gen 11:5-7). The very possibility to intermarry with the inhabitants of heaven to produce a mixed race, like king Gilgamesh of Mesopotamia, suggests a time when heaven and earth were not so sharply separated.

REPENTANCE

The OT in general, and the Pentateuch in particular, employs two main terms to capture the concept of repentance. They are *niḥam* and *šûb*. *Niḥam* ("repentance" in the Niphal and Hithpaël verb stems, but "comfort, console" in the Piel and Pual verb stems; our concern is with the Niphal and Hithpaël) has the sense of lamenting or regretting one's own doings and is used almost exclusively with reference to God. It signifies a change in God's attitude and relationship to humanity because humanity has taken either a positive or negative change in regard to God. *Šûb*, on the other hand, is applied most often to human repentance and by strict definition means "to turn or return." One of the more expressive usages of the terms in tandem is found in Jeremiah 18:8, where God is portrayed as turning or responding to human response. Because the Hebrew prophets are primarily preachers of *šûb*, the term is fully developed and applied in full force at this later stage in Israel's history. Nonetheless, the concept of *šûb* has its moorings in the pentateuchal *covenant. In the OT there are more than one thousand occurrences of *šûb* and its associated forms, thus giving witness to its importance. It is an instructive word because it reflects the notion of a journey

or a pilgrimage that requires constant attention, vigilance and a sense of purpose. If Israel or an Israelite was to stray from the proper path, *šûb* is what would bring them back to the right way. It demanded the whole nature of the person (intellect, emotion, will, etc.) to respond to God, resulting in proper moral and ethical behavior relating to God's self-disclosure (covenant, *law, etc.). In the earlier part of Israel's history, *šûb* was less an individual activity and more a corporate activity involving entire communities and even the whole nation. When national calamities such as famine, drought, military defeat or insect plague occurred, the populace was more prone to blame the nation as a whole than they were to feel individually responsible. In fact, all of them shared responsibility and, consequently, the ritual of repentance.

1. Repentance in Genesis
2. Repentance in Exodus
3. Repentance in Leviticus
4. Repentance in Numbers
5. Repentance in Deuteronomy
6. Summary

1. Repentance in Genesis.

The strongest statement of repentance in Genesis is applied to God and his reaction to human sinfulness:

The LORD saw that the wickedness of humankind was great in the earth, and that every inclination of the thoughts of their hearts was only evil continually. And the LORD was sorry [*niḥam*] that he had made humankind on the earth, and it grieved him to his heart. (Gen 6:5-6 NRSV)

These verses could well serve as a theme statement for the movement of the story line from the *fall in the garden of *Eden (Gen 3) until the call of *Abraham (Gen 12). The verses emphasize human rebellion and God's dissatisfaction with his creation. Even the animals, creeping things and birds are affected by God's response (Gen 6:7). Perhaps this is related to the notion that the serpent that tempted *Eve (Gen 3:1) falls within these categories. God repented of his creation, responding to the sinful actions of human beings by sending a flood. This can pose a problem in English terminology because of the rather restricted use of "repent" as meaning solely to turn from sin. However, the Hebrew can be understood as "to be sorry" or "to change one's mind." There is certainly an emo-

tional dimension of remorse that connotes a grieving in changing one's mind. Yet in some sense, by "repenting" in this context, the creator God became the destroying God. His repentance is expressed in an action opposite to the action he had become pained over. Nonetheless, God's rescue of *Noah's family and the animals, along with his establishing a new covenant with them, reveals his gracious, redemptive nature.

2. Repentance in Exodus.

Exodus 32—24 contains an incident in the early covenant life of Israel that reveals a profound understanding of human and especially divine repentance. The Sinai covenant, having just been established (Ex 19), was almost immediately violated by Israel. The incident of the *golden calf (Ex 32:1-10) and the subsequent punishment, intercession of *Moses and covenant renewal serve paradigmatically for Israel's self-understanding of its relationship with God. The key issue is the exploration of how God will respond to this first covenant violation—a direct disregard of the first two commandments (Ex 20:3-6). His response will set the tone for how God will deal with the sinfulness of his people, made so by his choice and covenant commitment. In symbolic and practical terms, the question raised is, How will one member of a new and intimate relationship respond to the first act of unfaithfulness by the other member of the relationship? Thus we see in God's covenant renewal (Ex 34) that God is willing to extend forgiveness for covenant failure. However, it should not be overlooked that God was intensely angry over the sin of his people (Ex 32:9-10) and a terrible judgment would follow (Ex 32:28, 34-35).

The covenant renewal was granted only because of Moses' intercession (Ex 32:11-13; 33:12-17). The words of Moses' entreaty are that God would "turn" (*šûb*) from his burning anger and "repent" (*niḥam*) from the harm he was planning against Israel (Ex 32:12). The result is *niḥam* on the part of the God of Israel (Ex 32:14). It is interesting that the repentance is not that of Israel, but rather only of God. It is through Moses' expression of sorrow and taking action that Israel is spared (Ex 32:19-32; 33:12-16). One might wonder at this point in the narrative whether God has really forgiven Israel for the covenant violation. But this appears to be

the case in Exodus 34:7, where God himself pronounces that he is one who forgives. What is most striking in this and the preceding verse is the repetition of the name of the Lord associated with positive character attributes (e.g., compassionate, gracious, slow to anger) that far outweigh any negatives. Put more simply, God's mercy predominates, just as he had said when he first established the covenant (compare Ex 34:7 with Ex 20:5-6). The fact that the whole incident ends with the glory of God shining in the face of Moses might indicate that the true glory of God is related to his divine nature and forgiving, restorative character. In sum, the canonical position of this episode makes God's own repentance and his forgiveness a key to the rest of the OT. This first impression of Israel's God as a forgiving God in the context of their first national covenant violation speaks to his character beyond the scope of the Pentateuch, reaching to the Prophets, Writings and even the NT.

3. Repentance in Leviticus.

Jewish ideas of repentance have always been connected to the great sacrificial system detailed in the Pentateuch and centered especially in the *tabernacle cult. Community and national repentance rites were enacted on the Day of *Atonement. However, penitent individuals could make personal offerings at the sanctuary at any time to atone for personal transgressions. Such cultic ritual allowed repenting sinners to disassociate themselves from their impurity by allowing the sacrificial system to objectively remove it from themselves. When wrongdoing toward one's neighbor took place, the laws of Leviticus were especially concerned with a full definition of what human repentance entailed. This included confession, a public acknowledgment of wrongdoing indicated in the guilt offerings (Lev 5:5), restitution and a cessation of wrongdoing followed by restoration to the violated one in full along with an additional one-fifth of whatever the violation was (Lev 6:4-5). The year of Jubilee, recorded in Leviticus 25, did not constitute a repentance in the truest sense, even though the word *šûb* is consistently used in the explanation of what the Jubilee is (Lev 25:10, 27, 28, 41). However, it did envision a proclamation of liberty to all Israelites who were in bondage to any of their fellow citizens and the return (*šûb*) to their ancestral possession of any who had been compelled through poverty

to sell them (see Sabbath, Sabbatical Year, Jubilee).

4. Repentance in Numbers.

Numbers 5:5-8 incorporates in one collective statement the levitical notions of repentance by confession and restitution. Three times in the passage, restitution/restoration is captured by the term *šûb*. Thus, repentance is responding with appropriate action to correct a wrong.

We find a somewhat surprising use of repentance (*niḥam*) in Numbers 23:19:

God is not a human being, that he should lie, or a mortal, that he should change his mind [*niḥam*]. Has he promised, and will he not do it? Has he spoken, and will he not fulfill it? (NRSV)

The contradiction appears to be with passages such as Genesis 6:6, which readily describes God as repenting (*niḥam*). What, then, is the meaning of Numbers 23:19, which states that God does *not* repent (*niḥam*)? The passage is not a contradiction of Genesis 6:6 but rather shows that God is faithful in a way that human beings are not. Although God can and will change his mind (Gen 6:6, *niḥam*) about things relating to human beings and their particular attitudes and actions, there are some things about which God would never change his mind. For example, God is committed to the house of David (1 Sam 15:29; 2 Sam 7:8-17). Another example is God's commitment to Israel via his initial covenant with Abraham (Gen. 12:1-3). It is God's non-negotiable commitment to Israel that is in mind here. God may change his mind about other things, but to this issue he will not. The context of Numbers 23:19 is the speeches of *Balaam, who is attempting to curse Israel at the wish of Balak, king of the Moabites (Num 22:1-4). Balaam is unable to bring a curse and instead proclaims that he can only bless Israel (Num 23:20). God's blessing of Israel is therefore seen to be irrevocable, and this immediately following the wanderings and the rebellions in the wilderness recorded throughout the book of Numbers. In this way, God is shown to be faithful to his covenant in a way that Israel was not, as witnessed in the golden calf incident of Exodus 32-34. In other words, God will not repent of those things to which he has made covenant commitments.

5. Repentance in Deuteronomy.

The book of Deuteronomy summarizes the his-

tory of Israel as revealed in the first four books of the Pentateuch and concludes with exhortations and warnings to the new generation of Israelites about to enter the Promised Land. In Deuteronomy *šûb* appears more than thirty times and serves as its primary moral and responsive term. At one point the Israelites had repented (*šûb*) and wept before God, yet God would not listen (Deut 1:45). However, as the new generation of Israelites are being warned not to forget all that had transpired since the earlier departure from Egyptian slavery, there is a promise that if they seek him appropriately and repent (*šûb*), God will listen this time (Deut 4:29-31). Some of the final charges of Moses, which lead to the conclusion of the Pentateuch, are concerned with Israel being willing to repent (*šûb*). Deuteronomy 30 is especially enlightening because of its repetitive use of *šûb*. The chapter gives further definition to the blessings and curses discussed in preceding chapters of Deuteronomy. The “returning” of Israel (*šûb* in Deut 30:3) demonstrates that the function of the blessings is to serve as positive motivation and the function of the curses is to serve as negative motivation in stimulating repentance. Therefore God actively works, even using painful means, to bring about repentance—a repentance that has the aspects of love and obedience (Deut 30:30). Blessings of God are associated with repentance (Deut 30:9), along with a definition of what it means truly to repent—obedience to God’s commandments, statutes and laws (Deut 30:10).

6. Summary.

To sum up, there are two primary terms used in the OT in association with “repentance.” One of the words (*niḥam*) is most often used with God as its subject and generally means to be sorry or to change one’s mind. The other (*šûb*) is used more in relation to humans and means to repent in the classical sense of turning to God and, more specifically in the Hebrew prophets, to respond appropriately to Torah. Human repentance, turning from an improper course of either attitude or action to an appropriate one directed by God, is usually met by divine repentance. Such divine repentance involves God changing his mind about someone or something to avoid a negative consequence. In a word, God responds to the response of human beings. Human repentance leads to divine repentance.

In the Pentateuch and the OT as a whole, repentance is primarily a national concern. There is more discussion of the nation repenting corporately than there is about individual repentance. This is in keeping with the community emphasis in Israel’s Scripture. God’s turning from his anger, repenting or changing his mind, in the golden calf episode (Ex 32–34) is a crucial canonical portrayal of God’s redemptive nature. He is faithful in his repentance in a way that humans are not, illustrating his covenant commitments to both Israel as a whole and to the house of David. For Israel, corporate repentance is an appropriate response and a vital element in their covenant relationship with God.

REST, PEACE

Rest and peace are overlapping ideas. Both are given to *Israel by Yahweh; both are enjoyed in Yahweh’s presence; both require faithful obedience; both indicate more than an absence of hostility with enemies or nations but include positive relationships. Each idea has its own vocabulary, nuances and distinctives.

1. Rest
2. Peace

1. Rest

The idea of rest has to do with (1) ceasing from labor and activity or (2) ceasing from motion. G. von Rad argued that the former is the dominant motif, the notion reflecting the change

from *Unruhe* (“unrest, tumult”) to *Ruhe* (“rest, calm”). Against von Rad, G. Robinson argued the latter is the dominant notion, reflecting the change from wandering to settlement, especially in the *land. Though it is often claimed that rest describes an objective state rather than an inner peace or state of mind, H. D. Preuss argues that its opposite is not just motion but restlessness. It thus often denotes cessation from strife, trouble or threat. Hence the state of rest is more than settlement and cessation from motion but also involves “satisfaction, joy, calm.” This is reflected in the deuteronomic expression that rest is “from your enemies.”

All these ideas cohere theologically. Cessation from activity or motion suggests the fulfillment and attainment of God’s purposes. Thus the state of rest represents not only physical security and enjoyment but also harmony with God, being in God’s presence, and freedom from the threat of enemies and *sin. In sum, the notion of rest sums up all of God’s *promises and purposes.

The bulk of words associated with the idea of rest in the Pentateuch come from the roots *sbt* and, especially, *nûah*.

1.1. Rest as Cessation of Activity. The first occurrence of the theme comes in Genesis 2:2-3 where God rested (*sbt*) on the seventh day from the work of *creation. While there is the sense that rest is a cessation of labor, the notion of rest is much richer than that. God’s rest expresses the completion and goal of his purposes and the enjoyment of the perfection and harmony of creation. God declares in Genesis 1:31 that the creation is very good. There is no strife, enmity or sin in the creation, hence there is rest.

God’s own rest on the seventh day becomes the paradigm for God’s people having a *sabbath rest every seventh day according to the fourth commandment (Ex 20:11 [*nûah*, cf. *sbt* in Gen 2]; cf. Deut 5:14, where the motivation to keep the sabbath is grounded in the exodus). The day itself is blessed and hallowed (Gen 2:3; Ex 20:11). There are also days of “complete rest” (*šabbātôn*) in special *festivals including the Day of *Atonement (Lev 16:31; 23:32), the Festival of Trumpets (Lev 23:24) and the Festival of Booths (Lev 23:39). The predominant idea here is rest from labor.

Not only God’s people, but the land also is to “rest [*smt*] and lie fallow” every seventh year (Ex 23:11 NRSV; also Lev 25:1-7; cf. Lev 26:34-35). An-

imals also are to rest on the sabbath (Ex 23:12).

1.2. Rest as Cessation from Movement and Trouble. Restless wandering is a result of sin and its punishment. Thus *Cain was sentenced to be a “restless wanderer” (Gen 4:14 NIV), no longer able to settle and facing the insecurity of threats from enemies. *Noah’s ark floated until it settled (*nûah*) on Mt Ararat (Gen 8:4). The forty-year wandering of Israel in the *wilderness was also a time of punishment for sin (Num 14:22-35). In a similar fashion, disobedient Israel will receive the *covenant curses of Deuteronomy 28, including the threat that it will find “no resting place for the sole of your foot” (Deut 28:65 NRSV).

The state of restlessness indicates that the state of rest includes, ultimately, a cessation not only of motion but also of strife from sin and its consequences. Rest is therefore about more than safety and settlement; it also concerns restored relationships with Yahweh. It is an objective reality and an inner state.

The *flood narrative resonates with words related to rest (*nûah*). After the floodwaters subsided, the dove sought a place to set its foot. The word *mānôah* (Gen 8:9), a cognate of *nûah*, is the same as used in Deuteronomy 28:65 for finding a resting place. Noah’s name is derived from the verb *nûah* (“to rest”) and the ark came to rest (*nûah*) on Mount Ararat (Gen 8:4). The goal of the flood is not to find rest on firm land but rest from the human problem of sin described in Genesis 6:5. What is being conveyed is that rest is found only in God and his work of salvation.

We find the theological dimension of rest more clearly later in the Pentateuch. In the following verses, rest is associated with God’s own presence. To *Moses, God promises to give rest (Ex 33:14; hiphil of *nûah*), a promise that parallels the promise of God’s own presence. This is also the case in Numbers 10:33, 36, where the ark and cloud of God’s presence accompany God’s people in seeking a resting place (*mēnûhā*). In Moses’ blessing on the tribe of Benjamin (Deut 33:12), the promise of rest (*škn*) in safety is paralleled with the promise of the presence of Yahweh.

Frequently the locus of rest is the land. Cessation of movement is clearly in mind. But again the theological dimension of being with God in his place and under his sovereignty is in mind. Jacob’s blessing to *Issachar includes the promise of a resting place in the land (Gen 49:15). It

is clear that cessation from labor is not primary in this verse. Rest in the land is also anticipated for all Israel in Numbers 10:33-36.

The connection between the land and rest is most developed in Deuteronomy. A similar formula, "The Lord gave rest to . . . from . . .," occurs three times in Deuteronomy and is found several other times in the Deuteronomistic History as well as in Chronicles. Thus Israel, anticipating entry into the land, is promised rest (*nūah*) from its enemies (Deut 3:20; 25:19). The goal of the salvation of Israel through the exodus is not just land but the state of rest in the land. In Deuteronomy 12:9-10 the same anticipation is expressed, but here rest is associated with proper worship in the presence of Yahweh. These verses mention the place where God's name dwells, anticipating the building of the temple by Solomon (see 2 Sam 7:1, 11).

In all cases just mentioned, the *hiphil* of *nūah* is used, with Yahweh as subject and Israel, or a subset of Israel, as the object. This is often regarded as a technical formula (see Roth). The *hiphil* indicates that rest is not Israel's achievement so much as God's gift. Yet rest demands a proper response from Israel, indicating that rest is not just freedom from enemies but has a positive intention associated with it, faithful obedience expressed in worship (Deut 12:9-10).

1.3. Rest of Death. At their deaths *Jacob (Gen 47:30) and Moses (Deut 31:16) are described as resting with forefathers (*škb*). Elsewhere, this verb has the connotations of lie down, sleep, even sexual relations, as well as rest.

1.4. Rest as Summary of the Promises of God. Though rest is not specifically one of the patriarchal promises, there is a sense in which the term summarizes all of these *promises (see Josh 21:44-45). The notion of God giving rest "expresses the greatest, the ultimate gift which Jahweh bestowed upon Israel in granting the land. By this gift Jahweh redeemed his promises in full" (von Rad 1962, 304).

Theologically, rest as the cessation of activity implies the completion and fulfillment of the task, that is, the promises of God. Similarly, rest as the cessation of motion implies the arrival in God's Promised Land along with the fulfillment of all his other promises, including relationship with God, security and safety, and obedience. So the notion of rest is a return to the ideal of Genesis 1:31-2:4. This is further developed in instances such as Psalm 95:11; Isaiah 14:3; 28:12;

and ultimately in Jesus' words of Matthew 11:28-30, and in Hebrews 3-4.

In summary, just as rest is the goal and culmination of the original creation, so it is also the goal and culmination of God's work of re-creation.

2. Peace

The Hebrew word-family *šlm* (115 times in Pentateuch), is the basis for expressing notions of peace, though issues concerning peace occur without *šlm* vocabulary. The English word "peace" often connotes inner calm and tranquility, as well as the absence of strife or hostility. However, the Hebrew notion is much richer, though there has been much debate about the precise meaning of *šlm*.

Von Rad (*TDNT*) argued that *šlm* has to do with material well-being, not inner peace, and was social, not individual. In contrast, it is commonly argued that the root meaning of *šlm* is "wholeness, completeness, health" (e.g., Westermann). So *šlm* describes a state, not a relationship, and thus notions of peace are an aberration. The more linguistically correct approach to determine meaning is not to find a basic and universal meaning, which can be a lowest common denominator, but to let context determine meaning in each case. So J. I. Durham finds that *šlm* can be material and relational, secular and theological. Similarly, G. Grelman notes that the idea of restitution or recompense is frequent and significant in the establishment of peaceful relations or in the notion of a covenant of peace (e.g., Num 25:5-13).

2.1. Peace and Restitution. All but one occurrence of the verb in the Pentateuch are in the *piel*, which invariably denotes the idea of repayment, retribution. A wide variety of situations are envisaged (e.g., several times in Ex 21:34-22:14; Lev 5:16; 6:5; 24:18, 21; see also Gen 44:4; Deut 32:41). This indicates that an essential ingredient for peace is the payment of recompense for wrongs with the two parties being reconciled. The only other occurrence of the verb in the Pentateuch is the *hiphil* in Deuteronomy 20:12, in a section of laws for warfare, with the meaning "to cause peace" or "to reach an agreement" (see further below).

Probably from the same word family is *šēlāmūm*, "fellowship offerings" (NIV) or "offerings of well-being" (NRSV). Though the precise significance of these *sacrifices is disputed, no-

tions of atonement, retribution and reconciliation are involved (see, e.g., Ex 20:24; 24:5; 29:28; Lev 6:5-7; Deut 27:7).

2.2. Peace as Well-being. The noun *šālôm* often denotes material well-being, sufficiency, prosperity or the inner sense of satisfaction. Often there is no theological content to this conception. So in Genesis 29:6 Jacob asks if things are “well” with his uncle Laban. Similarly, *Joseph asks about his brothers and father in Genesis 43:27-28 and receives the reply that his father is “well” (NRSV; see also Gen 37:14; Ex 18:7). Gerleman suggests that such questions are “weakened to a formula of greeting,” though the context of the verses mentioned suggests much more is involved (Durham). The inquiries express a genuine concern for someone else regarding their health, wealth and general standard of life.

Abram is promised that he will go to his ancestors in peace when he dies (Gen 15:15). Though the parallelism of this verse explains this as dying at a good old age, long life per se does not guarantee peace in death. Behind this statement lies a contrast with both the unnamed Egypt, who will face God’s judgment, and with Abram’s descendants, who will be oppressed aliens (Gen 15:13-14). Therefore for Abram to die in peace means neither to be under judgment nor to have lived under oppression.

2.3. Peace as Friendly Relations. *Šālôm* also describes friendly relations between people (cf. Gen 37:4). The link between peace and retribution seen above is hinted at in Exodus 18:23, where the people can return home in peace only when justice has been done. Similarly, the dismissal “Go in peace” in Genesis 44:17 applies only to those brothers of Joseph in whose sacks the cup was not found. They are innocent and hence can continue in peace. The guilty one cannot.

Sometimes such friendly relationships are based on a treaty or agreement. So *Abimelech and *Isaac exchange oaths and make peace (Gen 26:29-31). The notion of restitution is not far away here. The expression “covenant of peace,” *bērūt šālôm*, occurs in Numbers 25:12, where a covenant of peace is made by Yahweh with Phinehas, who has made restitution for sin and turned back Yahweh’s wrath. So relations between God and Israel are restored because restitution has been paid. In some instances *šlm* may of itself convey treaty terminology. For ex-

ample, the Shechemites believed they were at peace with Jacob’s family (Gen 34:21). The expression may connote an alliance. Similarly in Deuteronomy 23:6, Israel is warned never to promote the welfare (*šālôm*) of the Ammonites or Moabites. Again, treaty terminology may be in the background of this prohibition (McCarthy; cf. Wiseman).

Peace stands in contrast to war. So a treaty of peace or a friendly alliance precludes war between the two parties. Nonetheless, peace at any price is not God’s aim, and the absence of war does not necessarily mean the existence of peace. In the course of its wilderness wanderings, Israel was instructed not to go to war against Edom, Moab and Ammon (Num 20:14–21:20; Deut 2:1-23). Yet it was to destroy Sihon (who rejected the terms of peace offered by Israel [Deut 2:26]) and Og, as well as all the inhabitants of the Promised Land (Num 21:21-35; Deut 2:24–3:11; 7:1-6). Also, Israel was instructed to offer terms of peace (Deut 20:12: *hiphil šlm*) to nations far off which, if refused, would be subjected to war. But for nations near, no such terms of peace were to be offered (Deut 20:10-18; see Nations of Canaan).

2.4. The Giver of Peace. Yahweh is the giver of peace. In this respect the Aaronic blessing of Numbers 6:24-26 is most important in the Pentateuch. This prayer shows that peace from God is linked with blessing, preservation or protection, and grace. Peace is enjoyed in Yahweh’s presence (Durham). Similarly, in Genesis 28:19-22 Jacob’s prayer for “peace” is based on his experience of God’s presence. The Bible goes on to show that ultimately God’s provision for restitution for sin makes such peace possible.

In summary, peace is more than the somewhat bland definition of “wholeness” or “totality.” It is more than absence of warfare and hostility. It is a state of positive friendship and security between two parties, often the result of restitution and reconciliation. The Aaronic blessing directs us to the source of peace and the key relationship in which it is to be enjoyed. The Mosaic laws show that a necessary corollary of peace with God is peace between his people. Leviticus 26:6 promises peace to those obedient to Yahweh. Disobedience destroys the prospects of peace both with God and with each other.

Though in Deuteronomy 3:20 and elsewhere Yahweh promises rest “from all your enemies,” the state of peace which that implies is tied up

with faithful obedient living in God's land in a covenant relationship with Yahweh and with restitution for sin made under the terms, of that covenant. To some extent, then, peace and rest are overlapping terms, though it is too simple to say that "rest" is the deuteronomic equivalent of "peace" (von Rad *TDNT*, 404).

RETRIBUTION, PRINCIPLE OF. See SIN, GUILT.

REUBEN

Reuben was the firstborn son of *Jacob and the ancestor of the Israelite tribe of the same name. The name Reuben means "See! A son!" and reflects the delight that his mother Leah felt in bearing a son before Rachel, Jacob's favored

wife, could do so (Gen 29:31-32). The name is also similar in sound to the Hebrew phrase *rā'â . . . bē'onyî* ("[The LORD] has seen my affliction," Gen 29:32 NASB), which was uttered by Leah at Reuben's birth.

1. Reuben's Role in Genesis
2. Reuben's Role in Exodus, Numbers and Deuteronomy
3. Subsequent History

1. Reuben's Role in Genesis.

Reuben's role in Genesis reflects his position as the eldest son in a patriarchal society. His actions revolve around the theme of progenitorship that dominates much of the book (cf. Gen 12:2) and two important plot motifs related to that theme, namely, the barren matriarch and the apparent or threatened death of the heir.

1.1. Jacob Narratives. When his mother stopped bearing children, it was Reuben who brought her mandrakes, widely held to be an aphrodisiac, as a cure (Gen 30:14-15). Just after the death of Rachel and before the announcement of the death of *Isaac, the author of Genesis notes that Reuben slept with Bilhah, Jacob's concubine and handmaid of Rachel (Gen 35:22). By this act, Reuben apparently prematurely laid claim to the patriarchal rights and responsibilities of the firstborn (cf. 2 Sam 16:20-22; 1 Kings 2:19-25), an act later condemned by his father Jacob (Gen 49:3-4). Fittingly, Reuben appears first in the two lists of Jacob's sons found in Genesis (Gen 35:23; 46:8-9).

1.2. Joseph Narratives. Reuben talked his brothers out of killing *Joseph, the firstborn of Jacob's favored wife, and showed genuine grief when his brother was sold into slavery (Gen 37:12-30). Later, in an attempt to buy grain in Egypt to feed his extended family, Reuben offered Jacob the lives of his own two sons in exchange for that of *Benjamin (Gen 42:35-38). Toward the end of his life, Jacob announced that Ephraim and Manasseh, Joseph's sons, were to be considered as his own sons "just as Reuben and Simeon are mine" (Gen 48:5 NIV). Jacob thus adopted his grandsons while reaffirming the preeminence of his own firstborn. In his final blessing, however, Jacob subsequently removed Reuben's preeminence in response to Reuben's earlier attempt to seize the patriarchal headship (Gen 49:3-4; cf. Gen 35:22; 1 Chron 5:1).

2. Reuben's Role in Exodus, Numbers and Deuteronomy.

As a tribal entity, Reuben's preeminence began to wane (cf. Gen 49:3-4) in the *wilderness wandering narratives. The tribe of Reuben continues to be listed first in various rosters related to tribal census (Ex 1:2; 6:14; Num 1:5, 20-21; 26:5-11) and in the list of men chosen to spy out the land of Canaan (Num 13:4). On the other hand, in matters related to the *tabernacle the tribe of Judah is listed first while Reuben slips to fourth place (Num 2:10-16; 7:30; 10:18), which is consistent with the later biblical focus on Israelite worship in Jerusalem. Between Moses' initial census (Num 1:20-21) and that taken after the plague of Baal Peor (Num 26:5-11), Reuben drops from seventh to ninth in size among the tribes. This shift in preeminence may be reflected in the episode of Korah's rebellion in which On, Dathan and Abiram, three men from the tribe of Reuben, joined with Korah, a Levite, to challenge the leadership of Moses (Num 16:1-35; cf. Deut 11:6). While uncertainty persists, it is likely that their actions involved an attempt to reassert the declining influence of Reuben among the tribes.

After Moses conquered the Amorite kingdom of Sihon and the kingdom of Og in Bashan (Num 21:21-35; Deut 2:26—3:17), he allowed the tribes of Reuben and Gad and a portion of Manasseh to settle in areas in Transjordan not already considered part of the homelands of Ammon, Moab or Edom (Num 32:1-42; 34:13-14; Deut 3:12-17; 29:7-8). Reuben claimed the Medeba Plateau, a chalky, rather arid tableland (*mišōr*; cf. Deut 3:10; Josh 13:9, 16) particularly suitable for raising livestock and lying between the Arnon River (Wadi el-Mojib) and the city of Heshbon (Tell Hesban) (Num 32:1-5, 37-38; Deut 3:12, 16; cf. Josh 13:15-23; Judg 5:15-16). This land, wedged between Moab, Ammon and the Dead Sea and open to the vast eastern desert, was separated from the stronger Israelite tribes west of the Jordan River (cf. Josh 22:9-34). In addition, the King's Highway connecting the capitals of Ammon, Moab and Edom passed through this region (cf. Num 20:17; 21:22). These factors ensured the tribe of Reuben both the opportunity to reap the benefits of international trade but also the danger of being overrun by enemies. Moses designated the city of Bezer (possibly Umm el-'Amad) in the tribal inheritance of Reuben as a city of refuge (Deut

4:41-43; Josh 20:8). Archaeological remains to date attest to only meager remains from this region during the time of ancient Israel's settlement (Iron I).

3. Subsequent History.

Jacob's blessing of Reuben (Gen 49:3-4) foreshadowed the tenuous existence that faced the tribe once Israel began to settle the land of Canaan. Moses' blessing was more favorable (Deut 33:6) but presupposes difficult days ahead for the tribe. David's census—and hence royal Israelite control—included the region of Reuben, even though 2 Samuel 24:5 does not mention that tribe by name. Some believe that by this time Reuben had already been absorbed into the tribe of Gad. In any case, Reuben was eventually eclipsed by more powerful forces. Biblical records specifically mention conquests by the Syrians (2 Kings 10:32-33) and Assyrians (1 Chron 5:26). The annexation of lands held by Reuben by the Moabite king Mesha is known from both 2 Kings 1:1; 3:4-5 and the Moabite Stone (mid-ninth century B.C.); the latter mentions Gad, the land of Medeba and cities within Reuben's inheritance (e.g., Dibon, Baal-meon, Nebo and Bezer) but not the tribe of Reuben itself. In spite of these and other threats, the Chronicler notes that the tribe of Reuben was able to curtail the encroachments of certain desert tribes and remain in its land until the exile (1 Chron 5:18-22).

ROD, STAFF

In the ancient Near East a rod or staff was, among other things, a symbol of leadership and royal power. This usage is also found in the Pentateuch. Furthermore, a rod functioned in the vindication of *Aaron's priesthood. In a rather different context, we find *Jacob using rods in an enigmatic sheep-breeding practice.

1. Terminology
2. Ruler's Staff
3. Staff of God
4. Budding Rod of Aaron
5. Rods and Sheep Breeding

1. Terminology.

There are several Hebrew terms that translate into rod or staff. The most common is *maṭṭeh* (about 250 times in the OT) and its closest synonym *šēbet* (190 times in the OT). Both terms mean rod and staff, and both developed from this basic meaning to denote scepter and tribe, a tribe being those under the command of one who holds the scepter (*HALOT*, 1388; cf. Johnstone, 311-13; for the view that *šēbet*, "staff" and "ruler," come from two different roots, see Gevirtz). Also occurring in the Pentateuch are *maqṣel* (18 times in the OT) and *miš'enet* (11 times in the OT), which both denote rod and staff, and *mēhōqēq* (4 times in the OT), meaning commander's staff.

Common uses of a staff or rod were for walking (*maṭṭeh*, Gen 38:18, 25; *maqṣel*, Gen 32:10 [MT 32:11]; *miš'enet*, Ex 21:19), shepherding (*šēbet*, cf. Lev 27:32), and beating a donkey

(*maqṣel*, Num 22:27) or a person (*šēbet*, Ex 21:20). A figurative use is "staff of bread" (Lev 26:26), although the metaphor may go back to a custom of hanging bread on a staff of wood (cf. *HALOT*, 573).

2. Ruler's Staff.

In ancient Near Eastern iconography, the ruler's staff (often with a scepter) is a feature of royalty (e.g., *ANEP*, nos. 379, 383, 414 [Egyptian]; cf. Ps 45:6 [MT 45:7]; 110:2; Jer 48:17; see further Propp, 228). Against this background Jacob's blessing of Judah refers to the ruler's staff and scepter: "The scepter [*šēbet*] shall not depart from *Judah, nor the ruler's staff [*mēhōqēq*] from between his feet" (Gen 49:10 NRSV; cf. *ANEP*, no. 463, for the position between the feet; for the view that "from between his feet" refers to descendants, see Wenham 1994, 477). The hegemony here promised to Judah was realized in David's kingship, which was to represent Yahweh's rule, making Judah the divine scepter through which God reigned (Ps 60:7 [MT 60:9]; 108:8 [MT 108:9]; cf. 2 Sam 7).

*Balaam's prophecy that a star would come out of Jacob and a scepter (*šēbet*) out of Israel that would crush the heads and skulls of his enemies (Num 24:17) suggests a mace-like scepter with which a victorious monarch would strike the enemy (e.g., *ANEP*, no. 296 [Egypt]; see Harrison, 322). In the song of the well (Num 21:17-18), the reference to the well being dug with scepters and staffs (*bimēhōqēq bēmiš'ānōtām*) of the nobles is best taken literally (Milgrom, 178, 461).

3. Staff of God.

In response to *Moses' desire for assurance that his mission to lead Israel out of Egypt would be credible, God gave Moses the sign of changing his staff (*maṭṭeh*) into a snake and vice versa (Ex 4:2-5). When Aaron became the spokesperson for Moses (Ex 4:15-16; 7:1-2), this staff came to be referred to as Aaron's when the miracles were performed before *Pharaoh (Ex 7:10, 12), but it remained the rod of Moses (cf. Ex 7:15; cf. Propp, 227-29). The fact that it was called the staff of God (Ex 4:20; 17:9) indicates that it was not to be conceived magically but as an instrument of God's will (cf. Deut 18:10-12). However, when Moses used this staff in a manner that God had not commanded, by striking the rock with it to bring forth water, he treated the rod as

a power in itself. Then Moses sinned grievously in not recognizing God's place and holiness and was thus excluded from the Promised Land (Num 20:1-13; also see Jacob, 95-96, 201-6; Kok, 162-64).

The fact that God's will was being executed through the staff of God means that the turning of this staff into a snake (Ex 7:10) was of a fundamentally different nature from what the Egyptian magicians did by their secret arts (Ex 7:11; Sarna, 37), a fact demonstrated by their rods being swallowed up by Aaron's rod (Ex 7:12). The rod of God is mentioned in five of the ten plagues (Ex 7-10). Although the magicians could mimic the effects of the first two plagues (Ex 7:22; 8:7 [MT 8:3]), the irony is that they only contributed to Egypt's misery and could not undo the effects of Yahweh's judgment on Egypt and their gods.

In the victorious battle against Amalek at Rephidim, Moses took the staff of God with him to the top of the hill and apparently raised it. As long as he held his hands up, Israel was winning (Ex 17:9-13; for a survey of interpretations, Propp, 621).

4. Budding Rod of Aaron.

Aaron's (almond) rod (*matteh*) blossomed in divine vindication of the position of *Levi, and of Aaron in particular, as Yahweh's high priest (Num 17:8 [MT 17:23]; for contextual analysis, see Wenham 1981). This rod was then placed as a sign to the rebellious in front of "the testimony" (*'ēdūt*) in the *tabernacle (Num 17:10 [MT 17:25]), a placement that raises the question whether Jeremiah saw it when prophesying of the almond branch (Jer 1:11-12; cf. van der Toorn). The placement of a rod in the sanctuary was known in Egypt and Phoenicia (Milgrom, 145).

5. Rods and Sheep Breeding.

Jacob altered the breeding pattern of Laban's flocks to produce a maximum number of streaked, speckled or spotted young by placing

sticks (*maqēlôt*) near the watering troughs (Gen 30:37-41). The rods in this difficult passage have usually been explained as aphrodisiacs. The animals would have become stimulated by the mere sight of the rods and conceived young. Such an interpretation, however, raises more questions than it answers. The best interpretation seems to be that with the sticks or rods Jacob made mock phalluses and allowed only those animals that he did not want to produce offspring to become heated upon the rods (*'l hammaqēlôt*, Gen 30:39). So he determined which animals would actually mate and thus maximized his wages at Laban's expense (Noegel).

ROYAL GRANT COVENANT. See COVENANT; DECALOGUE.

S

SABBATH, SABBATICAL YEAR, JUBILEE

Within the context of Yahweh's intention to create a *holy nation of the Israelites, the closely associated concepts of sabbath, sabbatical year and Jubilee play an important role. Their importance is underlined by the fact that the sabbath was designated the sign of the *covenant made at Mount Sinai.

1. Sabbath
2. Sabbatical Year
3. Jubilee
4. Theological Significance

1. Sabbath.

The sabbath day is the seventh day of the week, a day of rest. The two primary ideas are that no work is to be done on this day and that it is to be observed regularly on the seventh day of the week. The word *sabbath* (*šabbāt*) occurs forty-five times in the Pentateuch: fourteen in Exodus, twenty-five in Leviticus and three each in Numbers and Deuteronomy. It can refer either to the sabbath day or the sabbatical year. Likewise, the derivative *šabbātôn* occurs a number of times in the Pentateuch. It is used to refer to particular sabbath days or the sabbatical year. The word appears both on its own and in conjunction with *šabbāt*, where it denotes a sabbath of complete rest, perhaps having an intensifying function. In addition, the seventh day is also mentioned as a day on which to rest but without its being called the sabbath.

The precise relationship between the noun *šabbāt* and the verb *šabat* is disputed. Whether the noun derives from the verb or vice versa is unclear. The Qal verb means "to cease, stop." Quite possibly, therefore, the noun simply means "the day that stops," implying the cessation of work or regular activity. Other possible

meanings include "to rest," "to celebrate" or even "to be complete." However, the basic meaning seems to be cessation (Dressler, 24). That there is a relationship between the two words is suggested by the absence of the noun *šabbāt* in Genesis 2:2-3 and Exodus 23:12; 34:21, where the seventh day is discussed and the verb *šabat* occurs (Andreasen 1978, 23-27). There is also conjecture that the noun *šabbāt* is related to the number seven, but that possibility has little scholarly consensus.

1.1. Usage.

1.1.1. *Sabbath in Exodus and Deuteronomy.* The first occurrence of the word *šabbāt* in the Hebrew Bible is in Exodus 16:23-30, where the word occurs four times in the context of instructions about collecting manna. On the sabbath, the seventh day, no manna was found, yet unlike on other days the manna collected the previous day had not turned foul. The sabbath day is described as a day of "solemn rest" (*šabbātôn*, Ex 16:23). This is the first time the seventh day is explicitly called the sabbath in the Pentateuch, and critical scholarship also usually regards this text as the earliest tradition in the OT referring to the sabbath. No reason is given for this day being special. This reference to the lack of manna on the sabbath day precedes the command to keep the sabbath in Exodus 20; in effect, the reference in Exodus 16 is part of the narrative and not part of the commandment. Yet this passage presupposes the knowledge and institution of the sabbath day (though some suggest that the passage allows the possibility that the sabbath was unknown to Israel at this stage). That might explain why the day is described in its full form, as a "day of solemn rest, a holy sabbath." There is no indication in Exodus 16 that the sabbath was a cultic celebration at this stage.

The command to keep the sabbath is the

fourth commandment of the *Decalogue. In Exodus 20:8-11, where the word occurs three times, the day is again the seventh day. No work is to be done on it by anyone, including animals. It is a holy day for remembering. Much of this parallels the instructions in Deuteronomy 5:12-15, where the word also occurs three times. On the different reasons given for keeping the sabbath law in Exodus 20 and Deuteronomy 5, see below.

The command to keep the “sabbaths” recurs in Exodus 31:12-17. Again it is the seventh day, a holy day on which work is proscribed. Yet another reiteration occurs in Exodus 35:2-3. A specific example of what is prohibited on the sabbath (kindling of fires) is given in verse 3. In both Exodus 31:15 and 35:2, *šabbātōn* occurs as well as *šabbāt*. An additional idea in both chapters is that any Israelite who infringes the sabbath law is to be put to death. These two passages are particularly solemn, highlighting the importance of the sabbath law.

The significance of the sabbath command can be seen in each of the passages mentioned thus far. That it is part of the Ten Commandments and its breach is punishable by death shows its importance. In particular, the way the commandments are written in Deuteronomy 5 makes the sabbath command central and thus in a position of great importance. The reiteration in Exodus 31 climaxes the lengthy instructions for building the *tabernacle and concludes all the laws given at Sinai in Exodus. Its position at the end of all these laws underlines its importance. Then, immediately after the *golden calf incident, the mention of the sabbath in Exodus 35 begins the section culminating in the building of the tabernacle. Structurally, therefore, the sabbath law is significant in Exodus. As will be discussed below, the sabbath is the sign of the Mosaic covenant.

1.1.2. Sabbath in Leviticus. In the second half of Leviticus, *šabbāt* occurs several times, often in association with feasts or *festivals. There is a general command to keep “my sabbaths” (Lev 19:3, 30; 23:38) as well as a command to keep the seventh day sabbath (also *šabbātōn*, Lev 23:3). These brief commandments are not elaborated on as in Exodus; here the sabbath day is Yahweh’s (“my”) day.

The Day of *Atonement is a sabbath of solemn rest (*šabbātōn*, Lev 16:31; 23:32). Sabbaths are also mentioned in conjunction with the offering of firstfruits (Lev 23:11) and the Festival

of Weeks (Lev 23:15, 16). *Aaron is to set out the bread and frankincense as an offering “sabbath after sabbath” (Lev 24:8). In the section of covenant sanctions for obedience, one of the first mentioned is keeping “my sabbaths” (Lev 26:2).

The day of rest associated with the Feast of Trumpets (Lev 23:24) and the first and eighth days of the Feast of Tabernacles (Lev 23:39) are all denoted by *šabbātōn*. The inclusion of the sabbath command in Leviticus 23 indicates that the day is not just about cessation of work but has a cultic dimension as well.

1.1.3. Sabbath in Numbers. In the book of Numbers the sabbath is mentioned just three times. Numbers 15:32 reports that a man found collecting sticks on the sabbath was sentenced to death, reinforcing the punishment stated in Exodus 31:14. His actions were a direct infringement of Exodus 35:3, which prohibits the kindling of a fire. Numbers 28:9-10 lists certain *sacrifices to be offered on the sabbath.

1.1.4. Rest on the Seventh Day. The seventh day is sometimes described as a time for rest without its being designated by the noun *šabbāt*. Genesis 2:2-3 states that God rested on the seventh day after the work of creation. The day is not called a sabbath day here, though the related verb *šābat* is used. Nonetheless, there is little doubt that the description of God’s rest in Genesis 2:2-3 is intended to portray a sabbath rest, since the account sets this day apart from the previous six. The symmetry and rhythm of the first six days changes abruptly. Whereas days one to three are balanced by days four to six, the seventh day stands alone. Only this day is blessed and holy. Three times it is said that this is the seventh day. It is also stressed by repetition that God completed his work (Gen 2:1-3; see van Gemeren, 46-48; Dumbrell, 18-19).

To what extent this description of the original seventh day is intended to be a *creation ordinance for all humans to follow has been the topic of much debate, a debate that has implications for Christian sabbath observance. Many who argue that the sabbath is a creation ordinance also argue that Christians are bound to keep Saturday as their sabbath. Those who argue that Genesis 2 is a creation ordinance for sabbath observance for all people sometimes appeal to similar ancient Near Eastern customs to argue that they are remnants of such an ordinance (see Swartley, 74). Some ancient Jewish sources, such as Philo, argued that sabbath observance is binding on all

humanity and not just Israel. However, many Jewish rabbinical texts argue the opposite, contending that the sabbath was given for Israel only (Dressler, 29-31; Lincoln, 348-58).

Modern commentators on Genesis 2 differ. On the one hand, G. von Rad (1963, 60) and J. Calvin (106-7) argue that this is not a creation ordinance; on the other hand, U. Cassuto (61-62) and C. Westermann (170) see implications here for universal sabbath observance. G. F. Hasel argues that because humankind is made in the *image of God and God rested on the seventh day, there is an implicit command for humanity also to rest on the seventh day. Though he disagrees that Genesis 2 is a creation ordinance, H. H. P. Dressler argues that the *blessing and sanctifying of the day in Genesis 2 is for the benefit of the people of God: "God's last creative act is not the making of man but the creation of a period of rest for mankind" (Dressler, 30). G. J. Wenham sees in the striking language of blessing and sanctifying used with reference to a day and the threefold emphasis on God's resting from his work "the clearest of hints of how man created in the divine image should conduct himself on the seventh day" (Wenham 1987, 36). Similarly, J. A. Pipa argues that God's resting on the seventh day is a model for how people are to act on the seventh day (Pipa, 25-41).

The Decalogue in Exodus makes God's resting after creation the paradigm for Israelite observance of the sabbath. However, on its own, Genesis 2 does not. Genesis 2:1-3 is part of a narrative and is not a legal text. There is no command to humanity to keep the sabbath here, though there are commands to humans in Genesis 1:26-28. The sabbath rest at the end of the first week makes a statement about the quality and completion of the creation rather than suggests a model of work and rest for humanity. In fact, humanity is not even mentioned in these verses. This seventh day is for God, who ceases work on it. Only in Exodus 20:11 does this seventh day become a sabbath day. Therefore, the sabbath is not a creation ordinance but rather part of the covenant laws applying to Israel (for a discussion of the various views, see Andreasen 1978, 71-81; Swartley, 65-95; Lincoln, 348-58).

Interestingly, the word *sabbath* is not used in conjunction with the Passover festival in any of the books of the Pentateuch. Instead, the day is called the seventh day. No work is to be done on it since it is a day of rest (see Ex 12:15-16; Lev

23:8; Num 28:25; Deut 16:8).

The same absence of the word *sabbāt* occurs in Exodus 23:12; 34:21, where the weekly seventh day is commanded to be a day of rest, especially in the latter case when it is the time for harvesting and plowing. No work is to be done on the eighth day at the end of the Feast of Tabernacles (Num 29:35).

H. L. Bosman, following N.-E. A. Andreasen, suggests that these references may imply a period when the weekly day of rest was not called "sabbath." However, the fact that both accounts of the Decalogue explicitly identify the seventh day as the sabbath makes this suggestion unlikely.

1.2. *The Reasons for the Sabbath.*

1.2.1. *Theological Motivations in the Decalogue.* Unusually for the Decalogue, the sabbath law carries a motivation or reason for observance. This differs in the two accounts of the Decalogue (Ex 20; Deut 5). The former appeals to creation and God's resting on the seventh day in Genesis 2, the latter to redemption and Yahweh's liberating Israel from slavery in *Egypt.

Exodus 20:11 gives as the reason the fact that Yahweh made everything in six days and rested on the seventh, blessing it and making the day holy (referring back to Gen 2:1-3). Unlike the previous six days, the seventh day has no "evening and morning" formula in the Genesis account. It is, in a sense, an endless day, anticipating the ideal for God's creation. It is to this that Exodus 20 appeals, inviting Israel to participate in a weekly sabbath modeled on the original, very good creation (so also Ex 31:12-17).

Unlike in Exodus 20 and 31, the reason for observing the sabbath in Deuteronomy 5:15 is that Yahweh has redeemed Israel from slavery in Egypt. Consequently, Deuteronomy includes the expression "so that your male and female slave may rest as well as you," a clause that is not found in the Exodus 20 parallel but which reflects Deuteronomy's abiding concern for social fairness and justice. The association with redemption from Egypt contributes to the religious character of the sabbath day.

We ought not be too concerned with a bifocal reason for keeping the day, since "creation and salvation are two aspects of the one theological reality" (Childs, 70). The two reasons are complementary, not contradictory.

1.2.2. *Sabbath as a Social Concern.* An assumption often made is that the sabbath law is for the

benefit of humanity. People need rest and refreshment. Exodus 23:12 does indicate the need for rest and relief for animals and *aliens. The clearest expression of humanitarian concern as a reason for the sabbath is in Deuteronomy 5:14, where the observance of the sabbath is "so that your male and female slave may rest as well as you." However, this humanitarian concern is not dominant in the pentateuchal texts (see Andreasen 1972, 122-40). More is at stake in the observance of the sabbath than just a social concern for rest and refreshment. The death penalty indicates that.

1.2.3. Sabbath as a Covenant Sign. An additional reason for sabbath observance occurs in Exodus 31:12-17. Here the Sabbath is to be a "sign" of the covenant "between me and you" (Ex 31:13, 17). The expression "between me and you" occurs as covenant formula in the covenants with Noah and Abraham (Gen 9:12; 17:11). So the sabbath is the sign of the Mosaic covenant just as the *rainbow is the sign of the *Noahic covenant and *circumcision is the sign of the Abrahamic covenant. Unlike the rainbow, this sign is primarily for the benefit of Israel. Its function is that Israel may know that Yahweh makes Israel holy (Ex 31:13). It is a sign of relationship between Yahweh and Israel (Andreasen 1972, 208-13). Thus as God originally declared the sabbath day itself holy, the sabbath command for Israel declared that they also were made holy by God. This is forward-looking, anticipating the goal of covenant history (Hasel).

1.3. The Character of the Sabbath. In one sense, the sabbath for the Pentateuch was not primarily a religious or cultic festival. Most of the texts that relate the sabbath to cultic activity occur outside the Pentateuch (see Andreasen 1972, 141-50). For the ordinary Israelite, no religious ceremony was commanded. Basically it was a day of rest. The dominant command or prohibition attached to the observance of the Sabbath day is "You shall do no work."

However, the sabbath day was hallowed and belonged to Yahweh, and that gave it a special character. The sabbath day was to be both solemn and joyful. It was to combine a celebration of God as Creator and Redeemer, being a foretaste of entering into the creation ideal, which was also the goal of redemption. The holiness of the day, and Israel's participation in it, indicated that the day was lived in the presence of God. Work was prohibited "from evening to evening"

(Lev 23:32) and included harvesting (Ex 34:21) and collecting sticks (Num 15:32-36).

It is unclear, however, what cultic activity occurred on the sabbath day apart from special sabbaths associated with other feasts and festivals. The priests offered special sabbath sacrifices, an additional burnt offering of two male lambs and a cereal offering (Num 28-29), but no mention is made of ordinary Israelites in this connection.

Nonetheless, the day was not just a rest day. It was a religious day that belonged to Yahweh. Though more is made of the religious and cultic nature of the sabbath in texts outside the Pentateuch, there are indications in the Pentateuch that the day was a religious occasion. It was set apart or made holy to Yahweh. It was his day (Ex 16:23, 25; 20:10; 31:15). Yet it was also a day holy for Israel (Ex 31:13). The command for Israel to participate in this day is linked to Israel's being holy to the Lord, set apart to be his people. Thus in Exodus 31:12-17 the sabbath is a sign that Yahweh sanctifies Israel itself. Theologically, the day reminds Israel that Yahweh is Creator and Redeemer and Lord of all. Observance of the day at least implies an acknowledgment of the lordship of Yahweh (Andreasen 1978, 42, 60-70).

For an assessment of how, and if, Israel kept the sabbath day, texts outside the Pentateuch need to be consulted. For example, one can consult Psalm 92 and Ezekiel 46:1-3 regarding its celebration, Ezekiel 22 regarding the profaning of the sabbath as a factor leading to the exile, Nehemiah 10:31-33 for a commitment to keep the sabbath after the exile, and Judges 14:12-18; 1 Kings 8:65; 2 Kings 4:23; 11:5-9; 1 Chronicles 9:32; 23:31 for particular occurrences of the sabbath.

1.4. Other Ideas About the Sabbath's Origins. Over the course of the twentieth century, scholars have made proposals regarding extrabiblical origins for the Israelite sabbath. For example, a number of scholars proposed an origin of the sabbath day in Mesopotamia. Such a theory often argues that the etymology of the Hebrew word *šabbāt* is found in the Akkadian word *šapattu* (or *šabbattu*), which probably means "full moon" or "the day of celebrating the full moon." In more recent years, G. Robinson has revived the theory that the Israelite sabbath was a relic of the Babylonian moon cult. He argues that only after the exile did the monthly festival become a weekly observance. But this is extremely unlikely. Hosea 2:11, a preexilic text, implies that sabbaths were

weekly and sets them apart from the new moon festival. The Babylonian moon festival had set days in the month, a pattern that is not found in the OT or in weekly sabbath observance. Weekly sabbaths do not coincide regularly with a lunar cycle of twenty-nine days. As L. L. Grabbe says, "No Old Testament texts connect the Sabbath with the lunar cycle in any way" (Grabbe, 89). Nonetheless, as Andreasen notes, it is intriguing that the Akkadian word is so similar to the Hebrew *šabbāt* and yet refers to something quite different (Andreasen 1978, 13). Similar theories have also purported to find the sabbath origin in Assyrian calendars or in Arabian moon festivals. In the end, however, such theories remain speculative. There is no evidence that clearly connects these with the Israelite sabbath (see Hasel, 5.850-51; Bosman, 4.1157-58; Kraus, 81-85; Andreasen 1978, 12-15).

E. Jenni proposed a sociological derivation for the sabbath, namely, that the sabbath might originally have been market day. However, although regular market days in the ancient world were observed, there is no evidence of weekly market days in any ancient Near Eastern literature.

Another theory is that the sabbath derives from the Kenites, with whom Moses and the Israelites had contact at Mount Sinai. Moses' Midianite family was Kenite (Num 10:29-32; Judg 4:11, 17). Supposedly the Kenites led the Israelites back to their ancestral worship of Yahweh, which was lost through the period of slavery in Egypt. Again, this theory is entirely speculative and inconsistent with the evidence of the book of Exodus. The linking of the prohibition of fire-making on the sabbath (Ex 35:3) with the argument that the Kenites were smiths (and hence worked with fire) is a flimsy argument for a Kenite origin of the sabbath law (Andreasen 1978, 15-16).

Finally, the number seven, it is argued, was significant in some ancient Near Eastern cultures, in particular, in Ugaritic texts and calendars. A variation on this is the claim of J. Morgenstern (4.136-37) that there is "abundant evidence" that Israel found the pattern of seven days in Canaan and adapted it for its own use. The original Canaanite seventh day was a taboo day, an evil day, and was associated with the pentacontad calendar in which the numbers seven and fifty were significant. However, despite his claim, Morgenstern's thesis lacks supporting evidence for such an origin of the sabbath or for its alleged transformation from

an evil or taboo day into a day of gladness.

The quest for an extrabiblical origin of the Israelite sabbath has failed thus far at least. All of these theories remain speculative; none is convincing. The origin of the Israelite sabbath must be found within the biblical record: "Only the ancient Hebrew literature speaks definitely about a seven-day week and a Sabbath" (Dressler, 23). According to B. A. Levine, "the Sabbath is an original Israelite institution" (Levine, 261; see also Andreasen).

2. Sabbatical Year.

The sabbatical year is an extension of the weekly sabbath. The words *šabbāt* and *šabbātôn* are also applied to the sabbath year. This occurs in Leviticus 25:1-7, where *šabbāt* occurs four times in this sense in the expressions "sabbath of complete rest" and "sabbath for Yahweh." When Israel is exiled from the land, ironically enough, the land can enjoy its sabbath years of rest as part of the sanctions for Israel's disobedience (Lev 25:34-35, 43). The other Hebrew word used in reference to the sabbatical year is *šamaṭ*. The verb can mean leaving land fallow for a year (Ex 23:11) or the cancellation of debts (Deut 15:1-2).

2.1. What the Sabbatical Year Entailed. Instructions regarding the sabbatical year occur in Exodus 21; 23; Leviticus 25; Deuteronomy 15; 31. Four things are involved.

2.1.1. Fallow Land. During the sabbatical (or seventh) year the land lies fallow (Ex 23:10-11; Lev 25:1-7). This law applies not only to fields but also to vineyards and olive orchards. Just as humans are to rest every seventh day, so the land is to rest every seventh year. Note that Exodus 23:10-12 juxtaposes the sabbath and sabbatical-year laws. Moreover, the purpose stated for this law is the benefit of the poor, who can eat whatever has grown in the field, vineyard or orchard on its own accord. Presumably the owner of the land eats from what has been set aside in the previous six years, though according to Leviticus 25 the owner and his family can eat of the wild growth along with slaves and, presumably but not explicitly, the poor. Nothing is mentioned about increasing the fertility of the land as a purpose for this law despite a number of scholars arguing that fertility must have been part of the law's intention, a carryover from Canaan (see Kraus, 70-71). Thus the force of this law is primarily humanitarian, though, as mentioned below, there were religious and cultic as-

sociations as well. The poor in these contexts are the landless, some categories of whom are listed in Leviticus 25:6, namely, the slaves and hired laborers or resident aliens. This is the same group who also benefit from the weekly sabbath in Exodus 23:12.

The sabbatical year law is just one of a number of laws that protect the landless Israelites (e.g., gleaning laws in Lev 19:9-10; Deut 24:19-21). Lying behind such laws is an appreciation of the importance of the *land as a gift from God and the obligation on Israel to share its bounty equitably, trusting that God will provide abundantly for all. The recognition that this is just one of a number of laws for the benefit of the poor makes us aware that other laws make provision for the landless during the other six years.

The thrust of the sabbatical year in Israel seems to have been the universal observance of the same year, rather than a rotation system. C. J. H. Wright (1984) suggests that the earlier Exodus text “must surely have” had in mind a rotation system and that later, in Leviticus, this became a single fallow year for the whole land. This would explain why in Leviticus 25:2 it is “the” land that will observe a sabbath and not “your” land, as in Exodus 23:10-11. The gleaning laws and other provisions for the poor are found in Leviticus and not in the *book of the covenant. However, G. C. Chirichigno (306-11) argues persuasively otherwise. The uniformity of the sabbath for all people and research into ancient practices and land fertility suggest that a universal fallow year was not in fact impractical.

No explicit theological motivation for observing this law is given in Exodus 23, though Leviticus 25:4 states that the sabbatical year is a “sabbath for Yahweh.” It is unlikely, however, that the law in Exodus 23:10-11, in the book of the covenant, was without religious significance (Chirichigno, 304-6). Its very presence ties economic and religious concerns together. Leviticus 25 states explicitly what is implicit in Exodus 23. H.-J. Kraus includes discussion of the sabbatical-year fallow-land law in his book dealing with cultic practices in Israel, arguing that it was a religious occasion.

2.1.2. Freedom of Slaves. In the seventh year a slave was to go free (Ex 21:2; Deut 15:12-18). This regulation applies to Hebrew slaves, not foreign slaves (cf. Lev 25:44-46). There is some debate about whether the term *Hebrew* was synonymous with *Israelite* or whether it referred to a

social class of landless people (Habiru or Apiru in ancient Near Eastern texts). The evidence is inconclusive. Certainly the legislation applied particularly to Israelite slaves. After release, the slave became a free person, though not necessarily with land. Thus the slave became a laborer. Recognizing that some slaves might prefer to remain slaves with their particular landowner, both Exodus 21 and Deuteronomy 15 allow for the possibility of a slave wishing to remain in the employment of his master, which indicates that slavery was not intended to be harsh or cruel (*see* Slave, Slavery).

The case under which an Israelite might become a slave was bankruptcy. Thus the sabbatical year legislation sought to protect the poor and allow opportunity for them to become independent. The legislation was motivated by the remembrance that Israel was enslaved in Egypt but was redeemed by Yahweh (Deut 15:15). In addition, slave-owners were to provide liberally and generously for their released slaves in the sabbatical year, presumably to help a freed slave make a start as a free person (Deut 15:14). The ideal expressed is that there be no poor in the land (Deut 15:4), though at the same time there is an acknowledgment that there will always be poor (Deut 15:11). The legislation in Exodus 21:7-11 treats female slaves differently from male; in Deuteronomy 15:12-18 they are treated equally. Chirichigno comments that the latter does not abrogate the former but develops it (Chirichigno, 347-49). In Exodus, the perspective is that of the slave; in Deuteronomy it is that of the master.

The legislation for slave remission seems to imply the offer of release after six years of service and not in a universal sabbatical year. Nonetheless, as Wright (5.857-61) says, undergirding the law is the same sabbatical principle. This is reflected in the juxtaposition of the laws in Deuteronomy 15 (Chirichigno, 300). A difficult question to resolve is the relationship between this law and that of slave release in the Jubilee year (Lev 25:39-43), a matter that I will address later in this article (*see* 3.2.2 below).

2.1.3. Remission of Debts. The third activity to be conducted in the sabbatical year was the remission of debts (only in Deut 15:1-11). Though an issue of dispute, this text most probably is later in origin than the sabbatical year laws of Exodus 23 and Leviticus 25 (so Wright; Weinfeld). Certainly Deuteronomy 15 presupposes both of them. However, this does not necessarily

indicate that Deuteronomy 15:1-11 is no longer agricultural in nature (e.g., Kraus, 73; Baker, 45-46). The purpose of this law is, like the other stipulations for the sabbatical year, the restriction of poverty in the land. Again the poor are protected by sabbatical year legislation. As with slave release, the beneficiaries of this law are fellow Israelites, not foreigners (Deut 15:3). This law is linked to the fallow-land law by the use of the same verb (*šāmat*, Deut 15:1; cf. Ex 23:11). Further, the context for most loans could be such things as borrowing seed for sowing with repayments made after harvest. Thus the context is extended from fallow land to remission of debts. So, typical of Deuteronomy, it presupposes earlier laws, extends them and continues or intensifies their humanitarian concern.

There is some debate about whether *šāmat* in Deuteronomy 15 means remission or deferment. For example, S. R. Driver, P. C. Craigie and C. J. H. Wright opt for deferment or suspension for one year. However, ancient Near Eastern parallels, Josephus, rabbinical scholars and many modern exegetes (e.g., von Rad; M. Weinfeld) understand the word to mean cancellation. Weinfeld argues this on the grounds of parallels with Mesopotamian laws and a Second Temple document seeming to support cancellation. It is impossible to be certain. Logically a suspension of debt gives more substance to the Jubilee laws, for if debts are cancelled totally in the sabbatical year, then the Jubilee year loses some of its significance. Also, if debts were totally cancelled every seven years, there would be little incentive to loan anything to anyone. Certainly if a suspension of debt is intended, then the use of pledged land and possessions would be of great use for the debtor and alleviate the financial situation. A suspension ought not be regarded as a token gesture. It would be real relief.

In part, our understanding of whether *šāmat* is cancellation or deferment depends on our understanding of *maššēh* in Deuteronomy 15:2. If *maššēh* is understood to be referring to the loan itself, then this law seems to indicate cancellation. If, however, *maššēh* is the pledge of the loan, then suspension or deferment for the sabbatical year may be in view. A debtor would normally have pledged something of value to a creditor, possibly even some land or, as a last resort (see Lev 25:35-55), a slave. The law restricts what could be used as a pledge, forbidding the retention of a cloak as pledge overnight (Ex

22:26-27; Deut 24:12-13, 17). Possibly the use by the creditor of this pledge for the duration of the debt would have helped to pay the debt. In the sabbatical year, debts were cancelled or suspended and pledges returned, if only for the duration of the sabbatical year.

In the end, we cannot be absolutely certain what was required in the sabbatical year. Cancellation and suspension are both textual possibilities. Logic, at least, favors the latter. On the whole, then, this law is about agricultural matters and not usually about slaves. It is an extension of the fallow-land law. At its heart is a humanitarian concern for poor Israelites. Where the fallow-land law protected the landless, this law extended that protection to landowners who faced poverty.

2.1.4. Reading the Law. Every sabbatical year, the book of Deuteronomy was to be read out loud at the Feast of Tabernacles (Deut 31:1-13). All Israel—men, women and children—were to hear it. The purpose was to teach subsequent generations what the *law entailed. This stipulation may be related to the command to observe all the ordinances and statutes (Lev 25:18).

2.2. Observance. It is not obvious how well this legislation was kept in OT times. Some critical scholarship assumes that only in Israel's early, seminomadic days would it have been possible to keep the fallow-land laws. Later, after settlement, Deuteronomy 15 and Leviticus 25 transformed the agricultural sabbatical year to a more social focus, reviving ancient cultic practices and adapting them to changed circumstances. This reading of the history of Israel is not convincing.

Outside the Pentateuch, Zedekiah decreed that Hebrew slaves be released. Though initially heeded by the people of Judah (Jer 34:8-10), this law was soon disobeyed (Jer 34:11). In response, Jeremiah rebuked the people for rejecting Zedekiah's decree and thus disobeying the law of slave release in the Pentateuch. The implication of this episode is that the sabbatical year was not being observed, though it has to be said that Zedekiah's decree seems to imply a universal year of slave release disregarding the length of service of slaves (Weinfeld, 39-40). After the exile, under Nehemiah the people pledged themselves to keep the sabbatical year laws of debt remission and fallow land (Neh 10:31), restoring the laws of both Exodus and Deuteronomy 15. There is evidence of sabbatical year observance

later on (1 Macc 6:49, 53; Josephus *Ant.* 13.7.4-8.1 §§228-34; 14.16.2 §475; as well as from some documents found in the Judean desert). None of these sources mentions the Jubilee law, though there is reference to it in *Jubilees* (see Grabbe, 97; Andreasen 1978, 53-54).

Within the Pentateuch, the covenant sanctions in Leviticus 26 seem to indicate an expectation that the sabbatical year legislation would not be kept and that only when Israel went into exile would the land find rest (Lev 26:34-35, 43; see also 2 Chron 36:21).

3. Jubilee.

3.1. Introduction. The instructions regarding the Jubilee are found primarily in Leviticus 25. The Jubilee year occurred every fifty years and involved a number of socioeconomic measures.

3.1.1. Terminology. Two key words are used in reference to the Jubilee year. The word *yôbêl* is probably related to the word for a trumpet made from a sheep's horn that was blown to announce the Jubilee year, in contrast to the *šôpâr*, which was blown to announce every other new year. The word *yôbêl* occurs in this way in Exodus 19:13 and five times in Joshua 6:4-13, though there is dispute about this etymology (see Baker, 47; North [6.3] argues it is connected to *yâbal*, "to bring back," hence "homecoming"). However, the main use of the word is to refer to the Jubilee year. Apart from the six occurrences mentioned above, *yôbêl* occurs only twenty-one other times, confined to Leviticus 25 and 27 (fourteen times, six times) and Numbers 36:4, with all these referring to the Jubilee year. On ten of those occasions *yôbêl* occurs with the word *šânâ* ("year").

The other key word is *dêrôr*, meaning "liberation" or "freedom" (Lev 25:10) and possibly deriving from an Akkadian word (so North, 3.266; Baker, 47). So in the Jubilee year, liberty (*dêrôr*) is proclaimed for those in the land with the exception of foreign slaves (Lev 25:10). Freedom or liberty is a central notion in the Jubilee year, and God's liberation of Israel from slavery in Egypt is the critical theological background (Lev 25:38, 42, 55).

3.1.2. What Year Is Intended? The counting for the year was "seven sabbaths of years." Most probably the year after the seventh sabbatical year was the Jubilee year, though some scholars have argued that the Jubilee year coincided with the seventh sabbatical year counting the years

inclusively (e.g., Chirichigno). However, the provisions for the Jubilee year do not totally coincide with those of the sabbatical year. Certainly Josephus, Philo and rabbinical scholars were unanimous in regarding the Jubilee as the fiftieth year. Also, Leviticus 25:21 seems to say that one year's harvest would suffice for three years, implying that the Jubilee year was successive to a sabbatical year. However, that verse does number the years as sixth, seventh and eighth and not forty-eighth, forty-ninth and fiftieth (North, 6.4). Some regard the Jubilee year as "a heightened and intensified Sabbath year" (Sloan, 7, agreeing with North; Chirichigno, 350: "no more than a seventh Sabbatical year in a 'heightened' form"). Others suggest that the Jubilee may have been a short year, perhaps of forty-nine days, functioning not unlike modern leap days. This suggestion translates Leviticus 25:8 as "The forty-nine days of the seven cycles of sabbatical years shall be for you a year" (see Wenham 1979, 302, 319; North, 6.4).

3.2. Provisions. The instructions for the Jubilee occur in Leviticus 25:8-55. Four main provisions applied.

3.2.1. Land Return. This is perhaps the main provision of the Jubilee year, without parallel in the sabbatical year. In the Jubilee year, any land that had been sold in the previous forty-nine years was to be returned to its original family of ownership according to the Mosaic land distribution (Lev 25:10b, 13). This law had implications for the sale of land in any year. The price of land was to be determined by the number of years or harvests before the next Jubilee year (Lev 25:14-17, 25-28). In addition, land could be redeemed before the Jubilee year by appropriate payment. The law did not apply to the sale of houses within a walled city except for cities of the *Levites. Houses originally belonging to Levites were returned to them in the Jubilee year (Lev 25:29-32). Consecrated land (i.e., land set apart for the *priests and the upkeep of the temple or *tabernacle) also came under the Jubilee legislation (Lev 27:16-24). The Jubilee law of land return also led to the command that a woman who inherited land had to marry into the tribe of her father. There was concern that if the daughters of *Zelophehad married into another tribe, then their father's land from the tribal territory of Manasseh would pass over to another tribe at the time of Jubilee (Num 36:1-12).

The theological motivation for the Jubilee law

of land return was that the land belonged to Yahweh, so the law regarded Israel as being “aliens and tenants” with Yahweh (Lev 25:23). Israelites technically were stewards of the land, not its owners. This theology of the land undergirds the whole Jubilee legislation. The land, of course, is crucial in the OT for the *promises and purposes of Yahweh as well as being an indicator of the relationship between Yahweh and Israel.

3.2.2. Release of Israelite Slaves. In addition, Israelite slaves were to be released (Lev 25:39-43). Presumably the return of land coinciding with slave release would give freed slaves the resources to make a new start. A distinction is made between Israelite slaves and foreign slaves; the provision of release did not apply to the latter (Lev 25:44-46). Even if an Israelite became a slave of a resident alien, the right of redemption still applied, so that Israelite slaves could redeem themselves if they prospered or a family member could redeem them. The redemption price was calculated in proportion to the original sale price dependent on the years remaining to the Jubilee. If redemption did not occur before the Jubilee year, release occurred in the Jubilee year (Lev 25:47-54).

The details in Leviticus 25 regarding slaves make it clear that slaves were to be treated generously and not harshly. The theological undergirding of this law is that the people of Israel are the servants of Yahweh who redeemed them from Egypt (Lev 25:55). This is not unlike the theological motivation regarding the sabbatical law of slave release (Deut 15:15). This theological expression also relates to the land-return law. Both land and Israel belong to Yahweh.

The slave-release aspect of the Jubilee provisions appears similar to that of the sabbatical year. An important question, therefore, is: In what ways do the laws of slave release in the sabbatical year differ from those in the Jubilee? Many of the difficulties that scholars perceive in this legislation arise because of the assumption that the Jubilee year prescribed the same measures as found in the sabbatical year legislation.

Usually attempts to resolve discrepancies between these two are based on a hypothesis of different periods of legislation. It is often argued that the original sabbatical year law, found in Exodus 23, was agrarian and was motivated by concern for the poor. Later, Deuteronomy modified this law and added the remission of debts, reflecting a more urban society. Later still, the

Jubilee laws were added. One view is that the Jubilee laws in Leviticus represent a later attempt to modify or rescue an unworkable sabbatical year law. There are difficulties with this view. Such a modification would favor the wealthy, since a slave would often be one for life. If the law was unworkable for the sabbatical year cycle, it was not necessarily more workable for a Jubilee cycle. N. Lemche argues that the Jubilee laws reflect a long history of growth and development standardizing in a particular year the earlier provisions of Exodus and Deuteronomy.

Many scholars are skeptical that the Jubilee laws were ever practiced. Some have suggested that the laws are even purely theoretical (see Kraus, 73). Others have sought to harmonize the two, suggesting that slaves were released after six years or in the Jubilee if that was earlier. Yet such views in the end diminish the significance of the Jubilee year (for a summary of various views, see Hartley, 431-33).

Wright (1984) overcomes the apparent discrepancy between the texts by contending that in the sabbatical year the category of slave released was the landless “Hebrew,” whereas in the Jubilee year any Israelite landowner who had fallen into poverty was released. Thus Leviticus 25 does not use the term *Hebrew* but “your brother,” a much broader term including any Israelite. In the Jubilee text of Leviticus, Israelite slaves have more rights, and slavery is more restricted than in Exodus and Deuteronomy, further suggesting that the texts are dealing with different groups of people. In sum, according to Leviticus the poor Israelite was not to serve as a slave (Lev 25:39, 42), had the right of redemption (Lev 25:47-55) and did not have to forfeit wife and children acquired during the period of “slavery” (Lev 25:41, 54). Whereas the liberated “Hebrew” became a free laborer (*hopši*) in Exodus 21:2; Deuteronomy 15:12, in Leviticus 25 the freed Israelite “returned” to the family’s original landholding.

Given these distinctions, Wright summarizes the difference between the sabbatical year and Jubilee year by saying that the former was concerned to protect the landless “Hebrews,” whereas the Jubilee legislation was designed to maintain the distribution and ownership of land by Israelite families. J. E. Hartley responds to Wright’s suggestion by saying that it faces “the formidable obstacle that a landed Israelite would usually be subject to a much longer period of bondage than would a class of landless

workers" (Hartley, 432). He rejects the notion of "Hebrew" as defined by Wright. Hartley (432-33) goes on to note that the laws of Exodus and Deuteronomy on the one hand and Leviticus on the other differ in their reference to time and land. Land is the central issue in Leviticus but not in the other texts. Exodus and Deuteronomy determine the maximum length of servitude for any slave, whereas Leviticus is concerned with the proclamation of liberty for all slaves at the one time.

Chirichigno also rejects that view that the Jubilee laws are a late abolition of the sabbatical year laws of Exodus and Deuteronomy. He argues that the laws of Leviticus 25:25-54 show three successive stages of destitution. First, an Israelite needed to sell or lease his land (Lev 25:25-28). The possibility of a redeemer existed in this situation. Second, an Israelite was unable to support himself and had to rely on interest-free charitable loans (Lev 25:35-38). This case existed when there was no redeemer as in the first stage. Finally, an Israelite, along with his family, was sold to a fellow Israelite (Lev 25:39-43) or, worse, a foreigner (Lev 25:47-54). No redeemer is mentioned in the case of slavery to a fellow Israelite, but in the second case a redeemer is mentioned. Presumably this casts the net wider than the redeemer in the first stage (Chirichigno, 352). Chirichigno argues that Exodus 21:2-6 and Deuteronomy 15:12-18 differ from Leviticus 25 in that the latter envisages the sale of the head of a family and not a dependent. In Leviticus 25, the case is not a defaulted loan but the need for protection for the man and his family. The man is regarded as a hired worker, for which Leviticus 25 uses terminology different from that in Exodus and Deuteronomy, not because it is abolishing those laws but because the cases differ. Leviticus 25 demands a longer period of debt-slavery than Exodus and Deuteronomy because it clearly envisages a different type of debt-slavery.

No attempt to relate the sabbatical year and Jubilee laws completely eases the apparent tensions between them. The arguments of Wright and Chirichigno certainly have appeal, though we must remain uncertain as to their precise working relationship. Certainly the view that Leviticus simply abolishes the earlier laws can be dismissed.

3.2.3. Cancellation of Debts. If, as has been suggested above, debt repayments were suspended

during the sabbatical year, then in the Jubilee year they were cancelled entirely. Though Leviticus 25 does not explicitly discuss debt cancellation, the return of an Israelite to his land plus the release of slaves implies the cancellation of debts that led to slavery or the loss of land (see Sloan, 7-9). Related to this provision is the prescription of interest charged to fellow Israelites (Lev 25:36-37). This provision is also grounded in Yahweh's redemption of Israel from Egypt.

3.2.4. Fallow Land. As in the sabbatical year, the land was to lie fallow in the Jubilee year (Lev 25:11-12). Similar to God's provision of *manna in the wilderness, the year preceding the sabbatical and Jubilee years would produce sufficient for the fallow years (Lev 25:21).

3.3. Observance. Many scholars argue that the legislation of the Jubilee year, as well as that of the sabbatical year, is so idealistic as to be impractical. North calls it "hardly realistic" (North, 6.6). Wenham says that "as a social institution the jubilee year remained an ideal, which was rarely, if ever, realized" (Wenham 1979, 318). Admittedly the legislation is exacting, and there is no clear OT acknowledgment that the Jubilee year was ever fulfilled. However, the OT's silence on this practice need not imply lack of observance. Put simply, we do not know if and when it was observed.

3.4. Origins of the Sabbatical Year and Jubilee. There is evidence from Ugarit of a seven-year cycle of fallow land for the purpose of agricultural productivity. This had religious overtones associated with the triumph of Baal. However, there is no evidence that Israel's practice derived from there. Weinfeld argues that the sabbatical year and Jubilee laws concerning slave release and remission of debts are both identical to Mesopotamian laws, though rewritten with "a utopic colouring" (Weinfeld, 43). The parallels claimed with Mesopotamia are used by Weinfeld to support the view that Deuteronomy 15 demands cancellation of debt and not only deferment of repayment. However, there are important differences between the two sets of laws. In Mesopotamia, the king declared liberty on his accession, often in his second year. In the OT, liberty recurred every seven years, a number Weinfeld concedes is distinct to Israel, and the Jubilee year was on a fixed cycle of fifty years. Such a pattern is without ancient Near Eastern precedent.

There is also scholarly debate about whether

these institutions were early, as the OT implies, or rather postexilic. Often the Jubilee law is regarded as a revision of earlier Deuteronomic laws or a supersession of the sabbatical year laws (Morgenstern, 4.142-43). It is also suggested that the Jubilee law was established to regain land lost during the exile. However, some rare Hebrew terms, including the word *yôbēl* itself, suggest an early origin. There may be allusions to the Jubilee in Isaiah 37:21-35, which presupposes the existence of Jubilee legislation. In addition, Jeremiah 34:8-22 seems to allude to earlier legislation. The similarity of other ancient Near Eastern practices (though not identical) indicates that the Jubilee law would not have been out of place in the second millennium. The association of the Jubilee law with old tribal and family land possession fits better in the preexilic period than later, when such a family land basis was looser. Of course, the absence of any mention of Jubilee in preexilic prophets and history books is inconclusive regarding its existence in the preexilic period. An event that occurred only every fifty years is unlikely to have been mentioned frequently. If it was postexilic, it is surprising that it is not mentioned as being inaugurated in the time of Ezra or Nehemiah. North suggests that in the time of *Moses, Israel was more likely to accept such idealism than in the times of Nehemiah (cf. Wenham 1979, 318). Hartley concludes, "Thus the sabbatical year and the visionary ideal of Jubilee were anchored in the ideology that gave birth to Israel, and the legislation was adapted to changing social conditions during Israel's history" (430). Wright states that "it makes sense to see the jubilee as a very ancient law which fell into neglect during Israel's history in the land, not so much because it was economically impossible, as because it became irrelevant to the scale of social disruption" (Wright, 3.1028; see further Hartley, 427-30).

4. Theological Significance.

Wright makes some helpful comments regarding the theological significance of the sabbath and Jubilee concepts. Because the sabbath days and sabbatical years are "holy to Yahweh," they express the conviction that time belongs to Yahweh, who is Lord over it. Furthermore, as we have seen, the *exodus release of Israel from Egypt forms a theological basis for these laws. Thus Yahweh as both Creator and Redeemer

provides the theological background to these laws.

A theology of the land is also significant. The land is Yahweh's (Lev 25:23). It is the land of promise, and in this bountiful land there is more than sufficient for all, provided various economic laws are heeded and the bounty of the land is shared. Related to this is the ethical love of fellow people reflected in these laws. In particular, these laws command a concern for the landless classes.

Finally, there is an eschatological dimension to these sabbath laws. They anticipate the ideal life in God's place and under his rule. The emphasis on social concern looks forward to the harmony of God's people under him. The cancellation of debt and restoration looks forward to the full and final redemption of the people of God. Even the distinctive trumpet sound announcing the Jubilee year, compared to the usual *šôpār* announcing all other years, can be regarded eschatologically (e.g., Is 27:13). Certainly the eschatological implications of this legislation are developed in later writings, not least in Isaiah (see further Sloan, 12-18; Wright, 3.1025-29).

SACRIFICES AND OFFERINGS

The core of the sacrificial system of ancient Israel consists of the five major kinds of sacrifices and offerings, the basic regulations for which are found in Leviticus 1—7 and the foundational applications of which are described in Leviticus 8—16. All of this is focused on the system as it functioned within the *tabernacle sanctuary (and later the temple), specifically in light of the fact that the Lord himself took up visibly manifest residence in the tabernacle (Ex 40:34-35; Lev 1:1). The purpose of the sacrifices and offerings within the sanctuary system, therefore, was to provide a means of approaching the Lord in his place of manifest presence in Israel (e.g., Lev 1:2) and to maintain that presence by preserving the purity and holiness of the sanctuary (e.g., Lev 15:31). However, since the time of *Cain and *Abel (Gen 4) sacrifice and offering had already been a part of biblical history. According to the Bible, Noah presented "burnt offerings" on the solitary *altar he built after the flood (Gen 8:20-21), *Abraham and the other patriarchs built altars and presented offerings (e.g., Gen 12:7-8; 22:13), Jethro offered burnt and peace offerings on behalf of Israel (Ex 18:12), and *Moses ratified the *covenant at Sinai by means of burnt and peace offerings offered on a solitary altar constructed there (Ex 24:3-8). This use of solitary altars continued even after the tabernacle (and later the temple) had been constructed, in accordance with the regulations given in Exodus 20:24-26 (see, e.g., Deut 27:5-7 with Josh 8:30-35; Judg 6:24-27; 1 Sam 7:17; 2 Sam 24:18, 25; 1 Kings 18:30-35; 19:10, 14, etc.). The system of offerings at these solitary altars involved the presentation of burnt, grain and peace offerings (cf. Lev 1-3). The sin and guilt offerings were added to the sanctuary system specifically because of the need to maintain the purity and holiness of the tabernacle, its furniture, its vessels, its gifts and offerings, and to promote purity and holiness in

the community at large. The details of the terminology, history, theories, kinds, applications and historical-critical issues surrounding the sacrifices and offerings in the Pentateuch are treated in this article in the following sections:

1. General Terminology and Historical and Theoretical Foundations
2. The Five Major Kinds of Offerings in the Tabernacle (Lev 1—7)
3. Prescriptions for Tabernacle Offerings (Ex 29—30; Lev 8—16)
4. Historical Criticism and Sacrifices and Offerings
5. Sacrifices and Offerings in the New Testament

1. General Terminology and Historical and Theoretical Foundations.

The foreign, ancient, detailed and sometimes enigmatic nature of the ritual procedures stipulated in the Pentateuch has made them a subject of relatively little interest to both scholars and common readers of the Bible. Add to this the negative ideological and theological stance toward ritual found in the Protestant Reformation, in the Enlightenment and in historical-critical analysis of the history of Israelite religion, and we have a recipe for virtual neglect or at least a negative bias against the OT priestly ritual system (Gorman 1994, 14-20). Three specific features of Protestantism contributed to this neglect: (1) the emphasis on inner religious experience as opposed to physical (ritual) actions that are viewed as inhibitors of true spiritual religion; (2) a christological interpretation of the OT sacrifices and offerings that overrides any serious focus on or appreciation of the rituals themselves in their OT context, and (3) anti-Jewish and anti-Catholic biases that react against their legalism, priesthood and ritual sacramental systems. In addition, Enlightenment religion focused on reason, ethics and cognition in religion, none of which would lend themselves to appreciation of ritual performances, at least not as rituals were understood in the period of the Enlightenment and in supposedly “enlightened” culture since that time.

Within the field of biblical studies, the history-of-Israelite-religion approach to historical-critical examination of the Hebrew Bible was based on attempts to be objective about religious phenomena, was focused on textual analysis and was committed to searching out timeless re-

ligious principles. Rituals, on the other hand, are experiential (i.e., resistant to purely objective analysis), are focused on physical action (as opposed to textual analysis) and are performed according to local knowledge that is culturally and temporally specific (not given to the easy recognition of universal expressions of religion within them). Moreover, the romantic tendencies within eighteenth- and nineteenth-century German historicism brought with them a high regard for what was seen to be relatively simple, personal and dynamic religion as opposed to highly organized and institutionalized religious systems.

1.1. *Ritual Theory.* A rather large body of scholarly literature about ritual (and myth) emerged in the fields of cultural anthropology, philosophy and literary studies in the last half of the twentieth century, some of which scholars have begun to apply to the study of biblical ritual (Gorman 1994, 20-29). M. Douglas has provided a very helpful recent review of the field (Douglas, 15-65), explaining and illustrating the difference between “analogical” and “rational-instrumental” ways of thinking and writing. It is important to recognize that she actually begins her discussion with myth as analogical *thinking*, and moves from there to ritual as analogical *action*, by means of which the performer engages actively with that which is perceived as reality in the world of the gods or other supernatural beings. In both the ancient and the modern world there was and is both analogical and rational-instrumental thinking and acting.

According to Douglas, ritual actions (and the texts that describe or prescribe them) create cyclical patterns and, thus, various sets of analogical relationships between ritual rules, their performances, and the real and ritual world in which the ritual is enacted. One of the reasons ritual texts do not often explain the meaning of the various elements of the rituals is because in ritual activity meaning is primarily displayed rather than explained. One needs to engage with the world of the ritual performance not only cognitively but also experientially if there is going to be true understanding of the ritual and its internal worldview. Ritual texts create their own internal sets of analogies that organize the view of the world assumed and enacted. Simply reading the regulations in Leviticus 1—3, for example, will reveal a parallelism (with variation, not just repetition) of terminology and descrip-

tions of actions similar to one another. There is no explanation because the rituals create a world of analogical relationships that carries its own meaning and, therefore, its own internal explanation. Ritual procedures, in turn, carry the ritual performers and other participants along through a physically enacted process of engagement with and participation in the ritual world of the performance and its gods or God (in the case of religious ritual), all of which is embedded within the larger surrounding world and concerns of the people involved.

Rituals do not stand alone. They display a well-defined world of meaning that intersects with the conceptual world of the people who have ownership of the ritual on one level or another. The account of the construction of the tabernacle has been shown to have strong structural and other kinds of literary links to the account of *creation in Genesis 1:1–2:3. For example, the Lord's instructions to build the tabernacle in Exodus 25–31 are presented in seven sections (see the introductory formulas in Ex 25:1; 30:11, 17, 22, 34; 31:1, 12), like the seven days of creation, and the last section is about the *sabbath, like the seventh day in the creation account (see Tabernacle). Moreover, J. D. Levenson and F. H. Gorman (1990) emphasize the importance of the rituals themselves in enabling and empowering the people involved to participate in founding, maintaining or restoring order in space, time and social relationships within the chaos of their world and their personal and communal life. The ritual system in ancient Israel, therefore, was intended to be a way of engaging actively and meaningfully with God, world and people in a way that was organized and helpful in maintaining proper order for all involved.

1.2. "Sacrifice" and "Offering." Although writers sometimes use words differently, in general the English term *offering* refers to the presentation of a gift (from Latin *offerre*, "to offer, present"). It is a broader term than *sacrifice*, which refers to making something sacred (from Latin *sacer*, "holy," + *facere*, "to make"). Similarly, in Hebrew the term for "offering" (*qorbān*) is a more general term than "sacrifice" (*zebah*). For example, in Leviticus 1–3 the expression "to present an offering" (the hiphil verb *hiqrib* with its cognate noun *qorbān*) introduces the entire section of regulations for burnt, grain and peace offerings. The word *zebah*, "sacrifice," does not

occur until Leviticus 3:1 in the introduction to the "peace offering" section (see Lev 3:3, 6, 9), where "offering" continues to occur (Lev 3:1, 2, 6, 7, 8, 12, 14). A "peace offering" was a particular kind of offering that was also a "sacrifice," which involved the sacrificial slaughtering of an animal and eating part of it in a communal meal. The noun *sacrifice* and its cognate verb *to sacrifice* in the OT occur only in reference to "peace" offerings. Since the English term *sacrifice* has a broader meaning than the Hebrew word, scholars sometimes use it more loosely to refer to any kind of animal offering in contrast to "grain offerings" (for more detailed discussions of these terms see Averbeck, 1.1068-70, 3.979-81, 4.996-97). The English expression "sacrificial system" is even broader, encompassing the entire system of offerings and sacrifices, animal and vegetable.

1.3. Theories of Sacrifice. In the nineteenth and twentieth centuries anthropologists, sociologists and historians of religion proposed a number of theories of sacrifice and offering. Unfortunately, the understanding and application of these theories have often been encumbered by tendencies toward reductionism (i.e., reducing all sacrifices to the same rationale) and evolutionary views of religious development (i.e., thinking that all sacrifices and offerings evolved from one primal form). However, if the reductionism can be eliminated and the various theories treated as complementary rather than exclusionary, three of them are especially helpful in understanding the underlying rationale of various dimensions of the ancient Israelite sacrificial system (see Averbeck, 4.997-1006 and the literature cited there for the details).

First, the "gift theory" views sacrifices and offerings as gifts that express homage, thanksgiving, etc. In general, they are a means of approaching God, bearing gifts that are pleasing to him. Several Hebrew terms carry this meaning explicitly. For example, *minhâ* can be used as a technical term for "grain offering" (Lev 2), or it can mean "offering, present, tribute, gift," as it does in Genesis 4:3-5. Cain and Abel brought their gifts in order to do homage to God and gain his favor (for more on Gen 4 see 2.2 below). Similarly, as noted above, *qorbān* basically means "gift" and is used with its corresponding verb (*hiqrib*) for the presentation of offerings before the Lord. Like *minhâ*, it can refer to animal or vegetable offerings or a combination of

the two. In Numbers 6:14-15, for example, it refers to the whole set of offerings used in concluding the period of a Nazirite vow: a burnt offering, a sin offering, a peace offering, their associated grain offerings and libations, and additional bread offerings (Num 6:14-15). Clearly, on one level at least, all sacrifices and offerings could be conceived of as gifts to the Lord. There is also another term, *ʾiššeh* (often rendered “offering by fire”), that most probably means something like “(food) gift, present.” It refers not only to offerings that were burned on the altar (e.g., the burnt offering in Lev 1:9) but also offerings that were not (e.g., the bread of presence, Lev 24:7, 9; see Averbeck, 1.540-41).

Second, although all sacrifices and offerings could be conceived of as gifts to the Lord, the “(sacrifice of) peace offering(s)” (Heb [*zebah*] *šēlāmim*) reflects primarily another concern, communion with the Lord. Essentially, the fat, kidneys and liver of the peace offering constituted a food gift to the Lord burned on the altar (e.g., Lev 3:3-5; 7:22-25), but the eating of the meat in a communal meal was an expression of communion between the worshipers and their Lord, and sometimes between the worshipers themselves in covenant ratification or enactment (e.g., Gen 31:54). Even the term *šēlāmim* would seem to suggest this (cf. *šālôm*, “peace, well-being”).

Third, there is the “consecration” theory of sacrifice. By the very nature of things, whenever someone brought a sacrifice or offering to the Lord he or she consecrated it to the Lord. This, it seems, was one of the reasons that the person who offered the offering laid their hand on the offering when presenting it to the Lord at the sanctuary (e.g., Lev 1:4; 3:2; 4:4). It identified the offerer with the offering (Wright) and consecrated the animal to the Lord to accomplish the purpose(s) for which the offering was being presented. It did not transfer sin or impurity to the animal, since it would be contrary to the central principles of the sacrificial system to offer something laden with sin or impurity on the altar (see, e.g., Lev 15:31). The high priest’s laying both his hands on the head of the Day of *Atonement scapegoat and confessing the sins of the people is a distinctive act and a different matter, involving the actual transfer of the sins to the goat. In that instance, however, the goat was not offered on the altar but sent as far away as possible from the altar and the community (Lev 16:21-22).

On the one hand, the very nature of the presentation of a sacrifice or offering at the sanctuary involved consecration of it to the Lord. On the other hand, some kinds of offerings also had the specific purpose of consecrating something or someone else to the Lord. The consecrated offering, especially its *blood, was used to perform acts of consecration. For example, according to Leviticus 8:15, on the day of the erection of the tabernacle Moses “took the blood [of the sin offering] and put [it] all around on the horns of the altar with his finger and [thereby] de-sinned [*piel* of the verb *ḥṭʾ*] the altar, and then poured out the [rest of the] blood at the base of the altar. So he consecrated it to make atonement for it” (see 3.2 below). This was the initial “day of atonement” for the tabernacle altar. The same basic consecration procedure was to be repeated each annual Day of Atonement thereafter (Lev 16:18-19; see 3.5 below).

1.4. Atonement. This brings us to the issue of atonement, one of the central concerns of the tabernacle sacrificial system. Leviticus 16:20 concludes by summarizing the effect of the previous sin offering procedures and providing a transition to the scapegoat ritual that follows: “When he [Aaron] finishes atoning [*kipper*, i.e., “purging”] the *holy place, the tent of meeting and the altar, then he shall present the live goat” (Lev 16:20). The summary in the first part of the verse tells us that the previous sin offering rituals purged the sanctuary, but the second part tells us there is yet more to be done, namely, the scapegoat ritual, the purpose of which was to purge the people (i.e., the community that surrounded the sanctuary). Both the goat that was slaughtered and the scapegoat were “sin offerings,” and both “made atonement” for the people (Lev 16:5, 10, 15, 21-22; see Atonement, Day of).

The English word *atonement* is a combination of “at” and Middle English “one(ment),” meaning “to be or make one.” It is, therefore, a word for reconciliation. This is not a bad concept for understanding the end result of the Hebrew word *kipper*, “to make atonement,” and its derivatives, but the conceptual and ritual mechanism by which this reconciliation was conceived to have been made is another matter altogether. Some have argued that *kipper* means “to cover,” based primarily on the Arabic cognate *kafara*, but also on the fact that the lid on top of the ark of the covenant was the *kappōret*. Others say it

means “to ransom,” since the derivative *kōper* IV means “ransom, bribe” (see, e.g., Ex 21:30; 30:12; 1 Sam 12:3). However, the basic meaning of Hebrew *kipper* is apparently “to purge,” based on our knowledge of the Akkadian cognate *kup-puru*, “to wipe clean,” and especially the use of *kipper* with the tabernacle and its altar as direct objects (see Lev 16:20 cited above and the further remarks on Lev 16:33 in 3.5 below). One makes atonement “on behalf of” (various Hebrew prepositions are used) the people and the priests by atoning (purging) the tabernacle and altar of impurities and sins (see more on atonement in the treatment of the various offerings in 2 below, and the thorough discussion in Averbeck, 2.689-705 and the literature cited there).

2. The Five Major Kinds of Offerings in the Tabernacle (Lev 1—7).

Leviticus 1—7 describes in some detail the proper procedures for the five major kinds of offerings and sacrifices (Lev 1—6:7 [MT 1—5:26]) and their priestly portions (Lev 6:8—7:36 [MT 6:1—7:36]), note the initial colophon in Lev 7:35-36). Even though the “ordination offering” for the priests is not specifically mentioned in the sacrificial regulations themselves (Lev 1:1—7:34), the final colophon for these chapters inserts it (Lev 7:37-38, esp. v. 37). This connects Leviticus 1—7 directly to Leviticus 8, the ordination and consecration of the priests and the tabernacle (note also the mention of the day the priests were anointed in Lev 6:20 [MT 6:13] and presented to the Lord to serve as priests in Lev 7:35; see 3.2 below on Lev 8).

Leviticus 1—7 is explicitly linked not only to the following chapter (Lev 8) but also to the previous one (Ex 40), in that these chapters are presented as a set of regulations that were communicated to Moses as he stood outside the tabernacle tent on the day of its erection, after the Lord had manifested his presence there. This may be observed by comparing Exodus 40:35, “Moses was not able to enter into the tent of meeting because the cloud had settled over it and the glory of the LORD filled the tabernacle,” with Leviticus 1:1, “So the LORD *called* to Moses and spoke to him *from* the tent of meeting” (not “in” the tent of meeting; contrast, e.g., Lev 9:23 and Num 1:1). In light of the Lord’s command to Moses that he should anoint and consecrate the tabernacle and priesthood on the erection day (Ex 40:9-15), it seems that the call to do this in

the sight of the congregation in Leviticus 8 (see Lev 8:1-5) must have taken place initially on that day, although the whole procedure lasted for seven days (Lev 8:33-35).

Thus Leviticus 1—7 not only stands between Exodus 40 and Leviticus 8 but also binds them together. Exodus 40 is concerned with the erection of the tabernacle, the initiation of its daily ritual regimen and the Lord’s visible presence manifest in the tabernacle. Leviticus 8 includes the anointing, purification and consecration of the tabernacle, but the focus is on the anointing, purification, consecration and ordination of the *priests* who would be continually responsible for the ritual functions within the tabernacle sanctuary. The regulations outlined in Leviticus 1—7 were essential instructions for those priestly functions.

The general rules that the people needed to be aware of when they brought offerings to the Lord are presented in two major literary units: Leviticus 1—3 and 4:1—6:8 (MT 4:1—5:26). Both are addresses from the Lord to the people of Israel through Moses, as the introductory formulas show (Lev 1:1-2; 4:1-2). The first three chapters are one unit with no introductory formulas intervening between them: the whole burnt offering (Lev 1), the grain offering (Lev 2) and the peace (or fellowship or communion) offering (Lev 3). The sin (purification) offering unit extends over Leviticus 4:1—5:13 and is separated from the two guilt (reparation) offering units in Leviticus 5:14—6:8 (MT 5:14-26) by the abbreviated introductory formula in Leviticus 5:14. The latter is divided into two parts by the repetition of the same formula in Leviticus 6:1 (MT 5:20).

Leviticus 6:8—7:36 (MT 6:1—7:36) consists of regulations for the priests’ handling and disposition of the offerings and their various parts, including the priestly prebends (i.e., their stipend or allotment for services rendered). In the first major part of this section the Lord addresses the priests, Aaron and his sons, through Moses regarding the burnt offering (Lev 6:8-13 [MT 6:1-6]), the grain offering of the people (Lev 6:14-18 [MT 6:7-11]), the grain offering of the priest (Lev 6:19-23 [MT 6:12-16]; see 3.1 below), the sin offering (Lev 6:24-30 [MT 6:17-23]) and the guilt offering (Lev 7:1-6). Leviticus 7:7-10 appears to be a summary of Leviticus 6:8—7:6 (MT 6:1—7:6) (re)emphasizing the fact that the meat of the sin and guilt offerings, the skin of the burnt

offering and certain kinds of grain offerings belonged to the priests.

This summary creates a point of literary transition to the peace offering section (Lev 7:11-36), the first part of which is still addressed to the priests (Lev 7:11-21). On the one hand, the priestly portions up through Leviticus 7:10 were “most holy,” so only the priests themselves could eat them, and only in a holy place within the sanctuary area (Lev 10:12-13, 16-18; 21:22; Num 18:9-10). On the other hand, the meat of the peace offering and its associated grain offerings were “holy,” but not “most holy,” so they could be eaten in any clean place in the camp and all the people in the families of the priests could join in the feast (see Lev 10:14-15; 21:22; Num 18:11-20). However, since the food was “holy,” they must not eat of it if they were unclean at the time (Lev 22:1-16).

Similarly, the person who brought the peace offering to the Lord would have a banquet with the bread and meat portions (Lev 7:11-13, 15-18; cf. Lev 22:17-33), that is, those parts that were not prebends for the priests (for the latter see Lev 7:14, 28-34). The whole family of the offerer could eat the meat and bread of the peace offering. But again, no one who was unclean at the time could partake of this “holy” food (Lev 7:19-21). If it was a thanksgiving peace offering, then it must all be eaten on the day the offering was presented to the Lord (Lev 7:15). Votive or free-will peace offerings, however, could also be eaten on the next day (Lev 7:16), but on the third day they must be incinerated, not eaten, lest the whole peace offering sacrifice be made unacceptable to the Lord and an offensive thing, and the person who eats it “bears his [punishment for] iniquity” (Lev 7:17-18).

The last two parts of this peace offering section are addressed not to the priests but to the people who brought the offerings (Lev 7:22-23, 28-29). This shift was necessary in the first place because, unlike the other offerings, the common people themselves would eat of the peace offering sacrifice, not just the priests (see 2.3 below). Therefore a warning was issued to them that no one should ever eat any of the fat or blood of the offerings, since these were the portions that were to be offered to the Lord on the altar (Lev 7:22-27; cf. Lev 17:11). A person who ate any part of these portions was subject to the penalty of being “cut off from his people” (Lev 7:25, 27).

In the second place, the shift to addressing the people and not just the priests was necessary because the offerer was the one who actually did the slaughtering of the animal (Lev 1:5, 11; 3:2; 4:29, etc.). Therefore, he or she needed to be aware that certain parts of the meat were to be presented to the Lord as food gifts that the priests and their families would then consume (Lev 7:28-34). Again, the fat and the blood were offered on the altar (Lev 7:31, 33), but the breast was to be presented as a “wave offering” to the Lord for all the priests and their families to share (Lev 7:29-31), and the right thigh was to be presented as a “contribution” to the Lord as the portion eaten by the particular officiating priest and his family (Lev 7:32-33; see 2.3 below).

Leviticus 7:35-36 is the colophon for the whole disposition, or allotment, section (Lev 6:8—7:34 [MT 6:1—7:34]). It places the emphasis on the portions that were designated for the priests and their families as a perpetual prebend due them. Leviticus 7:37-38, in turn, is the final colophon for all of Leviticus 1—7. It refers back to these chapters as “the law for the burnt offering, for the grain offering and for the sin offering, the guilt offering, the ordination offering and the sacrifice of the peace offerings” (Lev 7:37). It tells us that the Lord commanded Moses to command the Israelites in the wilderness of Sinai to follow these stipulations when they presented their offerings to the Lord (Lev 7:38). As noted above, the “ordination offering” is not mentioned previously in Leviticus 1—7, although from the description of it in Leviticus 8:22-31 it is apparent that it was a kind of peace offering, which is probably why it is mentioned just before the peace offering in Leviticus 7:37. It was inserted to link Leviticus 1—7 to Leviticus 8 and the following chapters.

The following discussion will describe and explain the meaning of the five main types of offerings in Leviticus 1—7, the relationships between them and the ritual logic of the combinations in which they were offered (for more detailed discussion see Averbeck, 3.405-15 [burnt offering], 2.978-90 [grain offering], 4.135-43 [peace offering], 2.93-103 [sin offering] and 1.557-66 [guilt offering]; for a relatively comprehensive chart of the five sacrifices and offerings, see Averbeck, 4.1020-21). Along the way we will also make note of the major points of contact between the biblical sacrificial terminology and its ancient Near Eastern background, including

cognate linguistic parallels and noncognate semantic-range comparisons and contrasts (see the articles cited above for more complete references and comprehensive analysis). Some of the most helpful recent secondary sources for understanding this ancient Near Eastern dimension of the discussion are the overview articles by M. J. Selman (esp. Mesopotamia and Syria/Palestine), M. Weinfeld (esp. Mesopotamia, Hatti, Ugarit, Syria/Palestine and Egypt) and M. A. Katz (Mesopotamia and Greece). Also valuable are detailed treatments of certain points across the ancient Near East found in J. Quaegebeur; extensive treatments of Ugaritic ritual texts in D. M. Clemens, G. del Olmo Lete; and chapters by P. Merlo and P. Xella, and G. del Olmo Lete in W. G. E. Watson and N. Wyatt. For Mesopotamian cult image rituals of “washing the mouth” and the related sacrifices and offerings, see C. Walker and M. Dick.

2.1. Burnt Offering (*ōlā*, Lev 1; 6:8-13 [MT 6:1-6]; 7:8; Num 15:1-10).

2.1.1. *Burnt Offerings in the Ancient Near East.* Punic inscriptions from Marseilles and Carthage use the term *kll* for the whole burnt offering (Tombback, 143), but a later Neo-Punic inscription uses the cognate *ʿlh* with the hiphil verb form of the same root (Tombback, 244, 247; cf. Gen 8:20). The term *kll* occurs infrequently in the Hebrew Bible also for the “whole burnt offering”: twice independently (Deut 13:16 [MT 13:17]; 33:10) and twice with *ʿōlā* (1 Sam 7:9; Ps 51:19 [MT 51:21]). The latter term seems to reflect the manner of offering the animal by “offering it up” on the altar or “causing it to go up” in smoke on the altar (see the hiphil of the verb *ʿlh*). The term *kll*, however, derives from the root meaning “whole, complete” and, therefore, relates to the extent of the incineration of the animal on the altar.

Ugaritic sacrificial texts use *šrp* for the “burnt offering.” This may be compared with Hebrew *šrp*, which is often used to refer to incineration outside the camp of the leftover portions of offerings that could not be consumed by the priests or burned on the altar (see, e.g., Lev 4:12). The Ugaritic term sometimes occurs alone as an isolated offering, but most often in the combination *šrp wšlmm*, “burnt offering and peace offering” (see Dijkstra, 71, lines 7-8 and comments on line 2; cf. the discussion in Weinfeld, 107-8, and now the discussions and tabulations in Olmo Lete, 36-37 passim, and Clemens,

1-2, 1133-35 passim). Hittite also uses a term for “burnt offering” paired with a term for “peace offering” (Weinfeld, 98-99 and n. 14, 106-7).

A few Neo-Assyrian texts use Akkadian *šarāpu*, “to burn” (cf. Ugaritic *šrp*), for the burning of humans as burnt offerings to the gods (CAD 17.2.52; cf. Weinfeld, UF 4, 1972, 144-49 for a complete discussion).

2.1.2. *The Basic Regulations for Burnt Offerings.* As noted previously, the rules for burnt, grain and peace offerings in Leviticus 1—3 form a unified literary whole since there is only one introduction for the whole set (Lev 1:1-2; cf. Lev 4:1-2, which separates the rules for sin and guilt offerings in Leviticus 4:1—6:7 [MT 4:1—5:26] from those in Leviticus 1—3). This literary fact reflects the historical reality that before and after the construction of the tabernacle the burnt offerings and peace offerings, along with their associated grain and drink offerings, constituted the core of the system of sacrifices and offerings that faithful Yahwists practiced at solitary altars outside the tabernacle (see 4.2 below).

A burnt offering (*ʿōlā*, 287x in the Hebrew OT and 1x in biblical Aramaic as *ʿālāt*, Ezra 6:9) could be from the cattle (Lev 1:3-9), the sheep and goats (Lev 1:10-13), or the birds (Lev 1:14-17). The latter is usually limited to the poor (see, e.g., Lev 12:8; 14:22). According to Leviticus 1:4, “And he [the offerer] shall lay his hand on the head of the burnt offering, and it shall be accepted for him to make atonement on his behalf.” The laying on of the hand identified the offering with the one presenting it and consecrated it as a burnt offering to the Lord (see 1.3 above). With regard to the atonement made by the burnt offering, as explained above (see 1.4 above), the basic meaning of *kipper*, “to make atonement,” is “to wipe clean, purge.” However, the burnt offering with its associated grain and drink offerings was essentially a food “gift” to God (see 1.3 above). It carried an atoning effect as a “gift” rather than as a means of “cleansing.” Essentially it “made atonement” not by means of blood manipulation but as a gift that would “wipe away” God’s wrath, much like Jacob intended with his gifts to Laban: “For he [Jacob] said, ‘I will wipe [*kipper*] his [angry] face clean with the gifts that go before me’ (Gen 32:20 [MT 32:21], lit. trans.; cf. Gen 8:20-22; 33:20).

When the burnt offering was incorporated into the sanctuary system of offerings from the previously existing solitary altar system, this con-

cept of atoning efficacy came along with it (Lev 1:4). The burnt offering was the last atoning offering in all attested cases where it is combined with the sin or guilt offering in the making of atonement. As a gift, the burnt offering carried the effect of the sin or guilt offering's "cleansing" atonement one further step by also "appeasing" God's wrath (i.e., "wiping his face clean") against the person(s) who needed atonement (cf. Gen 32:20 [MT 32:21] cited above). It was "an aroma pleasing to the LORD" (Lev 1:9; cf. Noah's burnt offerings after the flood, Gen 8:20-22). The "acceptance" of the burnt offering (Lev 1:4) depended on the proper fulfillment of all the regulations (Milgrom 1991, 149-50; Hartley, 19). No mention is made of a special indication of the acceptability of the offering. The burnt offering animal was to be a male without defect (Lev 1:3).

The offerer normally slaughtered the animal (Lev 1:5, 6; contrast the bird, Lev 1:15-17), but the priests splashed its blood (Lev 1:5) and placed its various parts on the altar fire (Lev 1:7-9). The distinctive nature of the burnt offering was that the whole animal was offered on the altar, the only exceptions being the removal of the hide of the larger animals as part of the slaughtering process (Lev 1:6, 7:8) and the removal of "the crop" of the birds "with its contents" (Lev 1:16, "feathers" in some English versions is probably incorrect).

2.1.3. The Uses of Burnt Offerings. The burning of the offering made it "a pleasing aroma to the Lord" (Lev 1:9, 13, 17). As noted above, this was intended to have a good effect on the Lord and his relationship with the worshiper. At the solitary altars it was a means of calling on the Lord to pay attention to the prayers of his worshipers (see, e.g., Num 23:3; 1 Sam 7:9-10; Job 42:7-9; cf. Job 1:5), sometimes also in association with the peace offering (see, e.g., Judg 20:26-27; 21:3-5; 2 Sam 24:25). Within the tabernacle system, in addition to its association with atonement procedures, the burnt offering, like the peace offering, could be used to express various sentiments and concerns in worship (Lev 22:18-20; Num 15:3). Furthermore, with its accompanying grain offerings and drink offerings, the burnt offering was the foundation of the daily, weekly, monthly and annual festival system (e.g., Ex 29:38-45; Num 28:3-8, 10; see 3 below).

2.2. Grain Offering (*minhâ*, Lev 2; 6:14-23 [MT 6:7-16]). The term *minhâ* (c. 211x in the Hebrew

OT and 2x in biblical Aramaic: Ezra 7:17; Dan 2:46) has four basic meanings or uses (see esp. Anderson 1987, 27-36, 57-75). Its basic meaning appears to be "gift," but it can be a gift of people to God or between people. If the latter, it can refer either to a "gift, present" (e.g., Jacob's "gifts" to Esau in Gen 32:20-21 [MT 32:21-22]; 33:10; cf. Gen 43:11, 15, 25-26), or in post-pentateuchal literature it can also have the nuance of "tribute" when offered to foreign kings or other superiors (e.g., the tribute that the Israelites sent to Eglon the Moabite by the hand of Ehud in Judg 3:15, 17, 18; discussed in Anderson 1987, 57-75).

When *minhâ* refers to a gift to God, it sometimes means simply "offering" in the general ritual sense, but in Leviticus and almost always in other priestly literature it means "grain offering." The latter is the main focus of this section (see below), but with regard to the former see Genesis 4:3-5, the first sacrificial passage in the OT canon, where it is used for both Cain's vegetable offering (Gen 4:3, 5) and Abel's animal offering (Gen 4:4). Both were "offerings" to God, but God's response to Cain and his offering was quite different from his response to Abel and his offering: "The LORD gazed favorably at Abel and his offering, but at Cain and his offering he did not gaze favorably" (Gen 4:4-5; for several suggestions concerning the acceptance/rejection of these offerings, see Abel).

The word *minhâ* as a general ritual term for "offerings" to the Lord can also refer to the offering of incense (Num 16:15), meat and bread offerings combined (Judg 6:18), meat offerings in particular (1 Sam 2:17) and "offerings" in general without any indication of the materials offered (cf. 1 Sam 26:19; 1 Chron 16:29; Ps 96:8; Zeph 3:10).

2.2.1. Grain Offerings in the Ancient Near East. Cognates of Hebrew *minhâ* are known in several Northwest Semitic languages, including Ugaritic, Phoenician and Punic, as well as Southwest Semitic, Arabic and Ethiopic (see Anderson, 27-30). In some cases it is a cultic term, but as in the Hebrew Bible, it also has noncultic usages. For example, it occurs in Ugaritic administrative economic texts as a term for payment of obligations (see CAT 4.91.1-3; cf. Anderson, 1987, 28-29). As a term for tribute, in a sense, but also as an offering to a deity, it appears in the Baal epic when El states his intention to give Baal over to the arrogant aggressor Yam (CAT 1.2.2.36b-38a). Phoenician and Punic texts use *mnht* only for

cultic “gifts, offerings” (Tombback, 186).

2.2.2. *The Basic Regulations for Grain Offerings.* Leviticus 2 and 6:14-23 (MT 6:7-16) give the basic regulations for the “grain offering” as it was to be offered in the tabernacle (and later the temple, 1 Chron 23:29). There were various forms in which the grain offering could be brought to the Lord. They included sifted grain (not ground fine, Lev 2:1-3, which was by nature unleavened), baked cakes (Lev 2:4, unleavened), baked wafers (Lev 2:4, unleavened), cooked on a griddle (Lev 2:5, unleavened), fried in a pan (Lev 2:7, which was by nature unleavened) or crushed grits of the first ripe grain (Lev 2:14-16; see Milgrom 1991, 178-95 for details on these kinds of bread offerings). Depending on what was suitable for the particular kind of grain offering, it would have oil poured or spread on it or mixed into it. If it was raw grain (i.e., uncooked in any way), incense would be added to the memorial portion (see below) to give it a pleasing aroma as it burned on the altar (Lev 2:1-2, 15-16). If it was already cooked, the bread itself would have a naturally pleasing aroma.

The priest offered a “handful” of the grain offering on the altar of burnt offering (never on the incense altar, even if it included incense, Ex 30:9) as a “sign offering” or “memorial [portion]” (Lev 2:2, 9, 16; Heb *ʾazkārā*) to the Lord along with the salt of the covenant (Lev 2:13; see below). The remainder of the grain offering was “most holy,” so it was to be consumed only by the priests within the tabernacle precincts (Lev 2:3, 10; 6:16-18 [MT 6:9-11]; 10:12-13; Num 18:9). This included the new grain offering of Leviticus 23:15-21 (cf. Lev 23:9-11 and Deut 26:1-11). The only exceptions were grain offerings brought by the priests for themselves, which were to be completely consumed on the altar (Lev 6:19-23 [MT 6:12-16]; see 3.1 below for more on these daily grain offerings of the high priest as part of the regular daily cult).

The term *ʾazkārā*, “memorial portion,” is probably an Aramaic *aphel* causative form (= Heb Hiphil) from the verb *zkr*, “to remember,” meaning “to remind, call to remembrance.” There are several possibilities regarding what it might have “called to remembrance.” Perhaps it was the whole grain offering, since *ʾazkārā* was only a token portion (Milgrom 1991, 182). Perhaps it called to remembrance the Lord and his blessings or was meant to remind the Lord of the one who brought the offering. There are

several other possibilities, and perhaps a combination of them is what is intended. The grain offering for the law of the suspected adulteress is referred to as a “grain offering of jealousy, a grain offering of remembrance (*zikkārôn*), causing remembrance [*mazkeret*, Hiphil participle of *zkr*] of iniquity” (Num 5:15). Thus, in this instance at least, the concept of remembrance is associated with the reason the offering was brought, namely, for remembering iniquity. In light of this, the *ʾazkārā* of the regular grain offering was probably meant to call to remembrance for everyone involved (the Lord, the priest and the offerer) the whole of the offering and especially the reason for which it had been brought, no matter what it might have been in the particular instance.

The importance of adding “the salt of the covenant of your God” to every grain offering is emphasized in Leviticus 2:13. This expression occurs in only two other places in the OT. It refers to the covenant commitment of the Lord to provide for the Aaronic priests (Num 18:19) and the Lord’s covenant commitment to the dynasty of David and his descendants (2 Chron 13:5). The nature of salt as a preservative suggests that this stipulation was meant to emphasize the enduring nature of the covenant bond between the Lord and his people.

2.2.3. *The Uses of Grain Offerings.* The main text for grain offering regulations in Leviticus 2 stands between the burnt and peace offering chapters (Lev 1 and 3, respectively). This makes good literary and ritual sense because the grain offering was regularly presented to the Lord in association with “burnt” and “peace offerings” (e.g., Lev 9:4, 17; 14:10, 20, 21, 31; 23:13, 37; Num 8:8). Numbers 15:1-16 is especially important for its clarification of the required amounts of grain, oil and drink that should accompany each votive, freewill or regularly required burnt or peace offering, depending on the size of the animal offered: a bull of the herd, a ram, or a lamb or kid(-goat) (for other drink offering prescriptions see, e.g., Ex 29:40-41; Lev 23:18; Num 6:15, 17; 28:7, 10, etc.; 29:6, 11, etc). The thank offering is not included in Numbers 15, which could mean that it was exempt from these requirements as the most voluntary of the peace offerings. The regulations in Leviticus 7:11-18 treat the thank offering separately, and the grain offering with the thank offering is given there without designating specific amounts (Lev 7:12-

14). Moreover, the grain offerings in that case are largely for the banquet that the worshiper(s) would hold with the meat and grain (and presumably also the drink), and only one of each kind of grain offering was contributed to the priest who officiated over the offering.

With regard to the burnt or peace votive, or freewill offerings, for the smaller lamb or kid-(goat) one was supposed to bring one-tenth of an ephah of fine flour (c. 3 liters = 3 quarts) mixed with one-fourth of a hin of oil (c. 1 liter = 1 quart) and one-fourth of a hin of wine for a drink offering (c. 1 liter = 1 quart). For a ram it was two-tenths of an ephah of fine flour mixed with one-third of a hin of oil and one-third of a hin of wine for a drink offering. For a bull of the herd, the requirement was three-tenths of an ephah of fine flour mixed with one-half hin of oil and one-half a hin of wine for the drink offering. Essentially the grain and drink offerings provided for the full, balanced meal of meat, bread and drink (see the remarks on food gifts to the Lord and the ancient Near Eastern practice of feeding the gods in section 3.1 below). Other bread and drink would also be brought to supply the needs of the worshipers who would share in eating the peace offering, but these particular grain offerings presented with the burnt and peace offerings (as called for in Numbers 15) were offered to the Lord. A “memorial portion” was offered on the altar (see above), but the remainder was “most holy,” so it was eaten by the priests in the sanctuary and not by the worshipers.

The regular daily cult included a burnt offering with its accompanying grain offering and drink offering both in the morning and in the evening (Num 28:3-8; see 3.1 below). Additions to the daily morning and evening burnt and grain offerings were standard procedure for the sabbath day (Num 28:10), the first day of the month (Num 28:15) and annual festival occasions (Num 28:24; 29:6, etc.).

2.3. Peace Offering (*šēlāmim*, Lev 3; 7:11-34). Several different etymologies and foundational meanings have been proposed for the *šēlāmim* offering (sing. *šelem*, in Amos 5:22 only; see the convenient summaries in Milgrom 1991, 220-21, and Hartley, 38). The translation “peace offering” allows for the necessary flexibility in the meaning and purpose of the offering and, therefore, is retained here (cf. Heb *šālôm*, “peace”), but others translate it “well-being of-

fering” (e.g., NRSV; from the Heb adjective *šālôm*, “whole, sound, well”; cf. both Milgrom and Hartley) or “fellowship” or “communion offering” (NIV).

In terms of the ritual practice, the peace offering was a “sacrifice” (Heb *zebah*). Thus, although the term *šēlāmim* can stand alone in reference to this kind of offering, it is introduced in Leviticus 3:1 as a “sacrifice (*zebah*) of peace offering (*šēlāmim*).” The term *zebah* itself is widely used in the ancient Near East (see Averbeck, 1.1066-68) and is the underlying root of *mizbeah*, “altar,” a place of sacrifice. In the Hebrew Bible the basic verb *zābah* and its primary noun *zebah* both refer almost exclusively to the slaughter of animals in order to create a meal (but note, e.g., the verb *zābah* with both burnt and peace offerings as the object in Ex 20:24). The noun *šelem*/*šēlāmim*, “peace offering,” occurs for the first time in Exodus 20:24. Before that, *zābah*/*zebah*, “sacrifice,” is used for what is later referred to as the “(sacrifice of) peace offering” (see Gen 31:54; 46:1; Ex 8:27-28 [MT 8:23-24]; 10:25; 12:27; 18:12). Even later, however, *zābah*/*zebah* alone continued to be used independently to refer to “sacrifice (of peace offering)” (see, e.g., Ex 23:18; 34:15, 25; Lev 17:7-8; Deut 12:6, 11, 27).

The distinctive nature of this offering was the communal celebration of the worshipers occasioned by the sharing in the meat of the offering. It was a “fellowship,” or “communion,” offering that indicated and enacted the fact that there was “peace” between God and his people and that the person, family or community was, therefore, in a state of “well-being.” This is why the peace offering was always the last offered when it was presented in series with other kinds of offerings (see 2.6 below).

2.3.1. Peace Offerings in the Ancient Near East. The *šēlāmim* type of offerings are found in Semitic and non-Semitic cultic systems of the ancient Near East (see Weinfeld, 98-99, 107-8 for a good summary). The Ugaritic texts are especially pertinent to understanding the biblical peace offerings. (See Olmo Lete, 35-37 passim; Clemens, 47-48 passim, and the primary and secondary literature cited in those places for good summaries of occurrences and interpretive issues surrounding *zebah* and *šēlāmim*. See 2.1.1 above for “burnt” and “peace offerings” occurring as a pair in Ugaritic.) B. Levine (1974) proposes a close connection between the *šlmm*, “tribute of-

fering,” that King Pabil presents to Keret in order to cause him to break off his siege (*CAT* 1.14.iii.26-28) and the covenant ceremony with Saul at Gilgal when the Israelites “sacrificed there peace offering sacrifices before the LORD, and Saul and all the men of Israel rejoiced there greatly” (1 Sam 11:15). Levine bases this on a comparison with the Akkadian *šulmānu*, “tribute.” While there may be some connection, it should be remembered that according to the text the offerings in 1 Samuel 11:15 were presented to the Lord, not to Saul. Levine’s proposal that the meaning of *šēlāmim* in the Hebrew Bible derives from this political use is unlikely.

2.3.2. *The Basic Regulations for Peace Offerings.* The peace offering could be of cattle (Lev 3:1), sheep (Lev 3:7) or goat (Lev 3:12). As with the other sacrifices and offerings, the animal was to have no defect, but in contrast with the burnt offering, it could be either male or female (Lev 3:1). As we shall see, in general the peace offering was used in various ways as a relatively free expression of worship, praise or thanksgiving, so in some ways it was less regulated than other kinds of offerings. As in the case of the burnt offering, therefore, the offerer laid a hand on the head of the animal and slaughtered it, and the priests administered the blood. In most instances the blood manipulation was of the same sort as that of a burnt offering (Lev 3:2b; cf. Lev 3:8, 13 and Lev 1:5).

The common people could eat the meat of only the peace offering (Lev 7:11-36). In addition, Leviticus 17:11 explains why no one in Israel was to eat the blood of any peace offering animal: “For the life of the flesh is in the blood, and I have given it to you to make atonement for your lives on the altar, for it is the blood that makes atonement for the life” (cf. Lev 17:14 and Gen 9:4-5; *see* Blood). The eating of the fat of the peace offering was also prohibited (Lev 3:16-17; 7:22-27). Both the fat and the blood belonged to the Lord alone: the fat because it was reserved for making a “gift” to the Lord (see, e.g., Lev 3:11) and the blood because it was reserved solely for the purpose of “making atonement” (Lev 17:11).

It is significant that Leviticus 3 never mentions blood atonement in regulations for the peace offering. The sin and the guilt offerings, which functioned solely within the sanctuary, were the primary blood atonement offerings in the tabernacle ritual system. However, since the

burnt and peace offerings were brought from the solitary altar system into the sanctuary system (see 2.1.2 above and 4.2 below), their effectiveness within that system became associated to some degree with issues of sanctuary atonement as well. Thus, for example, according to Exodus 29:33 the ordination peace offering and its accouterments are said to have made “atonement.” This atonement was not limited to the blood and its manipulation but instead, as in the case of the burnt offering, it included all the things associated with the ordination peace offering from which parts were offered to produce “a pleasing aroma to the Lord, an offering made to the LORD by fire” (Ex 29:25; cf. Lev 8:28). Nevertheless, the blood manipulation was clearly a primary part of the ritual and its atoning efficacy. In this instance, therefore, as an ordination offering the peace offering was in essence made into an atoning offering even though it was not normally associated with atonement. The reason Leviticus 17:11 points out that “life is in the blood” in the context of the peace offering is because it was in the peace offering that a worshiper would most likely commit the violation of eating the blood, since that was the only kind of offering in which the worshiper ate the meat of the animal.

The fat was treated like the whole carcass of the burnt offering. It was offered on the altar as “an offering made by fire, an aroma pleasing to the LORD” (Lev 3:5; cf. Lev 3:11, 14, 16 and the whole carcass of the burnt offering in Lev 1:9, 13, 17). Apparently, the fat was viewed as a delicacy. The Lord fed the people the best of the land, which included the “fat” of lambs, rams, goats and even wheat, as well as the “blood” of grapes (Deut 32:14; cf. Gen 45:18; Num 18:12, 29-30, 32). The “fat of the kidneys of the wheat” (Deut 32:14) is a play on words indicating the best of the wheat. The combination with the parallel “blood of grapes” in the same verse seems to suggest a double play on words, with the twofold peace-offering prohibition in mind. In the peace offering it was the Lord who was to get the “fat,” not the people or even the priests (1 Sam 2:12-17; for the libations and grain offerings that were to be offered with the peace offering and burnt offering, see 2.2.3 above).

2.3.3. *The Uses of Peace Offerings.* Aside from the importance of the ordination peace offering in the consecration and ordination of the tabernacle and the priesthood (see above), peace of-

ferings were also important in the inauguration of the tabernacle (Lev 9:4, 18, 22).

In addition to the prohibition against eating blood or fat in Leviticus 7:22-27, there are two major sections in the peace-offering regulations of Leviticus 7:11-34. First, Leviticus 7:11-21 distinguishes between the various kinds of peace offerings and rules for worshipers' eating of the meat. Second, Leviticus 7:28-34 gives the regulations for the portions designated for the priests from every peace offering. With regard to the former, there were three kinds of peace offerings. The thanksgiving (*tôdâ*) peace offering was to be eaten on the first day, but the votive (*neder*) and freewill (*nēdābâ*) peace offerings could be eaten on the first and second day (Lev 7:11-18). If the meat touched anything unclean, it was to be burned, and any unclean person who ate of a peace offering was to be "cut off from his people" (Lev 7:19-21).

The votive offering was associated with the regular practice of making a promissory vow to the Lord in order to gain his help in a difficult or troubling situation (see, e.g., Gen 28:20; 31:13; Lev 22:18, 21-23; Num 15:8; 21:2; 30:2-15; Deut 23:18). The one who made the vow was responsible before the Lord to pay it (Lev 27:2-13; Deut 23:21-23). Actually, one could make a vow of either a burnt or a peace offering (Lev 22:18-23), and freewill offerings were sometimes offered voluntarily with votive offerings (Lev 22:18-25; 23:38). Apparently, the freewill offering could be made to fit any occasion of worship before the Lord (see, e.g., Ezek 46:12).

With regard to the priestly portion designated in Leviticus 7:28-34, the breast of the animal was the "wave offering" (*tēnūpâ*) portion of the peace offering that would go to the priests and their families for their consumption. On the one hand, the use of the verb "to wave" (Hiphil of *nûp*) for the presentation of the "wave offering" (e.g., Lev 10:14-15) suggests that the priest literally "waved" the breast back and forth before the Lord (Milgrom 1991, 470). It would have been a conspicuous act that drew attention to this part of the peace-offering ritual procedure. On the other hand, the fact that Aaron was to "wave the Levites as a wave offering before the LORD" as a gift to the priests (Num 8:11) seems to preclude the raising and waving procedure. The heart of the matter was the presentation of the gift to the priests before the Lord, not the ritual gesture itself.

The second portion that went to the priests was the right thigh, known as the "tribute" or "contribution offering" (*tērûmâ*), but this portion went to the specific priest (and his family) who officiated in the presentation of the particular peace offering to the Lord, not to all the priests as a group. In the past it has been translated "heave offering" because of its association with the hiphil form of the verb *rûm*, "to lift, raise," as in the English verb "to heave," for lifting something with effort. However, in the context of offerings the verb means "to set aside as a special gift" (see, e.g., Lev 4:8-10, 31, 35; 22:15; Num 15:19-21). Thus, the term *tērûmâ* is used for various offerings that were contributed to the Lord for the use of the priests (Num 5:9; 15:19-21; 18:8, 19; Deut 12:6, 11, 17; 2 Chron 31:10, 12, 14). Specifically, for example, it is used to refer to the grain-offering portions that accompanied the peace offering and that were contributed to the priests (Lev 7:14), the wave offering for the priests (Num 18:11-19), the tithe to the Levites and the priests (Num 24-29), and the booty that went to the priests (Num 31:29, 41, 52).

2.4. Sin (Purification) Offering (*ḥaṭṭā't*, Lev 4:1—5:1; 6:24-30 [MT 6:17-23]). The translation of *ḥaṭṭā't* as "sin offering" is problematic, but so is "purification offering," depending on what one means by it. On the one hand, the fact of the matter is that *ḥaṭṭā't* can mean either "sin" or "sin offering," depending on its usage in context. According to Leviticus 4:3, for example, "If the anointed priest sins [qal verb *ḥṭ'*], bringing guilt on the people, he must bring to the Lord a young bull without defect as a sin offering [*ḥaṭṭā't*] for the sin [*ḥaṭṭā't*] he has committed." In Leviticus 5:6 the situation is even more complicated because *āsām* (meaning either "guilt," "penalty [for guilt]" or "guilt offering") occurs along with *ḥaṭṭā't* in its two different usages: "He [the offerer] shall bring his penalty [*āsām*] to the LORD for his sin [*ḥaṭṭā't*] which he has committed [lit. "which he has sinned," the qal verb *ḥṭ'*], a female of the flock of either lamb or goat, for a sin offering [*ḥaṭṭā't*], and the priest shall make atonement for him on account of his sin [*ḥaṭṭā't*]" (cf. NIV text and margin of Rom 8:3 for the same problem in the NT; consider also 2 Cor 5:21: did Jesus become "sin" or a "sin offering" according to this verse?). Therefore, the rendering "sin offering" makes a lot of sense.

On the other hand, the doubled middle radical of *ḥaṭṭā't* suggests a derivation from the piel

form of the verb *ḥṭ*ʾ, “to de-sin, decontaminate,” that is, “to purify,” and thus rendering a noun “purification offering” (see Hartley, 55-57, and Milgrom 1991, 253-54). *Ḥaṭṭāʾ*ʾt does not derive from the qal form (i.e., “to sin”; see Lev 4:3 and 5:6 above). In some instances, the “sin offering” was used to deal with moral sin (see below), but it could also be brought for physical impurities that had nothing to do with moral failure. For example, Leviticus 5:2-3, 6 prescribes the sin offering for physical defilement resulting from touching a corpse or some other kind of human uncleanness, and Leviticus 12:6-8 prescribes it for the cleansing of a woman after bearing a child (cf. Lk 2:22-24). Therefore, the rendering “purification offering” makes as good sense as “sin offering,” but it should not be taken to mean that the sin offering only applied to issues of physical (amoral) uncleanness. According to Leviticus 4:2, for example, it applied to “any of the LORD’s commandments.”

2.4.1. Sin Offerings in the Ancient Near East. Although the root *ḥṭ*ʾ, meaning “to miss, to sin,” occurs in virtually all the Semitic languages, there are apparently no examples in which the root or any of its derivatives is used for ritual purification. Nevertheless, the concepts associated with the “sin offering” were well known in other ancient Near Eastern ritual literature (see Weinfeld, 105-11; esp. Wright 1987, *passim*). For example, we know from Hittite and other ritual texts that purity of the sacred precincts of sanctuaries was a most serious concern (see, e.g., *ANET*³ 207-10). Also, there were various kinds of scapegoat rituals that, to one degree or another, correspond to the Leviticus 16 scapegoat purposes and procedures for purification of the sanctuary.

2.4.2. The Basic Regulations for Sin Offerings. The main section of sin offering regulations (Lev 4:1–5:13) is given a new superscription and introductory formula (Lev 4:1-2a) that sets it off literally from the previous burnt-, grain- and peace-offering regulations in Leviticus 1–3. This is probably reflective of the ritual historical background of the sin offering itself, in that it was not incorporated into Leviticus from the earlier ritual system at the solitary altars as were the burnt, grain and peace offerings. Unlike the previous sections, virtually every paragraph in Leviticus 4:1–5:13 either begins or ends with a statement of “sin” committed (Lev 4:2 overall, then Lev 4:3, 13-14, 22-23, 26, 27-28, 35; 5:1, 5-7,

10-11, 13) and its associated “guilt” (Lev 4:3, 13, 22, 27; 5:2, 3, 4, 5-7). There are four major divisions: the sin offering of the priest (Lev 4:3-12), of the whole congregation (Lev 4:13-21), of the leader (Lev 4:22-26) and of the common person (Lev 4:27-5:13). In turn, the latter section divides into three subdivisions: the basic sin offering regulations for the common person (Lev 4:27-35), special regulations for “hidden” sins (Lev 5:1-6) and concessions to the poor (Lev 5:7-13).

If the blood of the sin offering animal was not applied to the incense altar, the priests would have the meat to eat (Lev 6:24-30 [MT 6:17-22]). Also, the fat parts of the animal were offered up in smoke on the burnt-offering altar just like those of the peace offering (Lev 4:8-10 etc.), and in one place this smoke is even referred to as “an aroma pleasing to the Lord” (Lev 4:31). The latter should also be assumed elsewhere. It is not explicitly stated in other places, but it is assumed throughout. Moreover, it was not central to the sin-offering ritual as it was for the burnt, grain and peace offerings (cf. Lev 1:9; 2:2; 3:5, etc.). The main focus of the sin offering procedure was the blood manipulation, not the offering of a pleasing aroma and certainly not the priests’ eating of the meat.

Some have taken Leviticus 10:17 to mean that part of the sin-offering ritual for making atonement was the eating of the meat of the sin offering by the priests: “He [the Lord] gave it [the sin offering] to you to bear the iniquity of the congregation, to make atonement on their behalf before the LORD.” According to this view, the eating was part of the means by which the priests bore and eliminated the sins of the people (see Schwartz, 15-17). This is not the place to enter into all the details of this discussion, but in its context the eating of the sin offering appears to belong to the priestly prebend regulations beginning in Leviticus 10:12, not to the atoning procedure, which had already been fully accomplished on the inauguration day and graphically approved by the Lord earlier in Leviticus 9:15-24.

For any other violation of the Lord’s commands (Lev 4:2; 5:1-4) the stipulations for the parties concerned were: for the priest, a bull (Lev 4:3-12); for the whole congregation, a bull (Lev 4:13-21); for a leader of the congregation, a male goat (Lev 4:22-26); for a common Israelite, a female goat (Lev 4:28; 5:6) or a female lamb (Lev 4:32, 5:6) or, as a concession to the poor, ei-

ther two doves/pigeons (Lev 5:7) or a simple grain offering with no oil or incense (Lev 5:11-13). Clearly the relative value of the required offering corresponded to the relative status of the person who brought it and, in the case of the common person, their economic means. Also, the place of the blood-manipulation procedures of the sin offering for the priest and whole congregation was different from that of the leader and the common people. On the one hand, for the priest or the whole congregation, the priest sprinkled the blood with his finger seven times in front of the veil of the sanctuary (i.e., the veil that separated the holy place inside the tent of meeting from the most holy place where the ark of the testimony was located), put some of the blood on the horns of the incense altar within the holy place, and then poured out the remainder of the blood at the base of the altar of burnt offering located near the gate of the tabernacle complex (Lev 4:6-7, 17-18). On the other hand, the priest applied the blood of the leader and the common Israelite to the horns of the altar of burnt offering (Lev 4:30, 34; 5:9), which was the boundary of a nonpriestly Israelite's access to the tabernacle.

The point is that the blood penetrated into the tabernacle complex as far as the contamination did. The priest could enter the holy place, and the priest represented the congregation, so the blood of the sin offering for the priest and whole congregation was administered inside the holy place. Since the (nonlevitical) leader of Israel and the common person could only go into the tabernacle court, and then not beyond the altar of burnt offering, the atoning blood ritual of their sin offerings was performed at the altar of burnt offering. In both cases, the blood went as far as the particular person or collective group of persons could proceed into the tabernacle complex and, therefore, purified (cleansed) the tabernacle up to that point. This was the main purpose of the sin offering: to purify or, one might say, to decontaminate the tabernacle itself (see Hartley, 70; Kiuchi, 124; and a variation on the same basic principle in Milgrom 1991, 254-58).

2.4.3. The Uses of Sin Offerings. The sin offering was, therefore, the central blood-atonement offering in the sanctuary system of offerings. In some instances the result of bringing a sin offering was that the worshiper(s) could "be forgiven" for their sin (e.g., Lev 4:20, 26, 31, 35, etc.) by

dealing with the contamination of the tabernacle that it caused. In other cases, the issue was physical impurity, which also contaminated the tabernacle, but the result in such instances was that the worshiper would "become clean" (i.e., purified; see, e.g., the Lev 12:7-8 regulations for the purification of the woman after childbirth, and esp. Lev 15:31). In other words, through the sin offering's blood-manipulation ritual the violator of the law could gain forgiveness before God, while the unclean person could be brought back into the condition of being ritually clean as opposed to unclean. Uncleanliness did not (necessarily) come from violation of the law, but it could nevertheless defile (i.e., contaminate) the tabernacle presence of God (Lev 15:31). The purpose of the slaughtered sin offerings on the Day of Atonement was specifically to purify the tabernacle of all defilement, whether it was caused by violations of the law or by physical impurities (see 3.5 below).

According to Leviticus 4:2-3, "When anyone sins unintentionally [*bîšgāgâ*]" (NRSV), he was to bring a sin offering to the Lord (cf. Lev 4:13, 22, 27; 5:15, 18; 22:14, Num 15:22, 24-29). Some scholars have concluded from this that the sin offering only treated inadvertent sin, that is, sins committed by mistake or sins that were committed not knowing that the particular act was sinful (Milgrom 1991, 228-29). The term translated "unintentionally," however, means basically "in error" (the verb *šgg* means "to commit an error, go astray"), not necessarily unintentional or inadvertent (e.g., 1 Sam 26:21; Eccles 5:6), although it could be so (e.g., Num 35:11, 15, 22-23; Josh 20:3, 9). In Leviticus 4—5 it has the sense of someone straying from the commands of the Lord (Lev 4:2), whether unintentionally or intentionally due to temptation. According to Numbers 15 this kind of sin (Num 15:22-29) stands in contrast to sin done "defiantly" (Num 15:30-31; lit. "with a raised hand"). No sin offering would make atonement for the latter kind of sin because it amounted to blaspheming the Lord (Num 15:30) and despising his word (Num 15:31). Such a person should be "cut off from among his people" (Num 15:30-31). However, for "going astray" there was forgiveness available through the sin and guilt offerings (Hartley, 55).

The sin offering was used on various occasions. For example, we see it employed at the consecration of the priests (Ex 29:14, 36; Lev 8:2,

14), the inauguration of altar worship (Lev 9:2-7, 8-11, 15-17), the tribe-by-tribe dedication of the altar (Num 7:16 etc.) and the consecration of the Levites (Num 8:8, 12). It was also employed on regular monthly occasions (Num 28:15), at annual festivals (see Lev 23:19; Num 28:22; 29:5, 16-38) and especially on the annual Day of Atonement (Ex 30:10; Lev 16; Num 29:11). Other specific situations that could occur anytime during year would also require a sin offering, for example, the cleansing of a woman after childbirth (Lev 12:6-8), the cleansing of a leper (Lev 14:19, 22, 31) and the cleansing from unclean discharges (Lev 15:15, 30).

2.5. Guilt (Reparation) Offering ('āšām, 5:14—6:7 [MT 5:14—5:26]; 7:1-7). The term for “guilt offering” is 'āšām (also 'āsēmā, fem. 3x, Lev 6:5 [MT 5:24], 7 [MT 5:26]; 22:16). The sin and guilt offerings are widely regarded as the primary expiatory offerings in the levitical system of offerings. Over the centuries there have been a number of attempts to clarify the primary distinction(s) between them (e.g.): (1) the sin offering was for unintentional sins against fellow humans and the guilt offering for unintentional sins against God and intentional sins against people (Philo); (2) the sin offering was for sins of ignorance and the guilt offering was for all intentional sins when there were no witnesses (Josephus); (3) the sin offering was for mortal sins and the guilt offering for venial sins (Origen); and (4) the sin offering was for intentional sins and the guilt offering was for unintentional sins (Augustine). Various modern scholars have taken up these views in various forms and combinations. Some scholars have concluded that the precise ancient distinction between the sin and guilt offerings has been lost (see summaries in Hartley, 78; Kellermann, 431-32).

J. Milgrom has convincingly demonstrated that the primary purpose of the guilt offering was to make atonement for *desecration* of “sancta,” the mishandling of holy (sacred) things, as opposed to the sin offering, which made atonement for *contamination* of sancta (for the latter, see 2.4.2 above; for extensive explanation, see Milgrom 1991, 49-50, 339-78). Leviticus 10:10 sets forth two major dichotomies with which the priests were to be especially concerned: “You must distinguish between the holy and the common [or ‘profane’], between the unclean and the clean” (see section 3.4 below). *Consecration* changes the *status* of someone or something by

shifting them from the realm of the common to the realm of the holy (Lev 10:10a). *Purification* changes their *condition* from unclean to clean (Lev 10:10b). The main focus of the sin offering was to make atonement for the *defilement* of sancta. So it *purified* sancta, but it could also *consecrate* (i.e., make holy) sacred objects (but not people) in connection with this purification (see, e.g., Lev 8:15; 16:19). The main focus of the guilt offering was to make atonement for *desecration* of sancta. So it (re-)consecrated sancta, including people (see, e.g., Lev 14:12-18; Num 6:9-12; see 2.6 and 3.4 below on the leper and the Nazirite regulations), but it also included making reparation for the sancta that had been violated where that was possible (see, e.g., Lev 5:16; 6:5 [MT 5:24]).

Leviticus 22:10-16 is a helpful example. The holy food gifts were to be eaten by the priests and those in their household, not by the common people. “If anyone [i.e., a common person] eats a sacred offering in error [*bišgāgā*, see 2.4.3 above], he must make restitution to the priest for the offering and add a fifth of the value to it” (Lev 22:14). Such a person has violated the commands of the Lord, specifically the commands about “the Lord’s holy things” (i.e., the things dedicated to the Lord for the tabernacle or priesthood). For a common person to eat such gifts would be to “desecrate” the “sacred gifts.” Accordingly, it is prohibited (Lev 22:15-16).

2.5.1. Guilt Offerings in the Ancient Near East. The incident of the Philistines and the ark of the Lord in 1 Samuel 6 (see 'āšām in 1 Sam 6:3, 4, 8, 17) suggests that the concept of the guilt offering for desecration of sancta was not limited to Israelite religion but was certainly known elsewhere in the ancient Near East. Conceptually there are certain parallels that have been proposed for ritual terms and procedures in Hittite and Hurrian texts, and even in ancient Greece (Weinfeld, 106-7, 109, 111).

Semitic cognates have been proposed from Ugaritic, Arabic and Ethiopic (*KBL*³, 95-96). Some have been questioned (see, e.g., Kellermann, 429-30; Milgrom 1991, 339), but there are those who maintain the legitimacy of some of this proposed cognate evidence (see Wansbrough). In Arabic the parallel verb means “to transgress, be guilty” and the noun means “sin, transgression, outrage, guilt.” This is not debated.

2.5.2. The Basic Regulations for Guilt Offerings.

The flesh of the guilt offering was handled in the same manner as that of the sin offering (see 2.4.2 above), but the blood-manipulation ritual was like that of the burnt or peace offering, since its primary focus was not purification of the sanctuary (Lev 7:1-7). The main guilt-offering section begins with a person acting unfaithfully against God by somehow violating the distinction between the common and the holy (Lev 5:15; Milgrom 1991, 345-56). Thus he or she has “committed a sacrilege” (see, e.g., Achan’s violation of the “ban” in Josh 7:1). The same words can refer to a violation of one’s relationship with the Lord through idolatry (e.g., Num 31:16) or rejection of his commands (e.g., Lev 26:40; note esp. Deut 32:51).

The restoration plus a fine of one-fifth referred to in Leviticus 5:16 corresponds to a regular legal pattern in Israel. It was transferred from there to cases in which the violated property belonged to the Lord (i.e., the things that were holy to the Lord). The restitution made it possible for the offender to make atonement and receive forgiveness from the Lord (Lev 5:15, 16). The expression “convertible into silver by the sanctuary shekel” (Lev 5:15) is difficult. It probably means that one could substitute monetary payment for the offering of a ram, perhaps at the discretion of the priests (cf. Ex 30:11-16 for money as a means of making atonement; see Milgrom 1991, 319, 326-27).

The shift from Leviticus 5:14-16 to 5:17-19 in the guilt offering pericope is a shift from known violation to an unknown violation that later became known (see Schenker, 697-98). Milgrom suggests that this refers to a case in which the violator suspects that he has violated *sancta* but does not know what and how (Milgrom 1991, 331-34, 361-63). Another interpretation seems more likely, or perhaps a combination of Milgrom’s approach with the one that follows is possible; they are not necessarily mutually exclusive. According to Leviticus 5:17, “If a person sins and does something that violates the LORD’s commands [regarding *sancta*], although he did not know [it], he is guilty and will bear his punishment.” This is not a tautology (contra Milgrom 1991, 343-44). The expression “he is guilty” refers to the offerer’s legal status as a guilty person, while “he will bear his punishment” means that he must bear the consequences of being guilty even though he did not know he had committed a violation (Hartley, 76-77;

Schenker). The one who committed the violation might come to know his error either through remembering after the fact or being informed by another person that, for example, the meat he had eaten was from the “holy” portion that belonged to a priest and his family (cf. the remarks on Lev 22:14-16 above). It was done in ignorance (Lev 5:17-18), but if he came to know about it, he was still responsible for bringing a guilt offering to make atonement and obtain forgiveness (Lev 5:18-19).

Some scholars have argued that the guilt offering was brought in cases of violation of another person’s property only because there had been an associated violation of God’s name by swearing a false oath regarding the matter (Lev 6:3, 5 [MT 5:22, 24]; see, e.g., Milgrom 1991, 365-73; Knohl, 139-40). According to Leviticus 6:3 (MT 5:22), 7 (MT 5:26), however, the atonement and forgiveness brought by the guilt offering rectified the violation of “any of the things he had done that made him guilty,” not violation of God’s name through false oath. Leviticus 6:1-7 (MT 5:20-26) refers to matters that come to the official law court because the culprit has denied his violation of the other person’s property (Lev 6:2-3), and the false oath is part of that denial. A false oath would normally involve the invocation of the Lord in the oath and possibly even in his presence (i.e., at a Yahwistic altar associated with a city, Deut 16:21-22, or at the central sanctuary, Deut 17:8-13). Of course, cases could be settled out of court by following the regulations found elsewhere in the collections of laws in Exodus—Deuteronomy. If a case became a matter for the official court, however, it also became a matter for the official cult.

Numbers 5:5-10 relates to the same kind of violation, except that in Numbers 5 there is no mention of a false oath (contra Milgrom 1990, 34-35; Ashley, 112-15) and there was no kinsman to which the reparation could be made. Therefore, if a person was confronted with his violation and was convicted of the crime (i.e., he became legally “guilty,” Num 5:6), he was required to confess his violation openly (Num 5:7; cf. Lev 5:5), restore that which he violated plus one-fifth (Num 5:7-8; if the person to whom restitution was to be made was no longer alive and there was no kinsmen, then the payment went to the priests) and then bring his guilt offering to make atonement.

2.5.3. *The Uses of Guilt Offerings.* Aside from

the general regulations and scenarios in Leviticus 5—6 and Numbers 5, the guilt offering was applied in the cleansing of the leper (Lev 14:12-28), in the case of pre-marital sex with a slave woman (Lev 19:20-22; note the link to the violation of a person's property discussed above) and in the defilement of a Nazirite vow (Num 6:12).

2.6. The Order of Sacrifices and Offerings in Ritual Texts. Overall there are two different kinds of sacrificial texts: those that give *general rules* for the performance of ritual procedures, such as the five major kinds of offerings treated above (e.g., Lev 1—7), and those that outline *particular applications* of the various rituals to specific occasions or various kinds of situations (e.g., Lev 8—16; consecration of the priests, inauguration of the tabernacle and priesthood, cleansing a woman after childbirth, or a skin-diseased person, Day of Atonement, etc.). In turn, the texts that outline *particular applications* divide into two groups: *prescriptive* ritual texts that prescribe the number and various kinds of offerings to be used for a particular occasion or situation (e.g., the list of offerings for the fulfillment of the Nazirite vow, Num 6:14-15) and *descriptive* ritual texts that describe (sometimes even narrate) the actual performance of the ritual procedures in sequence (e.g., the description of the ritual procedures for fulfilling the Nazirite vow, Num 6:16-20; Anderson, 5.876-77).

As in the case of the application of rituals for the fulfillment of the Nazirite vow (Num 6:14-20), the prescriptive and descriptive texts for a particular ritual procedure sometimes appear side by side. Of course, the descriptive text follows the order of the procedure. The prescriptive text, however, is at least sometimes arranged according to the value of the offering being presented. For example, the prescriptive text for the cleansing of one with a skin disease lists the offerings in this order (Lev 14:10): two male lambs, one year-old ewe lamb, three-tenths of an ephah of fine choice flour mixed with oil (c. ten liters = one-third of a bushel) and one log of oil (c. one-third of a liter = two-thirds of a pint).

The corresponding descriptive text recounts the presentation and manipulation of these offerings in the following order: (1) one male lamb for a guilt offering with the log of oil, the blood and the oil both applied to the right ear, thumb and big toe of the formerly diseased person (the oil is also sprinkled seven times “before

the Lord” and applied to the head of the healed person); (2) the sin offering; and, finally, (3) the burnt offering (Lev 14:12-20). If a peace offering was prescribed as part of the ritual procedure, it would come at the very end of the process, after the burnt offering (see, e.g., the offerings for the fulfillment of the Nazirite vow, Num 6:16-17). In general, therefore, when the particular ritual procedure calls for the performance of several different kinds of offerings and other rituals, the order leads the worshiper along a ritual path from one stage to the next. It begins with expiatory atonement for sin, impurity or trespass (usually the sin or guilt offering, depending on what is required; sometimes other procedures were also added, e.g., the oil in Lev 14:15-18), which leads to the person's presentation of him- or herself to the Lord (usually the burnt and grain offerings combined; a kind of “atonement” is accomplished here too, Lev 1:4; 16:24, etc.) and eventually to a celebration of sacrificial communion (the peace offering and its associated banquet).

This order makes perfectly good sense. In one's approach to the holy God, one first needs to deal properly with whatever may stand in the way of approaching the Lord by offering the appropriate offering. Next one needs to present oneself to the Lord. After that, celebration is appropriate. However, some occasions, such as the Day of Atonement (the sequence in Lev 16 ends with burnt offerings, Lev 16:23-24), carry such a weight of solemnity and personal or communal affliction that celebration of communion is really out of the question (Lev 16:31). On other occasions, for example, the day the skin-diseased person was cleansed (Lev 14, see above), the peace offering may have been voluntary (as a freewill or thank offering) and, therefore, not mentioned in the prescriptive regulations or the descriptive account of the ritual procedures. These are some of the major factors that contribute to an understanding of the rationale of the ritual procedures in Leviticus 8—16, which is the central core of descriptive sacrificial texts in Leviticus and in the entire Hebrew Bible.

3. Prescriptions for Tabernacle Offerings (Ex 29—30; Lev 8—16).

The tabernacle construction account in Exodus 25—40 concludes with its erection in Exodus 40, which took place “on the first day of the first month” in the second year after they came out

of Egypt (i.e., one year less two weeks since the exodus, Ex 12:2, 6-8, 12-13, and ten months after they arrived at Sinai, Ex 19:1). Of course, with the erection of the tabernacle comes the beginning of sacrificial and other ritual functions in the tabernacle, so Exodus 40 also opens up onto Leviticus and Numbers, binding Exodus 25—40 with the sacrifices and other ritual procedures inside the tabernacle (Lev 1—16) and eventually the prescriptions and descriptions of its religious, moral and physical centrality to the wilderness community that surrounded it (Lev 17—Num 10; see Tabernacle).

With regard to Leviticus 1—16, in particular, the Lord's instructions to erect the tabernacle (Ex 40:1-16) included instructions to anoint and consecrate the tabernacle, the altar, the water basin and the priests (Ex 40:9-15). Between the Lord's instructions and the report of Moses' compliance (Ex 40:17-33), we read: "Moses did everything exactly as the LORD had commanded him" (Ex 40:16). However, there is no mention in this chapter of the anointing or consecration of the priests, the tabernacle or any part thereof. The focus in Exodus 40 is the actual physical erection of the tabernacle and the initiation of the regular daily cultic rituals in the tabernacle, both at the hands of Moses. The goal and result was the Lord's manifest occupation of the tabernacle in cloud and glory (Ex 40:34-35).

3.1. Regular Daily Offerings. Moses initiated the regular ritual cult of the tabernacle (i.e., the *tāmīd*, "continual, regular," Ex 29:38; see Haran, 205-10) on the erection day, which included arranging the "bread of presence" on the table (Ex 40:22; cf. Ex 25:30 and Lev 24:5-9, a weekly ritual), perhaps pouring a daily libation of strong drink (*šēkār*, Num 28:7) into the libation vessel on the table (Ex 25:29; see Gane, 183-92), lighting the lamps on the lampstand (Ex 40:25; cf. Ex 25:37; Lev 24:1-4; Num 8:1-4) and burning incense on the golden incense altar (Ex 40:27; cf. Ex 30:7-8), all in the holy place inside the tent. It also included the daily offerings on the bronze altar in the tabernacle court (Ex 40:29), which included a two-year-old lamb as a burnt offering, one every morning and one every evening, and their associated grain and libation offerings (cf. Ex 29:38-46).

In addition to the regular daily cult that Moses initiated on the erection day, he also installed the water basin between the altar and the tent and put water in it (Ex 40:30) so that he and

Aaron and his sons could wash their hands and feet when they entered the tent or approached the altar (Ex 40:31-32; cf. Ex 30:17-21). Thus, according to Exodus 40:33, "Moses finished the work." There is, however, an interesting shift from the past tense narrative verb forms of Exodus 40:18-30 (cf. Ex 40:33) to future continuous forms in Exodus 40:31-32: "Moses and Aaron and his sons *would* wash. . . . When they entered the tent of meeting and when they approached the altar they *would* wash." The most likely reason for this verb shift is the inclusion of Aaron and his sons with Moses in this explanatory remark, even though Aaron and his sons had not yet begun to function as priests on the tabernacle erection day. Yet it appears that there was one other element of the daily ritual cult that was initiated by Aaron (not Moses) on that day. It was the high priest's daily morning and evening grain offering (Lev 6:19-23 [MT 6:12-16], note *tāmīd* in Lev 6:20 [MT 6:13]; cf. Num 4:16 and see the careful discussion in Milgrom 1991, 396-99). It began on the day the priests were anointed (see Ex 40:12-15; Lev 8:12, 30) and, in this case, like the other rituals that were performed on that day (note, e.g., Lev 8:14-15, 18-19), the priests were the offerers and Moses was functioning as the priest (see 3.2 below on Lev 8).

This initiation of the regular daily cult was an essential part of setting up the tabernacle, the goal of which was to have the Lord manifest his presence and take up residence there. Any tent that is occupied, including the Lord's tent, has certain functions taking place in it. Here there is a table with bread on it, a lamp burning to provide light, incense for a pleasant smell, water for washing and regular meals served, including meat, bread and drink. The fact that all these were made functional immediately in the tabernacle was an invitation to the Lord to take up his manifest residence there, as he did in Exodus 40:34-35.

Of course, this could all easily be misunderstood. The ancient Israelites, or at least some of them, might think that the Lord needed to eat and was, in fact, dependent on their offerings for his food (see, e.g., the rebuke in Ps 50:12-13). This was a common notion in the ancient Near East (see Oppenheim, 183-98; Selman, 89-92; Katz, 101-117; Walker and Dick, 14, 18-20 for the "mouth washing" ritual for cult statues in Mesopotamia and Egypt, 151 lines 68-71, 184 line 19,

187 lines 35-39 for cult statue of god eating, 185 lines 58-64 for deity taking up residence in the sanctuary; Gane, 190-91, 194-95, for Hittites).

This notion of divine eating was vigorously resisted in Israel on several counts. It is true that the offerings could be referred to as the Lord's "food, bread" (Heb *lehem*; Lev 3:11, 16; 21:6, 8, 17, 21-22; 22:25; Num 28:2, 24), the burning of offerings sometimes produced "an aroma pleasing to the LORD" (e.g., Gen 8:21; Lev 1:9; 2:2; 3:5; 4:31), the burnt-offering altar was sometimes called "the LORD's table" (Mal 1:7, 12; cf. Ezek 44:16), and the daily burnt, grain and libation offerings were presented each morning and evening (like breakfast and dinner?). Nevertheless, the "bread of presence" was placed on the table in the holy place only once a week (on the sabbath day), no libation accompanied it, and only the incense that came with the bread was presented in fire to the Lord. The latter points stand in contrast to the standard daily practice in ancient Near Eastern ritual cult in which the placing of bread and pouring out of libation before the cult statue of the deity was conceived of as feeding the deity and took place daily (see Gane, 184-99).

The fact that food and drink were used as offerings suggests the active occupation of the tabernacle by the Lord of the altar and table. He really was present there continually, so there needed to be continual offerings to represent that. However, several features of the cult make it clear that the Lord was not thought to be physically eating the offerings. Especially significant is the fact that, in contrast to the ritual systems known from elsewhere in the Fertile Crescent, there was no cult statue of the deity to feed.

3.2. Dedicating and Consecrating the Priests, the Tabernacle and the Altar. Although the anointing and consecration of the tabernacle and priests evidently began on the tabernacle erection day, the whole process lasted seven days (Lev 8:33-35). Exodus 40 tells us only part of what happened on the first of those seven days. Moses' full compliance to the Lord's commands in Exodus 40:9-15 awaits the report of the anointing and consecration procedures in Leviticus 8. Leviticus 8 ties in with Leviticus 1-7 (see the reference to the ordination offering in Lev 7:37), but its main connection is back further, with Exodus 40, the day the tabernacle was erected. That inaugural day was momentous for the people and priests in a number of ways. Of course, the most

important was the Lord's occupation of the tabernacle (Ex 40:34-35), but there was also the full activation of the daily ritual cult as well as the consecration of the tabernacle and the priests (regulations in Ex 29; compliance narrative in Lev 8), the offering of carts for the levitical work of transporting the tabernacle (Num 7:2-9) and the first of twelve offerings for the dedication of the altar by the leaders of the twelve tribes (Num 7:10-88).

The ritual procedures for the consecration of the tabernacle, altar and priests began with Moses washing the priests and clothing them in the *priestly garments (see Priestly Clothing), followed by the anointing of the tabernacle tent and its furniture, then the altar in the courtyard and then the high priest, Aaron, in that order (Lev 8:6-12; cf. the regulations for making the anointing oil in Ex 30:22-33). As the text puts it, the anointing was an act of consecration. After that came the sin offering for the purification and consecration of the altar (Lev 8:14-17), the burnt offering for a pleasing aroma to the Lord (Lev 8:18-21) and the ordination offering and its associated grain offering for the consecration of the priests (Lev 8:22-32). The latter was a kind of peace offering, since the ones bringing the offering on their own behalf, in this case the priests, ate the meat of the animal offered (see 2.3 above). This, of course, corresponds to the natural order of offerings and sacrifices outlined above (see 2.6 above). Although not every detail is certain, it appears that these anointings, offerings and sacrifices were repeated each day of the seven-day period of consecration (Lev 8:33-35; Ex 29:30, 35-37; see Milgrom 1991, 536-41), beginning on the day Moses erected the tabernacle and initiated the regular ritual cult therein, and the Lord visibly manifested his occupation of the tabernacle (Ex 40).

The ritual manipulation of the blood of the ordination offering is of particular importance. There are only three places in the Hebrew Bible where sacrificial blood is applied to the bodies of people rather than to one of the altars in the tabernacle. These are the covenant ratification ritual in Exodus 24:6-8, the consecration of the priests in Leviticus 8, and the cleansing of the skin-diseased person in Leviticus 14:14-18 (for the latter, see 2.6 above and 3.4 below). The former two instances involve the blood of a peace offering, and in Exodus 24 the blood of the burnt offerings was also included in the spe-

cial procedure. In both cases, the blood had the effect of consecrating the people involved to the Lord. In Exodus 24:6-8 the blood was first splashed on the altar, then the people swore an oath to keep the covenant, and finally Moses splashed the blood on the people pronouncing, "See now the blood of the covenant the LORD has made with you based on all these words" (Ex 24:8). Thus the whole nation of Israel was consecrated to the Lord as "a kingdom of priests and a holy nation" (Ex 19:6) through the application of blood.

In a similar way, but also with significant differences, Moses first applied the blood of the ordination offering to the right earlobe, thumb and big toe of Aaron and his sons, and then splashed the remainder of the blood around on the altar (Lev 8:23-24). Then Moses put the fat, the liver, the kidneys, the right thigh (cf. Lev 7:32-33) and part of the grain-offering bread in the hands of the priests so that they could present it to the Lord as a "wave offering" (see 2.3 above), and afterward took these offerings from them and burned them on the altar to the Lord (Lev 8:25-28). He then took the breast and presented it as a wave offering to the Lord (cf. Lev 7:29-31). This was Moses' portion of the offering for having officiated in the consecration procedures (Lev 8:29). The rest of the meat and bread was to be eaten by Aaron and his sons that day and anything left over was to be burned in the fire (Lev 8:31-32). Moses also took some of the blood and anointing oil mixed on the altar and sprinkled it on Aaron and his sons, and on their garments, to consecrate them—garments and all—to the Lord and his service at the altar (Lev 8:30).

Whenever an offering was presented to the Lord it was by definition consecrated to him, so at least all the blood and fat were to be offered on the altar (Lev 7:22-27). If the intent of the offering was to consecrate something or someone else to the Lord, then there was a special way of manipulating the blood that signaled that (e.g., Lev 8:15 for the purification and consecration of the altar, Lev 8:24, 30 for the purification and consecration of the priests, and Lev 16:19 for the purification and consecration of the altar on the Day of Atonement). It is significant that the blood of the sin offering was never applied directly on people but always on the tabernacle or its furniture for their purification and consecration. Purification and consecration of people

was accomplished in Leviticus 8 with the blood of the ordination peace offering (cf. Lev 14 for the guilt-offering blood used in a similar manner to purify and consecrate the person who has been healed from their skin disease; see 2.6 above and 3.4 below). Thus in the offering and manipulation of the blood, which naturally belonged to the Lord alone (e.g., Gen 9:4-5; Lev 17:11), the blood could be used to make an explicit ritual connection between the Lord and the person or object that was to be purified and consecrated to the Lord (see Averbeck, 4.1002-4).

Numbers 7:1 recalls that on the day Moses set up the tabernacle he also anointed and consecrated it, including all its furnishings and the altar with all its vessels and utensils. Also, on that day the "leaders" (*něšî'im*) of the twelve tribes (Num 1:4-16) brought a joint offering of six carts and twelve oxen (two for each cart) and presented them at the tabernacle for the Levites, who were responsible for transporting the tabernacle (Num 7:2-9). Furthermore, again beginning on that same day, each of the twelve leaders brought dedication offerings (Num 7:12-88). With regard to the latter, the Lord instructed Moses that they should bring their dedication offerings for the altar over a period of twelve days, one leader each day, beginning with the day the tabernacle was erected (Num 7:10-12).

Numbers 9:1-3 tells us that Moses called for the first postexodus celebration of the Passover festival on the fourteenth day of the second year after they came out of Egypt. This fits well with the twelve days of offerings from the leaders, beginning with the erection of the tabernacle on the first day of the year (Num 7). According to Numbers 8, apparently sometime during this same twelve- to fourteen-day period, probably after the seven-day consecration of the priests (note Num 8:21, "and Aaron made atonement for them to purify them"), the Levites were cleansed and presented to the Lord as a "wave offering" (see 2.3 above) so they could function as assistants to Aaron and his sons in the work of the tabernacle (Num 8:5-26).

This involved sprinkling the Levites with "water of purification" (Num 8:7 NRSV; Heb *mē haṭṭā't*, lit. "water of sin/purification [offering]"), shaving their whole body, washing their clothes and offering two young bulls, one as a burnt offering with its grain offering and the other as a sin (i.e., purification) offering. The term "water

of purification” occurs only here. Some take it to be the *red heifer “water of (purification from) pollution” (*mê niddâ*), which was a “sin/purification offering” (Num 19:9; e.g., Milgrom 1990, 61), but others dispute this (e.g., Levine 1993, 274-75).

3.3. The Inauguration Day. The consecration of the priests and the tabernacle leads naturally into the inaugural day in Leviticus 9–10. The consecration was a seven-day procedure (Lev 8:35), and the eighth day was inauguration day for the tabernacle and the priests (Lev 9:1). Up to this point, Moses had been functioning as the priest. He was the one who had officiated, for example, at the erection of the tabernacle (note the burnt and grain offerings in Ex 40:29, cf. Ex 29:38-46) and the consecration of the tabernacle, the altar and the priests (Aaron and his sons) in Leviticus 8. The inauguration day was the first time Aaron and his sons actually officiated as priests on behalf of the people in the newly erected and duly consecrated tabernacle. They offered sin and burnt offerings first for themselves (Lev 9:2, 7-14), and then the sin, burnt, grain and peace offerings for the people (Lev 9:3-4, 7, 15-21). Again, we should note that the order of the performance of the offerings was according to standard procedure (see 2.6 above). The goal of the whole procedure was to have “the glory of the LORD appear unto you” (i.e., the people, Lev 9:6), which, in fact, happened in an awe-inspiring way when the Lord appeared and burned the offerings (Lev 9:23-24).

The reference back to the inauguration day at the beginning of the instructions for the Day of Atonement binds Leviticus 8–10 to 16 (Lev 16:1). The consecration of the tabernacle and the priests (Lev 8) leads directly into the inauguration of the tabernacle (Lev 9–10), which, in turn, leads to the regulations for the annual purging of both the tabernacle (with the blood of the slaughtered sin offerings, Lev 16:11-19) and the community (with the scapegoat, Lev 16:20-22) from all forms of sin and impurity on the Day of Atonement—a kind of reconsecration and reinauguration of the tabernacle complex and priesthood for another year (cf. Lev 9). It is significant that on both the inauguration day and on the Day of Atonement the priests presented offerings first for themselves and then afterward for the people (cf. Lev 9:8-21 with Lev 16:11-19). This was not a common occurrence.

3.4. Offerings and Sacrifices for Purity and Holiness. On the occasion of the death of Aaron’s two sons Nadab and Abihu, the Lord spoke directly and emphatically to him (Lev 10:8) regarding the central concerns of his tabernacle presence in Israel: “distinguish between the *holy* and the *common* [or ‘profane’], and between the *unclean* [or ‘impure’] and the *clean* [or ‘pure’], and . . . teach the Israelites all the *statutes* that the LORD has spoken to them by the hand of Moses” (Lev 10:10-11). The “statutes” in Leviticus 10:11 were undoubtedly the specifics about holiness and purity highlighted in Leviticus 10:10, the core of which are outlined in Leviticus 11–15. On the one hand, the distinction between holy and common has to do with “consecration” (i.e., “to make holy [sacred],” usually the piel stem of the Heb verb *qds*). To treat something or someone that is holy (sacred) as if he, she or it were “common” would be to “desecrate” them. On the other hand, the distinction between clean and unclean has to do with “purification” (i.e., “to cleanse, purify,” usually the piel stem of the Heb verb *thr*). If something or someone is clean (pure), to make it or them unclean (impure) is to commit an act of “defilement” (i.e., “to make unclean, impure,” usually the piel stem of the Hebrew verb *tm*’).

Nadab and Abihu had violated these principles on the priestly level (Lev 10:1, 3), so the Lord consumed them with fire. The same could happen to any priest who violated the Lord’s tabernacle presence in such a way (note Lev 10:9, “so that you may not die”). Similarly, just before the Day of Atonement instructions (Lev 16), at the end of the intervening purity regulations (Lev 11–15), the Lord pronounced the same essential warning against all the people of Israel (Lev 15:31). This was one of the major concerns of the Aaronic priests: maintaining tabernacle purity and holiness in Israel, which was to be “a kingdom of priests and a holy nation” (Ex 19:6).

There are three units of sacrificial prescriptions and descriptions in Leviticus 12–15: the woman after childbirth (Lev 12), the skin-diseased person after he or she is healed or a house that has a diseased mark on it (Lev 14), and the one who has been healed from an abnormal discharge of blood or other fluids from his or her body (Lev 15). The sacrificial regulations for the woman who has borne a child is given as a prescription, without a narrative de-

scription in the order of the ritual performances (Lev 12:6-8), but it includes a sin offering and then a burnt offering to follow.

The ritual cleansing of the skin-diseased person who had become well again was much more elaborate. First, the priest had to inspect the person outside the camp to make sure he or she was truly healed. Second, he performed a ritual with two birds, one of which he slaughtered so its blood ran into a clay vessel containing "living water" (water taken from a flowing source, not, e.g., a cistern), with which he would sprinkle the healed person seven times by taking the live bird, a piece of cedar wood, scarlet yarn and hyssop, and dipping them in the blood and water mixture. The priest would then pronounce the person clean and let the live bird go free. The similarities with the rituals of Leviticus 16:15-22 are significant: the healed person was cleansed and all impurity was sent away.

Third, the priest performed a ritual like that of the ordination blood and oil ritual in Leviticus 8:22-24 (see 3.2 above; cf. description of pattern of Lev 14 in 2.6 above). The point of significance here is that the ritual of applying the blood and the oil to the right earlobe, thumb and big toe of the healed person was that of a "guilt" offering. Why a guilt offering rather than some kind of peace offering? The answer seems to be that since the diseased person had been expelled from the "kingdom of priests and holy nation" (Ex 19:6), he or she had virtually been "desecrated." Formerly a holy part of a holy nation, they had been removed from the realm of the holy to live outside the camp (Lev 13:46). The main purpose of the guilt offering was specifically to make atonement for desecration of holy things devoted to the Lord (see 2.5 above). The guilt offering was therefore necessary for reconsecrating the healed person and reincorporating them into the holy community, which, to come full circle, had been consecrated to the Lord in the Exodus 24 ritual.

On the one hand, Leviticus 15 describes symptoms and ritual procedures for regular but unclean flows from the body that could be dealt with by remaining unclean for the day (for a woman's menstrual impurity it was seven days, Lev 15:19) and being forbidden from entering the tabernacle (lest they contaminate it) and from eating a peace offering (Lev 7:19-21), then washing the person's whole body in water and being clean once again when evening came

(Lev 15:16-18). This kind of uncleanness did not require a sacrificial offering. On the other hand, if the flow was abnormal and extended, then the uncleanness would last for the duration of the flow plus seven days, and on the eighth day the person washed his or her clothes and body in water and offered two doves or pigeons, one for a sin offering and the other for a guilt offering (Lev 15:13-15, 25-30).

3.5. The Day of Atonement. During the seven-day period of consecration (Lev 8), some of the anointing and sin-offering rituals were performed with the specific purpose of purifying and consecrating the tabernacle (Lev 8:10), and especially the altar of burnt offering (Lev 8:11, 15). Similarly, on the Day of Atonement (*see* Atonement, Day of), Aaron was to use the blood of the sin offering to purify and consecrate the same altar once again (Lev 16:19; cf. all the sin-offering procedures in the most holy place and in the holy place, Lev 16:11-17, 20). The scapegoat ritual followed immediately, the goal of which was to have the goat "carry away on itself all their [i.e., the whole nation's] iniquities into a solitary land" (Lev 16:22). The scapegoat was also a "sin offering" and "made atonement" (Lev 16:5, 9-10), but of a different kind. The blood rituals of the sin offering purified the tabernacle and altar. The scapegoat ritual purified the people, the community.

The summary at the end of Leviticus 16 maintains this correspondence. The goal was to make atonement on behalf of the priests and the people in order to purify (cleanse) them (Lev 16:30, 33) as well as to atone (i.e., purge sin and impurity from) the tabernacle itself (Lev 16:33). There is a problem in the English translations when they translate, for example, "He shall make atonement *for* the sanctuary, and he shall make atonement *for* the tent of meeting and *for* the altar, and he shall make atonement for the priests and for the people of the assembly" (Lev 16:33 NRSV, italics added). Milgrom has observed that in this and some other passages the verb "to atone" (Heb *kipper*) takes a prepositional object when referring to people (i.e., "he [Aaron] shall make atonement *for* [Heb *'al*]" the priests and the people in Lev 16:33, cf. 16:30), but the tabernacle and the altar are construed as direct objects (i.e., "he shall atone [purge] the holy sanctuary, the tent of meeting and the altar," Lev 16:33a, not "*for* the holy sanctuary, . . ."). The point is that the goal was to

purge the tabernacle and its furniture from all defilement on behalf of the priests and the people, and to cleanse the people as well. This was absolutely necessary for maintaining God's tabernacle habitation among them in good condition and, thus, for their very survival in his presence (recall Lev 15:31).

The process involved, once again, performing the ritual offering procedures in the standard order (see 2.6 above): sin offerings (Lev 16:11-22) and then burnt offerings (Lev 16:23-24). As noted above, the reference back to the catastrophe of Nadab and Abihu on the inauguration day (Lev 10:1-2) in Leviticus 16:1-2 binds these two days together. It is significant that, as on that first inauguration day, on the annual Day of Atonement the priests presented offerings first for themselves and then afterward for the people (cf. Lev 9:8-21 with Lev 16:11-19). The Day of Atonement was actually an annual repurification, reconsecration and reinauguration day for the tabernacle. In a sense, it was the "fall house- (tent-)cleaning day" for the tabernacle that reset the tabernacle system for another year.

4. Historical Criticism and Sacrifices and Offerings.

The most influential treatment of the history of Israel's religion and its significance for the study of the composition of the Pentateuch over the last two centuries is undoubtedly Julius Wellhausen's *Prolegomena to the History of Ancient Israel* (first published in 1878 as *History of Israel*, then under the *Prolegomena* title in 1883; English edition reprinted 1994). Wellhausen began his study of the Hebrew Bible with the preexilic historical books and prophets and was quite taken with the religion reflected in them. He knew that the Torah (specifically, the law within the Torah) was considered to be antecedent, but he testifies that when he took to the study of the Torah, he found no evidence of any impact of it upon the historical and prophetic books (Wellhausen, 3-4). With regard to the sacrifices and offerings, he argued that the priestly system of Leviticus 1—16 was an invention of the *postexilic* priestly institution. So P (i.e., the Priestly Source) was not the earliest pentateuchal source, as most scholars had previously thought, but actually the last in his proposed JEDP sequence of sources (see Pentateuchal Criticism, History of; Source Criticism).

4.1. The Historical-Critical "Scholarly Consensus" Regarding Altars and Offerings. Wellhausen's method was quite simple. He compared the religious institutions as set forth in the priestly material of the Pentateuch with the practices of the ancient Israelites as recounted in the preexilic historical books and the references to those practices in the corresponding prophetic books. The fact of the matter is that the preexilic historical books and prophets frequently refer to the burnt and peace offerings, but not to the sin and guilt offerings (for the latter see only 1 Sam 6:3-8, 17 and 2 Kings 12:16 [MT 12:17]; see also Is 53:10, though this is also generally taken to be postexilic by critical scholars). Wellhausen (69-75) argued that historically, therefore, the sin and guilt offerings were not introduced into the Israelite repertoire until the time of Ezekiel (see esp. Ezek 40:39; 42:13, 19-25; 44:27-29; 45:17-25; 46:20; cf. also 2 Chron 29:21-24; Ezra 8:35; Neh 10:33 [MT 10:34]). The priestly institution of the postexilic period created a historical fiction that placed the full ritual system of Leviticus 1—16, with which they were occupied in their day, back into the days of Moses, thus promoting their own religious and political agenda in postexilic Judah.

Wellhausen was fully aware that "belief in the dependence of sacrifices and other sacred acts upon a laboriously strict compliance with traditional and prescriptive rites occurs in the case of certain peoples, even in the remotest antiquity" (Wellhausen, 79, n. 1). Despite this common knowledge, he argued that the disparity between the two presentations of religious life in ancient Israel (i.e., the Torah versus the preexilic historical and prophetic books) showed that this was not the case in preexilic Israel. It is true that the fully developed system of offerings and sacrifices is conspicuous for its almost complete absence in Joshua through Kings and in Hosea, Amos, Isaiah, Micah and elsewhere. The real question, however, is whether or not this requires the kind of diachronic explanation and rearrangement of ancient Israel's religious history worked out by Wellhausen.

Of course, since his day there have been various exceptions taken to some elements of his theory. Many have taken P to be a redaction, not a full-fledged literary source that was first compiled separately and then later formed the basis and perspective of the final major redaction or composition of the Pentateuch. The various the-

ories of the composition of the Pentateuch current today articulate such issues differently, but P is still most often taken to be postexilic by most critical scholars (see the fuller discussion in Averbeck, 4.1011-12).

Conservative scholars have always objected to such theories (see below), but even among scholars committed to the historical-critical consensus in general, there has arisen a distinctively different approach. Some have argued forcefully that P is preexilic. Y. Kaufmann was convinced that the logic of Wellhausen's argument actually runs in another direction and leads to a different conclusion (Kaufmann, 153-211). To put it simply, since the prophets considered morality to have priority over any focus on detailed priestly rites and made much of this issue (see, e.g., the prophetic critique of the cult in Hos 6:6; Is 1; Amos 5; Mic 6), it would seem that they were reacting *against* an earlier priestly notion that the priestly rites could be sufficient apart from moral considerations. For Kaufmann, this priestly focus on ritual ceremony aside from morality, therefore, reflects a stage *earlier*, not later, than the preexilic prophetic books.

Others agree with Kaufmann's position in general, but some come at it differently. For example, M. Haran argues that the conditions of the writing and demands of P do not suit the postexilic period. For instance, the ark, the cherubim, the Urim and Thummim and so forth are indispensable to P's view of a legitimate cult, but the postexilic priesthood had no way of instituting them. It would have undermined their agenda to require things that they themselves could not match up to (Haran, 3-8). A. Hurvitz has argued that the language of P in some parts of the Pentateuch is earlier than Ezekiel. The latter carries special weight with J. Milgrom, who therefore accepts the earlier dating of P (Milgrom 1991, 3-13) and also accepts I. Knohl's view that the "Holiness Code" (H) of Leviticus 17-26 is actually later than P of Leviticus 1-16. However, Milgrom rejects Knohl's view that P's inner circle of priestly rituals was practiced in complete silence—without speech, singing or praying out loud (see Tabernacle, §4.1 for a summary and critique of Knohl's "sanctuary of silence" view; see esp. Knohl, 225-30).

The history of sacrifices and offerings in the Bible is tied up with that of the *altars on which they were offered. As noted above, the central is-

sue is the relationship between the five different kinds of offerings on the bronze altar of the tabernacle (and later the temple; see discussion of Lev 1-16 above) and the solitary altars on which only burnt and peace offerings were made during the preexilic period (according to the preexilic historians and prophets) as well as those during the period covered by Genesis through Exodus 24. The overall historical-critical consensus is that there never was a tabernacle in the first place, much less a bronze altar of the sort described in Exodus 27:1-8 on which one would make the offerings the Pentateuch describes.

P. Heger has attempted a reconstruction of the history of altar sacrifice in ancient Israel in accordance with this general scholarly consensus and based on comparisons between the three altar laws in the Pentateuch: the nontabernacle earthen altar law in Exodus 20:24-26, its reflection in Deuteronomy 27:5-7 and the tabernacle's bronze altar in Exodus 27:1-8. Without presenting Heger's argument in detail, I would point out that there are serious problems with this kind of reconstruction and rewriting of the history of ancient Israelite altars, sacrifices and offerings. It is rooted in modern skepticism about the biblically attested historical reality of Moses, the tabernacle, the bronze altar in the tabernacle complex and, most important for us here, the scriptural depiction of the incineration of (portions of) animal and grain offerings on the bronze altar inside the tabernacle from the beginning of Israel's history as a nation (for data and remarks on the historical plausibility and reality of the tabernacle, see Tabernacle §3.3).

4.2. The Religious Sociology and Politics of Sacrifices, Offerings and Altars. The fact that Exodus 20:24-26 gives regulations for the construction of acceptable earthen altars apart from the bronze altar fabricated for the tabernacle court calls for explanation. The answer, however, lies primarily in the sociology of ancient Israelite *religion rather than in its chronological development. Wellhausen's approach was based on taking the apparent lack of evidence for a full levitical system of offerings in the preexilic historical and prophetic books to mean that the levitical system was not in place at that time. Heger takes this approach further in the same direction, to the point where the priestly levitical system undoes itself.

Others have resisted this largely diachronic approach and explanation in favor of one that recognizes and takes seriously the sociological separation between the world of the preexilic historians, prophets and common people, and the priestly world of the tabernacle and later the temple. The priests and priestly system look out at Israel from a standpoint situated within the sanctuary complex. The preexilic historians, prophets and common people look from the outside in toward the sanctuary, from the perspective of outsiders who performed their own religious practices outside the tabernacle, whether they were loyal to Yahweh or the priestly system in the tabernacle or not. These systems were not mutually exclusive chronologically, theologically or sociologically (see, e.g., Haran, 7-8; Anderson 1987, 34-55; Averbeck, 4.1010-13 and the literature cited there). There is a diachronic fallacy in Wellhausen's basic method and in that of those who have followed him.

According to the biblical text, the solitary-altar law in Exodus 20:24-26 was given before the tabernacle was constructed (see the more thorough treatment in Averbeck, 2.889-98). It was, in fact, this kind of altar that Moses built to ratify the covenant at Sinai (Ex 24:3-8). However, even after the construction of the tabernacle and its altar, the Lord commanded through Moses (Deut 27:5-7; Joshua later obeyed the command, Josh 8:30-35) to construct such a solitary altar and to offer up burnt offerings and the fat of peace offerings on it when they had taken possession of the land he had promised to Abraham (Gen 12:6-7; Heger, 4-6, 14-87, exaggerates the differences between the altar regulations in Ex 20 and Deut 27). Interestingly, even though the tabernacle altar was available, God commanded them to build and offer their offerings on the same kind of altar that Abraham had built in the same location centuries earlier. Thus, they laid claim to the land based on the *promise and enacted it in a way that connected them in the moment directly to the original promise and its place of origin.

The earth-and-stone-altar law in Exodus 20:24-26 regulates the nature and construction of solitary altars on which one could offer "burnt offerings" and the fat portions of "peace offerings" in ancient Israel, along with the grain offerings and libations that were often associated with them (see Num 15:1-13). There is no mention of sin and guilt offerings associated

with these because offering them on such altars would have made no sense. The purpose of these latter sacrifices was to maintain the purity and sanctity of the community and of the tabernacle in light of the tabernacle presence of God in their midst (see Lev 15:31 and Lev 16; see 2.4-5 and 3.4-5 above). Solitary altars were not sanctuaries but places of "calling upon the name of the Lord" as one offered a sacrificial gift to the Lord wherever one was at the time (see, e.g., Gen 12:7-8; 13:4, 18; cf. foundation in Gen 4:26). The offerings presented on the solitary altars constituted (part of) the *action* of worship to the Lord, while calling on the name of the Lord was the vocal expression of worship, a petition and proclamation in *word* to the Lord.

It is true that many of the solitary-altar passages do not specify that offerings were presented on them. However, some do, and it seems that this was the most natural reason for building an altar to begin with (e.g., Isaac's assumption in Gen 22:7-9). No altar is mentioned in the Cain and Abel offering passage in Genesis 4:3-5. The first instance of an explicit offering on an altar is found in Genesis 8:20, when after the flood, "Noah built an altar to the LORD and took from every clean [species of] land animal and from every clean [species of] bird and offered up burnt offerings on the altar." As a result, the Lord "smelled the pleasing aroma" of the offerings and resolved to never again curse the ground or destroy every living thing (Gen 8:21). Only burnt offerings and peace offering sacrifices are referred to between Genesis 8 and Exodus 20 (see Gen 22:2-8, 13; 31:54; 46:1; Ex 3:18; 5:3, 8, 17; 8:8 [MT 8:4], 25-29 [MT 8:21-25]; 10:25-26; 12:25; 13:15; 18:12), where the altar law specifies burnt offerings and sacrifices for the earthen and stone altars. None of these passages until Exodus 20:24-26 specifies the material or manner of altar construction, but one should probably assume that it generally followed the pattern of Exodus 20.

The pre-Mosaic and Mosaic offerings at solitary altars, however, are not the real issue here. The problem is the continued legitimate construction of solitary altars and the practice of offering burnt and peace offerings to the Lord on such altars in multiple places after the death of Moses and the conquest of the land—despite the Deuteronomic call for centralized altar worship at the sole and central sanctuary residence of God in the land (Deut 12:5-14; see, e.g., Judg

6:24-28; 13:19-23; 21:3-4; 1 Sam 7:8-10; 1 Sam 7:17; 2 Sam 24:25; 1 Kings 18:23-24, 30-38; 19:10, 14). According to Deuteronomy 12:10, however, the centralization of worship was to be associated with the Lord giving Israel “rest” from all its “enemies” in the land. Joshua’s conquest gave Israel a foothold in the land and rest to a point, but it is clear from Judges 1–2 that there were still enemies to be conquered in the Promised Land after the death of Joshua. It was not until the time of David that this rest was achieved in full (2 Sam 7:1). David’s son Solomon, therefore, built the temple in Jerusalem as the central sanctuary in place of the tabernacle, which was located at Gibeon (1 Kings 3:4; 2 Chron 1:5-6). Up until then (and after the disruption of the divided kingdom), burnt and peace offerings along with their associated grain offerings and libations served as an acceptable means of worship at solitary Yahwistic altars.

In the meantime, the priests were responsible for the maintenance of the central sanctuary of the tabernacle (and later the temple) and its worship, wherever it may have been located. Moreover, the ideal of a centralized sanctuary was maintained, even if not always acceptably realized, for example, in the practice of some of the pious who would go once a year to the tabernacle sanctuary—wherever it was located—to worship the Lord (see, e.g., 1 Sam 1:3). Unfortunately, the priests and worship even at the central sanctuary were often less than ideal (1 Sam 2:12-17; Ezek 8–11), much less the worship at the relatively unsupervised solitary altars throughout the land. Of course, altars dedicated to other gods and their ritual accouterments were to be eradicated from the land (see, e.g., Deut 12:2-4), and according to Deuteronomy 16:21-22, for example, legitimate Yahwistic solitary altars were to be absolutely unencumbered by fertility symbols such as Asherah poles (or trees) and sacred pillars.

In the southern kingdom, for example, in order to centralize worship in the Jerusalem temple, Asa (c. 908-867 B.C.) eliminated foreign altars, high places, their sacred pillars and Asherahs, and all high places and incense altars from all Judah (2 Chron 14:2-5). In the time of Joash (c. 836-798 B.C.), Jehoiada the priest instigated the destruction of the Baal temple, priests and altars in Jerusalem (2 Kings 18:17-18). Hezekiah (c. 727-698 B.C.) instituted reforms that eliminated worship at solitary “high place” altars

where there were sacred pillars and Asherahs in favor of centralized worship at the Jerusalem temple. Finally, among other things, Josiah (c. 639-609 B.C.) implemented thorough reforms within the Jerusalem temple worship itself (2 Kings 23:4; note also the Asherahs in the temple, 2 Kings 23:6), did away with idolatrous priests, high places, altars (2 Kings 23:5, 12-14) and houses of the cult prostitutes of Asherah (2 Kings 23:7), and eliminated even the Yahwistic high places in Judah and Jerusalem at which even some of the Aaronic priests had been ministering. He brought these priests to Jerusalem where they could be provided for, although they were not allowed to minister in the temple (2 Kings 23:8-9).

It appears that although there was a centralized worship in place during the wilderness period, with the tabernacle in Israel’s midst (Lev 17:1-7), and a centralized worship ideal existed even from the start of Israel’s occupation of the holy land (Deut 12), it was also legitimate to offer burnt and peace offerings to the Lord on earthen and stone solitary altars “in any place” where the Lord caused his name to be remembered (Ex 20:24, 25) until there was “rest” within the boundaries of the land of Israel (Deut 12:10). Before the time of David such rest was precarious at best, so worship at such solitary altars was common among faithful Yahwists and pleasing to the Lord. Moreover, during the time of the northern kingdom, faithful Yahwists who lived in the north were not allowed to travel to Jerusalem to worship at the temple, so worship at solitary Yahwistic altars was the practice (1 Kings 9:10, 14).

When the political and military situation became relatively stable, at least for a time in pre-exilic Judah, however, the centralization ideal took over and some of the faithful kings pursued it. The ideal of centralized worship expressed in Deuteronomy 12 was not new with Josiah (or even Hezekiah), although its implementation during the days of Josiah was certainly an expression of good faith toward the Lord. The notion that the Exodus 20:24-26 law of the solitary altar contradicts the Deuteronomy 12 centralization law is based on a misunderstanding of the intent of Deuteronomy 12 and a diachronic fallacy. The priestly system of five main kinds of sacrifices and offerings in the tabernacle (and later the temple) was different from that of solitary altars, which were limited to burnt and peace offerings only. Both systems could and, in

fact, did legitimately function side by side during many periods of preexilic Israelite history. Wellhausen's "two wholly distinct worlds" were not really wholly distinct, but to the degree that they were, their distinctiveness was sociological, not chronological.

5. Sacrifices and Offerings in the New Testament.

The NT often refers to the OT sacrifices and offerings. We find Mary bringing two birds to the temple as a sin and burnt offering to the Lord for sacrificial purification from the impurity of her blood flow due to her giving birth to Jesus (Lk 2:21-24; cf. Lev 12). Jesus himself followed the sacrificial rules and advised others to do so as well (e.g., Mt 8:4), although he was distressed by the rabbinic practices of his day that sometimes undermined the purpose of these laws in the first place (e.g., corban in Mk 7).

The theology of Jesus as a sacrifice who made atonement for sins is both basic and profound for the Christian faith. Of course, the background for understanding the various dimensions of the sacrifice of Christ is the OT sacrificial system. Hebrew 9–10 is a central NT passage, but there are many others (see *DPL* and *DLNTD*, Death of Christ). Moreover, since Jesus offered himself on behalf of sinners, and his disciples are called to follow him, Christians are called to offer themselves completely to the Lord as acceptable offerings (Rom 12:1; see *DPL*, Sacrifice, Offering; *DLNTD*, Sacrifice, Offering, Gifts). The potential these sacrificial images hold for theology and for instruction in Christian discipleship is rich (see Averbeck, 4.1015-19 and the literature cited for details; cf. Goldingay and literature cited).

SARAH

Alongside the more widely recognized Israelite patriarchs stand the equally significant matriarchs of God's people. Among these, none plays a greater role in the history of Israel and God's dealings with humanity than Sarah. Her husband, *Abraham, is rightly known as the father of the faith; Sarah, a pivotal character in Genesis, equally can be seen as a mother of the faith. Indeed, many of the struggles and successes that Sarah experienced provided a pattern for the experiences of future biblical characters. It is no wonder, then, that Sarah continued to play a key role within the biblical traditions and even beyond.

1. Sarah in the Ancestral Narratives
2. Sarah in Later Tradition

1. Sarah in the Ancestral Narratives.

Sarai, as Sarah is known when she is first mentioned, was the wife of Abram. He was the first patriarch and she the first matriarch in the biblical text. When introduced in the biblical text, Abram is about seventy-five years old and Sarai is about sixty-five years old. Although her lineage is not initially recorded, the fact that she was childless receives double mention in Genesis 11:30: "Now Sarai was barren; she had no children." The couple's childlessness sets the tone for the stories about them that follow. Later God changed their names to the more familiar ones of Sarah and Abraham that are known throughout the biblical text (Gen 17:5, 15). Her name (in both forms) means "princess" or "chieftainess." It also may be related to the Akkadian word *šarrat*, a designation of the moon-goddess Ishtar.

Sarai is identified as *Terah's daughter-in-law in Genesis 11:31, but the issue of her genealogy remains complicated, for in Genesis 20:12 Abraham calls her his half-sister and explains to *Abimelech that she is the daughter of his father but not his mother.

After the death of Terah, God told Abram to leave his homeland and to go to a place that God would later disclose to him. God promised to make Abram a great nation, to bless him and to make his name great. God also promised that those who blessed Abram, God himself would bless, while those who cursed Abram, God himself would curse (Gen 12:1-3). Later God prom-

ised Abram descendants and land (Gen 15:4-7). Many of the issues in the stories about the couple can be understood as their struggle to come to terms with God's promises of land, offspring, greatness and *blessings. Thus the couple's yearning for a child draws in other characters: *Lot, Abram's nephew and apparent heir; *Hagar, Sarai's Egyptian handmaid; and Eliezer of Damascus, a servant and possible heir.

Sarai figures prominently in two accounts of marital deception: Genesis 12:10-20, the text regarding the couple's descent to *Egypt during a famine; and Genesis 20:1-18, a similar story taking place years later in Gerar. In both cases Abram feared for his life because of his wife's great beauty. In the first instance, Abram instructed her to say that she was his sister, and she obeyed. Consequently, *Pharaoh took her to his palace and rewarded Abram materially because of Sarai with sheep, cattle, donkeys, and male and female servants (Gen 12:16). The Lord, however, afflicted Pharaoh's household with serious diseases because of this situation. Realizing the couple's ruse, Pharaoh expelled them from the kingdom (Gen 12:17-20). In Genesis 20, Abimelech, king of Gerar, warned in a dream by God not to touch the still-beautiful Sarah, also expelled the couple and gave Abraham one of the strongest rebukes recorded in the biblical text.

The Nuzi documents have been thought by some to shed light on both incidents in Egypt and Gerar. It is claimed that Hurrian society honored a wife-sister relationship so much so that a woman in that society who became a man's wife and was then adopted by him as his sister enjoyed a higher status and more privileges than an ordinary wife. However, this interpretation is now questioned (Greengus; Walton, 396).

The Nuzi documents have also been used to enlighten the legal aspects of the triangular relationship of Sarai, Hagar and Abram. According to a custom prevalent during that time, a wife could give her handmaid to her husband and any child born to a handmaid would be the child of the mistress. Nuzi documents stipulate that if a wife is childless, it is her duty to provide her husband with a female *slave as a concubine. Thus Sarai herself suggested to Abram that he take Hagar and get a child through her so that Sarai could build her own family (Gen 16:2); two generations later, Leah and Rachel gave their handmaids to Jacob (Gen 30:1-8).

However, instead of dwelling on the Nuzi parallels, recent scholarship tends to emphasize Sarai's need for a son in her own right. A son would secure Sarai's status in the family and her place in the society; a son from the lawful wife not only would be the means of verifying God's promise of descendants to Abram but also would be a caretaker for Sarai and Abram in their old age.

The women in Abram's household, however, did not get along. Hagar's arrogance after she successfully conceived led to her harsh treatment by Sarai. Hagar fled, but God told her to return to her mistress and to submit to her (Gen 16:4-15). The story of the rivals Sarai and Hagar becomes a pattern in the biblical text for acrimony between wives. Rachel and Leah competed for Jacob's sexual favors (Gen 30:14-24), and Hannah mourned her childlessness while her rival, the fecund Peninnah, gloated (1 Sam 1:1-6). Sarah's long period of waiting for a child also presents a pattern in Genesis: Rebekah was barren for years before the birth of twins (Gen 25:21); Rachel finally conceived *Joseph and then *Benjamin after Leah had given birth to six sons (Gen 30:23-24; 35:16-26); and *Tamar, who outlived two husbands, waited many years for a child (Gen 38).

When God inaugurated the *covenant sign of *circumcision with Abram, he changed the couple's names and announced that Sarah would conceive a son who would be named Isaac (Gen 17:17-22). The promise of a son was reaffirmed when the Lord visited Abraham before destroying Sodom and Gomorrah (Gen 18:10). Although Abraham and Sarah greeted the prophecies of an upcoming child with incredulous laughter (Gen 17:17; 18:12), Sarah indeed conceived and bore a child at approximately age ninety; her husband was approximately one hundred. Through these struggles, the biblical text emphasizes that it is through the lawful wife that God's promise of progeny, land, greatness and blessings comes.

The story of a couple's anguish for a child repeats itself in Genesis and throughout the biblical text. A delayed child such as Isaac, the second patriarch, often signals a child marked for a special purpose. Joseph, the long-awaited son of Rachel, became the agent through whom the family was saved during a famine. Samuel, Hannah's son, became a prophet and king-maker. In the NT, Elizabeth and Zechariah re-

semble Abraham and Sarah because they, too, were well past child-bearing years when their son John was born (Lk 1).

The biblical text gives little information about Sarah after Isaac's birth except that she persuaded Abraham to expel Hagar and Ishmael permanently from the camp (Gen 21:8-21). Sarah died at age 127 in Kiriath-arba and was buried in the cave at Machpelah, which Abraham purchased from Ephron (Gen 23:3-20).

2. Sarah in Later Tradition.

Sarah and Abraham are mentioned again in Isaiah 51:2, where God calls Israel to remember its roots—Abraham and Sarah—and the miracle of the many descendants who came from these two ancestors. Later Jewish tradition surrounding Sarah adds much to the details of the biblical text. Regarding genealogy, Sarah is identified as Iscah, the daughter of Abraham's brother Haran (Gen 11:29). That would make her Abraham's niece. The name Iscah is related to the word *sākā* ("to look"), for all looked on her beauty (*b. Meg.* 14a). It is also said that her beauty lasted through journeys and wanderings and continued through to old age (*Gen. Rab.* 40:4), that her beauty made all other people look like monkeys (*b. B. Bat.* 58a), and that Abishag, a great beauty in her own right who sought to cheer David in his old age (1 Kings 1), was only half as beautiful as Sarah (*b. Sanh.* 39b).

The name Iscah also refers to Sarah's ability to prophesy, according to Jewish tradition, and to see with the eyes of vision (*b. Meg.* 14a). She is named as one of the seven prophetesses in the Hebrew Bible, and her prophetic gift is reputed to have excelled that of her husband (*Ex. Rab.* 1:1). In addition, when her name was changed from Sarai, Sarah became a princess for all humanity as well as a princess for her own people (*Gen. Rab.* 40:5).

According to Jewish tradition, Pharaoh loved her and gave her Goshen. It is for this reason that the Israelites settled there in Joseph's time (*Pirque R. El.* 36). She retained her virtue with Pharaoh by praying to God, who sent an angel to whip Pharaoh at her command (*Gen. Rab.* 41:2).

In order to quell the rumor that Abraham and Sarah had adopted a foundling and that Isaac was not their natural son, Jewish tradition says that Abraham held a party for the neighborhood the day Isaac was weaned. Sarah suckled all the neighborhood infants, thereby

proving her motherhood of Isaac (*Gen. Rab.* 53:9; *b. Baba Meši'a* 87a). Isaac further proved his parentage by his striking resemblance to Abraham (*Gen. Rab.* 53:6; *b. Baba Meši'a* 87a).

Miracles surrounded Sarah during her lifetime, according to Jewish tradition. Her dough miraculously increased, a light burned from Friday through Friday, and a pillar of cloud rested above her tent (*Gen. Rab.* 60:16). Her expulsion of Ishmael was justified because she saw him commit idolatry, rape and murder (*t. Soṭah* 6:6; *Gen. Rab.* 53:11).

Jewish tradition says that Sarah died suddenly over the shock of hearing that Abraham intended to slay Isaac. One account says that Satan appeared to her and told her that Abraham had slaughtered or was about to slaughter Isaac (*Pirque R. El.* 32); another account says that Isaac himself returned and told her of the event (*Lev. Rab.* 20:2). Upon her death, the Hebronites closed their places of business out of respect for her (*Gen. Rab.* 58:7; 62:3).

SERPENT

The cultural significance of serpent imagery in the ancient Near East combines with the pivotal role of the serpent in the text of Genesis to create an intriguing theological study. Somewhere between Leviathan and Satan we need to understand the Israelite perception of the serpent of the garden.

1. Serpents in the Ancient Near East
2. The Serpent in Israelite Theology
3. The Serpent and Satan
4. Curse of the Serpent

1. Serpents in the Ancient Near East.

From the very earliest evidence we have in ancient Near Eastern art and literature, the serpent is presented as a significant character. Perhaps because serpents' poison was a threat to life and their lidless eyes provided an enigmatic image,

serpents have been associated with both death and with wisdom. The Genesis account draws on both aspects through the wisdom dialogue between the serpent and *Eve, on the one hand, and through the introduction of death after the expulsion from *Eden, on the other. Similarly, Gilgamesh, the legendary Mesopotamian king, is cheated out of perpetual youth when a serpent consumes a magical plant the hero had retrieved from the sea bottom (*ANET*, 96, lines 258-89). The sinister image of the serpent is graphically displayed by the intertwining coils of a snake encompassing a cult stand found at Beth-shean. Whether as a representative of primeval chaos (Tiamat or Leviathan) or a symbol of sexuality, the serpent harbors mystery for humans.

Of particular interest is the Sumerian god Ningishzida, who is portrayed in serpent shape and whose name means "Lord of the Productive/Steadfast Tree." He was considered a ruler in the netherworld and "throne-bearer of the earth." He was one of the deities who offered the bread of life to Adapa. A serpent is often portrayed entwined in the roots of the World Tree, the tree at the center of the cosmos (e.g., in Gilgamesh, Enkidu and the Netherworld; see George, 180-81). In Egypt, where Israel spent several centuries, the serpent was considered a wise and magical creature. Wadjet, the patron goddess of Lower Egypt, is represented as a snake (uraeus) on the pharaoh's crown. This came to symbolize the power of pharaoh. But additionally, Apophis, the enemy of the gods, represented the forces of chaos in the form of a snake (*ANET*, 6-7). Even when not related to a god, the serpent represented wisdom (occult), fertility, health, chaos and immortality and was often worshiped. In summary, then, in the ancient world the serpent was viewed as possessing mystical wisdom and as a demonic and hostile creature. Though the Genesis creation account contained no serpentine sea monster to threaten God's establishment of cosmic order, here we find a serpent who begins to work against the order that exists in the human realm.

2. The Serpent in Israelite Theology.

Genesis 3 brings the serpent on the scene with little introduction and no strategic identification. When the Israelite audience considered the serpent, the ideas mentioned above that were current in the ancient world would un-

doubtedly have been associated with it in their minds. Yet in the context of Genesis, the serpent is described in the NIV and NRSV as “crafty” (*‘ārûm*) but not sinister or magical. Other translations have rendered this word “shrewd” (NJPS) or “cunning” (NKJV). That this description is neutral with regard to good and evil can be seen from the fact it is a quality considered worthy of pursuit elsewhere (e.g., the same Hebrew root in Prov 1:4; 8:5; 15:5) as well as an attribute of Dame Wisdom (Prov 8:12). It is often seen as the remedy for naïveté, which is especially significant in Genesis 3 as the serpent’s shrewdness is contrasted to the nakedness of the man and woman through a similar-sounding word (Gen 2:25). Nonetheless, the term can carry negative connotations, as in passages such as Job 5:12, where the shrewd are plotting against God, and Job 15:5 where shrewd words are used to devious ends. In Exodus 21:14 the murderer acts in this way to snare a victim. If tempered and controlled in the context of the fear of the Lord, this can be a very positive quality, but if it is used as an instrument for the schemes of our human fallenness, it can be very dangerous.

In addition, it is important to recognize that the serpent is simply classified as one of the wild animals. This classification mitigates against any speculation concerning an Israelite understanding of a hidden identity of the serpent. Neither god nor demon nor genie is indicated as lurking beneath the guise of the serpent. It comes with nothing out of the ordinary that would alert the woman’s suspicions. Of course, we cannot help but wonder what she thought when the serpent talked.

Unlike Christian theology, in Israel there was no inclination to embody all evil in a central figure or trace its cause to a single historical event, such as Satan’s fall. Therefore, the Israelites were quite willing to recognize the serpent as representing an evil influence without any attempt to associate it with a being who was the ultimate source or cause of evil. In fact, it would appear that the author of Genesis is intentionally underplaying the role or identification of the serpent. This would correlate with the other polemical elements of the early chapters of Genesis. It is important to remember that in the ancient world most cosmological models were built around a god taming or defeating the chaotic forces, often represented in the sea (see Day). In Canaanite literature this role of chaos was

played by the serpentine Leviathan/Lotan. In contrast, the biblical narrative states that the great sea creatures were simply beasts God created (Gen 1:21). This demythologizing polemic may also be responsible for avoiding any theory of conspiratorial uprisings for the existence of evil.

3. The Serpent and Satan.

In ancient belief the world was full of supernatural powers, known and unknown, good and evil, active and passive, chthonic (connected to the netherworld) and celestial. Despite Israel’s theological distinctness from its neighbors, the people shared in much of this belief. Today we live in a modern world that scorns those who believe in the supernatural, yet Christianity has historically affirmed the existence of demons, angels and the archenemy, Satan. We have therefore traditionally adopted an approach to the OT that posits a significant degree of continuity between their beliefs and ours. Indeed, a substantial amount of our information about Satan is derived from OT texts. Before we glibly equate Israel’s beliefs with our own, however, we must examine the texts on their own merit and within their own contexts. Before we could commend an exegetical identification of the serpent as Satan in Genesis itself, we have to ask: What did the Israelites know about Satan? If we were to build a profile of Satan, a composite sketch, solely from the OT, what would emerge?

“Satan” is one of the few English words that has a Hebrew origin. In the OT it finds usage both as a verb and as a noun. As a verb it means “to oppose as an adversary” (Ps 38:20 [MT 38:21]; 71:13; 109:4, 20, 29; Zech 3:1). As a noun it can be applied to a human being, thus designating one an adversary (1 Sam 29:4; 2 Sam 19:22 [MT 19:23]; 1 Kings 5:4 [MT 5:18]; 11:14, 23, 25; Ps 109:6). Finally, in the category of most interest to this study, the noun is applied to supernatural beings (fourteen times in Job 1–2; three times in Zech 3:1–2; Num 22:22, 32; 1 Chron 21:1).

There are no cognates to the Hebrew term in the related Semitic languages Ugaritic or Akkadian, though the root does occur in Aramaic, Syriac, Arabic and a number of other distant relations. If the technical usage (noun applied to supernatural being) is original and the other usages developed from it, we would have to conclude, judging from the nuances of those other usages, that there was little of a sinister nature in

the being, for these other uses evidence none of that element. In contrast, however, the broadly generic sense of the common noun and verb use suggests that the technical usage is a secondary development. If this is indeed the case, it would be logical to assume that a supernatural being would have been given this designation as a description of his function (i.e., a heavenly adversary). This finds confirmation in the fact that in most of the cases where the noun is applied to a supernatural being, the definite article is attached to it. In English when we refer to someone by means of a proper name, we do not use a definite article (e.g., Sarah, not “the” Sarah). In this practice Hebrew behaves identically. Therefore, we must conclude that the individual in Job 1—2 and Zechariah 3:1-2 should be identified as “the accuser” (description of function) rather than as “Satan” (proper name). Based on the use of “satan” in the OT, we would have to conclude that Israel had little knowledge of a being named Satan or of a chief of demons, the devil, during the OT period.

There is no hint in the OT that the serpent of Genesis 2—3 was either identified as Satan or was thought to be inspired by Satan. The earliest extant reference to any association is found in Wisdom of Solomon 2:23-24 (first century B.C.):

For God created us for incorruption,
and made us in the image of his own
eternity,
but through the devil’s envy death entered
the world,
and those who belong to his company
experience it.

But even here, the devil is not given the name Satan and, in fact, was variously named in early literature. “This figure normally became Samael in the Targum and in rabbinic tradition, but in a text known as the *Apocalypse of Abraham*, preserved only in Slavonic translation but datable to the same period that inspired the Syriac *Baruch* and the *Apocalypse of Ezra*, the seductive angel is called Azazel” (Forsyth, 224). Perhaps the earliest reference to Satan as the tempter (through the serpent) is in *Apocalypse of Moses* 16—19 (properly titled *Life of Adam and Eve*), contemporary to the NT. This text also links Isaiah 14 to Satan’s fall (Forsyth, 232-38). In the writings of the church fathers, one of the earliest to associate the serpent with Satan was Justin Martyr (*1 Apol.* 28.1; Forsyth, 351). From the NT material (esp. Rom 16:20; Rev 12:9), it is easy for

us to draw a connection between the serpent and Satan. This theological conclusion, however, comes as a benefit from progressive revelation.

In conclusion, the NT views the serpent as related to Satan, and so might we, but it offers few details about how close an identification should be made or how the two were related. We do well to cite the treatment of this issue by E. J. Young. While he recognizes that Satan is not mentioned in the passage, he contends that “it is perfectly clear that Satan is here at work” (Young, 22). For those who might wonder to whom it is “perfectly clear,” Young clarifies his remark:

In the light of the plain statements of the New Testament [Jn 8:44; Rev 12:9; 20:2] we have every right to say that Eve was tempted of the devil. The evil thoughts which issued from the mouth of an actual snake found their origin in the devil himself. In some sense that we cannot understand, for God has not revealed it unto us, the snake was an instrument used of the devil. To attempt to explain how the devil employed the snake is a task of which we are not capable, nor is it particularly profitable that we should know how this was done. That it was done, however, the data of the Bible compel us to believe. *We are far from saying that Eve herself understood this when the words issued from the serpent’s mouth; even Moses, the writer of Genesis, may not have had the full knowledge of the subject that is possessed by New Testament believers.* (Young, 22-23; italics added).

Here Young appropriately differentiates between our theological beliefs and the findings that can be exegetically derived from Genesis. We should also be reluctant to impart to the OT texts the information that Satan was to be equated with the serpent. Nonetheless, on the strength of allusions such as Romans 16:20, we are justified in accepting that the NT authors identified the serpent with Satan and therefore can be comfortable with that identification from a theological standpoint, even if the association would not have been recognized by OT Israel.

4. Curse of the Serpent.

The Egyptian Pyramid Texts (second half of the third millennium) contain a number of spells against serpents but likewise include spells against other creatures considered dangers or

pests. The serpent enjoys some prominence, however, since it is represented on the crown of the pharaoh. Some spells enjoin the serpent to crawl on its belly (keep its face on the path). This is in contrast to raising its head up to strike. A serpent on its belly is nonthreatening, while one reared up is protecting or attacking. Treading on the serpent is used in these texts as a means of overcoming or defeating it.

The depiction of dust or dirt for food is typical of descriptions of the netherworld in ancient literature. In the Gilgamesh Epic, Enkidu on his deathbed dreams of the netherworld and describes it as a place with no light and where “dust is their food, clay their bread,” a description also known from the Descent of Ishtar. These are most likely considered characteristic of the netherworld because they describe the grave. Dust fills the mouth of the corpse, but dust will also fill the mouth of the serpent as it crawls along the ground.

SETH

The third son of *Adam and *Eve, following *Cain (Gen 4:1) and *Abel (4:2), Seth is the “replacement” of Abel, who was murdered by his brother (Gen 4:8), and also the father of Enosh (Gen 5:6). That Seth replaces Abel may realize the connection of Adam and the ground: observe that Adam was taken from the ground (Gen 2:7), and Seth replaces Abel, whose blood cried out for revenge from that same ground (Gen 4:10). Seth is said to have lived 912 years (Gen 5:8) and is also the source of speculation in later Jewish (e.g., *1 En.* 37:1; *2 En.* 33:10; 71:32; *T. Benj.* 10:6; *T. Isaac* 3:15; *Mart. Ascen. Isa.* 9:28), Christian (e.g., *Apos. Con.* 7.39.2-4; 8.5.3;

8.12.21; *Life of Adam and Eve*; *T. Adam*) and gnostic (e.g., *Apoc. Adam*) midrash.

1. Seth's Etymology
2. Seth as Righteous
3. Seth's Line
4. Seth as Source of Speculation: A Sampling

1. Seth's Etymology.

Eve explains the name she gives to her third son, Seth (*šēt*), as “God has provided me [*šāṭli*] with another offspring in place of Abel” (Gen 4:25 NJPS). The connection may be simple paronomasia rather than etymological derivation of the former from the latter, though most have agreed with Eve's account. Clearly, a connection is made here to Genesis 3:15 and God's concern with the propagation of a righteous seed that will eventually crush the *serpent's head (cf. Num 24:17). Genesis is concerned with this seed, a seed based here on divine replacement. This seed follows an *election based on God's *grace and the human who responds in faith (cf. Gen 10:2-20; 11:29; 17:20; 19:19-38; 36). Cain cannot be that seed; he is the murderer of God's favored one (Gen 4:4). The meaning “substitution,” then, evokes the plan of the narrator. That the term *šāt* can also mean “foundation” is suggestive of Seth's future role in establishing the line of the seed that will crush the serpent's head.

2. Seth as Righteous.

2.1. The Image of Adam, the Image of God. Genesis 5:3, in the “family story” of Adam, states that Adam “became the father of a son in his likeness, according to his image,” and this gives emphasis to the ontic identity of Seth to Adam. That it is here that the father first names the child (cf. Gen 4:25; 5:3) may provoke the comment about the *image of God. Even more, it connects Seth to the creation of humans (Gen 1:26-27). The observation is not made about either Cain (or Abel), though we might assume it for them. Perhaps the likeness here, however, moves more in the direction of the seed of Genesis 3:15. That Cain is ignored in Genesis 5:3 supports the likeness-as-seed and shows the irrelevance of Cain to the seed of Adam. The narrator reveals that God is capable of creating new life to accomplish his purpose of defeating the serpent, even if the serpent's bite is seen in the murder of Abel.

2.2. The Fount of the Righteous Seed. Even

though a replacement, Seth and his descendants are the seed and the ones with whom true worship of the Creator God continues. Seth is the father of Enosh (lit. “man” and virtually synonymous with “Adam”), and “at that time people began to invoke the name of the LORD” (Gen 4:26: *hūhal liqrō’ bēsem yhwh*). Since this contrasts with the later Exodus 3:15 and 6:3, some interpreters find here a historical anachronism. Further, the targumists found a similar tension and so understood *hūhal* as indicative of the “beginning” and then also as derived from *hll* (“profane”), so that it was in the generation of Enosh that humans began to profane the name of the Yahweh. Thus, they began to make *idols and to call them by the name of Yahweh (so *Tg. Ps.-J.* 4:26 [“by the name of the Memra of the LORD”]; *Tg. Neof.* on Gen 4:26). The narrator of Genesis 4, however, sees true worship deriving from Adam and Enosh, the son of Seth. It should also be said that some think the narrator may have the tetragrammaton less in mind than he does the beginning of true worship, a worship that will find its purest expression under the Mosaic legislation when the sacred name will become the focus of Israel’s worship and identity (Ex 3:15; 6:3; 19–24). That other patriarchs are described similarly confirms the focus of the author on true worship rather than on the patriarchs specifically using the name of Yahweh (cf. Gen. 12:8; 13:4; 21:33; 26:25). Further, the narrator uses the same sacred name in Eve’s naming of Cain in Genesis 4:1. Nonetheless, there remains tension between this text and Exodus 6:3.

Perhaps no Jewish writer left a more accurate record of the impact of the image of Seth in the Pentateuch than Josephus: “He, after being brought up and attaining to years of discretion, cultivated virtue, excelled in it himself, and left descendants who imitated his ways” (*Ant.* 1.2.3 §68).

3. Seth’s Line.

Seth’s son, Enosh, is but the first of a series of links that conclude with *Abraham. The names in Genesis 1–11 in general reflect well-attested, second millennium B.C. evidence where we find West Semitic, Amorite and Hurrian names, while some names can be connected to place names of West Syria (see *Language of the Pentateuch*). Thus, we have Enosh, Kenan, Mahalalel, Jared, Enoch, Methusaleh, Lamech, *Noah (Gen 5:6–28), *Shem (Gen 11:10) and others un-

til *Terah and Abram (Gen 11:24, 26). There are no successful attempts at explaining the ages of the antediluvians other than that each one met the same end. Nor is there an explanation for their wives, though *Jubilees* 4:11 tells us that Seth took Azura, his sister, as his wife. Seth’s line becomes the story of God’s divine action in history as a result of replacing Abel after his murder at the hand of Cain. When the seed was threatened with extinction, Seth is raised to life to further the work of God.

4. Seth as Source of Speculation: A Sampling.

If the targumists find the origins of idolatry at the time of Enosh, Seth’s son (see above), others discover enough room to create further typologies and paradigms. Seth becomes a prototypical man of righteousness and obedience in the Enochian literature of Jewish apocalypses (e.g., *1 En.* 37:1; *2 En.* 33:10; 71:32) and in the testamentary literature (cf. *T. Benj.* 10:6, where he is classed with Enoch, Abraham, *Isaac and *Jacob; *T. Isaac* 3:15, where he is classed with Adam, Eve, Abel, Enoch and so on until Abraham). He is seen, probably in connection with a positive understanding of Genesis 4:26, as a righteous worshiper with Adam and Abel in *Mart. Ascen. Isa.* 9:28 and so becomes a priest with dominion over the people in an early Christian text (*Apos. Con.* 8.5.3). Here also he is the prototypical holy one surrounded by other saints who thwarted sinfulness in their generation to preserve the seed of Adam (*Apos. Con.* 7.39.3–4; 8.12.21). Pseudo-Philo finds a special spot for Seth in the generation of the people of God (cf. *L.A.B.* 1.1–6). This is an early and deuterocanonical perception of Seth, even though nothing in Genesis speaks of Seth’s own righteousness. Thus, Sirach 49:16 includes Seth, between Shem and Enosh, in a hymn to noble, righteous ancestors in Jewish history, including a focus on *Moses, *Aaron, David, Hezekiah, Josiah, Enoch and Adam (Sir 44:1–50:24). Both 1 Chronicles 1:1 and Luke 3:38 anchor the heritage of Israel’s *covenant blessings in Seth. Some rabbis thought he was born *circumcised (*ʿAbot R. Nat.* 2.12).

Probably because so little is known about Seth, later interpreters found their own secrets as originally given to Seth, sometimes directly from Adam himself. This theme is found especially among texts of a gnostic nature. Thus, *Life of Adam and Eve* tells the story of Adam’s testa-

ment to Seth and enjoins upon him to tell the story of the *Fall to his (now sixty-two!) brothers and sisters (*L.A.E.* 24:1-3). This theme of revelatory secrets is prominent in other gnostic texts (e.g., *T. Adam* 3; *Apoc. Adam*; *Gospel of the Egyptians*; *Three Steles of Seth*). Saint Epiphanius of Salamis, in his *Refutation of All Heresies*, provides clarity on the “Sethians” who were evidently from Egypt and called “Seth” the “Christ” who was incarnated in Jesus (*Pan.* 39.1.3; 39.3.5). His descendants were the elect.

SEXUALITY, SEXUAL ETHICS

Sexuality and sexual ethics form a very prominent theme in the Pentateuch. Its teachings show a frankness, a remarkable comprehensiveness and an unprudish celebration of sex, balanced by reserve in language and acknowledgment of strict boundaries for sexual expression.

1. Sexual Terminology
2. Theology of Sex in the Pentateuch
3. Marriage Customs, Mores and Laws
4. Deviant Sexual Practices
5. Conclusion

1. Sexual Terminology.

Pentateuchal sexual vocabulary, though comprehensive, is mostly euphemistic.

1.1. Male Terms. The Pentateuch contains terms for testicles (*ʿešek*; Lev 21:20), penis (*šōpā*, lit. “fluid duct”; Deut 23:1 [MT 23:2]), genitals (*mēbūšim*, “privates,” related to the root *bōš*, “be ashamed”; Deut 25:11; cf. *ʿerwā* and *bāšar* at 1.2 below), sperm (*zeraʿ*, lit. “seed”; Gen 38:9; Lev 15:16; 22:4; cf. Num 5:13: *šikbat zeraʿ*, “lying/discharge of seed”), generative power or vi-

rility (*ʿōn*; Gen 49:3; Deut 21:17), abnormal discharge (*zūb*, *zōb*; see 1.2 below), castration (lit. “wounded by crushing”; Deut 23:1 [MT 23:2]), foreskin (*ʿorlā*; Gen 17:11) and circumcision (*mūl*; *mūlōt*; Gen 17:10-27). Loins (*hālāšayim*; Gen 35:11) are from where descendants come. Thigh (*yārēk*) is used euphemistically for the male loins (Gen 46:26; Ex 1:5), which in the patriarchal narratives are sometimes held by a person while swearing solemn oaths (Gen 24:2-9; 47:29). The term for “intestines, internal organs” (*mēʿim*) can be used either for the male loins (Gen 15:4) or the female womb (Gen 25:23).

1.2. Female Terms. The Pentateuch refers to breasts (*šad*; Gen 49:25) and the womb (*reḥem*; Gen 20:18; 29:31; 30:22; Ex 13:2; cf. *mēʿim* above). The general word for belly (of either gender) can also be used for the womb (*beṭen*; Gen 25:23-24; 38:27; Num 5:21-22, 27). Genitals are euphemistically the region “between [a woman’s] feet” (Deut 28:57) and are labeled “nakedness” (*ʿerwā*, Lev 18 passim), a term also for male genitalia (Gen 9:22-23) and cognate with the word “naked” (*ʿārōm*), which *Adam and *Eve were in the garden without shame before the *fall (Gen 2:25). Genitals of either sex can also be labeled “flesh” (*bāšar*; Lev 15:2, 19).

The term for [a] menstruating [woman] (*nidda*=; Lev 12:2-5; 15:19-33) has as its root meaning “elimination [of blood]” but also means by extension “defilement, contamination, exclusion” (Lev 20:21; Num 19:9, 13, 20-21; 31:23; cf. Milgrom 1991, 745). Menstruation is called the woman’s “flow, discharge” (*zūb*, *zōb*; Lev 15:19-25), a term that can also refer to male or female abnormal discharges due, for example, to gonorrhea or urinary infections (Lev 15:2-15, 25-30). The woman’s period is also “the way [*derek*] of women” (Gen 31:35).

Barrenness is described as God’s “restraining/holding back” the womb (*ʿāšar*; Gen 16:2; 20:18). An “infertile” person (*ʿāqār*; Gen 11:30; 25:21; Deut 7:14 [sterile male or female]) is from a root also meaning “uproot, hamstring.”

1.3. Terms Relating to Male and Female. Pentateuchal references to male-female relationships include betrothal of free women with dowry (*ʿaraš*; Ex 22:16 [MT 22:15]; Deut 20:7; 22:23, 25, 27-28; 28:30), designation of bond-women to someone for marriage (*yāʿad*; Ex 21:8-9; cf. Neufeld, 69), marriage of a deceased brother’s wife in levirate marriage (*yābam*; Gen

38:8; Deut 25:5, 7) and intermarriage between distinct kindred groups (*ḥātan*; Gen 34:9), a practice forbidden Israel with Canaanites (Deut 7:3). To “marry” is idiomatically “to take a woman/wife” (Gen 6:2; 24:3; Lev 18:18) but is also expressed by a verb meaning literally “to be husband, lord, owner” (*bāʿal*, Deut 21:13; also used with the noun *baʿal* [“lord, husband, owner, Baal”] in the idiom *bēʿulat baʿal* [“husbanded/possessed by a husband”] in Gen 20:3; Deut 22:22), implying the notion that a man had exclusive claim to his wife’s sexuality and fertility (Wright, 196; pace Phillips, 15; Falk, 123, who assert that a wife’s person, not merely her sexuality, was the husband’s property).

When *Isaac “fondles” or “dallies with” Rebekah (Piel of *ṣāḥaq*; lit. “plays/has fun with”; Gen 26:8; cf. English “foreplay”), it is clear they are husband and wife, not brother and sister. The “desire” (*tēšūqā*) a woman has for her husband (Gen 3:16) is probably sexual attraction or urge (as in Song 7:10 [MT 7:11]) that leads her to marry despite its consequences of painful labor and male domination (pace Foh, 376-83, who interprets as “woman’s desire to dominate” her husband based on the use of *tēšūqā* in Gen 4:7). To “know, experience” someone (*yādaʿ*) can mean to experience sex with that person (Gen 4:1; 19:8; Num 31:17; cf. Gen 19:5 [homosexual]). Synonymous expressions for copulation include to “lie with” a person (generally of illicit acts) (*šakab*, Gen 19:32-33; 30:15; cf. Lev 18:22 [homosexual]; Ex 22:19 [MT 22:18] [male bestiality]; cf. *šēkōbet*, “lying, copulation, outpouring [of semen]” [lit. “give your lying (of seed)”], in Lev 18:20, 23 [male bestiality]; 20:15 [male bestiality]; Num 5:20; *miškāb*, “bed, act of lying, sex,” in Lev 20:13), to “recline with” (*rābaʿ*; Lev 18:23; 20:16 [both of female bestiality]), to “go into, penetrate [sexually]” (*bōʿ*; Gen 6:4; 16:2, 4; 38:16; Deut 21:13), and “to uncover the nakedness [*erwā*] of” (Lev 18) and “approach” a person (*qārab*; Lev 18:14). “Cleaving” and “one flesh” (Gen 2:24) encompass, though are not limited to, physical, sexual union. There is “begetting” (Qal of *yālad*, “beget” [of men], “bear child” [of women]; Gen 4:18; 10:8; Hiphil, “cause to bear child,” Gen 5:3-32) and “conceiving” (*ḥārā*; Gen 16:4; 25:21). The word meaning to ravish or sexually violate (*šāgal*; Deut 28:30 + 3x in the Prophets) was so offensive that the Masoretes always substituted in the Qere (marginal reading) the euphemistic “lie with” (*šakab*) to

avoid crude language in the synagogue. In Exodus 21:10 *ʿōnā* possibly means “conjugal rights” (others “cosmetics”; cf. Sprinkle 1994, 54 n. 1).

2. Theology of Sex in the Pentateuch.

2.1. Sex as Divine Blessing. Procreation is viewed positively in the *creation account as part of God’s blessing to humankind (Gen 1:28), so that the world, including sexuality, is pronounced “very good” (Gen 1:31). Only Eve (Heb *ḥawwā* [“producer of life”]; Gen 3:20) through childbearing (Gen 3:16, 20) could “help” (Gen 2:18, 20) Adam fulfill the divine commission to “be fruitful and multiply” (Gen 1:28). Moreover, marriage is a cure for loneliness (Gen 2:18) irrespective of whether children ensue. Woman, coming from the man’s rib/side (Gen 2:21), was made for man of the same bone and flesh as man (Gen 2:23), shares the divine *image with man (Gen 1:27) and in marital union substantially restores the primordial “oneness” with him (Gen 2:24). Love between spouses and other family members is the expected norm (cf. Deut 28:54-56).

Sex is also central to the patriarchal narratives. God promised Abraham, Isaac and Jacob countless “descendants” (lit. “seed”; Gen 13:16; 26:4; 28:14; 32:12 [MT 32:13]), and Israel multiplied prolifically in Egypt (Ex 1:7; the censuses list over 600,000 adult males in the wilderness, Numbers 1—3; 26). Thus God fulfilled his promise of making them as numerous as the stars of heaven (Deut 1:10; cf. Gen 15:5; 22:17).

*Circumcision, the symbol of the Abrahamic covenant, was a reminder of the seed promise (Gen 17:7-14) and was associated with the covenant obligations to walk blamelessly before Yahweh (Gen 17:1), making the Israelite male sexual organ a symbol of dedication to God.

2.2. Sex as Symbol of Uncleaness. The ideal sexuality of *Eden changed with the fall. In place of openness came shame; joy and love were marred by pain, lust and domination (Gen 3:7, 16). This warping of sexuality is perhaps one reason why the Pentateuch makes sexual expressions a source of ceremonial uncleanness, whether by abnormal male discharges or even normal ejaculation during intercourse (Lev 15:1-18), or for women during their periods or any abnormal vaginal bleeding (Lev 15:19-30) and forty or eighty days after the release of the bloody placenta in childbirth (Lev 12:1-8). These all, arguably, symbolized loss of potential

life (blood) and vitality (the fatigue of men after ejaculation) and hence movement toward death in contrast with God, who is associated with life (cf. Milgrom 1991, 766-68). The rule on child-birth additionally ensured that the woman had time to heal before renewing sexual activity.

An Israelite had to refrain from sex before entering the presence of God, for sexual propriety was absolutely mandatory in worship (Ex 19:15; 20:26; 28:42-43). Thus, unlike certain ancient pagan cults in which sexual acts were performed, Israel totally separated sexuality from worship.

3. Marriage Customs, Mores and Laws.

3.1. Marriage.

3.1.1. Ordinary Marriage. Marriage in the OT and the ancient Near East was a contractual arrangement, arranged by the girl's father (or other male guardian), who could veto any decision to marry made without him (Ex 22:16-17 [MT 22:15-16]; similarly Laws of Eshnunna §27), though a considerate guardian would at least consult the girl before concluding the deal (Gen 24:58). Presents might be given the girl (Gen 24:53), but it was essential to give the girl's family a brideprice (*mōhar*): for Rebekah (Gen 24:53), for Dinah (Gen 34:12) and for Rachel and Leah (Gen 29:18, 28-30). The exact amount of the brideprice was subject to negotiation except when set high as a penal sanction (Deut 22:28-29).

The father, in turn, was expected to give his daughter a dowry (mentioned only in 1 Kings 9:16 and Mic 1:14, but well known from second-millennium Mesopotamia and fifth-century and later Jewish marriage contracts). Laban gave Rebekah, Rachel and Leah female slaves as dowries (Gen 24:59-61; 29:24-29), though the latter two complained that this was inadequate in return for Jacob's years of service (Gen 31:15). The dowry belonged to the woman and in case of her death before bearing children went back to her father (cf. Code of Hammurabi §§162-164) and in case of divorce ordinarily left with the woman unless forfeited though her bad behavior (cf. Code of Hammurabi §§138, 141-142, 149), a fact that would discourage divorce.

3.1.2. Slave Wives. Money was paid both for a slave wife (*ʿāmā*) and a free wife, but only the free wife brought dowry into the marriage, giving her higher social status. Mosaic law demands that slave wives be treated like freeborn

daughters and given full wifely privileges (Ex 21:7-11). Hagar was a slave wife to Abraham, Zilpah and Bilhah to Jacob (Gen 16:3; 30:3-8).

3.1.3. Polygamy. Although polygamy (more specifically, polygyny) was allowed, Genesis 2:24 assumes that the ordinary pattern of marriage is of the "two" becoming one. Only the wealthy could afford to pay multiple brideprices, and even wealthy kings were adjured not to multiply wives to excess (Deut 17:17). Narratives describe, and laws regulate, the family strife polygamous marriages created (Gen 16:5; 21:10; 29:30-33; Ex 21:10-11; Lev 18:18; Deut 21:15-16). That Lamech, the Bible's first polygamist, was also a murderer (Gen 4:23) of the lineage of *Cain hints at a negative evaluation of the practice.

Although polygamy seems alien to those in Western cultures, the modern practice of serial marriages is, anthropologically speaking, akin to polygamy. Polygamy did serve a useful social function whenever the male population was decimated by war (cf. Is 4:1).

3.2. Children. Childbearing, as opposed to barrenness and miscarriage, was considered God's blessing (Gen 1:28; Ex 23:26) and fulfillment of the patriarchal promise (see 2.1 above). Barrenness was thought a divine closing of the womb (Gen 16:2; 30:2) and was a social blemish and source of anguish for women (Gen 30:1), so every effort was made to conceive, including prayer (Gen 25:21) and the use of mandrakes, considered a fertility herb (Gen 30:14-16).

3.3. Divorce. The pentateuchal laws permit divorce under certain circumstances, though that right to divorce could be removed (Deut 22:19, 28-29; also in Egyptian law; cf. Lorton, 42).

Deuteronomy 24:1-4 precludes a divorcée from remarrying her first husband if she subsequently married a second husband, a rule that applies regardless of whether the second husband divorced her or died. The case presupposes that a woman could be divorced through a process involving issue of a certificate of divorce, a document allowing the woman to remarry without accusation of adultery. (The Bible never mentions marriage contracts, though they were common in contemporary Mesopotamia.) The Pentateuch is silent about the possibility of a woman's divorcing a man, though fifth-century B.C. Jewish marriage contracts from Elephantine, Egypt, indicate that a woman could divorce her husband, a liberty that perhaps goes back to pentateuchal times (Sprinkle 1997, 544).

A man could not divorce his wife unless there was some sort of unseemly wifely behavior, literally a “nakedness of a thing” (*‘erwat dābār*, Deut 24:1). This limitation on the husband’s prerogatives served to elevate the wife’s dignity and standing in Israel’s society (Neufeld, 176).

The precise meaning of “nakedness of a thing” is disputed. Many interpreters believe that this term excludes adultery, since adultery was a grounds for execution, not divorce (e.g., Phillips, 112; see 4.1 below). However, the matter is complicated. The word “nakedness” (*‘erwā*) is used frequently in an idiom for sexual intercourse (see 1.3 above), so sexual connotations seem likely. Since execution required two or three witnesses (Deut 17:6-7), a man could know his wife had committed adultery but be unable to prove it. Cases of adultery not proven in court could be a matter of divorce (Otto, 138). Moreover, a man, out of compassion, might choose not to press capital charges but divorce instead (cf. Joseph and Mary, Mt 1:19).

Several arguments (marshaled by Wells) suggest that “nakedness of a thing” might include adultery as grounds for divorce. First, Jeremiah 3:1-8 cites the law of Deuteronomy 24:1-4 and applies it by analogy to the relationship between God and Israel. Rather than executing Israel for her adulteries, God sent her away into Assyrian exile with a “certificate of divorce” (Jer 3:8). Hence, Jeremiah understood “nakedness of a thing” in Deuteronomy 24:1 to be applicable to cases of adultery. Second, Proverbs 6:32-35 says that adultery will destroy a man since the woman’s husband will accept no ransom (*kōper*) nor gift (*sōhad*). This statement suggests that the husband might accept money in lieu of the execution of his wife’s paramour. The option of ransom in lieu of execution is sometimes explicit (Ex 21:29-30; 1 Kings 20:39) and arguably was assumed to be possible unless explicitly disallowed (Num 35:31). If so, the paramour might ransom his life with money, while the woman might save herself by forfeiting her dowry. Third, Mesopotamian and Egyptian laws allowed husbands the choice of having both wife and paramour executed, or else neither (Code of Hammurabi §129; Middle Assyrian Laws §§A14-16, 22-23; Hittite Laws §198; Lorton, 14-15, 38-39). If acceptance of ransom in lieu of execution were possible with adultery, biblical law would be consistent with its ancient Near East-

ern milieu, as it often is. Fourth, the false-witness law of Deuteronomy 19:15-19 (“you will do to him just as he intended to do to his brother,” Deut 19:19) suggests that the man who falsely accused his wife of adultery (Deut 22:13-21) should be executed as she would have been. Instead he was flogged, fined and prohibited from ever divorcing her. If a typical outcome of adultery were divorce with forfeiture of the woman’s dowry, then this man’s penalty would be comparable. These arguments suggest that a woman’s adultery was punishable either by execution or divorce with loss of dowry; hence, adultery was a major reason for divorce.

Other fundamental breaches of the marriage covenant also served as grounds for divorce (see Sprinkle 1997, 543-47). Sometimes divorce appears to be mandated by God’s command: A slave wife must be set free if the husband (having taken a second wife) refuses to keep his obligation to provide her appropriate food, clothes and *‘ônā* (conjugal rights?; see 1.3 above; Ex 21:10-11). A woman married to an Israelite after being captured in war must likewise be set free if the man is no longer willing to live with her as husband and wife, for she cannot remain as a slave (Deut 21:10-14). A woman who is “set free” after marriage is by implication given a divorce. Similarly, God tells Abraham to send away his slave wife Hagar (Gen 21:8-14), perhaps because the row between her and Sarah made performing spousal duties impossible, and perhaps because of her own unruliness against husbandly authority. As Wenham (1994, 82) observes, the verb used when Abraham “sends [Hagar] off” (Gen 21:14; Piel of *sālah*) is the same verb used elsewhere for divorce (Deut 22:19; 24:1, 3), and the verb used when Sarah asks him to “drive her out” (Gen 21:10; Piel of *gāraš*) is also used for divorce (Lev 21:7, 14; 22:13). Divorce is clearly implied here as well.

In Ezra 9—10, divorce of pagan wives is demanded “in accord with the law” (Ezra 10:3), which forbade marriage to Canaanites (Deut 7:1-5) lest they lead Israel into idolatry and sin. Not all of these women were Canaanites (Ezra 9:1-2), but perhaps the “nakedness of a thing” (Deut 24:1) in this case was a breach of the wife’s duty to rear Jewish children in the Jewish faith.

Returning to Deuteronomy 24:1-4, why is re-marriage to a first husband after a second marriage forbidden even if the second husband

dies? A number of views have been offered (see Sprinkle 1997, 531 n. 4; Otto, 138), none of which are certain. But among the more plausible ideas are that this A-B-A pattern of marriage to the first husband, then to the second, then back to the first was disruptive of the boundaries that define a family (Pressler 1991, 60-62), being akin to incest (Wenham 1979, 36-40). The husband having declared the first wife “unclean” so as to claim her dowry (Westbrook, 404-5) could not repeat the process but had to abide by his original declaration. This provision, by restricting male titles of disposal over women, bestowed to women an elevated legal status (Otto, 138).

4. Deviant Sexual Practices.

4.1. Adultery. The *Decalogue unconditionally prohibits adultery (*nā’ap*) as a sin fundamentally incompatible with a covenant relationship with God (Ex 20:14; Deut 5:18). Mesopotamia also considered adultery a religious sin (Loewenstamm, 147-48). The term *adultery* in the Pentateuch refers to intercourse with a woman who is married (Deut 22:22) or inchoately married (betrothed; Deut 22:23-27; similarly Laws of Ur-Nammu §6 [numbering per Roth, 17]; Laws of Eshnunna §26) and is condemned as a violation of the husband’s prerogatives. The marital status of the woman is especially relevant, for a married man who had sex with a single woman would not have been said to have committed *nā’ap* (but see 4.2 and 4.6 below).

Both the adulterer and the adulteress were subject to capital punishment (Lev 20:10; Deut 22:24 [stoning]; contrast Laws of Ur-Nammu §7, which exonerates the man if the woman initiates the adultery). An exception is the case of an inchoately married slave girl (Lev 19:20-22), where the girl is not executed because she was not free to refuse or the betrothal was not fully established by money, but the man was required to offer a guilt/reparation offering to God (implying also restitution to the master) for his offense.

Execution for adultery depended upon several factors. The woman would escape culpability if she cried out, indicating that she was an unwilling participant (Deut 22:24; cf. Code of Hammurabi §130, Middle Assyrian Laws §A12), and she is given the benefit of the doubt if she is violated where no one could hear her cries (Deut 22:25-27). The requirement of two or

three witnesses for capital cases (Deut 17:6-7) precluded most executions for sexual offenses, and divorce or ransoming rather than execution was probably an option (see 3.3 above).

Given the severity of the potential penalty, accusations of adultery were not to be made lightly. In Deuteronomy 22:13-21 a man after first intercourse defames his bride, claiming she was not a virgin. The accusation is not merely one of premarital sex (pace Tigay, 477-78; Pressler 1994, 105), since premarital sex was not a capital crime (see 4.2 below). Rather, she had committed adultery during the betrothal (inchoate marriage) period, for which she could be stoned (Deut 22:20-21), though the man’s real motive may be monetary: divorce with forfeiture of dowry (see 3.3 above). A falsely accused bride could exonerate herself by producing “evidence of virginity” (*bētūlim*), usually taken as the bloody bedcloth after the rupture of the woman’s hymen during her first intercourse (Deut 22:14, 20), though Wenham (1972, 326-48), noting that bleeding at first intercourse is an unreliable indicator of a woman’s virginity and rejecting the view that *bētūlim* denotes “virginity” per se, takes *bētūlim* as a term of marriageability, contextually “evidence of nubility,” that is, a menstrual cloth worn recently by the girl proving she was not pregnant before the consummation of the marriage. If the girl is exonerated, the man is flogged and pays an extremely large, one-hundred-shekel fine—the value of two prime adult male or three prime female slaves (Lev 27:3-4)—to the girl’s father, twice the amount charged for rape (Deut 22:28-29). This “double” amount might be taken as a penalty for attempted theft of the woman’s dowry (see Theft and Deprivation of Property). Additionally, he is prohibited from ever divorcing her (on why his false testimony is not a capital crime, see 3.3 above). If “evidence of virginity/nubility” is not found—presumably also collaborated with other evidence (cf. Deut 17:6; 19:15)—then punishment was death by stoning at the doorstep of her father’s house (Deut 22:21), since she acted immorally while still under her father’s jurisdiction. The purpose of this law was primarily to protect a woman against a husband’s frivolous accusations of unfaithfulness (cf. Code of Hammurabi §127, which prescribes flogging for defaming another’s wife).

The Pentateuch indicates adultery could also be punished by God through such things as

plagues (Gen 12:17; 20:7). Numbers 5:11-31 gives a case where a husband, in a fit of jealousy, accuses his wife of adultery. To resolve the issue, the woman must undergo a self-curse ritual at the *tabernacle with a *priest. She drinks water mixed with tabernacle soil, the “waters of bitterness.” The curse states that if she is innocent, no harm will befall her, but if not, “let her thigh fall and her belly swell” (Num 5:20-22). The exact meaning of this curse is unclear, but thigh and belly probably refer to the woman’s external and internal sexual organs (see 1 above), so the curse may be sterility (cf. Num 5:28; Milgrom 1990, 41, 303) or the appearance of a false pregnancy (Brichto, 55-70). The result is that a guilty woman would live under the threat of divine curse, but an innocent woman would be exonerated by the oath-taking (similarly Code of Hammurabi §131) and her husband precluded from further expressions of irrational jealousy.

4.2. Seduction and Rape. Adulteresses and prostitutes seduce men (Tamar and Potiphar’s wife; Gen 38:14-15; 39:7, 12), and Balaam apparently used Moabite/Midianite women’s sexuality to seduce Israelites into idolatry and bring on them a curse (Num 31:15-18; cf. 25:1-2, 6-7). If a man seduced and deflowered an unbetrothed maiden—were she betrothed, it would be adultery—then he had to pay the father the brideprice for maidens and marry her unless the father refused, in which case he still lost the brideprice (Ex 22:16-17 [MT 22:15-16]). Such a regulation served to discourage irresponsible sexual behavior, for the man might suffer economic loss and still not get the girl he wanted, or he might end up with a wife he did not want. It also compensated the girl’s family for economic loss, since a deflowered maiden would command less dowry.

This law may be compared with several ancient Near Eastern laws: Sumerian Law Exercise Tablet §7-8, which perhaps prescribes “marriage” as penalty for deflowering a maiden, though if identification could not be proven, the suspect was still required to swear an oath; Laws of Ur-Nammu §§6 and 8, where deflowering a “virgin” wife was punishable by death but deflowering a man’s virgin slave resulted in a fine of five shekels; and Laws of Eshnunna §31 where a fine of twenty shekels is prescribed for deflowering a slave girl.

Rape of an unbetrothed maiden carried a stronger penalty. In this case the guilty man had

to pay a brideprice specified at fifty shekels, a very high price, that of a prime adult male slave (Lev 27:3)—a day laborer earned only about a shekel per month (Sprinkle 1997, 544). Furthermore, he was prohibited from ever divorcing her (Deut 22:28-29). That the father could veto the match is not stated, though it may be assumed.

In the narratives, the rape (or possibly seduction) of Dinah (Gen 34:1-31) outraged her brothers. Shechem had “humiliated her” (Gen 34:2; Heb *‘anā* [“humiliate, violate”]) is used of enforced marriages, simple adultery and rape; cf. Deut 21:14; 22:24, 29) and “treated her like a whore” (Gen 34:31) in indulging in sex without permission of her family, though Simeon and Levi’s treacherous murder of Shechem’s clan for a noncapital offense and profaning of the sacred covenant rite of circumcision in the process was even more reprehensible (cf. Gen 49:6-7).

Assyrian laws were harsh: Middle Assyrian Laws §A55-56 say that if one rapes a man’s unbetrothed maiden, they will rape the rapist’s wife, or else he pays triple the value of the maiden (a triple brideprice) and is forced to marry her (cf. Deut 22:28-29), though, as in Exodus 22:16-17 (MT 22:15-16), the father can keep the money but refuse the daughter. Middle Assyrian Laws §A9 states that if a man grabs a woman or kisses her, his finger could be cut off for the grab and his lip cut with the blade of an ax for the kiss (cf. Deut 25:12, where a woman’s hand could be amputated for grabbing a man’s genitals; see 4.10 below).

4.3. Incest. The laws prohibit conjugal relations between close relatives, many of which were violated by the patriarchs who lived before these laws were given. Prohibitions include sex with a father’s wife whether or not she was one’s biological mother (Lev 18:7-8; 20:11; Deut 22:30 [MT 23:1]; 27:20; violated by Reuben, who slept with Bilhah, Gen 35:22; 49:4; applied to Christians by Paul, 1 Cor 5:1), with sisters or step-sisters (Lev 18:9, 11; 20:17; Deut 27:22; violated by Abraham, Gen 20:12; cf. 2 Sam 13:7-14), with granddaughters (Lev 18:10), with paternal or maternal aunts (Lev 18:12-14; 20:19-20), with daughters- or sisters-in-law (Lev 18:15-16; 20:12, 21; violated by Judah with Tamar, Gen 38:11-19), with stepdaughters, step-granddaughters and mothers-in-law (Lev 18:17; 20:14; Deut 27:23) and with two sisters at the same time (Lev 18:18; violated by Jacob, Gen 29:21-28). Exception is

made for levirate marriage, in which a man could (and is subject to shaming if he does not) marry a childless, widowed sister-in-law to raise up an heir for the deceased (Deut 25:5-10; cf. Gen 38), a custom that served a social need to care for childless widows.

Strangely, there is no explicit statement about incest with one's daughter, though the narrative about Lot's daughters (Gen 19:31-38) clearly implies that such Sodom-like behavior was reprehensible. Nor is there explicit prohibition of incest with a full sister. Leviticus 18 perhaps omits the most obvious cases to concentrate on those that are more doubtful. However, even the most obvious cases are covered in the general prohibition against sex with close relatives (*šē'ēr bēšārō*; Lev 18:6), an expression that is defined elsewhere (Lev 21:2-3) as including one's mother, sister and daughter (Milgrom 2000, 1527).

Where incest was provable, it was a capital offense (Lev 20:11-12, 14), but other punishments are mentioned: divine curse (Deut 27:20-23), "bearing guilt" (Lev 20:19, perhaps explained by Lev 20:20-21), dying childless (Lev 20:20-21) and being "cut off from one's people" (Lev 18:27-29; 20:17). This last expression may denote neither banishment nor human execution, but death and extirpation of descendants by divine intervention or separation from the relatives in the afterlife. The afterlife view explains why some cases involved both "execution" and divine "cutting off" (Ex 31:14; Lev 20:2-3; cf. Milgrom 1991, 457-60 for a full discussion). Threat of divine punishment in the case of incest was important since incest was, and is, a sin done in private and so difficult to prosecute in court.

Code of Hammurabi §§154-158 condemns and prescribes punishment for incest with a daughter (banishment), a son's wife (water ordeal) or a son's betrothed (thirty shekels to girl and marriage annulled), one's mother (both burned) and being found in a deceased father's wife's lap (disinherited). Hittite Laws §§189-198 allow marriage with a widowed stepmother, with sisters and their mother (if not at the same location), with one's deceased wife's sister and levirate marriage, but prohibits sex with one's mother, daughter, son, stepdaughter, mother-in-law or sister-in-law (for Hittite ideology, see 4.5 below).

Inbreeding can produce genetic deformities in children, and this may be one reason for

these prohibitions. However, such an explanation does not account for the prohibitions against marrying biologically unrelated in-laws. Instead, the primary motivation appears to be to define and protect the integrity of the family, the basic building block of society, from socially destructive forces that promiscuousness within families would unleash, and to protect widows from the abuse of being reduced to concubinage for other male family members.

4.4. Homosexual Acts. Homosexual copulation was practiced with other sexual sins among the Canaanites (Lev 20:23). Mesopotamian laws leave homosexuality unregulated except Middle Assyrian Laws §§A19-20, one of falsely accusing a man of being a "female" partner for homosexuals for which the penalty included fifty blows with a rod, one month of servitude and a fine, and the other of sodomizing (raping?) another man, for which the penalty is to be sodomized, then castrated. Hittite Laws, while condemning bestiality, did not consider homosexual acts as sins (Hoffner, 81-90), except when it involved incest with one's own son (Hittite Laws §189). In contrast, Leviticus 18:22 unequivocally prohibits sex between men, and Leviticus 20:13 states it was punishable by death. That Canaanites practiced it does not sufficiently explain the prohibition. Rather, at issue in context (Lev 18:6-23) is the integrity of the family.

This regulation presupposes that in creating humankind as "male and female" and decreeing that sex is to occur "according to its kind" (Gen 1), God established a design for sexuality, disruption of which is both a revolt against the divine word and damage to social life.

Although the OT generally speaks of "acts" and had no vocabulary for "sexual orientation," this reasoning suggests biblical authors would consider homosexual orientation a form of sexuality gone awry. Sexuality's purpose from creation was to drive humans to heterosexual union, which in turn produces the "blessing" of procreation (Gen 1:27-28), in contrast to homosexual sterility. The prohibition against women wearing men's clothing and vice versa (Deut 22:5) supports this thesis. This law, akin to other rules of forbidden mixtures (Deut 22:9-11), prohibits blurring of sexual identities (Harland, 73-75). Transvestite behavior confuses the God-intended differences between male and female (cf. Lev 18:22).

No mention is made in the OT of lesbian ho-

moerotic behavior, perhaps because it was less common (but see Rom 1:26), though there is little doubt that it too would be considered an “unlawful mixture.”

The Sodom and Gomorrah narrative (Gen 19; cf. the English word “sodomy”) tells how the men of Sodom demanded homosexual relations with the two men (actually angels) who had come to visit Lot (Gen 19:5), but he dissuaded them, and in a concession showing that he had been influenced by Sodom’s ethical standards, Lot offered the mob his virgin daughters instead (Gen 19:8; contrast Lev 19:29). Read in the light of the Pentateuch’s sex laws, the request by the men of Sodom was doubly offensive: not only a homosexual act, but also gang rape.

J. Boswell’s influential work, *Christianity, Social Tolerance, and Homosexuality* (Boswell, 91-117), argues that the Sodom narrative has been fundamentally misunderstood and that the essential sin at Sodom was not homosexuality but a lack of hospitality, a virtue valued more then than now. Lot violated custom at Sodom by entertaining foreign guests without permission of the city elders, and so they came, not wanting to “know” (Heb *yādaʿ*) the guests sexually, but to “know” who they were (similarly, Calvin’s commentary). Elsewhere when the sins of Sodom are listed, injustice, adultery, pride, indifference to the poor and general wickedness are mentioned, but not homosexuality (Is 1:10; 3:9; Jer 23:14; Ezek 16:46-48). Boswell claims that Jesus, who mentions Sodom in conjunction with the failure of cities to receive his disciples (Mt 10:14-15; Lk 10:10-12), also interpreted this narrative as a lack of hospitality and that this story is at most tangentially related to sexuality. It follows that those who show lack of hospitality toward homosexuals are the real sodomites.

Such a reconstruction is hardly sufficient, however. What the men of Sodom wanted to do to the angels was, to be sure, an act of inhospitality, but the homosexual element cannot easily be eliminated. That “know” (*yādaʿ*) can be used for copulation is well-established (see 1.3 above) both in Genesis 4:1 and the immediate context where Lot offers to the men his two daughters “who have not known a man” (Gen 19:8). Lot’s offering the men sexual gratification with his daughters as a substitute clearly indicates that the men wanted to “know” Lot’s guests in the sexual sense. In Judges 19:22-26, a narrative clearly modeled after Genesis 19, the Ben-

jaminites of Gibeah who want to “know” a Levite guest, accepted as substitute his concubine whom they proceeded to rape and abuse all night. Boswell’s reading of Genesis 19 involves wrenching it from its canonical context, ignoring that the Sodom narrative is woven into a literary work, the Pentateuch, which includes laws. In such a context, narratives were meant to be read by a person informed by these laws, and the laws condemn all homosexual intercourse.

As for the other passages, the sins of Sodom were not limited to homosexual acts. Genesis 18:20 and 19:13 speak of the “outcry” (*zāʾāqā/ṣāʾaqā*) of Sodom and Gomorrah, a term that can refer to the outcry of those who are oppressed, and this justifies the prophetic usage of Sodom as a symbol against Judah, whose sins were not primarily homosexual. Nevertheless, scriptural repugnancy toward homosexual acts, and that such an act was, as it were, the last straw before Sodom’s destruction, contributed to Sodom’s becoming proverbial for wickedness. According to Ezekiel 16:47-50, the richness of Sodom (“like a garden of the LORD,” Gen 13:10) led to pride and callousness in committing “abominations” (*tōʿēbā*; probably an allusion to the “abomination” of homosexual sex in Lev 18:22 and 20:13) and injustice to the poor. There was no need, contrary to biblical preference for euphemism in sexual matters, to spell out the homosexual element of Sodom’s sins in subsequent texts: the name Sodom itself sufficed. Moreover, contrary to Boswell’s thesis, no prophetic text that mentions Sodom specifies its sin as “lack of hospitality” to strangers. In Matthew 10:14-15 and Luke 10:10-12, associating Sodom with lack of hospitality is a possible inference, but an alternative is that failure to receive God’s (angelic or apostolic) messengers brings judgment (Carson, 246). On the other hand, Jude 7 does refer to certain angels who, similarly to Sodom and Gomorrah, “likewise” acted immorally and “went after strange flesh” (*sarkos heteras*); thus, Jude compares pejoratively what is probably the angel-to-women unions of Genesis 6:1-4 with the male-to-male lusts at Sodom (see Sons of God, Daughters of Man).

In terms of Christian ethics it has been argued that the law of Leviticus 18:22, like the nearby prohibition against sex with a menstruating woman (Lev 18:19; see 4.8 below), is ceremonial rather than moral and so is no longer binding on Christians under the new covenant

(so Thurston, 13). Sometimes it is claimed that *tô'ēba* ("abomination") is specific to ceremonial matters.

This line of reasoning is problematic, however, for several reasons. If accepted, this argument would also undermine the applicability of the incest and bestiality laws of Leviticus 18 that are more obviously moral in nature. Second, in the OT, ceremonial laws were binding on Israel but not on the nations, who instead were held responsible only for more purely moral obligations (cf. Is 13–23; Amos 1–2). Yet Leviticus 18:27 and 20:23 indicate that the failure to keep these laws of incest and homosexuality was the reason God would drive the Canaanite nations from the land, suggesting that they are more than merely ceremonial laws. An attempt to limit the moral obligation of the homosexual command solely to the Israelites and other residents of the holy land appears forced (pace Milgrom 2000, 1786–90). Third, the LXX of Leviticus 20:13 states, "Whoever sleeps with a male in the manner of bedding (intercourse with) a woman [*meta arsenos koiēn gynaikos*], they have both committed an abomination." The second of Paul's words for homosexuals in 1 Corinthians 6:9, *arsenokoitai*, combines elements of the "male" (*arsēn*) and the word "bed/intercourse" (*koiē*). This compound word, not found in any extant Greek text earlier than 1 Corinthians, is probably derived directly from the LXX of Leviticus 20:13; thus, Paul's use of the term presupposes and reaffirms Leviticus's condemnation of homosexual acts for the Christian (Hays, 382–83).

On homosexual prostitutes (*qādēs*, *keleb*; Deut 23:17–18 [MT 23:18–19]), see 4.6 below.

4.5. Bestiality. A man or a woman who copulated with an animal was subject to execution along with the animal (Ex 22:19 [MT 22:18]; Lev 18:23; 20:15–16; Deut 27:21). This prohibition is based on the perception that such acts violated the divinely prescribed hierarchy and division between humankind in the image of God and the beasts, and the rule that mating be "according to their kind" (Gen 1:24–31). Bestiality is an unlawful "confusion/mixture/perversion" (Heb *tebel*, from *bālal*, "to mix, tangle up") between the species (Lev 18:23). That no animal was a suitable "helper" for Adam implies a rejection of bestiality (Gen 2:18–22). Transgression of this results in punishment not only of the person but also of the beast (similarly, a human-goring ox is

"executed," Ex 21:28–30). For Israel such acts brought defilement that could, ultimately, expel the whole nation from the land (Lev 18:23–25).

Ancient near Eastern secular law collections did not regulate bestiality, and its gods sometimes engaged in bestial acts: Innana in a Sumerian hymn copulates with horses; Babylonian Ishtar with a bird, a lion and a stallion in the Gilgamesh Epic (Tablet VI, lines 48–56); Ugaritic Baal with a heifer (Eichler, 96–97). Whether these gods took the form of animals during these acts is unclear. The Hittites, like Israel, viewed both incest and bestiality as sins of impurity (Hittite Laws §§187–188, 199) that could provoke the gods to wrath, were punishable by death and required sacrificial cleansing rituals (Hoffner, 85–86), though bestiality with horses and mules was only mildly punished: the offender could not approach the king or become a priest (Hittite Laws §200a).

4.6. Prostitution/Harlotry. The verb *zānā* and its related cognates (*zōnā*, "harlot"; *zēnūnīm*, *zēnūt*, "harlotry") refer to all forms of illicit sex between a man and a woman, whether that be professional prostitution (Tamar; Gen 38:15), freely offered sex outside of marriage (Moabite women; Num 25:1) or marital unfaithfulness as in the metaphorical usage of Israel "whoring after" other gods though betrothed to Yahweh (Ex 34:15–16; Lev 20:5–6; Deut 31:16).

Harlotry is a term of contempt in the Pentateuch. Fathers are admonished not to give their daughters into prostitution since that fosters further debauchery in the land (Lev 19:29), but no penalty is stated for violation. Israelites were not to be either female or male prostitutes, and money acquired through prostitution could not be given to the sanctuary (Deut 23:17–18 [MT 23:18–19]). When Dinah was violated by Shechem, her brothers were outraged because their sister was "treated like a harlot" (Gen 34:31). Tamar was in threat of execution for becoming pregnant through "harlotry" (Gen 38:24), though not because she gave sex in exchange for money—only the daughters of priests were subject to legal sanction for simple harlotry (Lev 21:9; see 4.9 below)—but because being in effect betrothed to Shelah, her illicit sex amounted to adultery (Wenham 1994, 369).

Does the Pentateuch refer to "sacred prostitution," that is, ritualized sexual intercourse at a temple? There was in Corinth the famous brothel of Aphrodite. At Babylon (and similarly

at Cyprus) according to Herodotus (*Hist.* 1.199), though not confirmed by cuneiform sources, every woman was obligated to prostitute herself once at the temple of a goddess (Ishtar?). These practices have often been associated with Deuteronomy 23:17-18 (MT 23:18-19) that prohibits any female from being a *qēdēsā* ("holy one [fem.]"), seemingly defined in the next verse as a "prostitute" (*zônā*), and any male from being a *qādēs* ("holy one [masc.]"), seemingly defined as the "dog" of the next verse, and prohibits their wages from being given to the sanctuary.

The exact meaning of "dog" (*keleb*) is uncertain. Though literal dogs are mentioned in association with prostitutes (1 Kings 22:38), and halakic exegesis took the verse as referring to money obtained by selling a literal dog (*m. Tem.* 6:3), probably it is a term for male prostitutes rather than canines (pace Goodfriend 1995, 381-97), though the reason for this metaphor is conjectural: Did he take the stance of a dog during sex? Is this some sort of title for a "faithful" cult official (a fourth-century B.C. inscription at Kition lists "dog" as a minor cult official; Goodfriend 1992, 5:507)? Is it pejorative slang for male prostitutes? Did he service only men, or possibly women also? Moreover, did the *qēdēsā* and the *qādēs* engage in sex with each other in a form of sympathetic magic to induce the gods to give fertility to the land? The present state of knowledge allows no certain answers to such questions.

That "sacred prostitution" was part of a rite to give fertility to the land has been widely speculated, but no solid evidence supports it, and recent scholarship radically questions whether the OT refers to "sacred prostitution" at all (Tigay, 480-81; van der Toorn, 5:510-12). Tamar becomes a *qēdēsā* (Gen 38:21-22), but she seems to be an ordinary harlot, not a cult prostitute. The basic idea of "holiness" (root *qds*) has to do with the "separation" and could refer to the *qēdēsā*-harlot in the sense that prostitutes are separated or alienated from the larger community (Goodfriend 1995, 385). Hosea 4:14 speaks of men offering sacrifice with the *qēdēsā* (parallel with *zônā*), which could be a part of sacred prostitution, but the offense could be that of bringing the ceremonially unclean (secular) prostitute into the sanctuary. On the other hand, in Kings the masculine *qādēs* is regularly mentioned in conjunction with cultic offenses (1 Kings 14:23-24; 15:12; 2 Kings 23:6-16), so the idea of cultic

prostitution cannot be altogether ruled out.

4.7. Indecency. In Genesis 9:20-27, Noah, having become drunk, lay down in his tent naked. Ham, his son, came in and "saw the nakedness" of his father, but his brothers Shem and Japheth instead took a garment on their shoulders and, walking "backward," covered their father's nakedness. When Noah awoke to learn what had happened, he cursed Canaan, Ham's son, for the act. The brothers' exaggerated modesty indicates, at the very least, that they considered Ham's behavior indecent and disrespectful to their father. Modesty, especially in worship, was important in the Pentateuch (cf. Ex 20:26). However, that the act resulted in a curse has suggested to many commentators that something more serious had occurred, perhaps a homosexual act. Leviticus 20:17 condemns siblings "looking on the nakedness" of each other in the context of incest.

4.8. Intercourse with a Menstruant. Menstruation (the "way" of a woman, Gen 31:35) rendered a woman ceremonially unclean for seven days (Lev 15:19-20). If her husband touched her bed, he was unclean till evening, though if he "lay with her," he too was unclean seven days (Lev 15:21-24). Accordingly, couples were not to engage in sex during menstruation (Lev 18:19). Leviticus 20:18 adds that whoever "uncovers the nakedness" and "lays bare the flow" of a woman was subject to being "cut off from their people." The discrepancy between these rules is sometimes explained by source-critical scholarship as conflicting viewpoints between P and the harsher H, though it is preferable to say that "lying with" in Leviticus 15:24 is either literal (not a euphemism for sex) or refers to inappropriate sex, the man not realizing the woman's period had begun, whereas Leviticus 20:18 describes a flagrant, deliberate act. In both cases the quality of penalty is similar: danger of sudden death from God for defiling the sanctuary (Lev 15:31) versus being "cut off" (Lev 20:18), probably another case of divine punishment (see 4.3 above).

Menstruation was much less frequent before the twentieth century because women were more often pregnant, breast-fed longer (children through age three) and had a poorer diet that delayed onset of their first menses to age fourteen and brought on menopause around thirty-five to forty, as compared with ages twelve to fifty today (Milgrom 1991, 953). Thus these rules were less a practical problem

then than they would be today.

The rationale for these rules is probably unrelated to the fact that conception is less likely during menstruation (pace Melcher, 99), for if that were the reasoning one would also expect laws prohibiting sex with a pregnant or a post-menopausal woman, but no such prohibitions are given (Milgrom 2000, 1790). Nor does it relate primarily to a woman's discomfort with sex during her period, though prohibiting sex during a woman's menstrual "infirmary" may imply a broader prohibition of unwanted advances during times of "weakness" (Milgrom 2000, 1755). Primarily, however, this regulation has to do with the sacredness and symbolism of blood within priestly theology (Milgrom 1991, 941, etc.). Menstrual bleeding represents movement toward death, an uninhabitable womb undergoing self destruction, whereas intercourse and its life-giving semen represents potential for life, and the mixture of these contradictory symbols is incongruous. Additionally these rules teach the virtue of sexual self-control and that men do not have absolute ownership of their wife's sexuality.

4.9. *Special Restrictions for Priests.* Priests were more restricted than the general population in marriage. They were not to marry widows, divorced women or any who had been sexually immoral (Lev 21:7, 13-15). Such women, because of previous sexual activity, brought elevated levels of ceremonial impurity that would contaminate the priest, who in turn would profane the sanctuary and threaten the community with divine wrath (Lev 15:31). Similarly, a sexually loose daughter of a priest was subject to being "burned with fire," possibly cremation after execution (cf. Gen 38:24; Judg 15:6; though Lorton takes a similar "burning" in Egyptian law as "branding" [15]), because her uncleanness defiled her father (Lev 21:9).

4.10. *Other.* After the death of Er, Onan his brother was expected to act as *levir* (cf. Deut 25:5-10) to Tamar, but Onan "corrupted [the seed] to the ground, not giving seed/posterity to his brother." This displeased God, who caused him to die (Gen 38:9-10). The exact nature of Onan's sin is debated: Was the sexual act masturbation (cf. English "onanism") or *coitus interruptus* (withdrawal before ejaculation)? In either case, was it the sexual act that was sinful or the breach of duty as *levir* to his sister-in-law? Does this text condemn birth control generally as a

wasting of seed? Or was the spilling of seed a pagan fertility rite, giving semen to some deity (Grelot, 143-55)? The questions are more easily raised than answered.

Giving one's "seed" to the Ammonite god Molech (Lev 18:21; 20:2-5) is usually understood as human sacrifice (cf. 2 Kings 23:10; Jer 32:35, where "sons and daughters" pass through "fire" to Molech), yet in Leviticus 18 the expression is in a context of illicit copulations—incest and adultery before, homosexuality and bestiality after—where "seed" (*zera'*) means "semen" (Lev 18:20), not "children." It has been taken as reference to mixed marriages with pagans, as sacred prostitution or as dedication (rather than sacrifice) of children to a pagan deity (Hartley, 333-37). But if *zera'* means "semen," it could refer to some sort of ritual involving semen dedicated to this pagan god (compare Grelot's view of Onan above).

Deuteronomy 23:1-2 [MT 23:2-3] states that men with crushed testicles or severed penis, as well as the *mamzēr*, were ineligible to enter the "assembly of Yahweh." This assembly is perhaps a governing body (Tigay, 210), certainly not the whole national throng. If so, ineligibility to serve in this assembly that represented the rule of God to the people politically is similar to the ineligibility of priests with genital or other defects to conduct services representing the people to God religiously (Lev 21:18-20). Both groups required elevated levels of holiness symbolized by being "without blemish." The *mamzēr* (Deut 23:2 [MT 23:3]), whose descendants are excluded to the tenth generation, is unclear in meaning. "Bastard" (KJV, modern Hebrew), child of a prostitute (LXX), offspring of incest (Talmud; cf. Deut 22:30 [MT 23:1]) and half-breed (*HALOT*) are guesses.

A woman who seized the genitals of a man fighting with her husband was subject to having her hand amputated (Deut 25:12). Not only a breach of modesty and an unfair "blow below the belt," this act threatened the man's ability to father children. She could probably ransom her hand (see 3.3 above).

5. Conclusion.

The Pentateuch sees sexuality as a good thing when lawfully expressed but destructive if uncontrolled. Sexual gratification is not its highest value. Its theology of sex is incompatible with certain modern theologies that see sexual activ-

ity as one's "birthright." When homosexual sex is approved because it is a "right" to act according to one's desires, the default morality of sexual conduct becomes whatever "consenting adults" decide to do together. The Pentateuch, in contrast, bases its view of sex on the creation ordinances and divine instruction. The Creator provides instructions by which Israelites would be set apart from the nations (Lev 18:1-5; 20:22-26) and would know how to express their sexuality within their covenant relationship with God. Failure to control one's sexual expression according to those standards was detrimental to that relationship, to the integrity of the family, to social identity and societal order and to the individual's felicity.

Christians seeking moral guidance in sexual matters from the Pentateuch must make certain adjustments. There are culturally bound elements: slavery, arranged marriages, brideprice, ransoming and polygamy, to name a few. Some of the rules are specific to priests or to the OT ceremonial setting; some apply to Israel as a nation but not directly to the church, such as specific punishments for sexual offenses that were so severe, in part, because of the special holiness required of a people having God's tabernacle in their midst. Interpreters may differ as to which elements are culture-bound and which are universally applicable. Nonetheless, the several cases of NT use of these regulations suggest that abiding moral principles can and should be deduced by Christians from them.

SHEM

Shem, the firstborn son of *Noah, receives only brief mention in the pentateuchal stories and genealogies. However, this insignificant narrative role belies the historical and theological significance attributed to him by the author of Genesis and later commentators on the sacred text. For example, Shem is named as the founding ancestor of various peoples and even numbers *Abraham, *Isaac, *Jacob and the entire Israelite nation among his descendants. Moreover, Shem is presented as a priest and a model of learned piety by Jewish scholars of the post-OT period and as a revealer of hidden truths by two documents attributed to him. In order to appreciate Shem's role in the Pentateuch and his importance in later theological developments, one must consider the biblical data regarding Shem as an individual and as ancestor of various peoples, the supplementation of that data in

later Jewish traditions, and the attribution of several extrabiblical writings to this obscure but significant figure.

1. Shem in the Biblical Text
2. Shem in Later Traditions

1. Shem in the Biblical Text.

Shem is mentioned thirteen times in the Pentateuch: three times in connection with the *flood (Gen 6:10; 7:13; 9:18), three times in the account of the cursing of Canaan (Gen 9:20-27), and seven times in various genealogical notations (Gen 5:32; 10:1, 21, 22, 31; 11:10, 11).

It seems best to regard Shem as Noah's oldest son, though one cannot be completely certain of this. The order in which Noah's sons are listed (Gen 5:32; 6:10; 7:13; 9:18; 10:1) is of no help, since Ham, the youngest (Gen 9:24), is consistently named second. However, the most likely interpretation of Genesis 10:21b (*'āhî yepet haggādōl*, lit. "the brother of Japheth the greater [older]") identifies Shem as the oldest. Although the adjective *haggādōl* might be construed as modifying either *Japheth* (i.e., "the brother of Japheth the older") or *brother* (i.e., "the older brother of Japheth"), the fact that an adjective in Hebrew typically cannot modify a name directly (*IBHS* §14.2e) favors the latter option (so Westermann, 525; Hamilton, 343; Wenham, 228; NRSV; contra NIV).

1.1. Name. Shem is introduced without comment in Genesis 5:32 as one of Noah's three sons. The biblical writer attaches no special significance to Shem's name (*šēm*)—which is, in fact, the common Hebrew word meaning "name"—but that has not prevented scholars from attempting to fill in the gaps. Some propose that *Shem* is a shortened form of a theophoric name (e.g., *šēmû'ēl* = "son of El," "[his] name is El" or possibly "Shem [regarded as a divine name] is god"), while others argue that *Shem* ("The Name") signifies this individual's honored or exalted status. It seems best, however, to connect Shem's name with the cognate Akkadian word *šumu*, which means "name, reputation, son" (*CAD* Š/3, 284-97), and to explain how these various meanings might be reflected within the biblical context.

First, although it might seem odd to name one's son "son," the designation of the first man (Heb *'ādām* means "man"; Gen 2:7; 3:22) offers a comparable parallel. One might even suggest that the identification of Shem as "son" hints at

his later role as the one through whom the elect line of Abraham descends. Second, the juxtaposition of *šēm* ("name") in Genesis 11:1-9 and 11:10-11 offers an ironic contrast between the builders of the tower of Babel and God's chosen line. When the builders seek to make a "name" (*šēm*; Gen 11:4) for themselves, God intervenes to thwart their plans (Gen 11:8-9) and then promises to make a "name" for Abraham, whose ancestor is, appropriately enough, named "Name" (Gen 11:10-11; 12:2; see also Robinson, 603). In the end, the significance of Shem's name remains uncertain, so it is best to focus attention on the interests of the biblical author: Shem's praiseworthy character and genealogical significance.

1.2. Character. Slightly more is known of Shem's character, though the biblical evidence is still sketchy. One might infer that God delivered Shem and the rest of Noah's family through the flood because of their own personal piety, but the biblical writer says nothing of the sort, noting only that Noah found favor on account of *his* righteousness (Gen 6:8-9). Presumably the benefits of Noah's obedience were extended to his family members.

The most revealing account of Shem's character is found in Genesis 9:20-27. Here Shem and Japheth show themselves morally superior to their brother Ham by maintaining as best they can the *honor of their drunken and naked father, taking great pains to cover Noah without looking upon him. Although the exact nature of Ham's sin remains uncertain (*see* Sexuality, Sexual Ethics §4.7), the contrast between Ham and his brothers could not be more striking. As a result of this incident, Noah pronounces a curse on Canaan (Ham's son and the eponymous ancestor of the Canaanites; the connection between Ham's sin and the cursing of Canaan remains problematic) and a *blessing over both Shem and Japheth. The single element binding the curse and blessings together is the declaration that Canaan (and his descendants) will be a slave to Shem and Japheth (and their descendants). A cursory reading of the other elements of the blessings might imply that Japheth receives the greater good, but the biblical writer clearly holds a different view. Granted, Japheth will have his territory extended and will reside in the "tents of Shem" (perhaps through encroachment on Shem's territory or peaceful cohabitation). However, the biblical writer iden-

tifies Yahweh as the God of Shem, which is in itself the highest good from a biblical perspective and a portent of even better things to come, as the following genealogies make clear.

1.3. Significance. Two separate genealogies delineate Shem's significance, each focusing on a particular aspect of his legacy. Genesis 10:21-31 identifies Shem as the ancestor of a number of peoples and nations. Not all the names mentioned can be identified, but the list appears to reflect primarily a geographical, as opposed to an ethnic or linguistic, grouping (but cf. Obed). To consider Shem's immediate descendants, Elam, Asshur (or Ashur) and Aram can be associated with regions to the north and east of Palestine; in all likelihood the other names could be similarly located, if one had access to sufficient data. Recognition that the Elamites did not speak a Semitic language and that Elam and Aram were not ethnically related argues against a linguistic or ethnic grouping. Moreover, these groups should not be regarded as "Semites" (or "Shemites" or "Semitic" peoples), since this modern label applies only to speakers of a Semitic language (e.g., Hebrew, Akkadian, Aramaic, Ugaritic, Phoenician, Arabic, Moabite, Edomite). Rather, Shem is here presented as the ancestor of all the peoples of the known world to the east and north of Palestine, as distinguished from the descendants of Ham (Ethiopia, Egypt, Libya and Canaan) and Japheth (the region of the Mediterranean).

In addition to being the progenitor of numerous people-groups, Shem is named as the ancestor of a specific people. Shem's role as such is hinted at in Genesis 10:21, which links him closely with Eber (from whom the Hebrews take their name), but it is spelled out fully in Genesis 11:10-26. The different forms of the two genealogies reveal their specific interests. Genesis 10 provides a quasi-segmented genealogy, listing Shem's sons and a number of his grandsons, great-grandsons, and so on to the sixth generation. Here the goal is to present Shem as the father of many peoples. The linear genealogy of Genesis 11, on the other hand, lists the descendants of Shem in a straight line, naming only one individual per generation, until it reaches the tenth generation, where the pattern is broken by the naming of Terah's three sons: Abram, Nahor and Haran (Gen 11:26). Clearly the interest here is with the first-named member of that generation, Abram, and with the Israelite

people who descend from him.

Apart from the preceding material, the Bible has little to say about Shem. He is mentioned three times in the Chronicler's genealogy (1 Chron 1:4, 17, 24), but nothing new is added to the Genesis material. Shem is also named once in the NT, again in a genealogy (Lk 3:36), but no additional details of his life and character are provided. Of course, biblical silence has never discouraged interpretive speculation, a matter to which we now turn our attention.

2. Shem in Later Traditions.

Space does not permit a full review of later Jewish traditions about Shem (see Hayward; Isaac, 5.1195), but two strands seem worthy of special note. First, "Shem the Great" (*b. Sanh.* 108b) is often described as a priest of God and even identified in some circles with *Melchizedek (Gen 14:17-24), the priest-king of Salem (*Tg. Ps.-J.* and *Tg. Neof.* on Gen 14:18). Some elements of this tradition go so far as to state that Shem, rather than Noah, offered the sacrifices after the flood (Gen 8:20). Second, Shem is also presented as a model of learned piety. In this view the "tents" of Shem are understood to be houses of study in which Torah is taught to many, including, in one tradition, Gentiles (descendants of Japheth) who convert to Judaism (*Tg. Neof.* Gen 9:27).

Finally, one must note briefly that at least two extrabiblical writings are attributed to Shem. The first, *Paraphrase of Shem*, is an apocalyptic account of Shem's journey to "top of the world," where Derdekeas (the son of Light) reveals to him the workings of the three primeval powers: Light, Darkness and Spirit. Little in this gnostic apocalypse resembles the biblical account of Shem, although the description of Shem as being "from an unmixed power" and as "the first being upon the earth" does remind one of the Jewish exaltation of Shem the Great. The second work, *Treatise of Shem*, is a short astronomical/calendrical text that predicts the characteristics of a year based upon the sign of the zodiac in place when the year begins. It is unclear why this work was attributed to Shem, though the clear veneration of Shem in various traditions makes him as likely a candidate as any.

SICKNESS. See LIFE, DISEASE AND DEATH.

SIGNS AND WONDERS

The cultural divide between ancient Israel and the twenty-first century is sharply drawn: we bring destruction from the sky, can destroy the likes of Sodom and Gomorrah with a single stroke, turn rivers into conduits of death at will, and unleash biological and chemical elements that wipe out populations with an invisible death. Such wonders were once perceived in the ancient world as signs of divine activity, meaningful pointers to a reality beyond human sight. Now that humans can duplicate the signs and wonders of the gods of the ancient world, not unlike Pharaoh's magicians duplicating Yahweh's wonders displayed through *Moses, it requires an extra effort to see the world through the eyes of men and women millennia ago.

1. Distribution
2. Meaning
3. Differing Worldviews
4. History of Interpretation
5. Conclusion

1. Distribution.

The phrase "sign(s) and/or wonder(s)" appears

ten times in the Pentateuch, where it refers to extraordinary events that God performs on behalf of Israel. All but one of these appear in Deuteronomy, where most (six) refer to God's activity in bringing Israel out of *Egypt (Deut 4:34; 6:22; 7:19; 26:8; 29:3 [MT 29:2]; 34:11). These "signs and wonders" from Yāhweh in Egypt can be depicted as "great" (*gēdōlim*, Deut 6:22; 29:3 [MT 29:2]), "disastrous" (*rā'im*, Deut 6:22), "great trials" (*hammassōt haggēdōlōt*, Deut 7:19; 29:3 [MT 29:2]; in 4:34 simply *massōt*), "great terrors" (*mōrā'im gēdōlim*, Deut 4:34; cf. 26:8; 34:12), "war" (*milhāmā*, Deut 4:34) and accompanied by God's "strong hand" (*yād hāzāqā*, Deut 4:34; 6:21-22; 7:19; 26:8; 34:11-12) and "outstretched arm" (*zērō'a nētūyā*, Deut 4:34; 7:19; 26:8), with eyewitness authentication (e.g., "before your eyes") being a noteworthy emphasis (Deut 4:34; 6:22; 7:19; 29:3 [MT 29:2]; 34:11-12).

The remaining three occurrences of the phrase "signs and wonders" in Deuteronomy do not refer to the events of the *exodus. Instead, they refer to hypothetical occurrences in the future, a "sign or wonder" that a false *prophet might perform in order to lure Israel into *idolatry (Deut 13:1-2 [MT 13:2-3]) or horrible curses that could serve as "signs and wonders" on a covenant-breaking Israel (Deut 28:46). Even when referring to the signs and wonders performed in Egypt, Deuteronomy uses them to encourage Israel to expect a similar display in the conquest of Canaan (Deut 7:19). Therefore, although the events of the exodus are for Deuteronomy a frequent example of what constitutes "signs and wonders," they are not phenomena confined to the past or only one event.

This repeated clustering of similar vocabulary in a number of texts suggests a stereotypical focus that one associates with Deuteronomy, for it is found nowhere else in the Bible with such insistence. The phrase "sign(s) and wonder(s)" does surface sporadically elsewhere in the Bible, sometimes referring to the exodus events (Neh 9:10; Ps 78:43; 105:27; 135:9; Jer 32:20-21), but it also identifies the role-playing performed by prophets (Is 8:18; 20:3). The phrase "signs and wonders" is also at home as a Greek idiom widely used by Hellenistic writers (McCasland).

The exhortation format of much of Deuteronomy may account for the repetition of the phrase, but it remains curious that the phrase

appears in only one other place in the Pentateuch. The very prodigies of the flight from Egypt themselves, when they are actually described, do not attract this phrase in the book of Exodus. Only in Exodus 7:3, when God speaks to Moses in advance of the performance of any wonder before the Egyptians, does God note that he intends to make *Pharaoh belligerently stubborn (*see* Hardness of Heart) so that "my signs and my wonders" can be multiplied. Each of the plagues is usually identified simply by its own features, without a generic classification. Six times one of the two words (three times each) in the phrase "signs and wonders" will appear by itself to describe the extraordinary phenomena that vex Pharaoh: "a wonder" (*mōpēt*, Ex 7:9), "my wonders" (*mōpētay*, Ex 11:9), "these wonders" (*mōpētīm hā'ēlleh*, Ex 11:10), "this sign" (*hā'ōt hazzeh*, Ex 8:23 [MT 8:19]), "my signs" (*'ōtōtay*, Ex 10:1, 2). The only other generic descriptions are "this thing" (*haddābar hazzeh*, Ex 9:5, 6), "one more plague" (*nega' ehād*, Ex 11:1) or "all my plagues" (*kol maggēpōtay*, Ex 9:14; a word occurring elsewhere in the Pentateuch only when it refers to divine discipline in the wilderness wanderings: Num 14:37; 16:48, 49, 50 [MT 17:13, 14, 15]; 25:8, 9, 18; 26:1 [MT 25:19]; 31:16). The popular designation "ten plagues" thus does not reflect the biblical terminology, which, if it provides a summary rubric at all, prefers the terms *sign* or *wonder*. An actual tally of ten wonders is not attested until *Jubilees* 48:7.

2. Meaning.

2.1. "Sign." Is there a meaningful distinction between a "sign" (*'ōt*) and a "wonder" (*mōpēt*)? The etymologies of both words are perplexing, but usage underscores that "a sign" (*'ōt*) is any aspect of the physical world that is deliberately selected to inform, instruct or remind someone. F. J. Helfmeyer's functional classification clarifies that a sign may be used to impart information (astral bodies, Gen 1:14; plagues in Egypt, Ex 7:3-5) to protect (Cain, Gen 4:15; Passover blood, Ex 12:13), to motivate people to believe in Yāhweh (Num 14:11, 22-24), to bring to remembrance (unleavened bread, Ex 13:9; dedication of firstborn, Ex 13:16; *altar covering, Num 17:3 [MT 16:38]; preservation of *Aaron's rod, Num 17:1-11 [MT 17:16-26]), to recall a *covenant in particular (*rainbow, Gen 9:12-17; *circumcision, Gen 17:11; *sabbath, Ex 31:13, 17), to con-

firm or corroborate (transformations for Moses, Ex 4:1-9, 30-31), or to symbolize a message (Isaiah and his children, Is 8:18; 20:3; cf. Ezek 4:3; cf. *môpēt* in Ezek 24:24).

As many of these examples indicate, a “sign” (*’ôt*) need not be extraordinary, and indeed it can be a predictable phenomenon that one expects with regularity (e.g., astral bodies, sabbath, rainbow). What transforms the ordinary into an *’ôt* is that it has been intentionally given a significance that points to a larger reality (cf. 1 Sam 10:2-9). The primacy of the exodus as a locus for signs is confirmed from the fact that half (thirty-nine) of the OT occurrences (seventy-nine) of *’ôt* are found in the Pentateuch, and one-third of all occurrences in the Bible relate to the events of the exodus from Egypt.

2.2. “Wonder.” A *môpēt*, “wonder,” on the other hand, is explicitly an unusual omen, warning sign or portent associated with the disruption of the status quo and usually calamitous. In Deuteronomy *môpēt* is always a part of the phrase “sign(s) and/or wonder(s)” (nine times; see above). Exodus is the only other book in the Pentateuch in which *môpēt* appears (five times). There, in addition to the single occurrence of the phrase “signs and wonders” (Ex 7:3), it always refers to the events that accompany the exodus (Ex 4:21; 7:9; 11:9, 10). These *môpētīm* are “my [God’s] wonders” that proliferate in response to Pharaoh’s resistance (Ex 11:10), performed by Moses and Aaron (Ex 7:9; 11:10), even though at first entrusted by God only to Moses (Ex 4:21), and performed in response to Pharaoh’s specific request to see one (Ex 7:9).

The stereotypical use of *môpēt* in the Pentateuch does not provide sufficient leverage for grasping its significance. Elsewhere in the Bible, however, one finds that disasters that have overtaken an individual can prompt the identification of the afflicted one as a *môpēt* (“marvel”) to others (Ps 71:7), just as Ezekiel becomes a *môpēt* (“omen, warning sign”) of calamities that will overtake Israel when he acts out bizarre charades to illustrate Israel’s condition (Ezek 12:6, 11; cf. Is 8:18; 20:3). There is no question that *môpēt* can refer to what might be termed from a modern perspective a “miracle,” but these instances indicate that this is not its only or even its primary focus. Instead, a “wonder” (*môpēt*) remains primarily an unusual portent accompanying the disruption of the status quo.

2.3. “Marvel.” It is possible that the mean-

ings of the two terms *’ôt* and *môpēt* merged and became synonymous (2 Chron 32:24 identifies as a *môpēt* what 2 Kings 20:8-9 calls an *’ôt*), and some argue for a change of meaning even within the Exodus accounts. There is yet a third term, *niple’ t* (“wonder, marvel”) that exhibits some overlap in meaning with *’ôt* and *môpēt*, but it is used only twice in the Pentateuch, once in an anticipatory description of the Exodus marvels (Ex 3:20) and once anticipating the unique phenomena that will accompany the conquest of the land of Canaan (Ex 34:10). This term is particularly prominent in Psalms and hymnic texts, where the particular focus of the word is on an observer’s astonished reaction to an occurrence that is unexpected and that takes one’s breath away, something “wondrous,” a fact that may account for its curious selective distribution in biblical texts. As with *sign* (*’ôt*) and *wonder* (*môpēt*), the word *niple’ t* can describe the actions of Yahweh in the exodus (e.g., Ps 78:32; Mic 7:15) as well as in his orchestration of the—from a modern perspective—ordinary workings of nature that are nevertheless breathtaking (Job 5:9; 37:5, 14; Ps 107:24; 139:14). The cognate term *pele’* appears in the Pentateuch only in Exodus 15:11, where, in the context of the crossing of the Red Sea, it describes Yahweh as one who characteristically does wonders.

3. Differing Worldviews.

A significant problem results from two disjunctions, philosophical and linguistic, between ancient Hebrew writers and their modern interpreters. From a philosophical perspective, God, to an ancient Israelite, was behind all activities and caused all things to be. Events that appear to be a part of the matrix of the natural order—from a modern perspective—are consistently attributed to divine action: Pharaoh appointed *Joseph over Egypt (Gen 41:41), even as Joseph claimed that it was God who had appointed him over Egypt (Gen 45:8-9). The modern conundrum of the hardening of Pharaoh’s heart results from this worldview: Pharaoh hardened his heart (Ex 8:15, 32 [MT 8:11, 28]), even as it was God who hardened Pharaoh’s heart (Ex 7:3; 9:12; 10:20, 27; 11:10). All that took place reflected the work of God: conquering one’s enemies (Gen 14:20), finding what one sought (Gen 21:19; 24:27, 48), the provision of rain and ground water (Gen 49:25), an individual’s premature death (Gen 38:7, 10; Ex 21:13), the multi-

plication of flocks and herds (Gen 24:35; 26:12-14; 31:5-9), the mockery of one's peers (Gen 21:6) and the ability of a woman to have children (Gen 16:2; 17:16; 20:17-18; 21:1-2; 25:21; 29:31; 30:2, 17, 22). From a modern perspective, such events do not require the intervention of the divine but are a part of the cause-and-effect nexus of the physical world. From the Israelite perspective, the ordinary was always extraordinary because God was at work everywhere.

The lack of congruence between modern and Israelite worldviews results in a disjuncture between the vocabulary by which the ordinary and extraordinary are described. Because of a different philosophical perspective, it is no surprise that no Hebrew word unequivocally corresponds to the English word *miracle*. Should a miracle occur in the modern sense, it would necessarily have been to an ancient Israelite a "sign" (*'ôṭ*) of the activity of God. However, the reverse is not true, for to an ancient Israelite an *'ôṭ*, as noted above, did not have to be a miracle in the modern sense. Similarly, a "miracle" in the modern sense is by definition a *môpēṭ* ("omen, portent") or a *nipleṭ* ("wonder"), but the reverse does not hold true: every *môpēṭ* or *nipleṭ* is not a "miracle" in the modern sense.

4. History of Interpretation.

Much of the discussion over the past two thousand years surrounding the "signs and wonders" of the Pentateuch has resulted from attempts to differentiate the miraculous "signs and wonders" from those that are not miraculous, or at least to refine the distinctions among the types of signs and wonders. Such an analysis has introduced into the Hebrew text distinctions that would not have been self-evident to an Israelite and has resulted in some awkward formulations.

4.1. Pre-Enlightenment. Already in the first century one witnesses the bifurcation with Josephus, who is of two minds, attempting to link a rational explanation with the miraculous. He affirms that the events of the exodus were unprecedented in human history (*Ant* 2.14.1 §293), but nevertheless Josephus invokes historical parallels to justify their credibility, the latter being something he nevertheless does not insist on in accord with Hellenistic historiographic convention (*Ant* 2.16.5 §§347-48; 3.1.6 §§26-32).

In the book of Acts, the "wonders and signs" (the same Greek words used in the LXX to translate the Hebrew phrase) performed by Moses

explicitly encompass the disasters in Egypt along with the crossing of the Red Sea and the marvels of the *wilderness wanderings (Acts 7:36; cf. God's "uplifted arm" in Acts 13:17), but these words also are applied to the deeds of Jesus and the apostles (Acts 2:22, 43; 4:30; 5:12; 7:36; see *DLNTD*, "Signs and Wonders").

For the Gnostics, the signs and wonders of the Pentateuch were irrelevant, for Gnostics understood the God of the OT to be an arrogant demiurge responsible for the creation of evil matter, someone who used Moses to bring Israel out of Egypt so that they would be enslaved to him (Irenaeus *Haer.* 1.30.10). The early church fathers, on the other hand, in addition to underscoring that Jesus' miracles were greater than Moses' (e.g., Chrysostom *Hom. Jo.* 43), applied Moses' wonders allegorically to events in the life of Jesus and the church (see esp. Origen *Hom. Exod.*; cf. Brottier): the transformation of Moses' hand could signify the resurrection (Tertullian *Res.* 28), the dual sense of Scripture (Hilary *Mysteries* 16) or the incarnation itself (God becoming man and subsequently restored to his glory; Gregory of Nyssa *Life of Moses* 2.26-30). The church fathers were aware of a natural order that was diverted from its customary workings, but some also attempted to provide reasons or connections with natural phenomena for the developments that accompanied the wonders, without finding either stance problematic. Thus Gregory of Nyssa (*Life of Moses*) could move easily from one perspective to another: the breeding of the frogs was a normal activity that was simply intensified under Moses' command; *manna was dew that became food when it was gathered; the intense darkness of Exodus 10:23 was nothing physical but a spiritual defect in the Egyptians. Because the church fathers could call on their readers to observe miracles all around them as a part of the experience of the early church, seeing miracles in the Pentateuch was in no way problematic (Irenaeus *Haer.* 2.32.4).

Similarly, there was no question for the early rabbis that God could perform miracles, nor did early rabbinic interpretation confine these wonders to the past: one interpretation of Exodus 15:11 was that God "did wonders [*pele*'] for us and still does wonders for us in every generation" (*Mek. Shirata* 8, citing Ps 139:14; 40:5 [MT 40:6] in support). There was nevertheless a concern to minimize the disruption of the usual workings of the world. This resulted in the claim

on the part of some that miracles were preordained as an integral part of the matrix of creation, so that the Red Sea would split at the appropriate time when the Israelites were in need (*Gen. Rab.* 5:5). This concept resulted in a flexible list of ten miraculous things that were created on the evening of the first sabbath to be manifested when the appropriate time arrived, among which could be found the miraculous rod, the manna, the rainbow, the miraculous well of water in the wilderness, the mouth of the earth that swallowed the rebellious followers of Korah (Num 16:31) and *Balaam's talking donkey (*m. 'Abot* 5:6; *Mek.* on Ex 16:32; *Sipre* 355; *b. Pesah.* 54a).

The problem of distinguishing true "miracles" from mere "signs" became over time a particularly acute problem with respect to the ability of the Egyptian magicians (Ex 7–9). Although the Egyptian magicians duplicated some of the wonders brought on by Moses, the key issue in Exodus is that they are incapable of duplicating all the wonders. The text represents their vacillating ability as no more problematic than false prophets who can be expected to do a sign or wonder in Deuteronomy 13:1-3 (MT 13:2-4). But later readers were perplexed and sought an explanation for the Egyptian magicians' abilities, with the main alternatives established early. Their success could be attributed to simple magic tricks or spells (Artapanus), while others saw demonic powers at work (*Jub.* 48:9) or only apparent wonders that did not really take place (Pseudo-Clementines *Recogn.* 3.55-57, 60). When the Egyptian priests failed and asserted that the wonders pointed to the "finger of God" (Ex 8:19 [MT 8:15]), one usually understands this as an acknowledgment of their inadequacy before a superior power, but Rashbam understood them to be making the claim that the disasters were all natural events that did not need to cause concern (a view found much earlier in order to account for Pharaoh's strange obduracy; e.g., Irenaeus *Haer.* 4.29.2).

In the medieval period, under the influence of Aristotle, Maimonides (twelfth century) was careful to insist on the integrity of creation that continues without change after the signs and wonders of the exodus occurred. Maimonides also placed the Mosaic signs and wonders in a distinct class, in contrast to all other wonders performed by humans, underscoring the biblical perspective that even when cause and effect

seem to be apparent, God nevertheless remains the ultimate cause of everything (*Guide for the Perplexed* 2.29, 35, 48).

Also indebted to Aristotle, Thomas Aquinas's landmark observations in the thirteenth century about signs and wonders included an emphasis that wonders are relative to the beholder, thus implying that apparent miracles may not in fact be so (*Summa contra Gentiles* 3.101.1; cf. 103.9). He ranked miracles in a hierarchy, placing the crossing of the Red Sea in the highest category (something God did that nature never could do). Unlike Maimonides, Aquinas still considered this miracle to be a lesser marvel than deeds performed by some later prophets, such as the reversal of the sun's movement that occurred for Isaiah (2 Kings 20:9-11; *Summa contra Gentiles* 3.101.2).

4.2. The Enlightenment to the Present. It was not until the seventeenth century that rationalistic interpretations began to enter the mainstream of scholarly approaches to the Bible, driving a wedge between the natural and the supernatural and challenging the credibility of the text. What had earlier been a virtue now became a liability: if events recounted in Exodus were contrary to nature, they now were no longer a sign of God's work but a sign of naive storytelling. Earlier generations had found signs and wonders to be a legitimate means of authenticating God and his envoys, and even Pharaoh was not necessarily to be faulted for asking for a wonder or portent (*môpēt*) from Moses in order to authenticate his credentials (Ex 7:9; *Tanh.* *Yelamdenu* 2:3; cf. Judg 6:17; 1 Sam 10:2-9; 2 Kings 20:8-11; Is 7:10-14). Even T. Hobbes admitted that the works of God in Egypt were properly miracles "because they were done with intention to make the people of Israel believe," in contrast to the Egyptian magicians, who simply manipulated the minds of observers (*Leviathan* [1651], chap. 37).

B. Spinoza, however (*Theologico-Political Treatise* [1670], chap. 6), stood this argument on its head when he affirmed that miracles logically lead to atheism, for only an unchangeable natural order can give confidence that there is a God. Consequently, natural phenomena accompanying the apparent miracles accomplished by Moses provided the hint for Spinoza that it was these phenomena that had achieved the deed: the locusts were blown in and out of Egypt by natural winds (Ex 10:13, 19) and similarly made the Red Sea passable (Ex 14:21); the ashes

Moses threw into the air in some way spread the skin disease that infected the Egyptians (Ex 9:10).

When G. Berkeley called into question the reality of physical phenomena by arguing that it was a mental construct, in the very year that he was ordained a priest in the Church of England (1710), he felt it appropriate to address the signs and wonders of the Pentateuch (*The Principles of Human Knowledge*, #84): “It will be urged that miracles do, at least, lose much of their stress and import by our principles. What must we think of Moses’ rod? was it not really turned into a serpent? or was there only a change of ideas in the minds of the spectators?” For Berkeley, the mind of God that makes all sensations possible actually turned all sensations into miracles, and only in this sense “the rod was changed into a real serpent.”

The notion that there are no miracles—because everything is a miracle (a subtle twist on an old perspective) when properly understood as the expression of God—was elaborated by notable proponents such as T. Paine (*Age of Reason* [1794-1795]) and F. Schleiermacher (*On Religion* [1799]). Like Spinoza, Paine also turned an argument on its head: since appearances deceive, God would not likely employ miracles that would subject his messengers to the suspicion of being impostors, and it is a weak doctrine indeed that requires the support of a miracle.

D. Hume’s *An Enquiry Concerning Human Understanding* (1758, revising earlier publications of 1739 and 1748) became the classic articulation of the rationalist’s conclusion that miracles in general are impossible when one’s ultimate arbitrator is “experience and observation” (Hume, §10). He examined the wonders in the Pentateuch specifically and concluded that they were impossible, found in “a book, presented to us by a barbarous and ignorant people, written in an age when they were still more barbarous, and in all probability long after the facts which it relates, corroborated by no concurring testimony, and resembling those fabulous accounts, which every nation gives of its origin.”

G. E. Lessing posthumously published H. S. Reimarus’s ruminations, among them *The Passage of the Israelites Through the Red Sea* (1777), which included a general rejection of miracles and specifically the miraculous nature of events such as the crossing of the Red Sea. Those who resisted the developing materialistic and ration-

alistic assault on the supernatural responded with increasing attention to careful chronological and scientific analyses of the plagues associated with the exodus (e.g., J. Lightfoot).

In the nineteenth century, J. Wellhausen accompanied his Documentary Hypothesis with a synthesis that continued to build on the momentum of Enlightenment notions that natural explanations lay behind apparent miracles: a fortuitous wind at night caused a shallow sea to be fordable for some Hebrews who, returning home from Egypt at a time of plague, were pursued by Egyptian forces who were annihilated when the wind changed. Variations of this type of explanation have continued to the present among those who discern at least a kernel of historical reality in the narratives (Hort). Wellhausen took a further and decisive step, however, for in defending in his *Prolegomenon* a series of written documents lying behind the present form of the Pentateuch, he was able to propose different versions of the same events and relate these versions chronologically to each other. For Wellhausen, the Passover story came into existence over time, based on an ancient Israelite custom of offering the firstlings. The J document that Wellhausen proposed reported that God had killed the Egyptian firstborn because Pharaoh was preventing the Israelites from offering their firstborn at the regular festival (Ex 8:27 [MT 8:23]). Wellhausen’s later P document, however, reversed the sequence, making it appear that the death of the firstborn was the cause of the sacrifice of the firstborn in Israel from that time onward (Ex 13:15).

In spite of voices raised in support of an essentially unified plague narrative (Winnett; Casuto; Fischer), refinements and revisions of Wellhausen’s hypothesis continued throughout the twentieth century (e.g., Schmidt), resulting in the following features generally being accepted as signals of a distinct tradition associated with a Priestly (P) focus in the narratives of the exodus wonders: Aaron and his staff, Egyptian magicians, short descriptions with much repetition, the plagues not said to be reversed, Pharaoh not directly addressed before the disaster strikes, the passage of time not explicitly noted, and a distinctive vocabulary (e.g., *tannin* [“serpent”], *yē’orim* [“rivers”], “and so they did” [with variations]). Therefore, the disasters most clearly associated by scholars with P tend to be the lice

and skin disease (many would add darkness). When some of these features appear here and there in the other catastrophes, they are generally recognized as evidence of Priestly perspectives that have been added or merged with these accounts.

The non-P wonders are typically ascribed to a writer who preferred the divine name Yahweh (J). Since one of the primary distinctions between J and the writer who preferred the divine designation Elohim (E) disappears just before the exodus catastrophes, when E begins to use the divine name Yahweh (revealed at the burning bush), scholars are not in agreement as to how much of the non-P material can be confidently ascribed to E, if any at all. There is a general consensus that J is the primary contributor to the accounts of the bloody Nile, frogs, insect swarms, murrain, hail and locusts. Depending on the degree of precision an analyst requires for a coherent literary tradition, one may find the literary strata subdivided even further.

Some analysts have sought coherence in narrative structure (Galbiati), a tradition reaching back to Philo (*Vit. Mos.* 1.17-26 §§97-146) and Rashbam (i.e., Rabbi Samuel ben Meir; commentary on Ex 8:1 [MT 7:26]). But the narratives of the wonders in Egypt contain so many features that apply to two or more marvels that any mixing and matching of features that correspond or contrast can be made to provide an apparent coherence for almost any arrangement, making this criterion ultimately valueless for determining an original structure. Aesthetics is one of the more easily manipulated and subjective criteria, for structure has been argued to support an original cycle of seven plagues or to argue that one has the artistry of a single author for all the wonders. Or is it simply the unity of a redactor of nine plagues (or perhaps ten, or eleven, if one includes Ex 7:8-13)? With so much proved it is clear that nothing is proved, and the exercise must be deemed interesting but indecisive.

With the breakdown of a consensus with respect to the Documentary Hypothesis at the end of the twentieth century, it is no longer clear among analysts that J precedes P or that D follows J. Even the phrase "signs and wonders" is severed from having a specific reference to the accounts of the wonders that appear in Exodus 7–10, accounts that become from this perspective a literary fiction for which there is no need

to assume even a historical kernel (Van Seters). The wonder is that scholars claim to speak with any confidence on a subject that becomes increasingly an exercise in personal ingenuity that rarely stands the test of time for more than a generation or two.

5. Conclusion.

Semiotic theory has affirmed the problematic nature of signs, which convey both less and more than intended by those who employ them. Thus, when God is depicted transforming a staff into a serpent (and vice versa), is there meaning attached to the fact that it is specifically a serpent (Rashi)? that the transformation is undone (Ishodad of Merwe)? that Moses fled from it (Nahmanides)? that it is made of wood (Cyril of Jerusalem *Cat.* 13.20)? that it is specifically a rod reminiscent of authority (Sarna, 60)? Moreover, what features of such a sign do observers miss? Both overinterpretation and underinterpretation always occur, despite Philo's claim regarding the staff that was transformed into a serpent: "God himself had declared his will to them by demonstrations clearer than any verbal command, namely, by signs and wonders" (*Vit. Mos.* 1.16 §95).

This polyvalent perspective is reflected in the fluctuating persuasive power of signs. On the one hand, the biblical texts affirm that wondrous signs can be deceptive, for they can be performed by people to whom one should pay no heed. Not only is this notion embedded in the Egyptian wonders, where the Egyptian magicians can imitate some of Moses' wonders (Ex 7:11, 22; 8:7, 18; note 9:11), but Deuteronomy 13:1-3 (MT 13:2-4) warns of misleading prophets who can do "a sign or a wonder" that actually comes to pass. Since the text counsels, "You shall not listen to the words of that prophet" (Deut 13:3 [MT 13:2]), it is clear that "a sign or wonder" is not intended to be sufficiently compelling. On the other hand, signs that come from God also are not universally compelling: Pharaoh remained unpersuaded after the barrage of wonders that Moses performed, and Israel itself was sometimes convinced (Ex 4:30-31) and at other times was not (Num 14:11, 22; Ps 78:11-32). Caleb is portrayed in Numbers 14 as one who saw the same signs that Yahweh had performed in Egypt and in the wilderness, but Israel was not persuaded while Caleb was (Num 14:6-11, 22-24). The multiplication of signs was a partial

antidote (Ex 4:8-9; cf. 1 Sam 10:2-9) and seems to have been a rationale for the many plagues that God brought on Pharaoh.

This tension regarding the persuasive power of signs and wonders results in two opposed positions. On the one hand, the twelfth-century scholastic Richard of Saint Victor insisted that these wondrous signs lead to faith, even to the point where one can use “signs in place of arguments, and portents instead of experiments” (*On the Trinity* 1.2). This position is a continuation of the notion that should all humanity believe God in an ideal world, “all the power of signs will thenceforwards be superfluous” (*Const. ap.* 8.1.1). The opposing stance—that miracles make sense only if one is already a Christian—is articulated succinctly by the nineteenth-century New England transcendentalist George Ripley: “the evidence of miracles depends on a previous belief in Christianity, rather than the evidence of Christianity on a previous belief in miracles” (*Boston Daily Advertiser* [Nov. 9, 1836]). That the positions are not mutually exclusive is already indicated by Paul: “Tongues, then, are a sign not for believers but for unbelievers, while prophecy is not for unbelievers but for believers” (1 Cor 14:22 NRSV).

SIMEON

Simeon was the second-oldest son of *Jacob and ancestor of the Israelite tribe of the same name. The name Simeon is derived from the Hebrew verbal root *šm* (“to hear”) and reflects the relief that his mother Leah felt at Simeon’s birth, knowing that God had heard that she was unloved by Jacob and responded by granting her a son (Gen 29:33). In a clear instance of divine recompense, Leah bore half of Jacob’s sons: *Reuben, Simeon, *Levi, *Judah (Gen 29:31-35), *Issachar and *Zebulun (Gen 30:14-20), as well as his only daughter, Dinah (Gen 30:21), all before Rachel bore any children (cf. Gen 30:22-24).

1. Simeon’s Role in Genesis
2. Simeon’s Role in Exodus, Numbers and Deuteronomy
3. Subsequent History

1. Simeon’s Role in Genesis.

The exploits of Simeon in Genesis anticipate the eclipse of Simeon as a distinct tribal entity in the later history of ancient Israel. Like his brothers Reuben and Levi, Simeon’s role in Genesis fits the important plot motif of an older sibling being overshadowed by a younger.

1.1. Jacob Narratives. Simeon and Levi avenged the forcible rape of their sister Dinah by deceiving the men of Shechem into believing the two family groups could live together in

peace, then killing them and destroying their city (Gen 34:1-29). Jacob's response ("You have brought trouble on me by making me odious to the inhabitants of the land. . . . I shall be destroyed, both I and my household" Gen 34:30 NRSV) anticipates the conflicts that Israel would face once they began to settle the land of Canaan. Jacob later characterized Simeon and Levi as men prone to violence and, as tribes, destined their descendants to be scattered among Israel (Gen 49:5-7). The note in Genesis 46:10 (cf. Ex 6:15) that one of Simeon's sons, Shaul, was born to a Canaanite woman, provides early evidence of the gradual loss of Simeon's tribal identity.

1.2. Joseph Narratives. Joseph held Simeon as a hostage in Egypt to test his brothers' integrity when they approached him to buy grain (Gen 42:8-24). This imprisonment fell to Jacob's second-eldest son rather than to Reuben, Jacob's firstborn, because Joseph allowed the latter to return home as spokesperson to his father. Jacob bewailed another son lost (Gen 42:36) yet eventually bowed to Joseph's wishes and Simeon was freed (Gen 43:23). Toward the end of his life Jacob elevated Joseph's sons Ephraim and Manasseh to a position equal to his own firstborn, "just as Reuben and Simeon are mine" (Gen 48:5 NIV). In doing so Jacob reaffirmed the preeminence of his two eldest sons yet opened the door for their eventual displacement by others (cf. Gen 49:5-7).

2. Simeon's Role in Exodus, Numbers and Deuteronomy.

The fortunes of the tribe of Simeon began to wane in the *wilderness wandering narratives. The tribe appears in birth order (i.e., second) in various rosters related to tribal census (Ex 1:2; 6:15; Num 1:6, 22-23; 26:12-14), as well as in the list of men chosen by Moses to spy out the land of Canaan (Num 13:5), and in the list of men appointed by Moses to divide Israel's inheritance in Canaan (Num 34:20, where Judah naturally appears first instead of Reuben, who received his inheritance in Transjordan). Yet in matters related to the *tabernacle, Reuben and Simeon slip to fourth and fifth place, respectively (Num 2:12; 7:36-41; 10:19).

Between Moses' initial census (Num 1:22-23) and that taken after the incident at Baal Peor (Num 26:12-14), the tribe of Simeon dropped from third to last in size among the tribes and

was the only tribe whose total numbers plummeted (from 59,300 to 22,200 men of war). The writer of Numbers evidently intended to connect the decimation of the tribe of Simeon with the apostasy and subsequent plague of Baal Peor, which was stayed only when the Simeonite elder Zimri and a Midianite woman were executed by Phinehas (Num 25:1-14; cf. Ps 106:28-31). Yet because the total number of persons who died in the plague (Num 25:9) was substantially less than the corresponding drop in Simeon's numbers, it appears as though Simeon's tribal integrity was already in doubt by that time. This is confirmed by Moses' blessing on the tribes in Deuteronomy 33, in which Simeon fails to appear. Some MSS of the LXX mention Simeon as the subject of the "b" line of Deuteronomy 33:6, but this should be seen as an emendation attempting to solve what some hold to be a textual problem.

3. Subsequent History.

All biblical evidence subsequent to the Pentateuch points to the absorption of Simeon into the larger tribe of Judah. Simeon's tribal inheritance lay within that of Judah (Josh 19:1-9). At least half of the seventeen cities allotted to Simeon also appear in the city list of Judah (cf. Josh 15:21-32); the exact number is unclear due to textual difficulties in the lists. Judges 1:3, 17 notes that Simeon fought with Judah at the latter's behest against the Canaanites. This is the last explicit mention of Simeon in the biblical text until the work of the Chronicler.

The Simeonite cities that lay within Judah's tribal boundary had essentially been absorbed into Judah by the time of David, as seen by 1 Chronicles 4:24-31, and the list of Simeonite cities to whom David gave spoil that were now linked to various elders of Judah (1 Sam 30:26-31). This process should be seen as analogous to that by which Judah absorbed other non-Israelite clans and tribes such as the Jerahmeelites and Kenites (cf. 1 Sam 27:10; 30:29). Nevertheless, some individuals from Simeon maintained their tribal identity at least to the days of Hezekiah (1 Chron 4:24-43).

Of the cities mentioned within the tribal inheritance of Simeon, only the location of Beersheba (Tell es-Seba⁶) can be identified with certainty. The rest were located in or adjacent to the Negev Basin, a broad geological depression filled with fine wind-blown soil lying immedi-

ately south of the hill country of Judah. Although arid (cf. Gen 26:18-25), this region carries important natural routes that guard the southern approaches to Judah. For this reason, incorporating Simeon into Judah made good political sense for a kingdom emerging in the southern hill country of Israel.

SIN, GUILT

Sin is action and attitude in opposition to God and his purposes. In the worldview represented in the Pentateuch, God is characterized by power, holiness and concern for the good for human beings. God's purposes are purposes of shalom; the Pentateuch, however, chronicles human actions contrary to God's intentions. Sin is the violation of God's will and righteousness. It is disloyalty, disobedience, the breaching of a harmonious and just relationship with God, others, self and nature.

Sin is first against God and not, as in the ancient Near East and as often understood in the modern world, against a set of social taboos. By giving attention to biblical narrative, to "sin" vocabulary and to metaphors, the scriptural view of sin comes into focus. All three approaches bring to the surface issues that need sorting out.

1. Narratives of Sin
2. Vocabulary for Sin/Guilt
3. Metaphors for Sin
4. Consequences of Sin
5. Theological Issues Related to Sin
6. A Theological Summary of Sin

1. Narratives of Sin.

1.1. Genesis 1—11. Four major stories of sin dominate Genesis 1—11. The first is the account of *Adam and *Eve, who disobeyed God's command not to eat of the fruit of the tree of knowledge of good and evil in the garden (Gen 3). Though the story does not employ the usual words for "sin," the NT labels the action sinful (Rom 5:12; 1 Tim 2:13-14). The terms for sin (*ḥaṭṭā't* and *ʿawōn*) occur first in the second story, *Cain murdering his brother *Abel (Gen 4:7, 13). The third major story involves social violence (*ḥāmās*) and sexual perversion (Gen 6:1-5). However the cohabiting of *sons of God with human women is to be explained, the sin is against God's prescribed ordering. The fourth story is about God's displeasure incurred by the tower-building activity at *Babel, a sinful activity not because it involved newer technology (brick-making) but, so it might be inferred, because of a people's refusal to fill the earth as God commanded and also because of humans' invading the divine realm and so exceeding set limits (Gen 11:1-9).

All four incidents indicate an offensive act (against God, humanity, God's order, culture); all four clearly depict God's displeasure; and all specify resulting punishment. But in each case the punishment is ameliorated, even if only slightly, by an act of God's mercy (e.g., expulsion from the garden rather than immediate death; a mark on Cain). In the Cain and Abel story, sin is pictured as a crouching animal: humans can withstand it and master it, but the possibility exists that it will master them (Gen 4:7).

C. Westermann (1976, 50) stressed the diversification of sin in human social structures: the sin of married partners (Gen 2—3), of brothers (Gen 4:1-16), of the pre-flood generation (Gen 6—9) and of humankind generally (Gen 11:1-9). He noted in each the recurring pattern: sin, speech, punishment (cf. summary in Clines, 68). D. J. A. Clines's proposal of a sin-speech-mitigation-punishment pattern was further amplified by M. D. Bratcher (244), who noted a "discovery of sin" component either through divine inquiry (Gen 3:9-13; 4:9-10) or through divine observation (Gen 6:5, 12; 11:5-6). The thesis that sin is the main theme has been challenged by H. Shank, who investigated other sin stories (e.g., Lamech, Gen 4:23-24; Noah's sons, Gen 9:20-29) and sees the sin theme subordinate to the theme of divine self-limitation and human freedom.

1.2. Genesis 12—50. The patriarchs also contend with sin. The sin (*ḥaṭṭāʾt*) of Sodom and Gomorrah, cities for whom *Abraham intercedes, is described as grave (*rābbā* and *kobdā*, Gen 18:20). The language of sin is also on the lips of *Abimelech the Philistine when he asks Abraham, who has misrepresented *Sarah, “How have I sinned [*ḥāṭāʾ*] against you?” (Gen 20:9; cf. Abimelech’s response to Isaac, using *ʾāsām* [“guilt”] in Gen 26:10). *Jacob asks of Laban, “What is my offense [*pešaʿ*]: What is my sin [*ḥaṭṭāʾt*]?” (Gen 31:36). *Joseph asks, when tempted by Potiphar’s wife, “How can I do wickedness and sin [*ḥāṭāʾ*] against God?” (Gen 39:9). Each of these incidents assumes a standard that, when violated, precipitates evil consequences. The Sodom and Gomorrah story, while about God dealing with excessive corruption, may be read inferentially as making another point: a new possibility—namely, intercession with God—for arresting the consequences of sin (Gen 18:22-33).

Other stories of wrongdoing within the patriarchal narrative revolve around deception. For example, Jacob deceives *Esau (Gen 27). Laban in turn deceives Jacob (Gen 29:21-30). After marketing Joseph to the passing merchants, Joseph’s brothers deceive their father (Gen 37:29-35). Deceit is also the subject of the *Tamar-*Judah story (Gen 38:11-23), which interrupts the Joseph narrative but which functions as a commentary on the Joseph story (Alter, 5-12). Deception, one result of which is *family dysfunction, is the ubiquitous sin. R. W. L. Moberly (1992, 97-104) observes that the patriarchal stories lack warnings for disobedience and are not set against the backdrop of God’s holiness, as in Mosaic legislation and narrative.

1.3. Exodus—Deuteronomy. Several narratives in Exodus—Deuteronomy recount sin by the community; a few stories deal with sinful acts by individuals. Of one of the corporate sinful acts, the construction of a *golden calf as a surrogate for God the deliverer, *Moses says, “You have sinned a great sin” (*ḥāṭāʾa gēdōlā*, Ex 32:30). Later at Kadesh, an initial refusal to trust God because of the spies’ report is followed by the presumption of engaging in battle despite God’s prohibition, leading the larger community eventually to acknowledge, “We have sinned” (*ḥāṭāʾnū*, Num 14:40). Similarly, when God’s displeasure at Israel’s disgruntled behavior and constant murmuring brings on the plague of

serpent bites, the corporate body admits, “We have sinned” (*ḥāṭāʾnū*, Num 21:7).

Individuals also, Egyptian as well as Israelite, leader types all, engage in sinful behavior. *Pharaoh sins repeatedly in refusing to comply with God’s directives; he admits as much in response to a devastating plague (Ex 9:27; 10:16). Moses strikes the rock instead of speaking to it (Num 20:11-12). *Balaam, who is on his way to meet Balak but is stopped by an angel, admits, “I have sinned” (*ḥāṭāʾū*, Num 22:34). Korah and his colleagues Dathan and Abiram sinfully challenge the authority of their superior (Num 16:1-3, 12-14). These individuals either stubbornly resist God’s commands, only partially obey God’s instructions or trivialize them. A notable feature of these accounts is God’s response of anger and fierce displeasure.

2. Vocabulary for Sin/Guilt.

The terminology for *sin* is extensive, numbering more than forty words (Knierim 1995, 425). The large number of terms also points to the importance of this subject, since in any culture that which is valued or eschewed is differentiated (cf. the extensive vocabulary for edible worms in a jungle culture or the various words for modes of transport in industrialized countries). Of the many words for sin, three significant ones occur together in Leviticus 16:21: “Then Aaron shall . . . confess over it [the live goat] all the iniquities [*ʿāwōn*] of the people of Israel, and all their transgressions [*pešaʿ*], all their sins [*ḥaṭṭāʾt*]” (cf. Ex 34:7; Ps 32:1-2). To these basic words for sin may be added, for purposes of closer examination, the terms *raʿ*, *rāšāʿ* and *ʾāsām*.

2.1. Missing the Mark (*ḥaṭṭāʾt*). Of the various OT words for sin, *ḥaṭṭāʾt* is the most frequent, occurring, along with its derivatives, nearly six hundred times. Of these occurrences, approximately one-third are in the Pentateuch. The meaning of this term, “missing the mark,” is clarified by its nontheological use regarding slingers hitting a target: they did not miss (*ḥāṭāʾ*, Judg 20:16; cf. “miss [*ḥāṭāʾ*] the way” in Prov 19:2). The term also denotes being at fault, failure to perform a duty or “to be lacking.” Used in a moral and ethical sense, *ḥaṭṭāʾt* points to failure in meeting the demands of a law or statute, intentionally or unintentionally, but it can also signify falling short of the expectations inherent in certain relationships. The term is formal and

generic for overt evil actions (e.g., Lev 16:21; cf. Deut 9:18, where it sums up various wrongful actions). Frequently it is paired with other words for sin: *peša'* (Gen 31:36; 50:17), *āwōn* (Ex 34:9); *rāša'* (Num 16:26) and *ra'* (Deut 9:18).

The term occurs in various literary genres: narrative (e.g., Gen 4:7; 18:20; 20:9; 40:1; Ex 9:27), law, prayer and paraenesis. In Israel's story, the root appears in the episode of the golden calf (Ex 32:21, 30; cf. Deut. 9:16, 18), and in the accounts of Korah, Dathan and Abiram (Num 16:26, 38 [MT 17:3]).

Within legal material, behaviors classified as sinful include lying to a neighbor and stealing (Lev 6:2-4 [MT 5:21-23]), failure to pay vows or wages (Deut 23:21 [MT 22]); 24:15) and cursing God (Lev 24:15). Distinctions are also made in legal material, such as sinning unintentionally or inadvertently (*sēgāgā*, Lev 4:2-31; Num 15:28) and sinning in defiance, blatantly or with contempt ("high-handedly," *bēyād rāmā*, Num 15:30). The former, which are sins without malicious intent (e.g., an act that one did not know was wrong or about which there was uncertainty) can be forgiven through sacrifice, but not so the high-handed sins. Scripture also acknowledges failure as when, in making a promise, "it slips one's memory" (Lev 5:4; Wenham, 86, 93). The casuistic laws, "If so and so sins . . ." followed by prescriptive action (e.g., Lev 4:3, 22, 27), also belong in this legal category.

Not surprisingly, the word *ḥaṭṭā't* ("sin") and its derivatives occur in prayers—sometimes, as in the prayer of Moses, in pleas for God to forgive sin (Ex 32:31). Statements on the formulaic order of "I have sinned," which identify culpability and personal responsibility, are found thirty times in the OT, including seven (not all confessions of sin) in the Pentateuch (cf. tabulations in Knierim 1965, 20, 28; e.g., Pharaoh in Ex 9:27; 10:16, Balaam in Num 22:34, and other first-person singular Qal forms of the verb: Gen 20:9; 39:9; 43:9; 44:32). The formula "We have sinned" (*ḥāṭā' nū*) occurs twenty-four times in the OT; only four are from the Pentateuch (*Aaron and *Miriam in Num 12:11; Israel at Kadesh in Num 14:40; Deut 1:41; and Israel murmuring in Num 21:7). Instructions and especially warnings against sin and the incurring of guilt appear in paraenetic material (Ex 23:33; Lev 19:17; cf. Gen 4:7).

The word occurs with the verb *nāśā'* ("to carry"), especially in the formula "to bear [one's]

sin" (e.g., Lev. 19:17; 20:20; 22:9; 24:15; see below). Because *ḥaṭṭā't* is sometimes found in conjunction with *āsām* ("guilt, punishment"), as well as for other reasons, R. Knierim (1965, 55) concludes that the term *ḥaṭṭā't* functions in a judicial setting or at least within an adjudicative semantic field. Already in the Pentateuch the warning about sin resulting in exile is sometimes sounded (Deut 29:28). The noun form occurs with considerable frequency linked with words for death (*mwt*, e.g., Deut 24:16).

2.2. Breach of Law/Relationships (*peša'*). Earlier lexical definitions stressed the notion of rebellion inherent in *peša'*, a conclusion deduced from the political context in which the term is at home (DeVries, 4.361; Quell, 1.270, 273). For example, a vassal nation would rebel against its overlord (*pāša'*; e.g., 2 Kings 3:5; 8:20). While the meaning "rebellion" is not amiss, Knierim (1965, 178, 181) has shown that the term has to do with "breach" (German *verbrechen* or *brechen mit*). In this understanding of the word, there is the notion of taking something away, as in asserting ownership rights over that which belongs to another (e.g., kidnapping, Gen 50:17; cf. Ex 22:9 [MT 22:8]; 2 Kings 8:20, 22). So while there remains a juridical, or at least political, aspect to the term, once this legal sphere for the term is acknowledged, a secondary nuance of the term comes into play, namely, the straining of relationships. The notion of *peša'* as breach of law and of brotherhood is especially poignant in the words of Joseph's brothers, purportedly quoting their father when they ask for Joseph to forgive their *peša'* (Gen 50:17: "crime," NRSV; "trespass," KJV). Theologically, "whoever commits *peša'* does not merely rebel or protest against Yahweh, but breaks with him, takes away what is his, robs, embezzles, misappropriates it" (Knierim, 2.1036). Actions of *peša'* rupture solidarity and shatter harmony.

Out of a total of over 130 occurrences for the root *peša'* in the OT, nine are found in eight verses of the Pentateuch. The word is used in the genre of narratives, such as that of Laban and Jacob (Gen 31:36) and in connection with Joseph and his brothers (Gen 50:17). On the Day of *Atonement the priest is directed to confess the sins (*peša'*) of the people of Israel when he lays his hand on the scapegoat (Lev 16:16, 21). The term also appears in the Pentateuch in conjunction with the doxology of forgiveness (Ex 34:7; Num 14:18).

The term *peša*[¢] appears together with its synonym *ḥaṭṭā*[¢] (e.g., Gen 31:36) and so serves as an umbrella word for wrongdoing. Still, the two terms have distinctive nuances. If *ḥaṭṭā*[¢] is all about failure, especially the failure of achieving or reaching a goal, *peša*[¢] is about breaching a relationship. Some actions described as *ḥaṭṭā*[¢] may be unintentional, but actions of *peša*[¢] are clearly deliberate.

2.3. Iniquity (‘āwōn). The word ‘āwōn occurs 231 times in the OT (Knierim, 2.863) and about forty times in the Pentateuch, where it describes the evils of the Amorites (Gen 15:16), the sins of the cities Sodom and Gomorrah (Gen 19:15), the wicked dealings of Joseph’s brothers (Gen 44:16), the sin of erecting a golden calf (Ex 34:9) and the sin of bowing to *idols (Ex 20:5; Deut 5:9). The word occurs in the formula “bear iniquities” (see 3.2 below).

Lexical definitions employ such terms as “crookedness,” “perversity” and “iniquity.” The informing image is of a bent, twisted or crimped item laid alongside a standard straight edge. Knierim (1965, 238) emphasizes that the term ‘āwōn denotes a concrete action, but within Israelite holistic thinking it also entails consequences such as guilt (Gen 15:16) and punishment (Gen 19:15).

Scholars have tried to distinguish the meaning of ‘āwōn from the two other primary words for sin, *ḥaṭṭā*[¢] and *peša*[¢]. T. C. Vriezen (6.479) sees *ḥaṭṭā*[¢] as pointing to general failure and shortcoming; ‘āwōn, a more weighty term, as having an ethical component; and *peša*[¢], the weightiest term of all, referring to the religious dimension. W. Eichrodt sets up a distinction in which *ḥaṭṭā*[¢] is a general, more formal word designating sinful conduct, essentially a failure with regard to norm, whereas implicit in ‘āwōn is the “agent’s awareness of the culpability of his action, so that the formal aspect is here already supplemented by one of moral content” (Eichrodt, 2.380-81). For Eichrodt the root *peša*[¢] in both verb and noun forms denotes “rebellion” and “revolt” (contrast Knierim). Eichrodt concludes that for all these terms there is a “unifying basic conception of action contrary to the norm.”

2.4. Evil (ra[¢]). The term *ra*[¢] describes what is morally defective in character and action, such as the sin of Sodom (Gen 13:13). The term *ra*[¢] is opposite to good (*tōb*) in the expression “tree of the knowledge of good and evil” (Gen 2:9, 17;

3:5, 22). An entire community, unbelieving and reneging at the threshold of the Promised Land, is described as wicked (*ra*[¢], Num 14:27; cf. the same word for the same event in Deut 1:35). The Israelite army is to be free from an evil thing (*ra*[¢], Deut 23:9 [MT 23:10]). A congregation must purge *ra*[¢] from its ranks (Deut 17:7, 12; 19:19; 21:21).

The feminine noun *rā*[¢]*ā* as well as the adjective *ra*[¢] can refer either to moral/ethical wrongdoing or to bad things generally (misfortune, calamity). An instance of the first is in Joseph’s question to Potiphar’s wife regarding her efforts to seduce him sexually: “How can I do this great evil?” (*rā*[¢]*ā*, Gen 39:9). Other actions that are characterized as *rā*[¢]*ā* are Joseph’s brothers’ devious ways with him (Gen 50:17, 20; cf. Saul in 1 Sam 20:7, 9, 13) and a people’s turning to idolatry (Deut 31:18). Evil behavior is also contrasted with good behavior (Gen 44:4; cf. Num 24:13). The verb *r*[¢] can refer to perpetrating evil, as in the proposed actions of the Sodomites (Gen 19:9) or theft (Gen 44:5); homosexuality (Gen 19:7); or Onan’s *coitus interruptus* (Gen 38:10). The collocation of terms from this root when used in the moral sphere points to a generic meaning, “evil,” “wickedness.”

2.5. Guilty (rāsā[¢]). The term *rāsā*[¢] (“guilty”), along with its derivatives, occurs in the Pentateuch more than a dozen times. This word denotes behavior that is destructive and disruptive of harmony in the community and serves as a more generalized term for evil understood as the opposite of what is morally good. The antonym of *rāsā*[¢] is righteousness, as illustrated in the classic story of Abraham’s intercession for Sodom and Gomorrah where both terms *rāsā*[¢] and *šaddiq* (“righteous”) are decisive (Gen 18:23, 25; cf. Ex 9:27). The judicial dimension of *rāsā*[¢] is transparent in Deuteronomy 25:1, where a court ruling involves being “righteous” or *rāsā*[¢] (cf. Ex 23:1, 7). The Hiphil form of the verb means “to pronounce guilty,” as when ruling on property rights (Ex 22:9 [MT 22:8]).

The nominative (i.e., adjective or noun) forms are *rāsā*[¢] (265 times in the OT) or *riš*[¢]*ā* (fifteen times), both denoting wickedness/guilt in a more general sense. While most of the occurrences are in Wisdom literature, some instances occur in the Pentateuch, as in Abraham’s intercession (Gen 18:23, 25), Pharaoh’s confession (Ex 9:27), Moses’ description of Korah, Dathan and Abiram as wicked (Num

16:26) and reference to wicked Canaanites (Deut 9:4-5) and Israelites (Deut 9:27). The masculine noun form, *reša'*, occurs once in the Pentateuch (Deut 9:27). In brief, *rāšā'* is criminal wrongdoing.

2.6. Guilt (*'āsām*). The root in its various forms—the verb *'āsam*, “to incur or become guilty”; the noun, *'āsām*, “guilt, wrong, guilt-offering”; and the adjective *'āsēm*, “guilty”—appears more than forty times in the Pentateuch, mostly in Leviticus and Numbers. Guilt is to be understood as moral or legal culpability, so it has an objective dimension. Guilt designates the condition or state of a person who has acted wrongfully; it stands between the act of sin and the punishment. Some hold that the subjective, psychological notion of feeling guilty is scarcely, if at all, a component of the biblical concept. Guilt is incurred through action not in accord with the law (Lev 4:13, 22) even if the individual is unaware of his or her wrongdoing (Lev 5:2-4). The nominative form often denotes “guilt offering.”

Most of the occurrences of the verb *'āsam* entail actions that infringe on cultic purity, such as touching an unclean animal (Lev 5:2-3) or sinning inadvertently (Lev 4:22, 27; 5:17). But careless swearing of an oath also incurs guilt (Lev 5:4), as do theft and breach of trust in the stewardship of property (Lev 6:4 [MT 5:23]). The condition of being guilty (hence liable for punishment) follows upon committing sin (Lev 5:17).

Taking issue with the broadly accepted understanding of *'āsām* as guilt or culpability, J. Milgrom (1976, 11-12; 1991, 340-45) has identified four uses of the word, one of which he calls “consequential *'āsām*” especially in cultic texts. In his view the word denotes the wrong *and* the retribution, as underscored, for example, in Hosea 5:15 (cf. Gen 26:10). Milgrom (1991, 343-45) also includes a “feeling dimension” for the term, since when someone willfully appropriates something, it is already clear that guilt has been incurred (Lev 6:4 [MT 5:23]).

2.7. Other Terms in the Semantic Field. The remaining pentateuchal terms for wrongful behavior can be clustered around the main terms described above: *ḥaṭṭā't*, *peša'*, *'āwōn*, *ra'* and *rāšā'*.

2.7.1. Words Related to *ḥaṭṭā't*. One of the words that falls under the rubric of *ḥaṭṭā't* (“missing the mark”) is *sūr* (“to turn aside”). To

defect from God is to become open to idolatry (Deut 11:16, 28). Wrongdoing also consists of turning aside, deviating from the commandment (Deut 17:20; 28:14; see 3.3 below). Two other terms, *šgh* and *šgg*, carry the meaning “to err.” The noun *šegāgā* is found closely allied with *ḥaṭṭā't* in Leviticus 4:2; 5:15. The noun *šegāgā* refers to inadvertent or unintentional sin, which, as Milgrom (1967, 118) explains, comes about in two ways. The offender knows the law but accidentally violates it (e.g., Num 35:22-23; Deut 19:5-6), or one acts deliberately but did not know that it was wrong (Ezek 45:20). The verb *šgh* means “to act in error,” unaware of the consequence of an action. Its use in moral contexts underscores the fact that judicially there is an objective wrong, whether the agent (individual, priest or community) was specifically aware of the failure or not (Lev 4:13; Num 15:22; cf. Deut 27:18). In sum, *šgh* and *šgg*, like *ḥaṭṭā't*, signify moral failure of some sort.

2.7.2. Words Related to *peša'*. Certain terms for sin are generally in the word field of *rebel* (*peša'*). One of these, *mārā* (“resist, rebel”), is illustrated in the noncompliant behavior of Israel (Num 20:10) and Moses (Num 20:24; 27:14). The root *mrh* is relatively frequent in Deuteronomy, where, mostly from the mouth of Moses, the word characterizes Israel as contentious and rebellious (Deut 1:43; 9:7, 23-24; 31:27). The word is coupled with the verb *srr* (“to be stubborn, rebellious,” Deut 21:18, 20) and also with *qšh* (“stiff[-necked]”; Deut 31:27).

The closely related verb *mārad* (“to rebel, act with insolence”) appears in a plea for obedience that Joshua makes to the people (Num 14:9). Rebellion is also at the heart of the term *sārā*. The noun *sāra* (“rebellion, treason”) is applied to prophets who by dreams mislead the people (Deut 13:5 [MT 13:6]) and once in the Pentateuch to wrongdoing in general (Deut 19:16). Also within the category of *peša'* is the idiom of sinning “high-handedly,” or presumptuously, behavior against which Moses warns (Num 15:30; Deut 8:14).

To the extent that *peša'* is construed as breaching a relationship, the verb *mā'al* (“to be unfaithful, disloyal”) is a close synonym (Lev 5:15). The word is apropos to a woman's faithlessness in marriage (Num 5:12, 27). An instance of *mā'al* is deception of a neighbor, which is a breach of trust not only against the neighbor but also against God, since to make things right it is

necessary to make reparations to the neighbor *and* to bring a guilt offering to God (Lev 6:2-7 [MT 5:21-26]). Moses broke faith with God at Meribah (*mā'al*, Deut 32:51).

2.7.3. *Words Related to 'āwōn*. A word that is akin to the concept of “crooked” (*'āwōn*) is the noun *hepek*, which in its abstract form *tahpūkā* (“perversity”) occurs in a song highlighting Israelite wrongdoing over against God’s faithfulness (Deut 32:20). Another root in this world field is *slp* (“distort”), which occurs in didactic texts warning against twisting justice through bribery (Ex 23:8; Deut 16:19).

2.7.4. *Words Related to ra'*. A term that refers more generally to wickedness, as *ra'* does, is *'āwel* (“to act wrongly”). Showing partiality and cheating are wrong. Adjudication in court is not to be tainted with evil such as partiality: “You shall not render an unjust [*'āwel*] judgment; you shall not be partial to the poor or defer to the great” (Lev 19:15 NRSV; cf. Lev 19:35; Deut 25:16; 32:4).

2.7.5. *Words Related to rāsā'*. The lexeme *hāmās* (“violence”) is used alongside the word *rāsā'* (“wicked”) in Exodus 23:1. In addition, violence and ruthless, outrageous cruelty characterized human action prior to the flood (Gen 6:11, 13). Cruelty was in view in the words spoken by Jacob: “Simeon and Levi are brothers; weapons of violence are their swords” (Gen 49:5 NRSV). Such action tears at the social fabric of communal relations. In the Pentateuch’s other two references, the term is employed in the more general sense of wrong (Gen 16:5; Deut 19:16). Here should be included *nābāl*, which describes a person “who ‘commits an act of crass disorder or unruliness’ or acts ‘in an utterly disorderly or unruly fashion’ ” (Pan, 3.11). Examples in the Pentateuch have to do with sex-related actions (*nēbālā*; e.g., Shechem’s sexual act against Dinah, Gen 34:7; cf. Deut 22:21). Moses also characterizes Israel with this epithet (Deut 32:6, 21).

Into this more general category of “wicked” (*rāsā'* and *ra'*) are to be placed at least two other terms, also of a general nature, with the roots *t'b* and *šqš*. The noun *tō'ēbā* refers to that which is offensive or loathsome. The word can pertain to a cultural value (e.g., shepherding was loathsome in the view of Egyptians; Gen 46:34). Often, however, *tō'ēbā* (“abomination”) represents a divine estimate on activity that is evil and so, like sin, defiles the land (Lev 18:27). Concentration of the term is in Leviticus 18 (five times) and

in Deuteronomy (sixteen times). Israel is warned against certain actions typical of, or at least prevalent in, Canaanite and surrounding cultures, which are described as abhorrent and which are taboo (*tō'ēbā*; cf. Deut 20:15-18). These actions as listed in the Pentateuch can be grouped in five categories: (1) idolatries (Deut 27:15; cf. the mention of strange [*zār*] gods in Deut 32:16; cult prostitution in Deut 23:17-18 [MT 23:18-19]; and offering second-class animals for offerings in Deut 17:1); (2) human sacrifice (Deut 12:31); (3) sexual perversions such as homosexuality (Lev 20:13), incest and other illicit sexual activities apparently common in Egypt and Canaan (Lev 18:1-30); (4) illicit business practices involving deception (Deut 25:13-16); and (5) dietary and clothing taboos (Deut 14:3; 22:5).

Still in the category of what is bad (*ra'*) is the word *šeqeš* (“detestable, repugnant”), a synonym for *tō'ēbā* (cf. Jer 16:18), as is evident in the fact that unacceptable foods can be designated by either term (Lev 11:10; Deut 14:3). The word predominates in the *food laws (Lev 11:11-23), although the language of *šeqeš* is also applied to idolatry (Deut 7:25-26).

3. Metaphors for Sin.

Three metaphors within the Pentateuch aid in clarifying what is meant by sin.

3.1. *Sin as Blemish*. Language about the removal of sin on the Day of *Atonement evokes the picture of sin as an impurity, a blemish: “From all your sins you shall be clean [*thr*] before the LORD” (Lev 16:30). The terms *thr* (“clean”) and *tm'* (“unclean”) often refer to physical ritual purity and uncleanness (e.g., contact with a carcass, Lev 5:2-3), to contracting an infectious disease (Lev 13:13, 14) or to foods (Lev 11:1-23). But sin also defiles and makes unclean, and so renders a person unfit (cf. Is 6:5). Sexual relations outside marriage, for example, were defiling (*tm'*; Lev 18:20), as was involvement with mediums (Lev 19:31) and sacrificing of one’s offspring to Molech (Lev 20:1-8).

The idea of blemish is also captured in the root *hnp* (“pollute”), a synonym to *tm'* (Num 35:33-34). Land is polluted (*hnp*) through bloodshed (Num 35:33; cf. prophetic material where idolatry is said to pollute the land, Jer 3:2, 9). In some instances *hll* (“profane”), when coupled with *tm'*, includes the nuance of defiling (e.g., Lev 20:3). Sin must be understood as the opposite of *holiness, cleanness.

3.2. Sin as Burden. An important metaphor about sin occurs within an idiomatic, formulaic saying: “carry iniquity” (*ns’* ‘*āwōn*; cf. *ns’ plus ḥattā’* or *peša’*), a phrase that occurs twenty-nine times in the OT. On the one hand the idiom with the sense of “carrying off” points to forgiveness. When God is the subject, the sense is of God’s lifting off or removing the sin (Ex 32:32; 34:7; Num 14:18; cf. Ps 32:5; Mic 7:18). However, persons may also forgive (e.g., Joseph forgiving his brothers in Gen 50:17; cf. Pharaoh, Ex 10:17).

On the other hand, the phrase “carry the iniquity” is also to be understood as bearing the load of guilt, punishment or both. R. Knierim (1965, 73-91) has stressed retribution as the focus of the metaphor. The sinner must bear the consequences of his or her sin. So also Milgrom (1991, 295): “The expression *nāśā’* ‘*āwōn* always implies that the punishment will be meted out by God, not by man.” Cain asserts that his iniquity (‘*āwōn*), understood now as “punishment,” is more than he can bear (*ns’*, Gen 4:13). In the case of someone who fails to come forward with evidence in a court case, the verdict is “you shall be subject to punishment” (Lev 5:1). V. Hamilton (3.162-63) notes that where persons are the subject of *nāśā’* ‘*āwōn*, the sense is that of incurring guilt or bearing responsibility or punishment, possibly capital punishment (Ex 28:43; Lev 5:1, 17; 7:18; 17:16; 19:8; Num 5:31; 18:1), though even then forgiveness is possible (cf. Lev. 5:1-13). For a woman proven culpable, her burden is that she must “bear her iniquity” (Num 5:31). The burden is both her act and her punishment, claims B. A. Milne. B. J. Schwartz, however, moves against the grain of scholarly consensus to argue that the load the sinner carries is not the load of punishment but rather that of guilt. Those who understand the Hebrew idiom to point essentially to culpability or accountability will adopt a translation such as “he will be held responsible” (Lev 5:1 NIV).

Whether then the sinner is burdened with a sinful act, the guilt of that act or the consequences of that act, the formulaic phrase “carry iniquity” presents the image of sin as a load or burden. Sin weighs a person down and is wearisome to deal with. Sin constitutes a burden, a load that is carried but that can also be “carried off” or “carried away,” that is, forgiven.

3.3. Sin as Swerving from the Path. The term *sûr*, although it means to remove or take away

(e.g., animal parts in an offering, Lev 4:9), is frequently used in the sense of turning aside, as in leaving the path (e.g., Abraham’s visitors, Gen 19:3; Moses at the burning bush, Ex 3:3). The word is also used in a moral sense of someone leaving the right path. The informing image is of right living as a matter of walking in God’s ways (Gen 5:22; 6:9; cf. Gen 6:12). To sin is to stray or swerve from that right way. Thus the word *sûr* serves alongside *ḥātā’* (“to sin”) to describe what really transpired in the story of the golden calf: Israel turned aside (*sûr*) from the way God had commanded (Ex 32:8; cf. Deut 9:16). To sin is to get off (God’s) track, to stray from the good path.

4. Consequences of Sin.

A fundamental assumption throughout the Scripture is that persons are accountable to God for their actions (Gen 19:13; Lev 18:25). The consequences of sinful behavior can be delineated in two primary directions: (1) the effects of human sin on the offended person, God; and (2) the effects of human sin on the sinner, the human community and nature.

4.1. The Effect of Human Sin on God.

4.1.1. Grief and Disgust. Sinful actions bring pain to God, for he is not impassive or without emotion. The pre-flood widespread evil of sexual perversion and violence evoked in God a response of sorrow: “it grieved him to his heart” (Gen 6:6; cf. God’s passionate responses to Israel’s defection in Jer 2:5; 3:19). Another emotional reaction is caught up in the words *abhorrent* (*tô’ēbā*) and *detestable* (*seḡeṣ*). The pagan practices of the Canaanite and Egyptian religions of idolatry, deceit, corruption and sexual perversion are reprehensible and repugnant in the sight of God (see 2.7.5 above). God is a God of passion, sensitivity and emotion who can be “hurt” by sin.

4.1.2. Profaning of God’s Name. The OT functions with categories such as clean and unclean, *blessings and curses, holy and profane. To profane (*ḥll*) is to treat someone or something as common or ordinary. In the words of S. H. Blank, “To profane the name of God is to do damage to God’s reputation, to defame him, to lessen his prestige, to retard the process by which he achieves recognition, to put off the day of which it shall be known that he is God” (quoted in O’Kennedy, 2.147). Pentateuchal legislation warns against profaning the name of

Yahweh, degrading it from a status of holy to something other (Lev 22:32). For example, when priests whose calling it is to be holy engage in pagan mourning customs, they “damage” (*hll*) the name (reputation) of Yahweh (Lev 21:6). Similarly, priests are warned not to mishandle sacred donations, for that would profane (*hll*) Yahweh’s holy name (Lev 22:2; cf. Lev 19:8). When common people sacrifice their children to Molech, they incur Yahweh’s displeasure because they have defiled the sanctuary and profaned Yahweh’s name (Lev 20:3). Ezekiel especially will have much else to say on the subject (e.g., Ezek 36:21-22). However nuanced, sin is an insult to God.

4.1.3. Wrath. God’s wrath, as well as the wrath of Moses, punctuates the narrative of Israel and the golden calf (Ex 32:11, 12, 19, 22). God’s initial response to this idolatry is “Now let me alone, so that my wrath [*ʿap*] may burn hot against them and I may consume them” (Ex 32:10 NRSV). An angry response to sin by an offended God is recorded against Aaron and Miriam (Num 12:9), against Israel when it joined itself to Baal of Peor (Num 25:3-4) and against Israel for their refusal to enter the land at Kadesh-barnea (Num 32:10, 13). God also threatens anger against oppression of the resident alien, abuse of widows and orphans (Ex 22:21-24), and idolatry (Deut 6:15, 7:4; 11:16-17; 31:16-17). God threatens anger against those who sin through hostility against him. To such God announces that he in turn will be hostile against them in fury (*hēmâ*, Lev 26:28). God’s anger against Balaam, who acts in compliance with God’s word, is difficult to explain (Num 22:20-22).

4.1.4. Retribution: The Principle. In the OT worldview, sin in any form is punishable, but the way in which the principle of God’s punishment for sin operates has received different answers. K. Koch has argued that there is not a doctrine of retribution in the OT, if retribution is understood as a judge’s handing out sentences according to prescribed norms. Rather, so he holds, the link between an act and its consequence is so tight that whatever follows from an evil act is an implementation of what is implicit already in the act itself. The result of an act is embedded in the act just as the fruit is embedded in the seed (Hos 8:7; 10:12-13). That connection between wrongdoing and its consequence is already captured in the very vocabulary, so that terms such

as *raʿ* and *ʿawōn* can mean both the wrongdoing and the punishment that follows (cf. Gen 4:13, where *ʿawōn* may refer to all three: the sinful act, guilt and punishment). The judgment is not separate from the crime, Koch argues. To be sure, it is God who superintends the process, but in point of fact there is an inevitability enshrined in actions such that evil actions reap evil harvests just as good actions reap good harvests.

According to C. Westermann (1967), God’s role within the sin-punishment continuum is more intrusive than only to superintend an in-built process. The prophetic judgment speech has a legal background such that the punishment is not apart from a personal judge who passes sentence. At least for humans, a principle known as *lex talionis* (“an eye for an eye”) is in place (Ex 21:23-24; Lev 24:19-20; Deut 19:21).

P. D. Miller Jr. also raises questions about Koch’s conclusions. Miller shows that in the prophetic material there is a correspondence between sin and judgment. As a rule, though there are exceptions, the punishment not only follows the crime but is equal to the crime. In the Pentateuch this correspondence is exemplified in the Song of Moses: “They made me jealous with what is no god, provoked me with their idols. So I will make them jealous with what is no people” (Deut 32:21 NRSV; cf. Miller, 76-79). Because Israel did not serve (*ʿbd*) Yahweh their God, they will now serve (*ʿbd*) the enemies God will send against them (Deut 28:47-48; for other repetition of terms, see Deut 31:16-18). From these and other examples Miller deduces that a possible source for the correspondence of sin and judgment in the Prophets is found in the *covenant curses. Yahweh has an active role in the punishment process. Moreover, there is a “universal pattern of speech and style wherein poetic justice is a common literary device” (Miller, 98). While the inexorable connection between sin and punishment is strongly emphasized in the Pentateuch, there is also frequently the mitigation of an announced punishment (Bratcher, 249; see 1.1 above). So, for example, in the flood story the destruction is not total: Noah and his family are saved. While such mitigation comes by the free will of Yahweh, mitigation in other instances can come through intercessory prayer (Num 11:1-3; 12:1-15).

4.2. The Effect of Human Sin on the Sinner.

4.2.1. Alienation. Adam and Eve, following

their transgression, were driven from the garden and from the presence of God (*see* Eden, Garden of). The expression “east of Eden” notes the increasing distance from deity (Gen 3:24; 4:16; 11:2). Similarly, the theme of alienation is captured in God’s verdict on Cain: “you will be a fugitive and a wanderer on the earth” (Gen 4:12). The motif of migration is registered also in connection with the tower of *Babel. Wandering in the *wilderness follows on Israel’s lack of trust and obedience, and hence failure to occupy the Promised Land (Num 14:32-35). God’s reaction at the earlier incident of the golden calf is “Go up . . . but I will not go up among you” (Ex 33:3). Through sin the sinner is distanced from God and, for that matter, from others.

4.2.2. Guilt. Guilt, as explained in 2.6 above, is the state of culpability into which a person comes when acting wrongfully. The sinning agent (whether individual or community) stands under God’s indictment. Confessions such as “I have sinned” (Num 14:40; 21:7; 22:34) are acknowledgments that sin has placed one into the category of the guilty. It must be stressed that while such confessions may entail sorrow over sin, for biblical writers the idea of guilt is not so much a subjective feeling of anguish as it is an objective condition into which one has entered because of sin. It is fair to say that guilt may not be so much an agitation of conscience as the sense that punishment is inevitable. When Joseph’s brothers acknowledge that guilt (*ʿāsēm*) attaches to their wrongful action against Joseph, their further statement makes a close connection between the condition of guiltiness and subsequent negative consequences (Gen 42:21). Guilt may be collective (Ex 20:5-6) or individual (Deut 24:16).

Several of the words for sin incorporate the notion of consequence (e.g., the land becomes guilty; Hiphil of *ḥāṭāʾ*, Deut 24:4). The phrase “bear iniquity,” at least according to some, signifies the guilty status that results from committing sin (*see* 3.2 above).

4.2.3. Shame. Although little is said in the Pentateuch about shame as a consequence of sin, the opening narrative of human transgression points to it. Adam and Eve hide themselves from God, for as they explain, they are naked (Gen 3:10). Taken together with the earlier statement that they “were both naked and were not ashamed” (Gen 2:25), the conclusion follows

that one of the consequences of sin is shame. In the garden, shame—a sense of dishonor—replaces innocence. In the words of H. Shank (224), “Sin leads to shame, hiding, fear, pain, hardship, expulsion, and alienation in the garden.”

Disgrace was surely attached to a person who was publicly punished (e.g., the one flogged, Deut 25:1-3; cf. use of *qlh* II “to dishonor”) and to one who refused levirate responsibilities (Deut 25:5-10). However, the motif of shame is much more pronounced in other books (e.g., Ezekiel) than in the Pentateuch (*see* Honor and Shame).

4.2.4. Divine Punishment. Punishment for sin can take a variety of forms. To the extent that sin may be viewed against the backdrop of covenant, punishment consists in the implementation of covenant curses as a consequence of God’s anger (Deut 29:19, 27 [MT 29:18, 26]). These curses are listed at length (Lev 26:14-39; Deut 28:16-68) and include plagues (Lev 26:21; Deut 28:21), illness (Deut 28:22, 27-29, 35), loss of children and livestock (Lev 26:22), food shortages (Lev 26:26), famine (Deut 28:24, 38-40), defeat before enemies (Deut 28:25), death (Deut 28:26), devastation of cities and land (Lev 26:31-33), and diminishing of Israel’s status so that she becomes a byword among the nations and a nation of low status (Deut 28:37, 43-44).

A frequent formula that pertains to punishment for sin is the literal expression “That soul shall be cut off from the congregation of Israel” (cf. “from her people,” “from my presence”). The formula, it is commonly thought, refers to ostracism, expulsion from the community. Reasons for expulsion from the community often have to do with disregard of cultic regulations such as the “desecration of sacred time, sacred substance, sacred place, and God’s holy name as well as the people of Israel themselves” (Wold, 1.24; *see* Lev 7:20, 25, 27; cf. Ex 12:15; 30:33, 38). The formula occurs first in the story of Abraham: one who refuses circumcision is to be cut off from his people (Gen 17:14). However, other evil actions such as sacrifice of children also call for this punishment, but with Israel and God as agents the penalty represents being cut off from life (Lev 20:2-3).

Ultimately, as announced in the first transgression story, the punishment for violating God’s purpose is physical death (Gen 2:17), though it does not come immediately either to

Adam or to Eve, nor even to Cain. God does not strike Cain down; divine mercy is extended. "Penance and punishment are God's method of preparing the way for forgiveness" (Krasovec, 14). The nature of the punishment, especially in the four stories of the primeval cycle, is related to diminishing life or an approach to the sphere of death (e.g., expulsion of Adam and Eve from the garden). Death can be understood as separation from God and also as cessation of physical life. The verdict of physical death is both written over the sinful pre-flood generation and brought about through the deluge. Sin's negative consequence is graphically illustrated in the life of Moses, who because of disobedience forfeited entry into the Promised Land (Deut 32:48-52).

For outrageous sins, the Mosaic law prescribed the physical penalty of death (Ex 21:15-17; Lev 20:10-16; 24:10-17; Deut 21:18-21); the link between sin and death is also noted elsewhere (Num 18:22; 27:3; Deut 24:16). Most of the sixty occurrences of the combination *ḥt* ("sin") and *māwet* ("death") are found in the Pentateuch (e.g., Ex 10:17; Num 18:22; cf. Luc, 2.89). A striking example of the punishment following at once on sinful action occurs in the story of Israel's yoking itself to the Baal of Peor, for at the Lord's command the perpetrators were impaled and killed (Num 25:1-5; cf. Phinehas's execution of a sinning couple, Num 25:6-9).

4.3. The Effect of Sin on Human Community. Sin disrupts family and community harmony (*šālôm*). Thus Scripture records blame-shifting between spouses (Gen 3:12). The anger of those sinned against must be factored into a sin's consequence (e.g., Esau, Gen 27:45; Potiphar, Gen 39:19; Joseph, Gen 44:18). Sin can bring fractures into the family and clan, as in the story of Joseph and his brothers (Gen 37—50). Knierim (1965, 57-58) expands on the notion that *ḥt* has an adverse effect on community bondedness (cf. Gen 42:22). Some see hierarchy and patriarchy resulting from human sin. Sin destroyed the collegiality of sibling leaders (Num 12:1-15). The effect of one person's evil, especially that of a leader, can bring havoc to large numbers (e.g., Pharaoh's sin of resisting God and the resulting death of the firstborn in Egyptian families, Ex 11:4-10). The sin of unbelief, triggered by the evil report of the spies, sent an entire community into a spiral of discontent and eventually into a desert trek of forty years (Num 14:32-35).

Likewise, violations of the Ten Commandments resulted in Israel being exiled (cf. Freedman, Geoghegan and Holman). Sin destroys family and communal solidarity. In the words of C. Plantinga (7-27) sin is the "vandalization of shalom."

4.4. The Effect of Human Sin on Nature. The first biblical narrative of sin already plots the effects of sin on creation. As falling dominoes or bowling pins bring down others, so the sin of Adam and Eve spills over to affect the environment. "Sin was an event in the realm of the human spirit, but it has its repercussions in the whole of creation" (Milne, 3.1457). Now the earth is disempowered from bearing food in abundance; a divine curse on it makes food-gathering laborious (Gen 3:17-19). Pharaoh's resistance to God's command brings on the plagues, almost all of them within the realm of nature. Sinful actions such as disregard for divorce regulations defile the land (Deut 24:4). As Knierim (1995, 452) notes: "It [creation] is also the criterion by which sin can be diagnosed in the deepest sense of the word; it is the violation of the totality of creation and the presence of God in this totality." Prophetic literature reinforces the understanding that human sin brings negative effects on the natural environment (e.g., Hos 4:1-3).

5. Theological Issues Related to Sin.

5.1. The Origin of Evil. While the question of the origin of evil is often asked, answers from Scripture are not readily available beyond the narrative of how sin entered the human race (Gen 3). As for Adam and Eve, sin entered from the outside: the incentive to do wrong was injected from the external world. The story of Genesis 3 in which a contrary action to God's command is proposed by the serpent seems almost deliberately to put the answer to the question of sin's origin out of reach. The serpent, as a biological snake, is almost certainly the mouthpiece of "another." That Satan is later known as the "serpent" is telling (Rev 12:9; 20:2), but D. Bonhoeffer's (70) comment on Genesis 3:1-3 bears pondering: "We would be simplifying and completely distorting the biblical narrative if we were simply to involve the devil, who, as God's enemy, caused all this. This is just what the Bible does not say, for very definite reasons." Clearly matters stand quite differently on this question for Cain, for whom sin is not an encroachment from without but an impulse to be mastered.

The expression “sin lurks at the door” (Gen 4:7) is not to be taken as a reference to a demon. Humans were not created as sinful beings; they became sinful. Their freedom of choice must be acknowledged; there is no indication of compulsion other than that of personal desire.

From later writings, especially the intertestamental ones, where the predeluvian story of Genesis 6:1-8 takes center stage, the answer to the origin of sin points to heavenly realms. Some exegetes, by interpreting Isaiah 14 and Ezekiel 28 mythically rather than historically, then posit the origin of evil to be with the angel Lucifer, or Satan. Gnostics in the early Christian centuries speculated about a god whose lesser emanations resulted eventually in an evil deity. To the extent that any such explanations for the origin of evil champion the view that evil has its origin outside human persons, they are in agreement with the Pentateuch. But either of the above views are specious. The first five books give no answer to the question of the origin of evil other than it is an invasion from without.

5.2. The Pervasiveness of Sin. “That a bent towards sinning does affect all humankind, and that it cannot be isolated as belonging to any one part of the person, has been agreed on all sides, or nearly so, in the twentieth century” (Blocher, 19-20). The gist of the biblical material is that laterally sin extends to all human beings and that it has contaminated every possible relationship in which humans express themselves.

That sin so pervaded human experience as to make no one exempt was the assumption of ancient Middle Eastern peoples. In this vein an Akkadian incantation asks: “Who is there who has not sinned against his god? Who that has kept the commandment for ever? All humans who exist are sinful.” A similar refrain is heard in the following: “Mankind, as many as there are, which one of them comprehends his faults? Who has not transgressed, and who has not committed sin? Which one understands the way of the god?” (quoted in Cover, 6.32, 33).

Echoes of the same sentiment can be found in Scripture (Prov 20:9; Eccles 7:20). The person, represented in the ancient worldview by the “heart,” is shot through with evil (Jer 9:17). Sin is endemic to humanness (Jer 13:23). Sin is a universal phenomenon. It has become part of human experience. The same assumption is found in Genesis when God declares that humans are

characteristically sinful (Gen 6:5, 12; 8:21; cf. 1 Kings 8:46; Ps 143:2). Desires may be evil (Ex 20:17); actions can readily be so identified. The reach of sin extends to thoughts, words and deeds. Sin, with its resulting confusion and discord, is pervasive.

Seen another way, sin potentially damages every conceivable relationship into which humans enter or have been placed. The primeval history bears out this conclusion. Sin is against God (so Adam and Eve, Gen 3); sin affects relationships within the family and others generally (so Cain, Gen 4); sin wreaks havoc in the realm of nature’s order (so the pre-flood generation in their sexual deviations, Gen 6:1-3); and sin mars cultural advances (illustrated in the misuse to which the technology of brick-making was put, Gen 11:1-9). To speak of depravity does not mean that every relationship is necessarily totally depraved, but it does mean that sin has the potential to rupture every significant relationship.

5.3. Gradations of Sin. There are gradations of sin, as indicated by the kinds of threatened punishments. For some sins the consequences are material calamities (e.g., Deut 28:30-31); for others a person is cut off from the community (Ex 12:15); for still others the result is death (Num 16:23-33). Certain sins, such as those in full contempt of God (“sins with a high hand,” Num 15:29-31) are punished more severely than others. Just as there are gradations of holiness (e.g., the gradations of holy places in the tabernacle), so some sins are more grievous than others (cf. “great sin” in Ex 32:30). The distinction between ethics and etiquette (so van der Toorn) is only partly helpful, since violation of purity and food laws are not necessarily less serious than ethical violations. That the criteria for kinds of sin are not readily discerned does not gainsay the distinctions the Bible makes (cf. Wright, 152-53, whose terms for graded affinities of impurity are “tolerated impurities” and “prohibited impurities”).

5.4. Original Sin. “Original sin means that a nexus of sin embraces all people without exception” (Bromiley, 4.519). The teaching about original sin is not about the origin of sin as such but about inherited sinfulness. Discussion of the issue is often more philosophically and psychologically oriented than biblically oriented. The Scripture makes assertions but does not explain how it is that after Adam and Eve all have

sinned. Cain and all those subsequent to him—the entire human race—have a bent toward evil, to use the words of Luther, or an “evil impulse” (*yēšer ra*^c; cf. Gen 6:5), according to Judaism. Christian teaching on this subject has drawn on the Psalms (e.g., Ps 51:5 [MT 51:7]; 58:3 [MT 58:4]). Some have inferred from the sacrifice ritual required for the mother after the birth of a child that from the first the human newborn is tainted with sin, “a sinfulness that adheres to nature as it is transmitted” (Blocher, 27; Lev 12). Amplification of that teaching belongs to the province of a systematic/dogmatic theology (see Blocher, 17: “This book [on original sin] will be an exercise in dogmatics”; for other “systematic” discussions, see Murray; Berkouwer).

5.5. Process of Temptation to Sin. Bonhoeffer (115) claims that there are strictly speaking only two temptation stories in the Bible: one about the first human and the other about Christ. A sketch of the temptation process using the story of Adam and Eve as prototypical would include the following elements. (1) A circumstance arises whether through a tempter or otherwise that challenges one’s commitment to do the right. The serpent planted an idea by raising a “religious question” (Bonhoeffer, 72) and insinuating that God was withholding something good. The enticements to do wrong may come from without, or they may be generated from within. (2) A desire is aroused; rationalization ensues. Eve was enticed; the serpent not only denied that wrongful action would have bad consequences but suggested that something was to be gained by acting on what was prohibited. The proposal prompted calculation and rationalization. (3) The person entertains the possibility of transgression. For Eve this consideration focused on what might be beneficial in the short run without giving thought to long-term consequences. (4) The individual acts in disobedience to the command.

If one asks where in this sequence the sin was committed, the common answer is that it lies in the overt action. Even if the act of eating constituted observable disobedience, one cannot fail to notice that the mooring of Eve’s commitment was already loosened earlier, certainly by stage 2, where rationalization left an opening for further considerations. Sharp issue must be taken with H. S. Kushner (31), who writes of Eve’s act: “Eating from the Tree of Knowledge . . . was one of the bravest and most liberating

events in the history of the human race.”

Situations teasing or plummeting persons into wrong behavior vary. For Cain, the trigger toward sinful action was personal hurt when slighted. The story of the tower of Babel (Gen 11:1-9) lends some support to a sage’s observation that “civilization is built and destroyed by discontent.” Impatience and a longing for visible security led Israel to make a calf, a substitute for God. Promptings to do the wrong thing can come from within the person or group; sometimes a confluence of circumstances galvanizes the will for evil action, as with passing merchants in the story of Joseph’s brothers (Gen 37:25-28). Numerous are the paths by which one is led to the precipice of doing evil: “The serpent is *with us* in the world, *without us* in the world, and *within us* in the world” (Fishbane, 23, italics his).

5.6. Dealing with Sin and Guilt. The Pentateuch, if not the entire Bible, can be conceptualized around the problem of sin and how God deals with it and its consequences. Much of Deuteronomy is a warning against sin, which is to be avoided. When wrongdoing occurred, the Israelite congregation could acknowledge and confess its guilt. When evil was discovered within the community, God’s instruction was for it to be removed (Deut 13:5; 17:7, 12; 19:19; 21:21). Though God administered punishment, he would at least sometimes, as with the raised bronze serpent, provide a way of escape (Num 21:8).

An individual had several choices once a sin had been committed. One could resort to further sin, such as deceit or cover-up (the course of action taken by Joseph’s brothers, Gen 37:31-35), or one could offer excuses (Aaron, Ex 32:23), shrug it off or deny knowledge of it (Cain, Gen 4:9). God prescribed repentance (Deut 30:1-3) and also restitution (Num 5:5-7). Reconciliation between offenders and victims was possible (cf. Jacob and Esau; also Joseph’s brothers and Joseph). Failure to avail oneself of the means for removing sin, however, meant bearing the full weight of sin’s punishment (Deut 28:20-68; 30:17-18).

But God also forgives, as enunciated by God himself (Ex 34:7) and as illustrated in his forgiving Israel in response to Moses’ prayer (Deut 33:17). Accessibility to that forgiveness came through prescribed rituals of purification and compensation offerings (Lev 4:1—6:7). The

word *ḥaṭṭāʾt* can mean both “offense” and “purification offering.” Thus Leviticus 4:3 states, “If it is the anointed priest who sins, thus bringing guilt on the people, he shall offer for the sin [*ḥaṭṭāʾt*] that he has committed a bull of the herd without blemish as a sin offering [*ḥaṭṭāʾt*] to the LORD” (NRSV). The sense is that purification results in “desinning” (cf. the English “deice,” “decontaminate,” “detoxify”), by which the condition described is negated. Even more pertinent to the double use of *ḥaṭṭāʾt* is the English idiom “to dust” the furniture, which means not to place dust but “to remove” the dust. That the meaning of *ḥaṭṭāʾt* has both to do with sin and the removal of sin through sacrifice (*ḥṭ* in the Piel) connects closely the action and the possibility of its forgiveness.

6. A Theological Summary of Sin.

6.1. Core Notions. Core notions about sin crystallize in the story of the golden calf (Ex 32–34) more so than in the Adam and Eve story. The latter is not mentioned elsewhere in the OT, unless one reads Hosea 6:7 as referring to a person rather than a place. Blocher (42–48), however, finds several OT texts that he regards to be echoes of “the fall.” By contrast, the golden calf story is referred to in both Testaments (Deut 9:8–14; Neh 9:16–21; Ps 106:19–25; Acts 7:39–42; 1 Cor 10:7). W. Janzen (410) notes, “The golden calf story is not simply one of the many biblical accounts of human sin. It is in the story of Israel as a covenant people what the Fall (Gen 3) is in the story of humankind: an act that defines Israel’s character as rebellious, just as the Fall defined humanity’s persistent tendency as rebellious.” The Tannaitic writers regarded the incident of the calf as a “model for a study of sin and atonement” (Mandelbaum, 219). The two incidents are alike in that in each case (creation; exodus and covenant) God acted in grace and then gave a command. In both cases the command was disregarded. Each was a sin of idolatry, a replacement of God, whether by an object or by oneself.

From these stories, as well as from vocabulary and metaphors (see 3 above), one may observe sin in two dimensions. First and quite obvious, sin is disobedience to the express command of God (i.e., not to eat of the tree; not to make images). Those who sin defy set boundaries. Humans are made in the *image of God but chafe at the boundaries this sets for them

and want to be more than or “other than.” They overreach, as did Eve and the tower-builders. As M. Fishbane (32–33) suggests, the preflood generation also reached for divinity, but through sexual intercourse (Gen 6:4). The vocabulary for sin, especially the terms *ḥaṭṭāʾt* and *raʿ*, reinforce the understanding of sin as flagrant disobedience to an instruction that sets limits.

A second dimension of sinful behavior, even more fundamental than commandment breaking, consists in affronting a personal God, as illustrated in the calf story. God is offended and reacts in wrath and outrage, symptomatic of deep hurt. God’s displeasure is fierce, indeed so intense as to bring on a resolve to destroy the very people whom he has redeemed and with whom he has just concluded covenant (Ex 32:10). Such expressive, emotional reaction is to be explained not by someone’s disobedience of some impersonal statute but by the insult of in-your-face rejection. Entwined in this set of behaviors is ingratitude, suspicion of God’s capacity to deliver and basic distrust. Sin is indeed tied to law, but it is more closely tied with the law-giver. Sinful actions at their core represent rebellion against God, as represented by the terms *pešaʿ* (“breach, rebel”) and *rāšāʿ* (“wicked”). Sin is an offense against God’s lordship. “Sin is the revolt of the human will against the divine will” (Koehler, 170). Unbelief is sometimes said to be the root of sin, but D. Doriani pointedly remarks that sin is a “relationship of opposition. . . . [Sin] has no program, no thesis; it only has an anti-thesis, an opposition” (Doriani, 738–39).

6.2. Consequences. The calf-idol incident, like the garden story, demonstrates that sin has dire consequences. In the former, God is offended, even outraged (Ex 32:10). Though in the Eden story the reaction of the Deity is at first more benign, the story ends with God banishing the first couple from Eden and cherubim brandishing flaming swords. Sin strikes at the Deity and inflicts hurt and arouses anger; retribution follows.

As for the sinning agents, an initial consequence is that they are severely alienated from God and others, and placed at once into the status of “guilty.” Since it is a given that sin cannot go unpunished, a devastating plague follows the calf incident (Ex 32:35). In the garden also, alienation occurs: there is blame-passing between spouses, soon there is fratricide, and before long dispersion and confusion of lang-

uages (Gen 11). Sin is subversive of the relationships that God intended for family and for society. Sin's consequences also extend to the world of nature. Sin confuses, sin disrupts and sin destroys.

6.3. Solution. In the Pentateuch penalty and punishment are not the last words. There is a divinely appointed solution to the human predicament of sin. Following the calf-idol incident, Moses becomes the intermediary asking that God relent and not take extreme measures of punishment (Ex 32:14). Intercession, like sacrifice later, bridges the distance brought on by sin. God's readiness to forgive is emphasized in the doxology of forgiveness (Ex 34:6-7; cf. Moberly 1983). God's provision of forgiveness through sacrifice is elaborated in Leviticus. Atonement arrests the consequences sin brings (Num 16:46). The outworking of the solution to the human predicament of sin is the subject of salvation history, which culminates in Jesus and his redemptive act of atonement.

SLAVE, SLAVERY

Slavery is a condition acknowledged in the Pentateuch in which a person is deprived of freedom, at least for a period of time, by being in subjection to a master in order that the master may benefit from the labor of the slave. Slavery may be involuntary, in which case the slave is generally considered the property of the owner and, as such, may be bought and sold. In pentateuchal legislation, involuntary permanent slavery applies only to non-Israelites. Slavery may also be voluntary for Israelites, such as when they agree to work for fellow Israelites for a limited period of time to pay off debts or to survive poverty and destitution. But, because God brought the Israelites out of slavery in *Egypt to serve him alone as master, they are forbidden to bring fellow Israelites into a condition of permanent slavery, as was the case in the rest of the ancient Near East. Permanent slavery is permitted only for a Gentile in subjection to a Hebrew. The Israelites' identity as people redeemed from slavery has direct implications for the forms of slavery that existed in Israel and their treatment of their slaves, both Gentile chattel slaves and Hebrew bondservants.

1. Slavery in the Ancient Near East
2. Slavery as a Historical Condition in the Pentateuch
3. Slavery Within Israel

1. Slavery in the Ancient Near East.

Slavery was a common feature of ancient Near Eastern societies. Generally all subjects of the ruler, including his important officials, were considered his slaves or servants. The social condition of slavery, in which a person's labor was bound to a master, consisted in two main social groups. Chattel slaves were considered under law moveable property of their masters, to whom the slaves had only duties and before whom they had no rights. Because such slaves required a great deal of supervision and were costly to maintain, they were used primarily for domestic work. Such slaves could attain some degree of social improvement. With their masters' approval, they could possess their own property, engage in economic activity, purchase other slaves, hire free persons and marry free individuals. They could even attain their freedom if their masters agreed to this possibility. All such attainments could be withdrawn by the decision of their masters.

The most common kind of servitude was forced labor, or tenant farmers. People in this condition required much less supervision and training. Their labor consisted of farming the land that belonged to the ruler and the religious institutions and performing other forced labor for the authorities. They were required to give most of the harvest of their crops to the palace or the temple to provide labor for building projects and to produce other products for their masters. The slavery of the Israelites in Egypt consisted of this kind of servitude (Ex 1:11-14).

2. Slavery as a Historical Condition in the Pentateuch.

The historical narratives of the Pentateuch contain a number of references to slaves. *Abraham (Gen 12:16), *Isaac (Gen 26:19) and *Jacob (Gen 30:43) have slaves. Their wives have female slaves (Gen 16:1; 30:3). Abraham sends his chief servant to Abraham's relatives to get a wife for Isaac (Gen 24). *Abimelech, a Philistine, has slaves (Gen 20:14), as does *Pharaoh and his daughter (Ex 2:5; 9:20). *Joseph is sold by his brothers as a slave to Midianite traders (Gen 37:28) and is bought by Potiphar in *Egypt (Gen

39:1). The existence of slaves in the ancient Near Eastern nations is mentioned in a number of passages in the Pentateuch, indicating that slavery was a common occurrence (Ex 11:5; Lev 25:44-45; Deut 23:15-16). The condition of the Israelites in Egypt is described in the early chapters of Exodus as slavery (Ex 2:23), and God reminds the Israelites on numerous occasions that he brought them "out of the land of Egypt, out of the house of slavery" (Ex 20:2; Deut 5:6; 8:14).

Several of the characteristics of slavery in the ancient Near East are reflected in the history and legislation of the Pentateuch. First, slaves are usually foreigners, mainly prisoners of *war. If a town surrenders to the Israelite army, its people are to serve the Israelites as forced labor; if not, the Israelites are allowed to take the women and children as booty—that is, as slaves—from its vanquished inhabitants (Deut 20:10-14). Laws in Leviticus indicate that the Hebrews are only to have male and female slaves from the nations around them or from the *aliens residing among them. Their slaves are not to consist of their fellow Israelites (Lev 25:44-46).

This may appear to be contradicted by the fact that the Hebrew terms for "slave," whether male (*ʿebed*) or female (*ʿāmā*), are used for Hebrew slaves (Ex 21:2; 21:7) and for non-Hebrew slaves (Lev 25:44), but these terms have a wide range of meaning in the Pentateuch and should not always be understood in the specific sense of a chattel slave. For example, the term *ʿebed* is used to designate people as servants of the Lord (Ex 32:13), to refer to rulers' subjects and officials (Gen 21:25; 40:20), to designate oneself in humility before fellow humans (Gen 33:5) and to refer to oneself when addressing God (Ex 4:10). Thus, the meaning of the word must be determined by the context in the light of the term's range of denotations. It is clear in the various contexts in Exodus, Leviticus and Deuteronomy that there is a distinction between the "slavery" to which Hebrews and non-Hebrews are subjected. The use of the terms *ʿebed* and *ʿāmā* for Israelites should not be cause for interpretive confusion.

A second characteristic of ancient Near Eastern slavery reflected in the Pentateuch is that a slave does not have the rights of a free person; he or she is "the owner's property" (Ex 21:21). As such, slaves may be left to one's children as an inheritance (Lev 25:46). If a male slave gains

his freedom but has married a female slave while serving his master, he cannot take his wife and children with him into freedom; the woman and her children remain as the master's property (Ex 21:2-4). If one's ox gores a slave to death, one is required to pay the slave's master an amount of money, likely the value of the slave (Ex 21:32). In contrast, if one's ox gores a free Hebrew to death, the penalty is death (Ex 21:28-31). Third, slaves can be granted considerable responsibility by their masters, overseeing their masters' wealth, business and other slaves. Two examples of this are Joseph in Potiphar's household (Gen 39) and Abraham's chief servant, likely Eliezer (Gen 15:2; 24:2), both of whom are placed in charge of all of their masters' possessions. In Genesis 24 Abraham sends his chief servant to his relatives to find Isaac a wife. Although the slave is the servant of Abraham, he is the full representative of Abraham in this task. He is granted responsibility to use Abraham's riches for gifts, to discern God's guidance in pursuing his task and to make the final decision on Isaac's wife.

3. Slavery Within Israel.

Even as the Pentateuch reflects many common features of slavery as found in the ancient Near East, it also presents some unique features of Israelite slavery.

3.1. Israel's Identity as Freed Slaves. The people of Israel are portrayed in the early chapters of Exodus as oppressed "with forced labor" (Ex 1:11) by the taskmasters whom Pharaoh sets over them to build supply cities for Pharaoh. Their lives are made bitter "with hard service in mortar and brick and in every kind of field labor" (Ex 1:14). God hears their cries of suffering and responds with mighty acts to bring them out of Egypt (Ex 3:7-10), so that they may serve him as their divine master.

Consequently, the Israelite identity is constantly described in the Pentateuch as those who have been delivered from slavery so that they are free to serve God. This stands in contrast to many other ancient Near Eastern nations, where the people were defined as subjects of their king whose rule was mythologically grounded in the gods or who had some political right to lord it over them (e.g., in Gen 47:13-26 the Egyptian people became slaves of Pharaoh in exchange for food during the famine). God defines the Hebrew identity by his mighty acts of

redeeming them out of slavery in Egypt and bringing them into a relationship with him: "For to me the people of Israel are servants; they are my servants, whom I brought out of the land of Egypt: I am the LORD your God" (Lev 25:55).

The Israelites' identity—consisting of their redemption by God from slavery in order to serve him—has direct implications for the condition of slavery permitted in Israelite society. First, it means that they are never again to become slaves of fellow humans. Israelite society must consist of free men and women. Although an Israelite may be temporarily forced to take on the status of a slave, he or she must not be treated as one. Impoverished Hebrews who have to sell themselves into service to fellow Israelites for survival must not be made to serve as a slave (*ʿebed*), but as a hired servant (*šākīr*) or bound laborer (*tōsāb*; Lev 25:39-40). The same position is understood for a Hebrew sold into service to a resident alien (Lev 25:47-55). This is why kidnapping a Hebrew for the purpose of selling him or her into slavery is a serious crime, punishable by death (Ex 21:16).

Second, the Israelites' bondservant to others shall only be for limited duration; it must end after six years, or in the Jubilee Year. Israelites can become permanent bondservants of other Israelites only if they make the decision themselves. The two situations described where this occurs are: (1) after six years of service a man does not want to leave behind the slave woman he has married and their children because he loves them and his master (Ex 21:2-6); and (2) the Hebrew loves his or her master and the master's household, with whom he or she has prospered (Deut 15:16-17). The expression of love for the master in both cases indicates good treatment of the slave by the master. In these instances the slave is designated as a slave for life by the master's piercing of the slave's earlobe with an awl.

If a Hebrew man has to sell himself as a bondsman to an alien living in Israel, family members have the right to pay for his freedom at any time during his service. Alternatively, if he prospers he has the right to purchase his own freedom. If he is not redeemed, he and his family must go free in the Jubilee Year (Lev 25:47-55). There is no mention of the possibility for a Hebrew to choose permanent service to resident aliens.

Third, Israel's identity as liberated slaves means that the Israelites should show generosity

toward the poor and unfortunate among them so that they can provide for their own needs and not have to sell themselves into slavery to survive. In the three main passages where instructions are given for Hebrews' entering into slavery to another (Ex 21:2-11; Lev 25:39-43; Deut 15:12-18) the causes of this decision are personal impoverishment, often evident in the inability to pay back debts. Pentateuchal prescriptions are meant to mitigate the causes of and need for such bondservice. Resident aliens, *orphans and *widows are not to be abused, oppressed or deprived of justice. When money is lent to the poor, they are not to be charged interest. (Elsewhere in the ancient Near East exorbitant interest rates on loans were the chief cause of people being sold into slavery; *see* *Wealth and Poverty*.) Food or other necessities are not to be provided for the poor at profit (Ex 22:21-27; Lev 25:35-38). The Israelites are to leave the gleanings of their harvest for the aliens, orphans and widows among them (Deut 24:17-22). In addition, when Hebrew bondservants are freed after six years, their masters are to send them out with abundant provisions from the bounty of livestock and harvests with which God has blessed them. This not only provides the newly freed persons with the provisions that will keep them from future enslavement but also makes their choice of the option of permanent slavery under their existing master less likely (Deut 15:12-15). In all of these exhortations we find appeals to the Israelites to remember that they were slaves in Egypt and that God redeemed them from that condition of bondage. God promises blessings for those who help the weak and poor among them (Deut 15:18).

3.2. *Israel's Treatment of Slaves.* Israel's identity as slaves freed to serve God has a direct bearing on their treatment of slaves, both permanent chattel slaves and fellow Hebrews in bondservice. The treatment of chattel slaves indicates that these slaves are considered human beings. Male slaves are to be *circumcised so that they, along with the female slaves, may participate in the Passover meals (Gen 17:13; Ex 12:44), and in the other ceremonial expressions of worship (Deut 12:18; 16:10; Lev 22:11). Slaves must be given rest on the *sabbath (Ex 20:10; Deut 5:14). In contrast to the laws of other ancient Near Eastern nations, slaves who flee their owners and come to Israel are not to be returned to their masters, nor are they to be op-

pressed, but they are to be allowed to live wherever they please (Deut 23:15-16). If an Israelite man desires to take a non-Israelite captive woman as his wife, he has to allow her a month of preparation and mourning for her parents before he marries her. Subsequently, if he becomes dissatisfied with her, he may not sell her as a slave but must allow her to go free (Deut 21:10-14).

The slave's personal dignity is also evident in the prescriptions concerning personal injury (Ex 21:20-27), since the punishments for mistreatment are meant to restrain the abuse of slaves. When a master's discipline of a slave results in the latter's death, the owner is subject to punishment. If the slave survives the discipline, even if incapacitated for a day or two, there is no punishment to the master. If the discipline results in permanent injury to the slave, such as the loss of an eye or a tooth, the slave must be set free. Clearly, the personal rights of slaves override their master's property rights over them.

As previously noted, Israelites who must sell themselves into bondservice (because of personal impoverishment or inability to pay a debt or a fine) are not permitted to be treated like foreign slaves. They may not be sold as chattel slaves to other masters. Their time of service to fellow Israelites is limited to six years, and to resident aliens it is limited to the Jubilee Year. In the latter case, they may be redeemed by a relative at any time during their servitude. Israelites may enter into a condition of permanent servitude only if they choose so because of love for the master or for a slave wife and children.

In the situation where a father sells his daughter to another man (Ex 21:7-11), concern for the *woman's rights and dignity predominates. This transaction is best understood not as the purchase of a concubine but as the purchase of a wife for either the master or his son, where the woman's father cannot afford a proper dowry. It may well be that the woman is "bought" at an age several years before she is to be married, allowing for a lower purchase price and for her integration into her new household "as a daughter" (Ex 21:9). This establishes a permanent husband-wife relationship characterized by love and intimacy. This also explains why such a woman does not go free after six years. The master must retain her as a wife or allow her to be redeemed by her family; she may

not be sold to foreigners. If her husband takes another wife, he must not reduce his provision of food, clothing or marital rights for his first wife. If such reduction occurs, he must let her go without any debt, that is, without any requirement that she or her family repay the purchase price.

There is some uncertainty about how to reconcile the differences in details between the three prescriptive passages concerning the bondservice that impoverished Israelites enter (Ex 21:2-11; Lev 25:39-43; Deut 15:12-18). The Leviticus passage refers to a Hebrew working for the resident alien until the Jubilee Year, whereas the Exodus and Deuteronomy passages refer to the Hebrew working only six years. Exodus mentions only a male Hebrew entering service and his inability to take his servant wife and their children with him when freed, whereas Deuteronomy mentions both male and female Hebrews entering six years of service, and Leviticus indicates that bondservants and their families are set free in the Jubilee Year. A number of solutions have been proposed by scholars, none of which is without its problems. Perhaps the best solution is to view these civil prescriptions as having been drawn up to address peoples' difficulties in different situations. Depending on the problems that Israelites faced in these varied situations, one of these three civil prescriptions would take precedence over the others. It is certainly not problematic to allow for a range of civil legislation dealing with a diversity of social circumstances. Every code of civil legislation has some degree of variety that calls for legal interpretation and application to specific cases.

What is clear in the various pentateuchal passages on slavery is the following three principles. (1) All humans, even slaves and bondservants, have rights and privileges under the *law and before God. (2) Slavery and bondservice are preferable to poverty and destitution, especially when one has a good master. Pentateuchal prescriptions allow men and women to escape poverty and provide means of recovery of economic prosperity. (3) *Family is important and must be maintained even in the condition of poverty and bondservice. One remains properly related to the broader society by being part of a family. Bondservice can provide a new family for the male servant and the purchased female bride. If it is a loving and caring family, it not only ensures economic security for male

and female servants but also integrates them into a new household in a life of service to and fellowship with the God who has redeemed his people out of the house of slavery.

SOCIAL STRUCTURE

Thanks to the recent increase of multidisciplinary approaches to the study of biblical archaeology and history, scholars have come to realize that biblical history took place in a social as well as a political context. Therefore, a full understanding of what was going on historically in the biblical world requires some awareness of the ancient social structures that provided the framework for the activities that were undertaken by biblical peoples.

1. Terminology
2. Types of Social Structure

1. Terminology.

The first step toward a better understanding of the nature and development of social structure in the OT is to determine what terminology is appropriate for describing ancient social structures and their development. For example, what is meant when ancient Israel's social organization is described as a "tribe," "state" or "nation"? Are these terms even appropriate? Anthropologist A. Kingsnorth helps focus the problem by explaining:

Certain common words in English, along with their Latinized or Greek origin, explicitly coined forms, have been adopted by anthropology as technical terms to describe specialized phenomena. . . . While anthropology can claim no monopoly on the words: rank, lineage, segmentary, tribe, class, state, stratified, prestige, integration, acephalous, intensive agriculture, etc., when those words come to be used loosely or in a private, personal sense by archaeologists from the nonanthropological traditions for issues related to anthropological ones, they unwittingly introduce a source of confusion. (Kingsnorth, 108)

Kingsnorth's comments accurately portray the situation that has developed among many bibli-

cal scholars. While many such scholars are interested in the origin and development of the social structures of biblical peoples, most have been trained in nonanthropological disciplines and have thus appropriated different understandings about what certain sociological terms mean.

This is not to say that a biblical scholar's understanding of these terms is necessarily wrong and that they should not be used. It is certainly the prerogative of any scholar to use the terminology they feel best conveys their ideas. However, if effective, meaningful communication with scholars from other disciplines is desired, it is—at the least—helpful to explain what is meant by the terms biblical scholars use and why these terms were chosen.

As is evident from Kingsnorth's statement, quoted above, most of the words biblical scholars have employed to discuss ancient biblical societies have been assigned fairly specific meanings by disciplines such as sociology and anthropology that are specifically interested in studying social organizations. This includes terms such as *tribe* and *state*. Although different academic disciplines, such as political science, have different ideas about what these terms mean (Tapper), it might be useful for biblical scholars to find out what social scientists and anthropologists mean when they use these terms. Then they can choose to either adopt these meanings or to explain why they don't.

2. Types of Social Structure.

2.1. Anthropological Categories of Social Structure. In anthropological usage, "tribe" and "state" are generally understood as two of the four basic categories by which anthropologists attempt to classify all societies. Originally proposed by E. Service (who built on earlier ideas), the four categories are "band," "tribe," "chiefdom" and "state." Although the use of these categories has recently been criticized and should not be understood as depicting a simplistic, four-step social evolutionary trajectory through which all societies pass (cf. Yoffee; Kingsnorth), most anthropologists appear to believe that these terms still "provide a useful vocabulary for variations in [social] organizational form and in trajectories of developmental change" (Rothman, 4; see also Earle, 280). That is, these terms can provide a useful framework or control when attempting to describe and compare the nature

and development of social structures crossculturally. As Kuhn points out, most anthropology and archaeology textbooks tend to reflect the state of the field as the conservative majority view it and still prefer to categorize societies according to this scheme (e.g., Ember and Ember, 369-76; Thomas, 356-57; Wenke, 282-85; Renfrew and Bahn, 154-57). For convenience, the descriptions of these four categories provided by Renfrew and Bahn (154-57) will be followed.

Bands are generally understood to be small-scale societies of related individuals (less than 100 people) who are usually semi-nomadic hunters and gatherers. They are egalitarian and lack leaders (Renfrew and Bahn, 154).

Tribes are egalitarian, multi-community societies integrated through kinship. Economy is usually based on agriculture and pastoralism rather than hunting and gathering.

Chiefdom societies are still organized around kinship, but people have unequal or "ranked" positions within the sociopolitical organization. That is, people obtain their position by ascription (birth). A common component of a chiefdom economy is the accumulation and redistribution of goods by the chief.

States typically display a significant amount of ethnic plurality or social differentiation (Kamp and Yoffee, 87); there is a diminished to nonexistent role for kinship relations within the central political bureaucracy; often religious and political authorities are separate; they may maintain a standing army; and a significant amount of the population is usually settled in urban centers which function within a pronounced settlement hierarchy, usually three-tiered (cf. Renfrew and Bahn, 156, 157). All in all, state-level societies are understood to represent the most complex level of social organization.

One danger in using this four-stage terminology is that it can create the impression that the boundaries between these four categories of social organization are easily discernible, mutually exclusive and that all societies can be classified as one of these four. However, recent ethnographic work shows that not all societies can be so neatly pigeonholed into one of these four categories, nor is it impossible that within a given complex society more than one of these structures may be discerned at the same time. Indeed, there are many modern state-level societies that not only exhibit the main charac-

teristics of a state as listed above, but within which also exist parallel social structures that are more typical of chiefdoms or tribal societies. For example, the present Hashemite Kingdom of Jordan, which can be classified as a modern state in a sociopolitical sense, also maintains strong tribal structures that exist parallel to, within or "under" the state-level sociopolitical structures. Recent research into ancient polities suggests that similar complexity existed in ancient societies as well.

From the above discussion of social structures and typology one can see that terms such as *nomadic*, *pastoral society*, *kingdom* or *nation* are not really adequate or appropriate to apply to ancient peoples of the OT if the intention is to describe *social organization*. *Nomadic* is a descriptive term for a *residence mode*, which can be found in all four social categories, not just tribes. Similarly, *pastoralism* is a *subsistence strategy*, not a type of social organization, and can be found in all types of societies. Subsistence strategies can of course play a role in economics, especially when surpluses are created that can be used for trade. Terms such as *kingdom* are not precise with regard to social organization and need to be defined. *Kingdom* could apply to a modern state like Great Britain or a tribal kingdom that is organized along kinship lines such as exist in many places in the Middle East and Africa. The concept of nation is a fairly recent one that originated in Europe and then was applied globally. It does not really apply to ancient sociopolitical organizations at all, although biblical scholars frequently use it for the Hebrew word *gôy* or the Greek *ethnos* (Tibi, 132).

2.2. Archaeology and the Identification of Ancient Israelite Social Structures. In understanding ancient biblical social organizations, there is another pitfall beyond the use of appropriate terminology, and that is the assumption that ancient social structures can be archaeologically discerned simply by identifying a "trait-list" of archaeological remains that supposedly correlate with a certain level of social organization. For example, some scholars have assumed that the presence of monumental architecture, such as large public buildings and palaces, as well as large settlements with city walls and so forth, imply the existence of socially stratified complex societies, that is, states. Recent anthropological work has shown that, while state-level societies can possess these elements, so can less complex

societies. Thus, the presence of a “proto-ionic” capital (an architectural feature atop a column or pillar, found in places like Jerusalem and Ammon) does not by itself require a state-level society. At the same time, recent ethnographic research of modern tribal societies shows that kinship elements such as tribalism can exist within highly complex state-level societies. These findings suggest that getting at the precise nature of ancient biblical social structures is not as easy as earlier scholars assumed.

Nevertheless, careful study of biblical social terminology combined with analysis of the archaeological record within the framework of modern anthropological understanding can produce some insightful results. For example, a careful review of the terms in the Hebrew Bible reveals quite a bit of information about ancient Israel’s family structure (see Family Relationships). The expression “tribes of Israel” is, of course, a familiar expression to any reader of the OT. However, this is just one of several social organizational expressions that reveals a rather sophisticated kin-based social system. The smallest family unit was the individual, or the individual household or nuclear family (Heb *geber*). Beyond the individual or nuclear family unit was the *bēt ’āb* (“the house of the father”) or the *bayit*, the family “lineage.” The next level was known as the *mispāhā* (extended family or clan). (For some scholars there is little difference between the lineage and the clan.) The next level would be the *šebet* or *matteh* (“tribe”). Finally, there are several terms for the highest and most inclusive levels of family/societal organization, including *‘am* (“people”), *šibte yisrā’el* (“tribes of Israel”) or *bēnē yisrā’el* (“sons of Israel”).

Archaeologists believe they can identify this literary description of ancient Israelite social units in the archaeological record. The basic individual family house is equated with the pillared houses found throughout the territory of ancient Israel—sometimes called three- or four-roomed houses because of the number of rooms these houses typically possess. These houses usually consisted of a central open court with a dirt floor, with a long room on each side of the court and another broad room going across the back. It is thought that many of these houses had an upper floor over the three “exterior” rooms. Cooking and other activities took place in the open central courtyard, while animals

might be stabled in one of the side rooms. The other side room might contain wood, food or the equipment for various craft activities. The back room might have been for sleeping and living. In many Israelite and Judahite villages, clusters of these pillared houses have been isolated and appear to correlate with the *bēt ’āb*.

Examination of the construction of these house clusters suggests that as the family grew, new houses were added to the cluster—that is, as a son took a wife, he might build a new house close to that of his father’s original house. It is estimated that anywhere from ten to thirty people might occupy one of these house clusters. It is also estimated that up to three, and occasionally four, generations would be represented in these house clusters. That is, the typical *bēt ’āb* compound would house children, parents, grandparents and occasionally even great-grandparents. Each married couple lived in their own “pillared” house, but the house of their own children or parents were immediately and physically attached to their own dwelling. Passageways that connect these clusters suggest that there was a fairly free flow of the family members from one part of the compound or house cluster to another. Undoubtedly the wealth and resources accumulated by members of the *bēt ’āb* were usually shared by all. It is further believed that the several house clusters that make up the typical small Israelite village would generally correspond to the *mispāhā*, or clan.

Occasionally a *bēt ’āb* compound might become too crowded and some young man might decide to break off and establish a new house of his own. In this manner the house clusters did not grow too large, but the village nevertheless continued to grow. L. Stager estimates that there may have been as many as twenty *bēt ’āb* clusters in the village of Raddana, housing a population of as many as 200 individuals, probably all related. Similar house clusters have been found in other ancient Israelite villages, such as Beit Mirsim, Tell Far’ah (N), Tell en-Nasbeh, Tel Masos. Each settlement would undoubtedly be named after the leading family or patriarch of the clan.

Eventually even a village might have become too crowded or the resources in the immediate area too scarce to support the members of the village. In this case, a young man or men may have decided to move into the countryside and establish a new nuclear house or a series of nu-

clear houses that would grow into new house clusters and villages. The numerous small settlements, villages and towns in a given geographical region would naturally comprise the tribal territory. The growth of houses, house clusters and villages throughout Iron Age Israel, Ammon, Moab and Edom (1200-600 B.C.) has been well documented by archaeologists.

An important aspect of ancient tribal society was its *fluidity*. In brief, it was quite easy for individuals or smaller family units to join different families or tribes if there was some advantage to be gained. This could be through adoption or some statement of allegiance to the new family. Examples can be found from the time of Abraham (Gen 15:2-3) to that of Uriah the Hittite, who faithfully served Israel under King David (2 Sam 11), and into later periods. Beyond the individual level, larger units of tribal societies could form temporary or long-term alliances to deal with a common problem. This could work at the house, clan or tribal level. The ability of tribal societies to coalesce into larger entities, including supra-tribal entities, when the situation demanded can be seen to lie behind the union of the twelve tribes of Israel under a single king at the commencement of the monarchy.

With this brief background, what can be said of Israel's evolving sociopolitical structure through time? Combining textual, archaeological and ethnographic data with modern anthropological theory one can describe pre-monarchal Israel (patriarchal period and period of the Judges) as primarily a tribal or chiefdom type of social organization (some scholars have argued for combining the categories into "tribal chiefdoms"). In the earlier biblical period (patriarchal times) the residence mode was more semi-nomadic and the principle subsistence strategy was pastoralism. Because this type of residence mode is difficult to discern archaeologically, little can be said of the patriarchal or even the earlier time of the Judges from an archaeological perspective (scholars have differed over when to date these biblical periods, of course). However, in the immediate pre-monarchal period (time of the Judges), there is a discernible shift in Canaan's highlands to a residence mode that is more sedentary (small villages and towns), and the subsistence strategy moves from less dependence on pastoralism to an increase of intensive *agriculture. Most scholars identify these highland settlements as Israelite.

This trend of increasing sedentarization and intensive agriculture continues throughout both the time of the monarchy and the divided monarchy—pastoralism continues as a component, but intensive agriculture (including tree crops and vineyards) continues to increase, and larger components of the population are living in villages, towns and what might be called cities (although cities in ancient Israel were seldom on the scale of cities in Egypt and Mesopotamia). Anthropological analysis based on such things as ethnographic parallels indicates that during this time the Israelites were developing a more complex and sophisticated social organization. Saul and David's early careers certainly have the earmarks of complex chiefdoms as the Israelites attempted to establish a monarchy. The kin-based tribal component continued to play an important role in Israelite society.

It is during the time of the monarchy, especially during the latter part of David's reign and through the time of Solomon, that Israel's social structure appears to have reached its highest level of social complexity and might properly be described as a "state." Nevertheless, it is clear from both textual data and the archaeological record that the tribal element persisted within Israelite society. For this reason some scholars have suggested describing the monarchy as a "tribal state" or "tribal kingdom." Although Israel's power and prestige seem to have diminished after the dividing of the Solomonic monarchy, Israel and Judah did not revert back to a purely kin-based tribalism. Rather, once Israel accepted the concept of kingship, this remained an important aspect of Israelite society even after the breakup of the monarchy.

SOCIAL-SCIENTIFIC APPROACHES

Since the advent of *historical-critical studies of the Bible, new approaches have been introduced reflecting changes in literary analysis, *archaeological techniques and, most recently, the introduction of social-scientific methods and theories. The aim of social-scientific criticism, as a subfield of biblical exegesis, is to study the biblical materials as a reflection of their cultural setting. The meaning and the social background of the text are thus more fully illumined by the exercise of sociological and anthropological methods and theories. The era of modern social-

scientific research began in the late nineteenth century with the work of S. Freud, K. Marx, A. Comte and H. Spencer. Their work created an atmosphere of curiosity about the human condition and advanced the evolutionary perspective that had taken hold with the writing of C. Darwin. As sociology and anthropology emerged as separate sciences, scholars such as W. R. Smith and L. Wallis adapted their methods (at least comparative and functionalist perspectives) to Israelite history and culture. Despite this early start, there was a hiatus in the use of the social sciences (especially psychology, sociology and anthropology) in the study of the Bible during the period between 1930-1960 as literary and archaeological approaches (W. F. Albright School) predominated. However, in the last several decades, building on the work of M. Weber and continuing with the study of Israelite origins by G. Mendenhall and N. Gottwald, they have had a revival and have burgeoned into a major subfield.

1. Early Approaches
2. Recent Developments
3. Application of Social-Scientific Methods to the Study of Early Israel
4. Future Directions for Social-Scientific Criticism

1. Early Approaches.

In the earliest works that employed social-scientific methods, the emphasis was on collecting data from biblical narrative and laws, from archaeological excavations and from ancient Near Eastern texts. In addition, a few comparative studies were done with modern "primitive cultures," such as the bedouin of the Middle East and African tribal groups. Very often, however, assumptions of the evolutionary character of cultures and of the "survival" of ancient societal forms hampered the usefulness of these studies and in some cases discredited their findings.

Among the most influential of scholars employing social-scientific methods was W. R. Smith, considered by some the founder of social anthropology. In his extensive writings on Semitic life and culture (especially kinship, marriage and sacrificial practices), Smith posited an evolutionary process of ancient Israelite culture that included a primitive, a matrilineal and a totemistic phase. *Sacrifice, he suggested, was designed to create within the tribal group a sense of social unity and to tie the members to their

patron god. Using this model, he then asserted that as society became more complex, sacrifice became more ritualized and subsidiary to the growing influence of state development. In fact, his interest in ritual ran counter to the comparative-myth models of many of his contemporaries.

While many of Smith's views have been disputed, the questions he asked have continued to hold a central place in reconstructing the social world of ancient Israel. For example, in his examination of the role of ritual in Semitic culture, he strongly emphasized the materialistic origins for the development of social ideas and practices. This in turn became central to the development of the theories of the sociology of religion by E. Durkheim and to the comparative folklore studies of J. G. Frazer. In addition, Smith's careful examination of Arab culture promoted the use of careful field studies that now characterize modern social and cultural anthropology today.

Another early pioneer in the social-scientific study of ancient Israel was L. Wallis. He suggested that the people's cultural development was the direct result of cultural and class struggle. This clash of ideas was caused by the conflict between rural and urban societies, first Canaanite urban culture versus Israel village culture, then a struggle for supremacy between the local and regional Israelite village establishment (championing the *covenant with Yahweh) and the growing urban elite of the monarchic period. It is this conflict model as well as Wallis's insistence on separating theological from sociological studies of the biblical world that helped spark the work of G. Mendenhall, N. K. Gottwald and F. S. Frick since the 1960s.

A third major influence on modern critical study is the work of M. Weber. As a sociologist, Weber brought an expertise on social organization and the relationship between religion and society. His work on ancient Judaism analyzed the elements of Israel's cult, including the role of the Levites within the priestly hierarchy and the manner in which Hebrew prophecy served as a focal point of conflict in the struggle between Israelite religious ideals and the growing socioeconomic forces of the emerging Israelite state. He developed an "ideal type" model categorizing the social structure and the levels of social authority in ancient Israel. For example, in

his definition of *priests as cultic specialists, he set them apart from the normal categories of human enterprise. He further magnified this perception by including "charisma" as a personality trait that distanced those in leadership roles from the masses.

Weber's work on the forces within organizational structure and the transformation of a culture as it shifts from a collective mentality in the village setting to a more individualistic and competitive pattern in the urban setting was also taken up by the French sociologist A. Causse. This transition, according to Causse, eventually led in the postexilic and Hellenistic periods to a further reinterpretation of social symbols, as individualism became the basis for social identity in an era when political autonomy had been eliminated. Community values, as a result, came to be centered in mishnaic Judaism on faithfulness to the religious tradition rather than to a political entity.

From the 1930s through the 1950s, however, these early efforts at introducing anthropological and sociological methods into biblical interpretation ceased to advance as quickly. For instance, the very useful and influential study of Israelite religious and cultural institutions by R. de Vaux provided a form of encyclopedic register but was not tied to specific social theories. The very dominant American scholar and archaeologist W. F. Albright turned his students and their research to comparative studies of the ancient Near Eastern context of the biblical world. Their emphasis on linguistic analysis, archaeological investigations and historical reconstruction added to the store of available data but did not effectively explore the social prospects of cultural development.

2. Recent Developments.

Since the 1970s the emphasis of social-scientific critics has been on the application of a variety of sociological and anthropological methods, in conjunction with the emerging field of ethnoarchaeology. The delineation of social models allows researchers to identify both common and apparently unique cultural elements and behaviors. While some studies do choose to look at isolated cultural phenomena, it is more common to find comparative studies. These investigations can then be designed to look at cultural units over long or short periods of time, as well as within particular regions or in comparison

with culture areas or social “harvest zones” in widely dispersed areas. The structures that make up society, from the family unit to the ruling elites, can be examined within the light of both historical as well as macroorganizational perspectives.

Since there are multiple perspectives from which a culture may be examined, it is not surprising to find that social theorists disagree on which method is most effective. The principle methods that have been employed center on structural-functional traditions, conflict theories of social development and cultural-materialist perspectives, which examine subsistence strategies or economic patterns. It is also quite common for scholars to employ multiple methods that complement each other.

2.1. Structural-Functionalist Methods. The structural-functionalist approach takes the position that all aspects of a culture interrelate and therefore cannot be understood except as components of the overall structure of that society. Each cultural facet (e.g., religious system, legal system) contributes to the advancement and the stability of the society as a whole and thus works toward equilibrium through consensus building. When conflict occurs within society, the forces calling for change would either be absorbed into acceptable and recognizable social structure (understood as necessary adjustments to established procedures) or denounced and outlawed as a danger to society.

The chief value in examining a culture from a functionalist viewpoint is found in its emphasis on analyzing a culture as an interrelated whole, categorizing its structure and establishing the relationships between these various facets of the society (e.g., kinship patterns, economic system) and actual behaviors of the inhabitants. However, there is also a tendency in such studies to limit the perspective and the study of a culture to a particular period. This does not allow sufficient latitude to deal with a culture with a long history and multiple social transitions.

2.2. Conflict Theory. As originally formulated by K. Marx and adapted by M. Weber, conflict theory examines forces within a society that either contribute to or promote conflict between the classes or structures of a society. At work are ideological differences on how to control the means of power and the modes of production. It is therefore necessary first to identify competing

groups within the society. The task is then to analyze their methods for either protecting their own interests or supplanting the assets of other groups. The assumption is that the potential for social change and social conflict is endemic within society. The only way that this potential for flux or open conflict can be avoided is through methods of constraint. An ordered society is one, therefore, that has achieved control over the forces of conflict by coming to know and understand their potential for violence. Their energies are channeled into less revolutionary pursuits, and the society achieves equilibrium without totally suppressing the possibility for change.

2.3. Cultural-Materialist Theories. Within this set of theories are efforts to type societies based on their modes of subsistence (hunting and gathering, pastoral nomadism, agriculture) and on the technologies they develop to better take advantage of the natural resources of the area they inhabit. In this way cultural evolution and the likelihood of survival of a culture can be determined as new technologies or subsistence strategies are introduced. There is also a sense of environmental determinism inherent to this position, since it bases cultural development on the opportunities and limitations of the topography of the culture zone. The danger with such classification, however, is found in a too rigid approach that does not always allow for multiple economic endeavors. For instance, few farmers live exclusively off their crops. They realize it is necessary to balance the risk of below-normal rainfall or flood by keeping a few sheep and goats or engaging in small cottage industries (pottery, weaving, metalwork). Similarly, pastoralists often engage in seasonal agriculture or the care of fruit trees (olives and dates in the Near East).

These theorists also study the organizational aspects of subsistence strategies. It is understood that economy is based on resources, labor and leadership. An evolutionary process is posited in which society shifts from classless, egalitarian societies who share resources and combine their labor to rigidly stratified societies dominated by those who control the modes of production. According to this position (based on Marx and employed by N. Gottwald), the cultural transformation of ancient Israel from a village-based society to an urban-based society, dominated by a centralized authority, is explained by

the imposition of taxation and the means to enforce discipline by the monarchy. The later transition to vassal status under the domination of Mesopotamian empires simply added an even more authoritarian level of control, depriving the Israelites of political and economic autonomy and draining them of their resources.

The materialist approach is sometimes in conflict with those scholars who choose to emphasize cultural origins and evolution based on ideological development. It is possible to see a particular cultural attribute, such as conducting legal and economic transactions on the threshing floor, as a direct result of farmers coming together at the harvest to a communal agricultural installation to process their grain. While in assembly they see the advantages of doing business and conducting legal proceedings. On the other hand, these activities could be seen as part of a larger picture in which the egalitarian ideal of the village culture finds its voice in collective understandings of justice and fair dealing.

In sum, it must be noted that no single social-science model can be touted as the most reliable or most useful for the reconstruction of the ancient world. Instead, while scholars may favor a particular method or theory, most choose to take a more eclectic approach, applying a variety of social theories to what is revealed by the ancient textual material and the exposed archaeological data. Most also recognize that building a social model of an ancient culture based on information drawn from the study of modern cultures has its dangers. Presuppositions or the desire to make the data fit the chosen model simply discredits the process. However, critical use of models can be useful in tying data and allows for self-evaluation and restructuring of the analytical approach when too many factors indicate the need to refine or recalibrate the model.

3. Application of Social-Scientific Methods to the Study of Early Israel.

One of the difficulties that biblical scholars have had in adopting social-scientific methods to their study of ancient Israel has been in mastering an additional scholarly field. This has limited the number of scholars applying these methods to their interpretations of the biblical text. There has also been some difficulty in gaining acceptability for their findings by the academic community as a whole. However, the growth of interest in the reconstruction of the

social world of the ancient Near East within its cultural milieu has created a better climate for new theoretical orientations. This has already had an effect on archaeological investigations, drawing them away from the functionalist, ahistorical approach of the 1960s "New Archaeology" and reinvigorating the movement to tie artifactual remains to historical reconstruction.

3.1. Modern Interpreters. With the publication of his essay on "The Hebrew Conquest of Palestine," G. Mendenhall (1962) set the stage for the reintroduction of social-scientific criticism into biblical studies. By questioning the existence of the amphictyonic tribal league posited by M. Noth and the assumption that Israel was an ethnic group separate from the Canaanites, having originated as pastoral nomadic tribes (A. Alt), Mendenhall shattered a scholarly paradigm and left the issue open for new interpretations. He called for a reexamination of the very limiting notions of tribe and posited a conflict theory that placed the rural peasant classes at odds with urban elites. The struggle for the emergence of Israel out of a "peasant revolt" was strengthened, in his opinion, by the unifying character of the *covenant with Yahweh.

N. Gottwald then took Mendenhall's model a step further by applying in a more systematic way the principles of the structural-functionalist and cultural-materialist approaches. Using an interdisciplinary model, he diminished the importance of Yahwism as the driving force behind Israel's emergence. Instead, he pointed to a disaffection by the lower classes in Canaanite society that chose to revolt with their feet, withdrawing from the urban centers, "retribalizing" in a village setting and eventually reemerging as a rival political entity. Although Gottwald's economic determinist model has been strenuously critiqued (see Herion), his careful delineation of the social facets of ancient Israel (from its tribal structure patterns to its modes of subsistence management) have guided many scholars over the last three decades. His study has reinforced the fact that, while biblical scholars need to be familiar with the theories of Marx, Durkheim and Weber, they must also be cautious in making broad assertions about the sociology of religion of an ancient culture such as Israel.

3.2. Methods for Political Development. Ongoing studies of Israel's origins and its eventual political evolution into a chiefdom and then a monarchy have built upon or responded to the

work of Mendenhall and Gottwald. For instance, G. Lenski traces the pattern of Israel's political development from a "frontier society," existing on the margins of Canaanite control, which naturally returns to monarchic and bureaucratic structures once it has grown in size and social complexity. F. Frick points to better management of natural resources, improvements in technology and the resulting economic surpluses attendant with population growth as a combination of factors leading to the development of a chiefdom and eventual political stability under the leadership of a single family. The numerous archaeological surveys and excavations by I. Finkelstein, L. E. Stager and others in Israel and Jordan during the last two decades of the twentieth century have helped to support this widening social perspective and have pointed to the necessity for a multifaceted approach to the reconstruction of cultural and political development. In addition, D. Hopkins's effective use of geomorphology, climatic studies and agricultural economic principles in his study of the materials discovered in the Iron I settlements of the central hill country has added a further dimension to social-world studies.

3.3. Investigation of Social Institutions. The other major interest area in social-scientific criticism is the investigation of the social *institutions* in ancient Israel. This includes kinship patterns, concepts of *honor and shame, gender roles and prophetic activity. At the heart of these studies is a blending of the older comparative methods of ethnographic analogy with materialist and ideological analysis. There is also a strong emphasis placed on human experience as a generator of cultural patterns and customs.

3.3.1. Kinship. Kinship studies (see Family Relationships) take into account the work of cultural anthropologists such as C. Lévi-Strauss. They include the examination of marriage patterns (endogamy, exogamy, incest taboos and divorce), inheritance customs (primogeniture, matrilineal and patrilineal) and rules of association (patron-client relations, class distinctions, economic strictures [e.g., usury]). Among the recent studies of kinship in the Bible (see Steinberg), there is a clear realization that ideal patterns existed but had to make way for the realities of childlessness, political dislocation due to immigration and shifts in available or eligible marriage partners.

Since the ancient Near East is not a living

culture, much of the data for this type of analysis has to come from textual evidence. However, careful use of analogous data from the study of preindustrial cultures in the Middle East as well as modern tribal groups has proven useful. For instance, obligations placed upon daughters to remain virginal prior to marriage and chaste after marriage and the obvious social and legal concerns over adultery are found in biblical as well as ancient Near Eastern law codes and in the customary practices of Middle Eastern cultures.

3.3.2. Reciprocity. The models employed by cultural anthropology also demonstrate that reciprocity appears to be one of the major social forces at work in the ancient and modern Middle East (see Matthews and Benjamin). This social principle appears in the *lex talionis* ("law of retribution," "an eye for an eye"; see Bodily Injuries, Murder, Manslaughter, §3.2) clauses in ancient law and is a central feature of the determination of personal and household concepts of honor and shame. Thus an honorable household was one in "good standing" with its community, contributing to the economy, arranging marriages, functioning as civic leaders or elders and providing warriors to defend the village or town. Honor is therefore to be defined in this model by the wise person who recognizes proper behavior and understands the implications of every social action. For example, the offering of hospitality does two important things. First, it transforms a potential enemy from a stranger into a guest and therefore nullifies, temporarily, any threat to safety of the household. Second, playing the host garners honor for the household because it contributes to the welfare of the entire community and places an obligation on the guest to reciprocate when the opportunity arises. This sense of mutual obligation is also found in the laws providing for the "protected classes" (e.g., *widows, *orphans, *aliens) and in the conventions of political patronage and clientage.

3.3.3. Gender. With regard to gender-study approaches to the biblical text, the most influential have been by C. Meyers and P. Tribble. Meyers, a field archaeologist, applies the principles of ethnoarchaeology as well as economic models to demonstrate that in the labor-intensive village culture, the small population relied upon the contributions of every person, male or female. She notes that women worked hard, both in the

fields and as childbearers and managers of the household's resources. Women might not have the right to own land or serve in the assembly of elders, but their control over the domestic economy would have given them status within the household. Meyers has also studied female participation in the cult, especially their role in musical performance and sacrificial activities.

As a literary critic and feminist scholar, Trible has attempted to break down stereotypical images of women in the ancient world and to provide a more realistic evaluation of Israelite restrictions on their behavior. This ideological approach, coupled with the methods of rhetorical criticism, examines dialogue, social status, social identity and action to create a set of social categories for the characters in the biblical text. In her study of metaphors, she elicits the connotations attached to God as "father," "mother," "king" and "warrior." In this way, the theological dimensions of the text are coupled with its social context.

3.3.4. Prophetic Figures. A final major area of study of Israelite social institutions has been in prophetic figures and prophetic activity. Building on the "ideal type" described by Weber, R. R. Wilson describes prophets as "intermediary figures" and discusses the social forces that required their intermediation. He points to central or establishment prophets, who relied upon the cultic community and the monarchy for support or recognition (e.g., Isaiah), and to "peripheral" prophets (e.g., Elijah and Elisha) whose "support group" was drawn from the marginalized classes of society. G. A. Herion has criticized Wilson's overemphasis on the group orientation of prophetic figures as too limiting, forcing the prophet into the ideological mold of his or her interest group without allowing for any autonomous expression of viewpoint or social context.

T. Overholt has provided a social-psychological approach to the biblical prophets. He has done comparative research using ethnographic studies of Native American tribal groups. Realizing the dangers inherent to the comparative approach, he emphasizes that "the most successful cross-cultural comparisons will likely be those couched in terms of social patterns or structures" (Overholt, 5). In his study of shamans, "spirit mediums" and diviners, he points to community belief systems in the supernatural as the key to understanding prophetic authority and power. These practitioners take their cue from

crisis within the community and shape their message based, at least in part, on feedback from the community they serve. This may include trance-state or ecstatic performance, acting out traditional gestures or pantomime, or reciting sections of sacred writ or story as forms of social reassurance or direction.

4. Future Directions for Social-Scientific Criticism.

As is clear from the foregoing review, the field of social-scientific criticism does not rely on a single approach or method. Like cultural anthropology, from which it draws many of its theories and much of its comparative data, the social-scientific approach to the biblical text is eclectic. It includes an understanding and appreciation for the various theoretical approaches that have been formulated since the mid-nineteenth century, but it also has a healthy recognition of the contradictions that are apparent between the ideals that societies put forward as their norms and the realities of individual variations. Humans may be governed or shaped by their social environment, but that does not mean that they always follow the rules or are never working to effect social change through nontraditional means.

Having said this, it must also be understood that biblical scholars are not anthropologists. They may use the tools of other academic fields, but they must also recognize that they are generally a step removed from the cutting edge of critical inquiry in those fields. This can be the basis for discrediting the social-science approach by some biblical scholars who are either unfamiliar with the theoretical underpinning being used or who feel their belief in the uniqueness of Israelite culture is being threatened or "deconstructed." As a result, it is imperative that biblical scholars who choose to use social-science approaches carefully explain what they hope to achieve with their chosen theories and models. A discipline that hides behind jargon or becomes a form of academic "gnosticism" will never attract general recognition or acceptance of these interpretations.

It seems likely that future efforts in reconstructing the social world of ancient Israel will continue to apply a variety of methods. Structural-functional approaches will continue to be coupled with ideological and ethnoarchaeological data. However, an overemphasis on determi-

native, relativistic, reductionistic or positivistic methods or assumptions necessarily will be subject to criticism and reexamination. Without careful self-examination and a willingness to re-think what has been previously assumed to be paradigms of interpretation, the field cannot change as new data or approaches emerge.

What may ensure the continuation and the growing acceptance of this approach will be closer cooperation between scholarly communities. It is clear from the paper titles at the annual meetings of the Society of Biblical Literature and the American Schools of Oriental Research that a growing synthesis is occurring. Instead of "dig reports," scholars are speculating on the anthropological implications of the social horizon represented by artifactual discoveries and a vision of settlements as a part of a larger social environment. Biblical texts are being reinterpreted based on sociological principles that add new dimensions to our understanding of the world in which the stories were composed and edited. This greater sensitivity to the "cultural grid," a holistic understanding of symbol, ritual, custom, expectation and behavior as related in the text and evidenced by artifactual remains, holds great promise for future Old Testament study.

SOJOURNER. See ALIEN, FOREIGN RESIDENT.

SONS OF GOD, DAUGHTERS OF MAN

Genesis 6:1-4 has long been considered one of the most controversial and difficult passages of the OT. This difficulty is due to four problems. First, the brevity of the pericope with its lack of much explanatory detail leaves large interpretive holes that must be filled in by the interpreter. Whether one describes the narrative as laconic, terse, elliptical or fragmented, the point remains that the character of the text undermines the confidence with which it can be deciphered. Second, the connections of the passage to the surrounding context have been seriously questioned. Does the account relate to what is positioned before it or after it? Or is it indepen-

dent of both? Additionally, does it relate yet another narrative of offense committed by transgressing boundaries, or is it simply setting up a situation with no offense described? Third, what mythical connections have been retained or expunged? What level of interaction between supernatural beings and humans can the text absorb or tolerate? Finally, there are numerous lexical problems in the short passage. Identification of the “sons of God” and the “daughters of man” will be the focus of this article. But the *nēpīlīm* and the *gibbōrīm* (NIV “heroes”) likewise cry out for clarification. Furthermore, two words in Genesis 6:3 are *hapax legomena* (words that only occur once in the OT) and therefore contribute more to confusion about the passage than to confident understanding.

1. History of Interpretation
2. Context Association
3. Material Distinction
4. Theological Distinction
5. Social Distinction
6. Conclusions

1. History of Interpretation.

From the earliest records of interpretation of these verses, the exegetical voices were at first in unison, then antiphonal and finally discordant. The following can only provide a brief sketch (see further Newman; Wickham).

1.1. Early Jewish Interpretation. The earliest record of interpretation comes from the second-century B.C. book of *1 Enoch*, where “angels” or, alternatively, “watchers” occurs in the description next to the “sons of heaven” (*1 En.* 6–11). Other second temple literature favored this view as well, including *Jubilees* 4:15, the *Testament of Reuben* 5:6, *2 Baruch* 56:12-16, *2 Enoch* 18:4, and the *Genesis Apocryphon* (1Qap Gen^{ar} 2:1). Philo (*Gig.* 2.6) and Josephus (*Ant.* 1.3.1 §73) both followed this direction. Several Septuagint manuscripts (e.g., Alexandrinus) lend support to this view by rendering “angels of God” in place of “sons of God.” The Talmud (e.g., *b. Yoma* 67b; *b. Nid.* 61a) and other rabbinic writings continued to promote this view. Nevertheless, as early as the second century A.D. the tide began to turn. Symmachus’s translation of the OT into Greek rendered sons of God as “sons of the powerful,” and *Targum Onqelos* (second century A.D.) and *Targum Neofiti* (second-fourth century A.D.) both went in a similar direction. *Genesis Rabbah* 26:8 (fifth-sixth century A.D.) cites R. Simeon b. Yohai

(A.D. 130-160) as insisting on the interpretation “sons of nobles” and placing a curse on anyone who promulgated the “angels” theory. By the time of the medieval rabbis, this interpretation had become entrenched. Rashi, Ramban and Ibn Ezra all favored identifying the sons of God as rulers or judges.

1.2. New Testament Interpretation. The two primary passages in the NT are 2 Peter 2:4 and Jude 6. Peter mentions a sin committed by the angels but gives no detail of that sin. The punishment he mentions is that they are held in chains/pits of darkness reserved for judgment. In Jude the sin is given a phrase of explanation: they did not keep their own domain but abandoned their proper abode. Again, bonds in darkness is the punishment. The language used in these two contexts strongly suggests the authors’ familiarity with the second temple traditions. In the second temple literature, however, there is a highly developed angelology in which Genesis 6 plays only a minor role. Though a strong case may be made for the conclusion that Peter and Jude are elaborating on Genesis 6 through *Enoch*, it is difficult to be certain whether the NT authors are referring to the event of Genesis 6 or to something else. Genesis 6 makes no reference to the punishment of the sons of God, and the punishment of chains is applied to angels on a number of other occasions in *1 Enoch* (e.g., *1 En.* 21; 54:3-6).

1.3. Christian Interpretation. The earliest church fathers continued supporting the “angels” view. Numbered among the supporters are Justin Martyr, Clement of Alexandria, Tertullian, Lactantius, Irenaeus, Cyprian and Ambrose (Newman, 22). As in Jewish circles, however, a shift began in the late second and early third centuries A.D. Julius Africanus’s work contains the earliest known adoption of the Sethite theory (i.e., the sons of God are descendants of Seth). A variation of this view was promoted in Augustine’s influential *City of God* (15.22). In the mid-fifth century, Cyril of Alexander produced a lengthy treatise on the subject (quoted at length in Wickham, 135-36) in which he viewed the sons of God as descendants of Enoch and labeled the “angels” view as perverse. This remained the “Christian” interpretation throughout the Reformation and beyond (both Luther and Calvin firmly supported it). The above paragraphs show the “angels” view to be the only contender into the second century, at which

time both Jewish and Christian interpreters began to deviate from that view in favor of “rulers” and “Sethites” respectively.

1.4. Critical Interpretation. As the materials from the ancient Near East became available at the end of the nineteenth century and into the present, the “angels” view experienced a comeback of sorts, though somewhat transmogrified. Instead of viewing the sons of God as fallen angels, critical scholars, who increasingly understood Genesis in mythological terms, saw Genesis 6:1-4 as simply an example of the promiscuous kind of behavior that is attached to the members of the divine assembly throughout the literature of Babylon and Canaan. In the 1970s, C. Westermann felt comfortable stating that “The chapter that asked, are the בְּנֵי אֱלֹהִים [*bēnē ’ēlōhīm*, “sons of God”] to be regarded as human or as non-human beings, can be considered closed. The number of voices supporting the view that they are human has diminished” (Westermann, 371). More specifically, R. S. Hendel, for instance, sees it as an instance of mixing categories (divine and mortal) resulting in hybrid demigods and bringing about a cosmic imbalance. From a literary standpoint, he sees Genesis 6:1-4 as the old introduction to the *flood story that has been replaced with a more ethically oriented account in Genesis 6:5-8. Another strain of interpretation views the author/editor as borrowing from an Enoch tradition like that encapsulated in the books of Enoch (discussion and documentation in Vervenne, 23). As a result of these interpretations, we have now come full circle; the text has been “remythologized.” After an almost total departure from identifying the sons of God as supernatural in favor of various human identifications, there has been a widespread return among critical scholars to a supernatural identification. There is a difference, however, between these beginning and ending points. Initially interpreters did not balk at a mythological interpretation of the Bible because it coincided with their own worldview. Today interpreters do not balk at a mythological interpretation of biblical passages because they believe Israel’s worldview was little different from its neighbors. In the intervening period interpreters neither had a mythological worldview themselves, nor did they believe that the Bible represented such a worldview. Lacking correlation to either world, they rejected the identification.

2. Context Association.

The three basic options in this category are (1) to view this short pericope as an independent illustration of the gradual intrusion of sin as it grew to pervade the population; (2) to see the verses as an introduction to the flood narrative (whether replaced and virtually obsolete or obscure and somewhat incongruent); or (3) to consider the verses a summary conclusion to Genesis 5 (Vervenne). Although association of the narrative with the flood is not impossible, literary linkage is insufficient to make a strong case. A greater syntactical linkage can be established with the material in Genesis 5 (Vervenne, 34-35), but the significance of many of the statements in these verses remains obscure even in light of this possibility. In favor of the independence of the narrative is the pattern in Genesis 1—11 of using short idiosyncratic narratives that are literarily somewhat isolated. Other possible examples include Lamech’s song (Gen 4:23-24), Nimrod’s kingdoms (Gen 10:9-11) and the tower of *Babel (Gen 11:1-9). It is not difficult to see in Genesis 6:1-4 the idea that sin has now infiltrated society programmatically. This is the last step before its universal manifestation at the time of the flood.

3. Material Distinction.

The Israelite worldview certainly accepted intercommunication between the divine and human realms, so the realms are not isolated from one another. Whether the closer contact of sexual relations would have been viewed as possible is harder to determine. There are no statements that differentiate between the material substance of humans and angels. In fact Genesis 18—19 and 32 give every indication of corporeality. It is not until Matthew 22:30 that sociological distinction is made in the statement that angels do not marry, a statement that stops short of explicitly affirming that sexual relations would be impossible.

3.1. Evidences. The most significant piece of evidence supporting this view derives from lexical analysis of the phrase *bēnē hā-’ēlōhīm* (“sons of God”). It has frequently been observed that elsewhere in the OT the phrase refers to angels (Job 1:6; 2:1; 38:7). The argument can therefore cogently be made that lexical study indicates what the words mean, and what they mean determines the face value of the text. Consequently, the face value of the text would support the “angels” view. The only other reason to ad-

here to this position would be the belief that the NT affirmed this position, which for many provides substantial evidence.

3.2. Problems. For others, one of the major problems with this view is its mythological tone. The interpretation is not attested earlier than the Greek period when interpreters had already come under the influence of Greek mythology such as that found in Hesiod (where Zeus plans to annihilate the population in order to destroy demigods who have mated with mortals; Hendel, 18–19). Calvin represented well the reactionary revulsion when he commented on the passage: “That ancient figment, concerning the intercourse of angels with women, is abundantly refuted by its own absurdity; and it is surprising that learned man should formerly have been fascinated by ravings so gross and prodigious.” On the other hand, W. VanGemeren points out that Christians should be the last to go about demythologizing biblical text. That issue aside, however, the exegete must evaluate how strong the single strand of support is. First of all, it must be noted that the lexical base for the phrase *bēnē hā* is quite small. It is difficult to make confident semantic generalizations from only four occurrences. In fact, there is reason to believe that a larger semantic range could exist in light of the nature of the syntagmic combination “son(s) of X.” This type of construction is used to describe items or individuals of a particular category (e.g., “sons of the prophets,” “sons of the needy”). It describes “belonging.” Although it is possible that Hebrew idiom only used the phrase to refer to angels, other meanings would be logically possible. If the sons of God belong to the “*’ēlōhim*” category, they theoretically could be a group of humans who are related to the divine through their office. Such usage of *’ēlōhim* occurs in the OT in Exodus 22:8–9 (MT 22:7–8) and Psalm 82:6. From a theoretical standpoint, then, one might find judges (see also Ex 21:6), kings or priests referred to as “sons of *’ēlōhim*” (see also Gen 5:1–2; Lk 3:38, where Adam is “son of God”). Regarding the NT evidence, even if one is satisfied that Jude and 2 Peter reflect 1 Enoch’s interpretation of Genesis 6, hermeneutical issues need to be discussed similar to those concerning the author of Hebrews’ presentation of Melchizedek.

4. Theological Distinction.

The idea that a theological distinction differen-

tiated the sons of God from the daughters of men is premised on a number of schematic assumptions about the previous chapters of Genesis. This view takes Genesis 4:26 as referring only to the line of *Seth. It then ignores the possibility of the existence of other lines of descent from *Adam and *Eve, assumes that the lines of *Cain and Seth remained separate for millennia and extrapolates from the statements about Enoch and Lamech that the entire line of Seth was godly and the entire line of Cain was wicked. This sort of schema might have been attractive for the broad theological strokes of Augustine’s two cities, but it enjoys little support from close exegesis. These points do not constitute evidence; they are simply unwarranted presuppositions.

4.1. Evidences. This position is supported by reference to passages that speak of the Israelites or godly people as God’s children. Even though the specific term “sons of God” is never used for this group, the metaphor is used occasionally (e.g., Deut 14:1). Thus a case could be made for identifying the sons of God in theological terms. In addition, there are a number of passages that warn against pollution by marriage to those outside the elect line.

4.2. Problems. Besides the difficulty of accepting the assumptions required by this position (all of which are improbable), there are problems with the evidence. Even though the term “sons of God” can be defended as a theological designation, it is much more difficult to see the phrase “daughters of men” in theological terms referring to females of the line of Cain. Why should “daughters of men” be used to describe wicked people? On the second point of evidence, it is difficult to extrapolate the warnings against elect Israel intermarrying and to apply them to a group (Sethites) that has not been designated elect and has not even been identified as ethnically isolated.

5. Social Distinction.

This position occurs in several permutations. Even early in its history, variations for rendering *’ēlōhim* such as “mighty ones,” “judges,” “rulers” and “kings” were adopted. In addition, there is a variation concerning the nature of the offense. Most who have held this position have considered the offense to be either polygamy or promiscuity. A more recent view identifies the offense as the practice known as “right of the

first night.” This view is based on comparisons with the Gilgamesh Epic, which is seen as containing a paradigm for oppressive kingship that is also reflected in Genesis 6:1-4. Points of comparison with the Gilgamesh Epic are set out in table 1 (quotations and line citations from George):

Genesis	Gilgamesh
Sons of God	Gilgamesh is portrayed as 2/3 god and 1/3 man (1.48) and “flesh of the gods” (9.49)
Took wives, whomever they chose	Gilgamesh practices the right of the first night: “he will couple with the wife-to-be, he first of all, the bridegroom after” (P 160)
He is mortal; his days will be 120 years	The Anunnaki (nether-world gods) fix the fates and have established Death and Life (10.319-322)
Nephilim, Gibborim	Gilgamesh’s heroism (1.30), tall, magnificent and terrible (1.37), six-cubit stride (1.57), eleven cubits tall (Hittite version, 1.8)

Table 1: Genesis and Gilgamesh Compared

5.1. Evidences. The general biblical evidence for sons of God being understood in terms of social rank is twofold. First, the term *’ēlōhim* is possibly used in Exodus 22:8-9 (MT 22:7-8) and Psalm 82:6 to indicate categories of humans. This being the case, sons of *’ēlōhim* could logically refer to humans belonging to the *’ēlōhim* category. It is also true that kings in the OT can be designated as sons of God. Most notable is the wording of the Davidic covenant: “I will be his father; he will be my son” (2 Sam 7:14). The cognate evidence is more extensive. The titulature of the ancient Near East regularly indicated divine descent of kings, even outside Egypt’s context of deified kings. This idea of divine descent was a rhetorical expression of divine election and legitimization of the king that was typical in royal inscriptions. From Sumerian times (e.g., Eannatum, Gudea), through Old Babylonian (e.g., Hammurabi), into Middle Assyrian (e.g., Tukulti-Ninurta) and Neo-Assyrian (e.g., Ashur-

banipal), it was part of the royal prerogative to claim divine heritage (text citations in Walton). Thus the title “son of God” can be identified as a royal motif both in the Bible and outside of it.

5.2. Problems. Though it was common for kings to be portrayed as having divine parentage, there is no precedent for ancient kings as a group being referred to as sons of God. Other problems connect to the identified offense. Polygamy was always a weak candidate in that the OT does not condemn polygamy. Promiscuity is likewise an unlikely explanation in that the text describes the behavior as “taking wives,” using the standard Hebrew idiom for marriage. The “right of the first night” explanation easily accommodates the terminology of marriage and can be easily identified as offensive on account of its use in Gilgamesh to epitomize oppressive behavior. The remaining problem is that it is a practice ill-attested in ancient literature. Nonetheless, the Gilgamesh Epic is clear, and there are references in later sources that attest to the practice in antiquity (see discussion in Lambert, 195-96; Tigay, 182 n. 15).

6. Conclusions.

Direct lexical evidence favors the “angels” view, but that evidence is mitigated by the slim lexical foundation and the plausible logical alternatives presented by the nature of the syntagm. If the NT does indeed affirm this position, that would also be strong evidence. The Gilgamesh connection is intriguing for its ability to deal with all the elements of the text and to position the text within a recognizable ancient Near Eastern context. The view neither suggests borrowing from Gilgamesh nor does it suggest that the account deals in any way with the story of Gilgamesh. It only sees Gilgamesh as an example of the kind of situation that Genesis 6:1-4 describes. There are also those who do not believe that any offense is recorded in the passage (e.g., Sailhamer, 76). Even so, such a view does not eliminate the need to identify the groups involved, and therefore the problems do not go away.

SOURCE CRITICISM

Source criticism concerns itself with earlier written documents used in the composition of biblical literature. Formerly called "higher" or "literary" criticism, it mainly applies to the Pentateuch, Isaiah and the Gospels, though not exclusively so. Traditionally the Pentateuch has been credited in some way to *Moses. Source criticism has noted some difficulties with this understanding and has proposed other scenarios concerning its composition (see Pentateuchal Criticism, History of; Harrison, 1-82; Houtman).

1. Authorship
2. Traditional View

3. Documentary Hypothesis (DH)

4. Responses

1. Authorship.

The author or writer of a written work today is usually easily identifiable from a heading or title page. In contemporary Western society such identification of authorship is important in order to evaluate the validity or usefulness of a document. In other times and contexts, such information is not as vital. In literature from ancient Mesopotamia, for example, it is much more common to find the name of the scribe or copyist than of the original composer of the text. In a similar way, the Bible is not very interested in authorship, possibly for theological reasons. If the ultimate author is God (cf. "thus says the LORD" often in the Prophets; 2 Tim 3:16; Heb 1:1), the human writer becomes less important.

Intellectual property rights were also not a concern in the ancient world in contrast with our contemporary copyright laws. Ideas or even more lengthy sections of an existing work could be freely used in a new composition without the necessity of citing one's sources. An ancient Near Eastern example of this, to which we will return later, is the Babylonian Gilgamesh Epic (COS 1.132.458-60). This account, which includes a *flood story very similar to the story of *Noah, evolved over the course of centuries without indication that later editions were using earlier sources (Tigay).

Biblical statements that apparently concern authorship are open to various interpretations. For example, numerous psalms are headed as being "of" a named individual or group (e.g., David: Ps 3—9, 11—32; 34—41; descendants of Korah: Ps 42, 44—49; Asaph: Ps 50, 73—83; Solomon: Ps 72, 127; Moses: Ps 90). This is often taken as indicating authorship, but there are difficulties with this interpretation, especially when a group is referred to. Biblical books named after people also cannot necessarily be understood as claims of authorship, since the book names are themselves not an integral part of Scripture, having been added by later editors. Also, some books (e.g., Samuel) are clearly named for a chief character rather than a possible author. For example, in none of the Gospels is there a claim for authorship for any of the names traditionally associated with them. There do exist unambiguous references to authorship

in Scripture, however (e.g., Ex 17:14; 24:4; Num 33:2; Deut 17:18; 31:22), and these will be discussed below.

While incontrovertible claims for authorship of biblical texts are difficult to establish, the question is still not only of intellectual interest but also of historical importance. If a historical account was only recorded many centuries after the event itself, there are serious implications regarding factual accuracy.

2. Traditional View.

Nowhere in the Pentateuch is there a statement of its authorship, though traditionally Moses has been credited with writing it. The rabbis in their discussions in the Talmud concluded: "Who wrote the Scriptures?—Moses wrote his own book and the portion of Balaam [cf. Josephus, *Ant.* 4.7.13 §157] and Job. Joshua wrote the book which bears his name and [the last] eight verses of the Pentateuch" (*b. B. Bat.* 14b; cf. also the twelfth-century rabbi, Maimonides [420], whose eighth principle of the Jewish faith is that "the whole Torah was given us through Moses our Teacher entirely from God").

Ascriptions to Moses occur even earlier, however. In the OT and subsequent literature, numerous references are made to "the book of the law of Moses" (Josh 8:31 [Ex 20:25]; Josh 23:6; 2 Kings 14:6 [Deut 24:16]; 2 Chron 25:4 [Deut 24:16]; cf. 2 Chron 34:14, 15), "the law of Moses" (Josh 8:32; 1 Kings 2:3; 2 Kings 23:25; 2 Chron 23:18 [Lev 1]; 2 Chron 30:16 [apparently referring to Lev 1:5, though neither the verb nor the exact concept is used there]; Ezra 3:2 [Ex 27:1-8]; Ezra 7:6; Dan 9:11, 13 [Deut 11:26, 28]; Mal 4:4 [MT 3:22]; Tob 7:12, 13 [cf. Num 36:8]; 1 Esdr 8:3; 9:39; Lk 2:22 [Lev 12:6-7]; Lk 24:44; Jn 7:23 [Lev 12:3; cf. Gen 17:10-13]; Acts 13:39; 15:5; 28:23; 1 Cor 9:9 [Deut 25:4]; Heb 10:28; see also Num 31:21 [cf. 19:1-22]; Deut 33:4; Josh 1:7; 22:5; 2 Kings 21:8; Neh 8:14 [Lev 23:34-43]; Neh 10:29; Jn 1:17, 45; 7:19; 8:5 [Lev 20:10; Deut 22:20-24]; Heb 9:19), "the book of Moses" (2 Chron 35:12 [to Lev 3:3]; Ezra 6:18 [to no existing pentateuchal passage]; Neh 13:1 [Deut 23:3]; 1 Esdr 1:11 [Lev 2]; 1 Esdr 5:49 [Lev 1]; 1 Esdr 7:6, 9 [Lev 8—9]; see also Mk 12:26 [Ex 3:6]), "the commandment of Moses" (2 Chron 8:13 [Lev 23; Num 28—29]; see also Josh 22:5; Heb 9:19), and to Moses writing the law (Ex 24:4; 34:27-28; Deut 31:9, 24; Josh 8:32; see also Mk 10:3-5 [Deut 24:1-4]) and other things (Ex 17:14

[promise]; Num 17:2-3 [MT 17:17-18; scribal leaders' names]; 33:2 [itinerary]; Deut 31:19, 22 [song]; cf. 4Q266 18.5.6 [4QZedek 3:6]; 4Q504 [4QdibHam^a] 3:12; Josephus, *Ag. Ap.* 1.8 §39).

The NT associates various laws and teaching with Moses, even though not specifically saying they were written by him (Mt 8:4 par. Mk 1:44 par. Lk 5:14 [Lev 14:1-32]; Mt 19:7-8 par. Mk 10:3-5 [Deut 24:1, 3]; Mt 22:24 par. Mk 12:19 [Num 27:8]; Mk 7:10 [Ex 20:12 par. Deut 5:16; Ex 21:17 par. Lev 20:9]; Jn 7:22-23; Acts 15:1, 5; 21:21 [Gen 17:9-14, but see the discussion below]; Jn 8:5 [variant of Lev 20:10 or Deut 22:22]; Acts 6:14 [general cultic laws]; 7:44 [Ex 25—30]; Rom 10:5 [Lev 18:5]; Rom 10:19 [Deut 32:21]; 1 Cor 9:9 [Deut 25:4]; Rev 15:3 [perhaps the song in Ex 15:1-18 or Deut 32:1-43, though the words cited come from neither of these sources]).

In several instances the reference to "Moses" in the NT is to a canonical section of the OT (e.g., the Pentateuch) in distinction from the Prophets (Lk 16:29, 31; 24:27; Jn 1:45; Acts 26:22; 28:23), the Psalms (Lk 24:44; cf. also Josephus, *Ag. Ap.* 1.8 §39) or a document read weekly in the synagogues (Acts 15:21).

Several of these references indicate that "Moses" is understood as indicating other than the author of a Scripture portion. Rather it is used as an identification marker for the piece, somewhat like "Jane Eyre," which is a title, not an author. First, Luke 24:44 indicates that the designation "Psalms" indicates a body of literature including, but larger than, the canonical book by that name. It would also include other material from the Writings (e.g., Proverbs, Job). The Prophets corresponds to the canonical portion known as the Former and Latter Prophets, including the historical books, which are not technically prophetic books but are included in that canonical section. These two canonical categories are referential rather than descriptive of either authorship or literary genre. One should then allow the third category, the Law of Moses, also to be referential rather than indicating either a strict genre (i.e., law, which is only one of the mixed genres of the Pentateuch) or an author (i.e., Moses).

The referential function is clearer in John 7:22-23, in which Jesus is quoted as saying: "Moses gave you circumcision (it is, of course, not from Moses, but from the patriarchs). . . . If a man receives circumcision on the sabbath in order that the law of Moses may not be broken. . ."

Here there is a clear distinction between a literary work in which the circumcision regulations are recorded, called “Moses” and “the law of Moses” on the one hand, and the author or originator, called “the patriarchs,” on the other. Jesus seems to realize that his hearers might commit a category error, confusing title, which is what he intended here, with author, which was not his intent, so he makes his meaning clear. We, therefore, based on Jesus’ own usage, need to be careful in claiming that “Moses” always indicates author and not title.

Even the above quote from the talmudic tractate *Baba Batra* does not indicate an understanding of Mosaic authorship of the entire Pentateuch. It speaks of “Moses’ book” (possibly Deuteronomy), which cannot be the Pentateuch, since the *Balaam story (Num 22–24) is distinguished from it.

If one has a high view of the inspiration and reliability of Scripture, it is important to take care in interpreting what it says. While it does clearly state that Moses wrote a number of individual passages, as indicated in the numerous references above, it nowhere clearly states that he is the author of the entire Pentateuch in its present form. One must be careful in defending a position that goes beyond what Scripture itself demands, just as, on the other hand, one should hesitate to deny any Mosaic input at all in the light of these scriptural claims.

2.1. Problems with Mosaic Authorship. Numerous items within the Pentateuch itself have caused people to question its Mosaic authorship.

2.1.1. Anachronisms. Several instances appear to show a time lapse between the event and the record of that event. For example, Moses’ death is recorded in Deuteronomy 34. The logical impossibility of Moses’ writing this was recognized early, with both Josephus (*Ant.* 4.8.48 §326) and Philo (*Vit. Mos.* 2.291) stating that Moses wrote of it prophetically. Others claim that Joshua wrote these problematic verses (see *b. B. Bat.* 14b above). There are other anachronistic texts in the Pentateuch, however. One is the reference to the city of Dan in the story of *Abram and *Lot (Gen 14:14; cf. Deut 34:1), which is not so named until later, in the period of the judges (Judg 18:29). There are two names for a single place elsewhere in the Pentateuch, an indication of updating geographical names that had changed over time (Bela/Zoar, Gen 14:2, 8; Siddim/Dead Sea, Gen 14:3; En-mishpat/Kadesh,

Gen 14:7; Valley of Sheveh/King’s Valley, Gen 14:17; see also Mamre/Hebron, Gen 13:18; 23:19; Kiriath-arba/Hebron, Gen 23:2 [indicating that Hebron had at least three different designations]; Luz/Bethel, Gen 28:19; 35:6 [cf. Judg 1:26]; region of Argob/land of Rephaim, Deut 3:13; Bashan/Havvoth-jair, 3:14). Genesis 36:31, Numbers 24:7 and Deuteronomy 17:14-16; 28:36 seem to assume the existence of the Israelite monarchy, which was not established until 1 Samuel 8–12.

In addition, peoples who arrived only later than the patriarchal period in what became the Promised Land are referred to as inhabiting it (Philistines: Gen 21:34; 26:14-18; Ex 13:17), and others who were there in earlier periods are spoken of as if they had since left (Canaanites: Gen 12:6; 13:7), phenomena noted as early as Ibn Ezra in the twelfth century. This same rabbi noted difficulty with Canaan being called “the land of the Hebrews” at a time when there was nobody with that designation (Gen 40:15) and with Transjordan being designated “beyond the Jordan” (Gen 50:10-11; Num 22:1; Deut 1:1, 5), which would be from the perspective of those looking from the west eastwards. Moriah/Zion is designated “the mountain of the LORD,” a title that it only later acquired (Gen 22:14; cf. Is 2:3; Mic 4:2; Zech 8:3). The personal names *Jacob* and *Israel* are used to designate the later geographical regions so named (Gen 49:7). There are other instances where items recorded seem to be in the distant past (the phrase “to this day”: Gen 22:14; 26:33; 32:32; 35:20; Deut 2:22; 3:14; 34:6; see also Gen 16:14; Ex 6:26-27; 16:35, 36 [an antiquated measurement]; Num 21:14 [citing an ancient source]; Deut 10:6-7; 32:7-20), including references to Moses in the third person (“he”) rather than the first person (“I”) that would be expected if he were the author (e.g., Deut 1:1). One of the latter cases involves the statement that Moses was “more humble than anyone else on earth” (Num 12:3 NLT), a statement that would be falsified if it were made by the one to whom it refers (see Friedman 1992, 6.612-16).

2.1.2. Divine Names. A precipitating observation that led to the modern discussion of pentateuchal composition was that various names for God are used in the Bible (see God, Names of). One is a proper noun, the personal name of Israel’s God, which is *yhwh*, variously rendered Yahweh or Jehovah. The other involves a form

of *ēlōhīm* (“God”), which is a common rather than a proper noun. A clear example of the variation is at the beginning of Genesis: 1:1–2:3 uses only *ēlōhīm*, while Genesis 2:4–3:25 uses predominantly *yhwh ēlōhīm*. Since the distinction between name forms is observable in numerous places in the Pentateuch, this led to the suggestion that more than one writer was involved, each with a preference for one of the names (see further terminological variation in Friedman 1992, 6.609-10).

2.1.3. Duplicate Narratives. Readers have also suggested that several incidents or motifs in the Pentateuch are repeated. Creation is described in Genesis 1:1–2:3, in which man and woman are created simultaneously (Gen 1:27), and another account immediately follows in Genesis 2:4-25 in which they are created sequentially (Gen 2:21-22). There are several duplicates in the flood story (Gen 6:5-8 and 9-13; 6:18-22 and 7:1-5) and two genealogies from both *Adam (Gen 4:17-26; 5:1-28) and *Shem (Gen 10:21-31; 11:10-26). A patriarch passes his wife off as his sister in order to preserve his own life not once but in three separate stories (Abraham: Gen 12:10-20; 20:1-18; Isaac: 26:7-11). The episode with *Hagar and *Ishmael is repeated (Gen 16:1-16; 21:8-19). *Isaac is promised (Gen 17:16-19; 18:9-15) and named twice (Gen 17:19; 21:1-3), as is the place named Beer-sheba (Gen 21:28-31; 26:32-33, seeming to be based on two different etymologies, since the root *šb*^c produces both “oath” and “seven”). There are also two variant accounts of the establishment of Abraham’s *covenant with God (Gen 15; 17), as well as two narratives of Jacob’s journey to Mesopotamia (Gen 28:5; 29:1), with two motives for the journey (Gen 27:41-45, 46) and two accounts of God’s revelation to him at Bethel (Gen 28:10-19; 35:6-7). His name is twice changed to Israel (Gen 32:28; 35:10). Also there are duplicates of the manna and quail in the wilderness (Ex 16:2-35; Num 11:4-34), of Moses getting water from a rock at Meribah (Ex 17:5-7; Num 20:9-13), of Joshua’s appointment (Num 27:12-23; Deut 31:14-23), of the centralization of sacrifice (Lev 17; Deut 12) and of the list of prohibited animals (Lev 11; Deut 14), as well as a triplet of the Decalogue (Ex 20:1-17; 34:10-28; Deut 5:6-21; see further Friedman 1992, 6.609).

2.1.4. Literary Style and Vocabulary. It was noted above that some of the duplicated passages show stylistic or vocabulary differences

from each other. Genesis 1 is formal, precise and repetitious (the language “of a jurist, rather than a historian”; Driver 1913, 12), while Genesis 2 is fluid and accessible. These same two passages are also distinguished by divine name (see 2.1.2 above), which distinction is itself a stylistic variant. Several lists have been drawn up of vocabulary that is characteristic of some parts of the Pentateuch and absent in others (e.g., Driver 1948, vii-xi [P], xiii [E]; cf. also McEvenue).

2.1.5. Contradictions and Divergences. Discrepancies in the *creation accounts show a different order of creation in the two accounts (Gen 1: plants, animals, male and female humans; Gen 2: male human, plants, animal, female human), while the flood account requires placing two of each animal in the ark in one place (Gen 6:19-20; 7) and in another, seven (Gen 7:2). The flood itself lasts either forty days (Gen 7:4), 150 days (Gen 7:24) or an entire year (Gen 7:11; 8:13). Moses’ father-in-law is called both Reuel (Ex 2:18; Num 10:29) and Jethro (Ex 3:1; 4:18; 18:1-27), and possibly even Hobab (Num 10:29 is ambiguous, cf. Judg 4:11). The same site is called Horeb (e.g., Ex 3:1; 33:6; Deut 1:2, 6; 5:2) and Sinai (Ex 19:11; 24:16; 31:18; Lev 7:38; Num 3:1). Those buying *Joseph after retrieving him from the cistern are either Ishmaelites (Gen 37:25, 27-28; 39:1) or Midianites (Gen 37:36), while the pre-Israelite inhabitants of the land are both Amorites (Gen 14:7; 15:16; 48:22) and Canaanites (Gen 10:19; 12:6; 13:7; Ex 13:11).

3. Documentary Hypothesis (DH).

Difficulties such as these with the traditional understanding of pentateuchal composition led to various alternative proposals regarding its authorship (Blenkinsopp, 1-30; Barton, 6.162-65; Noth; Hayes, 84-120). The most widespread alternative proposal to that of complete Mosaic authorship of the Pentateuch is the Documentary Hypothesis (DH), also called the Graf-Wellhausen Hypothesis after two of its most significant proponents. Rather than accepting a single author for the Pentateuch, it proposes four separate sources arising over the course of half a millennium.

3.1. Source Identification. The earliest purported source is that of the Yahwist, since the divine name used therein is Yahweh. It is abbreviated J (pronounced y in German and earlier English). Starting in Genesis 2:4b, this source includes much of Genesis and parts of Exodus

and Numbers (Campbell and O'Brien, 91-160). Originating from the southern kingdom of Judah (Friedman 1987, 61-67), it was written about 850 B.C. The second source used the divine name Elohim (Heb *ēlōhim*), so it is called the Elohist and abbreviated E. Starting with Genesis 15 (Campbell and O'Brien, 161-93), it covers material similar to J. It arose in the northern kingdom of Israel (at times also designated "Ephraim"; Jenks; Friedman 1987, 61-67) around 750 B.C. These two sources, difficult to distinguish from each other on stylistic grounds (Noth, 20), have a flowing narrative style. Refugees from Israel brought them together in Judah when many from Israel were exiled to Assyria in 722 B.C. The third source is Deuteronomy, abbreviated D, which was dated to 621 B.C. and was a product of Josiah's reform (2 Chron 34:3—35:19). It is restricted to the book of Deuteronomy itself and does not play a major role in the process of distinguishing the other sources, except as regards their relative dating. The fourth is the Priestly, or P, source, covering material from Genesis 1 through the notice of Moses' death at the end of Deuteronomy (Campbell and O'Brien, 21-90). It is the latest source, coming from a fifth-century postexilic context. It is not a continuous narrative like the others but a collection of different genres of material of interest to the priests. It shows an evolutionary development of religious practice leaving sole authority in priestly hands. For example, while the patriarchs erect *altars apparently at will in earlier sources (Gen 12:7-8 [J]; 22:9 [E]), P places cultic functions firmly in the hands of the priests (e.g., Lev 9).

3.2. *Implications of the Documentary Hypothesis.*

A Pentateuch composed along the lines proposed by the DH raises several implications that cause concern. First among these is the issue of historical accuracy. What is the place of Moses in the compositional process? As usually formulated, the DH would have no place for Mosaic involvement of any of the material at any stage. This would imply that statements to the effect that Moses wrote at least some of the material (see 2 above) arose either through ignorance or distortion. The same applies to historical claims made within the Pentateuch. Writing is usually understood to reflect the period of composition more than the period about which it claims to report. In this case, it is possible to say that the *tabernacle never existed in Israel's history. Its inclusion in the P document was simply a reflec-

tion of the priests' interest in cultic matters, being in particular a retrojection of the later temple, specifically called "a historical fiction" (Wellhausen, 37, 39). This type of historical nihilism can be seen to have expanded to the entirety of the OT, since today some question whether anything at all can be historically determined through the Bible (cf., e.g., discussions in Long, Baker and Wenham). This has serious ramifications for a Judeo-Christian understanding that God works in human history (see 1 Cor 15:12-19).

This is not to say that the use of sources necessitates historical inaccuracy. Sources are mentioned within Scripture itself (see 4.1 below). However, the sources proposed by source critics are of a different kind from those used by historians to do their work. Historians seek clues in actual sources that may be dated as close as possible to past events so that they may reconstruct these events as accurately as possible. Source critics work in the other direction, starting with a finished piece of literature and hypothesizing what the constituent elements looked like. This process can be attempted with some hope for success when there is actual evidence from prior stages of the compositional process (e.g., the Gilgamesh Epic; see Tigay; cf. Carr, 16-20). When there are no actual controls in the form of antecedent documents, however—and there are none for the Pentateuch—any reconstruction is only highly speculative at best (Baker, 1989).

The time lapse between event and written record also relates to historical accuracy. Oral tradition is posited as the keeper of historical memory (see *Traditio-historical Criticism*; *Form Criticism*), since *writing was at times viewed as an innovation in Israel, only coming much later than the time of Moses and of the events purported to be narrated in the Pentateuch. Even then it was seen as being a skill restricted to scribal specialists (Nielsen 17, n. 3, and 56; but contrast Driver 1913, 158). This means of transmission left the information open to garbling over time. While the Pentateuch was not written as a historical document but as a theological one, its theology is nevertheless historically based, and impugning its historicity has theological outcomes.

4. Responses.

Problems with this consensus understanding of

the authorship of the Pentateuch have not gone unanswered. All the individual points raised above, which are only representative, cannot be addressed here, though they have been addressed with varying success in commentaries and other studies (e.g., Rooker, 25-38). Looking summarily at the five criteria mentioned above, one can offer the following responses.

Anachronisms (see 2.1.1 above) only prove a difficulty if one proposes a monolithically Mosaic composition of the entire Pentateuch. One could suggest, for example, a Mosaic core with editorial supplementation or some other model of composition that does not require suspicion of the historical integrity or intentionality of the text.

Divine names (see 2.1.2 above) can be varied for the same deity in other ancient Near Eastern texts without suggesting multiple authorship. In the Akkadian *Enuma Elish* creation account, the fifty-one names of Marduk are not only recited (COS 1.111: 402), but two of them are specifically mentioned as being Ea (line 140) and Enlil (line 149), names of two other chief deities in the story. Gods also are given both names and titles in the same document, such as Anat, who is entitled *btlt*, “virgin, girl” (e.g. COS 1.86.243), as is the case with Yahweh and Elohim. Consequently, this cannot be assumed to be the sign of multiple or composite authorship.

Duplicates (see 2.1.3 above) need to be determined by a careful, close reading of the text. None of those proposed are exact parallels, any more than are the four Gospels. The differences as well as the similarities need careful examination, ascertaining their rhetorical function. If these were in fact duplicates, there also needs to be consideration of what their function within a text would be, since some author/editor/redactor placed them together at some stage. Simply positing multiple sources does not answer the question for the present document.

Style (see 2.1.4 above) is a weak standard for establishing authorship, since there have been no adequate objective criteria established in the field (through such tools as statistical stylistics) to ascertain how much stylistic breadth there is within the known output of an identified author. One would need to take into consideration such things as an author’s style within various literary genres and their own maturation and change. This is to say nothing of the opposite side of the problem, the need to quantify the minimum

necessary criteria for distinguishing between works of two different authors. This is not to deny difference in style, but it is to demand some objective criteria by which to evaluate what these differences mean.

Contradictions (see 2.1.5 above) also need to be evaluated by close reading. A number of proposed contradictions have been shown to be spurious when attention is paid to what the text actually says.

Several general responses to DH must be also be made.

4.1. Sources and History of Composition. One cannot deny the use of sources in the composition of the Bible, since there is much recorded in the Pentateuch of which the author was not witness. As a result, the author either composed the material using imagination or relied on others for information (cf. Lk 1:1-4). There is also clear evidence that composition at times took place in several stages. The problems arise in discussing the nature of these sources and stages.

The ancient equivalent of footnoting explicitly acknowledges sources in numerous places in Scripture (e.g., “the Book of the Wars of the LORD” [Num 21:14]; “the Book of Jashar” [Josh 10:13; 2 Sam 1:18]; “the Book of the Acts of Solomon” [1 Kings 11:41]; “the Book of the Annals of the Kings of Judah/Israel” [e.g., 1 Kings 14:29; 15:31] “the annals of the kings of Media and Persia” [Esther 10:2]; “the Book of the Kings of Israel and Judah” [e.g., 2 Chron 35:27]; “the vision of the prophet Isaiah” [2 Chron 32:32]). Other passages refer to works by a title (e.g. “the book of the generations of Adam” [lit., Gen 5:1]; “the book of the covenant” [Ex 24:7; 2 Kings 23:2]; “the book of the vision of Nahum” [Nah 1:1]; cf. the references to a “book” in 2 above). These explicitly acknowledge that writers referred to previously composed material, which would have been written down (*sēper* [“book, written document”]; see BDB; HALOT; cf. the cognate Akkadian verb *šapāru*, which can mean “to write” [CAD 17.1.440-46]; in Northwest Semitic, see DNWSI 2.798-801).

Several stages in writing a biblical account can be discerned in some texts. For example, two or possibly three stages are evident in Joshua 6:24-25: the event of the destruction of Jericho; an initial composition somewhat later, but still within the lifetime of those who were there (“until this day”); and a possible note

some centuries later that the spoil ended up in the temple, if that is how “the treasury of the house of the LORD” is to be read (though it more likely refers to the tabernacle [1 Chron 9:23] or even the temple at Shiloh [1 Sam 1:24]). Genesis 14 also shows several ancient names that are glossed by later, new names adopted for the same site (as noted in 2.1.1 above). In light of the existence of these phenomena in sources elsewhere in the Bible, one cannot reject the DH on the grounds of denying sources, but one can disagree with the nature of those proposed.

4.2. *Evolution of a Theory.* Although the DH has held sway for over a century as the prevailing view (Rendtorff, 101; Friedman 1996, 87), it must not be viewed as a finished, monolithic hypothesis. There has been constant debate from even before its articulation by Wellhausen as to the nature, extent and relative dating of the sources. A vocal minority, consisting of both conservatives (e.g., Cassuto, Segal, Wiseman, Garrett, Alexander) and those who would not identify themselves as such (e.g., Noth, van Setters, Westermann, Rendtorff, Kikawada and Quinn, Talmon, Whybray), has found aspects of the DH inadequate on various grounds. Proponents of the DH have also lacked consensus, and the hypothesis is in a constant state of flux, which is in fact how an enterprise based on the investigation of hypotheses should work (for a discussion of DH over the last quarter century, see Wenham).

One wonders, however, how much modification the DH can undergo while still maintaining something identifiable as the original hypothesis. Some now deny the existence of separate J and E sources, resulting in a combined source JE (called the Jehovist by, e.g., Van Setters 1994). This seems to deny the relevancy of the foundational criteria of diversity of divine names, which led to the development of the theory in the first place (see 2.1.2 above). Additionally, J, the earliest of the sources, has been recently re-dated to the time of the exile (Van Setters, who argues for duplication of accounts as the sole sure criterion for determining sources). This disallows the possible evolutionary development between texts that was needed to explain apparent discrepancies. Some also place the P document much earlier (Wenham, 134; McConville, 154-55; Joosten, 13-15) or maintain that it was never a separate and distinct source (for bibliog-

raphy, see Carr, 43 n. 1). This not only disallows evolutionary development but also presents other difficulties, such as supposedly earlier documents referring to those that should not have been written until much later according to DH orthodoxy (cf. Baker, 1987). A leading German scholar has gone so far as to say, “Recent Pentateuchal research on the whole shows that one has to treat the classical criteria for source division with much greater caution and that without exception they have lost their certainty” (Westermann, 576). In spite of all of this, the DH has by no means been generally abandoned (Nicholson; Wenham, 133-34).

4.3. *Conclusions.* As S. Talmon comments concerning questions of authorship of works in antiquity, “conclusions, arising from whatever method of investigation is used, cannot be corroborated by any tangible means” (Talmon, 226). In other words, any conclusion regarding authorship must be regarded as extremely tentative since the authors are no longer available for consultation. It is also important to acknowledge that alternatives to traditional views should not, at least in the first instance, be viewed as wrong-headed attacks on orthodoxy. Most who made these proposals did not do so out of a desire to destroy people’s faith in the Bible (Harrison, 24). Each of the problems noted earlier (see 2 above) arises from the biblical text itself and must be addressed. Those espousing the DH or some other explanation should be seen as doing so in good faith, seeking to address the issues. Those who disagree with the particular interpretation must produce a persuasive and reasonable counter explanation rather than doing what is too often done, resorting to *ad hominem* slander, which does a disservice to one’s own cause.

We also need to be reminded of the outcome of the entire debate about DH: “an invalidation of the Documentary Hypothesis, if this indeed should be considered the upshot of the statistical linguistic investigation [as employed by Radday], does not yet prove the original unity of the Book of Genesis, nor does it have any bearing on the traditionally accepted Mosaic authorship of the Pentateuch” (Talmon, 231). While source criticism is in serious disarray, if not retreat, a fully adequate explanation of pentateuchal composition is still awaited.

T

TABERNACLE

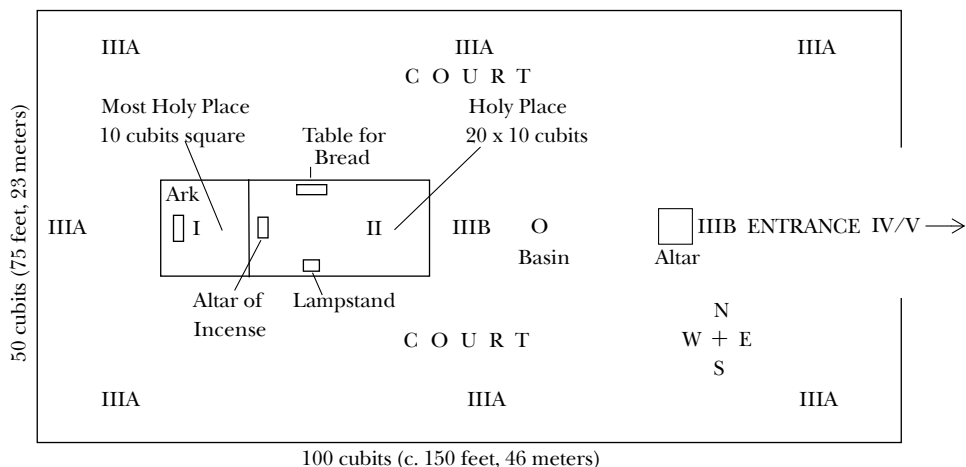

The tabernacle sanctuary was the Lord's tented dwelling place in the midst of *Israel as they traveled from Sinai to Canaan (Num 10—21). Even after they conquered the land, up until the time of Solomon's temple, the tabernacle survived as a sanctuary (2 Sam 7:6; 1 Kings 8:4; 2 Chron 1:3-6), although the ark of the covenant was removed from the tabernacle in the days of Eli (1 Sam 4—6) and never returned there. After the Lord delivered them from *Egypt (Ex 11-12), he guided and protected them on their journey from Egypt through the *wilderness to Sinai (Ex 13—18) by means of the pillar of cloud by day and the pillar of fire by night (Ex 13:21-22). In accordance with the Lord's instructions (Ex 25—31), they constructed the tabernacle (Ex 35—40) while they camped there at Sinai for almost one year (cf. Ex 19:1 with Num 10:11). On the day of its completion (Ex 40) the Lord promptly occupied the tabernacle in his glory (Ex 40:34-35) and from that point forward continuously manifested his guiding and protecting presence to all the people in the form of a cloud by day with fire in it by night over the tabernacle (Ex 40:36-38; Num 9:15-23; 10:11-12, 33-34). The details of the shape, content, construction, erection, dedication, history, theology and the central principles of worship in the tabernacle are treated in this article:

1. Terminology and Dimensions of the Tabernacle
2. Furniture of the Tabernacle
3. The Tabernacle Construction Account (Ex 25—40)
4. Community Holiness and Orientation Around the Tabernacle (Lev 1—Num 10)
5. The Tabernacle Presence of God
6. The Tabernacle and the Glory in the New Testament

1. Terminology and Dimensions of the Tabernacle.

There are three major terms used for what we usually refer to as the “tabernacle” (see the diagram and chart): “sanctuary” (*miqdās*), “tabernacle” (*miškān*) and “tent of meeting” (*ʾōhel mōʿēd*). Within the tabernacle complex as a whole there was, from west to east, the actual tented building itself, then the “basin” (or laver; *kīyôr*, e.g., Ex 30:18) and “the *altar of burnt offering” (*mizbah hāʿōlā*; e.g., Ex 30:28). Within the tented building there were two main areas: “the most holy place” (*qōdeš haqqōdāšim*) and “the holy place” (*haqqōdeš*). Within the most holy place was “the ark of the testimony” (*ʾārōn hāʿēdut*, e.g., Ex 25:22; or “the ark of the covenant of the LORD,” *ʾārōn bērit yhwē*, e.g., Num 10:33). Within the *holy place was “the altar of incense” (*mizbah haqqēṭōret*, e.g., Ex 30:27), “the table of [the bread of] the presence” (*šulḥan happānīm*, e.g., Num 4:7) and the “lampstand” (*mēnôrâ*, e.g., Ex 25:31).

1.1. Sanctuary (*miqdās*). The most common term for the tabernacle complex as a whole is *miqdās*, “sanctuary” (see, e.g., Ex 25:8 with Lev 12:4 and Num 3:28, although *miškān*, “tabernacle,” can sometimes be used in a similar way even in the same context; e.g., Num 3:29). In Ugaritic *mqdšt*, “sanctuaries,” occurs once, whereas the normal word for “sanctuary” is *qds* (= biblical *qōdeš*, see below). There are also other occurrences of *mqdš*, “sanctuary,” in Phoenician and Punic sources as well as in Arabic (*maqdis*). It derives from the root word *qds*, which in the Bible is used in various forms to identify a person, place, thing or time as “holy” (or “sacred”; cf. “sanctuary” as a sacred place, Latin *sanctuarium*) as opposed to “common” (or “profane,” *ḥll*). Note especially the Lord's statement of principle in Leviticus 10, when he com-

<u>Zone</u>	<u>Description</u>	<u>References</u>
INSIDE the tabernacle complex:		
I	The most holy (place) (<i>qōdeš haqqōdāšim</i>)	Ex 26:33; Num 4:4, 19
II	The holy (place) (<i>haqqōdeš</i>)	Ex 26:33; 29:30; Lev 6:30; Num 3:28
I-II	The tabernacle (<i>miškān</i>)	Ex 25:9; 26:1, 7, 15, 26
III	The court (yard) (<i>hāšer</i>)	Ex 27:9-19; Num 4:26, 32
A	A holy place (<i>māqôm qādōš</i>)	Ex 29:31; Lev 6:16, 26-27; 7:6; 10:13
B	Entrance (doorway) of the tent of meeting (<i>petah 'ōhel mō'ēd</i>)	Ex 29:4, 32, 42; Lev 1:3; 3:2; 12:6; 16:7
I-III	The sanctuary (<i>miqdāš</i>)	Ex 25:8; Lev 12:4; 19:30; 20:3; Num 3:28
OUTSIDE the tabernacle complex:		
IV	A clean place (<i>māqôm tāhōr</i>)	Lev 4:12; 6:11; 10:14; Num 19:9
V	An unclean place (<i>māqôm tāme'</i>)	Lev 14:40, 41, 45

Figure 1: The Tabernacle and Its Zones (Adapted from Jensen, 90, with significant changes and additions.)

mands *Aaron “to distinguish between the holy [*qōdeš*] and the common [*hōl*]” (Lev 10:10), and then in Leviticus 11:45, “you shall be holy because I am holy” (cf. Lev 11:44 and the virtual repetitions of this formulaic statement in Lev 19:2; 20:7, 26 and similarly Lev 21:8). It was, therefore, essential that the high *priest should not “profane the sanctuary of his God” (Lev 21:12), and that he and the other priests see to it that no one else did either.

Since holiness is a relative category in the Hebrew Bible, it is “graded” or “graduated” (see Jensen and figure 1), and the terminology is somewhat fluid. Although there are general tendencies in the way the various words are used, the same terms can sometimes be used for large

er or smaller units that are more or less holy than others. Therefore, as noted above, *miqdāš* often refers to the tabernacle complex as a whole. It can also refer to other sanctuaries, whether foreign (Is 16:12; Ezek 28:18) or Israelite, legitimate (Josh 24:26; 1 Chron 22:19; 28:10; Neh 10:39; Ezek 37:26, 28; 44:9-16; 45:4) or illegitimate (Lev 26:31; Ezek 21:2; Amos 7:9, 13). However, in a few instances it refers to the sacred furniture of the tabernacle (Num 10:21; cf. Num 3:31-32) or the sacred part of gifts offered to the Levites (Num 18:29). It occurs once in plural form for the multiple holy precincts in the sanctuary complex (Lev 21:23; cf. for the temple also Jer 51:51 and probably Ps 73:13) and once even for the inner sanctum, the most holy place, in

the unique expression “the sanctuary [*miqdāš*] of the holy place [*haqqōdeš*]” (Lev 16:33).

The same is true for the related term *qōdeš*, “holiness,” when used in reference to the tabernacle. Sometimes it too refers to the whole tabernacle complex and has the meaning “sanctuary” (Ex 30:13; 36:1; Lev 10:4), but most often it designates either the outer room of the tabernacle building called “the holy place” (with the article, *haqqōdeš*) or “a holy place” somewhere within the sanctuary complex (normally without the article, *qōdeš*, but with the article meaning “in the sacred precinct” in Lev 10:17-18; 14:13; see Milgrom, 392, 622), for which the adjectival expression *māqōm qādōš*, “a holy place,” is normally used (e.g., Ex 29:31; see figure 1). In a few instances *qōdeš* refers to the tabernacle building as a whole (Lev 4:26) or even the inner sanctum, the most holy place (Lev 16:2).

The effect of all these terms for the holiness of the tabernacle and the holy places in the tabernacle was to impress upon the ancient Israelites (and the modern reader) both the holiness of God and his concerns and intentions for the holiness of his people. Except for the sanctification of the *sabbath referred to in Genesis 2:3, the first occurrence of any form of the root *qds* in the Hebrew canon is the reference to the “holy ground” at the burning bush on Mount Sinai (Ex 3:5). Later, again at Sinai, the Lord promised that if they would commit themselves to a *covenant with him, the Israelites would become his “treasured possession out of all the nations”—they would become his “kingdom of priests” and “holy nation” (Ex 19:5-6; cf. also the very end of the legal stipulations of the Pentateuch, Deut 26:16-19). There have been numerous proposals for the meaning of “kingdom of priests,” but clearly its connection to “holy nation” assures us that at least part of the point is that, like priests, Israel could draw near to the Lord in all his holiness (see Lev 10:3, “among those who draw near to me I will show myself to be holy”).

Israel was a kingdom of priests consecrated to the Lord, even though there were also special consecrated (Aaronic) priests within that kingdom of priests. Compare the *blood ritual for the consecration of the holy nation (Ex 24:6-8) with that for the consecration of the holy priests (Ex 29:19-21), which was also the occasion of the consecration of the tabernacle (Ex 29:35-37). In both cases the blood of the offerings was ap-

plied directly to the people involved, although the latter was carried out in a more precise manner than the former. This is very unusual. The blood was rarely applied to people. Of course, these are two different levels of holiness, but both the nation and its priests were holy.

This is confirmed, furthermore, by the fact that when any person in ancient Israel (priest or not) was restored to the nation after having been severely unclean for a period of time and dwelling outside the camp (Lev 13:45-46), the ritual for their re-admittance to the camp of the “holy nation” was essentially the same as that for the consecration of the priests (cf. Ex 29:19-21 with Lev 14:14). For obvious reasons, the ritual of splashing the blood around on the people as an act of consecration for the whole nation (Ex 24:8) became more specific when only one Israelite was involved (Lev 14:14). The holiness terminology for the tabernacle, therefore, focuses our attention on the holiness of God, his otherness and transcendence, along with the need to maintain the holiness and purity of his dwelling place in the midst of his people. This, in turn, requires that his people actually function as the “holy nation” he chose and called them to be, for God himself is holy: “be holy because I am holy.”

1.2. Tabernacle (*miškān*). The term *miškān*, “tabernacle” (i.e., “dwelling place”), shifts our attention from the holiness and transcendence of God expressed by the term *miqdāš*, “sanctuary” (i.e., “holy place,” Ex 25:8; note the same basic noun structure of these two terms), and related *qds* words. With *miškān* our attention is focused on the presence and immanence of the Lord suggested by the fact that he would “dwell in their [Israel’s] midst” (Ex 25:8, the verb *škn*) in a “tabernacle” (Ex 25:9, the first occurrence of the noun *miškān* in the Bible), which would be constructed according to a plan that the Lord revealed to Moses on the mountain (Ex 25:9; 26:30; cf. also Acts 7:44 and Heb 8:5; 9:23). Within two verses (Ex 25:8-9) the text binds the transcendence of God together with his immanence. They belong together. A meaningful understanding of one is essential to grasping the other. The Lord’s transcendence is only understandable to us when held in relationship to his immanence, and vice versa. It is the holy God of heaven, creator and sustainer of the universe, who deigned to take up a tented abode in the midst of a nation that he himself called and de-

livered out of *slavery into his blessed light (Num 6:24-26; cf. John 1). Each side of this duality sets the other off in relief.

Although *miškān* can also be used for human dwellings, especially tent dwellings (e.g., Num 16:24, 27), when it specifically designates the tabernacle of the Lord the reference is to the tented building inside the tabernacle court, not the entire tabernacle complex (see Ex 26 and 36, and the contrast between the *miškān* and the court that surrounded it, e.g., in Ex 35:11-15 vs. Ex 35:16-17 and also Ex 35:18; 38:31; Num 3:26; for the complex as a whole see the remarks on *miqdās* above). Various forms of the same word also occur in cognate languages. For example, in Akkadian *maskanu* can refer to a “tent canopy” or “sanctuary.” In Ugaritic it occurs only twice, but both times it refers to an abode of the gods, and in both cases it is parallel to *’ahl*, “tent” (Heb *’ōhel*). Later Aramaic inscriptions use it with the meaning “shrine,” and it also occurs in Arabic as *maskan/miskan* for a dwelling or house. In the Bible it sometimes occurs in combinations with other terms, for example, *miškān hā’ēdut*, “the tabernacle of the testimony” (Ex 38:21; Num 1:50, 53; 10:11; cf. “the ark of the testimony” in Ex 25:22 with the explanation based on Ex 25:16).

By extension, *miškān* is later used in the plural for the temple, perhaps as a reflection of the various parts of the temple or as a plural of majesty (Ps 43:3; 46:4 [MT 46:5]; 84:1 [MT 84:2]). However, in its original sense, when referring to the tabernacle it suggests a nonsedentary transience. Like any other tent, it was portable, and that was specifically the reason for its construction. It was to be a moveable dwelling place for the Lord in his travels with Israel through the wilderness to the Promised Land. It was the Lord’s tent in the midst of the tents of the Israelites. That brings us to the term “tent of meeting.”

1.3. Tent of Meeting (*’ōhel mō’ēd*). The difference between *miškān*, “tabernacle,” and *’ōhel mō’ēd*, “tent of meeting,” when they refer to the tabernacle is that the latter emphasizes the “tent” nature of the dwelling and especially its function as a place of “meeting” between God and his people (*mō’ēd* derives from the verb *y’d*, which means “to designate, appoint” in the qal stem, but “assemble, gather, meet” in the niphal stem), while *miškān* focuses on its function as a transient “dwelling place” of God’s manifest

“presence” (see 1.2 above). The term *mō’ēd* occurs in Ugaritic in the expression *phr m’d*, “appointed or gathered assembly,” which refers not only to an assembly of the gods but also the place of their assembly, in the mountain of the god El.

R. E. Hendrix has observed that there is an abrupt shift from the exclusive use of the term *miškān* in Exodus 25:9—27:19 (19 times), where the Lord gives instructions regarding the structure and construction of the tented tabernacle, to the exclusive use of *’ōhel mō’ēd* in Exodus 27:20—33:7, where the focus is on the cultic functions within the tabernacle. Actually, the occurrences of “tent of meeting” end with Exodus 31:7, excluding the sabbath command subsection of Exodus 31:12-17. The latter seems to be inserted here specifically to emphasize the need to keep the sabbath even during the weeks and months when the tabernacle was being built. The same command is briefly reiterated in Exodus 35:1-3 as an introduction to the actual construction account in Exodus 35—39. Since the *golden-calf catastrophe (Ex 32—34) interrupted the continuity between the command and compliance sections of the tabernacle construction account, it was necessary to refresh and re-emphasize the need to keep the sabbath during the construction period (Ex 35—39). After all, the weekly sabbath was the sign of the covenant between God and Israel (Ex 31:13, 16-17), and violation of it would bring the death penalty (Ex 31:14; cf. Num 15:32-36).

Exodus 31:18 is the concluding structural and thematic link, which by its connection back to Exodus 24:12 binds Exodus 25—31 to its surrounding narrative framework (i.e., Ex 19—24 and Ex 32—34). There are no occurrences of “tent of meeting” after that, except the two in the narrative parentheses of Exodus 33:7-11, where it occurs twice in Exodus 33:7 (but note also simply “tent” in Ex 33:8-11), and where it refers to the other tent of meeting pitched outside the camp (see below), not the tabernacle tent of meeting, which had not been fabricated yet according to the sequence of the Exodus account (see Ex 35—39).

The “tent of meeting” section, therefore, consists of Exodus 27:20—31:10, where the focus is on cultic functions in the tabernacle complex. In fact, the end of the previous section and beginning of this one is signaled by the reference to the *’ābōdā*, “service,” of the tabernacle

(Ex 27:19, the first and only occurrence of this term in Ex 25-27). First, there are the *priestly garments (i.e., the cult functionaries), their consecration and the consecration of the tabernacle complex itself (Ex 27:29—29:37). The second unit describes certain cultic functions for which perishable goods must be supplied on a regular basis (Ex 29:38—30:38), including also the financial resources needed to supply those goods for “the service [*ʿābōdā*] of the tent of meeting” (Ex 30:16, which is part of the census ransom payment passage in Ex 30:11-16, and the only mention of *ʿābōdā* in Ex 28-31). Third, there is the call of Bezalel, the chief craftsman, whom the Lord “filled with the Spirit of God” for the various kinds of workmanship required in the fabrication of the sanctuary (Ex 31:3; cf. Ex 35:31) and to whom he also assigned other skilled craftsmen (Ex 31:6; cf. Ex 35:30-35; 36:1; 37:1, etc.). Note that the last mention of the tabernacle “tent of meeting” in Exodus 25—31 is in the Bezalel unit (Ex 31:7).

One might say that Bezalel and his craftsmen were also functionaries, albeit dedicated to the construction of the tabernacle rather than the regular priestly cultic functions that would be performed in it. However, the rationale for the inclusion of the craftsmen at this point may have more to do with the fact that Bezalel was “filled with the Spirit of God,” which calls to mind the other “tent of meeting” pitched outside the camp. The latter is first mentioned explicitly in Exodus 33:7-11 (but compare Ex 33:7b with Ex 18:13-16), which is a parenthetical sub-narrative embedded in the golden-calf account (Ex 32—34). It describes where and how Moses regularly received oracular revelations from the Lord both before (Ex 33:7-11) and after (Num 11—12) the tabernacle tent of meeting was functional. It was also there at that tent of meeting that the Lord put “his Spirit” on the seventy elders (i.e., the Lord’s Spirit on *Moses was transferred to them as well) so that they “prophesied” (Num 11:16-17, 24-25, 29; but note the freedom of the Spirit in Num 11:26).

Moreover, according to the regulations for the continual daily cult in Exodus 29:38-46, the tabernacle tent of meeting was to become not only a cultic tent but also an oracular one, like the tent of meeting pitched outside the camp. The Lord would meet at the tabernacle not only with Moses but with all the Israelites: “It shall be a continual burnt offering throughout your gen-

erations at the entrance of the tent of meeting where I will meet with you to speak to you there. And I will meet with the Israelites there, and it will be consecrated by my glory” (Ex 29:42-43). Compare this to Exodus 33:7b, 9, “Anyone who was seeking the LORD would go out to the tent of meeting that was outside the camp. . . . When Moses entered the tent the pillar of cloud would descend and stand at the entrance of the tent, and he would speak with Moses.” It is not entirely clear how the oracular functions of these two tents varied, but there were no regular cultic functions performed at the tent of meeting outside the camp, at least not of the sort that would be taking place within the tabernacle tent of meeting.

The biblical details and historical-critical debate about this oracular tent of meeting and its relationship to the tabernacle tent of meeting will be treated later (see 3.3 below). For now, however, it is important to take special note of the fact that the intervening golden calf debacle (Ex 32:1-8) struck at the very heart of their covenant relationship with God; namely, worship of the only true God according to the standards called for in the first two commandments (Ex 20:2-6; i.e., no other gods and no images). It jeopardized the continuing existence of that generation of Israelites (Ex 34:9-10), the establishment of the tabernacle tent of meeting and the system of worship within it, which was the subject of the previous chapters (Ex 25-31), as well as the continuing manifestation of the Lord’s personal presence at the tent of meeting pitched outside the camp (Ex 33; for further remarks see 5 below). It was only the prayer and other forms of intercession (Ex 32:11-34; 33:12-14) by which Moses called on God’s *grace (Ex 33:19; 34:6-9) that avoided these consequences and led to the reestablishment of the covenant (Ex 34:10-28), including the re-issuing of the two tablets of the *law (Ex 34:27-28; cf. Ex 24:12; 31:18; 32:19-20).

“Tent of meeting” is used less exclusively in Exodus 35—40 and in the rest of the Pentateuch. Usage suggests that the term “the entrance [*petah*, lit. “doorway”] of the tent of meeting” is relatively broad in its meaning, referring to the whole area between the entrance to the tabernacle complex as a whole and the entrance to the tabernacle tent itself (see the helpful discussions in Milgrom, 392-94, and Klingbeil, 61-64). One gets the impression that laypeople were limited to the forecourt, basically

between the entrance to the tabernacle complex and the burnt offering altar, but some distance was maintained between them and the altar itself. The inner court was the domain of the priests alone (Haran, 184-85).

According to Leviticus 8:3-4 the congregation assembled “at the entrance of the tent of meeting” to witness the consecration procedures for the priests. At that time Moses had Aaron and his sons “draw near” so that he could “wash them with the water,” which no doubt refers to the water in the basin between the altar and the tabernacle tent (Lev 8:6). In this instance drawing near must have involved going further into the court than “the entrance of the tent of meeting” where the congregation was located. Furthermore, during the seven day consecration period the priests could not “go out from the entrance of the tent of meeting” (Lev 8:33), which must mean that they could not exit the tabernacle complex. It cannot mean that they must stay in the tabernacle tent, since some of what they were required to do involved, for example, going to the water basin of the burnt offering altar in the court. On those days, therefore, they were to occupy themselves “at the doorway of the tent of meeting,” which included the whole area from the entrance of the tabernacle complex as a whole (they could go out to it, but not out from it) to the entrance of the tent structure inside the complex.

1.4. Dimensions, Framework and Curtains of the Tabernacle. The dimensions given for the tabernacle court in figure 1 are based on the standard assumption that a cubit equals about 18 inches (45 centimeters), the distance from an average-size man’s elbow to the tip of his fingers (Sarna, 159). There is really no serious debate about the length and width of the tabernacle court (see the measurements in Ex 27:9, 12, 18). Accordingly, it was about 150 feet long (100 cubits), 75 feet wide (50 cubits), and the hangings (*qēlā’im*) that surrounded the court consisted of the curtains (*yēri’ōt*) and the pillars (*‘immudim*) on which they hung, and stood about 7½ feet high (5 cubits, Ex 27:18). The gate was in the middle of the east side and was about 30 feet wide (20 cubits, Ex 27:14-16; see Sarna for all the details about the cloth fabrics, designs, wood and metals used in the fabrication of the tabernacle).

With regard to the tent itself, V. A. Hurowitz suggests that “boards” (*qērāšim*, e.g., Ex 26:15) that made up the solid structure were really

“frames” (like the doorframe surrounding a doorway; see Hurowitz 1995, 131, and the diagrams, pp. 147-50). The curtains (*yēri’ōt*, e.g., Ex 26:1) were draped over the framework. The dimensions of both the frames and the curtains are well established. Twenty frames made up each long side of the tabernacle, and they were each 1½ cubits wide, so if they were simply butted up against each other (there is debate about this, see below) and held together by means of a combination of grooves, rings, sockets and bars (Ex 26:15-30; see Sarna, 169), then the tabernacle building was 45 feet long (i.e., 30 cubits; Ex 26:15-18). The rear wall was made with six regular frames plus two double frames on each end that were constructed and placed differently in order to support the structure. Of course, there was no front wall since that was the entrance side. If the frames were simply butted up against each other, the total length of the back wall was 15 feet (10 cubits; see the discussion and diagram in Hurowitz 1995, 131-32, 149).

We can confirm the width and length of the structure by the dimensions of the curtains. When properly fitted together the total length of the ten underlying curtains was 40 cubits, which is 60 feet. It was draped over the wood framework covering the top, sides and rear (Ex 26:1-6). Therefore, we can confirm that the structure was 45 feet long and stood 15 feet high (i.e., 45 + 15 = 60). When properly fitted together the three overlying layers of spun goat hair, ram skins and dolphin skins, respectively, were 44 cubits long, which is 66 feet (the extra six feet overlapped like an awning over the front of the tabernacle), and 30 cubits wide, which is 45 feet. The width covered up one side, over the roof and down the other side of the tabernacle framework, so it was 15 feet high and 15 feet wide (i.e., 15 + 15 + 15 = 45 feet).

One interpretive tradition makes much of the different colors of the curtains (e.g., Ex 26:1): white linen for purity, blue for God’s transcendence, purple for his royalty and red for the shed blood that was so important for atonement. Others emphasize the gradation of the quality and value of the materials—the closer in toward the inner sanctum the higher the quality and value of the materials (e.g., Sarna, 156-57). This is relatively clear for the metals: the altar overlaid with bronze and the bronze basin overlaid in the courtyard (Ex 27:2; 30:18) may be contrasted with the table and incense altar overlaid

with gold (Ex 25:24; 30:3) and the gold lampstand (Ex 25:31) in “the holy place.” The ark was also overlaid with gold, inside and out (Ex 25:11). The colors, weaves and leathers of the curtains are less clear with regard to their quality and value, but the blue, purple and red dyed yarns woven with the fine white linen, from which the underlying curtain of the tent was made, were the most expensive in those days (Sarna, 155). Goat hair was normally used in the making of tents (Ex 26:7; cf. Ex 35:26), rams’ skins dyed red are known from later Arab portable shrines, and “dolphin” skins (see the helpful discussion in Cross 1998, 88-89) were used as a leather covering over the woven fabrics of the inner layers of the tabernacle tent (Ex 26:14).

On the one hand, the curtains that surrounded the court were of fine white linen alone, but the veil that separated the most holy from the holy place, the screen that covered the entrance to the tabernacle tent and the screen that covered the entrance into the tabernacle complex were all woven of the same materials: blue, purple and red dyed yarns woven with the fine white linen. This is probably because the line of movement from the entrance of the tabernacle complex into the holy place and, finally, into the most holy place was the straight line of approach to God. On the other hand, the veil that separated the holy place from the most holy place was embroidered with *cherubim (Ex 26:31; cf. also the inner tent fabric as a whole, Ex 26:1), which suggests the limitation of entrance into the most holy place even for the priests, except for the high priest on the Day of *Atonement. It is worth noting the function of the cherubim in Genesis 3:24, but also the fact that cherubim thrones of deities are known from elsewhere in the ancient Near East (Cross 1973, 35-36).

The “veil” (*pārōket*, Ex 26:31-35) that separated the most holy place (the inner sanctum) from the holy place (the outer sanctum) was apparently suspended on four pillars under the “clasps” that linked the two halves of the underlying curtain together (Ex 26:6, 32-33), thus 20 cubits (30 feet) back from the entrance of the tent, leaving a most holy place behind the veil that was 15 feet cubed. Alternatively, the *pārōket* may have been a kind of canopy that not only shielded off the ark of the covenant in the most holy place but also extended back over the top of the ark, suspended on the four pillars men-

tioned in Ex 26:32 (see Averbeck, 3.687-89; Friedman, 295; Hurowitz 1995, 144-46). There was also a “screen” (*māsāk*) suspended on five pillars that covered the entrance to the tabernacle tent leading into the holy place (Ex 26:36-37).

R. E. Friedman has proposed that the frames were not butted up against each other, but overlapped in such a way that the tabernacle would have had smaller dimensions: 20 cubits (30 feet) long, 8 cubits (12 feet) wide and 10 cubits (15 feet) high. The curtains would have overlapped to fit the framework over which they were draped. Moreover, he observes that the tabernacle was actually brought into the temple (1 Kings 8:4; 2 Chron 5:5), and proposes that the tabernacle itself may have actually been set up in the temple under the wings of the large cherubim in the inner sanctum (most holy place) of Solomon’s temple (1 Chron 23:32 and esp. 2 Chron 24:6; 29:5-7). The dimensions of the most holy place in the temple would accommodate the tabernacle if it were assembled as Friedman suggests (see 1 Kings 6:20 and 2 Chron 3:8; 20 x 20 x 20 cubits, with cherubim 10 cubits tall and with 5 cubit outstretched wings on each side).

Recently, Hurowitz has vigorously opposed Friedman’s view of the dimensions and history of the tabernacle (see Hurowitz 1995). His arguments are detailed, forcefully stated and most likely correct. Aside from the fact that it is difficult to see how the tabernacle tent would have fit under the wings of Solomon’s cherubim even according to Friedman’s own dimensions (e.g., both the tabernacle and the cherubim were a total of 10 cubits high, 1 Kings 6:23-28), the passages he cites in support of his view of the setting up of the tabernacle in the inner sanctum of the temple are hardly convincing (Friedman, 293-94). For example, it is indeed true that 1 Chronicles 6:48 [MT 6:33] refers to the *Levites, the tribal relatives of the priests, as those who “were appointed for all the service of the tabernacle [*miškan*] of the house of God.” However, this passage stands within the section that begins in 1 Chronicles 6:31-32 [MT 6:16-17], which says, “They were ministers in song before the tabernacle tent of meeting *until* Solomon built the house of the LORD in Jerusalem.” The writer of Chronicles was well aware of the shift to the temple after it was built, even though he sometimes conflated the two in his description of the cult.

Similar arguments apply to other passages as well. For example, according to 1 Chronicles 23:32, the Levites were assigned by David to “keep the charge of the tent of meeting,” but this seems to refer to the charge that had been given to them since the days of Moses that would be applied to the temple after it had been built (note the reference back to the tabernacle days in 1 Chron 23:26). Again, in 2 Chronicles 24:6 Joash refers back to the levy that Moses had imposed on the congregation of Israel “for the tent of the testimony,” commanding that it be reinstated to support repair work in the temple. 2 Chronicles 24:6 simply uses *miskān* in its general sense of “dwelling place,” like in Psalm 74:7, where it is used in poetic parallel with “sanctuary” (*miqdās*), and Lamentations 2:6 simply refers to God’s “meeting place” (*mō‘ēd*) in the temple sanctuary.

2. Furniture of the Tabernacle.

Moving from east to west into the tabernacle complex, the furniture of the complex included (1) the bronze (burnt offering) altar, (2) the water basin (laver), (3) three items in “the holy place,” the outer sanctum of the tent—the table of (the bread of) presence along the north wall, the lampstand along the south wall (Ex 26:35), and the gold incense altar up close to the veil but outside of it, near the ark of the testimony that was on the other side of the veil (Ex 30:6), and (4) the ark of the testimony itself in “the most holy place” (Ex 26:33-34). We will focus our attention on the water basin, table, lampstand and ark of the testimony (see Altars; Cherubim).

2.1. The Ark of the Testimony (Ex 25:10-16).

The ark was the most important piece of furniture in the tabernacle. It was placed in the inner sanctum of the tent called “the most holy place.” The cover on top of the ark was called the “the atonement seat” (*kappōret*, from the verb *kipper*, “to make atonement”) overshadowed by two gold cherubim. According to Leviticus 16:2, the Lord said to Moses, “I will appear in the cloud over the atonement seat,” so he was to make clear to Aaron that the high priest must not enter there except once a year on the Day of Atonement. With regard to Moses, however, the Lord would “meet” with Moses there and “speak” to him all the commandments so that he could deliver them to the Israelites (Ex 25:22). In fact, the ark was the depository of the two stone tablets of the *law, which the Lord was about to

give Moses on the mountain (Ex 25:16; cf. Ex 24:12; 34:28; Ex 40:20; Deut 10:5; 1 Kings 8:9). Thus the ark is sometimes called “the ark of the testimony” (*‘ārōn hā‘ēdut*, e.g., Ex 25:22; or “the ark of the covenant of the LORD,” *‘ārōn bērit yhw’h*, e.g., Num 10:33).

The ark itself was a rectangular box made of acacia wood overlaid inside and out with pure gold plating, 2½ cubits long (c. 3 feet 9 inches), 1½ cubits wide (c. 2 feet 3 inches) and 1½ cubits high. There are many species of acacia, most of which are thorny bushes or shrubs, but a few have trunks from which timber could be cut. It is a very hard and durable wood that is also lightweight. The term *acacia* (*šittīm*) is of Egyptian origin (Sarna, 158; KBL³ 1473). Gold molding ran along its edges, and two gold rings were attached to each long side so that acacia wood poles overlaid with gold could be inserted along both sides for carrying the ark without touching it. The poles were to remain in the rings permanently.

2.2. The Table of the Presence (Ex 25:23-30).

The table was also made of acacia wood overlaid with gold. It was 2½ cubits long (c. 3 feet), 1 cubit wide (c. 1½ feet) and 1½ cubits high (c. 2 feet 3 inches). Like the ark, it also had a gold molding around its edges, but there was also a “rim” about a “handbreadth” (c. four fingers) wide, perhaps a raised border meant to keep the bread and other elements in place on the table (“rim,” *misgeret*, from *sgr*, “to shut, close”; Ex 25:25, 29-30). Like the ark, the table was fitted with gold rings on its corners through which poles could be inserted, but there is no mention of keeping the poles in the rings permanently. They were probably removed so that the priests could maneuver more easily around the table in their cultic functions. This table was the place where the “bread of presence” was continually displayed before the Lord (Ex 25:30). The utensils mentioned (Ex 25:29) include (1) “bowls,” which were perhaps the pans in which the loaves of bread were shaped or baked; (2) “dishes,” or “ladles,” perhaps containers for the frankincense that was to be spread on the bread (Lev 24:7); as well as (3) “jars” and (4) “jugs,” or “bowls,” one or both of which were used in libations (Ex 25:29, “with which drink offerings were poured”; Sarna, 162-63).

Immediately after the regulations for the annual cycle of *festivals (Lev 23), Leviticus 24:1-9 details the daily provisions for lighting the lamp-

stand (Lev 24:1-4; see 2.3 below) and the weekly provision of bread for the table (Lev 24:5-9). There were to be twelve loaves arranged in two rows on the table, six to a row, or perhaps in stacks of six each. The frankincense spread on them made them “a soothing fragrance” offering to the Lord, probably representing the twelve tribes of Israel standing in the presence of the Lord. The bread was replaced every week, on the sabbath, and the week-old bread was eaten by the priests (Lev 24:8-9).

The combination of the daily lighting of the lampstand and associated burning of incense (Lev 24:3 with Ex 30:7-8) plus the bread constantly on the table impresses one with the fact that the Lord had truly taken up residence in the tabernacle. If there is a lamp burning, incense burning and bread on the table, then someone is “home” (see 5 below for discussion of “presence”).

2.3. The Lampstand (Ex 25:31-40). The lampstand was a six-branched *mēnōrâ* made of one piece of pure, hammered gold (Ex 25:31, 36), the seventh “branch” actually being the extension of the central shaft (see the first-century drawing in Taylor, 54). It stood across the holy place (on the south side) from the table (on the north side). It is significant that at the end of the lampstand section the “pattern” command is reiterated: “See and make [them; i.e., the lampstand, lamps and all the utensils] according to the pattern [*tabnit*, from *bnh*, “to build”] shown you on the mountain” (Ex 25:40; cf. Ex 25:9 and esp. Num 8:4 again). The verbal description is such that it is difficult to imagine exactly what the lampstand looked like, so seeing it on the mountain was necessary to its construction. For example, no dimensions are given in the text, unlike the earlier prescriptions for the ark and the table.

The major utilitarian function of the lampstand was to shed light in the holy place. The technical terminology for the shaft, cups and botanical features of the lampstand is largely Egyptian, suggesting an Egyptian background to the object as a lampstand (Ex 25:33-36; Sarna, 164). Its shape as a stylized tree, however, also has symbolic significance, and for this C. Meyers has argued effectively that the background is from the late bronze age northern Mesopotamia, Syria, Palestine and Cyprus, although the object appears to be particularly Israelite as well. The lampstand, therefore, is a stylized “tree of life.”

Some writers have gone further with this,

identifying the artistry and imagery of the lampstand with the asherah tree of the Canaanite fertility cult, which seems to have been an extensively pruned living tree planted by an altar (see, e.g., Taylor and the literature and iconography cited there). However, it is important to remember two things. First, the asherah tree itself derived from the tree of life imagery of the ancient Near East, though Canaanite religion associated it with Asherah, the goddess of fertility. Any visual similarities between the menorah and the asherah arise from their common background in this tree of life imagery. Second, it is clear from the biblical text that asherahs were to be eliminated, along with the other accoutrements of the Canaanite fertility cult (see, e.g., Ex 34:13; Deut 7:5; 12:3; Judg 6:25, etc.). Moreover, they were not to be planted or utilized in the Israelite worship system, even at legitimate solitary altars (Deut 16:21; cf. the solitary altar law in Ex 20:24-26), much less in the tabernacle. The menorah was in no way conceived of as an asherah.

2.4. The Basin (Ex 30:17-21). Since it was located in the courtyard rather than in the holy place, the basin (*kīyôr*, sometimes called the “laver”) was made of bronze, probably in two parts: base and bowl (Ex 30:18). It was supplied with water for the priests to wash their hands and feet before they approached the altar or entered into the holy place in the tent, lest they die (Ex 30:19-21; 40:30-32). There are no dimensions given, but it must have been large enough to hold sufficient water for all the priests to wash.

3. The Tabernacle Construction Account (Ex 25—40).

The tabernacle account begins in Exodus 25 and, as far as its construction and erection is concerned, concludes with Exodus 40. However, the account continues in the elaboration of tabernacle principles and procedures that are of primary concern in the narratives and instructions that extend from Leviticus 1 through Numbers 10, when the Israelites finally departed from Sinai under the guidance of God’s glorious presence within and over the tabernacle (Num 10:11-12, 33-36). The tabernacle account, therefore, not only fits within but also dominates the Sinai narratives (Ex 18—Num 10).

3.1. Discourse-Level Structure. Some basic observations regarding the arrangement of material in Exodus 25—40 have been presented above

and are assumed here (see 1.3 above). In brief, Exodus 24:12—25:1 links the narrative recounting of the giving of the law and ratification of the covenant in Exodus 19:1—24:11 with the tabernacle construction account in Exodus 25—40 (note the shared narrative pattern between Ex 24:15—25:2 and Ex 40:34—Lev 1:2 observed by Blum; see 5 below). Moreover, the promise of the tablets of the law in Exodus 24:12 and the reception of them in Exodus 31:18 provide the outside narrative boundaries for the first unit, Exodus 25—31.

Many have observed that Exodus 25—31 falls naturally into seven major sections (Ex 25:1—30:10; 30:11-16, 17-21, 22-33; 34-38; 31:1-11, 12-18), according to the recurrence of the introductory formula in the first verse of each section (“The Lord spoke/said to Moses”; see, e.g., Longacre). The first section, Exodus 25:1—30:10 (in fact, the whole of Exodus 25—31), is really a narrative speech of the Lord to Moses. Moreover, Knierim points out that this is especially significant because it presents the instructions for the tabernacle as having their origin not only in Moses but in the Lord himself. The decision to build a sanctuary as well as its design was a decision of the deity (Knierim, 114-19). This is true within the Bible (cf. 2 Sam 7:1-16) and in the ancient Near Eastern world of the Bible as well (see the summary and literature cited in Averbeck 2000, 419-20, n. 8 and 9).

Moreover, the fact that the call for contributions for building the tabernacle (Ex 25:2b-7) comes before the revelation of the architectural details (beginning in Ex 25:10) indicates that Exodus 25:1—30:10 (also with Ex 30:11—31:17) is a particular kind of divine speech. It is the commissioning and publication speech given by the Lord through the one responsible for the building of the sanctuary (Moses) to the people who would actually do the building work (Knierim, 120-23). It assumes that the plan is already complete, and this is in fact reflected in the building plan shown to Moses on the mountain (Ex 25:9, 40; 26:30; Num 8:4). It is instruction about the plan, not the plan itself.

The repetition of the sabbath law immediately before and after the golden calf incident (Ex 31:12-17 and Ex 35:1-3) sets off Exodus 32—34 as a historical and literary interruption in the tabernacle construction account (see 1.3 above). Exodus 35:1—39:43 is a standard building report. There is no instruction. It is a compliance

narrative, reporting the ready obedience of the Israelites to the instructions in Exodus 25—31. The construction follows the details of the command carefully, and the report emphasizes this fact (see Ex 38:21 and the regular refrain “just as the LORD commanded Moses,” Ex 39:1, 5, 7, etc.). The same is true for the erection and consecration of the tabernacle in Exodus 40 and the priesthood in Leviticus 8. According to Exodus 40:16, “Moses did everything just as the LORD had commanded him; just so he did it,” in accordance with the instructions in Exodus 40:1-15. Again, in the compliance section that follows, there is the regular refrain, “just as the LORD commanded Moses” (Ex 40:19, 21, 23, etc.).

Unlike the instructions in Exodus 25—31, the compliance section follows the natural pragmatic order of construction (Klein, 265-66). First, there is the call to collect construction materials and gather craftsmen and other laborers (Ex 35:4-19), followed by the abundant compliance of the Israelites to this call (Ex 35:20—36:7). The actual construction begins with the fabrication of the tabernacle tent itself (Ex 36:8-38), then the furniture in the tent (Ex 37:1-29), followed by the altar, basin and court surrounding the tent (Ex 38). The garments of the priests conclude the compliance section proper (Ex 39:1-31). The final conclusion gives notice of the completion of the tabernacle with the presentation of it all to Moses for his examination and approval (Ex 39:32-43).

Hurowitz (1985) has shown that, with necessary variations, the tabernacle construction and erection account in Exodus 25—40 follows the general pattern of temple construction accounts in the ancient Near East: (1) the divine command to construct the tabernacle (Ex 24:15—31:18); (2) the transmission of the divine command to the people charged to implement it (Ex 34:29—35:19); (3) the collection of construction materials and enlistment of artisans (Ex 35:20—36:7); (4) the account of the actual construction of the tabernacle and its furniture (Ex 36:8—39:43); and (5) the final erection and dedication of the tabernacle (Ex 40; cf. Lev 8).

3.2. *The Tabernacle and Creation.* There has been a great deal of scholarly attention paid to the correspondences between the creation accounts in Genesis 1—4 and the tabernacle construction account in Exodus. With regard to Genesis 1:1—2:3, the pattern of sevens is most significant (see Balentine, 138-41; Levenson, 78-

90, and the literature cited there): (1) Moses starts up the mountain to receive the instructions for the tabernacle on the seventh day, after the glory cloud of the Lord's presence has been manifest on the mountain for six days (Ex 24:16); (2) the pattern of seven divine speeches in Exodus 25—31, like the seven days of the creation, ends with the sabbath command (compare Gen 2:1-3 with Ex 31:12-17; cf. Ex 35:2-3); (3) the sevenfold repetition of the compliance formula in Exodus 40:17-33 ("just as the LORD commanded Moses," Ex 40:19, 21, 23, 25, 27, 29, 32) evokes the response to the divine creative word; (4) the patterns expressing completion in Genesis 1:31—2:3 correspond with Exodus 39:43, 32 and 40:33, respectively (God and Moses "saw" the work completed, Gen 1:31; Ex 39:43; the work was "finished," Gen 2:1; Ex 39:32; God and Moses "finished" their work, Gen 2:2; Ex 40:33; God and Moses blessed the completion of the work, Gen 2:3; Ex 39:43). Other verbal and literary patterns are also important. For example, the dividing and ordering of the world in Genesis 1 and the dividing and ordering of the tabernacle (e.g., sacred versus profane space, see 1.1 above) are both according to God's design.

G. Wenham has proposed a number of parallels between the Garden of Eden account in Genesis 2—3 and the tabernacle. He begins with the fact that the garden was the ideal "sanctuary," within which the Lord would be present with his people and walk with them (see Gen 3:8, Lev 26:12; see 5 below). Other proposed parallels between the tabernacle and the Garden of Eden that are more or less convincing, include the following examples:

(1) The cherubim the Lord stationed (lit., "caused to dwell," from the verb root *škn*; cf. *miskān*, "tabernacle") east of the Garden of Eden to guard the entrance (Gen 3:24) correspond to the two cherubim that form the "atonement seat" on top of the ark of the covenant (Ex 25:17-22; cf. also 1 Kings 6:23-28 with 1 Kings 8:6-7 in the temple), the cherubim designs on the veil (or canopy) curtains that separate the most holy place within which the ark was housed from the holy place outside the veil (Ex 26:31; cf. 1 Kings 6:29 in the temple), and the fact that the entrance of the tabernacle also faces toward the east (Ex 27:13-16).

(2) The tree of life in the garden (Gen 2:9 and Gen 3:24) corresponds with the tabernacle

menorah (lampstand), which not only provided light in the holy place, but was probably also conceived of as a stylized tree of life (Ex 25:31-40; see 2.3 above).

(3) The two terms in the Lord's command to Adam that he "cultivate [*ʿabad*]" and keep [*šāmar*]" the garden of Eden are the same terms used together in various passages for the work and service of the priests and Levites in the tabernacle (Num 3:7-8; 8:26; 18:5-6). The latter term, in fact, is used specifically for the "guard duty" (Num 1:53) of the Levites around the tabernacle.

Some have proposed that these kinds of patterns extend beyond Genesis 3 as well (see the summaries and literature cited in Balentine, 140-41). For instance, there is something of a creation—fall—re-creation pattern in Exodus 25—31, 32—34, 35—40, similar to Genesis 1—2, 3—6, 6—9. The term *ark* is common to both accounts; Noah's ark is constructed like a floating "house," a box-like structure similar to the ark of the covenant; and both are actually "sanctuaries" that are places of security in the midst of the chaos of this world. Moses is like a new Noah who intercedes to prevent annihilation (Ex 32—34), and both find favor in the eyes of the Lord (Gen 6:8; Ex 33:12-17). Moreover, the waters of the flood were dried up and Moses erected the tabernacle on New Year's Day (Gen 8:13; Ex 40:2).

Finally, based on the above intertextual literary patterns within the Pentateuch and comparisons with cosmogonies and temple-building texts of the ancient Near East, J. Levenson has argued persuasively that to build a sanctuary was to create a "microcosm," a small, properly ordered world within the larger "cosmos" (Levenson, 53-127). A sanctuary is the cosmos in miniature, and the cosmos itself is a sanctuary, depending on which way you look at it. Ultimately, God's "glory fills the whole earth" (Is 6:3), and the sanctuary was to be a special place in which the glory of God is displayed, treasured and engaged with in a special way by humans. The cosmos and the tabernacle were reflective of each other as the literary and thematic parallels between the creation and the building of the tabernacle show. By building the tabernacle (or temple) and by performing the ritual functions within it, people were allowed "participation in the divine ordering of the world" (Levenson, 91). There they approached God in appeal to his

involvement in their lives and the world around them.

3.3. The Tabernacle in History. J. Wellhausen argued that “the representation of the tabernacle arose out of the temple of Solomon as its root, in dependence on the sacred ark, for which there is early testimony, and which in the time of David, and also before it, was sheltered by a tent. From the temple it derives at once its inner character and its central importance for the cultus as well as its external form” (Wellhausen, 45). There are, of course, many parallels between the tabernacle and the temple. After all, they are both sanctuaries. The details are most interesting, however. For example, the dimensions of the tabernacle tent are exactly one half those of the temple (compare figure 1 above and the explanation of Ex 26 in section 1.4 with 1 Kings 6:2 and 1 Chron 3:3). Wellhausen, therefore, believed the tabernacle to be a “pious fraud.” There was no historical moveable tent sanctuary before the time of Solomon’s temple, unless it was the tent of the David tradition and its precursors, in which the ark was housed.

Since the time of Wellhausen there have been various tradition-historical proposals that have argued, in one way or another (the details vary with particular scholars), that the priestly tabernacle tradition of Exodus-Numbers was composed based on combining the traditions of Solomon’s temple, the earlier traditions of Moses’ oracular tent pitched outside the camp (Ex 33, see 1.3 above), the sanctuary tradition at Shiloh (1 Sam 2-3; see Haran, 198-201, 262 n. 3) and the tradition of David’s tent for the ark in Jerusalem (2 Sam 6 and 1 Chron 16; see Cross, 85, 92-95). The goal was to capture all or some of these traditions in projecting the sanctuary back into the Mosaic period as a means of supporting the agenda of the Priestly writer (P) in his own day.

There is also a competing tradition about a “tent of meeting” pitched outside the camp (see 1.3 above), which was, according to some scholars, a projection back into the Mosaic period by the Elohist (E) and Deuteronomist (D) under the influence of the prophetic institution (as opposed to the tent of meeting promoted by P). Although a few scholars have suggested that the ark was at one time housed in this oracular tent of meeting outside the camp, there is no text that associates the ark with this tent, and most would argue that these two tents never co-exist-

ed historically. M. Haran has pointed out that, according to the biblical text, there is a natural connection between the *theophany in Exodus 19–20 and the tent-of-meeting practice outlined in Exodus 33:7-11.

The oracular pattern outlined in Exodus 33:7-11 (cf. also Ex 34:29-35; Num 11:16, 24-30; 12:4-10) began when Moses went out to meet with God on the mountain on behalf of the people (Ex 20:21). Furthermore, Moses did not meet with God inside this tent but instead used the tent as a place to prepare himself and as a protection from the potentially fatal effect of seeing God’s glory. Moses stood inside the tent and looked out from the doorway when he met with God, who appeared in the pillar of cloud outside the doorway of the tent (Haran, 265-69). The people also worshiped the Lord at the doorway of their own tents when they saw the glory cloud standing and meeting with Moses at the tent of meeting outside the camp (Ex 33:10). This is a completely different tent of meeting than the priestly tent of meeting set up in the middle of the camp.

Although there is a great deal of historical-critical skepticism and speculation reflected in the scholarly debate outlined above, there has also been a good amount of reaction against Wellhausen’s view that the tabernacle is entirely a work of pious fiction. Much has been made of the possible background for a moveable tent sanctuary in the ancient Semitic world based on the pre-Islamic and post-Islamic Arab tent shrines (see Morgenstern for a detailed collection of the data). Most recently, K. A. Kitchen and D. E. Fleming (cf. also Cross) have brought forth evidence for large portable tent shrines from the Bronze Age (long before the evidence from Arabic sources) in Egypt, northern Mesopotamia and the Levant. Wood-framed and boarded pavilions are known from Egypt in the third and second millennia B.C., some with richly worked curtains, some for secular and others for religious use. The war tent of Ramesses II (c. 1275 B.C.) was even divided into two rooms, the outer one being twice as long as the inner one, like the Israelite tabernacle (see Egypt, Egyptians).

The large tent at Mari (c. 1750 B.C.) had ten “framing[?] units” (*qersu* in Akkadian = *qeršu* in Hebrew). It took twenty men to carry them, and the term is cognate to the *qereš*, “wooden frames,” of the tabernacle building (Ex 26:15),

which also appears in Ugaritic descriptions of the “tent shrine” of El (see Kitchen, 121, and esp. Fleming, 486-92). Other parallels include, for example, the layout of the Egyptian war camp as reflected on the Battle of Qadesh reliefs of Ramesses II, with Ramesses’ tabernacle-like tent fenced off in the middle of the camp (Kitchen, 123). Boxes borne on carrying poles passed through rings attached to the boxes are also well attested from Bronze Age Egypt. They originally contained vessels for libation rituals (Kitchen, 125). Other points of comparison could also be made.

The point is that there is good evidence for suggesting that a tabernacle-type structure is realistic in the Bronze Age world of the ancient Near East. The biblical account that puts the tabernacle back into the late Bronze Age is not an unrealistic projection of later ideologies and realities back into the Mosaic period. According to the biblical text, the tabernacle tent originated with God’s instructions to Moses, was constructed and erected under his direction, and endured from then through the wilderness wanderings and conquest to be set up at Gilgal (Josh 4:15-19), then Shiloh (Josh 18:1; 19:51; 1 Sam 2:22), Gibeon (1 Chron 16:39-40; 2 Chron 1:3-6) and finally stored in the temple (1 Kings 8:4).

4. Community Holiness and Orientation Around the Tabernacle (Lev 1—Num 10).

The tabernacle construction account concludes with its erection in Exodus 40, but Exodus 40 also opens up onto Leviticus and Numbers, binding Exodus 25—40 with the sacrifices and other ritual principles and procedures inside the tabernacle (Lev 1—16) and eventually the prescriptions and descriptions of its religious, moral and physical centrality to the wilderness community that surrounded it (Lev 17—Num 10; for a thorough discussion of Leviticus 1—16, see *Sacrifices and Offerings*).

Numbers 1—10 describes and presents that community as a war camp, but continues the focus on the tabernacle as the center of the community. The chronological notice in Exodus 40:1 assigns the erection of the tabernacle to “the first day of the first month (of the second year)” after the *exodus from Egypt (i.e., eleven months and two weeks after the exodus; cf. Ex 12:2, 6, 51), and Numbers 1:1 assigns the census of able soldiers to “the first (day) of the second month in the second year after they had gone

out from the land of Egypt,” exactly one month after the erection of the tabernacle. The intervening chapters, Leviticus 17—27, focus on maintaining the holiness of the community that surrounded the tabernacle.

4.1. The Holiness of the Community (Lev 17—27). Historical critical scholars generally distinguish between two main sections of Leviticus: Leviticus 1—16 is the so-called Priestly Code, or P (see also Num 1—10 discussed below), and Leviticus 17—26 is the Holiness Code, or H (on Lev 27 see discussion below). Most have taken H to be an earlier collection of laws that was incorporated into the later P collection by a priestly redactor in the postexilic period. Alternatively, P is sometimes viewed as a redaction (not an originally independent literary source) that shaped H and other priestly traditions into what we now have in the canonical book of *Leviticus. In any case, H has usually been viewed in historical-critical discussions as an intermediate collection of priestly teachings that stood historically and ideologically between D (the core of Deuteronomy, Josiah’s law book of 2 Kings 22:8-13) and the Priestly Code.

Recently, I. Knohl (1995, 1996) has reversed the order, arguing that the “school” of H rather than P was the final redactor of the Pentateuch (in the post-exilic period). On the one hand, in its character and function the inner priestly circle of the tabernacle system constituted a “sanctuary of silence.” This was the perspective of P, the legislative core of which is expressed in Leviticus 1—16. It is concerned only with the ritual cult practiced in absolute silence in the inner circle of the numinous presence of the Lord in the tabernacle (and temple). Moral ethics and popular practices of piety and worship, such as prayer and praise, functioned completely outside of this inner circle. The priestly school of P, according to this view, commenced its activity with the construction of Solomon’s temple, or perhaps even before that, at the shrine in Shiloh (1 Sam 1—3).

On the other hand, according to Knohl the school of priestly writers that stands behind the writing of H began its work much later, in the time of Ahaz and Hezekiah, and was the basis of Hezekiah’s cultic reforms (2 Kings 16—20). Their concern was to promote a new concept of holiness that combined ethical with cultic concerns as well as a form of sanctuary worship that included popular expressions of piety, including

vocal prayer and praise. The inner circle of the priestly cult remained “silent,” but from this time forward it was surrounded by an outer circle of popular worship that included the assembly as an essential part of the sanctuary worship system.

Although he agrees with Knohl on the historical priority of P before H, Milgrom rightly objects to his proposal of complete silence and lack of ethical expression within the inner priestly circle (P). For example, he points to Leviticus 16:21, where on the Day of Atonement “Aaron shall lay his two hands on the head of the live (scape-)goat and confess over it all the iniquities of the Israelites and all their transgressions in regard to all their sins” (Milgrom 1991, 24-25; cf. the response in Knohl 1995, 227-29). This passage allows neither for complete silence nor for lack of expressed concern for ethical matters in the inner priestly cult.

Some historical-critical scholars question the distinction between P and H altogether. They deny the independent existence of H and divide the book between Leviticus 1—10, the establishment of the divine service, and Leviticus 11—26, purity and holiness (see esp. Blum, 312-32). The basis for this is the literary and theological linkage between Leviticus 1—16 and 17—26 (note, e.g., that the reference to the clean and unclean animals of Lev 11 in Lev 20:25-26 binds Lev 11—15 with 17—26). The discussion of Leviticus 1—16 (see *Sacrifices and Offerings*) suggests that, from the perspective of overall structure and content, the primary literary break is indeed between Leviticus 16 and 17 (cf. also the remarks on Lev 17—27 below), but this does not necessarily mean they are from two different literary sources or that they are the product of different schools of redaction, one preceding the other chronologically.

Actually, the distinctiveness of these two sections of Leviticus is a matter of sociology, not chronology or ideology. Leviticus 1—16 is “priestly” in the sense that it views the tabernacle from the standpoint of the priests, from the inside looking out into the community. Leviticus 17—26 is more concerned with community “holiness” in light of the fact that the Lord was present in the tabernacle in their midst. It views the tabernacle from the standpoint of the congregation as a whole, from the outside looking in toward the tabernacle. Leviticus 1—16 and 17—26 belong together both historically and

theologically. The historical-critical discussion outlined above is plagued by the diachronic fallacy that views differences in perspective as, at best, competitive and, at worst, contradictory, and in any case deriving from different chronological stages in the development of ancient Israelite *religion.

Leviticus 17, therefore, begins a new section of the Sinai narratives, but it also serves as a pivot between Leviticus 1—16 and 18—26. This second major section of Leviticus is often referred to as the Holiness Code specifically because of the recurring expression “Be holy because I, the LORD your God, am holy” (Lev 19:2; 20:7, 26; 21:8) and the abbreviation of the formula “I am the LORD (your God)” throughout the section (numerous occurrences from Lev 18:2 to Lev 26:45). The formula occurs neither in Leviticus 17 nor Leviticus 27. The latter is a kind of appendix to the book (note the dual colophons in Lev 26:46 and Lev 27:34), but it also forms an inclusion with Leviticus 17, thus surrounding the Leviticus 18—26 Holiness Code. Both Leviticus 17 and 27 are concerned with the immediate relationship between the people, the tabernacle altar and the offerings.

Thus the subject in Leviticus 17 is still the tabernacle, but there is a shift to the general orientation of the camp of all the Israelites toward the tabernacle and worship of Yahweh as they traveled through the wilderness. Anyone who slaughtered an animal as a peace offering (i.e., for meat) or as a whole burnt offering either within the camp or outside the camp, without bringing it to the tabernacle to present and slaughter it as an offering there (Lev 17:2-9) was to be “cut off from the midst of his people” (Lev 17:4, 9). The purpose of these regulations was to maintain exclusive worship of Yahweh in the wilderness: “so that they no longer offer their sacrifices to the goat demons, after which they prostitute themselves” (Lev 17:7).

The Holiness Code proper (Lev 18—26) focuses on the purity and holiness of the camp overall, but it also recognizes that the tabernacle was at the center of that community and always keeps it in plain view in the legislation (Lev 19:30; 20:3; 26:2, 11-12). Whole sections are concerned with the tabernacle presence of the Lord in their midst. For example, the regulations for the priests (Lev 21), their families (Lev 22:1-16), the quality of the sacrifices in Israel (Lev 22:17-33), the annual cycle of festivals (Lev 23), the

lampstand and table of the bread of presence (Lev 24:1-9), and even the laws of consecration at the end of the book (Lev 27) all focus on the tabernacle itself, the relationship between the priests, the people and the tabernacle, or the ritual activities within or around the tabernacle.

4.2. The Community as a War Camp (Num 1—10). Numbers 1—10 turns our attention to the arrangement of the community as a moveable war camp that would travel through the wilderness until it reached, invaded and conquered the land that God had promised to Israel (Num 13:1-2). The section begins with a census, the primary purpose of which was to number the men twenty years and older who would serve in the army (Num 1:3). The *Levites were not included in the census because, instead of serving in the army, Moses was to appoint them “over the tabernacle of the testimony” and its furnishings (Num 1:50; cf. Num 2:33), to transport it as they traveled (Num 4), and to dwell closely around it when they camped in order to prevent the other Israelites from illegitimately encroaching on the tabernacle presence of God (Num 1:47-53; cf. Lev 10:1-3 and 15:31).

All the other tribes were to camp around the tabernacle at a distance and by their ordered positions, each family under the identifying ensign (i.e., standard or banner) of their particular tribe (Num 2). The Levites were anointed and consecrated for the Lord’s tabernacle service in place of the firstborn of all the Israelites (Num 3:12-13, 40-51; Num 8:5-26; cf. Ex 13:11-15). Of the families of the Levites, Gershon camped on the west side of the tabernacle, Kohath on the south, Merari on the north, while Moses and Aaron and his sons were on the east side, by the gate leading into the tabernacle, so that they could prevent laypeople from coming too close or entering the tabernacle complex and having the Lord break out against them (Num 3:14-39).

The Levites not only transported the tabernacle and camped in the inner circle, closely surrounding the tabernacle, but they were also anointed and consecrated to assist the Aaronic priests in “the service of the tabernacle” in cultic worship (Num 3:5-9; cf. Num 8:11, 14-15, 19, 22-26). It is especially significant that Numbers 7 flashes back once again to the time of the erection, dedication and consecration of the tabernacle recounted in Exodus 40 and Leviticus 8 (Num 7:1; see the remarks on Ex 40 and Lev 8 above). On that very day (cf. Ex 40:2 with Num

7:1), the twelve military chiefs of the tribes collectively brought an offering of six covered carts and twelve oxen (two to pull each cart) that were distributed to the Levites specifically for the purpose of transporting the tabernacle (Num 7:2-9). Moreover, after the altar had been anointed (Num 7:10, 88), over a twelve-day period, one chief per day brought a standard set of offerings for the dedication of the burnt offering altar in the tabernacle. These included silver and gold vessels along with grain, incense and animal offerings (Num 7:10-88).

There is a brief but important note in Numbers 7:89. It tells us that when Moses spoke to the Lord in the tabernacle (i.e., in the holy place, not the most holy place [lit., “holy of holies”]), the Lord spoke back to Moses in a loud voice “from above the atonement seat which is on the ark of the testimony, from between the two cherubim” (Num 7:89). The Lord had promised direct communication with Moses in this manner in the instructions for the building of the ark (Ex 25:22). Since Numbers 7 relates to the period of the initial erection and dedication of the tabernacle (recall Num 7:1), the conclusion of the dedication narrative, therefore, takes note of the fact that this promised oracular practice was now functioning. The following verses (Num 8:1-4) relate directly to this oracular practice. Moses received an oracle from the Lord specifically commanding Aaron to set the lamps on the lampstand in the holy place where Moses received the oracles. Special note is made of its workmanship.

The next oracle describes the purification and sanctification of the Levites whom the Lord gave to Aaron and his sons as a gift to assist them in the priestly functions of the tabernacle (Num 8:5-26). This no doubt also took place immediately after the erection of the tabernacle (Ex 40:2; cf. Num 7:1), sometime during the twelve-day period of the consecration (Lev 8), inauguration (Lev 9—10) and dedication (Num 7) of the tabernacle, its altar and the priests, before the Passover celebration on the fourteenth day of the same month (Num 9:3, 5). Numbers 9:15-23 recalls the day on which the tabernacle was erected (Num 9:15; cf. Ex 40:2, Num 7:1) and expounds on the appearance of God’s glory-cloud presence covering and inhabiting the tabernacle and its importance for guidance on Israel’s journey from Sinai to the Promised Land. The journey begins in Numbers 10:11, “in the

second year on the twentieth day of the month,” six days after the celebration of the second month Passover for those who were unclean and who, therefore, could not present their Passover offering at the tabernacle in the first month (Num 9:6-12).

5. The Tabernacle Presence of God.

The subject of God's presence with humankind is an important theme from the beginning of the Bible (Gen 1—4, creation and corruption of the heaven and earth) to the end (Rev 21—22, recreation and purity of the new heaven and earth). We constantly face the tension in Scripture between God's transcendence and immanence, both of which are important to a correct and meaningful understanding of God, his revelation of himself and how he relates to us. The earliest chapters of Genesis provide a helpful starting point for serious consideration of this tension. On the one hand, in Genesis 1:1—2:3 God is transcendent, although very much involved in the creation of the world by fiat. He even presents himself as the creator of humankind, male and female, in his own image and likeness. On the other hand, in the Garden of Eden story in Genesis 2:4—4:26 the Lord presents himself in intimate earthly relationship with people. He is immanent. For example, he shapes the man out of the dust of the earth and breathes the breath of life into his nostrils (Gen 2:7), plants a garden (Gen 2:8) and later builds the woman from the man's rib (Gen 2:21).

Eden, therefore, was a place of God's presence (Gen 4:16, “Cain went out from the presence [Heb *pēnē*, “face”] of the LORD and dwelt . . . east of Eden”; cf. *pēnē*, “face” in Lev 9:24—10:2 and the discussion of Ex 33 below). This was especially true of the Garden of Eden, in which God would “walk with” the first man and woman in the evening breeze (Gen 3:8). Even after the expulsion from the garden, however, those who were godly could be referred to as those who “walk with God” (see, e.g., Gen 5:24; 6:9; 17:1; 48:15; Mic 6:8; Mal 2:6). In the NT book of Revelation Jesus “walks” in the midst of the churches (Rev 2:1; 3:4) and, eventually, in the new heaven and earth the presence of God will be unmediated once again (Rev 21:3, “the tabernacle of God is with men”; Rev 21:22-27, “the glory of God” illumines the New Jerusalem and “its lamp is the Lamb,” so that the nations will “walk by its light”).

As we have already observed, Wenham has drawn out various verbal, thematic and structural correspondences between the Garden of Eden account in Genesis 2:4—4:26 and the tabernacle (see 3.2 above). Specifically as it relates to God's presence, according to the Sinaitic covenant blessings, if the Israelites would make no idols, observe the Lord's sabbaths, reverence his sanctuary and keep his covenant statutes and commandments (Lev 26:1-3), then, among other things, the Lord promised them “I will put my dwelling place [or “tabernacle”; *miskān*] in your midst and my soul will not abhor you. I will *walk in your midst*—I will be your God and you will be my people” (Lev 26:11-12). This passage explicitly links the tabernacle dwelling of God to his *walking* in the midst of Israel (see also Deut 23:14 [MT 23:15] and esp. 2 Sam 7:6-7, “I have been *walking about* in a tent, a tabernacle”) and shows that Yahweh was Israel's God and they were his people. His active presence with them and their obedience to his revealed will along the way was essential to the covenantal nature of the relationship between God and Israel (Ex 19:4-6).

The correspondences between the creation account and the tabernacle are important, but the near context is even more significant. It begins with the burning bush through which the Lord appeared to Moses at “the mountain of God” (i.e., the mountain that God made his special dwelling place, Ex 3:1-2; cf. Ex 4:27; 18:5; 19:2; 24:13). This was “holy ground” (Ex 3:5), and it was there that the Lord promised not only to be “with” Moses as he brought Israel out of Egypt but also to bring him back there to worship God “on this mountain” (Ex 3:12) and from there to lead them “to a good and spacious land, to a land flowing with milk and honey, to the place of the Canaanite, Hittite [etc.]” (Ex 3:8). In other words, the Lord would be present with Moses and the Israelites all the way from Egypt to Mount Sinai, and from Sinai to the Promised Land.

The form in which the Lord guided them to and from Sinai, and its similarities to the theophany at Sinai itself, is most significant. From the time of the exodus from Egypt and the crossing of the Reed Sea, until they arrived at Sinai, “The LORD was traveling before them *by day in a pillar of cloud* to lead them on the way and *by night in a pillar of fire* to give them light so they could travel day and night. Neither the pillar of

cloud by day nor the pillar of fire by night departed from before the people" (Ex 13:21-22; cf. Ex 14:19-20, 24; Neh 9:12; and note also the similarity to Gen 15:17). The cloud actually concealed the "glory" (Heb *kābôd*) of the Lord from their sight, but on one occasion "the glory of the LORD appeared in the cloud" as part of a rebuke against their grumbling in the wilderness on the way to Sinai (Ex 16:10; cf. Ex 16:7). At Sinai this manifestation turned into a terrifying display of God's awesome power in the form of a thick dark cloud from which thunder sounded and lightning flashed (cf. the pillar of fire), the purpose of which was to instill the fear of the Lord in the people so that they would be sure to obey his commandments mediated through Moses (Ex 19:9; 20:18-21; Deut 5:22-6:3).

Unfortunately, Israel's fear of the Lord did not last long, for less than two months later (cf. Ex 24:16, 18 with Ex 32:1, 15-20) they had already severely violated the Lord's presence and his other basic commands in the golden calf debacle (Ex 32). In the aftermath of the catastrophe that followed (Ex 32:27-28, 34-35), the absolute necessity of the divine presence with Israel from Moses' point of view becomes clear (Ex 33). Because the people were so "stiff-necked," the Lord proclaimed: "I will not go up [to the Promised Land] in your midst . . . lest I destroy you on the way" (Ex 33:3); instead "I will send an angel before you" (Ex 33:2; cf. Ex 14:19; 23:20-23; 32:34). To both Moses and the people this was an even more severe calamity (Ex 33:4-6, 12-16). Thus there was great significance in the fact that the Lord spoke face to face with Moses from the pillar of cloud at the entrance of the other tent of meeting (not the tabernacle) pitched outside the camp, part way up Mount Sinai (Ex 33:10-11; cf. the background for this tent in Ex 20:21).

Moses, therefore, responded to the Lord: "See, you have been saying to me, 'Bring this people up,' but you have not made known to me whom you will send with me, even though you have said, 'I know you by name and, furthermore, you have found favor in my eyes'" (Ex 33:12). The Lord responded back, "My *presence* [Heb *pānay*, lit. "my face"] will go and I will give you rest" (Ex 33:14). Then Moses said, "If your *presence* does not go, do not take us up from this [place]" (Ex 33:15). In the following scene Moses asked to see God's glory (Ex 33:18), perhaps meaning that he wanted to see the mani-

festation of the glory of his "presence" that had been referred to in Exodus 33:14-15 (cf. "face to face" in Ex 33:11).

The Lord agreed to show him his glory, but insisted, "You are not able to see my *face*" [*pānay*, lit. "my face"; Ex 33:20], which is exactly the same term rendered "my *presence*" in Exodus 33:14 (cited above). After all, as the Lord put it to Moses, "no man shall see me and live" (Ex 33:20). Thus, the "presence" (i.e., "face") of Yahweh is identified as Yahweh himself and, for Moses' own good, the Lord took precautions against Moses' seeing his "presence" when he showed his glory to him (Ex 33:21-23; note once again, "my face"/"my presence" in Ex 33:23). Interestingly, the brightness of God's glory was reflected in the glow of the skin of Moses' face (recall "face"/"presence" in Ex 33) when he came down from receiving the second set of law tablets (Ex 34:28-29; cf. Ex 32:19 for the breaking of the first set). This struck fear in the people of Israel, so he covered his face with a veil (cf. 2 Cor 3; see 6 below).

The main point to be observed is that God showed his glory to Moses in a special way, face to face. However, that same glory was also manifest to Israel in the glory of the Lord that appeared to them on Mount Sinai shortly after they ratified the covenant in Exodus 24:1-11. God summoned Moses up onto "the mountain of God" to receive the first set of tablets (Ex 24:12-13) and, as it turns out, also to reveal to Moses the plan of the tabernacle and its furniture (Ex 25-31; cf. the mention of the tablets again at the very end of the section, Ex 31:18). According to Exodus 24:15b-16a, 18a and 25:1-2a (numbers in parentheses below refer to basic elements of the pattern found also in Ex 40:34—Lev 1:2; see below):

The (1) *cloud covered* the mountain, and (2) *the glory of the LORD settled* [skn] (3) *on Mount Sinai* . . . and (4) *he called to Moses* on the seventh day *from within* the cloud. . . . And the appearance of the LORD's glory was like a consuming fire on the top of the mountain in the sight of the Israelites. Then (5) *Moses entered the midst of the cloud* and went up into the mountain. . . . And (6) *the LORD spoke to Moses, saying, "Speak to the Israelites."*

E. Blum (312-13) has pointed out that a virtually identical pattern of divine glory cloud and revelation also occurs in precise detail at the very end of the tabernacle construction account, im-

mediately after Moses had erected and dedicated the tabernacle. According to Exodus 40:34-35 and Leviticus 1:1-2:

Then the (1) *cloud covered* the tent of meeting, and the (2) *glory of the LORD* filled (3) *the tabernacle* [*miškan*]. And (5) *Moses was not able to enter the tent of meeting* because the cloud had settled [*škn*] upon it, and the glory of the LORD filled the tabernacle. So (4) *the LORD called to Moses* and the (6) *LORD spoke to him from the tent of meeting, saying, "Speak to the Israelites."*

Here we see the similarity between the appearance of the Lord's glory to the people in Exodus 24:17 ("the appearance of the LORD's glory was like a consuming fire on the top of the mountain") and his original appearance to Moses in Exodus 3:1-3 (i.e., the burning bush that was not consumed, also on Mount Sinai). The tabernacle became the medium through which the Lord in his true presence traveled from the mountain of God (Sinai) to accompany and guide Israel from there to the Promised Land.

The tabernacle was, therefore, a sort of moveable Sinai. The purpose for building the tabernacle was to provide a place for the Lord to "dwell among them" even after they left Sinai (Ex 25:8; cf. also Ex 29:45-46). Wherever the tabernacle was, the Lord would be present in all his glory just as he had been at Sinai. The last three verses of Exodus anticipate the Lord's guidance of Israel through the wilderness from Sinai to the Promised Land: "when the cloud lifted from over the tabernacle, the Israelites would set out on their journeys, but if the cloud did not lift, they did not set out. . . . For the cloud of the LORD was over the tabernacle by day, and fire was in it by night, in the sight of all the house of Israel during all their journeys" (Ex 40:36-38). The same motif is repeated over and over again in Numbers 9:15-23, just before their departure from Sinai in Numbers 10:11-12, 33-34 and, of course, recalls the original cloud and pillar of fire that led them out of Egypt (see remarks on Ex 13:21-22 above).

Leviticus 1:1—Numbers 9:14, therefore, is encased between these two tabernacle presence and guidance passages (Ex 40:34-38 and Num 9:15-23), and the regulations contained therein focus especially on the need to "practice" that presence on various levels, in the tabernacle as well as in the community at large, and in multiple ways: in worship, in maintaining the purity

and holiness of God's presence, in relationships within the community and in separation from corrupting influences of the surrounding nations. Even the main narrative section within the book of Leviticus focuses on the consecration of the tabernacle and the priesthood, and on the inauguration of tabernacle worship in Israel (Lev 8—10).

The same glory of the Lord that occupied the tabernacle immediately and completely on the erection day—so that Moses could not enter the tabernacle (Ex 40:34—Lev 1:1)—also "appeared to all the people" on the inauguration day in a fire display that consumed the inaugural sacrifices on the altar (Lev 9:23-24). This same glory of the Lord also regularly appeared "in the cloud over the atonement seat" on top of the ark of the covenant in the most holy place of the tabernacle (Lev 16:2). Later the same glory of the Lord would occupy the temple of Solomon on its dedication day so that the priests, like Moses in Exodus 40, could not enter the temple, and on the same day (as in Lev 9) there was the divine fire display that consumed the temple dedication sacrifices on the altar (1 Kings 8:10-11; 2 Chron 5:13-14; 7:1-3).

Some scholars have argued that the Hebrew verb *škn*, "to dwell" (i.e., "to tabernacle"; the underlying verbal root of the noun *miškan*, "tabernacle") was used in P (i.e., the priestly source or redaction of the Pentateuch) as a reaction against the preexilic Sabaoth-Zion temple ideology of the monarchy (recall that, according to standard critical theory, P is postexilic). According to this theory, Zion temple theologians used the verb *yšb*, "to sit, dwell," to indicate that God actually dwelt in the temple, enthroned above the cherubim on top of the ark of the covenant (2 Kings 19:15; cf. the early tent shrine background for this in 1 Sam 4:4 and 2 Sam 6:2), like a king on a throne (see, e.g., 1 Kings 1:35).

The later priestly theologians of the Pentateuch, however, corrected this Zion temple view of God actually dwelling on earth by using the term *škn* instead of *yšb* for Yahweh's habitation of the tabernacle sanctuary, suggesting that the Lord would only descend on the tabernacle periodically and then depart (Ex 33:7-11; Num 11:14-17, 24-30; Num 12:5, 10). Moreover, according to this view, the term "tent of meeting" and expressions associated with it (e.g., *appearing* at and *filling* the tabernacle) suggest that God would only appear at the tabernacle period-

ically, whenever he was “meeting” with Moses or the people. There was no continuous presence of the Lord in the tabernacle according to this view.

This is not the place to attempt to sort out all the specific details of this scholarly discussion (see the very helpful review and the literature cited in Kutsko, 79-87), but a few remarks are in order. First, the tent of meeting referred to in Exodus 33:7-11, Numbers 11:14-17, 24-30 and Num 12:5, 10, upon which the Lord only descended periodically and then departed, was the tent of meeting pitched outside the camp, not the tabernacle tent of meeting that was pitched in the middle of the camp (see, e.g., Ex 40 with Num 1:52—2:34, and 1.3 above).

Second, the fact that the Lord would “meet” periodically with Moses, the priests or the people at the tabernacle and, on occasions, would “fill” the tabernacle with his glory does not necessarily imply that he did not take up continuous albeit mobile residence there in the form of his glory in the cloud. His habitation in the tabernacle tent was just as continuous as the habitation of the Israelites in their tents around the tabernacle, perhaps even more so (note 2 Sam 7:6; but see also 1 Sam 4:4; 7:1-7; 2 Sam 6:10-11), if one considers the tent David pitched for the ark of the covenant in Jerusalem to be an extension of the wilderness tabernacle (note the parallel priestly functions established by David in the tabernacle at Gibeon and in the tent in Jerusalem, 1 Chron 16:4-6, 37-42). There can be no other reason for the daily cult carried out in the tabernacle (Ex 29:38-42; Num 28:1-10, etc.; Knohl 1997, 73-74).

Third, with regard to the usage of the terms *škn* and *yšb*, it is true that the latter is sometimes used for God’s dwelling in the temple (1 Kings 8:13 par. 2 Chron 6:2), but there are also times when *škn* is used (see esp. 1 Kings 6:13, 8:12 par. 2 Chron 6:1; cf. also *miskān* for the temple in 2 Chron 29:6 and Ps 74:7). Furthermore, even when Solomon used *yšb* to refer to God’s dwelling in the temple in his prayer for the dedication of the temple, he went to great pains to emphasize that God was not “contained” therein: “But will God truly dwell [*yšb*] on the earth? Even the heavens and the highest heavens cannot contain you, much less this house that I have built” (1 Kings 8:27 par. 2 Chron 6:18; cf. also God’s dwelling [*yšb*] in heaven, 1 Kings 8:30, 39, 43, 49, etc.). The difference between the

tabernacle and the later temple was that the former was mobile, as a tent should be, while the latter was not. They were both points of access to God’s continuous manifest presence in the midst of his people, but neither of them is presented as a place to which God limited his presence exclusively. In anticipation of the instructions to build the tabernacle, God was present and “dwelt” (or “settled,” *škn*) on Mount Sinai in the glory cloud (Ex 24:16, cited above) but later moved this manifest presence to “dwell” (or “settle”) on the tabernacle once it had been erected (Ex 40:35).

Thus, God’s manifest presence moved to the tabernacle from Mount Sinai and was moveable in the tabernacle as Israel traveled from Sinai, but, in any case, the Lord was continuously present in the tabernacle until the dedication of the temple. Unfortunately, by the time of the Babylonian captivity, the Israelites had so desecrated and defiled the temple that the glory-cloud presence of the Lord actually departed from there, discontinuing his previously continuous manifest presence there and abandoning it to destruction (Ezek 8:4; 10:3-4, 18-19; 11:22-25). Even then, however, there was the promise of the Lord’s return to a new and permanent temple (Ezek 43:1-9). This does not appear to have happened at the dedication of the second temple (Ezra 6:13-18), which brings us to the NT.

6. The Tabernacle and the Glory in the New Testament.

As John 1:14 puts it, “The Word became flesh and *made his dwelling* [Gk *skēnoō*, “tabernacled”] among us. We have seen *his glory*, *the glory of the One and Only*, who came from the Father, full of grace and truth” (NIV, italics added; cf. Jn 2:11; 7:18; 17:24). Later, in his high priestly prayer on behalf of those who would believe in him (Jn 17:20), Jesus said to the Father, “I have given them *the glory* that you gave me, that they may be one as we are one: I in them and you in me” (Jn 17:22-23 NIV, italics added). This glory comes from the Holy Spirit of God who indwells believers (2 Cor 3:17-18; 4:4, 6; cf. Jn 14:16-17). The church is “a *holy temple* in the Lord . . . a *dwelling* in which *God lives by his Spirit*” (Eph 2:21-22 NIV, italics added; cf. 1 Cor 3:16-17 and 1 Pet 2:4-5). According to 2 Corinthians 3:18, believers are actually the reflection of God’s glory in the world: “And we, who with unveiled faces all reflect the Lord’s glory, are being transformed

into his likeness with ever-increasing glory, which comes from the Lord, who is the Spirit" (NIV).

As in the OT, the sanctuary presence of God is nothing to trifle with. The corporate body of believers is sacred to him, and God takes violation of that sacred domain seriously: "If anyone destroys God's temple, God will destroy him; for God's temple is *sacred*, and you are that temple" (1 Cor 3:17 NIV, italics added). Similarly, the individual believer is "a temple of the Holy Spirit," so one must be defiled through immorality (1 Cor 6:18-19), but instead "honor [lit. "glorify," Gk *doxazō*] God" with the body (1 Cor 6:20; cf. Lev 10:3 cited above). Thus the presence of God is the key to tracing the theme of sacred *space* in the OT into the NT, where it is developed in terms of sacred *community*. As Jesus said in John 4:23-24, instead of worshipping God at Jerusalem, "a time is coming and has now come when the true worshipers will worship the Father in spirit and truth, for they are the kind of worshipers the Father seeks. God is spirit, and his worshipers must worship in spirit and in truth" (NIV).

The glory of the New Covenant, therefore, is greater than that of the one mediated by Moses at Sinai (2 Cor 3:7-11). In turn, the new heaven and earth will have no need for a temple (Rev 21-22). God will be immediately present in all his glory and fully accessible in his profound holiness, surrounded by a people who will have been purified and sanctified through the redemptive work of the divine Son of God, the mediator of the New Covenant and the cornerstone of the church (Eph 2:19-22; see DPL, Temple).

TAMAR

Tamar (literally, "palm tree"), the daughter-in-law of *Judah and wife of Er and then Onan, has become very popular in the wake of the feminist movement, and not without reason. The feminist perspective rightly sees the story as one about a woman who was wronged by two men, first her brother-in-law and then her father-in-law, and perhaps even a third, her original husband Er. "It is characteristic of the patriarchal stories that revolt against the established social order, where it is a question of injustice, is initiated by women only. And in each case the justice of such self-defense is recognized" (Westermann 1986, 56).

Tamar demonstrated strength of character, obedience, courage, daring, skill, shrewdness, initiative and decisiveness in spite of the questionable deed in which she was involved. More articles have been written in the last decade about Tamar and her contact with Judah (Gen 38) than about the twelve sons of Jacob combined. Her entire story stems from one chapter in Genesis, although she is mentioned in the ancestries of both David (Ruth 4:12) and Jesus (Mt 1:3).

1. Tamar, Daughter-in-Law of Judah
2. Tamar and the Joseph Narrative
3. Tamar, Place Name

1. Tamar, Daughter-in-Law of Judah.

Tamar married Judah's son Er. She is mentioned in the Pentateuch only in Genesis. We know nothing about Tamar's background except her name, which in Hebrew refers to the palm

tree, "the tree of life in the desert" (Wildavsky, 46). The narrative of Genesis 38 seems to imply that she was a Canaanite. Judah had moved into the territory of the Canaanites, and there he had met Hirah, a Canaanite from the town of Adullam, later part of the tribe of Judah in the eastern Shephelah. Adullam is located in the hill country of Judah, ten miles northwest of Hebron. Furthermore, Judah married a Canaanite woman, the unnamed daughter of Shua. Nowhere does it suggest that Judah went back to his own land to find a wife for Er. The issue of whether or not Tamar was a Canaanite remains open, however, and by leaving it open, "the narrator may allow for greater acceptance of the woman who will become the ancestress of the Davidic line" (Jeansonne, 101).

When God put Er to death, Judah gave his daughter-in-law to Onan according to the levirate law. Onan apparently intended not to share the inheritance of his father with the offspring of his deceased brother and so spilled his semen on the ground. When Onan also died, Judah hesitated to give her to Shelah, lest he lose a third son. Consequently, he told Tamar to live as a widow in his house until Shelah came of age (Gen 38:11). After a long period of time, during which Tamar lived in Judah's house, Judah's wife died (Gen 38:12). Then Tamar began to act (Gen 38:13-14).

When Judah failed to keep the promise of giving his son Shelah as husband to Tamar, Tamar disguised herself as a prostitute connected to a pagan shrine, placed herself in Judah's path, accepted his request to sleep with him and became pregnant by Judah. The obscurity of the laws of levirate marriage suggest that Tamar's righteousness consists not only in her obedience to her father-in-law Judah but also in the fact that she had been more righteous "in her relationship to her dead husband, to herself, to Judah himself, and above all to posterity than Judah had been" (Andrew, 267). When all other options in the family of Judah had failed, Tamar at least recognized Judah as the last remaining option within the levirate law (Wildavsky, 44). She alone, of all the characters in the story, was willing to raise up offspring for her husband Er. Some view the action of Tamar as moral, in that she exercised her right to offspring through the levirate law whereas Judah intended to keep that from her. Indeed, C. Westermann argues that her action is normal "and

no moral judgment is passed" (Westermann 1986, 53; Wildavsky, 42). If the levirate law was to be applied according to a rule such as "the nearest available male relative," then Judah would have been that person. That Judah never again slept with her (Gen 38:26) suggests that the narrator would have viewed such a relationship as incest but did not so view the initial relationship (see Sexuality, Sexual Ethics, §4.3). Furthermore, the twins seem to be accepted as legitimate, both in this narrative and in the Book of Ruth.

The story is also a story of movement from death to life. Death comes early in the narrative to Er, Onan and the wife of Judah. It could have come to Shelah. It almost came to Tamar, who had wisely protected herself. Five people either died or could have died. Life remains with Tamar because of her shrewd decisiveness. While being brought out to her death, she moved toward life. Life continued not only in the birth of a son but in the birth of twins, Perez and Zerah (Gen 38:27-30). Even the names of Tamar's sons signify the flourishing of life, for Perez means "breaks out" and Zerah may refer to the rising of the sun. In this movement from death to life, the story of Tamar illustrates the power of God, which often operates in unexpected ways, accomplishing the will of God in spite of human mistakes. Her appearance at this stage in the narrative of Genesis can be seen as a threat to the promise of God to the patriarchs that they will have many offspring (Bandstra, 104).

2. Tamar and the Joseph Narrative.

The location of this chapter within the *Joseph narrative highlights the importance of the Judahite line for the fulfillment of God's promise of a savior. According to 1 Chronicles 5:1-2, the rights of firstborn were lost by Reuben, passing instead to Joseph. The role of Judah is alluded to in that passage and more fully explained in Psalm 78:59-72. There the psalmist indicates that God chose the tribe of Judah over the tribe of Joseph, and Genesis 38 anticipates those events. Clearly, Tamar was important to the development of the position of both the person and the tribe of Judah.

Besides the obvious connection to the person of Judah, one of the links of the Tamar story to the Joseph narrative, within which it is embedded, is the role of clothing, which is the medium of deception and of truth in both stories.

In addition, the kid of a goat and the verb "to recognize" are also common to Genesis 37 and 38 (Lockwood, 35). P. F. Lockwood argues that Genesis 38 "serves as an abridgement of the whole Joseph cycle and anticipates its outcome. It is the Joseph story in a nutshell" (Lockwood, 37). Both Tamar and Joseph suffer banishment and a threat to life, both force their victimizers to acknowledge wrongdoing and mend their ways, both experience God turning the misdeeds to good effect, and both Tamar and Joseph have two sons, with the second elevated above the first (Lockwood, 40).

3. Tamar, Place Name.

One pentateuchal reference to a place name, Hazazon-tamar (Gen 14:7), is probably unrelated to Judah's daughter-in-law, instead referring to the palm tree. The place is identified in 2 Chronicles 20:2 as En Gedi (Westermann 1985, 197).

TERAH

Terah was a descendant of *Shem, the son of *Nahor and the father of *Abram, Nahor and *Haran (Gen 11:10-27). Along with Abram, *Sarai (Terah’s daughter-in-law) and *Lot (the son of Haran), Terah left *Ur of the Chaldeans and settled in Haran in north Syria, where he died some years later at the age of 205. After Terah’s death, Abram and his family moved to Canaan (cf. Acts 7:4). It is important to note that all of the material in Genesis 11:27—25:11 is prefaced by the statement, “This is the family history of Terah,” as he was the family head. Terah, along with Nahor, is described as an idolater who worshiped other gods (Josh 24:2). In fact, the Joshua source interprets Genesis as implying that Abram’s decision to follow Yahweh was a break with his ancestors’ traditions (Gen 12:1-6).

1. Etymology of Terah’s Name
2. Terah in the City of Ur
3. Terah and Later Traditions

1. Etymology of Terah’s Name.

An understanding of the etymology of the name Terah has proved to be difficult. It was previously postulated that Terah occurred as *trh*, a divine name at Ugarit (Jouon, 280-85; contra Gordon 1938, 407-10; Albright 1938, 35-40), but no evidence of this has come to light, and thus this theory has been rejected. *Trh* in Ugaritic is a

nominal and verbal root, and it has not been found as a personal name. It is probably related to Akkadian *terhātu* (“to pay the marriage price”).

Others have speculated that *Terah* is related to the Hebrew word, *yarēah* (moon) or *yerah* (lunar month), implying that Terah and his family were moon worshippers (Hamilton, 363). Another suggestion has *Terah* meaning *Tēr-’āh* (“brother moon” or “the divine brother”), where *Tēr* is a dialectical equivalent of *šhr*, a South Arabic term for the moon (Key, 21). This has been deemed plausible because of the fact that both Ur and Haran were main centers of moon (Akkadian, Sin) worship in the Tigris-Euphrates region. Moreover, *Tēr* (Iltehrī and related forms) was the name of the moon god in the vicinity of Haran by the Neo-Assyrian period, and it was present in a series of personal names (Landsberger and Bauer, 92; Lewy, 425-26; Zadok, 42). However, most argue that this association is untenable since *Tēr* is a form of West Semitic *Ser/Sahr* and phonologically different from Terah. This being the case, one should note that several other individuals in Terah’s family did have names that may have been associated with lunar worship (Sarah, Milcah, Laban).

Others have noted that *trh* in Hebrew means “ibex, mountain goat,” a root that appears as part of an Amorite feminine name (*al-li-tur-ra-hum*) in the early second millennium B.C. (Gelb, 34, 200). Finally, there is a Sumerian personal name *te-ra* in a cuneiform text from the Ur III period (c. 2120-2000 B.C.). This name, however, is not considered related to Terah (Schneider, 521).

The name *Terah* is also compared to the place name *Til (ša) turāhi*, a place named in Assyrian texts during the period of Shalmaneser III (858-824 B.C.) located on the Balikh River in the vicinity of Haran (Kraeling, 153-54; Parpola, 355-56). This Assyrian king claims to have taken this town in 854 B.C. Other towns in this vicinity mentioned in the same records are *Til Nāhiri* (Nāhuru) and *Sarugi*, names that appear to correspond to Nahor and Serug, the grandfather of Terah. The term *til* (mound) possibly indicates that the Assyrian period site was built on a pre-existing mound (possibly from the second millennium B.C.), although there is no evidence for this. Some have postulated that this place name is found among Aramean settlements of the sec-

ond millennium B.C. (Albright 1924, 386-87), a view that is now considered untenable. Thus, in addition to being a personal name, Terah likely has associations with a place name in northern Mesopotamia, similar to other names in Abraham's ancestry.

2. Terah in the City of Ur.

Scholars have debated for generations the precise location of the city of Ur, the city of origin for Terah's family. Although it has traditionally been presumed to be the Ur in southern Mesopotamia, a city that had strong Amorite connections in the Middle Bronze Age (Saggs, 200-209), others have argued for a northern Mesopotamian location for the city. Some have argued for either Urfa (modern Edessa), about twenty miles northwest of Haran, or Ura, a city in the Hittite Cilicia (Gordon 1958, 28-31). Moreover, northern Mesopotamia is called Abraham's "country" in Genesis 24:4-7. This makes sense when one considers that many place names in the region are related to Abraham's relatives (Nahor, Terah, Haran, Serug). However, it is historically plausible that Amorites moved back and forth from northern and southern Mesopotamia in this period. It is true that northern Mesopotamia was the Amorite homeland, and that many families began to travel south in the late third millennium B.C., establishing themselves in the urban centers (Ur, Uruk, Babylon, etc). It is certainly plausible that Amorite families returned to their homeland periodically. Thus, Terah's family may have come to Ur in previous generations and returned to their families' place of origin later on. Thus, it seems most plausible that Terah and his family lived in Ur in southern Mesopotamia.

3. Terah and Later Traditions.

Many have attempted to reconcile the chronological data concerning Terah in Genesis 11:26-32 with the statement in Acts 7:4. According to Genesis 11:26, Terah was seventy years old when Abram was born. Abram left Haran to enter Canaan at the age of seventy-five when his father Terah was 135 (Gen 12:4). Terah then lived seventy more years and died at the age of 205 (Gen 11:32). However, Acts 7:4 (and Philo) states that Abram left Haran for Canaan only after the death of his father. It is possible that Luke was using the LXX or Samaritan Pentateuch, where Terah is stated to have died at the age of 145.

One other approach is to argue that Genesis 11:26 states that Terah began to father children at the age of seventy but that Abraham was born sixty-five years later.

The geographic name Terah, an Israelite encampment in the wilderness between Tahath and Mithkah (Num 33:27-28), appears to be etymologically related to Terah. Its precise location, however, is unknown.

TERAPHIM. See IDOLS, IDOLATRY, TERAPHIM, HOUSEHOLD GODS.

TESTING

Under the rubric of testing we shall look at two contrasting ideas: God's testing of *Israelites and Israel's testing of God. The Pentateuch itself underlines this contrast, and it is mirrored in the Psalms. The vocabulary used for both sets of testing is essentially the same.

Devotional spirituality has traditionally ex-

trapolated from explicit examples of God's testing of Israelites to contemporary experience, with the corollary tendency of identifying any difficulty or hardship in life as a test engineered by God himself. Cognitive psychology would speak of this tendency in terms of attribution theory—explaining a difficult experience by attributing its onset to God. This would be a way of finding meaning in the circumstances and avoiding categorizing them as random, meaningless or damaging. For these reasons, when we articulate what the biblical text says about testing, we need to be aware that modes of Christian extrapolation from Scripture and our life strategies are at issue as well.

1. God Testing Human Beings
2. The Vocabulary for Testing

1. God Testing Human Beings.

1.1. The Testing of Abraham (Gen 22). The story of the sacrifice of *Isaac is the episode that dramatizes the concept of God putting an individual to the test. The narrator introduces the Isaac episode in direct, unambivalent terms: "God tested Abraham" (Gen 22:1). This gives the reader access to the privileged information of the storyteller and interpreter. *Abraham may not be framing the events this way, but our perspectives as readers are shaped to construe it this way. Tension will build as the story unfolds because we are pulled into the dramatic moment and we feel with Abraham, and this despite knowing the outcome—as the first readers would have also done in their generation. It is important to note that this opening comment by the narrator removes the episode from the domain of attribution theory to the domain of biblical storytelling and biblical theology. It is not a matter of Abraham attributing his compulsion to God's instigation. It is God's initiative.

The story is also distinguished from ordinary life by its transparently supernatural quality. God speaks directly to Abraham by name, apparently speaking aloud: "God said to him, 'Abraham!'" And he said, 'Here I am!' God said, 'Take your son, your only son, Isaac, whom you love, and go . . . offer him'" (Gen 22:1-2). The dialogue, the specific unmediated command and the *promise of a further disclosure of exact whereabouts—"one of the mountains that I will show you" (Gen 22:2b)—prepare the reader for further supernatural intervention by direct dialogue. Abraham is stopped from carrying out the

killing and burning by the angel of the Lord (Gen 22:11-12). To this, in Genesis 22:15-18 the narrative adds a second audible utterance "from heaven" in which God reiterates his covenant promises of *blessing. Abraham has passed the test: "because [*ya'anāšer*] you have done this, and have not withheld your son, your only son" (Gen 22:16). By its antecedent episodes, by its narrative frame and by its direct audible divine commands and direct audible divine comments afterward, this episode is distinguished from episodes in contemporary life and stands before us in all its stark extremes.

The enormity of this test, the horrifying and disturbing demand that God makes of killing the son and heir to all the promise, these also distinguish Abraham's test from other events in the metanarrative of salvation—except for the test embodied in the story of Jesus, epitomized in his facing of crucifixion. A different typological trajectory of testing, from Abraham to the gospel story, sees God the Father filling the role of Abraham, the father, while Jesus fills the role of Isaac. Perhaps this analogy underlies Paul's statement in Romans 8:32.

The testing of Abraham's obedience by specific direct command has a setting and an accompaniment that resonate with other dimensions of Israel's metanarrative and with specific episodes in it. First, we could say that any direct divine command is a test of obedience, and that would apply to the command in the *Eden story (Gen 2:16-17; 3:11) as much as to the *Decalogue and all the covenant stipulations. Second, God's initiative, provision and commitment are prominent in the Abraham story, as they are in the Eden story, in Exodus and in the retrospective and prospective of Deuteronomy.

We could enunciate this as a principle in the biblical presentation of testing as follows. Testing is embedded within a relationship that God himself initiates and is active to maintain. The relationship is rich with promise and foretaste. It is backed up with substantiations and guarantees.

In the Eden story, the garden; its resources of water, food and animals; the woman; and God himself walking there in the cool of the day are all presented as provisions and accompaniments to the test of obedience. In the offering of Isaac, God's provision is highlighted. First there is the father's opaque reply—"God himself will provide a lamb for the offering" (Gen 22:8)—

which becomes translucent in retrospect. In addition, the name that Abraham gives to the place and the incident probably includes a play on words between “see” and “provide”: “‘The Lord will provide [or “see”]’; as it is said to this day, ‘On the mount of the LORD it shall be provided [or “be seen”]’ ” (Gen 22:14 NRSV). This same emphasis on relationship and provision are explicit in the episodes in Exodus and Deuteronomy.

Finally, the Isaac episode is bound into the wider story of Abraham, which speaks so emphatically of God’s commitment and *promises. Isaac himself is the symbol of all this, of God’s previous supernatural intervention in his conception, of this son and heir as foretaste of descendants as numerous as sand and stars (Gen 22:17, compare Gen 17 and 15). To sacrifice Isaac was to sacrifice the promised future, but what was at stake for Abraham was his relationship with God. Without that relationship there would have been no command and no test. The text implies that the relationship with God would have survived even if Isaac had died. So this testing of Abraham is a test of the strength of the relationship with God. We cannot separate testing from trust and reliance. God counts on Abraham to honor his command. Abraham counts on God to stand by him.

This brings us to the issue of outcome. Israelite readers would have known that the story of God and Israel continued. They would have known this even after the exodus generation failed the test of obedience and after both northern and southern kingdoms were exiled from the land of promise. Where the readers are located in the metanarrative contributes to how the story will be heard. Yet that location of the reader does not solve the theological question: Does God know the outcome of any test that he engineers in advance? Is it a foregone conclusion? Genesis 22 tells the story as a discovery by God of the strength of Abraham’s commitment: “for now I know that you fear God, since you have not withheld your son, your only son, from me” (Gen 22:12). The words “*for now* [*ki ‘attâ*] I know” certainly dramatizes the episode. If we read them literalistically, then God himself did not know what Abraham would choose in advance. In fact, it would be unfair to Hebrew storytelling to ask it to turn into an academic treatise on God’s sovereignty and human freedom. Rather, this story is the story of a journey

with God, sometimes told from God’s perspective—as in the narrator’s opening words—and sometimes told from the human participant’s perspective.

1.2. *Israel in the Desert.* The desert journey of Israel both before and after Sinai is the setting for testing in two directions, God’s testing of Israel and Israel’s testing of God. The first has theological approval. The second is condemned. The retrospective of Deuteronomy 8 offers us the best vantage point on God’s testing of Israel. Jesus quotes words from Deuteronomy 8:3 about obedience to God being the staff of life (Mt 4:4; Lk 4:4) during his temptation in the desert (Mk 1:12-13).

The idea of God running an experiment on the Israelites in the laboratory of the desert dramatizes the concept of testing: “Remember the long way that the LORD your God has led you these forty years in the wilderness, in order to humble you, testing you to know what was in your heart, whether or not you would keep his commandments” (Deut 8:2 NRSV). This retrospective embraces the entire *wilderness period, not simply particular episodes within it that mention testing nor the period after balking at entering Canaan. This overview statement raises similar issues and carries similar motifs to the testing of Abraham, which is no surprise since the Abraham story previews Israel’s experience and is deliberately shaped to create correspondences by analogy and to give coherence to the metanarrative. If we take the words of Deuteronomy 8:2 at face value, then God did not know the outcome of the test in advance. This would accord with “openness theology” in which God does not know the future in any absolute way, though he has information and resources to further his purposes. However, given the human propensity to sin that the Pentateuch documents for humanity and for Israel, we need not press the wording “to know . . . whether or not” unduly. *Moses could have told God the outcome from his own experience of the Israelites.

Deuteronomy in particular, and *covenant and political treaty language in general, is concerned with wholehearted loyalty to the overlord. That concern is dramatized in the language of Deuteronomy 8, which speaks of “walking in the ways of the Lord and fearing him” (Deut 8:6), as well as referring to “the heart.” The desert journey is the literal walking that accompanies the spiritual walk with God.

The desert environment made Israel dependent on God for life in every sense, materially for the basics of water and food. The dependence is counterbalanced by God's abundant provision that Deuteronomy 8 emphasizes as the counterpart to the "humbling and letting you hunger" (Deut 8:3). If Israel was tested by the desert experience, then Israel's trust was also rewarded, substantiated and affirmed by God "feeding you with manna" (Deut 8:3). In addition, clothes did not wear out, nor did feet swell (Deut 8:4). Promise and provision lie ahead in the destination of Canaan (Deut 8:7-10). All these motifs of covenant relationship, promise, blessings and providence echo the context of Abraham's testing.

An important dimension is added to the concept of testing in Deuteronomy 8 by its reference to the father-son relationship: "know then in your heart that as a father disciplines a child, so the Lord your God disciplines you" (Deut 8:5). The same ideas of fatherly discipline appear in Proverbs, generalized for all Israelites all of the time (Prov 3:11-12), and they are reapplied to Christian believers who are under duress in Hebrews 12:5-11.

Both the nurturing aspect of parenting and the disciplinary aspect of parenting appear in connection with God's testing, training and unique relationship with Israel. Israel is privileged, so Israel may be punished. Deuteronomy 8 places provision and blessing before the community that is listening to Moses' address. Prospect rather than threat fills the foreground. Yet the choice to obey remains pivotal for this retrospective and prospective passage, as for the whole of Deuteronomy. Testing relates directly to covenant loyalty in the relationship with God and to choices facing Israel. Such testing cannot be depersonalized into surviving tough circumstances, nor can it be turned into an opportunity and an occasion for a merit award—though in the case of Genesis 22 and Deuteronomy 8 there is a closely associated reiteration of the promises of blessing.

The specific test of Exodus 16 is related to the provision of *manna. Israel's complaints are the background. God announces the gift of quail and the regular manna, adding: "each day the people shall go out and gather enough for that day. In that way I will test them, whether they will follow my instruction or not" (Ex 16:4 NRSV). Some fail the simple test by leaving surplus

manna to go bad and by looking for manna on the *sabbath. This angers Moses on God's behalf (Ex 16:20, 28), but no judgment falls. Again, testing is closely related to God's provision and implicitly to covenant as well because the sabbath becomes a sign of covenant (Ex 16:25, 29), and a pot of manna is placed in the ark of the covenant (Ex 16:31-34). The provision of water in the previous chapter, or rather the desperate thirst and the discovery of brackish water, is looked back on as a test: "there God put them to the test" (Ex 15:25). Miraculous provision undergirds both the water and the food tests.

Rather different is the *theophany at Sinai, which terrifies the Israelites. Moses assures them that God means them no harm: "Do not be afraid; for God has only come to test you and to put the fear of him upon you so you do not sin" (Ex 20:20 NRSV). The fear of the Lord is a key motif in Exodus (Ex 1:17, 21; 14:10-11, 30-31). In Exodus 20:20 it relates directly to the formation of the covenant and being God's "treasured possession" (Ex 19:4-6). The invitation to the covenant meal at the top of Sinai and the fact that "they beheld God, and they ate and drank" without God harming them (Ex 24:11) links the theophany on top of Sinai with covenant making. Yet covenant breaking is an explicit possibility in Exodus 20:20. This unfolds in the *golden calf incident.

The same vocabulary of testing is used of Israel's provoking God by distrust, complaint and disobedience. The scene at Massah and Meribah reverberates in Exodus 17:7; Numbers 20:13, 24; 27:14; Deuteronomy 6:16; 9:22; 33:8; and resonates in Psalms 78; 81; 95; and 106 (cf. Heb 3:9-19). Testing God is equated with rebellion, provocation, complaint, distrust, unbelief and sin—the antithesis of good covenant relations. This said, we must also point out that biblical theology incorporates prayers that question, accuse and complain to God, the so-called lament psalms, which express despair, anxiety and anger. By canonizing these forms of prayer, OT faith presents a robust spirituality that is rooted in a committed relationship.

2. The Vocabulary for Testing.

The key verb for "testing" in Genesis, Exodus, Numbers and Deuteronomy is *nissâ*, the Piel of the root *nsh*, with a semantic range of "try out, exercise, train, put to the test." There is nothing hostile, emotionally negative or pejorative about

the verb as such. It is used equally of God testing and of Israel provoking him: “and yet [they] have tested me [*yḥnassû ’ôî*] these ten times and have not obeyed my voice” (Num 14:22). Context, relational dynamics and theology decide the appropriate nuance of *nissa*. The place name Massah (*massâ* is a noun form of *nsh*) means “trial, test” and is associated with the noun Meribah from the root *ribh*, “to bring a lawsuit against, dispute, quarrel.”

Elsewhere in the OT, for instance in Psalms and Jeremiah, this verb *nsh* for testing is associated with verbs for scrutinizing or scanning, and some of these contexts are associated with the metaphor of refinement of gold or silver.

TEXTUAL CRITICISM

Since there are no extant autograph copies of books of the Bible, its text must be established by the process known as textual criticism. Textual criticism involves the comparison of witnesses to the text, such as manuscript copies, early translations and citations. This article will survey the witnesses to the text of the Pentateuch and seek to provide a synthesis of the picture they give of the text.

1. Definition and Aims
2. Textual Witnesses
3. Textual Problems
4. Synthesis
5. Method

1. Definition and Aims.

Textual criticism is usually seen as the attempt to define the text in its *original* form. However, in order to distinguish textual criticism from literary criticism, textual critics of the Bible also often see themselves as seeking to define the

text in its *final* form. There is in the use of the two words “original” and “final” with regard to the biblical text the recognition that the textual critic is seeking to classify and eliminate deliberate or accidental changes that have taken place in witnesses since the biblical books were completed at a literary level, and yet also that the textual critic does not seek to take into account any stages of literary composition before an OT book was complete. For many works of classical literature, the definition of a final and original text is not difficult, since they were composed in a short time and then published. On the other hand, works such as those of Homer underwent significant graphic changes hundreds of years after their composition when the writing reforms of fifth-century Greece were introduced. Modern textual criticism wisely does not aim to restore Homer’s works to their putatively original spelling. Similarly, preexilic biblical literature will almost certainly have undergone substantial linguistic updating since its composition. Thus, for instance, given less use of vowel letters within the word in Hebrew inscriptions from before the exile, it seems reasonable to suppose that compositions such as the Pentateuch were originally spelled with fewer vowel letters than they now contain. However, the Ketef Hinnom amulets (see 2.1.4 below) show that at least some medial vowel letters are preexilic. Still, the textual critic does not seek to reconstruct a hypothetical form of the text but rather the text as it was finalized.

Just as the authors of some biblical books were anonymous, so were the scribes involved in the finalization of the written form of the Pentateuch, though there is no compelling reason to believe that the latter were involved in editing the content. The present lack of textual evidence from the early Second Temple period does not permit certainty as to the time when spelling was fixed. However, it is possible that this took place when the script of the Pentateuch was changed from the Old Hebrew or paleo-Hebrew script to the Aramaic (or “Assyrian”) square script some time after the exile. As with all ancient Hebrew, this text was without vowel markings except for *matres lectionis* (vowel letters). The aim, then, of textual criticism is to define the books in this received form, which by the work of the Spirit of God is canonical Scripture.

2. Textual Witnesses.

2.1. Hebrew Witnesses.

2.1.1. *The Masoretic Text.* The OT text from which almost all modern Bible translations are made is basically the Masoretic Text (MT). This Hebrew text has been transmitted to us by a meticulous group of Jewish scholars called the Masoretes who flourished between approximately the sixth and the tenth centuries A.D. They devised a system of marks that could surround the Hebrew consonantal text and describe the manner of reading without disturbing the consonants. These marks included vowel signs and indications of the quality of consonants (*daghesh* and *raphe*) as well as cantillation marks representing the way the text was recited liturgically and indicating the syntax of the sentence. The Masoretes also produced notes on the text, including the *Masorah parva* (Mp) and *Masorah magna* (Mm). The Mp is a system of notes in the side margin of manuscripts particularly marking unique forms, listing statistics of the spellings of words and indicating times when what was traditionally read (the *Qere*) was different from what was represented by the written consonantal structure of a word (the *Kethib*). The *Qere* and *Kethib* system seems to have fulfilled a variety of functions, including marking textual variants and updating archaic forms. The Mm, usually marked in the top and bottom margins, expanded some of the notes in the Mp, listed passages marked only as statistics in the Mp and also contained additional information. The Masoretes introduced or passed on other signs, for instance, the large letter *waw* in the word *gāhōn* ("belly") in Leviticus 11:42 to mark the middle letter of the Pentateuch. Around Numbers 10:35-36 inverted forms of the letter *nun* may mark a variant textual tradition, since these verses are placed before verse 34 in the Septuagint (LXX), the early Greek translation of the Hebrew Bible.

The Masoretes, though they created these innovations, were essentially seeking to preserve older traditions rather than invent a system *de novo*. They seem to have passed on the text they received very carefully, and as a result there has been minimal change in the consonantal structure of the Hebrew text from the beginning of our era to the time of the invention of the printing press, which allowed even greater standardization of the text. That there has been so little change in the consonantal text underlying MT is shown by some of the Dead Sea Scrolls (see 2.1.3

below). Furthermore, the vocalization recorded by the Masoretes can be shown by comparative philology to represent accurately the phonemic structure of the ancient language. There is some evidence that early Bible translators such as Aquila and Jerome had access to vocalization traditions not dissimilar to those found in the Masoretic systems. The particular system of vocalization that is represented in modern printed editions of the Hebrew Bible is called the Tiberian system, but there were at least two other varieties, known as Babylonian and Palestinian, though these systems are only extant for parts of the Bible and are not as fully developed as the Tiberian system. In addition, the text now underlying printed Hebrew Bibles is known as the Ben Asher text, which was a predominant variety of the Tiberian text closely related to the Ben Naphtali text, from which it differs only eight times in its consonants (Würthwein, 25).

The earliest manuscript containing the whole OT in Hebrew is known as Codex Leningradensis or L (MS Firkowitsch I. B19A in St. Petersburg). It comes from A.D. 1008 and forms the basis for the standard critical edition of the OT, namely the *Biblia Hebraica Stuttgartensia*. There are also some earlier manuscripts of the tenth century containing the Pentateuch (Tov, 47). The comparative lateness of the manuscripts of MT led to some negative estimates of its value before the discovery of the Dead Sea Scrolls.

2.1.2. *The Samaritan Pentateuch.* The Samaritan Pentateuch (SP) is the version of the first five books of the Bible that constituted the canon of the Samaritans and was first introduced to European scholars in A.D. 1616 by Pietro della Valle. It is written in a script related to the Old Hebrew script, and unlike MT it does not have a consistently applied system of vowel signs. The extant manuscripts of the SP date from around the twelfth century A.D. and later, though like the MT, the SP has in general been faithfully transmitted. In comparison with the MT, the SP contains a greater number of vowel letters and a number of features that seem to be updatings of linguistically archaic forms. The text is also often expansionistic. In particular, formulas from parallel passages are inserted to make the text in a given instance include information recorded elsewhere. Thus, after Numbers 20:13 the SP inserts sections largely following the wording of Deuteronomy 3:24-28 and 2:2-6. These pluses are almost universally understood to be second-

ary expansions and play little part in text-critical discussions.

In addition, the SP contains a few variants that are viewed as sectarian innovations reflecting the theology of the Samaritans. The main sectarian variants in the SP are as follows. Twenty-one times when Deuteronomy refers to the place that God “will choose” (*ybhr*) the SP reads “chose” (*bhr*), indicating that Gerizim is the place already chosen by God, not Jerusalem, which would be chosen in the future from the point of view of the Pentateuch (see also SP’s “in the place where I *have caused* my name to be remembered” in Ex 20:24, where the MT has “in every place where I *shall cause* my name to be remembered”). There are also expansions to the Ten Commandments in Exodus 20:17 and Deuteronomy 5:21 (based on Deut 11:29-30; 27:2-7), making the tenth commandment to build an altar on Mount Gerizim. The MT of Deuteronomy 27:4 requires that the altar be constructed on Mount Ebal, for which the SP reads Mount Gerizim. It is not entirely agreed that it is the SP that contains the secondary text in this last case, and some authorities believe that the innovation has taken place in the MT. The connection between the variant in Deuteronomy 27:4 mentioning Gerizim, not Ebal, and the expansion at the end of the Ten Commandments is important because it shows that alterations to the law made on grounds of the theology of the Samaritans are also connected to an expansionistic tendency that is similar to the expansionistic tendency in the SP manifested in variants that show no sectarian motive. Since nonsectarian variants in the SP show up in certain manuscripts of the Dead Sea Scrolls, it is possible that there are several strata of variants in the SP, with the specifically sectarian changes taking place at a later stage than some of the expansionistic changes. However, the existence of expansionistic variants in Qumran texts showing no sectarian elements and of similar expansions containing sectarian elements in the SP may suggest some continuity between the earlier and later stages of development of the SP. Thus we should probably not think of the Samaritans adopting a text from a community outside their own.

A satisfactory edition of the SP is still a desideratum. The edition of von Gall is flawed by the editor’s preference for Samaritan readings closer to the MT.

2.1.3. *Ancient Manuscripts from the Judean*

Desert. Text-critical investigation of the Bible has been revolutionized by the discovery since 1947 of a number of manuscripts, now generally known as the Dead Sea Scrolls, which have a much greater antiquity than the manuscripts of the MT and the SP. The chief location of discovery has been Khirbet Qumran, where the scrolls are usually dated from before approximately A.D. 68 back to the middle of the third century B.C. There have also been important finds of ancient texts, though not in the same quantity, at Masada, Wadi Muraba‘at and Nahal Hever. Among the Qumran scrolls every book of the Pentateuch is represented in several fragmentary manuscripts, with Deuteronomy heading the list with at least thirty-one such copies. Ten of the texts of the Pentateuch (and one of Job) are written in the paleo-Hebrew script, as opposed to the square “Assyrian” script that is now normally thought of as the Hebrew script.

For the biblical text generally, Tov (114-17) introduces a fivefold classification of the Dead Sea Scrolls:

1. Those that reflect the consonants of what was later the MT are known as *proto-Masoretic* manuscripts. For instance, 4QGen^b (4Q2), probably from the first century A.D., only has one variant (an orthographic *waw*) from the consonants of the MT and also reflects quite closely the division of the MT into paragraphs. This indicates how early the consonants of the MT were fixed. The majority of the Qumran biblical scrolls are classed as proto-Masoretic.

2. Those that reflect some of the variants later attested in the SP Tov calls *pre-Samaritan* texts. They are sometimes also called *proto-Samaritan* texts on the ground that there is a link between the types of expansion that have occurred in earlier and later strata of the text of the SP. A prime example of this type of text is 4QpaleoExod^m (4Q22), which contains parts of Exodus 6:25—37:16. 4QpaleoExod^m shows many of the expansions of the SP, but from space calculations it is surmised that it probably did not have the sectarian expansion to the Ten Commandments. It is therefore thought that the text is not Samaritan. While 4QpaleoExod^m is generally assigned to a text type or group with the SP, it also contains some agreements with the MT against the SP. In addition, the manuscript 4QNum^b (4Q27) contains a number of nonsectarian expansions similar to the SP. It should be noted, however, that sectarian expansions

would not be expected in Numbers, since the SP of Numbers does not contain passages as clearly sectarian as the SP does in Exodus and Deuteronomy.

3. There are a few manuscripts that seem to reflect the text type of the *Vorlage* (or “source text”) of the LXX. There are no very clear cases for the Pentateuch, though 4QLev^d (4Q26) and 4QDeut^q (4Q44) show that significant variants from the LXX existed in Hebrew, and other pentateuchal manuscripts also contain LXX-type variants.

4. Approximately twenty percent of the biblical manuscripts at Qumran are written in what is called *Qumran style*. This involves a system of orthography using vowel letters much more than in Masoretic orthography, though with even less consistency. Qumran style often involves a different morphology. Thus, the third masculine singular independent pronoun occurs as *hw’h*, not *hw’*. Because the attitude of copiers using Qumran style does not seem to have been strict regarding the reproduction of their *Vorlage*, it is difficult to define with certainty the type of text from which such texts were made. Texts in this style were almost certainly written at Qumran itself, whereas the other texts may have been brought from elsewhere and may antedate the settlement of the community at Qumran (probably second century B.C.; see *DNTB*, Qumran: Place and History).

5. Approximately ten percent or so of the manuscripts do not align strongly with any of the above groups and are classified as *non-aligned*. The term *nonaligned* does not always mean that the text in question does not have strong characteristics. Some of these texts could point to the existence of a previously unknown type of text that is just as real as the types of text represented by the MT, SP and LXX.

However, even this fivefold classification is problematic since many of the fragments only consist of a few legible words. Thus, the way texts are characterized by scholars now, based on the existing fragments, could be significantly different from how they might be characterized if they were available in their entirety.

These texts show that a plurality of text types was in use during the Second Temple period but also that there is no objection in principle to supposing the uncorrupted transmission of a text like the consonants of the MT during a long period for which we have no direct witness. The

relative proportions of the text types seem to attest some sort of ascendancy for the proto-Masoretic type. The texts from Qumran also reveal much about scribal practice from antiquity, about scroll and column size, and about some of the scribal features of the MT in their inception.

In evaluating the significance of the discoveries at Qumran, we should also recognize that they bias our reconstruction since they provide so much more data than other contemporary areas. We must therefore be cautious in generalizing the idiosyncrasies of Qumran to make statements about the textual situation of the Second Temple period as a whole.

2.1.4. Other Witnesses. A few other Hebrew witnesses to the biblical text exist. The earliest of these are two tiny silver rolls, possibly amulets, from Ketef Hinnom that contain a quotation of the wording of the priestly blessing (Num 6:24-26), with some variation from the MT. These probably date to the century before the Babylonian exile.

2.2. Early Translations of the Bible.

2.2.1. The Septuagint. The Septuagint (or LXX) was the first translation of the OT into Greek. Its name, meaning “the seventy,” is derived from the tradition, reflected in the *Letter of Aristeas* (first century B.C. or earlier), that a translation of the Hebrew Pentateuch into Greek was made by seventy(-two) translators in the first half of the third century B.C. under Ptolemy II Philadelphus. The term *Septuagint* thus originally referred only to the translation of the Pentateuch but subsequently came to denote the whole Greek OT, which was probably complete before the end of the second century B.C., as indicated by the prologue to Ecclesiasticus. However, the history of the LXX has not been simple, and divergences in its text from the proto-Masoretic text motivated a number of revisions. The most significant of these was that of Origen (died c. A.D. 254) in producing the Hexapla.

The Hexapla was a massive work of six columns in which the contents were in principle arranged thus: the first contained the Hebrew text; the second the Hebrew text in Greek transliteration; the third, fourth and sixth the translations of Aquila, Symmachus and Theodotion respectively (see 2.2.2 below); and the fifth a version of the LXX. Origen adapted the fifth column containing the LXX, adding symbols in the text marking where the LXX had a plus in relation to the Hebrew, and also insert-

ing Greek text from the other three Greek translations, especially Theodotion's, where the LXX had a minus in relation to the Hebrew. As copies of the fifth column were made and recopied, many of these signs were omitted, and since the text of Origen's fifth column has infected most LXX manuscripts, the task of reconstructing the original LXX has become more difficult. Origen's critical signs have survived partially in a few Greek witnesses, particularly in the fourth or fifth century A.D. Codex Colberto-Sarravianus (G) for the Pentateuch, and in Syriac and Armenian texts. The two most important early and extensive manuscripts of the LXX for the Pentateuch are Codex Alexandrinus (A) and Codex Vaticanus (B) from the fifth and fourth centuries A.D. respectively. Codex Vaticanus is not extant in Genesis until Genesis 46:28. A few fragmentary manuscripts of the LXX Pentateuch are to be found among the Dead Sea Scrolls.

2.2.2. *The Three.* Dissatisfaction with the LXX as a translation led to the creation of three more translations of the OT into Greek, known as "the Three," dated to the second and perhaps early third centuries A.D., each essentially reflecting the proto-Masoretic text. The first of these, by Aquila, is famed for its literalism and etymologizing translations even at the expense of violating normal Greek grammar and idiom. These features make the translation very useful for textual criticism. The translation of Symmachus is one particularly noted for its elegant Greek style. The translation of Theodotion is important because of its role in the fifth column of the Hexapla, though what is ascribed to Theodotion in manuscripts may go right back to the first century A.D. or even earlier. These translations are no longer extant for extended passages in the Pentateuch.

2.2.3. *The Peshitta.* The Peshitta is a translation of the OT into the East Aramaic dialect of Syriac, probably during the first two centuries A.D. It may have been translated by a Jewish group lying outside rabbinic Judaism. As scholars have reconstructed more of its original form, it has become apparent that it was made from a Hebrew text more similar to the proto-Masoretic than had previously been supposed. The syntax of Syriac lies moderately close to Hebrew, but the translation is not characterized by strong attempts at formal literalism, and therefore those using the Peshitta for text-criti-

cal purposes need to be aware of its tendency to prefer idiomatic Syriac over slavish translation.

2.2.4. *The Targums.* There are a number of Targums for the Pentateuch. Targums are translations of the Bible into Aramaic and share translation features such as the avoidance of anthropomorphisms with reference to God, the updating of geographical place names and expansions inspired by subtle triggering phrases in the original text (see *DNTB*, Rabbinic Literature: Targumim). Originally Targums were not written down. As a result, those that we now have in written form may contain oral elements significantly older than the time of their final editing. The earliest Targum is *Targum Onqelos*, made some time between the first and fifth centuries A.D. The more expansive *Targum Pseudo-Jonathan* was completed some time after the rise of Islam. In 1956 A. Díez Macho announced the discovery of a previously unknown targum now known as *Targum Neofiti*, which is contained in a manuscript dating from A.D. 1504 but with a text dating back at least to the mid-first millennium A.D. There are targums that have only partially survived among the manuscripts of the Cairo Genizah and that originate in Palestine, and there are also fragment targums (collected in *Fragmentary Targum*), which are short extracts of midrashic material without a continuous translation of text. All these targums contain expansive exegetical material, though *Onqelos* is the least expansive. Despite these expansions, at the level of formal correspondence to their *Vorlage* the targums are sometimes quite literal, and thus it is apparent that they all reflect a text very close to the MT. In addition to these Jewish targums there is also the *Samaritan Targum*, which is the Aramaic translation of the Samaritans based on SP but which exists in more than one form.

2.2.5. *The Vulgate.* The Vulgate is the Latin translation of the Bible made by Jerome between A.D. 390 and 405. In the OT it is hard to establish evidence of variation from the consonants of the MT in its *Vorlage*. This is because, though translated from a Hebrew text, it was also made with considerable reference to the existing Latin tradition of translation from the LXX. Its agreement with the LXX against the MT therefore need not indicate a non-Masoretic Hebrew *Vorlage*. It is, moreover, often para-

phrastic and therefore needs to be used with caution in textual criticism.

3. Textual Problems.

When extensive texts are copied manually over long periods of time it is inevitable that mistakes are introduced, and it is clear that this has occurred with manuscripts of the Bible. In addition, it is shown by the scrolls at Qumran that whereas accurate and skilled copying existed for some purposes, not all copying was done to equal specifications.

There are certain formal descriptions given of common mistakes that occur accidentally in copying. The term *dittography* is used for the writing twice of an element (varying in extent from a letter to a section) that should only appear once. The converse is *haplography*, which occurs when something that should be written twice is written but once. Often this takes place when two similar phrases occur that begin the same (*homoiarcton*) or end the same (*homoioteleuton*).

However, while many of the variants introduced in manuscripts of the Bible have been accidental, others have clearly been introduced deliberately. A deliberate change may result from the attempt by a scribe to restore a text that is already corrupt, or that the scribe believes to be corrupt, but changes in the text also resulted from theological disputes between different groups.

While most of the Pentateuch is the same in the main witnesses of the MT, SP, Dead Sea Scrolls and LXX, there are also some substantial areas of difference between some of these texts that deserve special attention here.

3.1. Chronology. At the level of *chronology the texts differ. This is true not only for the ages in the *genealogies in Genesis 5 and 11, where the MT, SP and LXX have different schemes, but also in smaller details such as the chronology of the *flood and whether God finished *creation on the seventh (MT) or sixth day (thus LXX, SP, Peshitta) in Genesis 2:2. The texts also have different ways of reckoning the length of the sojourn of the Israelites in Egypt (Ex 12:40). There are certainly signs of inner-Greek alteration of chronology (witness the division of Greek witnesses to the dates of Methuselah's life), but the appearance of variant chronologies in the SP suggests that the basic chronology of the LXX also goes back to a Hebrew *Vorlage*. The SP's

chronology of the antediluvian patriarchs must be partially secondary, since it seems designed so that Jared, Methuselah and Lamech all die in the flood.

3.2. LXX Exodus 35—40. In the second account of the *tabernacle in Exodus 35—40, the LXX has a text significantly shorter than the MT and SP, and also with differences of order. In this case the variants of the LXX are thought by Gooding to go back essentially to the process of translation and transmission of the LXX, though this is not universally accepted and scholars differ as to whether they class this as an issue of literary or textual criticism. However, due to the complex state of the end of the text of LXX Exodus, caution is required in its use for textual criticism.

3.3. Order. There are some smaller differences of order. The most significant of these is that, in contrast to the MT and LXX, the SP and seemingly 4QpaleoExod^m place Exodus 30:1-10 (the account of the incense *altar) between Exodus 26:35 and 26:36. Both the locations of the SP and the MT have their own logic, and the wording is not affected.

4. Synthesis.

There is little dispute that from at least the beginning of the second century A.D. the tradition from which the MT derives has been handed down with extreme care. On the other hand, several centuries before this there seem to be significant variations between witnesses, such as the proto-Masoretic, proto-Samaritan and LXX-type texts. The second and third centuries B.C. could then be seen as a time when a variety of texts was allowed within Judaism, before the proto-Masoretic text gradually gained the ascendancy witnessed in the Masada texts (from A.D. 73 or before), which are almost all proto-Masoretic. The proto-Masoretic text thus pushed out the other texts so that they survived only outside Judaism. However, according to the numbers of manuscripts found at Qumran, it would seem that texts of the proto-Masoretic type were already in some form of ascendancy by the second century B.C. and that by then the stricter spelling conventions of the MT had been fixed. Since the somewhat later MT contains so many forms that agree with reconstructed forms from comparative Semitic philology, it must have been based on a reliable source. This should be borne in mind when comparing the proto-Ma-

soretic text and other texts, since at least at the level of vocalization the Alexandrian Jews who translated the LXX do not seem to have had so firm a tradition. This difference in reliability could well be explained if, with Tov, we suppose that the proto-Masoretic text arose from inside a group regarded as authoritative within Judaism.

Another model to explain the variety of texts has been the theory of local texts, most recently expounded by F. M. Cross. For the Pentateuch, according to this theory, the proto-Samaritan manuscripts reflect a text type from Palestine, the LXX-type manuscripts reflect a text type from Egypt and the proto-Masoretic manuscripts reflect a text type from Babylonia. This tripartite local division looks similar to the divisions made for NT Greek manuscripts, but while there may be some truth in the fact that certain text types flourished in certain locations, the association of the proto-Masoretic text with Babylonia is without evidence and, if the *Letter of Aristeas* is to be believed, the *Vorlage* of the LXX Pentateuch came from Palestine. The situation is also more complex, and a simple tripartite classification does little to explain the nonaligned texts from Qumran. In principle, however, the theory that texts were restricted to localities does explain how variant texts could have arisen without mutual interference.

5. Method.

Frequently textual criticism is presented as a science governed by strict rules of interpretation or maxims that lead the scholar to the right result. One of these is the rule *lectio difficilior potior*, "the more difficult reading is the preferable." This is sometimes explained to mean that "the more difficult reading to derive from the other readings is the original one." However, Tov evaluates such maxims in use for OT textual criticism negatively. In fact, in most texts where there are two possible variants, good and contrary explanations can be given for the originality of each. The textual critic gains insight only by experience and by acquaintance with a number of cases in witnesses where the direction of origin of the variant is much clearer.

The textual critic needs to be aware of the tendency for certain letters to be confused. These include *kaph* and *beth*, *yodh* and *waw*, and *resh* and *daleth* in the later, square script. However, the textual critic must also have an aware-

ness of the shape of letters in the paleo-Hebrew script, since some letters looked similar in that script but no longer look similar in the familiar square script.

A textual critic needs to remember that a correct reading may be contained in any witness but through experience will also perceive that not all witnesses contain good readings with equal frequency. Given the frequent ambiguity of internal criteria for deciding between readings, a textual critic must sometimes resort to evaluating variant readings purely on the quality of the witnesses in which they appear. In this connection it should be noted at the level of generalization that the MT in diagnostic readings more frequently shows signs of originality, and therefore its witness pitted against another in an otherwise ambiguous case is to be preferred. However, this generalization should not be made into a law. Another aid to deciding the originality of a reading is the grouping of witnesses against each other. A reading contained in two witnesses that are otherwise typologically far apart, as in the case of the MT and the LXX of Exodus, if not clearly secondary on internal grounds, has a strong case for originality. However, different textual groups may share secondary readings, and that a variant is shared by different textual groups does not on its own demonstrate its originality.

In treating the versions it is important to consider each version and its method of translation as a whole before using its text critically. It is clear that this has not been done sufficiently in the production of the *Biblia Hebraica Stuttgartensia*. Its apparatus should therefore not be used without further confirmation as a witness to the text of a version.

P. J. Williams

THEFT AND DEPRIVATION OF PROPERTY

Biblical law attempted to protect individuals from the unwarranted removal or destruction of their property. To that end, pentateuchal law specified various punishments for acts that, whether intentionally or unintentionally, unlawfully deprived one member of the community from his or her own legal property. Even beyond that, the biblical laws sought to create a certain ethos in Israel, one that promoted the value of human life over material property and that encouraged a right relationship with God and one’s neighbor. By thus promoting and balancing justice and fairness, the biblical laws concerning theft and deprivation of property enabled Israel to enjoy the harmony and material well-being intended by God.

1. Categories of Theft and Deprivation of Property
2. Penalties for Theft and Deprivation of Property
3. Theology, Ideology and Morality in the Property Laws

1. Categories of Theft and Deprivation of Property.

1.1. Theft, Stealing, Burglary (Heb gnb). The most frequent Hebrew root in the general semantic range of theft, and the one used in the *Decalogue’s prohibition (Ex 20:15; Deut 5:19) is *gnb*. Rabbinic tradition (Westbrook, 15) holds that this root has the connotation of taking by stealth and deception, as opposed to “robbery,” which is done openly using threat of violence (see 1.2 below). This analysis generally holds true for the occurrences of *gnb* in the Pentateuch except for kidnapping (lit. “stealing a person”), which presumably does involve use of force (Ex 21:16; Deut 24:7). Rachel stole the *teraphim* when Laban was away shearing sheep (Gen 31:19); *Jacob stole the heart of Laban in the metaphorical sense of *deceiving* him (Gen 31:20); predatory animals steal sheep when a shepherd sleeps (Gen 31:39); and Jacob tried to preclude the possibility of accusation of theft by keeping in his flock only animals of specific colors different from Laban’s, making chicanery seemingly impossible (Gen 30:32-33). Burglars try to break into houses either when no one is home or when the residents are asleep (Ex 22:2-3 [MT 22:1-2]), and Joseph’s brothers feared accusation of stealing in the sense of stealthily carrying

away silver (Gen 44:8).

1.2. Robbery (Heb *gzl*). The Hebrew root *gzl*, on the other hand, is a stronger term than *gnb*, taken traditionally as an open act involving threat or use of violence, though this rabbinic view is qualified by B. S. Jackson (8) who sees *gnb* as an individual within the community and *gzl* as a group act of outsiders, and this further qualified by R. Westbrook (17, 23-30) who, rejecting Jackson's "insider-outsider" dichotomy, sees the essence of *gzl* as "abuse of authority." Examples of *gzl* include Abimelech's servants *seizing* a well belonging to Abraham (Gen 21:25) and Laban and his posse threatening to *take by force* his two daughters whom Jacob had married (Gen 31:31).

1.3. Confiscation, Withholding (Heb *ʿsq*). The Hebrew root *ʿsq* is often translated generally with the notion of "oppress" or "exploit", but J. Milgrom (337) argues the meaning is more explicit, referring to such actions as *withholding* wages (Lev 19:13; Deut 24:14-15; Mal 3:5) and *confiscating* pledges in the case of loan default (Ezek 18:7; cf. Deut 24:6, 10-14). It is used in parallel with *gzl* as an act of abuse of power ("Do not confiscate [*ʿsq*] from your neighbor nor rob [*gzl*] him," Lev 19:13; "oppressed [*ʿsq*] and robbed [*gzl*]," Deut 28:29; "they covet fields, then rob [*gzl*] . . . and they confiscate [*ʿsq*] a man and his house," Mic 2:2). Like *gzl*, *ʿsq* can involve the use of open force (to confiscating houses, lands, pledges and persons), but *gzl* is usually an act of the lawless, whereas *ʿsq* is an act by the rich or the powerful that is either technically legal or else is an abuse of power tolerated by (even perpetuated by) legal authorities. Whether or not legal, *ʿsq* is always pitiless and can amount to legally sanctioned robbery.

1.4. Spoil, Plunder (Heb *bzz*, *šll*). Jacob's sons looted (Heb *bzz*) Shechem for the rape of their sister Dinah, taking livestock, wives and children (Gen 34:27-29; cf. Gen 14:11-12). Israelites in the desert feared becoming plunder (*bz*, Num 14:3), though they themselves were sometimes allowed to plunder (Num 31:9-47; Deut 2:35; 20:14).

1.5. Fraud. Fraudulent acts include using dishonest scales (Lev 19:35-36; Deut 25:15), sending one's cattle to graze another man's field (Ex 22:5 [MT 22:4]), refusal to return an item that was lost and found or else left in bailment with another (Ex 22:7-13 [MT 22:6-12]) and moving a boundary stone (Deut 19:14).

1.6. Usury (Heb *nešek*, *m/tarbit*). OT laws seek

to protect poor Israelites from economic exploitation ensuing from loans to them at interest (Ex 22:25 [MT 22:24]; Lev 25:35-38). Terms for interest are *nešek*, literally "bite," perhaps referring to the interest paid up front to the lender at the beginning of a loan (like "points" on a house loan), and *m/tarbit*, literally "increase," which may refer to interest paid subsequently. Another view is that the former is interest on money, the latter on produce (cf. Loewenstamm, 78-80). The Laws of Eshnunna §§18a-21 (c. 1800 B.C. Babylonia) limited interest rates to 20 percent for money and 33.3 percent for grain, exorbitant rates by modern standards that could easily lead to default, forfeiture and enslavement (Neh 5:3-5; 2 Kings 4:1).

Deuteronomy 23:19-20 appears to condemn interest taking altogether (except to foreigners), not just for the poor, a view put into practice by the medieval church. However, in view of Exodus 22:25 (MT 22:24) and Leviticus 25:35-38, which refer explicitly to the poor, the poor may also be in mind in Deuteronomy 23:19-20 (so Calvin; cf. Sutherland, 3-9). Failure to address the needs of debtors could spawn civil unrest (cf. the defaulting debtors among David's disenfranchised, early followers; 1 Sam 22:2).

2. Penalties for Theft and Deprivation of Property.

2.1. Kidnapping: Execution. Kidnapping, literally "stealing a person" (Ex 21:16; Deut 24:7), generally related to the slave trade (Gen 40:15; cf. Gen 37:18-36; 1 Tim 1:10, where "kidnapper" [Gk *andrapodistēs*] is a term for slave dealers), was punishable by death, whether the victim was found in the thief's possession or whether the victim had been sold into slavery (contrast theft of animals below, where disposal of goods increases the penalty).

2.2. Animal Theft with Disposed of Goods: Four- or Fivefold Restitution (Possible Slavery). Exodus 22:1 (MT 21:37) indicates that a stealer of an ox or sheep that he has slaughtered or sold must return fivefold for the ox, fourfold for the sheep. Multiple restitution for animal theft is probably a result of the importance of animals to an agricultural/pastoral society, for they were not only the herdsman's property but also his livelihood. Stealing these was akin to stealing a carpenter's tools or a fisherman's nets, depriving one of future as well as present benefits. Also, the greater multiple for an ox probably represents its com-

paratively greater importance within the ancient economy (Sprinkle, 134-35). If the thief were too poor to pay full restitution, he could be sold into slavery for up to six years (Ex 22:3 [MT 22:2]; cf. Ex 21:2), the proceeds of his sale going for the restitution. In the ancient Near East an ox was worth more than half the value of a typical slave—in fifth-century B.C. Babylonia, forty shekels as compared with sixty shekels (Sprinkle, 133)—so the owner who had an ox stolen by a poor person would receive less than full multiple restitution. Poor thieves were deterred by potential loss of freedom, rich thieves by the multiple restitutions.

2.3. Animal Theft Without Disposal of Goods: Twofold Restitution. Unlike the case of stealing a person, a distinction of penalty is made between theft where the animal has been disposed of and where it has not. Only twofold restitution is required when the goods were not disposed of. The rationale for this is puzzling since, as B. S. Jackson puts it, a thief caught with the goods is not less guilty, only less successful (Jackson, 134). One possibility is that moral rather than strictly legal considerations come into play: the thief, until he or she had disposed of the goods, was not yet “rooted in sin” (R. Akiba, *t. B. Qam.* 7) and still had the possibility of repentance. Perhaps the lower penalty reflects the hope that this might lead to repentance (for other views, cf. Sprinkle, 135-37; see 2.5 below).

2.4. Theft of Personal Property: Twofold Restitution. When household goods were stolen and the thief was found, twofold restitution was required (Ex 22:7, 9 [MT 22:6, 8]); that is, the object or its value was returned, plus one hundred percent.

2.5. A Thief Who Repents: Reparation/Guilt Offering and Restitution plus Twenty Percent. The priestly law (Lev 6:1-7 [MT 5:20-26]) deals with the case of sacrilege (Heb *m'el*) caused by swearing falsely concerning a deposit, an investment (?), something robbed (*gzl*), something withheld (*'sq*) or something lost. In this case the culprit swears under the self-curse of an oath (see 2.9 below) that he or she has not done this but subsequently “feels guilty” (following Milgrom, 338-45; pace “becomes guilty” [RSV, NASB] or “realize guilt” [NJPS]). The thief then is to make restitution to the person defrauded, adding one-fifth to it as a penalty. Reduction from the usual twofold restitution for theft takes into account his or her repentance (see 2.3-4 above). Besides resti-

tution, which provides satisfaction to the person defrauded, the culprit is to offer a guilt/reparation offering to atone for the offense against God.

2.6. “Theft” of Crops by One’s Animals: More Than One Hundred Percent Restitution. When one’s animals have grazed a neighbor’s fields (Ex 22:5 [MT 22:4])—a form of theft if deliberately driven into the field, but in any case negligence—restitution must be made from the best (or highest value) of the victim’s field, resulting in one hundred percent plus compensation for the loss. By replacing the damaged crop at the maximum yield the field could be expected to produce (more than it might actually have produced), the owner of the field has no grounds for complaint even if he suspects the act was deliberate.

2.7. Damages to Animals or Property Due to Negligence: Simple Restitution. Related to the theft laws are laws concerning damages due to negligence, all of which require exact replacement of the loss, with no windfall to the victim. Hence, the owner of a goring ox that fails to take precautions so that it kills a neighbor’s ox must make restitution “ox for ox” (Ex 21:36), though the owner is allowed to salvage the value of the carcass. A similar rule applies when negligence regarding an open pit kills a neighbor’s animal (Ex 21:33-34). When fire ravages a neighbor’s field, in which case, unlike the case of grazing another’s field, the negligent party receives no benefit (see 2.6 above), simple restitution (rather than restitution from the “best” of the field) is prescribed (Ex 22:6 [MT 22:5]).

2.8. Damages to Another’s Animal Without Negligence: Share the Loss. In Exodus 21:35 two oxen owned by different owners encounter each other, and one gores the other to death unexpectedly. No one was at fault; either ox could have been killed. In this case, rather than making one person bear the whole loss, the law demands splitting the loss between the two parties (a ruling identical with Laws of Eshnunna §53). Finkelstein (23, 36) terms this a primitive form of shared-risk accident insurance following a principle of loss distribution.

2.9. Suspected Theft with No Proof: An Oath but No Restitution. Where evidence was lacking, justice could be left to God through oaths.

2.9.1. Requirement of Oaths. When a bailee claimed an item left with him was stolen, but the bailor suspected it was actually expropriated by the bailee but had no proof, the bailor could

force the bailee to swear an oath, that is, to make a conditional self-curse that he or she did not trespass the neighbor's property (Ex 22:7-8, 11 [MT 22:6-7, 10]). Without solid evidence, the plaintiff could not demand any restitution.

Likewise, in the next case (Ex 22:9 [MT 22:8]) a lost or stolen item is found by the original owner, but the owner cannot prove that the found item is actually his or her property. Again, the owner cannot force the current possessor of the item to return it nor demand multiple restitution, for the owner has no proof. The owner can, however, force the possessor to come to God ("the judges" for *hā'ēlōhim* of some English translations is philologically dubious; cf. Sprinkle, 145-48) and can force the accused to swear that he or she did not trespass the neighbor's property (Ex 22:11 [MT 22:10]). The accuser also must swear that he or she is not making false accusation in an attempt to expropriate the property of the accused.

2.9.2. *The Rationale Behind Oaths.* The use of the oath assumes that even where human courts fail, the divine Judge can punish wrongdoers and is especially inclined to do so in cases of false oaths (cf. Zech 5:2-4). In the process of oath taking, the accused may, under fear of divine wrath, break down and confess the crime or else show guilt by refusing to pronounce the self-curse (interpreted as "God declaring one guilty"; Ex 22:9 [MT 22:8]), in which case the thief must pay twofold (see 2.4 above). Oaths operated similarly in ancient Mesopotamia (van der Toorn, 45-49).

2.9.3. *Other Cases Enforced by God, Not State.* Even without an oath, threat of divine intervention remains, as when Deuteronomy 25:15 admonishes the Israelites to keep honest scales "so that your days may be prolonged in the land." Similarly, one who moves a boundary stone is declared "cursed" by God (Deut 27:17). Oppressive usury taking and pledge seizing from the poor may lead to imprecatory prayers against the lender and judgment from God (Ex 22:25-27 [MT 22:24-26]), preventing the lender from receiving God's full blessings (Deut 23:19-20 [MT 22:20-21]). Apparently the usury "laws" served as moral admonitions rather than state-enforced statutes, since Nehemiah the governor had to cajole rather than command rich Israelites to stop taking interest from poor Israelites, this despite Ezra's having made the Mosaic law the law of the land (Neh 5:1-13; cf. Ezra 7:25-26). Laws

that are enforced by God rather than the state are not "laws" in the ordinary, modern sense.

2.10. *Accusation of Theft with Proof to the Contrary: No Restitution, No Oath.* If the accused could show some exculpatory evidence—as in the case of a bailee suspected of wrongdoing with an animal left in his care who produced evidence of depredation beyond his control (Ex 22:13 [MT 22:12])—then the plaintiff could demand neither restitution nor the taking of an oath. The oath was reserved for cases where evidence was lacking.

3. Theology, Ideology and Morality in the Property Laws.

Every society has condemned theft as disruptive of the social order, and there are many similarities between Israel's laws/morality and its neighbors' (van der Toorn). Nonetheless, the Pentateuch, by placing theft in the *Decalogue (Ex 20:15; Deut 5:19) as one of the kinds of behavior fundamentally incompatible with a *covenant relationship with Yahweh, underscores that theft is not only a "crime" but also a "sin" against God, as is the coveting that can lead to it (Ex 20:17; Deut 5:21). From a theological perspective, unjustly depriving others of goods is to deprive them of the blessings and tangible benefits that God meant for his people to enjoy and is therefore an undermining of divine purposes (Wright, 136-38). Even where deprivation comes legally as a result of economic ups and downs, it was the divine purpose that on the sabbatical year (Deut 15:1-3; 31:10) there be a remission of debts, and on the year of Jubilee (Lev 25:39-55) additionally a release from slavery and a restoration of ancestral land to the original owners (see Sabbath, Sabbatical Year, Jubilee). Permanent deprivation was thus contrary to the divine will.

In some ways the Bible seems lenient concerning theft. In the ancient Near East, theft of an animal could require up to thirtyfold restitution and the death of the thief who could not pay (Laws of Hammurabi §§8, 265; Hittite Laws §§57-59, 63, 67, 69). The Laws of Eshnunna (§13) require the execution of the housebreaker at night, and the Laws of Hammurabi (§21) requires any housebreaker to be executed. Biblical law, as M. Greenberg points out, differs from ancient Near Eastern laws in limiting restitution to at most fivefold and not allowing a death penalty for property crimes. Only "stealing a person" and taking an item under the ban (Deut

7:26; 13:17; cf. Josh 6:18; 7:15) are capital offenses, never ordinary theft of property. Indeed, biblical law, unlike cuneiform law, protects the life of the housebreaking thief (Ex 22:1-4 [MT 21:37—22:3]) by pronouncing bloodguilt on anyone who murders the thief except in what might be termed an act of self-defense at night. Hence, biblical law values human life above property to a greater degree than cuneiform law.

Similarly, the goring oxen laws show the value of human life over property. Unlike similar cuneiform laws, biblical law sharply distinguishes between the case where an ox gores an ox (Ex 21:35-36), involving mere property, and where an ox gores a human (Ex 21:28-31), when transcendent life value is involved. The latter requires the execution of the goring ox, whereas the former does not. Moreover, if negligence is involved in an ox goring a person to death, the owner must ransom his life in order to avoid execution, thus possibly giving an economic windfall to the victim's family (he will give all he has to save his life), whereas negligence resulting in the death of a neighbor's ox results in replacement value of the animal and no more, with the owner of the goring ox even keeping the carcass. These differences underscore the supreme value of human life over property in biblical law.

Moral and religious admonition is wedded with legal procedure in these laws. Creditors were admonished to respect the dignity and property rights of debtors by not barging into the house to seize a debtor's pledge but were to wait outside for the debtor to bring it out (Deut 24:10-11). Out of compassion, creditors are encouraged not to seize as pledge a person's only cloak needed to keep one warm or only millstone needed for preparing the flour essential for subsistence (Ex 22:26-27 [MT 22:25-26]; Deut 24:6, 12-13). Biblical law provides for the possibility of repentance and placating both persons and God (see 2.3, 5 above), and threatens wrongdoers with divine punishment even when they escape human justice (see 2.9 above).

By promoting a sense of justice and fairness—punishing thieves both rich and poor, tempering legality with compassion, encouraging repentance by reducing penalties when it occurred, compensating those who suffer loss by negligence, endorsing the sharing of losses when no one was at fault and placing wrongs in the hands of God when beyond human courts—these laws were meant to assure harmony and

material well-being in Israel.

THEOGONY. See COSMOLOGY; CREATION.

THEOLOGY OF THE PENTATEUCH

In the end, it is the OT's theological vision that explains why it has survived for more than two millennia and has shaped the world in the process. To a large extent that theological vision is given decisive shaping by the Torah (the Pentateuch). The univocal presentation of God in that block of material establishes the theological parameters for the rest of the OT. So much is this the case that while OT theologians cannot agree on a "center" for OT theology, G. Hasel could still assert without any real fear of contradiction that God himself is the center. Throughout the thirty-nine books one concept of deity is pervasive: God is the one transcendent Creator. Even in the wisdom literature, which foils so many proposals for a "center," there is no question about the concept of God the writers espouse. In part, this underlying consistency in the rest of the OT is due to the consistency

within the Torah. There is complexity in the picture, even mystery, but not contradiction. Throughout, God is the transcendent Creator who is passionately concerned that his creatures experience the good for which he created them. Because of this consistency, it is possible to talk about a theology of the Pentateuch, a single understanding that underlies differing emphases in the different books.

1. Theological Worldview
2. God
3. The World
4. Humanity
5. Sin
6. Salvation

1. Theological Worldview.

Beneath everything else the Pentateuch does and says is a view of reality that is radically different from that of any of Israel's neighbors. While the history of religions school of the late nineteenth century sought to deny this point of view, W. F. Albright and his students brought it back into currency in the middle years of the twentieth century. It was most succinctly expressed by G. E. Wright, who maintained that because of the manifest differences between the religion of Israel and that of Israel's neighbors, the kind of evolutionary development proposed by J. Wellhausen was impossible. Unfortunately for his point of view, Wright was not able to offer an intellectually consistent explanation for the origin of this supposed uniqueness. Following Albright's lead, he suggested that God had revealed himself in certain great historic events upon which the Hebrew people had reflected and from which they derived their theology. The weak point of that argument is that Wright admitted that the reports of those supposedly revelatory events as found in the Bible have been heavily adapted and embellished, so much so that we can only speak generally about what may or may not have taken place. Wright's critics, especially J. Barr and B. Childs, pointed out that events that cannot be reconstructed from the data now extant can hardly serve to explain a unique theology.

As a result of this inability to explain where the supposed uniqueness came from, there has been a major shift away from the Albright-Wright point of view in recent years. Since it is once again assumed that Israelite *religion must have developed in an evolutionary fashion

much like the other West Semitic religions, it is not thought possible that it contained any truly unique elements. But much of this argument revolves around what constitutes uniqueness. If it can be shown that the Egyptian Pharaoh Akhenaten demanded the worship of one god, does that show that Israelite monotheism was not unique? If it can be shown that Aristotle taught the existence of an "Unmoved Mover," does that show that the Israelite concept of transcendence was not unique? Does the existence of certain Assyrian records claiming that a god directed the activities of a certain dynasty show that the Hebrew idea of God revealing himself in human history is not unique?

These and other examples that could be cited might be used to show such a thing, *if* uniqueness is thought to mean that an idea never existed outside of Israel. However, all these cases were isolated and momentary. They appeared and disappeared, making little or no impact upon their cultures. The prevailing religious point of view in Egypt, Greece or Mesopotamia from 3000 B.C. to A.D. 300 is very different from these points of view, and it is diametrically opposite to that of Israel as reported in the Bible. To this extent Wright was entirely correct. Even if one were to grant the point of T. L. Thompson that the religion depicted in the OT never existed until it was artificially created in the Second Temple period, we are still left with the inescapable fact that nowhere else in the world is there a religion that is consistently and thoroughly constructed on the principles that OT religion is. If we choose to explain it as the product of evolutionary development, we are still faced with the fact that nowhere else in the world does evolutionary religion lead to this result. It is in this sense that the theology of the Pentateuch and, by extension, the OT, is unique: if certain of the parts may be found elsewhere in isolation, nowhere else are these and many other elements put together in this exclusive, consistent and thoroughgoing way.

1.1. Transcendence. In contrast to all the cultures neighboring Israel, the Pentateuch insists that God is other than the physical world. He is not to be identified with the *creation in any way. This parameter is set at once in Genesis 1 and is maintained throughout. God spoke the world into existence. It is neither an extension of him nor an effusion from him. Thus it is forbidden to represent him in the form of any cre-

ated thing (Ex 20:4-5; Deut 5:8-9). Nor is this prohibition a minor issue in the theology of the Pentateuch. The making of a bull *idol is the first breach of the covenant, one that is serious enough to have threatened the destruction of the people (Ex 32:1-10; *see* Golden Calf). *Aaron and the people clearly saw no disparity between *Moses' worshipping the invisible Yahweh on the mountain while they worshiped the visible Yahweh in the valley. That was the way of Egyptian religion, as it was for all the other religions of the ancient Near East. But those religions all emphasized the essential continuity of the divine with the cosmos. This Sinai religion was different in insisting on a radical discontinuity between these two. Especially as that theology reaches its climax in Deuteronomy, the prohibition of idolatry assumes an even more important position. To engage in this practice became the key evidence of disloyalty to Israel's God (cf. the first curse in Deut 27:15). It is difficult to imagine why this should be the case except for the overwhelming importance that the Israelite theologians attached to the idea of transcendence.

A compelling argument can be put forward that every other major conception about God to be found in the Pentateuch has its rootage in this idea. Iconoclasm has already been mentioned. It is not accidental that there are only three iconoclastic religions in the world (Judaism, Christianity and Islam) and that all three spring from the OT. The same three religions, and only these three, teach monotheism. Why should they alone insist upon the oneness of God? Again, it is because of their dependence upon the same source, the OT. Why does this source alone succeed in conceiving of God in this way? And why was Akhenaten's attempt so abortive, surviving his death by less than a half dozen years? Surely the answer is transcendence. If the divine is conceived of as being continuous with this world, as Akhenaten and every other religious thinker in the ancient Near East did, monotheism is a logical impossibility. As this world is multiple, so must be the divine. On the other hand, once one grants that the divine transcends every other entity in the cosmos, then unity becomes a necessity, for there can be only one entity that is truly other than all others. Again, this idea of monotheism that pervades the OT has its origins in the Pentateuch. It is implicit in the first commandment (Ex 20:3) and is made explicit in the Shema (Deut 6:4; cf. also Ex

8:10 [MT 8:6]; 9:14; Deut 4:35, 39).

Fundamental to the Pentateuch's idea of divine transcendence is the self-existence of God. The remarkable declaration of Exodus 3:14 underlines this point. When Moses asked for the name of God as a part of his attempt to avoid going to Egypt, the Lord responded with much more than Moses asked, not with a label, but with an announcement of his identity, "I AM WHO I AM" (NRSV). Here is a being who exists in himself. He is neither dependent on any other nor derivative from any other. In all times and all places, he is. No other being in the universe can make that claim. All other beings are contingent on something or someone else for their existence. They exist only because of the prior existence of something else. As Aristotle recognized, only one being could conceivably say "I am" without reference to anything else.

But the Pentateuch's idea of transcendence differs from that of the classical Greek philosophers. And this difference almost certainly explains why the Pentateuch continues to shape world thought while Aristotle's had little impact even in its own day. The difference is the Bible's successful coupling of transcendence and personality. The Greek philosophers could imagine something utterly other than the cosmos but could only conceive of it as impersonal. The theologians of the rest of the world could conceive of the gods as personal, but their gods were actually only the forces of nature, society and psyche wearing humanlike masks. The stories of the gods never represent the gods as full-orbed, multifaceted personalities. They are a caricature of personality, the divine made in the image of the human. The Pentateuch succeeds in doing what no other theological document before or since has done: it describes the transcendent One as fully personal. The God described in the Pentateuch is not an imperfect image of the human. Instead, humans have ultimate value because they reflect the personal *image of their Creator. Thus, individual human people come to have incredible value in the pages of the Torah because their personhood is derived from that of the One who stands behind all things.

The lifeless transcendence of the Greeks had no power to sway the hearts of human persons, no personal authority to compel their wills. On the other hand, the one-dimensional personalities who peopled the myths were not only inca-

pable of escaping their own destinies as parts of the cosmos but were also incapable of entering into meaningful relationships with their worshipers. Where else but in the Pentateuch could there be found such a description of the transcendent one as that in Exodus: "I am the LORD, I am the LORD, the merciful and gracious God. I am slow to anger and rich in unfailing love and faithfulness. I show this unfailing love to many thousands by forgiving every kind of sin and rebellion. Even so, I do not leave sin unpunished, but I punish the children for the sins of their parents to the third and the fourth generations" (Ex 34:6-7 NLT)? But even if a similar statement could be found concerning some other deity, what could not be found is an entire body of religious literature that is consistently and thoroughly shaped by this concept of one transcendent person.

How are we to explain this unique worldview? The Pentateuch nowhere presents it as the result of human reason applied to the everyday routine. Neither does it present it in some logically organized form. The text conveys to us that this theology was the result of a fairly complex process. That process involved above everything else direct, intelligible verbal communication by God to individual humans. That communication came in a number of ways. In some cases it was audible, as when a representation of God, sometimes referred to as "the messenger (angel) of the Lord," spoke with someone (*Abraham, Gen 18—19; *Jacob, Gen 32) or when the Israelites heard God speaking from Mount Sinai (Deut 4:32-33). In other cases the communication was in a dream (Jacob, Gen 28:12-15). In some cases it seems to have been directly to the ear of the hearer (e.g., Moses, Num 12:8: "mouth to mouth"; see also Ex 33:11; Deut 34:10: "face to face").

This divine speech was always in the context of unique human experiences. God spoke to *Adam and *Eve in the context of the garden and of their sin. He spoke to *Cain in the context of his temptation and subsequent sin. He spoke to *Noah in the context of the *flood. He spoke to the patriarchs in the context of their journeys both in compliance with and defiance of his will. He spoke to Moses and the Hebrew people in the context of the Egyptian captivity, Sinai and the *wilderness wandering. Nowhere does the Pentateuch say that its distinctive worldview was the result of human speculation

upon a limited number of dramatic incursions by the divine into the Israelite experience. It insists that God spoke to Israel and its representatives consistently and constantly, giving divine interpretations of what he was doing and why. It further makes clear that God never spoke to them in abstract terms unrelated to the specific realities of life. In other words, the Pentateuch maintains that its distinctive view of reality was communicated to Israel by God in the context of life experience. It should not be surprising that no place else do we have even the intimation of such a process. A unique content demanded a unique means of communication. Furthermore, we should recognize that if the Pentateuch's claims about God and the nature of reality are correct, there is no way unaided human speculation upon the cosmos could possibly arrive at an understanding of that reality. Such speculation could not go beyond the limits of the cosmos and could certainly not reach to that which seems logically contradictory to the cosmos: a transcendent person. The nature of the cosmos would lead a speculator to conclude that forces rather than people are fundamental and that continuity, not transcendence, is the vital principle.

1.2. The Gender of God. The idea that God is a transcendent person poses some difficulties in communication, especially in the context of the ancient Near East. Obviously, even if the Hebrew language had provision for a neuter gender, which it does not, it could not have been used, for this God is not a force, an it, a thing. He is a person, and in human language it is impossible to speak of a person in gender-free terms. But if it was necessary to use gendered terms to describe this transcendent person, what terms should be used? The Pentateuch, as well as the entire rest of the Bible, uses masculine pronouns and terms exclusively. Why is this? It is commonly suggested that this was a result of a patriarchal society, using *patriarchal* in a wholly pejorative sense. Because men ruled the society, they arrogantly constructed God in their own image. However, reflection shows that this is much too easy an answer. In fact, every society in the ancient Near East was patriarchal. Yet the other societies regularly ascribed great power and prestige to female deities. In fact, in many of them the most popular deity, both among men and women, was the mother, or fertility, goddess. Thus, it will not do to explain the He-

brew choice as the result of social prejudice. The Israelites were no more prejudiced in favor of males than any of their peers. In fact, comparison of their *law code with that of surrounding nations suggested they may have been less prejudiced in that direction.

In that case, why the exclusively male terminology for God? It seems likely that this is the only alternative left if both personhood and transcendence are to be preserved. While sexuality is a prominent feature of many male deities in the ancient Near East, it is not so with all of them. On the other hand, it is not possible to find any female deities where sexuality is not the prominent feature. The sexuality of the female deities constantly underlines their oneness with the creation, perhaps because of the oneness of the mother and the child. If it is important to stress the separateness of God from creation, then it is impossible to describe him in anything other than male terms. However, this is *not* to suggest that maleness is somehow superior to femaleness; it is only a device to preserve both the transcendence and the personhood of God. God is *never* described in genital terms, and he never acts sexually male. All that is good and true of both genders is a reflection of the character and nature of the one God.

2. God.

The concept of God in the Pentateuch everywhere shows the impact of the doctrine of transcendence. In contrast to the gods shaped by the worldview of continuity (the divine, the natural and the human all co-inhering in each other), this deity is never described in terms of identity with any created thing. He creates without conflict and according to a preexisting plan. He has a purpose for creation. He is suprasexual. He cannot be manipulated by sympathetic magic. He is motivated by love that is not tainted with self interest. He is absolutely reliable. He promulgates and adheres to a single standard of right and wrong. He reveals himself by involving himself in unique, nonrecurring events in time and space and through relationships with unique people in time and space.

2.1. Character. The Pentateuch describes the character of God as remarkably consistent. This does not mean he is always predictable. He is never depicted as being within the grasp of mere human reason. But from the outset he is shown to be absolutely true to his word. He can

be depended upon. There is only one situation in which he can be depended on *not* to keep his word: if he has announced destruction because of sin and is given almost any good reason to change his mind, he will gladly do so. The best of such reasons is *repentance on the part of the sinner, but another is intercession (Gen 18:16-33; Ex 32:11-14). Furthermore, it is clear that the Lord puts a high premium on *ethical relationships among people. Just as it is impossible to manipulate him through the environment, so he does not seek to manipulate his people and does not sanction such behavior among them. He has a passionate concern for right treatment of other people. These characteristics of God are described in several key concepts.

2.1.1. Holy. The concept of holiness in the ancient world was an unremarkable one. While the term is not uncommon in the other Semitic languages, neither does it occur particularly frequently. It describes that which sets apart the divine, and that which pertains to the divine, from the common or ordinary (*see* Holy and Holiness, Clean and Unclean). It has no particular moral connotation, as it could not, applying equally to such generally beneficent gods as El and such predatory gods as Resheph (pestilence).

Thus it pertains more to matters of perceived essence than it does to character. It describes a god's otherness. There is one sense, however, in which "holy" does have implications for character. Whatever belongs to a particular deity is expected to share the character of that god or goddess. Thus the "holy men" or "holy women" of the Canaanite temples were expected to be sexually promiscuous, just as their divine masters or mistresses were (Deut 23:18 [MT 23:19]; cf. also Gen 38:21).

A quite different situation prevails in the Pentateuch. To be sure, one of the very earliest occurrences of "holy" does stress the essential difference between the divine and the ordinary. When Moses met God at the burning bush, God's first words were to command Moses to take off his shoes because he was standing on "holy ground" (Ex 3:5). The dirt on the soles of Moses' shoes was ordinary dirt, whereas God's presence in the bush made the dirt immediately around it of a different quality. It might also be argued that the occurrence in Exodus 19:6 is similar to the general usage when it promises that the Hebrews will become a holy nation if

they keep God's covenant. That is, they will belong exclusively to God and will be capable of being used only for his purposes. But the doctrine of transcendence changes all that. There is only one being in the universe who can rightly be called "holy." Thus it becomes possible for the first time to describe "holy" behavior: it is the behavior of the only Holy One.

What is that behavior? As with all the rest of their theology, the Israelites learned this through the incarnational mode of revelation. When the people of Israel entered into a *covenant with God, they were called upon to live in certain ways. These ways encompassed all of life: religious, civil, social, environmental and personal. Why were these stipulations placed upon Israel? Because, as was true of all suzerainty treaties, the stipulations expressed the wishes of the covenant lord. To relate to this covenant lord one must live in keeping with his desires. But the biblical covenant takes these requirements a step beyond mere wishes. This is made clear in the elaboration of the covenant that appears in the block of material following the *book of the covenant (Ex 20—24). That unit extends from Exodus 25 through Numbers 9. The present book divisions obscure the unity, but study of the dates given in Exodus 19:1; 40:1-2; Numbers 1:1; 9:1 and 10:11 makes it plain that the material from Exodus 19 to Numbers 10 is intended to be read together. When that is done, the prominence of the concept of holiness becomes apparent. From the descriptions of the *tabernacle, its furnishings and service (Ex 25—31; 35—40), through the manual of *sacrifices (Lev 1—9; 16) and the so-called Holiness Code (Lev 17—27), words having to do with holiness occur more than two hundred times.

What emerges when these words are studied is that God is calling his covenant partners to manifest a certain kind of character in all areas of life because that is his holy character. So the Israelites are expected to honor their parents because their Lord is holy; they are expected to be careful of their neighbor's reputation because their Lord is holy; they are expected to preserve the sanctity of *sex in heterosexual marriage because God is holy. In short, having become covenant partners with the holy God, they not only belong exclusively to him but are also expected to live in ways appropriate to his character. The most succinct statement of this point is to be found in Leviticus 22:31-33:

Thus you shall keep my commandments and observe them: I am the Lord. You shall not profane my holy name, that I may be sanctified among the people of Israel: I am the Lord. I sanctify you, I who brought you out of the land of Egypt to be your God: I am the Lord.

Thus the Israelites learned that "holy" describes not merely the essence of deity but also the character of deity. And as there is only one holy being, so there is only one holy character. And although we humans cannot share that essence, we *can* share that character and indeed are expected to, although it is not as simple as the Israelites first thought it would be. In the process of trying to live out God's holy character, the Hebrews learned a great deal about their own character.

2.1.2. Unfailing Love. The most significant thing the Israelites learned about the holy character of God is that it is "unfailing love." Just as "holy" is an unremarkable Semitic word that the Pentateuch invests with remarkable value, so is the word translated here as "unfailing love." This is the Hebrew word *hesed*. So far the root is not known to have been used in ancient Near Eastern literature outside the Hebrew Bible, whereas in that corpus *hesed* and its related words occur nearly 275 times. While the word itself only occurs about twenty times in the Pentateuch, the concept is clearly rooted there. N. Glueck argued that the term had special covenantal significance. More recent studies by F. I. Andersen and K. D. Sakenfeld have shown that its meaning is more broadly based than Glueck recognized. It speaks of a favor given to someone who does not have a right to that favor by someone who does not have to give that favor. As such, there is no single English word that captures all the connotations. In differing contexts translations can range all the way from "kindness" to "mercy."

This facet of God's character is made abundantly clear in the Pentateuch. Lot testified that this was the only reason he escaped Sodom (Gen 19:19). Jacob admitted that this was the only reason he escaped the conniving of Laban (Gen 32:10). *Joseph was able to survive all the human treachery that befell him because of God's *hesed*. But even prior to these verbal occurrences, God's *hesed* had been manifest. For this reason Adam and Eve were not simply destroyed on the spot, nor was the race completely

wiped out in the flood. This is why God came to Abraham with completely undeserved promises and continued to keep those promises to the succeeding generations. Moses knew this when he declared in the Song of the Sea (Ex 15:1-18) that it was only as a result of “unfailing love” that the Lord brought his people through the sea and put them on the road to the Promised Land (Ex 15:13). Later Moses observed that God keeps his *hesed* with thousands of those who love him (Ex 20:6), and in Deuteronomy 7:9 he clarified that he meant thousands of generations.

But nowhere is this aspect of God’s holy character made clearer than in the incident of the golden calf (Ex 32–34). At the moment when God was giving the instructions whereby the people would be able to have his presence in their midst, they succumbed to their fears and rushed ahead to fulfill their needs for themselves. As a result, they broke the blood oath they had made just a few weeks earlier in which they called down death on themselves if they broke the covenant (Ex 24:8). In simple justice God was obligated to destroy them. But in fact he invited Moses to intercede for them by saying that he would destroy them if Moses would “let me alone” (Ex 32:10). In fact, Moses would not do that and reminded God that he had obligated himself in the promises to Abraham and his descendants. Nothing more is needed to move God not to carry out his justice (Ex 32:13-14). (While it is true that some who were apparently ringleaders were killed by the Levites at Moses’ command, it is still true that the nation as a whole was spared when in justice it should have been destroyed.) The conclusion of the experience was that Moses received a revelation of God in which what Moses had inferred was made explicit. This is the passage in Exodus 34:6-7, which was quoted above. This passage is quoted or alluded to at least a half dozen times in later parts of the OT, showing how it became the foundational understanding of Israel’s God. As such, it may have a better right to be called Israel’s creed than does Deuteronomy 26:5-9, as it was styled by von Rad. The opening statement declares that the Lord is the gracious and compassionate God and then goes on to explain that appellation with two characteristics, one negative and one positive. On the one hand, God does not become angry easily; on the other, he is full of *hesed* and “truth” (see 2.1.3 below). In

contrast to the other gods of the ancient world, this God is characterized by a self-denying faithfulness to his people that is inexplicable in terms of any analogy with features of this world. This was not merely a mother’s self-sacrifice for her children nor a father’s self-denial for them. It was something that described the very essence of the being of the divine.

2.1.3. Truth. Another feature of the character of God, one often occurring in company with *hesed*, is truth, or faithfulness. The Hebrew root involved is *’aman*, “to be stable, reliable, secure.” The nominal/adjectival derivative is *’emet*, “true, truth.” What the Pentateuch insists is that this God is true to his people in unheard-of ways. He is true to his covenant promises long after there is any legal obligation to do so. He is also true to promises that have no legal basis, such as those made to Abraham. It is that truth that Moses appealed to in Exodus 32 when he declared that God could not destroy the Israelites even though they had brought the covenant curses on themselves. God had promised Abraham a nation, and God, being who he is, could not break the promise. He is also true to his declarations about the results of sin. The serpent may declare that God lied when he said that eating the tree would result in death, but the writers of the Pentateuch demonstrate that God’s statement was entirely dependable. This idea of God’s truth has very significant implications. If the sole Creator of the universe, the transcendent One, is absolutely reliable, absolutely true to his word, then it begins to be possible to think of that which is true outside of any creature’s wishes or perceptions. There is a foundation laid here for the concept of objective truth.

2.1.4. Just. A third expression of God’s holy character is his consistently “right” behavior. In the Pentateuch, two Hebrew roots are used to express this idea. The more frequent of the two is *šāpat*, “to govern, order.” God is depicted as the one who governs his creation in a “right” way, that is, a way that is in keeping with the nature of the creature being governed. Thus God’s “ordinances” (*mīšpāṭim*) are always the right way for people to live. He does not command them to do things that are not right. The second root is *šdq*, which most often occurs in the nominal/adjectival forms *šaddiq*, *sedeq* and *šēdāqā*, “right, righteous, righteousness.” In Genesis 18 the concept is expressed in the rhetorical question, “Shall not the Judge of all the earth do right

[*mīšpāt*]” (Gen 18:25). This is a particularly instructive example of this concept. What was right or just in the case of Sodom and Gomorrah? If only a handful of people in those great cities had not corrupted their way of living, would not the destruction of the cities on account of the sins of the mass of people have been the “right” thing? Clearly that was not the case, for God remained before Abraham in an invitation for Abraham to intercede on behalf of the faithful few. The right thing, or the just thing, for this God to do was to spare the many for the sake of the few. God will unfailingly do the right thing, and the right thing will always err on the side of mercy.

Another expression of this characteristic of God in the Torah is found in Deuteronomy 32:4, where in the Song of Moses the unblemished (perfect) justice and rightness of God’s behavior is compared favorably with the perverse and crooked behavior of humans (Deut 32:5). In paganism, the gods are simply super-sized versions of humanity, both more just and more perverse than humans. The gods are thus made in the image of humans. But the Torah insists that God does not share all the characteristics of humans. Humans were made in his image but have fallen away from that image because we refused to be subject to him.

2.1.5. Purity. The idea of God’s purity is closely related to the idea of his essential oneness. The Pentateuch is at pains to establish the fact that the divine cannot be subdivided either in character or in identity. God is not partly true and partly deceptive; he is not partly beneficent and partly cruel; he is not partly transcendent and partly continuous. He is not partly clean (constructive) and partly unclean (destructive). At the same time, it is clearly important for humans to learn that only that which stems from God and his creative plan is clean. What is unclean in the world is that which is in defiance to God and his plan. This is not an implicit dualism in which positive and negative forces are eternal in the cosmos, each having a real essence in itself. Rather, the Pentateuch treats the unclean merely as a negation, an absence. God alone is self-existent and eternal, and he is wholly good, wholly clean.

The importance of this idea in the Pentateuch can be seen in the number of covenant stipulations given to teaching this point. Many of them seem bizarre to modern readers, whose

ideas of cleanness are almost wholly physical. It comes as a new thought that death and all things associated with it (such as buzzards, shellfish [which live on the seafloor, where death filters down] and pigs [which eat anything, including carrion]) should be unclean because death is the ultimate negation of God’s creative plan. Similarly, it is hard for us to grasp that dualism is an idea so dangerous that the Hebrew learners would be required to symbolize rejection of it by refusing to wear clothing made of two or more kinds of cloth.

2.2. Roles. As W. Brueggemann has pointed out, the Hebrew language is a language of action, with verbal forms defining the basic outlook and approach of the language. Thus it is not surprising that the understanding of God in the Pentateuch is expressed in terms of what he does as well as who he is. It is possible to identify at least five prominent roles assigned to God in this block of material: Creator, Sovereign, Father, Redeemer and Judge.

2.2.1. Creator. God’s role as sole Creator of the universe is established from the beginning of the Pentateuch (*see* Creation). There is no preexisting chaos from which he emerges, nor is he the creation of some earlier gods to solve a problem they cannot solve. He exists alone and creates solely as an expression of his own plan and purpose. The recurring phrase “It was good” in Genesis 1 demonstrates this point. Clearly this is not a statement that the creation was morally good. Rather, it states that the outcome was in keeping with what the artist had envisioned before the actual work of creation had begun. As stated above, the fact that the creation was spoken into existence establishes that the creation is neither an effusion of nor an emanation from the Creator. There is a clear distinction between the Creator and that which was created. God created in an orderly and progressive fashion with his ultimate purpose the creation of humans, whom he could vest with responsibility in the creation, on whom he could confer his blessing and with whom he could have fellowship. Given the personal nature of God, it is not surprising that human persons should be the highest expression of his creative purpose.

In contrast with other ancient Near Eastern stories of the origins of the cosmos, *sexuality plays no part in creation. God does not produce anything by sexual activity. Here again is an evi-

dence of transcendence. The fact that sex is a part of the cosmos, as the Bible clearly recognizes (“male and female he created them” [Gen 1:27]), does not mean that it is a part of ultimate reality. Theologizing that arises from speculation on the cosmos can always be expected to find sexuality at the heart of existence. The Pentateuch does not.

A similar situation exists with regard to conflict. Almost all other origin stories in the world claim that creation was the outcome of a cosmic struggle between forces that are constructive of life as we know it and forces destructive of such life (“good” and “evil” being almost wholly defined in such terms). Not so in Genesis. There is no conflict whatsoever in either of the versions of the creation story found there. God creates all things in serene harmony. There is no opposition to him. All things exist solely as an expression of his will. There is no cosmic principle of evil to oppose his creative purposes. Conflict only enters the world *after* creation is complete, and it is not the result of some destructive cosmic principle opposed to life but of the refusal of humans to be subject to the authority of the Creator. Once again, if divine reality is constructed on the basis of the world we know, then conflict must be a part of that reality, because it is a part of all our experience. The Pentateuch gives evidence of having arrived at its theology in a different way.

2.2.2. Sovereign. Although the noun “king” is never applied to God in the Pentateuch (cf. Ex 15:18), the term *Lord* is regularly so applied (apart from the euphemistic use of *’adonay* in place of the divine name, e.g., *’adon*: Ex 23:17; 34:23; Deut 10:17; *’adonay*: Gen 15:2, 8; 18:3, 27, 30-32; 20:4; Ex 4:10, 13; 5:22; 34:9; Num 14:17; Deut 3:24; 9:26). Most uses of *’adonay* occur in direct address in which the speaker is painfully aware of the awesome power of God and is entreating him to do something. The occurrences in Genesis 18 are especially interesting because this is where Abraham hesitantly intercedes on behalf of the righteous in Sodom and Gomorrah. The God who can reduce two cities to cinders with a word is not someone to be trifled with. Similar examples appear in Exodus 3, where Moses is looking for excuses to avoid the Sovereign’s call to go to Egypt. The most inclusive statement of God’s sovereignty is found in Deuteronomy 10:17, where Yahweh is called “God of gods and Lord of lords”—he is *the* God

and *the* lord in all the earth.

But even apart from the use of these specific terms, it is clear that the Pentateuch considers God to be the absolute ruler of the earth. Nowhere is this more vividly stated than in Exodus 7–12, in the narrative of the plagues. What God decreed did happen in spite of the greatest king on earth at that time and in spite of all the gods of Egypt (cf. Ex 18:10-11). Thus Moses concluded his song of praise by saying, “the Lord will reign forever” (Ex 15:18). Similarly, the creation narrative describes a God who has no rival to the accomplishment of his will. Finally, the acceptance of the covenant by Israel implies their recognition of the absolute sovereignty of God in their lives. Israel was acknowledging that God had the right to pronounce commandments, decrees and statutes over them. He alone has the right to determine what is acceptable behavior and what is unacceptable. This sovereignty is never successfully challenged in the Pentateuch. No one is able to stand against God, whether king (*Pharaoh, Sihon, Og), prophet (*Balaam), priest (Korah) or magician (priests of Egypt).

But this sovereignty is not expressed by merely forcing people to do God’s will. It is greater than that. The text never suggests that God willed Joseph’s brothers or Potiphar’s wife to sin against Joseph so that God could maneuver Joseph into a position of power. Rather, God’s sovereignty is great enough that he can use even sinful choices to accomplish his purposes. In the case of Pharaoh, it is quite clear that God did not harden Pharaoh’s heart against Pharaoh’s own will (*see* Hardness of Heart). Pharaoh was not a gentle, kindly man who was suddenly turned into a hard-hearted tyrant by an equally hard-hearted God. Long before there was any word of God hardening Pharaoh’s heart, the king of Egypt had cynically commanded enslavement and infanticide for Israel. What God did was to demonstrate that this man who thought himself ruler of the world was not free. He was a prisoner of his prior choices because that is the kind of world the sovereign God created (cf. Ex 3:19; 7:22; 8:15 [MT 8:11]; 9:12). God’s sovereignty in spite of sinful choices was also demonstrated when the Israelites refused to trust God and enter the land at Kadesh-barnea (Num 14). God did not cause them to make this choice, but neither was his promise to Abraham and all his descendants frustrated.

God would find another way to keep that promise through a second generation who would choose to believe.

2.2.3. *Father*. It was stated above that the most unique contribution of the OT to world thought is that the transcendent One is a person. Although the actual term “father” is only applied to God once in the Pentateuch (Deut 32:6), the concept of one who is personally involved with his children is very apparent throughout this material. It may be that the term itself was not used more widely because of its negative connotations in a pagan context. There “father” was largely restricted to “the one who engenders.” Since that idea is very much counter to the Pentateuch’s understanding of creation, there may have been a conscious decision not to use the term. But immediately in Genesis 2, when it is said that God walked in the garden with Adam and Eve, it is hard to avoid the image of a father and children sharing time together. Likewise, the response of God to the sin of Adam and Eve was one of personal grief and pain, not calm judicial pronouncement. God’s relations with Abraham and *Sarah were intimately personal. He dealt with them on a personal level in relationships that were dialogical, not monological.

We are told eventually that God’s purpose in all this is to create a people *for himself* as his own special possession (Ex 6:7; Deut 4:20; 29:13 [MT 29:12]). This is not disinterested involvement for the sake of some abstract salvific purpose. God is creating a family, not through sexual manipulation of the cosmos but by risking rejection in inviting people to freely choose to be in relationship with him. Thus we have a God who passionately cares about what becomes of his people. He loves them passionately and becomes passionately angry at them when they choose roads away from him to their own destruction. He is jealous for them (Deut 32:16, 21), as is a parent who longs for the best for his or her child. Most of the center portion of the Pentateuch (Ex 19—Num 10) revolves around how the presence (lit. “the face”) and the glory of God can be in the midst of his people without destroying them. One of the more poignant parts is found in Exodus 33, which reports that God told Moses to take the people and to go on to the Promised Land without him—in light of the rebellion revealed in the golden calf incident, it was probable the people would do something to cause God’s “face” to destroy them. God would keep

his promise to them but would give up his own desire to live among them. But Moses, with the theological and spiritual sensitivity that had come to characterize him, explained that the land without the presence of God would be worthless and that he and the people would remain where they were. The people’s primary need was not for deliverance from bondage or for possession of a land; it was for a face-to-face relationship with the personal, fatherly God.

2.2.4. *Redeemer*. If God is truly Creator, Sovereign and Father and his creatures rebel against him, he must find a way to restore them into fellowship with himself. It would not be possible for him simply to turn his back on them and annihilate them. This emerges in the very first pages of Genesis. It was because of God’s mercy that Adam and Eve did not die instantly. Rather, God prolonged their lives in order that they and their progeny might not end their lives as rebels. The same thing is true in the story of the flood. Unlike the Sumerian version of the story, the God of Genesis intentionally sought a person through whom the human line might possibly be carried on. And when an arrogant humanity intent on bringing God down to their level had been scattered in confusion, it was God who sought out Abraham and Sarah through whom the blessing intended for humans (Gen 1:28) might yet be theirs. This pattern continues through the remainder of Genesis. It is God who continually makes the first overtures to people with the purpose of making his blessing available to the human race. The pattern continues in Exodus. It is reported in Exodus 2:23 that the people cried out for relief from their slavery and that God heard them. But in fact this report comes at the end of the chapter that tells about God’s providential preparation of a deliverer. Once again the writer tells us that before we pray, the Redeemer God has already begun to answer. Redemption is always initiated out of the heart of the personal, sovereign creator.

But it is one thing for a person to wish to redeem, quite another for that person to be able to redeem. Here the sovereignty of the Creator comes into play. There is no power in the cosmos that can prevent God from redeeming those who will turn to him in trust, belief and obedience. This is the burden of the book of Exodus: God not only wants to redeem the human race; nothing can prevent him from doing that

except continued rebellion on the part of humans. This thought continues throughout Leviticus and Numbers. God can find a way so that humans corrupted by sin who wish to have a relationship with him may do so. But those like *Nadab and Abihu (Lev 10:1-7) who refuse to submit to the Sovereign and insist on coming to him in their own way find redemption impossible. The same was true for the generation in the wilderness, especially as represented by Korah and Dathan (Num 16). The giants of Canaan could not have prevented God from bringing the promised blessing to his people, but continued rebellion could. Thus in Deuteronomy, one of the prominent features of this second giving of the law is the theology of obedience, which appears between the *Decalogue in Deuteronomy 5 and the case examples in Deuteronomy 12–26. Moses takes pains to show that submission and obedience are the appropriate results of memory of God's faithfulness, of awe at God's power and justice, and of love in response to God's incredible love. In short, Moses attempts to show that in view of the redemption God has demonstrated, continued rebellion would be not only disastrous but also stupid.

2.2.5. Judge. But if God is a redeemer, acting out of a fatherly heart to realize his sovereign, creative purpose, he is also the Judge who enforces the effects that follow from the choices that humans make. This is the point of the revelation in Exodus 34:7: God forgives "wickedness, rebellion and sin. Yet he does not leave the guilty unpunished." The point is that while God is glad to restore the sinner to fellowship with himself, this should not lead anyone to conclude that they can sin with impunity, presuming on God's grace. Sin has consequences in the order of creation that follow on even if forgiveness is extended. For God to do otherwise would be to destroy the order he built into creation.

As mentioned above, the Hebrew root *špt* involves much more than the mere legal proceedings that the English translations "judge," "to judge," "judgment" and "justice" suggest. It connotes that right order of things that makes human life possible. One of the recurring descriptors of the stipulations of the covenant is "judgments" (*mišpāṭim*). A more accurate translation might be "regulations." They express the order under which humans were made to live which, if violated, results in a diminution of the realization of the human potential. So the peo-

ple called *šōpētim* ("judges") in the OT were much more than legal officers. They may have given decisions in disputes, but they were much more involved with maintaining God's created order in human affairs. This involved military action as well as administration and government. Thus the Pentateuch views God as the archetypal *šōpēt*. Sin is not merely an offense against God's will; it is much more an offense against the order of creation, so God cannot allow it to go unaddressed. While the Pentateuch often depicts God bringing the effects of human choices upon people directly, it is also true that indirect effects are just as much a part of God's governing activity. Thus children do indeed suffer the effects of their parents' sins, not because God vindictively decides they should suffer but because it is the result of this world of cause and effect. God makes it possible for us to avoid one of the effects of our sin, estrangement from himself, through atonement (Lev 1–9; 16). But as the Judge of the universe he must carry out the physical effects of our sin or the order of the universe would be destroyed. By the same token, if people persist in rebellion, he has no choice but to bring punishment upon them. Again, because God is no mere "force," the Pentateuch often represents this judgment as being an expression of God's anger. It is because he is a person who created us in love for fellowship with himself that his response to our self-destruction is not one of cool, judicial disinterest. His anger is the necessary complement of his love.

3. The World.

As already mentioned above, the Torah sees the world as distinct from the world's Creator. It is a creation, a brand new thing. Thus manipulation of the world has no effect on God. Rather, the world is utterly subject to God's will. He can intervene in its processes at will, though normally he chooses to allow those processes to continue at the pace and in the measure he originally designed. As a creation it has its own reality. It is not a reflection of a primal reality. It is reality itself. Thus what takes place here is not the result of actions in the "real" invisible world. Free choice is possible here with appropriate, traceable effects stemming from those choices. In its original expression, the world was wholly good. That is, it fully conformed to the original design of the Creator. Like humans, the physical world

has been affected by human sin, but this has not utterly destroyed its ability to reveal what God had planned in it. It is now a place of frustration in work and pain in human relations, though it is still possible for humans to experience a measure of the pleasure and satisfaction God intended it to provide. But it can only provide these if it is maintained and cultivated under human care as God directs.

4. Humanity.

Human beings are the apex of creation. They are not an afterthought created to provide for the needs of the gods, as in the Babylonian story of origins, the *Enuma Elish*, nor are they slaves of the gods, created to perform unpleasant tasks that the gods do not wish to perform, as in some of the Egyptian stories. Rather, humans are partners of God in the maintenance and cultivation of the world. As such, humans are a different order of being than the rest of the creation. They are a separate order of creation, transcending the rest of the world just as God transcends the entire creation. Both of the previous points are expressed in a concrete way in Genesis 2 when God has Adam name the animals, symbolically establishing their natures. Adam shares with God in the task of ruling the world of nature, and he is separate from it.

Humans are made in the image of God. Although the Pentateuch nowhere specifies exactly what that means, it seems plain that at the least it includes the personal nature of God and a capacity for relationship with him. Some have suggested it also includes self-consciousness, the ability to transcend oneself. But this can only be inferred. Humans are sexually differentiated, and nothing indicates that this differentiation was anything but intended from the beginning. We do not find our true identity in self-centeredness but in fellowship and self-giving. Humans have become perverted through rebellion. Attempting to make themselves morally self-sufficient, our first parents cut themselves off from the dependent relationship with God for which they were made and did irreparable damage to the human race in the short term. No place is this stated more clearly than in Genesis 6:5: “every inclination of the thoughts of their hearts was only evil continually” (NRSV). This same thought occurs again in Genesis 8:21 and Deuteronomy 31:21. Something has happened to the very way we form our thoughts and concepts

so that we have an innate resistance to authority, a consuming desire to possess and a fear of other people depriving us of our wants. The evidence of these characteristics is to be found throughout the Pentateuch, from Cain to Korah and Dathan, and Moses presumes that it will continue in his song in Deuteronomy 32, which is explicitly composed as a witness against the people when they turn against God in the future (Deut 29:24-29). Nevertheless, the Pentateuch declares that humans are capable of redemption if they will follow the pattern of Abraham and Moses, trusting God’s love, believing what he says about the way of redemption and obeying his commands.

5. Sin.

*Sin is understood as any offense against life as God designed it. It is to miss the target that God designed for humanity, whether intentionally or unintentionally (*ḥaṭṭāʿt*, “sin”); it is the expression of an inner twistedness (*ʿāwōn*, “iniquity,” “guilt”); it is finally to step over the bounds God has defined for humanity (*pešaʿ*, “transgression,” “rebellion”). In paganism offenses against the gods were largely confined to trespassing, often unconsciously, into some area of life the gods had reserved for themselves. This is not the case in the Pentateuch. While there is considerable attention given to dealing with the effects of unintentional sin (cf. Lev 1—7; 16), it is made clear at the outset that the distinctive feature of the human behavior that separates them from their Creator is willful disobedience of his known will (Gen 2—3). In particular, it is the attempt to define for oneself what is “good” and what is “bad.” It is the refusal to admit transcendence. Humans will be God in their lives (cf. Num 15:30-36). The result is the one discussed above: a perverted way of thinking in which on any issue people tend away from submission to God and obedience to his will. No longer must they be told, as Eve did, that God cannot be trusted. Humans believe it instinctively. Thus the Pentateuch shows the amazing but all-too-familiar picture of people who have experienced God’s fatherly care for them again and again but who are convinced in every new crisis that God means to do them harm. As a result of this condition, humanity has fallen into theological darkness, ignorant of God’s purposes and ways, with the ensuing result that even when they are enabled not to transgress God’s ways intention-

ally, they constantly fall short of his best and are rendered spiritually unclean. Sin has become not merely certain actions but an attitude toward God. The Pentateuch addresses all of these conditions in very concrete but also very profound ways.

6. Salvation.

From the very outset the Pentateuch is addressed to the solution of the sin problem. How can humans be restored to fellowship with God and thus receive the blessings for which they were originally created? From one point of view, the flood narrative serves to show what will not work. The effects of sin have gone so deeply into human nature that even if the best-behaved people alive were preserved and everyone else were destroyed, sin *as an attitude* would still rear its ugly head (Gen 9:20-23). Somehow sin would have to be addressed on a different level. There needed to be an attitude change before there could be a behavioral change. And in all of that there needed to be some way for humans to re-enter the presence of God, without which life is only existence.

To address these issues God started at the beginning. Adam and Eve disobeyed God because they did not believe what he had said would happen to them if they disobeyed. And they did not believe his word because they had become convinced that they could not trust him to provide their most basic needs (physical—food; aesthetic—beauty; intellectual—wisdom). So God began with another couple by showing them his absolute trustworthiness. He cared about their most basic needs (place, progeny, posterity) and promised to provide these if they would permit him to do so.

Once God's trustworthiness had been established, Abraham was given the opportunity to believe a frankly incredible promise. When Abraham had passed this test (after some detours along the way), he was ready for the final one, the test of obedience. Again he passed with honors. This pattern is developed twice more in the book of Genesis in the Jacob and Joseph stories. Thus the paradigm for experiencing the blessing of God is reestablished. But not only is the paradigm restored; in the obedience of the patriarchs a platform is erected upon which both the results and the being of sin may be addressed. A just God cannot simply ignore the results of sin in the world, and a loving God

cannot allow the contagious nature of sin to continue to pollute the race. Thus the patriarchal narratives are means, not ends. They prepare the way for something beyond themselves: the covenant.

6.1. Covenant. Already in the Noah narrative the concept of covenant was introduced. God solemnly committed himself never to destroy the world with water again. This kind of voluntary self-limitation of a god for the sake of humans was strange enough, but the developments that followed were stranger still. In Genesis 15 God's response to Abraham's belief was again a solemn oath to keep his promises to Abraham. But in this case the divine commitment was solemnized in a ceremony in which the deity condemned himself to death should he break his word. Again, such a thing was unheard of in the ancient world. The normal pattern was directly overturned. Instead of a human being required to make such a fearsome commitment to his god, while the god accepted no obligation whatsoever, here the deity put himself under the doom of death, while requiring nothing from the worshiper! Only in Genesis 17 is the first covenant obligation put upon Abraham, and it is the apparently rather innocuous one of *circumcision, marking oneself as a devotee of God.

In all of this God was carefully preparing the way for what would appear in Exodus 19 and following. Sin had done three things: it had made it impossible for the "face" (the presence of God) to dwell with humans in unbroken fellowship; it had led humans into a willful ignorance of the holy character and nature of God; and it had made them incapable of reproducing the divine character in their life in God's world. Genesis had shown that the prerequisites for coming back into God's presence were trust, belief and obedience. But the fundamental issues described above remained to be addressed. The Sinai covenant was the means of addressing them, of showing how they would ultimately be addressed.

As noted above in the discussion on God's holiness, the present division of the Torah into books obscures the unity of the material between Exodus 19 and Numbers 10, the description of what took place at Sinai during the year and twenty days the people of Israel spent there. When this material is looked at as a unit, important understandings of the covenant emerge. Exodus 19 describes the preparation for the cov-

enant, reminding one that covenant is not the means of entering a relationship with God but is a response to his prior grace. Exodus 20—24, containing the Decalogue and the book of the covenant, describes the basis upon which the relationship between God and humans can continue to exist: absolute loyalty and a replication of the divine character in every area of life. In Exodus 25—40 the goal of the covenant is described. That goal is the residence of God in the midst of his people as represented by the tabernacle. Throughout the instructions for building, furnishing and serving the tabernacle (Ex 25—31) and in the subsequent report of how those instructions were carried out (Ex 35—40) the word *holy* appears again and again, with something of a climax being reached when it is said that a gold plate was to be affixed to the front of the priest's turban, on which were to be the words "Holiness to the Lord" (Ex 28:36; 39:30). Thus when the book of Exodus reaches its climax with the glory of the Lord filling the tabernacle (Ex 40:38), a question is raised: How can an absolutely holy God live in the midst of sinful people without destroying them? The answer is given in Leviticus 1—16 (17).

The means of maintaining the covenant is nothing other than the grace of God, who provides continuous *atonement for those who wish to remain in covenant with him. It is significant that atonement is not the means of entering the covenant. The covenant is entered by trusting, believing and obeying God. It is also important to note that atonement is not given for those who insist on sinning "with a high hand"—presumptuously—like Nadab and Abihu (Lev 10:1-7). It is almost entirely given for those who intend to live obediently to God and who from an outward perspective are doing so. Leviticus 10:8—15:33 is a parenthesis prompted by the tragedy of 10:1-7. In Leviticus 1—9 God had been trying to show his people that his holiness constituted a positive danger to humans and that he alone could define the terms of their relationship. Nadab and Abihu demonstrated that the lesson had not been learned. So God gave a whole series of object lessons designed to help the people learn that the distinction between holy and unholy, clean and unclean, is a real one. In Leviticus 16:1 the reader is returned to what had been originally intended to be the climax of chapters 1—9, the Day of Atonement. As the addendum to chapter 16,

Leviticus 17 tells us that atonement requires the shedding of blood (Lev 17:11). As Genesis 2 made plain, sin results in death, so unless there is a death in our place, we cannot have fellowship with God, however much we may want it. But the purpose of the covenant is not atonement. Atonement is only the means of maintaining the covenant. The purpose of the covenant is that humans should share the character of God. This is shown by the succeeding section of the unit, Leviticus 18—27, which states again and again that God expects his people to be holy as he is holy. This is not merely a description of a theological condition, as the section makes quite clear. The command to be holy is followed by specific ethical, civil and ceremonial commands. Holiness is a way of living, a way of living that reflects the holy character of God. The final section of the unit, Numbers 1—9, reverts to discussing the goal of the covenant, God's presence in the midst of his people in the tabernacle. Again, as in Exodus 40:38, the climactic statement is in Numbers 9:15, which reports that the cloud of God's glory covered the tabernacle.

6.2. The Law. Thus obedience to the commands of the covenant was never intended to be the way into a relationship with God. Instead, such obedience was expected to be the glad response to the revelation of God's grace in his deliverance from bondage. As humans, availing themselves of God's continuing gracious provision of atonement, experience the grace of God's sanctifying presence (Lev 22:31-32), they are expected to live out the life of God. Holy living is the necessary and natural outcome of a genuine experience of God's grace. The concept of the law that Jesus and Paul both attacked so vehemently, that by obedience one could earn God's favor, is neither the Pentateuch's nor the OT's. It is a Pharisaic perversion. The covenant did not exist to show humans that they could obey God and thus please him. Rather, it existed to show them that even with the best will they could not attain his holy character in themselves. This is what both the Pentateuch and the rest of the OT show. Until Moses' hope expressed in Numbers 11:29, the giving of the Holy Spirit, was made possible by Jesus' death on the cross, that holy living was only a forlorn hope. But when the cross, foreshadowed in Leviticus 16, occurred, the fulfillment of the covenant in holy living and in the experiencing of the "face" of God in the tabernacle of the hu-

man heart became a genuine possibility.

THEOMACHY. See CREATION.

THEOPHANY

A theophany may be defined simply as a visible manifestation of God, a self-disclosure of the deity. The word does not occur in the OT or NT but is a theological word formed by the combination of two Greek words, *theos* ("god") and *phainein* ("to appear"). Thus *theophany* refers to an appearance of God. The Greek word was actually used in nonbiblical literature to refer to the displaying of images of gods at a festival at Delphi. In the OT the Niphal of the verb *r'h* ("to see") frequently occurs in the context of a theophany with the meaning "to appear" (Lev 9:23; Num 14:10; 16:19, 42 [MT 17:7]; 20:6).

As theophanies are normally understood to be temporary manifestations of God, many scholars maintain that they are restricted to the OT, since the NT understanding of the incarnation of Christ removes any need for further visible manifestation of God.

10. Theophany and the New Testament

1. Theophany and Theology.

Since God is understood to be different and distinct from his creation (i.e., *holy), he is in no means limited by it (1 Kings 8:27; Ps 139; Amos 9:2-4). Thus when he appears in theophanies he in essence limits himself to specific and particular forms within the context of the *creation he has made.

Theophany should be regarded as one of the means whereby God reveals himself to humanity. Whereas God's special revelation may be di-

vided into the broad categories of word and deed, God's revelatory *deeds* occur as either theophany or miracle. A theophany is a form of divine revelation wherein God's presence is made visible (or revealed in a *dream) and is recognizable to humanity.

2. Types of Theophanies.

Theophanies occur in various ways in the OT. These include (1) a direct message (Ex 19:9-25); (2) a message in a dream (Gen 20:3-7; 28:12-17); (3) a message in a vision (Gen 15:1-21; Is 6:1-13; Ezek 1—3; 8:1-4); (4) a message by an angel (Gen 16:7-13; 18:1-33; 22:11-18; 32:24-30; Ex 3:2—4:17; Josh 5:13-15; Judg 2:1-5; 6:11-24; 13:2-25); and (5) a message by an angel in a dream (Gen 31:11-13). Some OT theologians, such as W. Eichrodt and G. Davies, would eliminate the category of dreams from the list of theophanies, since the manifestation of God is not a physical reality but takes place only in the mind of the dreamer. Yet the broader definition that includes any manner in which God chooses to reveal himself seems to be the safest way to approach the subject.

2.1. Theophany and Covenant. J. J. Niehaus has isolated reasons God appeared in theophanic glory in conjunction with his *covenant relationship with the nation of Israel. First, God appeared to initiate the covenant. This occurs in Genesis with reference to creation (Gen 1:1—2:3), in Genesis 15 with relation to *Abraham and in Exodus 3—4; 19 with relation to *Moses and the nation of Israel at large. Second, God appeared to instruct, or correct, his covenant partner. We find an example of this manner of manifestation in Joshua 5:13-15 with the angelic appearance to Joshua and in 1 Kings 18:20-40 to illustrate his power to the nation. Third, God appeared in theophany to commission or encourage a prophet (Is 6; Ezek 1; 1 Kings 19:9-18). Fourth, God appeared to the nation to bring covenantal judgment on his rebellious subjects. This would include his intervention after the *Fall of humanity (Gen 3:8-19) as well as the judgment on *Nadab and Abihu (Lev 9:23—10:2).

2.2. Theophany in Pagan Religion. The nonoccurrence of God's appearing in the form of an animal in the OT is related to the avoidance of any association of Israelite worship with paganism. It was customary in the ancient Near Eastern cultures, particularly in Egypt, for a god to be associated with an animal form. Thus this

distinction was in part related to Israel's call to be holy, distinct from the world and the surrounding nations.

3. Ancient Near Eastern Background.

The notion that a supernatural being or god could reveal himself or herself to humanity was generally accepted not only in the ancient Near East but also in the Hellenistic world during the OT and NT eras. In the ancient world the attribution of human victories and defeats to the action of gods and goddesses was a common phenomenon. These engagements by the gods in human military conflicts required theophanic language. The use of theophanic language was naturally and frequently extended to favored monarchs who went to battle against rebellious vassals.

3.1. Glory and Theophany. Mesopotamian epics frequently refer to the "glory" (*melammu*) of the gods as part of the military armament used to defeat their enemies and thus demonstrate their power. This is analogous to the "glory" (*kābōd*) or glory-cloud (see Ex 24:16) of the Lord, which also was seen to be a manifestation of power and strong enough to destroy anyone who should gaze upon it. This form of the divine presence was manifested at the ratification of the covenant at Sinai and represented God appearing as a witness to his covenant with his people. A good case can be made for identifying this form of the divine presence with the appearance of the Spirit of God at creation in Genesis 1:2 as well as at Pentecost at the ratification of the new covenant in Acts 2. The glory of God is also associated with God's "face" (*pānim*, Ex 33:18-20).

3.2. Thunderstorm and Theophany. In contrast to both Mesopotamian and Canaanite traditions, in Israel God was not associated in theophany with beneficent phenomena of nature (e.g., rivers, trees, and the sun and moon) but rather with those natural forces that often terrify people, such as the lightning flash, the dark thundercloud or the raging storm—all aspects of a majestic thunderstorm. While data from the ancient Near East may suggest that covenant relationships between gods and humans did exist, there is no evidence that a covenant relationship of this form was initiated with the god appearing in a storm theophany. This is all the more striking, as many ancient Near Eastern traditions did portray gods as in some sense cre-

ators. This uniquely distinguishes the Sinaitic covenant from the other covenants of the ancient Near East.

4. Theophanies and Old Testament Contexts.

Many of the OT theophanies occur in the Pentateuch, particularly in the patriarchal narratives and Exodus, but they also appear in the conquest events, as well as in Judges. Theophanies also occur in prophetic literature, often in association with the prophetic call of the individual prophet to service.

4.1. Patriarchal Narratives. In the patriarchal narratives the theophanies of the Lord are accompanied by the announcement of divine promises. These theophanies were not spirit appearances but specific temporary manifestations that were not accompanied by the frequent outbursts of nature in earthquakes, fire, cloud, wind, thunder and smoke, such as occurred in the Sinai theophany. The patriarchs normally responded to these appearances by erecting an *altar (Gen 12:7; 26:24-25; 28:12-19; 35:1-15).

4.2. Sinai Theophany. Later during the exodus-conquest period, Sinai and the ark of the covenant dominate the biblical narratives. The Sinai theophany was accompanied by cataclysmic events, although it is emphasized that when God spoke to Moses no form was seen (Deut 4:12, 15). The revelation of God to Moses and then to the nation of Israel at Mount Sinai was the watershed event in Israelite history and as such marked a change in the way God would manifest himself in theophanies. Up to this point in time God had manifested himself to the individual patriarchs, but now with the creation of the nation of Israel and the establishment of the *tabernacle, the special dwelling place of God, God's appearances would usually be connected with the ark or the tabernacle. In essence, the ark of the covenant and the tabernacle became a portable Sinai. The martial character of the Sinai theophany was evident not only in the cloud in the battle of the sea (Ex 14:19-29) but also in the assembling of Israel in military companies by tribe, and in the march from the mountain by tribes following the divine warrior. The pillars of cloud and fire and the other heightened forms of natural phenomena at Sinai were understood to be sense-perceptible representations of God's presence (Ex 13:21-22; 14:19; 16:7, 10; 24:16). The God of Mount Sinai accompanied Israel in the wilder-

ness in the forms of the fire and the cloud (Ex 13:21-22; 14:19-20, 24). "The cloud" (with the definite article; Ex 24:15-18; 40:34-38; Num 9:15-23) referred to the tabernacling presence of God, as did "the name." This pillar or glory filled the holy of holies at the dedication of the Mosaic tabernacle and rested between the cherubim on the cover of the ark (Ex 25:22; 40:34-38). Later, during the monarchy, the temple in Jerusalem and the Temple Mount of Zion were viewed as the special place of God's presence among the people. The same glory of the Lord entered Solomon's temple (1 Kings 8:11).

5. Manner of Manifestation.

The different writers of the OT portrayed the appearances of the Lord in various yet remarkably similar ways. Sometimes the Lord appeared as a man, sometimes as or in the person of "the angel of the Lord." Frequently the phrase "glory of the Lord" is used to describe a theophany (e.g., Ex 24:16-18). Similarly the phrase "pillar of cloud" occurs in Exodus 33:9 to mark a theophanous appearance on Mount Sinai.

5.1. Concealment of God in Theophany. While the essential characteristic of every theophany is the appearance of God, in every theophany God's power must be held in check. Whenever the Lord reveals himself, he also conceals himself. The reason for this is the recognized danger to the one who gazes on God's appearance. In an encounter with God or one of his envoys, the survival motif is constant. The reason for the concealment certainly is related to the idea of God's holiness. The concealment often took the form of a thick, dark cloud. This understanding is reflected in the first appearance of the angel of the Lord, when the angel appeared to Hagar. Hagar asked, "Have I really seen God and remained alive after seeing him?" (Gen 16:7-13; cf. Judg 6:22-23). A possible consequence of having a visual perception of God was the danger of forming a "graven image," if even only a mental one (Ex 20:4).

5.2. Freedom of God. The various ways in which God revealed himself is an indication of his freedom. He could use fire, thunder, lightning, his Spirit or his angel to reveal his presence, but all are to be equally understood as genuine revelations of God.

6. Characteristics of Theophanies.

6.1. Divine Initiation. A prevalent characteris-

tic of all OT theophanies is their divine initiation. This feature distinguishes theophanies in the Bible from those alleged to occur in pagan societies that resulted from persistent and strenuous efforts (1 Kings 18).

6.2. Temporary. Another common feature of theophanies is that they are always temporary. Theophanies are always transient manifestations and are to be distinguished from the ongoing testimony of the existence of God through nature (Rom 1:19-20). The temporary nature of the theophanies is related to their purpose. After the purpose of the theophany is accomplished, the divine appearance ceases. Perhaps the best example of this is Mount Sinai, where God met with Moses alone and then appeared to him after the exodus among the Israelites. Subsequent to the Mosaic period we hear nothing of manifestations of God from Mount Sinai.

6.3. Holy Space. God imparted holiness where and for how long the theophany lasted. For example, God warned Moses that he was on holy ground (Ex 3:5; cf. Josh 5:15). As long as the Lord was present in theophany, the sacred place was holy because God's presence sanctified it. The Lord's holiness later sanctified the tent of meeting (Ex 29:42-43). The Lord descended to the entrance of the tent in order to commission someone (Ex 33:7-11; Num 11:24-25; Deut 31:14-15) or to carry out his judgment (Num 12:5-15). Later in Israel's history the Lord's holiness sanctified the Solomonic temple (1 Kings 9:3). God's theophanic appearance at the dedication of Solomon's temple as at Mount Sinai placed this temple in the framework of the Mosaic covenant and revelation. This connection was reinforced through the presence of elders and other leaders, and a seven-day feast on both momentous occasions (1 Kings 8:1, 65). The transference of the symbols of the Lord's presence to the temple was analogous to the movement of the pillar of cloud to the tabernacle. Thus it was not a great leap for later theophanic appearances to be associated with Mount Zion, the special residence of the temple, which became the site associated with the Lord's presence. Theophanic images of Sinai are set in Mount Zion (Is 24:23; 40:5). God appeared on Mount Zion as a thunderstorm going to war against Israel's enemies (Ps 18:7-20; 29:1-11; 97:1-5; 144:1-11). In fact, in the prophetic writings theophanies are associated primarily with Zion (Ezek 1; 10; Amos 1:2; Mic 1:2-4; Zeph 1). As was mentioned above, it is God's

presence that makes a place holy, but that holiness is gone when God departs from the designated place. Mount Sinai was holy only as long as God was present there. God left the temple as a consequence of Judah's abominations (Ezek 8-11), thus depriving the shrine and the city of its sanctity.

6.4. Natural Sites. God appeared at locations in the natural environment such as springs (Gen 16:7), rivers (Gen 32:22-32) and trees (Gen 12:6-7) but predominantly at mountains (Gen 12:8; 22:1-14; 28:12; Ex 19; Ps 48). For many cultures of the ancient Near East the mountain was considered the most conducive location for communication with the supernatural. God's glory covered Mount Sinai for six days (Ex 24:15-18), just as God's Spirit moved in creation for six days (Gen 1:2-31). Niehaus observes that this correlation was intended to suggest that a new creation was taking place in the exodus events analogous to the original creation.

6.5. Terminology. The Hebrew term *qôl* ("voice," Gen 3:8; Ex 19:16; Ps 29:3, 4, 5, 7, 8, 9; 46:6 [MT 46:7]; 77:18 [MT 77:19]; Joel 2:11; 3:16 [MT 4:16]) is common in theophanies and is used to indicate the thunderous and frightening sound of the appearance of God. Trumpeting the sound of the divine presence occurred at Sinai, at Pentecost and at every Day of the Lord (cf. Jesus' Parousia). The sound of God's coming signaled even the initial theophany in the garden. The root *r'm* ("thunder") is sometimes used in conjunction with *qôl* (Ps 29:3; 77:18 [MT 19]; 104:7).

6.6. Topography. In many of the OT theophanies, topography and nature were disturbed. These disruptions frequently took place in the atmosphere (Ex 19:16-19; 1 Kings 19:11-13).

6.7. Israel's Benefit. Theophanies often introduced momentous events (Ex 3:1-12), further revealed God's plan (Gen 15:1-17; 28:12-17), supported the wavering (Ex 3:2-4:17; Judg 6:11-24) and were restricted to Israelites, except in such cases where foreigners had contact with Israelites (Gen 20:3-7; Num 22:20-35).

6.8. Sinaitic Theophany. In all of Israel's history, God's self-disclosure at Mount Sinai was unique because it was here that God entered into a covenant relationship with the entire nation. Important to the theophany at Sinai was the recognition of God as Israel's king and thus rightly the bestower of his will through his *law. This is similar to ancient Near Eastern practices

of newly established kings imparting new legislation. Laws were the inevitable outcomes of the theophanies of the Lord as king (Ex 19—24; Ps 132; Is 2:2-4). Theophanies forcibly impressed on God's people the sovereignty of God, and assured them of his presence and concern for them.

7. Human Reaction to Theophany.

The human reaction to God's appearance was always one of fear and terror. This fear was not the result of God's being mysterious or even all-powerful but rather a result of his being totally separate and distinct from humanity and creation. The terror of God's theophany was a common element in the Jewish intertestamental literature (Jdt 16:15; Wis 5:21-23; Sir 16:18-19; 43:16-17; *As. Mos.* 10:3-6; 1QH 3:32-36). The terrorizing appearance of God explains why God was often cloaked in a cloud in the theophanic appearance: the full revelation of his glory would totally overwhelm and could in fact destroy a human onlooker (Ex 20:19; Deut 18:16).

8. The Form of Theophany Accounts.

8.1. Old Testament Accounts. Genesis 26:23-25 provides a good example of the literary components of a theophany:

- introductory description: "From there he went up to Beer-sheba. And that very night the LORD appeared to him and said,"
- divine self-asseveration: "'I am the God of your father Abraham;'"
- quelling of fear: "'do not be afraid,'"
- assertion of divine presence: "'for I am with you'"
- *hieros logos* (holy word): "'and will bless you and make your offspring numerous for my servant Abraham's sake.'" "
- concluding description: "So he built an altar there [and] called on the name of the LORD."

The same forms occur in the important Sinaitic theophanies. For example, Exodus 3:1—4:17 contains an introductory description (Ex 3:1-4), a divine self-asseveration (Ex 3:5-6), an assertion of gracious presence (Ex 3:7-8a), the *hieros logos* (Ex 3:8b-10), a protest by the addressee (Ex 3:11), and *hieros logos* with repetition of the earlier elements (3:12—4:17). Likewise, Exodus 19:16—20:17 contains an introductory description (Ex 19:16-21a), the *hieros logos* (Ex 19:21b-22), a protest by the addressee (Ex 19:23),

hieros logos (Ex 19:24) and *hieroi logoi* (Ex 20:1-17).

8.2. Ancient Near Eastern Accounts. Scholars have noted that these same motifs are also observed in the Assyrian theophanies. J. J. Niehaus has shown that these identical motifs are also to be found in the NT with the apparition of the angel Gabriel to Mary (Lk 1:26-38), the angelic theophany to the shepherds (Lk 2:8-20), the account of Jesus walking on the water (Mt 14:22-33; Mk 6:45-52; Jn 6:16-21), the transfiguration (Mt 17:1-8; Mk 9:2-8; Lk 9:28-36) and the appearance of angels at the empty tomb (Mt 28:1-8; Mk 16:1-8; Lk 24:1-12; Jn 20:10-18), as well as Jesus' postresurrection appearances (Lk 24:36-49; Jn 20:19-29). Theophanic descriptions frequently occur in the form of hymns explaining God's being and appearance in poetic form (Judg 5:4-5; cf. Deut 33:2-5, 26-29).

8.3. Words of Theophanies. God's word, the *hieros logos*, should be considered a critical component among the elements of theophany. According to G. von Rad, all the phenomena that accompanied the theophany were mere accessories to the divine pronouncement that inevitably formed the center of the theophanic event (von Rad, 2.19). Even though the visual component in all of these theophanies was important, if not awesome, the heart of the matter in each case was what Yahweh had to say (Niehaus 1995, 29). Without the words accompanying the theophany, the phenomena and meaning of the theophany would go unexplained. Thus God explained that the meaning of the vision given to Abram was the establishment of the covenant (Gen 15:17-21). This is also illustrated through the first Sinaitic theophany, when God appeared and explained that Moses would lead the Israelites out of Egypt (Ex 3:1-10). An indirect outcome of the explanation of the theophanic events was God's intention to reveal more of his personal nature. Through the effect of the divine appearances accompanied by the divine communication, God's people ultimately learned more of God's power and attributes.

9. Theophany and the Angel of the Lord.

Many consider the appearances of the angel of the Lord as constituting theophanic events. There are justifiable reasons for viewing these appearances as theophanies, especially since the angel of the Lord is frequently equated with God. The deity of this unique angel is suggested

by the facts that he (1) is identified as God (Gen 16:7-13; 18:2, 10, 13; 22:10-12, 15-18; Ex 3:2-6, 14, 18; Judg 2:1, 5; 6:11, 14, 16), (2) is recognized as God (Gen 16:9-13; Judg 6:22-24; 13:21-23; cf. Gen 32:24-30 with Hos 12:4-5), (3) is described in terms befitting the Deity alone (Ex 3:2-9, 14; 23:20-23; Josh 5:15), (4) calls himself God (Gen 31:11, 13 [in reference to the "angel of God"]; Ex 3:2, 6, 14), (4) receives worship (Josh 5:14; Judg 2:4-5) and (5) speaks with divine authority (Judg 2:1-5). The angel of the Lord who appeared in the burning bush (Ex 3:2) not only says he is God (Ex 3:6) but is designated as God by the text (Ex 3:4). The angel of the Lord received sacrifice (Judg 6:21), and Gideon feared his life because he had gazed at God (Judg 6:22). The angel who wrestled with Jacob (Hos 12:4) was recognized to be God (Gen 32:30). The angel-of-the-Lord theophanies are linked with major statements in redemptive history, including the Abrahamic and Mosaic covenants.

10. Theophany and the New Testament.

In postexilic times the theophanic cloud came to be called the Shekinah, which signified God's "dwelling" with his people (Ex 25:8). The glory-cloud is associated with the first and second comings of Christ (Mt 17:5; Acts 1:9; Rev 1:7; 14:14). The crowning event of the book of Exodus was the theophany of the Lord at the completion of the tabernacle. In a similar way God also descended on the day of Pentecost in the NT and filled the church, a temple of living stones. God appeared in glory in the OT and will appear in like manner in the eschaton (Is 24; Rev 19—22). The OT recognizes a future time when the Lord's theophany will be continuous (Is 60:19).

TRADITIO-HISTORICAL CRITICISM

As applied to biblical texts, the term "traditio-historical criticism" (also "tradition criticism" or "tradition history") describes the attempt to uncover the folk traditions that lie behind passages in the Bible. The method assumes that much of the material of the Pentateuch—both the narratives and the legal texts—went through a long process of oral composition, transmission and modification before any written texts were produced. On the basis of analogies from other cultures and by applying rules that ostensibly distinguish oral material from material that began as written texts, scholars have attempted to describe the tradition history of the Pentateuch (and of other biblical texts). Such an analysis demarcates which texts began as oral tradition, who were the tradents (storytellers) that created and passed on these tales, what was the original setting (*Sitz im Leben*) and purpose for a given tale, and the process by which the oral tale was transformed into a written document. Advocates of the method claim that the results of a tradition-critical analysis are useful for gaining an understanding of the theology and history of OT Israel.

1. From Oral Tradition to Written Text
2. The Beginning of Traditio-historical Criticism
3. The High-Water Mark of Traditio-

historical Criticism

4. Concluding Observations

1. From Oral Tradition to Written Text.

A traditio-historical analysis must demonstrate how oral tales were transformed into written texts and redacted into the present biblical documents. This is a complicated matter; tradition critics often argue that the oral tale was radically different both in content and purpose from the present text. The *Sitz im Leben* of the OT traditions is often said to be the campfire scene or the popular festival where storytellers recited their tales. As these tales passed from speaker to speaker, they naturally underwent transformation as individual storytellers added or omitted details, gave the story local coloring or otherwise modified it to reflect their own viewpoints. When the tales were committed to writing, moreover, they were further changed to fit the theological, ideological and political agendas of the scribes and redactors who used them. It is no small matter for the modern scholar, working with only the text of the OT, to delineate such a convoluted and obscure history.

The relationship between tradition history/tradition criticism (*Traditionsgeschichte* or *Überlieferungsgeschichte*) and form history/form criticism (*Formgeschichte* or *Gattungsgeschichte*) is somewhat confused. At its simplest, form criticism is the attempt to classify a text by its formal structure and literary genre; in principle, it may be applied to a written text without any attempt to investigate that text's oral history. As practiced by many, however, form criticism is the preliminary spadework that leads an investigator from the written text to its oral, preliterate antecedents. Many scholars therefore regard tradition criticism as an outgrowth of form criticism or indeed treat the two methods as a single investigatory process.

2. The Beginning of Traditio-historical Criticism.

2.1. Hermann Gunkel. Around the beginning of the twentieth century, Hermann Gunkel (1862-1932) introduced folklore research, such as had been carried out by the Grimm brothers, into pentateuchal studies. Gunkel wanted to find the preliterate stages of growth that lie behind the OT—the oral traditions. In a career that included major publications on Genesis and the Psalms, as well as *Das Märchen im Alten Testament*

(ET: *The Folktale in the Old Testament*), Gunkel convinced many scholars of the soundness of his method and the significance of his results. In the latter work, he compared the folktales he uncovered in the OT to folktales selected from around the world and argued that the same processes governed the rise and transformation of folktales in both groups.

Gunkel made a distinction between “legend” and “history” that was fundamental to his method. He described a legend as an oral tradition that concerns the life story of a family and tends to be poetic. History, by contrast, is based on written texts, concerns political situations and is prosaic (see Gunkel 1987, 21-27; Kirkpatrick, 24). For him, the patriarchal history of Genesis 12–50 was based in legend (Gen 1–11 was classed as myth).

An example of Gunkel's method at work is his interpretation of Genesis 34, the sack of Shechem (Gunkel 1997, 357-65). He asserts that two primary legends lie behind the event: (1) A “Hamor variant,” in which all twelve tribes sack the city, and (2) a “Shechem recension,” in which only *Simeon and *Levi do the deed. The personal names used here actually represent *tribal groups* and *not individuals*; the time of the event was when the pre-Israelite tribes wandered Canaan as nomads. The story of the rape of Dinah probably has no basis in fact; it is a legend motif that has been artificially inserted into the tale. Nevertheless, it has critically shaped the story. The Hamor variant takes the position that whoever violates an Israelite woman should justly be put to death, whereas the Shechem recension is more complex, portraying Shechem and Hamor somewhat sympathetically and implying that Simeon and Levi were rash in their actions. The Hamor variant is thus the later version; it comes from a later time when the framers of the narrative tended to moralize and idealize the patriarchs. The redactor who combined the two was more sympathetically disposed toward the Hamor variant. The outlook of the unified narrative is one of heaping scorn on the local Gentiles; the image of these Canaanites *circumcising themselves for an Israelite girl probably delighted the original audience.

In addition to the tradition-critical analysis described above, we should note that Gunkel's treatment of the text is complicated by a *source-critical analysis that employs J, E and P.

2.2. Axel Olrik and Andre Jolles. Two scholars,

neither of them an OT specialist, contributed significantly to the rise of tradition criticism. Axel Olrik was a Danish folklorist who, beginning in 1909, published observations on the characteristics of oral narrative. Gunkel incorporated this material into the third edition of his commentary on Genesis (see Gunkel 1997, xxxi-xxxvi) as further evidence of the soundness of his method. Olrik's observations have been dubbed "Olrik's laws." These "laws" became the tools by which some scholars uncovered oral traditions in the Bible.

R. N. Whybray (146-47) presents Olrik's laws in a systematic form. They assert that an oral narrative has clear structure and clear unity of plot, moves toward a single conclusion, avoids irrelevant or retrospective material and frequently has a series of episodes, each with progressively greater tension. Oral narratives tend to give clear, vivid accounts, to make use of repetition and patterns and to have a preference for things occurring in threes. They also focus on a single character and will only have two main characters, and they put only two characters in a single episode. Thus, a scholar who discerned many of these traits in a given text could argue that behind the text lay an oral tradition. In recent scholarship, J. Van Seters has advocated applying Olrik's laws to Genesis. For example, he uses the absence of traits of oral composition in Genesis 21:8-21 to argue that the text must be a literary (not oral) composition that drew upon Genesis 16 (Van Seters, 200).

Andre Jolles did research into Norse family traditions, especially those from Iceland of around 1000. His chosen term for these traditions was *Sage*, and through his influence many OT scholars in the mid-twentieth century were convinced that the "saga" was the (oral) genre that lay behind the patriarchal narratives. These scholars would conduct their research into Genesis using the Icelandic sagas as their analogue and historical model. Jolles's influence has been immense; Westermann (1980, 31-35) asserts that Jolles gave us the fundamental description of the narrative form and that elements of the Icelandic sagas have precise counterparts in Genesis.

3. The High-Water Mark of Traditio-historical Criticism.

Although Gunkel may rightly be termed the father of tradition criticism and produced a mas-

sive commentary on Genesis, the method came to full flower in the works of Albrecht Alt, Gerhard von Rad and Martin Noth. The work of these scholars was also the high-water mark of the method; after them, tradition criticism would never again be so dominant or fruitful in OT research.

3.1. Albrecht Alt. The usefulness of tradition criticism, in the eyes of many scholars, was established through the work of A. Alt, in particular by his 1929 essay "Der Gott der Väter" (ET: "The God of the Fathers"). Alt argued that the divine titles "the God of *Abraham," "the fear of *Isaac" and "the mighty one of *Jacob" are the remnants of oral traditions lying behind the present book of Genesis. In his view, three distinct "numina" (deities) had been the patron gods of the individuals Abraham, Isaac and Jacob (who were not related to one another). These numina were worshiped by nomadic tribes prior to their settlement in Canaan. As tribal groups entered the land, they associated their patriarchal numina with the cult shrines already in the land. As Yahwism began to dominate and unify the tribes of Israel, J and E brought the patriarchs together into a single genealogy and their numina into a single deity, the "God of the fathers," who was, of course, made out to be Yahweh.

The original traditions about the patriarchs and their numina were either forgotten or suppressed; only the titles of the numina (e.g., "God of Abraham") remain. The stories about divine encounters in the present book of Genesis (e.g., Gen 28) were for the most part original compositions by the documentary writers, although they do preserve fragments of the traditions of the numina (e.g., Gen 15). They also contain elements of traditions that were attached to the local shrines (e.g., Gen 28:11-12, an E text, preserves such a cult tradition about Bethel). It is possible, however, to make inferences about the relationship between the numina and the tribes. All of the traditions about the Jacob numen, for example, are attached to shrines in the territory of the *Joseph tribes; this indicates that the Joseph tribes worshiped the "mighty one of Jacob." Because J associates the numen of Abraham with the oak of Mamre, Alt suggests, we can associate that cult with *Judah and the *Calebites. Yahweh was originally associated with the cult at Shiloh; the notion that the whole nation had worshiped Yahweh at Sinai before

entering the land was a fabrication of the *Moses saga. All of the tribes were able to unify under Yahweh as a national deity because the cult of Yahweh had successfully assimilated the tribal numina; they never had to abandon their ancient gods.

3.2. Gerhard von Rad. Tradition criticism may have hit its high point in von Rad's 1938 essay, "The Form-Critical Problem of the Hexateuch." It is a superb example of the method and results of tradition criticism. As his starting point for examining how the "Hexateuch" was formed, von Rad observes that Deuteronomy 6:20-24; 26:5b-9 and Joshua 24:2b-13 are creeds. He contends that they are not casual historical recollections but are formal recitations for cultic settings. He also asserts that minor accretions in these texts are obvious and easily set apart from the rest. In his development of the argument, von Rad contends that later free adaptations of the creeds are proof that they served the purpose of being early recitations around which the Israelite understanding of their faith developed. Taking as examples 1 Samuel 12:8; Psalm 136 and Exodus 15, one sees how the creedal formulation was a fixed constant in Israelite religion but was also freely subjected to adaptation and transformation. A striking omission, he says, is any reference to Sinai in these compositions; in fact, the earliest reference to Sinai in a creedal statement is Nehemiah 9:13-14.

Following Wellhausen, von Rad takes it as a given that the Sinai tradition is an independent strand. It is a fixed, self-contained unit that has two major elements: the *theophany and the making of the *covenant. The Sinai tradition, moreover, is devoid of references to God's saving acts in the exodus and the desert wanderings. And just as there are free reworkings of the creed, so there are loose, poetic renditions of the Sinai tradition (e.g., Deut 33:2, 4). Thus, there are two separate, primitive traditions: the creedal tradition of the settlement (involving the patriarchs and the exodus), and the Sinai tradition.

This of course leads to the question of the setting in which the Sinai tradition took shape. For von Rad, following Mowinkel, the answer is clear: a cultic setting. Confirmation of this hypothesis is found in the form of Psalm 50, which is a witness to a cultic ritual involving Sinai, theophany and the *Decalogue. Psalm 81 is similar; it obviously reflects a New Year festival (Ps

81:3 [MT 81:4]) and a celebration of the giving of the Decalogue (Ps 81:8 [MT 81:9]). The cultic origins of the legislative/Sinai tradition is further indicated in Deuteronomy, where the use of the word "today" as a kind of refrain (e.g., Deut 29:10-15) makes the giving of Yahweh's law contemporary for the worshiper in a cultic setting. Indeed, the hortatory and recital form of the presentation in Deuteronomy probably reflects a more primitive version of the cult than does the historical narrative in Exodus 19—25. The most likely setting for the Sinai cult, von Rad suggests, is the covenant festival at Shechem (Josh 24), a Yahwistic New Year festival that can be identified as the Feast of Booths (*see* Festivals and Feasts).

The cultic setting for the settlement tradition is established in the creed of Deuteronomy 26:5b-9 as the Feast of Weeks. This was originally a Canaanite harvest festival, but the settlement creed afforded the early Israelites a useful method for appropriating the festival. The purpose of the settlement creed was to account for Israel's ownership of the land. The location of this cult was, von Rad asserts, at Gilgal (*see* Josh 14:6-14; Judg 2:1).

It was the Yahwist who began the process of taking the traditions of Israel and, by a literary *tour de force*, drawing them together into a coherent narrative. The traditions themselves were far older than the Yahwist; he was a collector rather than an original author. The settlement tradition reflected in the Deuteronomy 26 creed was the starting point for this process. It and other early (pre-J) formulations of the creed already referred to the patriarchs. By the time the Yahwist began his work, moreover, the tradition-historical process outlined by Alt, whereby the separate patriarchs and their numina were fused into a single genealogy and faith, had already taken place. But the Yahwist arranged and gave order to the saga material and, most importantly, integrated the patriarchal tradition into the settlement tradition. He achieved this by re-orienting the patriarchal traditions into a prelude to the settlement. Furthermore, it was the Yahwist who fused the settlement tradition to the Sinai tradition, although it took a long time for this merging of traditions to gain acceptance as the orthodox faith of Israel. Therefore it was the Yahwist who gave the Hexateuch its basic form. Although the problems of the formation and redaction of E and P are themselves quite

complex, by the time they arrived the fundamental shape of the text, the Hexateuch, was established.

The upshot of all this is that an enormous amount of cultic tradition has been incorporated into J, although the astounding thing, in von Rad's words, is that "there is not one single instance in which the original cultic interest has been preserved" in J (von Rad, 68). The Yahwist has thus to some extent secularized Israel's faith, in that he has divorced major elements of it from the cult. For him, Yahweh's primary sphere of dealing with his people is not in sacred institutions but in history, especially in the fact that Yahweh has fulfilled his promises and given Israel the land.

It is not by accident that the first volume of von Rad's *Old Testament Theology* was subtitled *The Theology of Israel's Historical Traditions*. For him, the theology of the Pentateuch/Hexateuch can be described as a massive elaboration of the original creed of Deuteronomy 26 (von Rad 1962, 1:122-25). In describing OT theology, therefore, the scholar is describing how the traditions have grown and been transformed. Tradition criticism is the key to understanding how Israel understood and developed her core beliefs.

3.3. Martin Noth. Martin Noth detected five major independent streams of early Israelite tradition that lay behind the Pentateuch. These were: (1) the guidance out of Egypt; (2) the guidance to the arable land; (3) the promises to the patriarchs; (4) the guidance in the wilderness; and (5) the revelation at Sinai. He suggests that as the early tribes that were to make up Israel came together in Canaan, different groups brought different traditions with them, and these traditions were slowly merged into the one story of Israel. For example, the tribes that had a tradition of meeting a deity at Sinai combined their story with those who had a tradition of deliverance from *Egypt. The traditions of promises to the patriarchs were adopted by the whole of emerging Israel as legitimizing their conquest of the land.

This leads Noth to a skeptical agnosticism about some of the most significant elements of biblical history. About Sinai, he is only willing to say that some group of people (not all Israel) had a pilgrimage to Sinai and maintained this memory with a cult tradition; he suggests that bearers of this tradition scattered to the other

tribes of Israel so that all Israel adopted it as their own. About Moses he is even more silent; he is not sure which of the major themes Moses might have originally been attached to, but he is certain that Moses had no connection to the original Sinai tradition (Noth 1958, 109-37).

4. Concluding Observations.

Tradition criticism operates from the assumption that the modern scholar can recover the earliest oral traditions that lie behind the present text of the OT as well as their historical circumstances and subsequent developments. Is this valid? Unless the scholar has something near to omniscience, it hardly seems possible.

Many of the fundamental tenets of tradition criticism are doubtful. Gunkel's distinction between "legend" and "history" is clearly overdrawn if not artificial. There is no reason to believe that the cult shrines of the ancient Near East generated traditions in the manner that tradition criticism presupposes. Moreover, describing Olrik's observations as "laws" is misleading because it is clear that not all oral tales have all these characteristics. Still less can one contend that wherever these traits are found one is in oral material; a story originally composed as a written text could easily have most or all of them. Modern folklorist study has progressed well beyond Olrik's work. This is not to say that all of his opinions have been abandoned, but they are hardly worthy of being called "laws," and many would question whether it is possible to describe a universal set of traits for all oral tales. Among modern OT scholars, few follow Olrik's laws, and those who do add major qualifications (e.g., Van Seters, 158-61). Furthermore, tradition criticism does not take seriously the evidence that ancient Near Eastern societies were highly literate and regularly committed material they thought worth remembering to *writing (Waltke).

The idea that the Icelandic saga can serve as a type for the patriarchal tradition strikes many scholars today as outlandish. The cultural gap between the two societies is enormous, and the violent Icelandic sagas are too unlike the Genesis stories for meaningful comparison. On top of that, it is not even clear that the Icelandic sagas began as oral tradition (Kirkpatrick, 83).

The specific theories outlined above only increase one's suspicion of the method. Noth's five themes, for example, are not sufficiently

well-established to serve as the basis for historical research. Anyone is free to be skeptical about the stories in the Pentateuch; what is intolerable in Noth is that he bases his skepticism on the alleged *certainty* of his traditio-historical analysis.

Gunkel's discussion of the "two traditions" that lay behind Genesis 34 is fanciful in the extreme. How can we, from this distance, possibly know how many "traditions" were behind this text, what their *Sitze im Leben* were and where the moral preferences of the tradents lay? Scholars have pointed out that Alt's analysis is devoid of external controls (e.g., Van Seters, 141; Kirkpatrick, 36). One needs to understand that Alt's elaborate reconstruction is based entirely on inferences from the biblical text. Alt does appeal to analogies from Arab, Aramean and Greek culture, and especially to Nabatean and Greek inscriptions, but it is clear that these are only a thin façade of external data; they contribute nothing substantial to the argument (and the value of these analogies has in any case been fairly dismissed by subsequent scholarship).

A single example will suffice to illustrate Alt's cavalier handling of the evidence. Alt asserts that the "god of the fathers" is an artificial construct meant to draw together the separate patriarchs and their numina and that this "god of the fathers" has no connection to any shrine. This is in spite of the fact that Genesis 46:1 asserts that Jacob offered sacrifice to the "God of his father Isaac" at Beer-sheba. More than that, Alt himself asserts that early traditions in Genesis associate Beer-sheba with Abraham (see Alt, 22 n. 59, 54). In short, Alt dismisses the fact that the evidence associates the "god of the fathers" at Beer-sheba with all three patriarchs!

Von Rad's starting point for investigation contradicts powerful historical analogy that a creed comes at the *end* of a historical process and not at its beginning. The creeds of the Christian faith, even the very basic so-called Apostles' Creed, come after the formation of the NT, not before it. A creed is by definition a simple, concise, yet reasonably complete statement of a large body of faith that is already established, although the creed may give that faith definition from a distinctive perspective. Even the supposed creeds in the NT, minimal though they are (e.g., 1 Tim 2:5-6), came after the gospel of Jesus had been widely proclaimed in the Gentile world; one would be hard-pressed to show that

the NT grew out of such a text. One does not begin with a creed and then slowly create a story and faith.

Beyond that, the details of von Rad's analysis are hopelessly conjectural and at times incoherent. Claiming that the creeds have their origins in cults and that the cult center for the settlement tradition is the celebration of the Feast of Weeks at Gilgal is little more than piling speculation on speculation (especially since Gilgal has no association with the Feast of Weeks). In von Rad's model, Deuteronomy is the seedbed for *both* the *settlement* and the *Sinai* traditions. Of course, a scholar may contend that the present Deuteronomy has been so redacted that both traditions have been forced together, but one is struck by how seamlessly Deuteronomy 26 moves from the "settlement creed" to exhortations to obey the statutes and decrees of Yahweh—a hallmark of the "Sinai" tradition! At the same time, Psalm 81, a hymn supposedly from the Sinai tradition, contains explicit reference in verses 6-7 (Eng 5-6) to the exodus. Yet it is critical to von Rad's thesis that the two traditions were entirely separate at this stage. It is difficult to avoid the conclusion that here as elsewhere the entire tradition-critical project has broken down.

Tradition criticism is not dead, but its future does not look very bright. After the withering criticism the method and its results have received from scholars (e.g., that one cannot with confidence determine what material had its origin in oral literature, that the notion of the cult-etiology is questionable, that the "five themes" approach to the material improperly controls the analysis of the data; see Knight 1985, 268-71), it is difficult to see how it could return to prominence. To be sure, there are those who more or less advocate its continuing usefulness (see Knight 1977), but no subsequent sweeping theses such as those developed by von Rad and Noth have captured the field the way these did. Probably the most significant scholar after von Rad and Noth is C. Westermann, who builds a case for understanding the narratives of Genesis through analyzing the promises to the patriarchs and distinguishing earlier traditions of promise from later ones. Other traditio-historical syntheses, particularly that developed by I. Engnell (which asserts that two independent streams of tradition produced the Tetrateuch and the Deuteronomic History in the postexilic period), have won few adherents.

TRAVEL AND TRANSPORTATION

During the Middle and Late Bronze Ages, travel in the ancient Near East was, save for local traffic, primarily for the purposes of trade, com-

merce and military movement. Several accounts in the Pentateuch depict the Hebrews moving their flocks from one grazing area to another. *Joseph's brothers, for example, moved their animals from the valley of Hebron to Shechem to Dothan, a distance of some sixty miles (Gen 37:12-17). From Egypt come numerous topographical lists for this time period describing Egyptian military campaigns into Palestine.

Travel in antiquity, especially long-distance, was a particularly dangerous affair. A text from Egypt during the Middle Kingdom (early Middle Bronze Age) called "The Satire on Trades" comments on such travel:

The courier goes out to a foreign country, after he has made over his property to his children, being afraid of lions and Asiatics. . . . The itinerant merchant sails downstream to the Delta to get trade for himself. When he has done more than his arms can (really) do, the gnats have slain him, the sand flies have made him miserably miserable. Then there is inflammation. (ANET, 433; AEL 1.188)

Often the roads were simply impassable. A remark by Galen, a medical author of the second century, certainly applies to much earlier periods, when he says: "Even today we see that some of the ancient highways of the world are in part swampy, in part covered by stones or thickets; that they are difficultly steep or dangerously sloping, infested with wild animals, impassable because of the width of rivers, long, or rough" (Meijer and van Nijf, 145).

Most people traveled by foot in these times, even over long distances. But that is not the only way they journeyed. We now turn to discuss the various means of transportation in the ancient Near East during the second millennium B.C.

1. Modes of Transportation
2. Roads of Antiquity

1. Modes of Transportation.

1.1. Sea Travel. Many scholars agree that water-borne transportation may be traced to the Neolithic period in the ancient Near East, approximately 10,000 years ago. The earliest artistic representations of ships date to the Ubaid period in Mesopotamia (c. 5200 B.C.), although ships with sails are not found until around 3500 (Steiglitz, 135). The latter appear in Egypt a little later, around 3300 B.C. From the beginning of the second millennium B.C., shipping was a ma-

jor means of transport in the ancient Near East (De Graeve, 17).

For the Hebrews during the second millennium (the period of the events of the Pentateuch), the sea served as a barrier rather than a highway (Pritchard, 4.333). Several factors contributed to this condition. First, Palestine has an absence of natural harbors. Second, the coastal areas were dominated by other peoples during this time—the Hebrews had very little access to the sea. Finally, the Israelites were not a seafaring people in the second millennium B.C. but principally a seminomadic people dependent on herding and agriculture. Confirmation of this situation is the paucity of references to seafaring in the Torah (Gen 49:13; Num 24:24; Deut 28:68). Not until the time of Solomon in the tenth century B.C. did Israel participate in maritime enterprises, and only then from the Gulf of Aqabah and not from the Mediterranean Sea.

1.2. Land Travel. In addition to referring to walking, the Pentateuch alludes to various forms of land travel. Some scholars, however, argue that some of these modes of transport, such as the camel, do not belong to the purported age of the Pentateuch, that is, the Middle and Late Bronze Ages. They understand these references to be anachronistic—a reading into the times of the Pentateuch by later writers. Thus, we are encouraged to be careful in our analysis and study.

1.2.1. Wheeled Vehicles. Wagons and carts for travel were apparently invented in Mesopotamia. The date of invention, however, is a matter of debate. Saggs, for example, places it early, in the Halaf period in Northern Mesopotamia, about 4000 B.C. (Saggs, 35). Others insist it did not happen until later in the fourth millennium B.C. (Childe, 177-78). There appears to be universal agreement that carts and wagons came into use no later than 3000. Therefore, references to wagons in the Pentateuch are not out of place (Gen 45:19, 21, 27; Num 7:3, 6-7).

Chariots are mentioned frequently in the Torah (see, e.g., Gen 41:43; 46:29; 50:9; Ex 14:6-7; Deut 11:4). It is likely that the Sumerians invented chariotry in the first half of the third millennium B.C. Not everyone agrees, but the latest date given for the discovery of chariotry is in the very early years of the second millennium B.C. (Moorey, 196-215). It must be earlier than that date, however, because of the recent discovery of a clay horse figurine found at Tell es-Sweyhat in Syria. The statuette has a hole bored through

its muzzle, indicating that the animal was domesticated and held reins in its mouth—these to pull a chariot. In addition, several model chariots were found at the site from the same period, dating to about 2300 B.C.

1.2.2. Donkey Caravan Travel. Transportation by donkey in a caravan is well known in the Pentateuch (Gen 22:3; 42:25-28). It had been common as a means of transport since about 3000 B.C., for both travel and trade. As W. F. Albright so cogently remarks, it is clear “that the sudden appearance of vast numbers of donkeys among the Midianites of *Moses’ time is perfectly in keeping with the actual situation then, just as are the donkey caravans of Joseph’s brethren in Gen. 42—47, or the Israelite donkey caravans of the time of Deborah (Judg. 5:6-11)” (Albright, 205).

1.2.3. Camels. The camel is mentioned twenty-eight times in the Pentateuch, and each reference reflects the domestication of that animal (Gen 12:16; 24:10-64 [18x]; 30:43; 31:17, 34; 32:7, 15 [MT 32:8, 16]; 37:25; Ex 9:3; Lev 11:4; Deut 14:7). Many scholars argue that not until the first millennium B.C. was the camel fully domesticated in Palestine as a transportation animal (Van Seters, 17). W. F. Albright comments: “Tame camels and camel riders do not appear with certainty until well along in the first millennium B.C.” (Albright, 197-98 n. 1). These authors conclude that biblical references to camels in the Torah—such as *Abraham giving his servant ten camels to search for Isaac’s wife (Gen 24:10)—are later additions to the text and do not reflect the reality of camel domestication in the Levant (Kohler-Rollefson, 183).

A main problem with an outright dismissal of camel domestication in Palestine before the first millennium is the paucity of evidence regarding the matter. It is simply impossible to give a precise date to the domestication of the camel and its appearance in the Levant (Knauf, 149). The best reconstruction is by R. Bulliet, who sees four stages of camel domestication: (1) it began in the fourth to third millennium in southeastern Arabia; (2) during the third millennium the camel was employed as a beast of burden and used in caravans; (3) by 1000 B.C. camels were being used throughout the ancient Near East for military purposes; and (4) between 500 and 200 B.C. warriors learned to use the lance and sword while mounted on camels, which they could not do in the prior stage (Knauf, 149).

One author concludes that the “earliest archaeological evidence comes from Umm an-Nar, a site located on a small island . . . in the Persian Gulf. Here the cultural context suggests that the dromedary may have been domesticated in the eastern part of the peninsula during the 3rd millennium B.C., perhaps as early as 2700 B.C.” (Wapnish, 105) It is also clear that the earliest evidence of camel domestication on the Iranian Plateau occurs roughly between 2600-2500 B.C. Consequently, it is not out of line to conclude that camels were generally used in ways described by the Pentateuch before the times it is purported to describe. Yet, this general statement leaves something to be desired because the diffusion of the domesticated camel from Arabia to the ancient Near East has not been fully documented. The crucial question is, when did domesticated camels first appear in the Levant and in Palestine in particular?

Camel bones have been found in archaeological contexts of Palestine beginning in the early third millennium B.C. (Lernau, 87). Occasional representations of camels appear on monuments and in figurines from this early period (Van Seters, 17). The problem with such evidence is how to distinguish whether or not these represent wild or tame camels. The evidence is simply inconclusive.

Inscriptional evidence of the Levant is also uncertain. A tablet from Alalakh dating to the fifteenth century B.C. may mention the domesticated camel in a fodder-list. The initial reading has been disputed, however (Lambert, 42). Mesopotamian lexical lists found at Ugarit from the Old Babylonian period (c. 1950-1530 B.C.) appear to demonstrate some knowledge of the camel and its domestication. A Sumerian text from the same period found at Nippur makes mention of camel's milk, which would lead one to assume some sort of domestication (Kitchen, 79). The clearest, earliest reference to the camel as a domesticated animal occurs in the inscription of Assur-bel-kala from Assyria (c. 1074-1057 B.C.).

Caution is the word of the day. As the evidence presently stands, any conclusions drawn regarding camel domestication must remain tentative at best. For scholars to say that the appearance of tame camels in the Pentateuch must be anachronistic is to go too far. Our knowledge is simply lacking, and it is an argument from silence. Even so, it appears that domestication of

the camel began in the Levant not much later than 2000 B.C., but significant camel use did not begin until much before 1200 B.C. (*see* Zoology).

2. Roads of Antiquity.

Not until the Roman period was much attention paid to the construction and upkeep of roads and highways. During the period of the Republic, the Roman authorities began the construction of a vast system of highways that made communication possible between Rome and various parts of the empire, including Palestine. For example, Plutarch says of the construction of roads by Gaius Gracchus (late second century):

His roads were planned so as to run right across the country in a straight line, part of the surface consisting of dressed stone and part of tamped-down gravel. Depressions were filled up, any watercourses or ravines which crossed the line of the road were bridged, and both sides of the road were levelled or embanked to the same height so that the whole of the work presented a beautiful and symmetrical appearance. (Meijr and van Nijf, 143-44)

In addition, no maps of roadways are known from before the Roman era. Therefore, it is quite difficult to determine the routing of roads in Palestine prior to this time.

For the Middle and Late Bronze ages, we are primarily dependent on extrabiblical literary sources, such as texts from Egypt, to supplement the Bible. However, because of the scarcity of evidence even from these sources, routes for travel in the period of the Pentateuch may be generally divided into two basic groups: (1) international highways; and (2) regional/local roads.

2.1. International Highways. During the Middle and Late Bronze ages there were two principal international highways through Palestine. The first, often called the Great Trunk Road, linked Egypt with virtually every part of the Levant. It ran from Memphis, the very important religious, political and economic center of Middle Egypt, to Pi-Ramesse, a city probably to be identified with Tell el-Dab^a, about seventeen miles southwest of Tanis (Currid, 125-28). From there the route proceeded to Sile (Tell Abu Sefa) in the Delta region of Lower Egypt. The roadway went along the coast of the Mediterranean Sea until it reached Gaza, a town in the coastal plain

of Palestine. The Bible refers to this section as the “way of the land of the Philistines” (Ex 13:17). The Egyptians called it the “Way of Horus” (AEL 1.103, 108, 231).

This highway in Palestine traveled to the north along the coast until it reached the Arunah Pass, and it turned slightly to the northeast to the city of Megiddo. From there it divided into three branches: (1) one went directly eastward to Beth-shean; (2) a second continued northward along the coast to Acco and points north; and (3) the final branch proceeded to the Sea of Galilee, north to Hazor and eventually to Damascus.

The Great Trunk Road was an important thoroughfare for trade and commerce between Egypt and Mesopotamia, but beyond that this highway was a main artery for military campaigns and conquests throughout the history of the ancient Near East. When Thutmose III (c. 1479-1425 B.C.) invaded Palestine, the route he took was from Sile to Gaza, then to Megiddo (ANET, 235). The same route was taken in later military campaigns under Ramesses II and Shoshenq (ANET, 255; Currid, 190-92).

The second principal route is called the King’s Highway. Although not as important as the Great Trunk Road for travel between Egypt and Syria, it was vital because of the many roads to Arabia branching from it. Its southern extension began in the area of Elath/Ezion-geber, at the northern tip of the Gulf of Aqabah, and it ran northward along the hill country of Transjordan through ancient Edom and Moab. The route went by the towns of Bozrah, Dibon, Heshbon and Amman. From there it proceeded north through ancient Gilead and Bashan, eventually reaching Damascus. The road was used frequently by the Egyptians in the Middle and Late Bronze Ages. Three topographical lists provide a description of the route: from the reigns of Thutmose III, Amenophis III (c. 1391-1353 B.C.), and Ramesses II (c. 1279-1213 B.C.) (Krahmalkov, 54-62). Part of this road was used by the Hebrews in their escape from Egypt under Moses (Num 20:17; 21:22).

2.2. Regional/Local Roads. Regional and local roads, paths, and tracks are very difficult to determine and trace for the pentateuchal period. They no doubt existed, but to give detail to their general existence is practically impossible. The use of the Hebrew word *derek* may at times imply the location of a roadway. For example, in

Deuteronomy 3:1 the biblical author explains that after the Hebrews had destroyed much of Sihon’s kingdom, they “turned and went up the road [*derek*] to Bashan.” In another instance, Jacob relates that he buried Rachel “on the road to Ephrath, that is, Bethlehem” (Gen 48:7). The precise routes of these roadways are unknown.

From Egyptian literature comes evidence that helps to define regional routes during the Middle and Late Bronze ages. For instance, when the Israelites left Egypt to go into the Sinai desert they seem to have used a primary road of Egyptian mining expeditions during the Middle and New Kingdoms (c. twentieth to twelfth centuries B.C.). Some of the military campaigns of the Egyptian pharaohs, such as Thutmose III, also employed regional roads through Palestine and thus can provide some general direction.

UR

Genesis 11:31 tells us that Abram departed from “Ur of the Chaldeans,” along with *Terah and his family, on a journey that would take him to Canaan. Modern archaeology has discovered a city of Ur in southern Mesopotamia that is believed by some to be the city of patriarchal origins.

1. Archaeological Discovery and Historical Reconstruction
2. Ur of Patriarchal Origins

1. Archaeological Discovery and Historical Reconstruction.

The city of Ur is one of the oldest and most famous in Mesopotamia, with a recorded history of over two millennia. It is identified with modern Tell al-Muqayyar, located on the Euphrates in southern Mesopotamia. In a sounding at the site in 1855 J. E. Taylor discovered a brick inscribed with a foundation text of Nabonidus (556-539 B.C.), which enabled H. C. Rawlinson to identify the modern tell with the ancient city of Ur. C. Thompson (1918) and J. E. Taylor (1919) conducted excavations at the site, but it was C. L. Woolley, director of the joint British Museum–University of Pennsylvania expedition, who conducted the first systematic investigation of the tell during the period 1922-1934.

The roughly elliptical tell measures approximately 1200 meters by 900 meters—not, therefore, one of the most extensive cities of its time—and the density of the dwellings has been taken to indicate an average population of around 24,000.

Findings at the tell point to the Early Dynastic (ED) III period (2600-2500 B.C.) and the Third Dynasty (2111-2003 B.C.), especially under Ur-Nammu and Shulgi, the first two kings of the Third Dynasty, as the high points in the city’s

history. It was during Ur-Nammu’s reign that the famous ziggurat began to be constructed. This three-story building measures 62.5 meters by 43 meters at its base, has a core composed of mud bricks protected by an outer skin of burned bricks, and was provided with a series of stairways that led to the temple of Nanna, built on top of the third story. Ur was the center of Mesopotamian worship of Nanna/Sin, the moon god, the same god who was said to reside in *Haran, the city to which Terah and his family migrated when they left Ur.

The city never recovered a political leadership role in Mesopotamia after its destruction at the end of the Third Dynasty, but it remained an important religious center, one that Nabonidus sought to enhance when he promoted the cult of the moon god.

Woolley made his most spectacular finds at the site when he uncovered a number of royal tombs, the earliest of which date to ED III. In two of these tombs, those of King Meskalamdug and Queen Puabi, he discovered an array of expensive, finely crafted artifacts. These included chariots, weapons made of gold, a solid gold helmet, stringed instruments of various shapes and sizes with gold overlay, and a wealth of jewelry in gold and lapis lazuli (for photographs see Roaf, 92-95). Human remains were also found buried with these artifacts; in one case as many as eighty bodies were found, mostly females. All this material and all these people were intended to serve the needs of the departed king and queen in the afterlife. The servants may have been given poison to drink once they were in the burial area, or they may even have been sacrificed prior to the funeral. However, the practice of killing servants to enable them to accompany the king or queen to the afterlife is not widely attested in Mesopotamian history.

The rich finds in these tombs indicate the wealth of the city during this period. The city had the advantage of proximity to the Persian Gulf, and its wealth was most probably derived from its lucrative involvement in trade along the Gulf, perhaps also from trade links with the Indus Valley.

Woolley's discovery of a three-meter-deep deposit of alluvial sand led him to assume that this was evidence for the Genesis *flood. There clearly was a major flood that affected the city, but subsequent finds of significant alluvial deposits at other sites in Mesopotamia come from quite different periods of history.

2. Ur of Patriarchal Origins.

According to Genesis 11:31, Abraham left "Ur of the Chaldeans" with Terah and his family on their proposed journey to Canaan. The descriptor *Chaldean* is not used of southern Mesopotamia until the tenth century at the earliest. Biblical *chronology, however, clearly indicates a date for Abraham much earlier than this (the debate about dating the patriarchs continues), and the reference to the Chaldeans here is most probably an editorial aid for readers for whom the Chaldeans were the dominant element in the region. Nevertheless, chronological difficulties associated with the use of the term *Chaldean* and traditions pointing to a location for Abraham's birthplace in the north of Mesopotamia, in the region of Haran, have raised questions about Tell al-Muqayyar/Ur's claim to fame as the city from which Terah and Abraham migrated.

The Haran region is closely associated with Terah, Abraham and their wider family in OT traditions (cf. Gen 24:10; 28:10), and a reputedly ancient tradition associates the Ur that Abraham left with the city of Urfa (Edessa), which is some thirty-two kilometers northwest of Haran. The tradition is, however, probably no earlier than the eighth or ninth century A.D. In any case, the term *Chaldean* would be an inappropriate descriptor of the region at any time in its history. The traditions that locate Abraham's birthplace in the south of Mesopotamia are more impressive than those supporting a northern locale. Local traditions that have survived in the south bear witness to a continuing belief about Abraham's birthplace there, even though they are often vague. Both Eupolemos (c. 150 B.C.) and Josephus were convinced that Abraham's birthplace was the southern city of Ur.

The Genesis text gives no indication whether

Terah's decision to leave Ur was based on any economic, political, military or some other change in the city's prospects and therefore in his relationship to it. Neither does it indicate what role Terah and his family, whose origins are clearly among the peoples of the Haran region, was playing in the life and commerce of the city of Ur.

Since detailed dating of the patriarchs is still a matter of considerable debate, there is no scholarly agreement about which, if any, changes in Ur's fortunes might have precipitated this migration, which was to make such a lasting impression on human affairs.

WARFARE

Warfare is generally understood to be armed conflict by one political unit against another with the purpose of destroying either the opponent or its will to resist. This article briefly examines the conduct of warfare found in the Pentateuch, as well as instructions provided for the waging of warfare in Israel. Ethical issues related to the conduct of war by Israel in the Pentateuch conclude the study.

1. General
2. Vocabulary
3. Accounts of Warfare
4. Ethics of Warfare

1. General.

Conflict is a common event recorded within the OT. Some of that conflict is between God and humanity and is found from the opening chapters of Genesis to the closing chapters of the Bible. Much of the conflict is between individuals, from *Cain and *Abel in Genesis to divorce between husband and wife in Malachi. So, too, there is much conflict between political units (i.e., warfare) from the account of *Abraham and the five kings in Genesis 14 to the great nations at war with one another in the eschatological portions of Daniel and Zechariah.

Not only do people from various walks of life engage in warfare within the Pentateuch (for individuals engaged in warfare, see 3 below), but God himself is portrayed as a warrior. While T. Longman and others argue that there are overtones of warfare in the divine conflict with

chaos in the *creation account (*see* Cosmology), the portrayal of God as warrior in the Pentateuch is most evident in Exodus 15:3, where God is said to be a warrior who battles the forces of *Egypt on behalf of Israel. He is understood to be present in the battle camp in Deuteronomy 23:14, where there is implication that failure to maintain ritual purity would result not in his aid and comfort to Israel but in his rejection of and hostility toward them. The presence of the pillar of fire and cloud, first in evidence in Exodus 13:21-22 and used as a blocking force in Exodus 14:19-20, 24-25, is closely associated with the God of Israel, who in Numbers 10:34-36 is said to rise and scatter the enemies of Israel.

2. Vocabulary.

While a full discussion of the terminology of warfare used in the Pentateuch lies beyond the scope of this brief article, the more common terms are addressed below in alphabetic order. (The term often understood to refer to “holy war,” *ḥerem*, is discussed in a separate article by that name.)

2.1. *Ḥāmūšim*. This term, which means “arrayed for battle,” is found just twice: in Exodus 13:18, with respect to the movement of the Israelites from Egypt to the Red Sea; and in Numbers 32:17 (where *ḥāmūšim* should be read for *ḥūšim*, with the LXX and Vulgate), where the tribes settling in the Transjordan agree to participate in the invasion of Cisjordan. In both cases a military formation or gathering of some sort is intended. It is possible that the word’s lexical relationship to the number “five” is indicative of an arrangement similar to that described in Numbers 2, though the term is not used there. Such forces would move with a unit positioned forward, a unit to its rear, a unit to each side to protect the column’s flanks, and with the leader-

ship occupying a fifth and central position.

2.2. *Lāham*. This verb, meaning “to wage war,” is found seventeen times in the Pentateuch, only in the Niphal. The seventeen instances relate to nine occasions, more frequently to discussions about warfare rather than to the narrative description of combat itself. Even in narrative texts *lāham* describes combat fighting in only the most general of terms. For example, the king of Egypt is concerned that Israel may join forces hostile to Egypt (Ex 1:10). Likewise, several texts state that Yahweh will fight for his people (Ex 14:14, 25; Deut 1:30; 3:22). Numbers 21:26 notes past actions by Sihon, and Numbers 22:11 reports that Balak is planning warfare. Deuteronomy 1:41-42 reports a discussion of Israel’s decision to go to war against the Canaanites, and Deuteronomy 20:4, 10, 19 offers rules for conducting warfare. On the other hand, the verb is used three times to describe active warfare against the Amalekites (Ex 17:8-10) and twice to note actual hostilities by the king of Arad and by Sihon against Israel (Num 21:1, 23).

2.3. *Milhamā*. This substantive form of the preceding root is found thirty-seven times in the Pentateuch, predominantly in Numbers and Deuteronomy. It may be understood as warfare in a general sense in a number of cases (e.g., Ex 13:17; 17:16; 32:17; Num 21:14; 31:27; 32:20, 27, 29; Deut 4:34; 20:5, 6, 7) but also relates to certain aspects of warfare. For example, *milhamā* appears in construct with “men” to designate a person engaging in warfare, a soldier or warrior (Num 31:28, 49; Deut 2:14, 16). Similarly, the victory song following the dramatic events at the Red Sea likens Israel’s God to such a warrior (Ex 15:3). Deuteronomy 1:41 uses *milhamā* to signify a weapon of warfare.

Frequently *milhamā* is used with a variety of verbs to signify the physical relationship of the combatants to a battle. One departs (*yāšāʾ*) for the purpose of engaging in warfare (Num 21:33; Deut 20:1; 21:10). One approaches (*qārāʾ*) the field of conflict (Ex 1:10; Deut 2:32; 3:1) and arrays one’s forces (*ʿarak*) to engage in battle (Gen 14:8). One actually engages in or enters into (*bōʾ*) hostilities (Num 10:9; 31:21; 32:6), incites (*garāʾ*) hostilities (Deut 2:9, 24), then returns back home (*bōʾ*) from the field (Num 31:14). When combined with the verb *ʿāsā*, *milhamā* signifies the general waging of warfare (Gen 14:2; Deut 20:12, 20).

2.4. *Šābāʾ*. This verb is found in the Qal in the Pentateuch on six occasions, but only in Numbers 31:7, 42 does it refer to warfare. Elsewhere it is used of those who provide various services in the religious precinct (cf. 1 Sam 2:22).

The substantive for this root, also *šābāʾ*, is found nearly ninety times in the Pentateuch, the great majority in Numbers. It is not found in Leviticus. The word carries a variety of meanings associated with various groupings of people or of heavenly objects (units, hosts, corps). Most frequently in the Pentateuch, however, the word is associated with military units. In Genesis 21 and 26 Phicol is said to be the leader of a military unit. In Exodus 6 and 12 Israel is said to move in tribal units, which also appear to have a military responsibility to guard the nation assigned to them. In Deuteronomy 20 and 24 the word is used in the context of mustering for military service. In Numbers 1, 2, 4, 8, 10, 26, 31 and 32 the word is used exclusively in the context of military formations or activities. In Numbers 33 the word is used in a summary fashion, as it is in Exodus, to signify the movement of tribal units with a military responsibility presumably assigned to them. It should be noted that the expression “Lord of hosts,” found widely elsewhere in the OT, is not found in the Pentateuch.

2.5. *Šūr* and *Šārar*. The verbs *šūr* (I Qal) and *šārar* (I Hiphil) are used with the meaning “to besiege” (Deut 20:12; 28:52). The verbs *šūr* (II Qal) and *šārar* (II Qal) are also used with the more general meaning “to attack” (Ex 23:22; Num 10:9; 25:18; 33:55; Deut 2:9, 19). The substantive of the root *šūr*, *māšōr*, is found twice in Deuteronomy 20:19, 20, once with the general sense of a siege and once as a word for the siege works themselves.

2.6. *Qārab*. This verb is found in the Qal in the Pentateuch forty-five times. It generally means “to draw near” (rarely in the sense of ritual activity, where the Hiphil is more commonly used), normally without hostile intent. Nevertheless the act of drawing near to another can be deemed an unfriendly action (Ex 14:20; Deut 2:19, 37; 20:2, 10; 25:11).

3. Accounts of Warfare.

Both the patriarchal period and the period following the *exodus from Egypt record armed conflict between Israel (or its forebears) and other political units. With rare exception the battle is described more for the divine intervention

than for its technical conduct, which is the particular interest of this article.

3.1. *Early Accounts.* The oldest literature speaks to the warlike capacities of the various tribes in terms that do not often condemn but rather usually praise the aggressive behavior of certain groups. Thus Genesis 49 records praise for *Judah (Gen 49:8-11), *Dan (Gen 49:17), *Joseph (Gen 49:23-24) and *Benjamin (Gen 49:27). On the other hand, the same poem condemns the actions of *Simeon and *Levi (Gen 49:5-7; cf. Gen 34) against Shechem in a time of peace. Exodus 15:1-18 records a triumph song celebrating the actions of the divine warrior against the army of Egypt as God intervened to rescue his people from their oppressors. Deuteronomy 33 combines these themes, expressing the protection of the divine warrior and the particular strengths of some of the tribal groups: Judah (Deut 33:7), Joseph (Deut 33:17), *Gad (Deut 33:20-21) and Dan (Deut 33:22).

3.2. *Battle Accounts.* There is far greater interest in the political ramifications of the oppression of God's people and their restitution following armed conflict than in any recounting of the battles themselves. For example, the reference to the Book of the Wars of Yahweh (Num 21:14), notwithstanding the provision of its title, provides only political boundary information without regard to military action. Nevertheless, the following battles are significant.

3.2.1. *Abraham.* The conflict between the forces arrayed with Abraham and the marauders from the north (Gen 14) is typical of most of the accounts rendered in the Pentateuch. The account of the initial battle mentions only the array of the northern forces against those of the plain and the latter's confusion and defeat among the tar pits (Gen 14:8-10). The concern of the writer is the capture of *Lot and his family. Abraham's enlistment of allies for support, his marshaling of his forces, his pursuit of the northern force and his recapture of Lot and the others taken captive is merely summarized (Gen 14:13-16). Much more emphasis is placed upon the subsequent encounters between Abraham, *Melchizedek and the king of Sodom and their negotiations with regard to the spoils (Gen 14:17-24).

3.2.2. *The Exodus.* The telling of the exploits of the exodus from Egypt emphasize the helplessness of Israel and the mighty acts of God against the overpowering capacities of Egypt to

wage war. The battle is God's, and thus the powers are cosmic and do not involve alliances, military formations, weapons of warfare or the leadership structure necessary to carry out hostilities. This divine intervention sets something of a paradigm for the reporting of all subsequent warfare in the Pentateuch. The emphasis is upon the mighty acts of God on behalf of an inadequate rabble in arms (cf. Num 10:35-36).

3.2.3. *The Wilderness.* Following the exodus, Israel appears both to encamp and to proceed forward between encampments in formations that suggest some military organization. The five-part organization described in Numbers 2:1-34 and 10:11-28—with the leadership placed in a central location among the other tribal groups, each composed of three tribal units with a designated leader—suggests a military formation arranged for command and control. This formation, to be held while in hostile territory, is defensive on all fronts, though the weaker numbers to the west (rear) and south (right flank) suggest that danger was more likely to be encountered as they moved east (forward) and from the north (left flank). While military formation, particularly the hiding of an ambushing force, is sometimes discussed in the accounts of later military exploits (such as at Ai and Bethel in Josh 8), this is the only record of military formation in the Pentateuch.

3.2.4. *Amalek and First Invasion.* The attack by Amalek against Israel at Rephidim (Ex 17:8-13; cf. Deut 25:17-19) is remarkably devoid of description save for the comment that the initial attack was upon the rear of the column and among the stragglers (Deut 25:18). Similarly, the defeat of a portion of Israel at the hands of the Amalekites and Canaanites (Num 14:39-45; cf. Deut 1:41-44) emphasizes only the failure to go to battle without the blessing of God or the appointed leadership. The only aspect of warfare noted is that Israel ascended to the ridge in attacking the inhabitants. This description suggests a frontal assault against strong defenders, an attack lacking surprise and cunning.

3.2.5. *Arad to Bashan.* The campaigns from Arad to Bashan in Numbers 21—25 also reveal little of the strategies or tactics of warfare. The surprise attack by the Canaanite king of Arad (Num 21:1-3) begins with an initial success on the part of the attacker, but it raises such hostility on the part of Israel that they defeat the army and go town to town destroying all the inhabit-

ants to the extent that the area is designated a waste, Hormah.

The attack by Sihon and the Amorites at Jahaz (Num 21:23-24; cf. Deut 2:32-35) recounts only their attack against Israel's encampment, most likely now in a defensive posture on the desert fringes. The defeat of the army of the Amorites, who prior to this period had defeated the Moabites, driving them south of the Arnon (see Num 21:26-30), allows the Israelites to press northward to take possession of the land to the east of the Jordan from the Arnon in the south to the Jabbok in the north.

In similar fashion the account of the defeat of Og king of Bashan (Num 21:33-35; cf. Deut 3:1) provides only the notice that Og came out to attack Israel and was defeated, laying open his country to Israelite occupation. Finally, the account with regard to Moab and Midian and the seer *Balaam (Num 22—25) is interesting for its description of the negotiations among allies prior to waging war against what is seen as a dangerous enemy. The failure of a satisfactory prognosis results in diplomatic subterfuge (Num 24:25—25:18; cf. 31:8, 16).

3.3. Instructions for Waging Warfare. Various instructions with regard to activities related to warfare—the calling up of a citizen army, the terms to propose to the enemy and the setting up of a siege—are found in Deuteronomy 20. With its reference to those who have planted a vineyard or built a house, these instructions appear more appropriate to warfare conducted from a national homeland than they do for tribal groups encamped temporarily on the desert fringe. They are thus provided in the context of Deuteronomy with a view to the future, not as indicative of the method by which warfare was conducted or even ought to have been conducted in the context of the period of early Israelite history recounted in the Pentateuch. No such instructions, however, are found elsewhere in the OT, and thus these are of significant interest to the student interested in the conduct of war during the later periods of the Israelite monarchy.

3.3.1. Fear. Of first importance is the need to be certain that those going into battle are emotionally and religiously prepared for the dangers of combat. Thus the priests assure the soldiers that God fights for them. The officers then ascertain whether any would rather return home than fight, lest they forfeit the fruit of their la-

bors or fail to leave offspring to their widows. The truly fearful would likely endanger their comrades and thus should be eliminated from the fight. Once those who might defect are winnowed from the fighting force, subordinate leaders are selected.

3.3.2. Negotiations. Next in importance is the recognition that warfare is only conducted when the enemy will not acquiesce to the demand to surrender. Those surrendering are not to forfeit their lives. In the event of the necessity of military operations, only the adult men forfeit their lives for their resistance. Women and children as well as livestock and other property become the possession of the Israelites. The exception are those peoples and cities under **hērem*. According to Deuteronomy 20:16-18, certain people groups within the land which Israel is to possess are to be utterly destroyed.

3.3.3. Siege Warfare. With respect to siege warfare, the instructions state only that fruit-bearing trees may not be destroyed in the construction of siege works. The destruction of wealth-producing agriculture is unnecessary, since fruit-bearing trees are seldom sufficiently large to be structurally significant in construction. Moreover, if Israel should succeed in overcoming the city, the future inhabitants would immediately benefit from a food source that would otherwise be decades in cultivation.

4. Ethics of Warfare.

Perhaps to justify the horrors of war perpetrated by a people deemed to be chosen specially by a just and holy God, past biblical interpreters have assumed that the war conducted by the Israelites was always justified in some way, either as self-defense or as a warfare commanded by God. The greatest difficulty is found with respect to warfare initiated by the people of God against others, an event found only once in the Pentateuch.

4.1. Defensive Warfare. As noted above, many of the engagements were initiated by other political units, forcing Israel or its forebears to defend themselves. The attacks against Israel by Egypt at the Red Sea, by Amalek at Rephidim, by the king of Arad at Hormah, by Sihon at Jahaz and by Og of Bashan all result in defensive engagements, although the entry of Israel into areas controlled by the kings of Arad, the Amorites and Bashan were likely seen by those three as potentially offensive in nature. Abra-

ham's fight with the kings in Genesis 14 is not strictly defensive but in its wider context can be understood as a response to a hostile and unprovoked raid against his near kin, Lot.

4.2. "Holy War." On some occasions war is commanded by God. Within biblical scholarship such warfare is frequently spoken of as a kind of "holy war," different from the brutishness of ordinary warfare. This "holy war" is seen as primarily defensive by some (see von Rad regarding the oldest biblical material) or as a divine reordering (see Boling and Wright, 27-37). The association of the Hebrew term *herem* with some of the battles recorded in Joshua, as well as its use in the Pentateuch, has led some to this conclusion (see Niditch for a review of the literature).

4.3. Offensive Warfare. If one dismisses the entry of Israel into territory controlled by the kings of Arad, the Amorites and Bashan as neutral or friendly in nature, the only hostile warfare instigated by Israel in the Pentateuch is its attack against the Canaanites in Numbers 14:39-45, which results in a sound defeat. The initiation of this attack is rooted in the promise of God to deliver the country of the Canaanites to Israel (Num 13:2). Only when the people recoil in disbelief upon hearing the report of their spies is the offer postponed for forty years (Num 14:33). The defeat is thus seen not as a result of offensive warfare but as a result of disobedience against the orders of God.

WEALTH AND POVERTY

The OT demonstrates throughout a deep concern for the poor and, while sometimes perceiv-

ing riches as a gift from God, also consistently warns about the dangers of wealth. Recently some scholars have questioned this commitment to altruism as inadequate or even as ultimately serving the class interests of later redactors (cf. Pleins, Rodd; Sneed). This negative ideological stance, however, does not do justice to the pervasive ethical impulse of the text. Through its narratives, legislation and nuanced vocabulary the Pentateuch provides a clear testimony of the demand to care for the defenseless and to be a gracious steward of material possessions.

1. The Choice of a Methodological Approach
2. Ancient Near Eastern Legislation
3. Foundational Narratives
4. Wealth as Gift and Responsibility
5. Poverty: Issues and Solutions
6. Wealth and Poverty in the Rest of the Old Testament

1. The Choice of a Methodological Approach.

Critical theories regarding authorship and composition are relevant to the discussion of topics of ethical concern in the Pentateuch. Based on differences in structure and content, many scholars have related the three primary series of laws to diverse time periods: the *book of the covenant (Ex 20:22—23:33) to the Israelite monarchic period, Deuteronomy to the reforms of Josiah in the seventh century and the Holiness Code (Lev 17/18—26) to the exilic or postexilic period. They have claimed that these dissimilarities reflect distinct theological constructs and ideological agendas. In other words, moral concepts and institutional realities varied over time. Legislation pertinent to issues of wealth and poverty that have been utilized as sample cases for this notion of a legal evolution include, for example, the Jubilee (North, 191-212; Westbrook, 36-57; Crüsemann, 283-85). In addition, many date the concept of *covenant late and dismiss it as a significant basis for the moral demands of God before the seventh century (Nicholson). A critical perspective also is applied to the narrative sections of the Pentateuch, with various proposals put forward concerning the identity and dating of the Yahwist, Elohist and Priestly strands (see Source Criticism).

These interpretations, of course, impact the understanding of the Pentateuch's social teaching in terms of the provenance, interconnections and motivations of its moral demands and

models. This is significant because these critical reconstructions do not coincide with the traditional biblical presentation of life in ancient Israel. From these perspectives, a proper reading of the texts would not lead to a uniform treatment of the biblical material but rather should attempt to trace the changes in ethical thought over time.

Critical pentateuchal scholarship, however, is in flux. New views of the historical and textual data are emerging, and some of the past consensus is beginning to break down (e.g., Crüsemann). While not denying that Israel's social mores and institutions developed across the centuries, our alternative to trying to wed the consideration of wealth and poverty in the Pentateuch to any particular hypothetical textual and sociohistorical reconstruction is to ground the presentation in more of a synchronic analysis. Such an approach can acknowledge the variety in the information, even as it attempts to offer a more comprehensive picture, and can appreciate as well the broader sociocultural backdrop of the ancient Near Eastern context.

2. Ancient Near Eastern Legislation.

Poverty was not an uncommon experience in ancient times. Diseases, wars, market fluctuations (both national and international), heavy tributary demands and agricultural disasters such as crop failure, drought and insect plagues all would have contributed to the ruin of a family, village, city or country. Ancient Near Eastern literature reflects these harsh realities and demonstrates attention to the poor in several ways.

The prologues of several law codes (e.g., the Laws of Ur-Nammu, c. 2100 B.C., *ANET*, 523; Lipit-Ishtar, c. 1930 B.C., *ANET*, 159; Hammurabi, c. 1750 B.C., *ANET*, 164-65) declare that the care of the poor is a virtue of a good king and utilize the formula "I established justice [Akk. *mišārum*] in the land" to emphasize the promulgation of legislation on behalf of the needy. (Scholars question whether these pronouncements are better taken as political propaganda rather than as indicative of actual legal practice.) Second, these codes contain specific laws designed to deal with a number of the causes of poverty and to help particular groups of the unfortunate. For example, there is legislation to protect *widows and *orphans and to regulate debt *slavery (e.g., Code of Hammurabi §§114-119; Middle Assyrian Laws §§C2-3; cf. Chirich-

igno, 30-100). Third, other literary genres give voice to the distress of the disenfranchised (e.g., in Egypt, The Peasant's Lament, *ANET*, 407-10). Lastly, at their coronation monarchs occasionally proclaimed exoneration from debts, granted amnesty for prisoners and slaves and declared certain cities exempt from taxes, corvée and military service. Examples of these royal edicts can be found across the ancient Near East (cf. Chirichigno, 85-92; Weinfeld, 75-110, 133-51), of which the most complete extant decree comes from the reign of Ammi-šaduqa of Babylon (1646-1626 B.C., *ANET*, 526-28).

It is not difficult to recognize parallels with biblical legislation, as the OT also deals with the victims of poverty and offers a variety of solutions for their plight. The uniqueness of the biblical material in some measure lies in some of the details of the legal guidelines but is especially apparent in the theological motivations for the moral life.

3. Foundational Narratives.

Three narrative complexes serve as the primary theological background for the Pentateuch's treatment of wealth and poverty. Their goal was to shape a peculiar national ethos and lifestyle (Birch; cf. Wenham).

The first set of narratives is the description of *creation in Genesis 1—2. Out of the formlessness and emptiness (Gen 1:2) God shaped and filled a world that he blessed (Gen 1:22, 28) and deemed "good" (Gen 1:10, 12, 18, 21, 25)—"very good" after the creation of humans in his image (Gen 1:26-27, 31). The account culminates with the establishment of a day of rest, a day specifically set aside and blessed by God (Gen 2:1-3). According to Genesis 2, Yahweh God placed Adam in a fruitful garden to enjoy fellowship with him and the companionship of the woman (Gen 2:15-25; 3:8). They were charged with working this garden as God's representatives (Gen 2:15-20). In sum, all the earth is Yahweh's, and everything and everyone are the work of his hands. Each human potentially is a recipient of the divine blessing, both to enjoy the bounty of this watered paradise and to participate in the creation of life by being fruitful and multiplying. Humans are to live in accordance with God's will and to respect the rhythm of life, which is celebrated with the *sabbath (cf. Wright 1983, 67-87).

The subsequent downward spiral into rebel-

lion, violence and death in Genesis 3—11 sets the stage for the second narrative complex (Gen 12—50). Humanity was judged by God (Gen 3; 6—8), and the failure of *Noah and the hubris at the tower of *Babel (Gen 9; 11) suggest even further alienation from the Creator. Against this series of reversals, Abram/*Abraham was chosen as the mediator of God's blessing to "all the families of the earth," a purpose reiterated to his descendants (Gen 12:2-3; 18:18; 22:17-18; 26:4; 28:14). The blessing worked itself out in both material and spiritual dimensions. This mission was successful to the degree that the patriarchs lived exemplary lives before other peoples and maintained a proper relationship with Yahweh (Gen 15:6; 18:19; 20:7; 21:22-24; 22:12, 18; 26:5, 28-29; 30:27; 41:39). Their place of activity was the land of Canaan (Gen 12:1, 5-9; 13:14-18; 15:7; 17:3-8; 26:1-5; 28:15-22; 50:24-25), where the divine blessing was to be made visible and incarnated in the obedient life of God's people (cf. Carroll R.).

The final set of narratives—and the most important for social concern—comprises the exodus from Egypt. Israel was miraculously liberated from oppression under *Pharaoh. This merciful deliverance by the God of the patriarchs defined the character of Yahweh in a special way (Ex 2:23—3:22; 6:2-9; 14:30—15:21). He heard the cry of the oppressed and led them to a new way of life in another place. This freedom from slavery was the beginning of the pilgrimage to create a different kind of people, a people constituted at Sinai by the *law and a covenant (Ex 19—24). From there Israel traveled to the Promised *Land "that flows with milk and honey" (Ex 3:8, 17; 13:5; 33:3; Lev 20:24; Num 13:27; 14:7-8). This land was Yahweh's (Lev 25:23) and was to be holy; here God would manifest himself in a special way at the *tabernacle (Ex 25—40; Lev 26:11-12; Deut 12:2-12, 18; 14:23, 26). The comprehension of the land of Canaan as gift and presence, in combination with the aforementioned notion of the earth as God's creation, were to be the basis of a different estimation of land possession and tenure (cf. Wright 1990; Habel; Millar, 67-104).

4. Wealth as Gift and Responsibility.

The patriarchal narratives recount the acquisition of possessions by God's people, both in the Promised Land and in Egypt (Gen 14:22-24; 20:14-16; 24:35; 26:12-13; 30:43; 47:27; Ex 11:2-3;

12:35-36). Yahweh later pledged to provide homes, good crops, fruitful trees and vineyards in Canaan after the dispossession of its inhabitants (Deut 6:10-11; 8:7-10).

At one level these material gifts echoed the divine purpose at creation to bless humanity and were a particular expression of the mandate to multiply and fill the earth (note Gen 24:35; 26:12-14; 47:27). Prosperity ideally would lead to a spirit of generosity toward others and to a greater trust in divine providence: Abram allowed Lot to choose his residence and was rewarded with the hope of a greater possession (Gen 13:8-17); *Jacob shared with *Esau from what he had gained in his sojourn in Paddan-aram (Gen 33:10-11); and Joseph sent his brothers home with abundant provisions (Gen 45:19-24; 50:20).

The law encouraged those who had material means not to take advantage of the less fortunate: boundary lines to family properties were to be preserved (Deut 19:14; 27:17), scales kept true (Lev 19:35-36), negotiations done equitably (Lev 25:13-17), legal proceedings not perverted (Ex 23:1-8; Lev 19:15-18; Deut 16:19) and interest not charged to fellow Israelites (Ex 22:25-27 [MT 22:24-26]; Lev 25:35-37; Deut 23:19-20). In addition, harvesters were to leave sections of the fields for reaping by the poor (Lev 19:9-10; Deut 24:19-22).

Gratitude toward Yahweh for material plenty was to be expressed concretely by bringing tithes and offerings to the tent of meeting (e.g., Deut 14:22-29). Participation in the agricultural feasts was another means of acknowledging God's provision and celebrating his goodness (e.g. Ex 34:22; Lev 23:15-21, 39-43; Deut 16:16-17). Even the poor were to bring offerings to God and to fulfill their vows, even though theirs were adjusted to fit their economic status (Lev 12:8; 14:21-22; 27:8). Worship, in other words, was not the prerogative simply of the comfortable and secure but was designed to allow all to reflect upon the blessings of the Creator and the mercies of the nation's redeemer.

Underlying these directives were reminders not to forget the implications of creation and especially of the exodus. The experience of the grace of God was to engender socioethical sensitivity (e.g., Ex 20:11; 22:21-24 [MT 22:20-23]; 23:9; Deut 5:15; 10:12-22). Failure to comply with Yahweh's law and the violation of the rights of the weak would bring natural calamities, invasion and ultimately expulsion from the land itself—

that is, the loss of wealth (Lev 26:14-39; Deut 28:15-68). The enjoyment of wealth, therefore, was to be appreciated as a stewardship, a responsibility and a motivation for worship. A nation thus shaped by faithfulness and benevolence would be a witness to the world of divine blessing (Deut 4:5-8; 15:6).

5. Poverty: Issues and Solutions.

5.1. The Vocabulary of Poverty. The OT has a varied vocabulary to refer to the poor, and on occasion it might seem that several of the terms communicate different nuances about poverty (Pleins). Nevertheless, no neat and consistent distinctions can be drawn between them, as they can appear in tandem or in parallel (e.g., Deut 15:11; 24:14). The most prominent words for the poor in the Pentateuch are *dal* (TDOT 3.208-30; NIDOTTE 1.951-54), *ʿebyôn* (TDOT 1.27-41; NIDOTTE 1.228-32) and *ʿānî* (ThWAT 6.247-56; NIDOTTE 3.454-64). The causes of poverty were multiple, and several groups (such as widows, orphans, resident aliens) were more exposed to its impact. The OT underscores oppression as a major component of the life of the poor and here too offers a rich lexicon to denote this exploitation (e.g., *lhš*, TDOT 7.529-33; NIDOTTE 2.792-93; *šq*, NIDOTTE 3.557-58; Hanks, 3-40).

Dal might denote poor peasant farmers. Though they suffered economic hardship, they were not totally destitute since it was assumed that they were able to offer sacrifices (Lev 14:21). The vision of the emaciated cows of Genesis 41:19 is a graphic representation of the weakness and powerlessness of the *dal*. The *ʿebyôn* were the needy who were in more desperate straits (e.g., Ex 23:6, 10-11; cf. Is 32:6-7); scholars have suggested that the term referred to landless day laborers. The word *ʿānî* designated the afflicted and humble poor who struggled to survive and had to fall back on the generosity of others (e.g., Lev 19:9-10; 23:22). All of these terms described economically and socially dependent individuals or groups (although probably not social classes in the modern sense of the term) that, often without property and social status, were unable to sustain a family and successfully negotiate the severe vicissitudes of daily life in the ancient world.

5.2. Legislation for the Poor. The laws of the Pentateuch attempted to provide a safety net for the unfortunate and vulnerable members of society. The Pentateuch prescribed a series of

charitable acts and legal measures that were designed to aid the poor in their distress. Mention has already been made of the provisions for gleaning and the call for just dealings at the city gates. All of these directives were designed to help preserve the stability of Israel's multiple household, patrilocal, ancestral land-tenure system. If observed, these laws would have prevented the creation of great landed estates (latifundialization) and the wrongful accumulation of land at the expense of the defenseless.

The precariousness of existence made falling into debt a constant danger. In Israel, as in the rest of the ancient Near East, the accumulation of debt could eventually lead to debt slavery, where children (Ex 21:7-11; cf. 2 Kings 4:1) and even heads of households would be sold to pay off a debt. The sabbatical manumission laws set the limit for such an arrangement at six years and laid down guidelines for the pardoning of debts and release from servitude which could help the individual be reincorporated into civil society (Ex 21:1-11; Deut 15:1-18). The most extensive legislation dealing with the impoverishment of an individual or family was the Jubilee (Lev 25; for an explanation of how to coordinate these manumission laws, see Chirichigno).

The Jubilee was to be proclaimed at regular intervals (of either forty-nine or fifty years; see North, 10-34; Chirichigno, 317-21). Scholars debate whether the Jubilee was an early or late idea and whether it was a utopian ideal or a viable arrangement (Wright 1990, 125-28; Chirichigno, 354-57). The text envisions three successive stages of impoverishment with corresponding policies to remedy each situation, with the Jubilee as the final solution if all else failed. Initially, an Israelite would sell a part of his property, which could be redeemed later by either a near kinsman or himself (Lev 25:25-28); in the second situation, the one in difficulty could work for another Israelite and should be able to receive interest-free loans (Lev 25:35-38); the lowest level of misfortune required entry into debt slavery (Lev 25:39-55).

This passage returns repeatedly to the exodus account as the motivation for gracious treatment of the poor (Lev 25:38, 42, 55). In addition, the declaration that Yahweh was the divine patron who blessed the land (Lev 25:23; cf. Deut 15:4-6, 10) and the focus on the sabbath (Lev 25:1-7; cf. Lev 26:34-35, 43) pointed back ultimately to the creation and first sabbath rest of

Genesis 1—2. The Creator decreed that his established rhythm of life be lived out within the history of his people. The Jubilee also had sacral connections: the trumpet sounded on the Day of *Atonement (Lev 25:9). Once again, social ethics and worship went hand in hand.

The context for these measures was the extended family and clan (the *bêt 'āb* and *mīšpāhā*; cf. Gottwald, 237-341; Wright 1990, 48-55; Perdue, 174-79; Janzen, 26-105). This sociocultural circumstance left several groups within Israel especially vulnerable. On the one hand, widows and orphans had no family head to provide protection and guarantee an inheritance. Several laws, such as allowances at harvest (Deut 24:19-22; cf. Lev 19:10; 23:22) and a triennial tithe (Deut 14:28-29), afforded them periodic charity. Another group bereft of a kinship support system and reliant on Israelite hospitality was the alien (*gēr*; *TDOT* 2.439-49, *NIDOTTE* 1.836-39). These were those who had left their native lands because of war or famine (e.g., Gen 21:23; 47:4) and had come to reside in Israel. They were to be included in the gleaning provision, the triennial tithe, the sabbath rest (Ex 20:10; 23:12) and several of the feasts (Deut 16:11-15). Widows, orphans and aliens were not to be deprived of justice, since Yahweh was their protector (Deut 1:16; 10:18; 24:14-15, 17; 27:19). Israel was to be gracious, because it too had suffered as an alien in Egypt (Ex 22:21-24 [MT 22:20-23]; 23:9; Deut 10:19; 24:18) and even now was an alien or tenant on Yahweh's land (Lev 25:23). In this regard Deuteronomy 15 is significant. The relationship of "brother" and the obligation to a kinsperson was extended to embrace the entire community (Deut 15:2-3, 7, 9, 11-12; cf. Houston). Once again, the text appealed to the exodus to orient attitudes and actions toward the poor (Deut 15:15). The blessing experienced by the nation would be determined by their care for the needy, who could appeal directly to Yahweh their protector (Deut 15:4-6, 9-11).

The power and the limitation of these laws was that there were no formal sanctions for complying with these moral demands. Israel was to respond to theological and moral persuasion and to shape its character to mirror the person and actions of Yahweh.

6. Wealth and Poverty in the Rest of the Old Testament.

The care for the poor in the rest of the OT can

be related to the Pentateuch. If one holds to the view that the pentateuchal material is early and an important foundation to subsequent revelation, then these passages could very well be consciously alluding to or building upon the first five books of the OT. Even if a contrary reconstruction of the history of the *religion of Israel is advocated, it still is admitted that all of the OT to some degree shares echoes of a common moral ethos. For example, kings were commanded not to accumulate possessions inappropriately but instead were to gain knowledge of the law (Deut 17:17); Rehoboam and Ahab ignored this principle (see below). The sabbath was supposed to be inseparable from graciousness to the needy, so the prophetic denunciation of irresponsible religiosity is readily understood. Some scholars also argue that the prophets referred to violations of specific laws (e.g., for Amos, see Niehaus, 322; cf. Kaiser).

At the same time, while some data suggest these connections, other material points to development and amplification of what is contained in the Pentateuch. (Of course, once again one's critical posture determines how these are defined and explained.) Proverbs particularly stresses the individual's actions instead of citing Israel's laws for the community. On the other hand, the prophets and the historical narratives provide names and faces to the law's stipulations—that is, the laws are incarnated, so to speak, for good or bad, in the lives of individuals. Finally, the eschatological hope pictures a day when these norms will be a reality.

The conscientious use of wealth and concern for the poor continued as moral virtues throughout the OT (Pleins; cf. Gutiérrez, 287-306). In his defense Job recounted his care of the needy (Job 29; 31:13-23; cf. 24:1-25), and Nehemiah decried those who took advantage of fellow Israelites who were in debt (Neh 5). Even kings, who at times reveled in opulence, were held accountable for unjust gain. For example, Rehoboam witnessed the division of the kingdom for failing to lighten the load on the nation (1 Kings 12:1-19), and Ahab was denounced for acquiring Naboth's vineyard (1 Kings 21:17-29). The possession of riches should be accompanied by wisdom and integrity (Ps 112; Prov 3:13-18; 8:18-20; 22:1; 30:7-9), for wealth can be fleeting (Prov 27:23-27), especially in the hands of the unrighteous (Ps 49:5-20 [MT 49:6-21]; 62:9-10 [MT 62:10-11]; Prov 11:28).

Proverbs has much to say about the poor. On the one hand, individuals are warned that poverty can come because of laziness (Prov 6:6-11; 24:30-34), the pursuit of pleasure (Prov 21:17; 23:19-21), greed (Prov 11:24; 28:22) and the failure to heed counsel (Prov 13:15-18). At the same time, those with means and in positions of power are admonished not to oppress the poor (Prov 13:23; 14:21; 21:13; 22:16; 28:3, 15, 27), since they are under Yahweh's special care (Prov 14:31; 17:5; 22:2, 22-23; 29:13). Some suggest that the various perspectives on the poor in Proverbs reflect diverse social settings (e.g., Whybray), but sensitivity toward the needy is everywhere evident.

The Psalms champion the cause of the poor and oppressed (Ps 10; 12) and link ethical concern for their plight with true worship (Ps 15) and worthy rulers (Ps 72; 82). At times, the term *poor* can refer in a metaphorical way to the pious in general, who humbly trust in God for sustenance and protection (e.g., Ps 37; cf. Zeph 2:2-3; 3:12-13).

The powerful rhetoric of the prophetic literature repeatedly decries the abuse of the needy (Sicre). The absence of justice in the land turned worship into hypocritical religiosity (e.g., Is 1:2—5:30; 58:1-14; Jer 7:1-15; Amos 2:6-8; 5:21-24; 8:4-6; Mic 6:6-8). Many eschatological passages of national hope, however, envision a world of abundance for all, a life devoid of warfare and physical need and characterized by justice and acceptable worship of Yahweh (e.g., Is 2:1-5; 11:1-9; 65:17-25; Amos 9:11-15).

WEEKS, FEAST OF. See FESTIVALS AND FEASTS.

WEIGHTS AND MEASURES

Metrology is the science of weights and measures. As a science it demands precision in its standards of measurement. Unfortunately, prior to the founding of the metric system there was no absolute standard of measure. For this reason, biblical metrology is *not* an exact science, and usually only approximations may be given. Consequently, precision is rarely an issue in biblical metrology.

Imprecision exists because no official standard of measurement ever existed in the history of Israel. In fact, at any given period more than one system was in operation at the same time. In some periods there was a *royal* standard and a *common* standard. Second, biblical metrology also tolerated considerable margins of error—there was not a high level of accuracy. For example, archaeologists have uncovered numerous shekel weights from a variety of sites in ancient Palestine, and there are great discrepancies between them regarding true or real weight. Third, many aspects of biblical metrology are poorly attested in both ancient literature and archaeology. Seldom is one measure defined in terms of another. Much interrelating is mere guesswork. Fourth, comparative systems of measurement in the rest of the ancient Near East are not of great help in determining biblical metrology because those systems (in Egypt and Mesopotamia) were as loose as the biblical systems. When the analysis is primarily directed toward the Pentateuch, which relates the earliest history of Israel, then the task becomes even more difficult.

With all those caveats, however, we yet know a good deal about biblical weights and measures

during the time of the Pentateuch. We cannot fully reconstruct the ancient biblical systems, but much can be said about them.

1. Weights
2. Linear Measures
3. Capacity Measures
4. Surface Measures
5. Conclusion

1. Weights.

1.1. Balances. The only way in which weighing was done in antiquity was by means of a balance (Wolters, 163), which consisted of two metal pans suspended from either a hand-held beam or an upright support. Several fragments of balances, such as pieces of pans, beams and weights, have been discovered in second millennium B.C. sites in Palestine. We know that balances were used in the ancient Near East at least as early as the middle of the third millennium B.C. A relief in the tomb of Mereru-Ka at Saqqara from the Sixth Dynasty (2350-2200 B.C.) pictured gold being weighed in a hand-held balance (ANEP, 40). Judgment balances that are free-standing were commonplace by the end of the third millennium B.C.

Balances or scales were not precision instruments in antiquity. Tests have demonstrated that ancient balances have a margin of error up to 6 percent (Diringer, 86). Even so, the Torah calls for the Hebrews to be just in weights and measures (Lev 19:35-36).

1.2. Provenance. The Hebrew system of weights was borrowed from greater Canaan, which in turn derived its system from Babylonia. Three of the four principal weights were the same in each culture: mina, shekel and gerah. A parallel may also be drawn by the fact that weight pieces were called *stones* in both Akkadian and Hebrew (see Lev 19:36; Deut 25:13). The two major weight systems in the ancient Near East were from Mesopotamia and Egypt. There are no references to Egyptian weights in the Bible.

Although the Hebrew system of weights was ultimately borrowed from Babylonia, the Israelites gave different values to the various weights. Babylonian standards were sexagesimal; for example, one talent equaled sixty minas. The Hebrew system was quinquagesimal: one talent was the same as fifty minas (see Gen 23:15; Ex 30:24; 38:29; Num 31:52). Both value systems were present in the rest of the ancient Near East: Ala-

Weight	Value	Torah Reference
talent	3,000 shekels	Ex 25:39; 37:24; 38:25-26
mina	50 shekels	no reference
shekel	1 shekel	ubiquitous
pim	$\frac{2}{3}$ shekel	no reference
beka	$\frac{1}{2}$ shekel	Gen 24:22; Ex 38:26
peres	$\frac{1}{2}$ shekel	no reference
gerah	$\frac{1}{20}$ shekel	Ex 30:13; Lev 27:25; Num 3:47; 18:16
qesitah	unknown	Gen 33:19

Table 1: Israelite Weight System Prior to Monarchy

lakh and Ugarit had a quinquagesimal system, whereas Ebla had a sexagesimal one (Archi, 48).

1.3. Weight System. The basic unit of currency in the Hebrew system was the shekel. That term is derived from the verb *šql*, which means “to weigh.” The shekel as the primary and foundational weight was common for all Semitic metrologies (de Vaux, 203). It was so customary in the Hebrew system that the word *šeqel* was sometimes entirely omitted in a passage (see Gen 20:16; 37:28).

Inscribed shekel weights have been found in large numbers at various sites in Palestine, such as Lachish, Samaria and Gezer. Recovered shekels leave room for conjecture regarding the precise weight of the measure. They weigh anywhere from eight to twelve grams. In addition, shekel values have been uncovered in various denominations: one, two, four, eight and twenty-four pieces.

Different shekel systems operated in Hebrew culture simultaneously. Genesis 23:16 mentions “the shekels current with the merchant.” The merchant/trader seems to have had two sets of weights, a light set for purchasing and a heavy set for selling (Deut 25:13). The Torah also mentions a “shekel of the sanctuary” (Ex 30:13, 24; 38:24-26; Lev 5:15; 27:3, 25), and a “king’s weight” is spoken of in the later historical books (2 Sam 14:26). In Assyria two weight systems, the royal and the common, operated simultaneously (Rainey, 34-36).

The basic weight system of the Israelites before the monarchy is presented in table 1.

2. Linear Measures.

2.1. Variety. As with weights, precision was rarely an issue with lengths and distances in ancient Israel. For example, the basic unit of length was the cubit; however, its precise length varied from place to place and from time to time. In Deuteronomy 3:11, a cubit is defined as *the length of a forearm*—and because body lengths vary, so must the length of a cubit. According to 2 Chronicles 3:3, Solomon’s temple was constructed based upon the old standard of cubits, indicating that there must have existed a new standard of cubit length. Ezekiel defined a cubit as 20.6 inches (Ezek 40:5). The Roman cubit used in NT Palestine was seventeen inches. As O. R. Sellers comments, “That there were different cubits in Israel is clear” (Sellers, 837).

2.2. Provenance. The cubit was a widespread convention in the ancient Near East, and it may have been used as early as Paleolithic times. In Egypt, it was called a *mh*, and it specified a length from the elbow to the tip of the middle finger (its hieroglyph includes an extended forearm and hand). There were various cubit standards in Egypt, such as the royal cubit that measured 20.65 inches. The same was true in Mesopotamia, where both a royal and a common cubit existed at the same time. The royal cubit of the statues of Gudea, prince of Lagash (c. 2000 B.C.), was 19.5 inches.

2.3. System. No actual Israelite cubit measures have been uncovered through archaeology. The most definite evidence comes from the Siloam Tunnel inscription from the eighth century B.C.

Length	Value	Torah Reference
finger	$\frac{1}{4}$ handbreadth; $\frac{3}{4}$ inch	none; only in Jer 52:21
handbreadth	4 fingers; $\frac{1}{6}$ cubit; 3 inches	Ex 25:25; 37:12
span	3 handbreadths; $\frac{1}{2}$ cubit; 9 inches	Ex 28:16; 39:9
cubit	2 spans; 18 inches	Deut 3:11 and many others
reed	6 cubits	none; only in Ezek 40:5-7

Table 2: Israelite Linear Measures

It claims that the tunnel is 1,200 cubits long. According to R. B. Y. Scott, based upon actual measurement of the tunnel, each cubit would be 17.5 inches (Scott 1958, 214). However, it is likely that the inscription was merely providing a round figure. It also states that the tunnel is 100 cubits below ground, a figure that is also apparently a round number.

Lengths in the OT (and the Pentateuch, in particular) employed *natural* measures. The common scale appears in table 2, and some approximations are provided for each length.

The ratio in length from the finger to the cubit is 24 fingers = 6 handbreadths = 2 spans = 1 cubit.

Longer distances are not measured by cubits in the Pentateuch but rather by *bowshot* (Gen 21:16), *a day's journey* (Num 11:31), *three days' journey* (Gen 30:36; Ex 3:18), *seven days' journey* (Gen 31:23) and to the *extent of the country* (Gen 35:16). These distances naturally lend themselves to imprecision.

3. Capacity Measures.

3.1. Provenance. The Hebrew system of capacity measurement mainly derived from Mesopotamia. The latter system was highly complex, and there was considerable variation in standards. It is likely that the premonarchic Israelite culture also employed a number of different standards of capacity measurement. Unfortunately, it is not possible to reconstruct any of these systems fully. We are left with the ability to provide only a basic outline.

3.2. Systems. Capacity measurement may be divided into two categories: for dry and liquid measures. The unit names derived from "household utensils and the farmer's estimates of quantities" (Scott 1959, 29-32). For example, the

dry measure *homer* derived from the Hebrew word for "donkey", and it signified a load of grain carried by a donkey. The term *omer* literally means "sheaf"—it is the quantity of grain from an average-sized sheaf. Such measurements are naturally and necessarily imprecise.

The basic dry-measure system of the Hebrews was a decimal structure: 1 homer = 10 ephahs; 1 ephah = 10 omers (see Ex 16:36; Ezek 45:11). The ephah, according to Leviticus 19:36, was the primary and most common dry measure. It was equal to $\frac{3}{8}$ to $\frac{2}{3}$ bushel. A dry measure of uncertain size called a *seah* is mentioned in Genesis 18:6.

The Hebrew system of liquid measures is only generally known. Moving from the largest to the smallest measure is 1 bath = 6 hins; 1 hin = 12 logs. It is a sexagesimal system based upon an Assyro-Babylonian precursor. The hin is the principal measurement for liquid capacity (Lev 19:36). Its size is unknown: suggested figures range from $\frac{1}{2}$ quart to 2-3 gallons.

4. Surface Measures.

4.1. Provenance. Area measures are poorly attested in the Pentateuch and in the entire OT. There does not exist a system of terms for measures of area. A system may have been in operation, but it simply has not come down to us. The ancient Egyptians measured area according to the cubit. However, even that was inconsistent because "measures of area used in Egypt during the Old Kingdom differed from those current in the Middle Kingdom" (Baer, 113). The Pentateuch employs the cubit as an area marker for the levitical cities (Num 35:4-5).

4.2. System. For the most part, the Hebrews estimated surface measures by processes of seeding. That was the practice of field measure-

ment in the entire ancient Near East (except Egypt) as early as the third millennium B.C. It naturally arose out of agricultural practice. Thus, in 1 Samuel 14:14 and Isaiah 5:10, the term *šemed* is used of land measure. It literally means “yoke” and refers to what a pair of oxen could plow in a day. In 1 Kings 18:32, Elijah is pictured digging a trench around an altar that was large enough to hold two measures of seed. Throughout the OT, a specified amount of barley was equal to an amount of land area that it would sow (Lev 27:16). A common misconception is that such surface measures are necessarily vague. That is not true. Assyro-Babylonian records indicate very precise surface measurements corresponded to *seed* values.

5. Conclusion.

It is abundantly clear that no weight or measure in the Pentateuch or in the whole Bible was fixed precisely. We cannot provide exact metric equivalents, only approximate values for metrological terms. The same is true for the entire ancient Near East (Hallock, 204-6; Zaccagnini, 312). What M. A. Powell says about Mesopotamia rings true of the Bible: “The evidence is such that it does not allow us to define *the* norm of ancient Mesopotamia, for the probability is that no single, preferred norm ever existed” (Powell, 87).

WHEAT. See AGRICULTURE.

WIDOW

Whereas in modern parlance the term *widow* refers simply to a woman whose husband has died, in the OT and in the ancient Near East the label had more specific social, economic and legal connotations. In societies characterized by a patrilineal and patrilocal framework, the loss of the head of a home left the widow (Heb *’almānā*) in a precarious and vulnerable situation. She would be left without a male protector and an important basis of her social identity and status. The protection of widows was a pervasive theme throughout the ancient world, and their care was usually understood to be a fundamental commitment of the “gods” and was demanded of human rulers. In the Pentateuch the widow is also the subject of legislation dealing with a variety of familial matters and appears as an important character in several narratives.

1. The Ancient Near Eastern Context
2. Widows Within the Pentateuch
3. The Concern for Widows in the Rest of the Old Testament

1. The Ancient Near Eastern Context.

Widowhood would not have been uncommon in the ancient Near East, and its causes were multiple. The impact of disease and war on the male population, as well as the typical age difference of about a decade between men and women at marriage (hence the potentiality of the wife surviving her older husband), could result in a sizable number of widows. Legal documents evidence the sense of duty towards the widow (Sum. NU.MU.SU; Akk. *almattu*; cf. CAD 1.362-64) in at least two ways (cf. Fensham; Owen; Tavares; Roth).

First, the rhetoric of the prologues and epilogues of the law codes mention the monarch’s responsibility toward the widow as a fundamental virtue of a just reign. The defense of the weak usually is tied to the sun god. The prologue of the law code of Hammurabi (c. 1750 B.C.) states that his calling from the gods is to establish justice (*ANET*, 164), and in the epilogue he explains the measures he has taken to protect the widow (*ANET*, 178). No law codes have yet been

discovered in Egypt, but the same stance is echoed in other literary genres, such as the royal instructions (e.g., Instruction for Merikare, *ANET*, 415).

Second, specific laws target issues defining and safeguarding the maintenance of these women and their children (e.g., Code of Hammurabi §§171-173, 176a-177; Neo-Babylonian Laws §§12, 13; Middle Assyrian Laws §§A28, 33-34, 45-46). The financial future of a widow depended on retrieving the dowry supplied by her father's house and on the provision of food, shelter and a stipend stipulated in a testament that her husband might have made before his death. The latter would be subtracted from the inheritance due to his male heirs, if there were any, and might be terminated if she remarried. Not surprisingly, these settlements sometimes were legally contested. In some contexts, laws allude to a levirate practice (see below), whereby the brother of the deceased married his widowed sister-in-law (e.g., Middle Assyrian Laws §§A30, 33, 43). Women who did not remarry could return to their parents' home and authority. The very poorest might have found refuge at the temple.

2. Widows Within the Pentateuch.

2.1. Methodological Considerations.

2.1.1. *Issues in Pentateuchal Criticism.* The data in the Pentateuch concerning widows echo in many ways the literature of its milieu. What complicates the study of this information, however, are certain critical approaches that postulate different hypotheses about the settings of the *laws and their connection to relevant narratives. For instance, scholars have observed apparent discrepancies in details between the regulations for levirate marriage in Deuteronomy 25:5-10 and the account of *Tamar's actions in Genesis 38 and point out the contradiction between those guidelines and the prohibitions against marrying a brother's wife in Leviticus 18:16; 20:21. Scholarly options range from attempts at harmonization to various suggestions of changes in practice and law over time (Westbrook, 69-89). Some recent criticism has moved beyond the classical JEDP paradigm to quite different theories regarding the dating of the three principal blocks of legislation—the *book of the covenant (Ex 20:22–23:33), the Deuteronomic law (Deut 12–26), and the Holiness Code (Lev 17–26)—and the manner and purpose of the final com-

position of the Pentateuch (e.g., Crüsemann; see Source Criticism). Other approaches to this material—both social-scientific and literary—might prove more profitable than entering into debates about hypothetical diachronic developments.

2.1.2. *Contextual Considerations.* Socioarchaeological studies have illuminated the nature of the family in ancient Israel (Meyers; see Family Relationships). An awareness of environmental realities and the special demands of an agrarian social context, in which roles are specified by age and gender, are fundamental for a proper appreciation of the lot of the widow. Such societies place a premium on the inalienability of family property, and progeny are a vital source of labor.

The basic kinship group in Israel was a residential, multigenerational family collectivity under the leadership of a male head called the "father's house" (Heb *bêṭ 'āb*); hence, it is patrilocal. The perpetuity of the family domain was determined patrilineally. Such an arrangement does not necessarily imply a dismissive view of women. *Women were held in high regard because of their role in childbearing, the administration of the home and the education of children (Meyers, 22-41; cf. Wright, 183-221; contra Pressler). At the same time, this system could expose the widow to a precarious existence.

Anthropological studies underscore the anomalous situation of the widow as an unmarried, childbearing woman outside the patrilineal structure (Matthews and Benjamin, 132-41; cf. Niditch). OT legislation can be viewed, then, as responding to the financial dangers of this sociological irregularity.

2.2. *Legislation and Issues of Character.* The Pentateuch stipulates two acts of community charity to provide sustenance for the widow. Reapers were to leave some of the harvest in the field for the powerless within Israel: the alien, the *orphan and the widow (Deut 24:19-20; cf. Ruth 2). In addition, every third year there was to be a special tithe for the needy, and compliance was encouraged by the promise of divine blessing (Deut 14:28-29). Of course, the existence of legislation is no guarantee of its observance, and subsequent narratives picture widows in desperate socioeconomic straits (1 Kings 17:8-24; 2 Kings 4:1-7).

Deuteronomy 25:5-10 deals with the situation

of the childless widow and is designed to safeguard the continuance of ancestral lands within the family (Westbrook, 69-89; Pressler, 63-77). The phrase "when brothers dwell together" (Deut 25:5) refers to a time in the *bēt 'āb* after the death of the father but before the division of the estate among the male heirs. This levirate law prescribes the duty of the husband's brother (the *levir*) to provide a legal heir for the deceased and his portion (compare Num 27:5-11; see Zelophehad, Daughters of; *Levites were not allowed to marry widows, Lev 21:14). Refusal would bring public shame.

These biblical injunctions are not to be envisioned as isolated acts of obedience but are set against the backdrop of broader national narratives. Yahweh's demand that Israel should not take advantage of the widow refers to the experience of the exodus (Ex 22:22-24 [MT 22:21-23]; Deut 10:17-19). That redemptive act defines the divine character and also establishes the basis of the moral imperative. The memory of oppression and release was to mold the values of the people of God and their attitudes toward the less fortunate in the land (Deut 24:18, 22; cf. Janzen, 55-86; Millar). The widow in no way was to be excluded but was to be welcomed as a full member of the worshipping community (Num 30:9 [MT 30:10]; Deut 16:11-14).

Family histories are part of the larger narratives, too, and can offer paradigms for ethical formation (Janzen, 26-54). At one level the account of Tamar in Genesis 38 is a story of the abuse of levirate custom by both brother and father-in-law, yet it is also another episode of the outworking of the sovereign provision of children to the patriarchs (Gen 12:2; 17:6, 20; etc.) and the choice of the younger (Perez) over the elder (Zerah; Gen 38:27-30; cf. 25:24-26). In the wider canonical perspective, Perez is a member of the line of David (Ruth 4:18-22). But Tamar, a non-Israelite, embodies as well loyalty to communal ideals in contrast to *Judah, who follows his impulses (Gen 38:26). This widow now is not only a victim of circumstance but also a model of selflessness, even if her behavior entails great personal risk—an admirable trait characteristic of other widows elsewhere in the Bible (van der Toorn, 137-39).

3. The Concern for Widows in the Rest of the Old Testament.

Beyond the Pentateuch, Yahweh remains the

protector of the widow (Ps 68:5 [MT 68:6]; 146:9; Prov 15:25). The care of widows is a mark of moral virtue (Job 29:13; 31:16), while injustice toward them is strongly condemned by the prophets (Is 1:17, 23; 10:2; Jer 7:6; Ezek 22:25; Mal 3:5). Perhaps the most well-known account is that of Ruth, a widow whose story includes a levirate-type marriage with a paternal kinsman (an agnate) and the redemption of family property. Even though of Moabite origin, Ruth is a model of propriety and is linked back to Tamar (Ruth 2:11-13; 3:10; 4:11-12). As in the rest of the ancient Near East, the ideal was that the kings of Israel establish justice to care for the weak—including the widow—in the land (Jer 22:3, 15-16; cf. 2 Sam 8:15; 1 Kings 10:9; Ps 72) and in the future restoration (e.g., Is 11:1-9; Jer 23:5-6).

WILDERNESS, DESERT

In the Hebrew Bible, the wilderness is not simply the open desert of blowing sand and palm trees. Rather, it is that marginal geographical area that does not provide sufficient resources to sustain long-term community existence. The wilderness plays a significant role in the life of the Pentateuch. This is not only in the physical sphere for Israel, due to the preponderantly pastoral lifestyle of the people and also their wandering as a nation in the wilderness prior to entering the Promised Land, but also as a theological construct.

The most common Hebrew word translated as "wilderness, steppe, desert" is *midbār*. It occurs 271 times in the OT, 105 of which are in the Pentateuch. A second term, *ʿarābā*, is used sixty-one times in the OT, nineteen of these in the Pentateuch (Numbers and Deuteronomy only). Most probably it is cognate with Arabic and Ethiopic words for "dust, dryness" (*HALOT*). A third term for "desert, steppe," *yēšimôn*, is rarer and occurs thirteen times in the OT, three times (Num 21:20; 23:28; Deut 32:10) in the Pentateuch. It derives from the Hebrew root *yšm*, which itself is an alternate, biform of the root *šmm*. *yšm*, unlike *šmm*, does not occur in the Hebrew Bible. They both denote devastation and desolation, semantically close to the English word *desert*.

1. Wilderness as Physical Location
2. Wilderness as Theological Construct

1. Wilderness as Physical Location.

1.1. Genesis. All seven occurrences of *midbār* relate to geographical areas in the region of Canaan. Genesis 14:5-7 describes the military campaigns of a coalition of kings that moved south as far as "El-paran near the desert" (Gen 14:6). El-paran is also called Elath (Pritchard,

33), and the nearby desert, to the north and west of the Red Sea, is elsewhere called the wilderness of Paran (Gen 21:20). This is where *Ishmael settled after being exiled from *Abraham's household (Gen 21:20-21). Abraham's family lived "between Kadesh and Shur" (Gen 20:1), in the north of the Sinai Peninsula, and when *Hagar and Ishmael were originally expelled they were in the wilderness of Beer-sheba (Gen 21:14), which apparently lies between Beer-sheba and Kadesh, some forty miles to its south. The two wandered to the northeast of their original home and then moved directly south to settle. This would indicate that this entire area of the Negev could be considered *midbār*.

One of *Esau's descendents is said to have made a discovery in the wilderness (Gen 36:24). What was discovered is unclear, but most translations take it as some source of water (e.g., Vulgate, NASB, NIV, NKJV), an event remarkable enough in the arid region to receive special note. Since Esau and his descendants settled in Seir, the area southeast of the Dead Sea, this unidentified wilderness probably is to be located there, due east of that of Paran.

Wilderness is also found farther north. Joseph was commissioned to find his brothers, who were tending their sheep near Shechem (Gen 37:12). Since sheep constantly needed new pasture, they had moved into the vicinity of Dot-han, about fifteen miles further north, when Joseph came upon them (Gen 37:17). His brothers threw him into a cistern in the desert there (Gen 37:22). This incident indicates that a wilderness area is sufficient to support animal grazing for at least a short period but needed its meager water supply stored in an artificial holding place.

1.2. Exodus. The wilderness plays a much more significant role in the subsequent pentateuchal books. It occurs some twenty-seven times in Exodus. It is first mentioned there in conjunction with *Moses, who lived in the land of Midian after fleeing *Egypt (Ex 2:15). This area is in Transjordan and stretches down as far as the eastern side of the Gulf of Aqabah, the eastern branch of the Red Sea (Pritchard, 30). There is evidence of Midianites throughout a wide area, however (cf. Gen 37:28, 36), so living among them did not necessitate Moses' movement a great distance from his Egyptian home. Starting from somewhere in this region, he arrived at Horeb, God's mountain (Mount Sinai), while seeking fresh pasturage for his sheep.

This is described as being on “the far side of the desert” (Ex 3:1; cf. 4:27), the first time *midbār* is used in the book. The desert is described in relation to Moses’ starting point. The location of Sinai is debated, but wherever it is, and wherever in Midian Moses started from, the Sinai Peninsula is aptly described as “wilderness.” It is also given this designation when viewed from Egypt to its west, since it is to there that Moses requested *Pharaoh that Israel might be allowed to go to worship its God (Ex 3:18; 5:1, 3; 7:16; 8:27, 28 [MT 8:23, 24]). The request to go only a journey of three days into the wilderness would not have allowed them to reach the traditional site of “the mountain of God” (cf. Ex 15:22; 19:1). This time period could have been meant as a ruse or as a test of Pharaoh’s willingness to cooperate with God’s plans for Israel (Houtman, 376 nn. 93, 94).

When setting out from Egypt toward the west, the Israelites went “by the desert road toward the Red Sea” (Ex 13:18 NIV). Based on their starting point in the eastern Nile Delta (Gen 47:6), the two geographic designations most probably indicate the course of the road as passing through the wilderness by way of, or around, the Red Sea, the latter being a way station rather than the road’s destination. Since wilderness is ubiquitous in the Near East, there are several roads designated “of the wilderness” (Josh 8:15; Judg 20:42), so care must be taken to understand which one is meant. One of their first stops on this route was Succoth (perhaps the Egyptian *ṭkw*; J. Seely, 6.217), which is “on the edge of the desert” (Ex 13:20). This would indicate that the whole territory east of the Nile Delta was considered as *midbār*. In the mind of those not familiar with it, the *midbār* is a place inimical to travel (Ex 14:3), a place of death (Ex 14:11, 12).

The first section of the *midbār* they entered is called the wilderness of Shur (Ex 15:22; cf. Gen 20:1 above), in which water was scant and, what little there was, bitter (Ex 15:23). They then passed through the wilderness of Sin, which is west of Mount Sinai (Ex 16:1; 17:1), so its location depends on the site determined for that location (D. Seely, 6.47). Here the people again complained about their lack of water in comparison to Egypt (Ex 16:2-3), and God met their need right there in the wilderness (Ex 16:14, 32). Israel then came to the wilderness near “the mountain of God” (Ex 18:5; see above), where Moses had been prior to his return to Egypt. Fi-

nally they arrived at the wilderness of Sinai (Ex 19:1, 2), where they stayed for almost two years (cf. Num 10:11).

The final occurrence of *midbār* in Exodus uses it as one of the boundaries of the *land that God promised to his people. It would stretch “from the Red Sea to the Sea of the Philistines, and from the desert to the River” (Ex 23:31). This seems to provide a north-south extent, between the Red and Mediterranean Seas, as well as an east-west one, between the Sinai wilderness and the Euphrates.

1.3. Leviticus. Leviticus is set at Mount Sinai, which is located in the wilderness of Sinai (Lev 7:38). Elsewhere one reads of the *midbār* only in Leviticus 16, where the scapegoat is described as part of the ritual for the Day of *Atonement. The significance of the ritual will not be discussed here, except to note that the significance of the wilderness, to which the goat will be sent (Lev 16:10, 21), is that it is a land “cut off” (*gēzērâ*; Lev 16:22; “solitary,” NIV). This is so that it will not come into contact with anyone, since the wilderness is not a place of permanent habitation. The implied uncleanness of this area “outside the camp” will be discussed below.

1.4. Numbers. Numbers is the “wilderness book” par excellence. Its Hebrew title, taken from the first distinctive words in the book, is *bēmīdbar*, “in the wilderness,” where the entire book is set. Structured as an itinerary from the wilderness of Sinai (Num 1:1) to Transjordan, Numbers has the most references to the “wilderness” in the Pentateuch (forty-eight for *midbār*, nine for *‘arābā* and two for *yēšimôn*). The first nine chapters take place at the wilderness of Sinai, including the census of potential warriors and *priests (Num 1:19; 3:14; cf. 26:64), the sin of *Nadab and Abihu (Num 3:4) and a celebration of the Passover (Num 9:1, 5; see Festivals and Feasts). After their preparations, Israel struck camp and moved from one *midbār* (at Sinai; Num 10:12) to another, that of Paran (Num 10:12; 12:16; 13:3, 26). It was a place needing special skill and knowledge for survival (Num 13:32). From there the spies were sent out to explore yet another desert, that of Zin/Tsin (Num 13:21; 20:1), not to be confused with that of Sin. This lay just to the south of Canaan in the northern Negev, in the vicinity of Kadesh (Num 13:26; see Gen 20:1 above). The nation Israel was coming full circle to the area previously inhabited by their forefather, Abraham. There

they also rebelled, complaining against the provisions of God (Num 27:14).

When the people heard the report of the spies, they again grumbled about the *midbār* being a place of death, as they would do numerous times subsequently (Num 14:2; also 16:13; 20:4; 21:5; cf. Ex 15:22; 17:2-3), where it would have been better to die of thirst or starvation rather than by the sword of the intimidating Canaanites. Ironically, God arranged for this wish to be met, since all those enumerated in the census at the beginning of Numbers died before they had any opportunity to be killed by the Canaanites (Num 14:16, 29, 32, 33 [2x], 35; 26:65; Deut 2:14). God reminded the people of the miraculous signs of provision that he had provided for them in the *midbār* (Num 14:22). Since they forgot this, he urged them to turn back to the wilderness road from where they had come (Num 14:25).

Soon Israel continued its progress toward the land, leaving the Sinai wilderness and crossing into Transjordan, going through several locations described as *midbār*. These included the area south of Moab (Num 21:11) as well as the area to its north, approaching Ammonite territory (Num 21:13, 18). The Amorites opposed Israelite passage through their territory north of the Dead Sea (see Aharoni and Avi-Yonah, 52), though they were unable to stop them (Num 21:31). The Israelites' wandering enumerated in the Pentateuch ends with them settling in northern Moab (Num 22:1), which was also a wilderness (Num 24:1).

Numbers 33 is a summary of the wilderness wanderings and mentions *midbār* in several places: in conjunction with Succoth and Etham (Num 33:6; cf. Ex 13:20 above) and with Marah, where it is called the wilderness of Etham (Num 33:8; cf. Ex 15:22 above, where it is called that "of Shur"), the wilderness of Sin (Num 33:11-12), the wilderness of Sinai (Num 33:15-16) and the wilderness of Zin (Num 33:36; cf. 34:3), matching the progress outlined in Exodus, with the one alteration of name noted.

At times, the designation *midbār* seems to apply generally to the entire region traversed by Israel between its exodus from Egypt and its preparation to enter the land, not to any specific location within it (cf. Num 15:32). This entire area is associated with wandering and death (Num 27:3; 32:13, 15).

The writer of Numbers also uses the other

two words in this semantic field. Numbers 21:20 describes Pisgah, which is in Transjordan at the north end of the Dead Sea, the site where *Balaam delivered his second and third oracles (Num 23:14; cf. 23:28) and the height from which Moses looked down on the land of Canaan, which he would never enter (Deut 34:1). It is there called a "wasteland" (NIV; *yěšimôn*; cf. also 23:28), which here serves as a synonym for *midbār*, which was used to describe the same area in Numbers 21:11, 13. The difference between the two terms *midbār* and *yěšimôn* is impossible to determine from these contexts. The third term, *ʿārābā*, is used of the low-lying area along the east side of the Jordan River just north of the Dead Sea (Num 22:1; 26:3, 63; 31:12; 33:48, 49, 50; 36:13). Here Israel encamped immediately prior to entering the land. The NIV translates this "plains of Moab," but the area is also designated as a *midbār* (Num 24:1, above), so these three terms have much semantic overlap. While *ʿārābā* describes a specific locale in these verses, in later prophetic texts it has the meaning of a wilderness or desert as an unproductive area semantically parallel to *midbār* (e.g., Is 35:1; Jer 2:6).

1.5. Deuteronomy. Deuteronomy, a sermonic summary of Israel's history, would be expected to employ the semantic field in a way similar to the other pentateuchal books. Its setting is in the *midbār* "east of the Jordan—that is, in the *ʿārābā*" (Deut 1:1), using two of the terms encountered earlier. The term *midbār* describes the territory between Horeb/Sinai and Kadesh (Deut 1:19; cf. Num 10:12; 13:26), including that area south of Kadesh toward the Red Sea (Deut 1:40; 2:1), the area of Moab along the east side of the Dead Sea in Moab (Deut 2:8; cf. Num 21:13, 18), and further to the north in the vicinity of a town named Kedemoth (Deut 2:26; Aharoni and Avi-Yonah, 52), in whose desert area was the city of refuge known as Bezer (Deut 4:43; Aharoni and Avi-Yonah, 108). It also is used of the wilderness of Zin (Deut 32:51; cf. Num 13:21; 20:1 above). In addition, it serves as a general description of the Sinai Peninsula (Deut 1:31; 2:7; 8:2, 15, 16; 9:7, 28; 11:5; 29:5 [MT 29:4]), where God both punished and preserved his people. It is also a general designation of the southern part of the land promised to Israel, in contrast to Lebanon in the north (Deut 11:24; cf. Ex 23:31 above).

Finally, in one of the only poetic passages in

which the semantic field occurs in the Pentateuch, Moses in his song (Deut 32) describes Jacob/Israel's origin as being "in a desert [*midbār*] land," also described as a "wilderness waste [*yəšimôn*]," where God found and cared for him (Deut 32:10).

1.6. Summary. For people who had to traverse or spend time in the wilderness or desert, it was a notable demographic area. The main cause of its unsuitability for much permanent habitation was the lack of sufficient water. While a swath of land running from Mesopotamia through Syria and Israel to Egypt is known today as the Fertile Crescent, this fertility is limited to watered areas, and much of it was shown in the study above to be much less fertile. The Pentateuch mentions numerous towns in relation to the wilderness, but these are located at water sources, and their description is often noted as being adjacent to the wilderness. While vast areas such as the entire Sinai Peninsula are described as desert or wilderness, there are also subdivisions within it, each designated as the "wilderness of X," as are areas of Transjordan.

2. Wilderness as Theological Construct.

The desert was a significant place for Israel. This is shown literarily by the extraordinary amount of material associated with it in the Pentateuch. It was a dangerous place for Israel, a place of dread because there they not only met death but they also met their God. It was the place where they first became a separate, cohesive nation, and it also was the place of wandering following repeated rebellions against God and his appointed leader Moses. It was a transitional place, the place between *slavery and the land of promise where they would permanently settle. It was also transitional in that it was "outside the camp," a place that, while at times clean (Ex 33:7; Lev 4:12), was also where the unclean and defiled were relegated (Lev 10:4-5, 13:46; 24:14, 23; Num 5:3). This is particularly exemplified by the scapegoat in Leviticus 16, which carried the sins of the nation to this outside place. Since these sins were expelled from the camp in order to protect it from pollution, by implication the place where they ended up would suffer pollution.

The earliest part of Israel's journey through the wilderness is pictured in terms of a disciplined army on the move toward its objective, an appointment with God at Mount Sinai (see the

military census in Num 1). It is only after the Israelites lost this first vision that they became wanderers, as described by one writer as "not on the way anywhere" (Brueggemann, 8), unable in that generation to reach the end of their wanderings (Num 14:30-31).

Through their encounters with their God in the wilderness, Israel was formed and forged as a people. They experienced God's *grace and salvation at both ends of their wilderness wanderings, with the exodus and its parted waters as they entered the wilderness (Ex 13:17—15:21) and the parting of the Jordan waters and the conquest as they left the wilderness (Josh 3—4) and entered the land. Their *election from among the nations is described as taking place here (Deut 32:9-12; Barth, 87-88), as is God's provision for their physical and psychological needs. God lived among his people (Num 11:20; 14:14; Deut 2:7), and his presence with them and his actions on their behalf were visible (e.g., Ex 16:10; Deut 11:5-7). He guided them using smoke and fire (Ex 13:21; Deut 1:30-33), his divine messengers (Ex 23:20-21; 32:34) and his own divine presence in the ark (Num 10:33, 35-36; 14:14). God, and no human guide, was the one whom they followed (Deut 8:2; cf. Num 10:29-36, where the human guide refused to lead; Barth, 102).

God's physical provision was multifaceted. His psychological support was given through the assurance of his presence, but he did not stop there. He provided water (Ex 15:22-27; Num 20:1-13; 21:16-18; Deut 8:15; 32:10; 33:8; cf. Gen 26:15-22) and food (Ex 16:4, 11-15; Num 11:4-9, 31-32) and met their need for clothing (Deut 29:5) and healing.

The latter suggests the other aspect of the time in the wilderness; it was also a time of rebellion (e.g., Deut 9:7) and subsequent judgment. The wilderness is described as a time of testing, where God was ascertaining the true relationship his people had with him in order that he might bless their faithfulness (e.g., Ex 15:25; 16:4; Deut 8:2, 16; 13:3). Instead of maintaining steadfast trust in the one who had freed them from slavery and promised his presence throughout their journey toward the land, they in fact tested him (Ex 17:2; Num 14:22; Deut 6:16; 33:8) and had to suffer the destructive consequences that befell that generation. While Jesus was tested in the wilderness and prevailed (Mt 4:1; Mk 1:13; Lk 4:1-2), Israel failed its test-

ing. Numbers 14, a chapter in which wilderness terms occur more than any other in the Pentateuch, is a picture of rebellion and defeat, of wandering homelessness. Punishment is brought by fire (Num 11:1-3), plague (Num 11:31-35; 14:36-37; 16:41-50 [MT 17:6-13]; 25:8-9), the wilderness wandering itself (Num 14:26-35, 39), earthquake (Num 16:30-33), snakes (Num 21:4-6) and execution (Num 25:5, 7-8). The very leaders of the nation were not immune from punishment (Num 20:12). None of these punishments was complete and terminal for the nation, however. God allowed the nation as a whole to continue, often providing healing for the hurts brought upon the Israelites through their own stubbornness (e.g., Num 21:7-9). He did not allow his divine anger to erase his love for his people (Ex 15:13; 34:6-7; Num 14:18; cf. Ezek 20:17).

God's ultimate goal was not punishment, however, but the restoration of the people from out of slavery and the fulfillment of his *promises. The people had become a "great nation" (Gen 12:2; cf. Num 1:44-46) prior to setting out from Egypt, but the ultimate goal of their journey was the Promised Land (Gen 12:1; 15:7; 17:8). While the journey itself was stretched to thirty-eight years of wandering in the wilderness due to the people's lack of faith, its ultimate goal was entry into the land and the rest and security that it would provide (Deut 26:9). This was Israel's inheritance, the place of rest that they would ultimately possess (Ex 15:17; Deut 12:9-10).

There is some evidence that an uninhabited and uninhabitable wilderness was part of the *creation tradition. In Deuteronomy 32:10, the writer juxtaposes "wilderness" (*midbār*) and "wasteland" (*yěšimōn*) with "barren" (*tōhū*), a term that describes the setting for God's creative acts in Genesis 1:2, where it is rendered "formless" (NIV). As this primordial condition was inimical to life, so was the marginal land of the wilderness. W. Brueggemann states: "Wilderness is the historical form of chaos and is Israel's memory of how it was before it was created a people" (Brueggemann, 29). As God set out in Genesis to make the uninhabitable habitable, his goal for the wilderness generation was that they ultimately reach the land, where there was fertility, flowing with "milk and honey" (cf. Ex 3:8; Lev 20:24; Deut 11:9; see Land, Fertility, Famine). The disfavor of barrenness would be replaced by the favor of fecundity.

The two sides of the notion of wilderness continued in Israelite tradition, and its positive aspects should not be ignored. Deserted wilderness could be a horrible place (e.g., Is 30:6), associated with punishment for Babylonia (Jer 50:12, with both *midbār* and *ʿārābā*) and even for Israel itself (e.g., Jer 4:26; Hos 2:3), as well as with isolated loneliness (e.g., Ps 102:6). Human power can also destroy, resulting in a wilderness (e.g., Is 14:17; 33:9). Wilderness is also seen as a good place, a place of solitude and restoration (e.g., Ps 55:7 [MT 55:8]), a place where God shows, and the people experience, his power and might (Ps 68:7-8 [MT 68:8-9]; 136:16; Is 35:1; 40:3; Hos 13:5). It is a place where Israel is able to spend uninterrupted time with God, where he woos and loves her, entering into a marriage contract with her through the *covenant, this time remembered not as a hardship but as a honeymoon (Hos 2:14-15).

WOMEN

"The Old Testament, and the religion of which it tells, is male-originated, male-focused and probably anti-women. This is seen in the way

that it is written, in the interests of the writers and most clearly in the laws which it describes, where women's interests and concerns are of small account and where women are seen as little more than the property of men or at best as adjuncts. The Pentateuch in particular shows the truth of these statements." Statements such as these are often presented as truisms, sometimes leading feminist thinkers and modern women in general to dismiss biblical faith as irrelevant to or destructive of their life and identity. However, there is need for a much closer examination of the relevant material before this kind of easy judgment can be supported.

There is no doubt that the societies described within the Pentateuch were patriarchal. Most of the material was written by men and presents a male perspective. However, these statements in themselves do not justify the conclusion that the text as a whole denigrates women or even that the religion of Israel was basically "bad news" for women. There is also no doubt that certain individual women were recognized and seen as having a significant role in the history of the nation, and women as a whole were seen as an integral part of society.

Of the 187 chapters that comprise the Pentateuch, 107 (or 57 percent) have some direct mention of a woman or women. It is granted that some of these references may be peripheral, but the figures do not include references to the community as a whole or references to children (as opposed to sons). In Exodus, Leviticus and Numbers the percentages are lower—48 percent (nineteen out of forty chapters), 48 percent (thirteen out of twenty-seven) and 33 percent (twelve out of thirty-six) respectively—although in these cases many of the chapters contain detailed instructions about *laws and rituals and may also have no specific reference to males. In Genesis, where the main focus is on narratives about the life of the chosen family as they move toward becoming the chosen people, 78 percent of the chapters (thirty-nine out of fifty) make reference, often very significant reference, to women. In Deuteronomy, dealing with the meaning of community and the life of the community, it is 71 percent of the chapters (twenty-four out of thirty-four). Thus, women are certainly not missing from the Pentateuch. It remains to be seen whether or not it is accurate to describe them as marginalized and irrelevant to the interests of the writers.

This article will include a brief look at the way in which women are included in the laws and speeches within the Pentateuch and then spend more time considering the way in which the understanding and teaching of the laws and speeches is interpreted within the narrative texts.

1. Women in Legal and Ritual Texts
2. Women and the Life of the Community
3. Women in Narrative Texts
4. Conclusion

1. Women in Legal and Ritual Texts.

There are indications that women were seen as the property of their fathers or husbands, and it could be assumed that women had no rights of their own. Compensation for the violation of a virgin was paid to her father (Deut 22:28-29), and Exodus 21:22 states that anyone who caused injury to a pregnant woman, so that the baby but not the woman died, "the one responsible shall be fined what the woman's husband demands." That is, injury to a woman seems to have been viewed primarily as injury to her father or her husband. Similarly, fathers and husbands could overrule any vow made by a woman (Num 30:1-15). Again, although the point of Exodus 21:2-11 is to provide some safeguards for slaves, it does appear to sanction the purchase of women as sex slaves (Ex 21:7-11).

Women who had *sex with any man other than their husbands were automatically suspect; the possibility of rape does not seem in general to have been considered relevant (Lev 20:10; Deut 22:22). The death sentence appears to have been mandatory for all women involved in adulterous situations; the concept of an innocent woman is never really considered. If the woman was engaged rather than married and the sexual encounter took place in an isolated area, then the possibility of the woman's innocence does come into play (Deut 22:25-27), but in general it was taken for granted that the best option for a virgin who was raped was for her rapist to marry her. He had no choice in this matter, but apparently neither did she. The only possibility was for her father to refuse to allow the marriage (Ex 22:16). Finally, a man was able to divorce his wife if she did not "please him" because he found "something objectionable about her" (Deut 24:1), but no provision was made for a wife to divorce an objectionable husband.

However, the attitude to women that these texts seem to portray and that is so alien to modern perceptions do not tell the full story. It is interesting that statements such as these are found almost entirely within the casuistic or case law. They deal with situations that existed and needed regulating rather than commanding or even encouraging such situations to exist in the first place. Jesus, in Matthew 19:8, makes it clear that he saw the arrangements for divorce as having always been a concession rather than an ideal. In fact, even in their recognition of the existence of oppression, many of these regulations are geared to provide a level of protection for the women involved. Daughters could be sold as *slaves (Ex 21:7) but not as prostitutes (Lev 19:29). Women who were “bought” as wives could not be sold as slaves or even simply neglected (Ex 21:11; Deut 21:14). Women who displeased their husbands could be sent away, but only with a paper that permitted them to marry again without being declared an adulteress.

Men could bring accusations against their wives simply on a jealous whim, but the regulations ensured that proof of any charges had to be provided before any action was taken (Deut 22:15-21). The “adultery test” described in Numbers 5 seems rather unpleasant, but it recognizes the lengths to which jealous men may go and provides a woman with a way of proving her innocence rather than living with the results of ongoing suspicion. Unlike some similar tests in other cultures that may easily have resulted in the death of the woman, this potion, a mixture of holy water and temple dust, would only be likely to harm the woman as a result of the psychological pressure brought upon her through guilt.

Assaults on female slaves were treated as seriously as those on male *slaves (Ex 21:20, 26-27). Deuteronomy 15:12-17 makes it clear that female slaves were to be freed after six years in the same way as male slaves. Thus it appears that the apparent restriction in Exodus 21:7 (“When a man sells his daughter as a slave, she shall not go out as the male slaves do”) provided protection for a woman who had been taken as a slave-wife, preventing her from being cast off after six years, rather than restricting the freedom of all bonded women.

Women were seen as having the right and the ability to make vows and were held fully accountable for the fulfillment of any vows they

might make (Num 30:3-16). The only exception to this was if a father or a husband specifically overruled a vow. Thus again, there is recognition within the text of the realities of a patriarchal society alongside the recognition of women as independent and responsible beings. It is notable that the most serious vow that an Israelite might make, the Nazirite vow, was explicitly available to be made by men or women (Num 6:2). Similarly, women were free to bring *sacrifices in their own right, and there were particular sacrifices relating to purification after childbirth that women were particularly commanded to bring (Lev 12:6). Mothers also were to be honored alongside fathers (Ex 20:12; Deut 5:16).

2. Women and the Life of the Community.

There is no indication within these texts that women were ever seen as anything other than full members of the community. They were as much a part of God's chosen people as the men; they joined in worship, received blessings and, although themselves not undergoing circumcision, were nevertheless not, using later terminology, seen as part of the “uncircumcised.” Much of the material within the Pentateuch relates to the whole Israelite community of men, women and children. Reference to the entire or whole “Israelite community” is made twenty-three times in Exodus and Numbers, and its equivalent “all Israel” occurs eleven times in Deuteronomy.

Women were involved in musical aspects of worship (Ex 15:20-21), and both men and women were involved in the craft work (*see* Arts and Crafts) necessary for the construction of the sanctuary (Ex 35–36). Deuteronomy 12:12 and 14:26 speak of whole families involved in sacrifices and sacrificial feasts. Exodus 23:17 states that “three times a year [i.e., at the three major *festivals] all your males shall appear before the LORD God.” Deuteronomy 16:16 repeats this charge. However, the preceding verses describe those involved in keeping the feasts as including “your sons and your daughters, your male and female slaves, . . . and the widows resident in your towns” (Deut 16:14). Thus the charge to the men is by no means to be interpreted as a restriction on the women. Women and children were explicitly included as part of the *covenant ceremony in Deuteronomy 29–30. The call to “choose life . . . loving the LORD your God, obey-

ing him, and holding fast to him” (Deut 30:19-20) is addressed to the women as much as to the men. The regular law reading, which Israel was commanded to undertake, was to be attended by all the women as well as all the men. It mattered that the women too “hear and learn to fear the LORD your God and to observe diligently all the words of this law” (Deut 31:12).

3. Women in Narrative Texts.

It is impossible to cover all the narrative incidents within the Pentateuch relating to women. An attempt has been made to provide a general picture of the material within Genesis, Exodus and Numbers, while considering a smaller number of specific texts in further detail.

3.1. *Genesis*.

3.1.1. *Genesis 1—11: Primeval History*. Issues relating to the creation narratives are dealt with in detail elsewhere in this volume (see Creation), so only a few points will be noted here. Within Genesis 1 there is no distinction between men and women as being in the *image of God or as having dominion over all the earth. The blessing and commission of Genesis 1:28 is given equally to both. Moreover, God sees men and women cooperating together in managing the creation as “very good.” Genesis 2 approaches the creation in a different way but achieves the same result of presenting men and women as distinct beings whose relatedness is stressed more than their distinctness and who are both interdependent and responsible. The implication is that human *life in every area can only be lived in the way that God intends when women and men cooperate together—for men to be alone, without the partnership of women, is “not good.” This picture in Genesis 1 and 2 is of men and women as different but united, cooperating together as perfect complements, each playing a part in the God-given task of governing the earth. In Genesis 3 this relationship is disrupted and spoiled, and we see that as a result of *sin, where there had been communion there would be conflict, and where there had been cooperation there would be domination. Life outside of *Eden would have to be lived with all the tensions and conflicts inevitably resulting from human disobedience to God.

3.1.2. *Genesis 12—25: Abraham Narratives*. *Abraham is the link figure throughout these narratives, but in several of the individual stories he is in the background, with the main focus be-

ing on another, whether *Sarah, *Hagar, *Lot, Lot’s wife and daughters, Abraham’s servant or Rebekah. These narratives leave the reader in no doubt about the key part played by women in Israel’s early history. The writer is certainly aware of women’s interests and concerns and seems to be making a conscious effort to make sure that these interests and concerns are brought out within the text. There are a number of occasions where the account, although not always the characters it portrays, indicates an understanding of and attitude toward women that does not reflect the worldview of the society depicted.

Sarai is introduced alongside Abram in Genesis 11, and although God’s call is described as coming to Abram, it is clear that Sarai was with him from the beginning. In fact, the first story that is told, after the initial entry into the land indicated by God and the building of *altars and the invoking of the name of Yahweh, focuses on Sarai. Her words are not recorded, but it is she whom the Egyptians notice and she who takes the responsibility of saving Abram from potential danger. It may be thought that Abram was careless of his wife’s safety and that the only thing that counted for her as a woman was her looks. However, the pair apparently saw themselves as fleeing from certain death in the Canaanite famine and assumed that Sarah’s unusual beauty meant that she was likely to be taken anyway. The only question was whether Abram himself could survive. As a husband he would not; as a brother he might. In addition, the presence of a brother—who in many instances was seen as having a greater responsibility for the well-being of a woman than her husband—could in any case have provided more security for Sarai. So Sarai cooperated in an attempt to save Abram’s life. What the text brings out is that, regardless of how Abram and Sarai saw the situation, the Lord, powerful even in Egypt, was as concerned to preserve Sarai from the dangers of abduction as he was to preserve Abraham from death. Her well-being was important. Pharaoh’s affliction was “because of Sarai.” The concept that God’s “worldview” may be rather different from that of Abram, Sarai and their contemporaries begins to be presented in the text by a writer who appears to be both aware of the culture of the time and able to present a critique of it.

This understanding and critique of society

continues in Genesis 16. Sarai was barren. The tragedy of this condition particularly for women is well-presented here as elsewhere in the OT. In this instance it was Sarai's concerns rather than Abram's that led to the use—or abuse—of Hagar in order to produce offspring for the now-aging couple. "Abram listened to the voice of Sarai" (Gen 16:2). This may or may not have been usual in that society, but here it is presented without comment. Sarai's opinions counted for Abram, just as his safety counted for her. In this context, the one who did not count was the foreign slave-woman. It is noteworthy that on no occasion in the text is Hagar called by her name by either Abram or Sarah. Here and in Genesis 21 she is simply the slave-girl, in their society of no real account. When Hagar seemed unwilling to enter into the spirit of this exercise in surrogate motherhood, Sarai's resentment is clearly described. The reader's sympathy is pointed toward Hagar, but Sarai's reaction is clearly understood. The discernment of the writer at this point and the understanding of the feelings of the women are remarkable. Hagar's "constructive dismissal" from Sarai's service—local laws appear to have made it impossible for a slave used as a surrogate mother to be actually dismissed, but cruel treatment was tolerated—led to an encounter with "the angel of the LORD." Here again, God's "worldview" is shown to be different from Abram and Sarai's; he calls Hagar by her own name and deals with her as a significant individual. However, although we are made aware that contemporary human culture is not the only way of understanding life, and may not always be right, nevertheless Hagar is sent back to live within that culture. But first she is given the privilege of being the first recorded person to give a title, or name, to God. The meaning of the title is unclear, and it is not expanded on elsewhere, but the fact that Hagar, the female outsider, had a direct encounter with God is considered significant enough to mention.

In Genesis 17 the writer's interest in women continues. This chapter, which develops the understanding of the covenant, is one of the most significant theological passages within the Pentateuch. We learn in much more detail of the promises made to Abram and his descendants and of the covenant sign of circumcision. Given the nature of this sign, it may be thought that the covenant was really aimed at Israelite men

and that the women were merely incidental. However, the writer again makes it clear that this was not so. Deliberately placed in the center of the circumcision narrative (Gen 17:15-22), we have explicit reference to the fact that the promise of *blessing and of many descendants, including a royal line, was also for Sarah. She, as much as Abraham, was chosen as the parent of God's covenant people. The placing of these references to Sarai is perhaps done to preempt any thought that, just as circumcision related to men, so did the covenant itself. It is certainly hard to find other justification for the unusual way in which this chapter is arranged. The account of Abram's difficulty in accepting the possibility of Sarah's motherhood and his attempt to make it easier for God by being quite happy to accept Ishmael as his covenant heir is interesting. He does appear to have assumed that the covenant was about himself and himself alone. God's rebuke, with a firm no, seems to have been as much about Abram's self-centered discounting of Sarai as it was about his lack of faith. The child of the covenant was to be born to both Sarai and Abraham.

Chapter 18 reinforces this point. The situation of Abraham providing hospitality for the three visitors and remaining with them while they ate was normal. Their mention of Sarah and even deliberately bringing her into the conversation was not. The strangeness of this behavior, which in other contexts may even have been considered offensive, is likely to have drawn the attention of ancient readers. It mattered that Sarah as well as Abraham understood the nature of Yahweh's power and purposes. Her attitude is pictured as being significant. Even her embarrassed lie was brought out into the open. She as much as Abraham had to face up to the question, "Is anything too wonderful [i.e., hard] for the LORD?" (Gen 18:14).

The story of the rescue of Lot and his family from Sodom is not a glorious one. Lot's callous disregard for the safety of his daughters is somewhat easier to understand in a culture where nothing could be seen as worse than a breach of hospitality. However, it could be argued that here again is a critique of Lot's perspective. His action is certainly not approved within the text and seems to be presented as at the least misguided. The later despair of the daughters in their situation of fear and isolation—we are not told how long they remained in the cave before

they took their drastic action, although they still apparently could obtain wine—is surprisingly well told by the presumably male writer. Nothing to them was worse than being single and childless. Their action is described without comment, as had been their father's actions concerning them. Readers are left to draw their own conclusion about God's attitude to treating human beings, whether male or female, as objects to be manipulated for one's own purposes.

The final, and longest, story within the Abraham narratives, leaves the reader with many questions about Abraham and *Isaac. For example, at what stage did Abraham die? Why was Isaac not to go seeking his own wife? Why was the servant assumed to have control over the adult Isaac's actions? However, the picture of Rebekah is clear. The ideal wife for Isaac was a strong, outgoing woman, able and willing to carry the vast amount of water needed to feed ten camels, happy to set aside normal custom and to talk freely with a male stranger, and adventurous enough to set off immediately to face a new life. Rebekah, like Sarah, is pictured as knowing her own mind and expecting her ideas and opinions to count.

3.1.3. Genesis 26—50: Isaac, Jacob and Joseph Narratives. Rebekah, particularly in Genesis 27, continues to be portrayed as the dominant partner in her marriage. Her manipulation of Isaac and favoritism toward *Jacob is not necessarily approved by the text, but the writer clearly presents her initiative and ability. As the Jacob stories proceed, there is continued interest in family life, and the writer draws clear pictures of Rachel and Leah with an insight into the vital importance of fecundity for these women's valuation of themselves. However, in these chapters the focus remains centered on Jacob, and there is little sign of a critique of contemporary values or any parallels to the concern for Sarah's spiritual development that the earlier chapters present.

Within the Joseph narratives women virtually disappear. There are a number of brief genealogical references, and Rachel's death is acknowledged (Gen 48:7) because of its effect on Jacob. Potiphar's wife is presented as the temptress, but there is no interest in her character or her fate. Within this context, Genesis 38 has more in common with the Abraham narratives than with the chapters that surround it. It describes the machinations between *Judah and

*Tamar, with both seeking to manipulate the other. Here again the common view of the society, that women were only significant insofar as they furthered men's aims and met their desires, is both presented and critiqued. Tamar is certainly a person in her own right whose personal rights and desires are recognized and even affirmed.

3.2. Exodus.

3.2.1. Exodus 1—15: Moses' Early Life and the Escape from Egypt. The first two chapters of Exodus focus briefly on a whole range of characters. Apart from *Moses himself and the oppressive *pharaoh, all other characters are women. The brave midwives, Shiphras and Puah, stand out as Israelites who, because they feared God (Ex 1:17), risked their lives to enable Hebrew baby boys to live. Their bravery, initiative and intelligent diplomacy are noted by the text and presented as approved by God. Similarly, Moses' mother and sister are both presented as having intelligence and initiative. Without these women, and also the compassionate Egyptian princess, the *exodus never would have happened. The story of Zipporah and her sisters, protected by Moses from the bullying tactics of male shepherds, shows that men as well as women can behave in heroic ways but also presents the welfare of the women as having significance.

In Exodus 3—15 Moses takes center stage, and the other main characters are *Aaron and the *Egyptian officials. Other men and women are only in the background as part of the people, Israelites and Egyptians, both in different ways waiting to learn of their fate. Israelite women were presumably fully involved in preparations for eating the Passover and leaving the land and in obtaining gifts from the Egyptians, but we are given no details of specific personnel involved in this. The only other character who is introduced is *Miriam, described in Exodus 15:20 as Aaron's sister who was a prophet. This is the only reference to Miriam in the book of Exodus, and she is presented in this instance very briefly as a musician and worship leader.

3.2.2. Exodus 16—40: Life in the Desert. The second half of Exodus has small sections of narrative enclosing summaries of the law and details for the construction and contents of the *tabernacle. Most of these contain comments about Israel as a whole, and apart from the story of the *golden calf are not much more than editorial

links. A few characters are mentioned in passing: *Jethro, Moses' wife and sons, Aaron's sons, and Bezalel and Oholiab the craftsmen. Exodus 35 tells of the involvement of the whole congregation in the provision of materials for the tabernacle and in its crafting: "everyone whose heart was stirred, and everyone whose spirit was willing . . . came, both men and women," bringing their gifts and offering their skills (Ex 35:21-22). The leaders were men, but the text goes out of its way to let readers know that women were involved. For example, Exodus 35:25-26 speaks of the women's skill in spinning and make it clear that material used even in the inner parts of the tabernacle was created by women.

3.3. Numbers. Like Leviticus and Deuteronomy, much of the material in the book of Numbers deals with the organization and structuring of the community as well as its life and worship. However, there are a number of narrative sections recording specific incidents during the travels of the Israelite tribes. Many of these incidents are negative, including the complaints of the people about the *food and the resultant provision of *manna and quails, the appointment of seventy elders to work with Moses (Num 11), Korah's rebellion (Num 16), further complaints by the people and Moses striking the rock (Num 20) and the syncretism of Zimri and others (Num 25).

Two incidents focus on women. In Numbers 12 we are told of the jealousy of Miriam and Aaron over what they perceived as Moses' favored position. The description is fairly brief, but the implication is that both Miriam and Aaron had been used as spokespeople by God and wanted to receive recognition equivalent to that of Moses. The resultant punishment indicates that Miriam was the prime instigator of their complaint. Women are as capable of arrogance and jealousy as men, and their sin is treated equally seriously. God's words and actions at this time show that their status as his *prophetic spokespeople is not in question, but such status is not to be given more significance than it deserves and all Israelites must be wary of making complaints against those whom God has chosen to use in a special way. Aaron's pleading on Miriam's behalf shows a positive family solidarity that balances their bickering with Moses.

In Numbers 27 we meet the five daughters of *Zelophehad. The point of this account is to

make clear that, when there were no sons to make sure that the daughters of a family were properly cared for, the daughters themselves were to inherit their father's property. This purpose could have been achieved simply by including the point within the general case-law, but the writer includes the story of these particular women, describing their ability to speak out on their own behalf in a lucid and persuasive way. We are even told the names of all five of these women: Mahlah, Noah, Hoglah, Milcah and Tirzah (Num 27:1). Moses, perhaps recognizing the validity of their position but also reflecting the unwillingness of a male-dominated culture to accept their demands, instituted a special consultation with the Lord himself. It needed to be made clear that women were not to be deprived of their rightful inheritance within the community. The regulation is further clarified in Numbers 36. In order to prevent the disintegration of tribal lands, women who fell into this category were to marry within their own tribe. Women's rights, as all human rights, are significant but cannot be used to support the destruction of the community that can make those rights a reality.

4. Conclusion.

An examination of the narrative passages within the Pentateuch confirms that the society was patriarchal and that women were not often at the center of national life or given great consideration. However, it also confirms what the legal passages had made clear, that women were fully acknowledged as members of the community, that, like the men, they were capable of both loyalty and betrayal, of unselfishness and of greed, and that, like the men, they were given full credit for their righteous actions and held fully accountable for their sin. The Pentateuch may be male-focused, but it cannot be seen as anti-woman. In fact, it is surprisingly aware of the concerns and interests of women and surprisingly conscious of their contribution to the community and its life.

WRITING

Writing is a means of recording language in visible form, a means whereby ideas, thoughts and deeds of humankind can transcend the physical limits of time and space. Writing was well established across the Fertile Crescent long before Israel, or even the patriarchs, came into existence, and Israel became a nation at the time and place in which the simplest of ancient writing systems was maturing.

6. Oral Tradition and Written Records

1. Writing Systems.

1.1. Early Systems in the Biblical World. Current evidence suggests that writing arose late in the fourth millennium B.C. as an administrative tool for the increasingly complex societies developing in Mesopotamia and Egypt, noting goods issued and received by the controlling powers. It was soon turned to various tasks: commemorating royal achievements; transmitting messages to neighboring places; preserving magic spells and rituals precisely; setting down literary compositions. Both the Babylonian cuneiform, written on clay tablets, and the Egyptian hieroglyphic and hieratic scripts, the latter written on papyrus, were current in the Levant in the third and second millennia B.C., where town rulers adopted them for local use and for diplomatic correspondence. That meant their clerks were trained in foreign scribal traditions, those learning cuneiform, at least, copying Babylonian literature as part of their education. Those two writing systems are complex. To read and write Babylonian required knowledge of some three hundred signs, Egyptian some seven hundred, denoting both syllables and words.

While cuneiform was adapted for recording several different, often unrelated languages (Sumerian, Babylonian, Hurrian, Hittite), neither script was well suited for recording the West Semitic dialects and other tongues of the Eastern Mediterranean. Consequently, the second millennium saw a period of experimentation as scribes tried to find better scripts for their own languages. On Crete, Minoan hieroglyphs gave way to Linear A and Linear B with its Cypro-Minoan and, later, Cypriote Syllabary offshoots, each with between 50 and 150 signs, Linear B being used for recording Mycenaean Greek. In Anatolia the Hittite hieroglyphic system also had about 150 signs. The latter and Linear B were basically syllabic scripts, having signs for *ba*, *bi*, *bu*, *da*, *di*, *du*, and the like, besides a number of word signs. An apparently syllabic script has been found at Byblos, and some specimens of another were excavated at Tell Deir 'Alla in the Jordan Valley; both remain to be deciphered.

1.2. The Early "Alphabet." In Canaan another system appeared early in the second millennium

that was simpler still. This Proto-Sinaitic or Canaanite Linear script comprised about thirty signs only. Surviving examples are damaged or brief, the majority found in the area of Egyptian turquoise mines at Serabit el-Khadem in western Sinai, a few in Canaan and two in middle Egypt. The few words that have been read are sufficient to show the language was “Canaanite” (e.g., *b^lt*, “lady”). The script continued in use throughout the millennium, the signs gradually being simplified until they are clearly ancestors of the Phoenician letters of the first millennium. In origin, they probably represented simple syllables, a consonant plus any vowel (e.g., *b* + *a*, *i* or *u*), and that is basically the structure of the Arabic and Hebrew writing systems of today, where marks may be added to the letters to note the vowels. Consequently, these scripts are, strictly speaking, syllabaries, not alphabets. For writing the Semitic languages, marking vowels is not essential. (When the Greeks adopted the Phoenician signs about 800 B.C., the nature of their language forced them to create independent vowel signs, which they did partly by giving new values to Phoenician signs for sounds Greek did not possess, such as *a* for the Semitic glottal stop ^ʾ*aleph*. Thus they created the first true alphabet with one sign for each sound.)

The Canaanite Linear script slowly gained popularity in the Levant. When scribes at the northern town of Ugarit, educated in Babylonian cuneiform, saw the advantages of the simpler system for recording their own West Semitic language, they imitated the new script with an “alphabet” of twenty-seven cuneiform signs (three extra signs were added to ease the writing of Hurrian and then used for the Ugaritic language, too). The scribes’ inherent conservatism, their need to continue writing in Babylonian for diplomatic purposes and, almost certainly, the cost of importing papyrus from Egypt prevented them from adopting the Canaanite script itself. Clay tablets inscribed in their Ugaritic language display the whole range of uses that are seen in Babylonian and Egyptian writing, from accounts and legal deeds, census lists, international treaties and letters to rituals and lengthy epics. Personal names were engraved on stone seals and metal tools and occasionally written on pottery vessels before they were baked; there are also two stone stelae with short funerary texts. It is significant that, if the clay tablets are discounted, the few Ugaritic cuneiform texts that remain are

very similar to the texts written in the Canaanite Linear script, allowing the deduction that much more was written with that script on papyrus, leather or wax-covered wooden tablets that have perished.

Being nearer to Egypt, and often under Egyptian suzerainty, the scribes in Canaan followed Egyptian writing practices (e.g., writing from right to left) and used Egyptian materials, papyrus and wooden boards. Thus the tablets from Ugarit suggest what may have been written further south but is no longer accessible. Beside their testimony should be placed an Egyptian version of a Canaanite myth, Astarte and the Sea, and a Hittite tale, Elkunirsha and Ashertu, known from fragmentary copies of the late second millennium (ANET, 17-18, 519-20; COS 1.23:35-36, 1.55:149) and echoes of Phoenician stories in classical sources. There is no reason to doubt that written literature did exist in Late Bronze Age Canaan. At Ugarit the documents, lists, letters and the like were called *spr* (= Heb *sēper*), and the one who wrote them was titled “scribe” (*spr* = Heb *sōpēr*), a term found as a loanword from Canaanite in contemporary Egyptian texts (Hoch, no. 540). The clay tablets were described with the word “tablet” (*lht* = Heb *lūah*), sometimes defined by the content. This word basically signified a plank or slab of any material. In Babylonian, from early in the second millennium, the Akkadian word *lē³u* was applied especially to wooden boards, frequently covered with wax, on which notes, accounts and other works were written, as later in Hebrew (Is 30:8; Hab 2: 2).

1.3. Writing in the Iron Age. The collapse of the city-states of the Levant at the end of the second millennium B.C. saw the disappearance of the cuneiform and Egyptian scripts from the region; thereafter they are present only on imported objects or when Assyria took control. The Phoenician alphabet, the conventionalized form of the Canaanite Linear script, became the usual writing system, and local scripts developed from it in the new states of the Arameans, Israelites, Ammonites, Edomites and Moabites (Naveh). The oldest continuous inscriptions are carved on a stone sarcophagus and foundation blocks discovered at Byblos, belonging to the tenth century. Royal monuments from the ninth century show the script current from Moab to Aramean Gozan on the Habur River, and there are more from the next two centuries. Since

most writing was done on papyrus, leather or wood, it is lost.

An impressive quantity of seals and other inscribed objects displays its use much in the same way as described above for the Canaanite Linear script: to indicate ownership, donations and the like. However, there is also a growing number of *bullae*, small lumps of clay that sealed documents and containers, many of which bear on one face the imprint of a seal and on the other the marks left by the fibers of the papyrus documents they once secured. Hundreds from Judah prove the existence there of such documents in the eighth and seventh centuries B.C. However, the least important records were not put on expensive papyrus but scribbled on pieces of broken pottery. These potsherds (*ostraca*) were the scrap paper of antiquity and often do survive where the longer documents, written on perishable materials, have rotted away. Between two hundred and three hundred ostraca from Israel and Judah demonstrate the currency of writing there in daily life during the eighth and seventh centuries (see Renz and Röllig). Although contemporary copies of literary compositions on papyrus or leather are not available, their existence and appearance is suggested by an Aramaic text painted on a wall at Tell Deir 'Alla in imitation of a column of a scroll, retelling visions seen by *Balaam son of Beor. The plastered wall is dated slightly before 800 B.C. Graffiti scribbled on plastered walls and on two store-jars at Kuntillet 'Ajrud, a way station in the Negev Desert in the ninth century, and on the walls of tombs near Hebron a century later also show a readiness to write connected texts of a religious nature (Renz and Röllig: 47-64, 199-211).

2. References to Writing in the Pentateuch.

The first mention of writing in the Pentateuch occurs when God commanded *Moses to record the defeat of Amalek in a book (*sēper*) as a memorial (*zikkārôn*, Ex 17:14). Moses is also depicted as writing the Israelites' itinerary from *Egypt (Num 33:2), his parting "song" (Deut 31:19, 22), the names of the tribal leaders on staves (Num 17:2-3 [MT 17:17-18]) and particularly in connection with the *law (see below). Within the law there are requirements for others to write: the king was to make a copy of the law for himself (Deut 17:18); householders were to write the commandments on their doors and

gates (Deut 6:9; 11:20); in the question of a wife's adultery, the priest was to write curses "on a scroll" (*sēper*, Num 5:23); a man divorcing his wife was to give her "a certificate of divorce" (*sēper kērūtut*, Deut 24:1, 3); craftsmen were to provide for *Aaron's vestments stones bearing the names of the tribes and a golden plaque with an inscription (*miktāb*)—in both these cases, the writing is described as "engraved like a seal" (*pittūhê hôtām*, Ex 39:6, 30). There was a register of the elders of the tribes, for two were among the "listed" (*bakkētūbim*, Num 11:26). God kept a book (*sēper*) containing the names of those he held guiltless and from which names could be erased (*māhâ*, Ex 32:32-33).

With regard to the law, from the start it was written. When Moses first descended Mount Sinai, he recorded the laws that the people had accepted (Ex 20—23) in the *book of the covenant (*sēper habbērūt*), which he read to the people (Ex 24:4, 7). Later he wrote further commands that God gave (Deut 31:9, 24) in "the book of the law" (Deut 28:58, 61; 29:21; 30:10). The laws were also to be written on stones when Israel entered the Promised Land (Deut 27:3, 8). Most famously, the law was given on stone tablets" (*lūhôt hā'eben*, Ex 24:12): "He gave to Moses two stone tablets, written with the finger of God" (Ex 31:18), "inscribed on both sides, God's work, the writing of God, engraved [*hārūt*] on the tablets" (Ex 32:15-16). After Moses had broken the first set, on which he said God had written (Deut 4:13; 5:22; 9:10), he was told to carve out (*pāsal*) a second set on which God would write the commands again (Ex 34:1; cf. 34:4; Deut 10:1, 2, 4), although Exodus 34:27 possibly implies Moses wrote "the words of the covenant, the ten words" (see Decalogue). These tablets were called "tablets of the covenant" (*lūhôt habbērūt*, Deut 9:11, 15) and "[tablets of] the testimony" (*[lūhôt] hā'ēdut*, Ex 25:16; 31:18; 32:15; 34:29).

2.1. Purposes of Writing in the Pentateuch. The name "tablets of the testimony" discloses a major purpose of writing, to preserve information for future use as a form of witness (cf. Deut 31:26). This was a major role of written documents throughout the ancient Near East: affirming at the highest level the conquests of kings and so their claims upon territories; and at the individual citizen's level purchases or dispositions of property and so claims to ownership. Treaties were a means of regulating the

former and were expected to be renewed by successive generations. Legal deeds between individuals were usually witnessed but were themselves witnesses to be produced if disputes arose. Reports of lawsuits show that they could serve in that way generations after the contracting parties were dead. The “tablets of the testimony” kept in the ark had that function; their words could testify that Israel had, or had not, kept the basic terms of the Sinai *covenant. The penalty the breach demanded was countered by the blood of the *atonement *sacrifice poured over the lid (*kappōret*) of their container. The order to write the law on plastered stones at Mount Ebal had the same intent (Deut 27:2-3, 8). The record of the Amalekite war was a form of memorial (*zikkārōn*), similar to the records ancient kings had composed to celebrate their victories, the case of Moses’ song as a text for teaching and many written hymns from the biblical world.

2.2. Terminology of Writing. As indicated, the verb “to write” (*kātab*) is basic, with derivatives, and the action is usually done in or on a “record” (*sēper*). The latter term may apply to the collection of laws, the record of the Amalekite war, the curses on the allegedly adulterous woman and the divorce deed. It denotes, therefore, a written document of any length, as in Ugaritic. The curses on the alleged adulteress being washed into the water she was to drink (Num 5:23) and God expunging names from his book (Ex 32:32-33; Deut 29:20 [MT 29:19]) show that the normal writing material permitted erasures. The verb used (*māḥā*) means “to wipe away” (e.g., 2 Kings 21:13; Is 25:8) and so applies better to ink writing on papyrus or leather than to anything else, although it could be extended to inscriptions on hard surfaces (e.g., the epitaph engraved on the stone coffin of Ahiram at Byblos, c. 1000 B.C.). The writing on the plastered stones at Mount Ebal was presumably in ink. However, the names on the wooden staves could have been written with ink or scratched, whereas stones, including the two stone tablets, were engraved. Writing implements are not named, apart from “the finger of God.” What was written was read (*qārā*): Moses read the book of the covenant to the people at Sinai (Ex 24:7); the law was to be read to the people every seven years (Deut 31:10-11); the king was to read the law constantly (Deut 17:19).

3. The Ancient Context of the Pentateuchal References.

First, the simplicity of the terminology deserves attention. A single word, *sēper*, covers all types of written text; the terms “roll” (*mēgillā*) and “little roll” (*gillāyōn*) found in other books are absent, as is any trace of the Aramaic and Persian words that appear in Ezra, Nehemiah, Daniel, Esther and Chronicles (*pitgām*, *patšegen*, *’iggeret*, *’igrā*, *nīštēwān*). This suggests that the books reflect a preexilic situation, apparently one where writing was a normal part of life, accessible to the citizenry.

Second, the range of writing materials indicates local traditions derived from Egypt. It was there that writing on papyrus or leather had developed; there stones were engraved and plaster could be applied to stone surfaces, then painted, although surviving specimens were all inside buildings or tombs. These techniques were used in Canaan before the rise of Israel.

Third, Exodus to Deuteronomy relate the experiences of Israel on the route from Egypt to Canaan, events that the biblical *chronology would place in the era now called the Late Bronze Age. Every ancient text deserves to be treated as reliable unless objective evidence proves it is not. Taking these books as reflecting that time, therefore, how consistent are they with other evidence about writing in Late Bronze Age Canaan? There is nothing to tell which script Moses would have written. Cuneiform is unlikely because it was not the normal script in Egypt, being known there only for international correspondence; the common Egyptian hieratic is certainly possible, in the wilderness written rather on animal skins than papyrus. Either of these scripts would probably have required him to compose in the appropriate language, necessitating translation in due course and transfer to Hebrew characters. (Both scripts could be used for writing Canaanite or similar languages, but examples are quite rare and the results not entirely satisfactory.) The most likely writing system for Moses to have used was the relatively new Canaanite Linear Script. It was simple, had reached a cursive form by 1300 B.C. and did not require any transfer once its offspring, the Hebrew system, was established. If Moses used that script, then he could have written in an archaic form of Hebrew. Ink would have been made simply, from lamp black and gum. Scrolls of skin or papyrus would have

been relatively light and easy to carry and could have been made sufficiently long for any composition (see 3.3 below).

The two stone tablets, the second set cut from the rock by Moses, were evidently not large, as painters have often depicted them, for Moses had to carry them down the mountain. In Egypt flakes of stone were commonly used like ostraca. Examples convenient to hold in the hand, written on both sides, would easily contain the text of the Ten Commandments, possibly more (see Decalogue). The Egyptian examples are usually written in ink, but on the mountain, scratching with another stone would have been as practical, with the advantage that the letters would not smudge or fade. The two tablets are called *lūḥôt* (singular *lūah*), the same word as Babylonian *lê'u* and Ugaritic *lht* (see above). Writing on stone tablets was clearly feasible in Late Bronze Age Canaan and is exemplified there in the Iron Age by the tenth century Gezer Calendar, thus contradicting G. Garbini's contention (Garbini, 104-5) that Israel would only have conceived the idea of stone tablets when it met cuneiform tablets during the exile in Babylon, a contention that also ignores the currency of cuneiform tablets in Late Bronze Age Canaan (Millard 1994).

3.1. Acquaintance with Writing. To picture the Israelite tribes as desert nomads, unlikely to be acquainted with such urban skills as writing, is incorrect; they had left a settled life in Egypt where some had contact with the court or were trained in various crafts (Bezalel and Oholiab are named; others worked with them; Ex 35:30—36:2, 8; etc.). Scribes may have been among them. The nature of the land they were entering was known in Egypt from military campaigns and travel for administration and trade, as the school exercise of the thirteenth century B.C. known as the Satirical Letter demonstrates (Papyrus Anastasi I, *ANET*, 475-79). It was a land of rival towns, formally controlled by Egypt. Therefore its populace had some familiarity with Egyptian clerical activities, tax-collecting in particular, but were also aware to a small degree of Babylonian cuneiform, of Ugaritic cuneiform and, perhaps more widely, of the Canaanite Linear script. Israel was not isolated from other peoples, so the fact that those groups had all sorts of written texts makes it plausible to suppose that the Israel of Moses may have had some, too. While many people may have known

about writing, fewer would have had need to know how to read and write, tasks usually left to the scribes.

3.2. Uses of Writing in the Late Bronze Age in the Levant. In connection with the Pentateuch, it is pertinent to observe the existence of written treaties, territorial descriptions, itineraries and rituals among texts of the time. Treaties are well attested in the Late Bronze Age, and the basic formula they reveal is remarkably similar to the pattern visible in the Pentateuch. Among its constituents relevant here are the provisions for written copies to be kept in sacred places and read periodically (see Beckman, 46, 51, 81, 91, 111, 123). Several treaties include detailed descriptions of frontiers, fixing which towns belong to which of the treaty partners and how intruders should be treated. Clearly, such descriptions could only result from knowledge of the territories, which may well have been written (Beckman, 24, 35, 45, 109, 114-17). It should be noted that travelers reported on places they had visited, as the Egyptian Satirical Letter and the slightly later Report of Wen-Amun illustrate (Papyrus Anastasi I, *ANET*, 475-79; Wen-Amun, *ANET*, 25-29; *COS* 1.4:89-93). Likewise, Babylonian scribes recorded the daily stages of various journeys (Edzard). From Ugarit and her contemporary further east on the Euphrates, Emar, come several tablets inscribed with rituals (*COS* 1.95:299-301, 122-26, 427-43) that can be set beside extensive and well-known Babylonian, Hittite and Egyptian ones from the third to the first millennia. The Emar rituals offer particularly relevant comparisons with passages in Leviticus, including ablutions and the apportioning of meat offered and hides of *sacrificed animals to *priests. Recording rituals was the best means of ensuring they were performed correctly and thus effectively. Earlier in origin but current at this time is the Egyptian Story of Sinuhe, which offers comparisons with the patriarchal narratives, especially *Joseph, exemplifying the continued popularity and preservation of an old tale (*ANET*, 18-22; *COS* 1.38:77-82).

The separate written compositions named in the Pentateuch (e.g., the book of the covenant, Ex 24:7; the list of stages, Num 33:2-49) find analogies, therefore, in contemporary literature. Other passages, not specifically described as written, may well stem from clerical activity (the ritual instructions of Leviticus; the census lists [e.g., Num. 1]; the offering lists [Num 7:12-88];

see Levine, 259-66). Inclusion of such records within longer works is more rarely found and, although many ancient inscriptions incorporate earlier material, there is nothing of quite the same pattern or extent as the Hebrew books from Genesis to Deuteronomy. Inclusion of older laws beside more recent ones, as with many in Exodus replaced in Deuteronomy, illustrates how an authoritative ancient text might be preserved even if it had been superseded to some degree. Thus Hammurabi's laws, with a historical introduction, promulgated in the eighteenth century B.C., were copied for more than one thousand years, although they had lost any force they may have had as other laws had been introduced subsequently (COS 2.131:335-53). The Hittite Laws exist in an earlier and a partly revised later version (COS 2.19:106-19). The value attaching to proving ownership to property through its descent in a family meant that documents that were title deeds were written and kept with care. In some cases, lawsuits concerning ownership reproduce earlier texts brought forward as evidence to prove the case.

Without external evidence, the question of whether or not producing the books of the Pentateuch was within the competence of Late Bronze Age scribes is difficult to answer. The quantity of text is not an obstacle. In Assyria and Babylonia scribes would copy long compositions onto successive, numbered tablets; at Ugarit narratives occupied more than one tablet; in Egypt papyrus scrolls could be lengthened as required (Millard 1998, 174-75).

Preservation would present another problem. Would a mobile population be concerned to care for books? The difficulties are easy to exaggerate. Ancient scrolls were not so large as those often seen in modern synagogues. At most they were about 30 centimeters (11 inches) high, often half that, and when well rolled, they would have looked like a thick stick, between 2 and 6 centimeters in diameter (0.75-2.5 inches), thus not awkward to carry in a bag. Decay has destroyed scrolls that might have lain in ruined buildings in Canaan and Israel to indicate who owned them. Evidence from other countries shows that books were often stored in temples and palaces. State treaties might be deposited in shrines "at the feet of" a god (Beckman, 46, 111, 123), protected by the sanctity and witnesses before the god against the party who broke their terms. The book of the law was placed beside

the ark in a similar way, in the charge of the *Levites (Deut 31:26). Diplomatic letters, reports and a variety of other documents have been found in royal palaces in Mesopotamia and Syria, from the archive of Ebla (c. 2300 B.C.) to those of Nineveh in the seventh century B.C. Yet many discoveries demonstrate that books were far from confined to temples and palaces, for the houses of individual citizens in several cities (Ur, Nippur, Ashur, Ugarit among them) have yielded literary texts besides their legal, business and household records (Pedersén). The graffiti at Kuntillet 'Ajrud and in tombs exemplify a similar situation for ancient Hebrew (see 1.3 above).

3.3. *Uses of Writing in the Iron Age in the Levant.*

After the Late Bronze Age there is little trace of writing in the Promised Land until the eighth century B.C. That fact has led to a widespread supposition that writing was rare in the interval. An argument has also been made against the currency of writing before the eighth century on the grounds that there were no suitable political states in the land to foster it (Jamieson-Drake). That case, since adopted by several scholars, carries little weight since the model of the state used is inappropriate and the archaeological and epigraphic material is undervalued or incorrectly assessed (see Lemaire). Names and notes scratched on potsherds and the agricultural cycle of the Gezer Calendar exemplify writing in the tenth century. Ostraca and graffiti, especially the messages scribbled on store jars in the desert way station at Kuntillet 'Ajrud and the Balaam text from Tell Deir 'Alla, prove its use for identification and for "literature" in the ninth. These few survivors testify both to the ability to write and to a readiness to write spread across the land in the earlier part of the monarchy. The accidents of survival and discovery explain the absence of extensive Hebrew texts from the twelfth to the ninth centuries better than theoretical models; the situation is not peculiar to ancient Israel.

4. *Written Sources.*

While the books of the Pentateuch doubtless reached their present forms through amalgamation of a variety of earlier writings, to delineate those components is difficult, other than in the specific cases mentioned above (see 3.2 above). Distinct from the Documentary Hypothesis (see Source Criticism), a variety of literary devices can be observed that mark divisions within the

Pentateuch, although not necessarily indicating different documents (Baker). Observing how Babylonian scribes added a colophon at the end of literary texts copied on cuneiform tablets, giving the title and other bibliographical information, P. J. Wiseman (1936) suggested that the phrase “these are the generations of” in Genesis had the same function. He rendered *tolēdôt* “origins” or “histories,” arguing that each time the word occurred it closed the preceding section. Thus Genesis 2:4 refers back to Genesis 1:1—2:3, Genesis 5:1 to Genesis 2:4b—4:26, and so on. In each place it marked the end of a clay tablet on which the individual record had been preserved prior to the compilation of Genesis. Other commentators had treated the term as retrospective, so the attraction of Wiseman’s presentation was the ancient context in which he was able to set it. However, *tolēdôt* is better translated “generations” or “issue,” a term looking forward rather than back, to the issue rather than the parentage (see Wenham, 50, 55-56; see Genesis, Book of, §1.1).

How much of the Pentateuch may have been written in the Late Bronze Age remains indeterminate. There is no reason, from the point of view of ancient writing practice, why the texts Moses is said to have written were not, nor much of the rest. If an early date is accepted for the Pentateuch, the present form of the books results from later editorial work, for the language is later than Moses’ day (see Language of the Pentateuch). Repeated copying, revision or modernizing of old writings was not unusual in the ancient Near East in order to keep them alive for religious use and private study.

5. Oral Tradition and Written Records.

Concentration on the role of oral tradition in the formation of the Pentateuch, as well as other parts of the Hebrew Bible, has led scholars to underestimate the part played by writing. In his pioneering studies, H. Gunkel apparently assumed that early Israel existed in a wholly illiterate environment where short verses were the only form of literary composition, prose coming later (Gunkel). As described above (see 1 above), writing was well established across the Fertile Crescent long before Israel, or even the patriarchs, came into existence and could easily have been available to Moses. Late Bronze Age literature from both Mesopotamia and Egypt includes poetic narra-

tives of royal exploits alongside prose accounts of the same events, all written shortly after they took place. They are thus comparable with the Song of Moses in Exodus 15 and the prose narrative in the previous chapters (prime examples are the Assyrian Tukulti-Ninurta Epic and the king’s inscriptions [see Foster, 209-29; Grayson, 243-46, 271-76] and the Kadesh Inscriptions of Ramesses II [see COS 2.5:32-40]). While the hallmarks of oral composition have been traced in parts of the Pentateuch, especially in Genesis, oral composition does not preclude commitment of the work to writing, whether that be almost simultaneous or at some later moment (see Traditio-historical Criticism). The Ugaritic myths and legends, poetry from the Late Bronze Age, display even more obvious oral traits in their extant, written forms (ANET, 129-55; more recently COS 1.86, 87:239-83, 102, 103.333-56). Consequently, considerations of the history of the Pentateuch should allow for the existence of oral and written versions of some portions of it side by side over long periods.

It is remarkable that Israel became a nation and took control of a land at the time and in the area where the simplest of ancient writing systems was maturing. The means for recording their traditions, laws and history were readily available, for an elite scribal class could not maintain a monopoly over so simple a script, as history reveals.

ZEBULUN

Zebulun was the tenth son born to *Jacob and the ancestor of the Israelite tribe of the same name. He was Jacob's youngest son except for *Joseph and *Benjamin, who were born to Jacob by Rachel. Jacob's first wife, Leah, bore Zebulun and his brother *Issachar after *Reuben, Jacob's eldest, had brought his mother mandrakes as an aphrodisiac to cure her infertility (Gen 30:14-20). Zebulun plays a background role in the Pentateuch, both as a son of Jacob and as a tribe.

1. Birth and Name
2. Zebulun's Role in the Pentateuch
3. Subsequent History

1. Birth and Name.

The name *Zebulun*, which probably means “honor,” is derived from a wordplay uttered by Leah in Genesis 30:20: “God has presented me [*zēbādānī*] with a precious gift [*zēbed tōb*]. This time my husband will treat me with honor [*lyizbēlēnī*]” (NIV). The verbal root *zbl* (“to exalt, honor”) is taken by some instead to mean “to dwell” (e.g., NKJV, NASB). Both meanings find support in 1 Kings 8:13: “I have surely built you a lofty house” (*bēt zēbul*), while the Ugaritic parallel *zbl*, “prince(ship),” and Akkadian *zabālu*, “to carry or bear up,” support the former. In either case, the name Zebulun reflects the Leah's heartfelt longing for her unresponsive husband.

The Ugaritic parallel to Zebulun, *zbln* (“disease”), may also be derived from the Akkadian verb *zabālu* with the sense that disease “carries off” its victims. Other personal names derived from the West Semitic element *zbl* are Zebul (Judg 9:28) and Beelzebul (Mt 10:25).

2. Zebulun's Role in the Pentateuch.

2.1. Standard Formulas. Typically Zebulun appears only in standard genealogical or census-related formulas common to each of the sons of Jacob or tribes (Gen 35:23; 46:14; Ex 1:3; Num 1:9, 30-31; 2:7; 7:24; 10:16; 13:10; 26:26; 34:25; Deut 27:13). In every case except two (Num 13:10; Deut 27:13), Zebulun is listed either just before or just after Issachar. This link is based in fraternity but also anticipates their tribal settlement patterns in that they received adjacent allotments of land in lower Galilee. Moreover, both tribes usually follow immediately after Judah in these lists, again following birth order but perhaps also foreshadowing the relative importance of Zebulun in later biblical history. In fact, biblical statements regarding Zebulun subsequent to the Pentateuch tend to emphasize Zebulun's role as a people who were important in redemptive history. This importance is also reinforced by Zebulun's size: the fourth largest of the tribes in the two censuses of *Moses (Num 1:30-31; 26:26) and largest in population of the tribes who would be apportioned land in Galilee.

2.2. The Blessings of Jacob and Moses. The blessings that Jacob (Gen 49:13) and Moses (Deut 33:18-19) bestowed on Zebulun can best be understood as anticipating Zebulun's strategic position once the tribe settled in the land of Canaan.

Zebulun's tribal allotment bordered Manasseh to the southwest, Issachar to the southeast, *Naphtali to the northeast and *Asher to the northwest (Josh 19:10-16). Zebulun received the hilly region of western lower Galilee and the northwestern end of the Jezreel Valley (cf. Josh 21:34). This region is dominated by the hard limestone Nazareth ridge that separates the broad Jezreel Valley on the south from the Beth Netophah (i.e., Iphtah-el; cf. Josh 19:14) Valley on the north and is rich in terms of water resources, soil and building materials.

Perhaps most importantly, the tribal inheritance of Zebulun carried a number of important natural routes connecting the seacoast with points inland, including the Great Trunk Road running between Egypt and Mesopotamia (the *Via Maris*; see Travel and Transportation §2.1). Of the towns lying within Zebulun's territorial boundaries (Josh 19:10-16), Shimron (Khirbet Sammuniyeh) and Hannathon (Tell el-Bedei-wiyeh) were particularly important in that they guarded strategic junctures on the main routes, as witnessed by their appearance in Amarna texts 8, 224, 225 and 245 (cf. Josh 11:1). Notable also was Gath-hepher (Khirbet ez-Zurra'), hometown of the prophet Jonah (2 Kings 14:25).

The wording of Jacob's blessing is a bit vague ("Zebulun shall dwell toward the seashore," Gen 49:13) and leaves open the possibility of Zebulun's territory actually touching the shore. All told, this blessing would better fit the tribal inheritance of Asher (cf. Josh 19:24-31), yet Zebulun's eventual control of the northwestern extremity of the Jezreel Valley and of the final bend of the *Via Maris* toward the Mediterranean is adequate to explain Jacob's words.

Moses' blessing focused on the potential for Zebulun and Issachar to live prosperous and righteous lives in their respective homelands (Deut 33:18-19). The "mountain" at which these tribes would offer "righteous sacrifices" (Deut 33:19) was probably Mount Tabor, standing as a lone sentinel on their shared border and evidently a location of Israelite worship prior to the centralization of Yahwistic worship in Jerusalem (cf. Hos 5:1).

3. Subsequent History.

Zebulun's position in what the prophet Isaiah would term "Galilee of the Gentiles" (Is 9:1 [MT 8:23]) offered Israel great opportunity for political and economic expansion in their land but

also provided a clear target for nations that sought to control the international highways crossing Galilee. The early period of Israel's settlement saw Zebulun confined to the hilly regions of its territory (Judg 1:30). Archaeological evidence shows the region to have been sparsely settled during the Late Bronze Age, with a number of small Israelite settlements appearing only in the thirteenth to twelfth centuries B.C. Zebulun played a prominent role in the military victories of Barak (Judg 4:6, 10; 5:14, 18) and Gideon (Judg 6:35), laying the foundation for Israel's eventual control of the Jezreel Valley during the time of David. In 733 B.C. all of Galilee fell to the Assyrian king Tiglath-pileser III (cf. 2 Kings 15:29) and was made a part of the Assyrian Empire. Isaiah's response to the "contempt" now facing the lands of Zebulun and Naphtali (Is 9:1 [MT 8:23]) was to foresee the coming Messiah (Is 9:2-7 [MT 9:1-6]). Matthew's citation of Isaiah's words heralded the public ministry of Jesus, the carpenter who was raised in Nazareth in the old tribal territory of Zebulun (Mt 4:12-17).

ZELOPHEHAD, DAUGHTERS OF

When Zelophehad, son of Hephher and grandson of Gilead, died in the wilderness, his death raised an inheritance problem. Because he had no son, his five daughters—Mahlah, Noah, Hoglah, Milcah and Tirzah—publicly petitioned *Moses, *Eleazar and the elders for an equal

share in his inheritance—and received it (Num 27:1-11). Later, the daughters' case closes the book of Numbers by further clarifying that they could marry whom they chose, but only from the tribe of Manasseh (Num 36:1-12). Significantly, Moses took both requests before the Lord and received a direct command.

1. The Initial Request and Ruling
2. A Clarifying Request and Ruling
3. Later Interpretations

1. The Initial Request and Ruling.

The daughters, who are mentioned by name four times in Scripture (Num 26:33; 27:1; 36:11; Josh 17:3), posed a keen legal question of what should happen to a father's patrimony if he died without a male heir. This question was immediately recognized as one likely to occur in the future and affect subsequent generations. The women presented their petition in a public setting and used cogent arguments (Num 27:3-4).

Their story comes in a section of Numbers dealing with succession issues. Their speech reads like a legal argument offered in a court setting. The daughters stated that their father had died in the *wilderness but had not taken part in Korah's treason and blasphemy. He left no sons. The daughters expressed concern for the preservation of their father's name and their own inheritance claims. Their argument exhibits a clear understanding of the desert experience and the reason for the death of their father's generation, namely, because of unbelief in God's ability to lead the Israelites into the land he had chosen for them.

That the daughters mention Korah—and the fact that their father had no part in his rebellion—probably was a legal tactic showing that there was no moral or theological reason for differentiating him from those of his generation who were likewise condemned by the Lord to die without entering the Promised Land. They argued that there was nothing to separate them from being in line to receive their father's rightful inheritance—except their gender.

Upon hearing their arguments, Moses chose not to decide their question on his own but instead sought the Lord (Num 27:5). The Lord answered on the side of the daughters by telling Moses, "You must certainly give them property as an inheritance among their father's relations and turn their father's inheritance over to them" (Num 27:7).

Then the Lord further elaborated on inheritance issues. If a man died without a son, his inheritance went to his daughter; if he died without a son or a daughter, his inheritance reverted to his brothers; if he had no brothers, then his inheritance went to his father's brothers; and if his father had no brothers, then his inheritance went to the nearest relative in the clan (Num 27:8-11).

A brief account in Joshua 17:3-6 confirms that the daughters' allotment was contained in that of the tribe of Manasseh.

2. A Clarifying Request and Ruling.

The book of Numbers ends with a further controversy regarding the daughters of Zelophehad. This time the daughters did not approach Moses and Eleazar on their own. Instead, the family heads of the clan of Gilead asked Moses about marriage partners for them (Num 36).

Again the Lord provided guidance. The Lord commanded Moses to tell the leaders of Gilead that the daughters of Zelophehad could marry whom they pleased within the tribal clan of their father (Num 36:6). The Lord further stated that no inheritance was to pass between tribes but that each Israelite was to have the tribal land inherited from his forefathers (Num 36:7). The text recounts that the daughters followed the Lord's command and married within their father's clan (Num 36:12). This action ensured that Zelophehad's name would not be lost in Israel.

The ruling in favor of Zelophehad's daughters applied to other Israelite women as well. They too could marry within their fathers' tribal clans and thus keep the inheritance of an Israelite within tribal boundaries. The inheritance solution appears to have addressed another situation as well, one in which a wife and mother also died and a levirate marriage had not taken place. The rulings sought to maintain equity among the twelve tribes and did not allow one tribe to gain status and land in a manner out of proportion with the others. This issue was particularly important in light of Israel's imminent settlement in Canaan.

3. Later Interpretations.

Jewish tradition praises the daughters of Zelophehad for sagaciously choosing the right moment to approach Moses, one in which he

was expanding on levirate marriage law. The daughters showed notable exegetical ability in presenting their case. Jewish tradition lauds them for their virtue and the care they showed in choosing husbands. The youngest, for example, did not marry until age forty, when she found a worthy husband.

According to Jewish tradition, Zelophehad did not murmur against God (Num 11:1) and did not join the ten spies in condemning the land (Num 14:1). Therefore, he deserved his inheritance in Israel. Rabbi Akiba, however, believed that Zelophehad was the man who gathered wood on the *sabbath (Num 15:32; *b. Šabb.* 96b).

ZOOLOGY

In the Pentateuch the names of a number of animals and birds occur, some in a narrative context (e.g., Ex 11:7) and others in lists within a legal context (e.g., Lev 11:4-30). The former are relatively easy to identify; the latter in places are virtually impossible to identify with any degree of certainty.

1. The Range of Pentateuchal Zoology
2. A Historical Survey of Pentateuchal Zoology
3. The Limitations of Pentateuchal Zoology
4. Criteria for Identification
5. The List of Unclean Birds
6. Wild Animals
7. Beasts of Burden
8. Animal Products

1. The Range of Pentateuchal Zoology.

Various animals and birds mentioned in the Pentateuch include: (1) domestic animals such as sheep, goats, cattle and pigs (Gen 12:16; Lev 7:23; 11:7; Deut 14:8); (2) beasts of burden such as camels and horses (Gen 12:16; Deut 17:16); (3) insects such as gnats, flies, locusts, grasshoppers, bees and scorpions (Ex 8:16, 20 [MT 8:12, 16]; 10:4; Num 13:33; Deut 1:44; 8:15); (4) reptiles and amphibians such as vipers, frogs, venomous snakes and cobras (Gen 49:17; Ex 8:2-9 [MT 7:27-8:5]; Num 21:6; Deut 32:33); (5) birds such as quail and eagles (Ex 16:13; 19:4); (5) mammals such as dogs, rock hyraxes, rabbits, weasels, rats, deer and gazelle (Ex 11:7; Lev 11:5-6, 29; Deut 12:15; 14:7); and (6) wild animals such as wild donkeys (Gen 16:12), wolves (Gen 49:27), wild oxen (the now extinct aurochs Num 23:22; 24:8; Deut 33:17) and several words for lion (lion cub and lioness included, Gen 49:9).

2. A Historical Survey of Pentateuchal Zoology.

Throughout the centuries scholars have attempted to identify the creatures occurring in the Pentateuch. Rashi and Luther did so largely in terms of the fauna of the south of France and Germany respectively. Thus zoologically misplaced European fauna such as "badger," "ferret" and "lapwing" found their way into the English Authorized Version of 1611. Gradually scholars realized that the fauna of the Pentateuch was essentially Middle Eastern, not European. Several, such as Samuel Bochart of Caen in his *Hierozoicon* (c. 1650), addressed this. H. B. Tristram's *Natural History of the Bible* (1867)

laid the foundation of modern study. His arguments were based on comparative philology and observations gleaned from a year's stay in Palestine. More recently F. S. Bodenheimer's *Animal and Man in Bible Lands* (1960) and G. S. Cansdale's *Animals of Bible Lands* (1970) have brought extensive zoological knowledge to bear upon the subject.

3. The Limitations of Pentateuchal Zoology.

Ancient zoological classification certainly did not correspond to the exactitude of our modern Linnaean system. So although *nešer* means "eagle" (Lev 11:13), it also appears to refer to the "vulture" in Proverbs 30:17 (where the context is feeding on carrion) and Micah 1:16 (where baldness, a characteristic of the vulture, not the eagle, is referred to). Likewise, *ʿaṭallep* ("bat") (Lev 11:19; Deut 14:18), which occurs in the list of unclean birds, is, strictly speaking, a mammal, not a bird at all.

4. Criteria for Identification.

In attempting to identify a given animal or bird, a number of criteria need to be applied. Each of these criteria needs to be examined critically.

4.1. Discerning the Consensus of Modern Scholarship. Sometimes a consensus of scholarship is easy to discern. For *dūkipat* (Lev 11:19; Deut 14:18), all modern English translations have "hoopoe." Similarly, *ḥāsīdā* (Lev 11:19, Deut 14:18) is rendered as "stork" by all, though the REB offers "heron" in the margin.

However, for *yanšūp* (Lev 11:17; Deut 14:16) a consensus does not exist. NIV, NRSV, NASB and NJPS have "great owl," while RSV has "ibis," JB "barn owl" and REB "screech owl" (another name for the barn owl). For *rāḥām* (Lev 11:18; variant *rāḥāmā*, Deut 14:17) NIV and REB have "osprey," NRSV and NASB "carrion vulture," JB "white vulture" and NJPS "bustard." By way of a caution it should be noted that even where a number of translations have opted for a common identification, such an identification need not necessarily carry more weight; translators out of desperation may simply have copied one another.

4.2. The Use of Comparative Etymology. For *rāḥām* (Lev 11:18) and the variant *rāḥāmā* (Deut 14:17) the Arabic cognate *raḥamu(n)*, "white or carrion vulture," would seem to count against the identification "osprey" and "bustard" cited above. However, it should be noted that the

name of an animal or bird may not be used for the same species in a different language. Take, for example, *dīšōn* of Deuteronomy 14:5. This is equated by some with Akkadian *ditānu* or *didānu*, the "bison" or "aurochs" (AHw 173b; CAD D:164a), and even the Hittite *tīsanuš* (of same meaning), but no translations offer this, as such a large animal would be inappropriate in a list of deer and goats. Similarly, *šāb* of Leviticus 11:29 is "tortoise" in modern Hebrew (cf. KJV), but all modern versions follow the Arabic *qab* to read "lizard."

Comparative etymology from languages spoken in areas nearer and closer in time to the events narrated in the Pentateuch should have priority over examples from areas farther away or more distant in time. Take, for example, the frequently occurring *taḥaš* (Ex 25:5; 26:14; 35:7, 23; 36:19; 39:34; Num 4:6, 8, 10, 11, 12, 14, 25; Ezek 16:10). The Egyptian *ṯḥs* ("leather") should thus be preferred to Arabic *tuḥas*, a kind of dolphin or dugong (sea-cow). So JB and NRSV.

4.3. Data from Elsewhere in the Old Testament.

Sometimes mention of an animal or bird in other parts of the OT helps to identify that animal or bird and to eliminate other identifications. The Hebrew *bat yaʿānā* (Lev 11:16; Deut 14:15), following the Septuagint *strouthos*, has traditionally been translated "ostrich," but this hardly fits the context of Micah 1:8, since ostriches rarely make a noise. So NIV renders the phrase "horned owl," REB "desert owl." Similarly, Hebrew *qāʾāt* (Lev 11:18; Deut 14:17), following the Septuagint *pelekan*, has traditionally been rendered "pelican," but Psalm 102:6 (MT 102:7) suggests a desert habitat for this bird. Consequently, NIV and NRSV offer "desert owl," REB "horned owl."

It is perhaps appropriate to signal a potential caveat here, too. The writers of other OT books, living in different periods and in different geographical locations, may not necessarily have had the same zoological knowledge as the writer of the Pentateuch.

4.4. The Geographical Range of the Animals and Birds.

It is all too easy to impose animals and birds into the biblical text that never lived in the lands of the Bible. For example, the KJV had "badger" for *taḥaš* and "ferret" for *ʿānāqā* ("gecko"; Lev 11:30). Even "mole" for *ḥōled* (Lev 11:29), followed by TEV, NASB, JB and JPS, would seem inappropriate, since moles do not live in Palestine (Tristram, 120; Committee on Transla-

tions of the United Bible Societies, 55). Thus, “weasel” of KJV, NIV and NRSV would seem more correct.

Certain species of birds migrate, so the birds in the list of unclean animals need not necessarily be permanent residents of Sinai, Palestine or wherever the list is thought to have been written. The NIV’s “red kite” for *dā’ā* (Lev 11:14; variant *rā’ā* in Deut 14:13) is only a migrant in Palestine, and as G. R. Driver notes (Driver, 11), flying at a great altitude, the bird is not easily seen, so “red kite” appears overspecific, with “kite” being the choice of other English translations except NRSV, which has “buzzard.” In a similar vein, G. S. Cansdale comments that pelicans fly over Palestine only once or twice a year as quickly as possible, using thermals to mount high in the sky and glide north on almost fixed wings, usually so high that they can only be identified through field glasses (Cansdale, 157).

5. The List of Unclean Birds.

Leviticus 11 and Deuteronomy 14 give a list of unclean birds.

5.1. Variations in the List. Minor variations occur within the list as cited in Leviticus and Deuteronomy. Leviticus 11:14 has *dā’ā*, whereas Deuteronomy 14:13 has *rā’ā*. The same verse also has *dayyā*, which may be an attempt to reflect the Leviticus *dā’ā*. The variants *rāḥām* (Lev 11:18) and *rāḥamā* (Deut 14:17) have already been noted. The position of *šālāk* is variable, occurring after *kōs* in Leviticus 11:17 and after *rāḥamā* in Deuteronomy 14:17.

5.2. A Pattern in the List? The question remains: Is there any logic or pattern discernible in the list? Of course, the lack of precise identification of some of the birds hinders the discernment of a pattern. G. R. Driver argued for a pattern, that the birds are arranged in a roughly descending scale of sizes by natural families (Driver, 19), but it is clear that he fitted some of his identifications to fit his preconceived pattern of grouping the land birds before the sea and river birds. For example, for *šāḥāp* (Lev 11:16; Deut 14:15) he advanced “long-eared owl,” for *šālāk* (Lev 11:17; Deut 14:17) “fisher owl,” and “cormorant” for *’anāpā* (Lev 11:19; Deut 14:18), although all English versions, except for TEV, have “gull,” “cormorant” and “heron” respectively, which being sea or river birds did not fit into his pattern. G. S. Cansdale comments that “Driver’s work must be accepted with caution . . .

because . . . his findings imply a more detailed knowledge of birds by the ancient writer than seems likely” (Cansdale, 141 n.).

The occurrence at the end of the list of *’atallēp* (“bat”), which is a mammal, not a bird (as Aristotle taught), may not be accidental.

6. Wild Animals.

Two wild creatures are worthy of further comment.

6.1. The Aurochs. The Hebrew term *rē’ēm* (Num 23:22; 24:8; Deut 33:17) is without doubt the now extinct aurochs, or wild ox *Bos primigenius*. The Egyptian king Thutmose III (1479-1425 B.C.) claimed to have killed seventy-five out of a herd of 176 aurochs. Ramesses III (1184-1153 B.C.) hunted aurochs in Gezira in Sudan. This huge creature had disappeared from Palestine before the Christian era. The last recorded specimen died in A.D. 1627 in a park north of Warsaw.

6.2. The Hornet. The Hebrew term *šir’ā* occurs twice in the Pentateuch (Ex 23:28; Deut 7:20) and also in Joshua 24:12 in the context of dispossessing the inhabitants of Canaan. It has traditionally been translated “hornet” (so NIV, NASB). Comparison can be made with the modern Hebrew term, which means “wasp.” The Septuagint has *sphēkia*, “wasps’ nest.”

The presence of the definite article in all three cases suggests a definite weapon that God used to dispossess the Canaanites. J. Garstang (258-60) suggested it was a reference to the Egyptians, “the hornet” referring to Pharaoh’s hieroglyph *bu’ty*, the symbol of Lower Egypt. Others take it in a more metaphorical sense, such as NJPS’s “plague,” NRSV’s “pestilence,” TEV and NEB’s “panic” or Holladay’s “depression,” “discouragement” (HALOT, 310b).

7. Beasts of Burden.

Three beasts of burden are mentioned in the Pentateuch: donkeys, horses and camels.

7.1 Donkeys. The donkey was the main beast of burden, being mentioned in all the pentateuchal books except Leviticus. The first mention is during Abram’s stay in Egypt (Gen 12:16), but he had probably used donkeys as transport from Mesopotamia, where several distinct breeds were recognizable by about 1800 B.C. “Donkeys” that drew wheeled carts in Mesopotamia more than a thousand years earlier are now known from stone carvings and drawings to

have been onagers, the wild ass *Equus onager* that is still found in parts of West and Central Asia (Cansdale *IBD*, 53).

7.2 Horses. The horse is first mentioned in a list of livestock brought to *Joseph in Egypt in exchange for food (Gen 47:17). *Jacob referred to the horse when blessing *Dan (Gen 49:17). The Egyptian army that perished in the “Sea of Reeds” had horses (Ex 14:9, 23, 15:1, 19, 21, Deut 11:4). The horse was primarily perceived as an animal of war (Deut 20:1), hence the prohibition on a future Israelite king not to acquire great numbers of them (Deut 17:16).

The origin of the horse lies in Central Asia. It was probably first tamed in the grass steppe lands of northern Ukraine or somewhere farther east. Numerous horse bones in the Tripolye culture of Ukraine 2800-2700 B.C. are cited as evidence. By 2100 B.C. Third Dynasty of Ur texts refer to the *ANŠE.KUR.RA* “donkey of the (eastern) mountains.” Horses occur in the Kanesh (Kültepe) texts of central Anatolia around 1900 B.C. Eighteenth-century horse models have been found at Brak and Chagar Bazar in Northern Syria. In Egypt a single horse skeleton at the Middle Kingdom fortress of Buten may have been buried as early as the seventeenth century B.C. (Drower, 71-78). The presence of horses in the Pentateuch (even at its earliest possible fifteenth-century B.C. date) is thus not at all anachronistic.

7.3 Camels. References to camels (Gen 12:16; 24:35; 30:43; 32:7, 15 [MT 32:8, 16]) in the stories of the patriarchs are often dismissed as anachronistic, since according to many archaeologists the camel was not domesticated until the twelfth century B.C., when pictorial and written references to the camel become frequent.

Evidence for the pre-twelfth-century use of camels is scanty, but this is not entirely surprising. The camel is not a city animal; it is kept outside settlements and is primarily used in the desert. Even so, there is some evidence. In Turkmenia Namazga IV period (3000-2600 B.C.) models have been found of camels pulling carts. In Egypt a limestone carving of a camel is dated to the First Dynasty (c. 3100-2890 B.C.). Camel bones have been found at Mari in pre-Sargonic levels of the twenty-fifth to twenty-fourth centuries B.C. Old Babylonian lexical texts from about 2000-1700 B.C. attest domestication. A Sumerian text from Nippur of the same period refers to camel's milk. A camel jawbone has been found

in a tomb at Tell el-Farah North in Palestine from about 1900-1550 B.C. A kneeling camel figure from Byblos is dated to the eighteenth century B.C. Thus the pentateuchal narratives themselves should also be treated as evidence of pre-twelfth century camel domestication and not simply dismissed as anachronistic (see Travel and Transportation).

8. Animal products.

A number of products that are directly or indirectly derived from animals are mentioned in the Pentateuch.

8.1. Onycha. The Hebrew term *šēḥēlet* occurs in a list of spices, blended together to make incense (Ex 30:34). It is universally translated “onycha” following the Septuagint. Onycha is made from a certain mollusk, of genus *strombus*, similar to the murex shell, found deep in the Red Sea. The strombus *Blatta byzantia* is advanced as a specific identification (Tristram, 297). More specifically, onycha is made from the horny operculum or shield by which the opening to the shell is closed when the soft body has been drawn into it (Cansdale, 232). But its presence in a list of vegetable products may be sufficient to cast doubt on this identification, as F. N. Hepper notes: “there is doubt whether onycha . . . was really intended. It is more likely that it was a fragrant plant, the identity of which is not positively known” (Hepper, 142).

8.2. Honey. Honey occurs in the oft-repeated refrain “a land flowing with milk and honey” (Ex 3:8, 17; 13:5; 33:3; Lev 20:24; Num 14:8; 16:13-14; Deut 6:3; 11:9; 26:9, 15; 27:3; 31:20; Josh 5:6; Jer 11:5; 32:22; Ezek 20:6, 15). The Hebrew term *dēbaš* may not only signify bee honey but also syrup extracted from such fruits as figs, dates and grapes (cf. the Arabic *dibis*, Turkish *pekmez*). Thus “a land flowing with milk and honey” may not stand for a land of bees but for a land rich in fruit (Committee on Translations of the United Bible Societies, 11).

8.3. Curds. The Hebrew *ḥem'â* is a “type of curdled milk similar to yoghurt” (*HALOT*, 107b). Thus Genesis 18:8 and Deuteronomy 32:14 refer to “curds,” “a coagulated substance formed by action of acids on milk, and made into cheese or eaten as food” (*COED*, 250b).
